should not meddle
with one another's
occupations.

But when the cobbler or any other man whom nature designed to be a trader, having his heart lifted up by wealth or strength or the number of his followers, or any like advantage, attempts to force his way into the class of warriors, or a warrior into that of legislators and guardians, for which he is unfitted, and either to take the implements or the duties of the other; or when one man is trader, legislator, and warrior all in one, then I think you will agree with me in saying that this interchange and this meddling of one with another is the ruin of the State.

Most true.

Seeing then, I said, that there are three distinct classes, any meddling of one with another, or the change of one into another, is the greatest harm to the State, and may be most justly termed evil-doing?

Precisely.

And the greatest degree of evil-doing to one's own city would be termed by you injustice?

Certainly.

This then is injustice; and on the other hand when the trader, the auxiliary, and the guardian each do their own business, that is justice, and will make the city just.

I agree with you.

We will not, I said, be over-positive as yet; but if, on trial, this conception of justice be verified in the individual as well as in the State, there will be no longer any room for doubt; if it be not verified, we must have a fresh enquiry. First let us complete the old investigation, which we began, as you remember, under the impression that, if we could previously examine justice on the larger scale, there would be less difficulty in discerning her in the individual. That larger example appeared to be the State, and accordingly we constructed as good a one as we could, knowing well that in the good State justice would be found. Let the discovery which we made be now applied to the individual—if they agree, we shall be satisfied; or, if there be a difference in the individual, we will come back to the State and have another trial of the theory. The friction of the two when rubbed together may possibly strike a light in which justice will shine forth, and the vision which is then revealed we will fix in our souls.

From the larger
example of the State
we will now return to
the individual.

That will be in regular course; let us do as you say.

I proceeded to ask: When two things, a greater and less, are called by the same name, are they like or unlike in so far as they are called the same?

Like, he replied.

The just man then, if we regard the idea of justice only, will be like the just State?

He will.

And a State was thought by us to be just when the three classes in the State severally did their own business; and also thought to be temperate and valiant and wise by reason of certain other affections and qualities of these same classes?

True, he said.

And so of the individual; we may assume that he has the same three principles in his own soul which are found in the State; and he may be rightly described in the same terms, because he is affected in the same manner?

Certainly, he said.

Once more then, O my friend, we have alighted upon an easy question—whether the soul has these three principles or not?

How can we decide whether or no the soul has three distinct principles?

An easy question! Nay, rather, Socrates, the proverb holds that hard is the good.

Very true, I said; and I do not think that the method which we are employing is at all adequate to the accurate solution of this question; the true method is another and a longer one. Still we may arrive at a solution not below the level of the previous enquiry.

Our method is inadequate, and for a better and longer one we have not at present time.

May we not be satisfied with that? he said;—under the circumstances, I am quite content.

I too, I replied, shall be extremely well satisfied.

Then faint not in pursuing the speculation, he said.

Must we not acknowledge, I said, that in each of us there are the same principles and habits which there are in the State; and that from the individual they pass into the State?—how else can they come there? Take the quality of passion or spirit;—it would be ridiculous to imagine that this quality, when found in States, is not derived from the individuals who are supposed to possess it, e. g. the Thracians, Scythians, and in general the northern nations; and the same may be said of the love of knowledge, which is the special characteristic of our part of the world, or of the love of money, which may, with equal truth, be attributed to the Phoenicians and Egyptians.

Exactly so, he said.

There is no difficulty in understanding this.

None whatever.

But the question is not quite so easy when we proceed to ask whether these principles are three or one; whether, that is to say, we learn with one part of our nature, are angry with another, and with a third part desire the satisfaction of our natural appetites; or whether the whole soul comes into play in each sort of action—to determine that is the difficulty.

A digression in which an attempt is made to attain logical clearness.

Yes, he said; there lies the difficulty.

Then let us now try and determine whether they are the same or different.

How can we? he asked.

I replied as follows: The same thing clearly cannot act or be acted upon in the same part or in relation to the same thing at the same time, in contrary ways; and therefore whenever this contradiction occurs in things apparently the same, we know that they are really not the same, but different.

The criterion of truth: Nothing can be and not be at the same time in the same relation.

Good.

For example, I said, can the same thing be at rest and in motion at the same time in the same part?

Impossible.

Still, I said, let us have a more precise statement of terms, lest we should hereafter fall out by the way. Imagine the case of a man who is standing and also moving his hands and his head, and suppose a person to say that one and the same person is in motion and at rest at the same moment—to such a mode of speech we should object, and should rather say that one part of him is in motion while another is at rest.

Very true.

And suppose the objector to refine still further, and to draw the nice distinction that not only parts of tops, but whole tops, when they spin round with their pegs fixed on the spot, are at rest and in motion at the same time (and he may say the same of anything which revolves in the same spot), his objection would not be admitted by us, because in such cases things are not at rest and in motion in the same parts of themselves; we should rather say that they have both an axis and a circumference; and that the axis stands still, for there is no deviation from the perpendicular; and that the

Anticipation of objections to this 'law of thought.'

circumference goes round. But if, while revolving, the axis inclines either to the right or left, forwards or backwards, then in no point of view can they be at rest.

That is the correct mode of describing them, he replied.

Then none of these objections will confuse us, or incline us to believe that the same thing at the same time, in the 437 same part or in relation to the same thing, can act or be acted upon in contrary ways.

Certainly not, according to my way of thinking.

Yet, I said, that we may not be compelled to examine all such objections, and prove at length that they are untrue, let us assume their absurdity, and go forward on the understanding that hereafter, if this assumption turn out to be untrue, all the consequences which follow shall be withdrawn.

Yes, he said, that will be the best way.

Well, I said, would you not allow that assent and dissent, desire and aversion, attraction and repulsion, are all of them opposites, whether they are regarded as active or passive (for that makes no difference in the fact of their opposition)?

Likes and dislikes exist in many forms.

Yes, he said, they are opposites.

Well, I said, and hunger and thirst, and the desires in general, and again willing and wishing,—all these you would refer to the classes already mentioned. You would say—would you not?—that the soul of him who desires is seeking after the object of his desire; or that he is drawing to himself the thing which he wishes to possess: or again, when a person wants anything to be given him, his mind, longing for the realization of his desire, intimates his wish to have it by a nod of assent, as if he had been asked a question?

Very true.

And what would you say of unwillingness and dislike and the absence of desire; should not these be referred to the opposite class of repulsion and rejection?

Certainly.

Admitting this to be true of desire generally, let us suppose a particular class of desires, and out of these we will select hunger and thirst, as they are termed, which are the most obvious of them?

Let us take that class, he said.

The object of one is food, and of the other drink?

Yes.

And here comes the point: is not thirst the desire which the soul has of drink, and of drink only; not of drink qualified by anything else; for example, warm or cold, or much or little, or, in a word, drink of any particular sort: but if the thirst be accompanied by heat, then the desire is of cold drink; or, if accompanied by cold, then of warm drink; or, if the thirst be excessive, then the drink which is desired will be excessive; or, if not great, the quantity of drink will also be small: but thirst pure and simple will desire drink pure and simple, which is the natural satisfaction of thirst, as food is of hunger?

There may be simple thirst or qualified thirst, having respectively a simple or a qualified object.

Yes, he said; the simple desire is, as you say, in every case of the simple object, and the qualified desire of the qualified object.

438But here a confusion may arise; and I should wish to guard against an opponent starting up and saying that no man desires drink only, but good drink, or food only, but good food; for good is the universal object of desire, and thirst being a desire, will necessarily be thirst after good drink; and the same is true of every other desire.

Exception: The term good expresses, not a particular, but an universal relation.

Yes, he replied, the opponent might have something to say.

Nevertheless I should still maintain, that of relatives some have a quality attached to either term of the relation; others are simple and have their correlatives simple.

I do not know what you mean.

Well, you know of course that the greater is relative to the less?

Certainly.

And the much greater to the much less?

Yes.

And the sometime greater to the sometime less, and the greater that is to be to the less that is to be?

Certainly, he said.

And so of more and less, and of other correlative terms, such as the double and the half, or again, the heavier and the lighter, the swifter and the slower; and of hot and cold, and of any other relatives; — is not this true of all of them?

Yes.

And does not the same principle hold in the sciences? The object of science is knowledge (assuming that to be the true definition), but the object of a particular science is a particular kind of knowledge; I mean, for example, that the science of

Illustration of the argument from the use of language about correlative terms.

house-building is a kind of knowledge which is defined and distinguished from other kinds and is therefore termed architecture.

Certainly.

Because it has a particular quality which no other has?

Yes.

And it has this particular quality because it has an object of a particular kind; and this is true of the other arts and sciences?

Yes.

Now, then, if I have made myself clear, you will understand my original meaning in what I said about relatives. My meaning was, that if one term of a relation is taken alone, the other is taken alone; if one term is qualified, the other is also qualified. I do not mean to say that relatives may not be disparate, or that the science of health is healthy, or of disease necessarily diseased, or that the sciences of good and evil are therefore good and evil; but only that, when the term science is no longer used absolutely, but has a qualified object which in this case is the nature of health and disease, it becomes defined, and is hence called not merely science, but the science of medicine.

Recapitulation.

Anticipation of a possible confusion.

I quite understand, and I think as you do.

439Would you not say that thirst is one of these essentially relative terms, having clearly a relation—

Yes, thirst is relative to drink.

And a certain kind of thirst is relative to a certain kind of drink; but thirst taken alone is neither of much nor little, nor of good nor bad, nor of any particular kind of drink, but of drink only?

Certainly.

Then the soul of the thirsty one, in so far as he is thirsty, desires only drink; for this he yearns and tries to obtain it?

That is plain.

And if you suppose something which pulls a thirsty soul away from drink, that must be different from the thirsty principle which draws him like a beast to drink; for, as we were saying, the same thing cannot at the same time with the same part of itself act in contrary ways about the same.

The law of contradiction.

Impossible.

No more than you can say that the hands of the archer push and pull the bow at the same time, but what you say is that one hand pushes and the other pulls.

Exactly so, he replied.

And might a man be thirsty, and yet unwilling to drink?

Yes, he said, it constantly happens.

And in such a case what is one to say? Would you not say that there was something in the soul bidding a man to drink, and something else forbidding him, which is other and stronger than the principle which bids him?

I should say so.

And the forbidding principle is derived from reason, and that which bids and attracts proceeds from passion and disease?

The opposition of desire and reason.

Clearly.

Then we may fairly assume that they are two, and that they differ from one another; the one with which a man reasons, we may call the rational principle of the soul, the other, with which he loves and hungers and thirsts and feels the flutterings of any other desire, may be termed the irrational or appetitive, the ally of sundry pleasures and satisfactions?

Yes, he said, we may fairly assume them to be different.

Then let us finally determine that there are two principles existing in the soul. And what of passion, or spirit? Is it a third, or akin to one of the preceding?

I should be inclined to say—akin to desire.

Well, I said, there is a story which I remember to have heard, and in which I put faith. The story is, that Leontius, the son of Aglaion, coming up one day from the Piraeus, under the north wall on the outside, observed some dead bodies lying on the ground at the place of execution. He felt a desire to see them, and also a dread and abhorrence of them; 440for a time he struggled and covered his eyes, but at length the desire got the better of him; and forcing them open, he ran up to the dead bodies, saying, Look, ye wretches, take your fill of the fair sight.

The third principle of spirit or passion illustrated by an example.

I have heard the story myself, he said.

The moral of the tale is, that anger at times goes to war with desire, as though they were two distinct things.

Yes; that is the meaning, he said.

And are there not many other cases in which we observe that when a man's desires violently prevail over his reason, he reviles himself, and is angry at the violence within him, and that in this struggle, which is like the struggle of factions in a State, his spirit is on the side of his reason;—but for the passionate or spirited element to take part with the desires when reason decides that she should not be opposed¹, is a sort of thing which I believe that you never observed occurring in yourself, nor, as I should imagine, in any one else?

Passion never takes part with desire against reason.

Certainly not.

Suppose that a man thinks he has done a wrong to another, the nobler he is the less able is he to feel indignant at any suffering, such as hunger, or cold, or any other pain which the injured person may inflict upon him—these he deems to be just, and, as I say, his anger refuses to be excited by them.

Righteous indignation never felt by a person of noble character when he deservedly suffers.

True, he said.

But when he thinks that he is the sufferer of the wrong, then he boils and chafes, and is on the side of what he believes to be justice; and because he suffers hunger or cold or other pain he is only the more determined to persevere and conquer. His noble spirit will not be quelled until he either slays or is slain; or until he hears the voice of the shepherd, that is, reason, bidding his dog bark no more.

The illustration is perfect, he replied; and in our State, as we were saying, the auxiliaries were to be dogs, and to hear the voice of the rulers, who are their shepherds.

I perceive, I said, that you quite understand me; there is, however, a further point which I wish you to consider.

What point?

You remember that passion or spirit appeared at first sight to be a kind of desire, but now we should say quite the contrary; for in the conflict of the soul spirit is arrayed on the side of the rational principle.

Most assuredly.

But a further question arises: Is passion different from reason also, or only a kind of reason; in which latter case, instead of three principles in the soul, there will only be two, ⁴⁴¹the rational and the concupiscent; or rather, as the State was composed of three classes, traders, auxiliaries, counsellors, so may there not be in the individual soul a third element which is passion or spirit, and when not corrupted by bad education is the natural auxiliary of reason?

Not two, but three principles in the soul, as in the State.

Yes, he said, there must be a third.

Yes, I replied, if passion, which has already been shown to be different from desire, turn out also to be different from reason.

But that is easily proved:—We may observe even in young children that they are full of spirit almost as soon as they are born, whereas some of them never seem to attain to the use of reason, and most of them late enough.

Excellent, I said, and you may see passion equally in brute animals, which is a further proof of the truth of what you are saying. And we may once more appeal to the words of Homer, which have been already quoted by us,

Appeal to Homer.

‘He smote his breast, and thus rebuked his soul¹ ;’

for in this verse Homer has clearly supposed the power which reasons about the better and worse to be different from the unreasoning anger which is rebuked by it.

Very true, he said.

And so, after much tossing, we have reached land, and are fairly agreed that the same principles which exist in the State exist also in the individual, and that they are three in number.

The conclusion that the same three principles exist both in the State and in the individual applied to each of them.

Exactly.

Must we not then infer that the individual is wise in the same way, and in virtue of the same quality which makes the State wise?

Certainly.

Also that the same quality which constitutes courage in the State constitutes courage in the individual, and that both the State and the individual bear the same relation to all the other virtues?

Assuredly.

And the individual will be acknowledged by us to be just in the same way in which the State is just?

That follows of course.

We cannot but remember that the justice of the State consisted in each of the three classes doing the work of its own class?

We are not very likely to have forgotten, he said.

We must recollect that the individual in whom the several qualities of his nature do their own work will be just, and will do his own work?

Yes, he said, we must remember that too.

And ought not the rational principle, which is wise, and has the care of the whole soul, to rule, and the passionate or spirited principle to be the subject and ally?

Certainly.

And, as we were saying, the united influence of music and gymnastic will bring them into accord, nerving and sustaining the reason with noble words and lessons, and moderating 442and soothing and civilizing the wildness of passion by harmony and rhythm?

Music and gymnastic will harmonize passion and reason. These two combined will control desire,

Quite true, he said.

And these two, thus nurtured and educated, and having learned truly to know their own functions, will rule¹ over the concupiscent, which in each of us is the largest part of the soul and by nature most insatiable of gain; over this they will keep guard, lest, waxing great and strong with the fulness of bodily pleasures, as they are termed, the concupiscent soul, no longer confined to her own sphere, should attempt to enslave and rule those who are not her natural-born subjects, and overturn the whole life of man?

Very true, he said.

Both together will they not be the best defenders of the whole soul and the whole body against attacks from without; the one counselling, and the other fighting under his leader, and courageously executing his commands and counsels?

and will be the best defenders both of body and soul.

True.

And he is to be deemed courageous whose spirit retains in pleasure and in pain the commands of reason about what he ought or ought not to fear?

The courageous.

Right, he replied.

And him we call wise who has in him that little part which rules, and which proclaims these commands; that part too being supposed to have a knowledge of what is for the interest of each of the three parts and of the whole?

The wise.

Assuredly.

And would you not say that he is temperate who has these same elements in friendly harmony, in whom the one ruling principle of reason, and the two subject ones of spirit and desire are equally agreed that reason ought to rule, and do not rebel?

The temperate.

Certainly, he said, that is the true account of temperance whether in the State or individual.

And surely, I said, we have explained again and again how and by virtue of what quality a man will be just.

The just.

That is very certain.

And is justice dimmer in the individual, and is her form different, or is she the same which we found her to be in the State?

There is no difference in my opinion, he said.

Because, if any doubt is still lingering in our minds, a few commonplace instances will satisfy us of the truth of what I am saying.

What sort of instances do you mean?

If the case is put to us, must we not admit that the just State, or the man who is trained in the principles of such a State, will be less likely than the unjust to make away with a deposit of gold or silver? Would any one deny this?

The nature of justice illustrated by commonplace instances.

No one, he replied.

Will the just man or citizen ever be guilty of sacrilege or theft, or treachery either to his friends or to his country?

Never.

Neither will he ever break faith where there have been oaths or agreements?

Impossible.

No one will be less likely to commit adultery, or to dishonour his father and mother, or to fail in his religious duties?

No one.

And the reason is that each part of him is doing its own business, whether in ruling or being ruled?

Exactly so.

Are you satisfied then that the quality which makes such men and such states is justice or do you hope to discover some other?

Not I, indeed.

Then our dream has been realized; and the suspicion which we entertained at the beginning of our work of construction, that some divine power must have conducted us to a primary form of justice, has now been verified?

We have realized the hope entertained in the first construction of the State.

Yes, certainly.

And the division of labour which required the carpenter and the shoemaker and the rest of the citizens to be doing each his own business, and not another's, was a shadow of justice, and for that reason it was of use?

Clearly.

But in reality justice was such as we were describing, being concerned however, not with the outward man, but with the inward, which is the true self and concernment of man: for the just man does not permit the several elements within him to interfere with one another, or any of them to do the work of

The three principles harmonize in one.

The harmony of human life.

others,—he sets in order his own inner life, and is his own master and his own law, and at peace with himself; and when he has bound together the three principles within him, which may be compared to the higher, lower, and middle notes of the scale, and the intermediate intervals—when he has bound all these together, and is no longer many, but has become one entirely temperate and perfectly adjusted nature, then he proceeds to act, if he has to act, whether in a matter of property, or in the treatment of the body, or in some affair of politics or private business; always thinking and calling that which preserves and co-operates with this harmonious condition, just and good action, and the knowledge which presides over it, wisdom, and that which at any time impairs this condition, he will call unjust action, and the opinion which presides over it ignorance.

You have said the exact truth, Socrates.

Very good; and if we were to affirm that we had discovered the just man and the just State, and the nature of justice in each of them, we should not be telling a falsehood?

Most certainly not.

May we say so, then?

Let us say so.

And now, I said, injustice has to be considered.

Clearly.

Must not injustice be a strife which arises among the three principles—a meddlesomeness, and interference, and rising up of a part of the soul against the whole, an assertion of unlawful authority, which is made by a rebellious subject against a true prince, of whom he is the natural vassal,—what is all this confusion and delusion but injustice, and intemperance and cowardice and ignorance, and every form of vice?

Injustice the opposite of justice.

Exactly so.

And if the nature of justice and injustice be known, then the meaning of acting unjustly and being unjust, or, again, of acting justly, will also be perfectly clear?

What do you mean? he said.

Why, I said, they are like disease and health; being in the soul just what disease and health are in the body.

How so? he said.

Why, I said, that which is healthy causes health, and that which is unhealthy causes disease.

Yes.

And just actions cause justice, and unjust actions cause injustice?

Analogy of body and soul.

That is certain.

And the creation of health is the institution of a natural order and government of one by another in the parts of the body; and the creation of disease is the production of a state of things at variance with this natural order?

Health: disease: :
justice: injustice.

True.

And is not the creation of justice the institution of a natural order and government of one by another in the parts of the soul, and the creation of injustice the production of a state of things at variance with the natural order?

Exactly so, he said.

Then virtue is the health and beauty and well-being of the soul, and vice the disease and weakness and deformity of the same?

True.

And do not good practices lead to virtue, and evil practices to vice?

Assuredly.

445 Still our old question of the comparative advantage of justice and injustice has not been answered: Which is the more profitable, to be just and act justly and practise virtue, whether seen or unseen of gods and men, or to be unjust and act unjustly, if only unpunished and unreformed?

The old question, whether the just or the unjust is the happier, has become ridiculous.

In my judgment, Socrates, the question has now become ridiculous. We know that, when the bodily constitution is gone, life is no longer endurable, though pampered with all kinds of meats and drinks, and having all wealth and all power; and shall we be told that when the very essence of the vital principle is undermined and corrupted, life is still worth having to a man, if only he be allowed to do whatever he likes with the single exception that he is not to acquire justice and virtue, or to escape from injustice and vice; assuming them both to be such as we have described?

Yes, I said, the question is, as you say, ridiculous. Still, as we are near the spot at which we may see the truth in the clearest manner with our own eyes, let us not faint by the way.

Certainly not, he replied.

Come up hither, I said, and behold the various forms of vice, those of them, I mean, which are worth looking at.

I am following you, he replied: proceed.

I said, The argument seems to have reached a height from which, as from some tower of speculation, a man may look down and see that virtue is one, but that the forms of vice are innumerable; there being four special ones which are deserving of note.

What do you mean? he said.

I mean, I replied, that there appear to be as many forms of the soul as there are distinct forms of the State.

As many forms of the soul as of the State.

How many?

There are five of the State, and five of the soul, I said.

What are they?

The first, I said, is that which we have been describing, and which may be said to have two names, monarchy and aristocracy, accordingly as rule is exercised by one distinguished man or by many.

True, he replied.

But I regard the two names as describing one form only; for whether the government is in the hands of one or many, if the governors have been trained in the manner which we have supposed, the fundamental laws of the State will be maintained.

That is true, he replied.

[\[Back to Table of Contents\]](#)

BOOK V.

449Such is the good and true City or State, and the good and true man is of the same pattern; and if this is right every other is wrong; and the evil is one which affects not only the ordering of the State, but also the regulation of the individual soul, and is exhibited in four forms.

Republic V.

Socrates, Glaucon, Adeimantus.

The community of women and children.

What are they? he said.

I was proceeding to tell the order in which the four evil forms appeared to me to succeed one another, when Polemarchus, who was sitting a little way off, just beyond Adeimantus, began to whisper to him: stretching forth his hand, he took hold of the upper part of his coat by the shoulder, and drew him towards him, leaning forward himself so as to be quite close and saying something in his ear, of which I only caught the words, ‘Shall we let him off, or what shall we do?’

Certainly not, said Adeimantus, raising his voice.

Who is it, I said, whom you are refusing to let off?

You, he said.

I repeated¹, Why am I especially not to be let off?

Why, he said, we think that you are lazy, and mean to cheat us out of a whole chapter which is a very important part of the story; and you fancy that we shall not notice your airy way of proceeding; as if it were self-evident to everybody, that in the matter of women and children ‘friends have all things in common.’

The saying ‘Friends have all things in common’ is an insufficient solution of the problem.

And was I not right, Adeimantus?

Yes, he said; but what is right in this particular case, like everything else, requires to be explained; for community may be of many kinds. Please, therefore, to say what sort of community you mean. We have been long expecting that you would tell us something about the family life of your citizens—how they will bring children into the world, and rear them when they have arrived, and, in general, what is the nature of this community of women and children—for we are of opinion that the right or wrong management of such matters will have a great and paramount influence on the State for good or for evil. And now, since the question is still undetermined, and you are taking in hand another State, we have resolved, as you heard, not 450to let you go until you give an account of all this.

Socrates, Adeimantus, Glaucon, Thrasymachus.

To that resolution, said Glaucon, you may regard me as saying Agreed.

And without more ado, said Thrasymachus, you may consider us all to be equally agreed.

I said, You know not what you are doing in thus assailing me: What an argument are you raising about the State! Just as I thought that I had finished, and was only too glad that I had laid this question to sleep, and was reflecting how fortunate I was in your acceptance of what I then said, you ask me to begin again at the very foundation, ignorant of what a hornet's nest of words you are stirring. Now I foresaw this gathering trouble, and avoided it.

The feigned surprise of Socrates.

For what purpose do you conceive that we have come here, said Thrasymachus, — to look for gold, or to hear discourse?

The good-humour of Thrasymachus.

Yes, but discourse should have a limit.

Yes, Socrates, said Glaucon, and the whole of life is the only limit which wise men assign to the hearing of such discourses. But never mind about us; take heart yourself and answer the question in your own way: What sort of community of women and children is this which is to prevail among our guardians? and how shall we manage the period between birth and education, which seems to require the greatest care? Tell us how these things will be.

Yes, my simple friend, but the answer is the reverse of easy; many more doubts arise about this than about our previous conclusions. For the practicability of what is said may be doubted; and looked at in another point of view, whether the scheme, if ever so practicable, would be for the best, is also doubtful. Hence I feel a reluctance to approach the subject, lest our aspiration, my dear friend, should turn out to be a dream only.

Fear not, he replied, for your audience will not be hard upon you; they are not sceptical or hostile.

Socrates, Glaucon.

I said: My good friend, I suppose that you mean to encourage me by these words.

Yes, he said.

Then let me tell you that you are doing just the reverse; the encouragement which you offer would have been all very well had I myself believed that I knew what I was talking about: to declare the truth about matters of high interest which a man honours and loves among wise men who love him need occasion no fear or faltering in his mind; but to carry on an argument when you are yourself only a hesitating enquirer, which is my condition, is a dangerous and slippery thing; and the danger is not that I shall be laughed at (of which the fear would be childish), but that I shall miss the truth where I have most need to be sure of my footing, and drag my friends after me in my fall. And I pray Nemesis not to visit upon me the words which I am

A friendly audience is more dangerous than a hostile one.

going to utter. For I do indeed believe that to be an involuntary homicide is a less crime than to be a deceiver about beauty or goodness or justice in the matter of laws¹. And that is a risk which I would rather run among enemies than among friends, and therefore you do well to encourage me².

Glaucon laughed and said: Well then, Socrates, in case you and your argument do us any serious injury you shall be acquitted beforehand of the homicide, and shall not be held to be a deceiver; take courage then and speak.

Well, I said, the law says that when a man is acquitted he is free from guilt, and what holds at law may hold in argument.

Then why should you mind?

Well, I replied, I suppose that I must retrace my steps and say what I perhaps ought to have said before in the proper place. The part of the men has been played out, and now properly enough comes the turn of the women. Of them I will proceed to speak, and the more readily since I am invited by you.

For men born and educated like our citizens, the only way, in my opinion, of arriving at a right conclusion about the possession and use of women and children is to follow the path on which we originally started, when we said that the men were to be the guardians and watchdogs of the herd.

True.

Let us further suppose the birth and education of our women to be subject to similar or nearly similar regulations; then we shall see whether the result accords with our design.

What do you mean?

What I mean may be put into the form of a question, I said: Are dogs divided into hes and shes, or do they both share equally in hunting and in keeping watch and in the other duties of dogs? or do we entrust to the males the entire and exclusive care of the flocks, while we leave the females at home, under the idea that the bearing and suckling their puppies is labour enough for them?

No distinction among the animals such as is made between men and women.

No, he said, they share alike; the only difference between them is that the males are stronger and the females weaker.

But can you use different animals for the same purpose, unless they are bred and fed in the same way?

You cannot.

Then, if women are to have the same duties as men, they⁴⁵² must have the same nurture and education?

Yes.

The education which was assigned to the men was music and gymnastic.

Yes.

Then women must be taught music and gymnastic and also the art of war, which they must practise like the men?

Women must be taught music, gymnastic, and military exercises equally with men.

That is the inference, I suppose.

I should rather expect, I said, that several of our proposals, if they are carried out, being unusual, may appear ridiculous.

No doubt of it.

Yes, and the most ridiculous thing of all will be the sight of women naked in the palaestra, exercising with the men, especially when they are no longer young; they certainly will not be a vision of beauty, any more than the enthusiastic old men who in spite of wrinkles and ugliness continue to frequent the gymnasia.

Yes, indeed, he said: according to present notions the proposal would be thought ridiculous.

But then, I said, as we have determined to speak our minds, we must not fear the jests of the wits which will be directed against this sort of innovation; how they will talk of women's attainments both in music and gymnastic, and above all about their wearing armour and riding upon horseback!

Very true, he replied.

Yet having begun we must go forward to the rough places of the law; at the same time begging of these gentlemen for once in their life to be serious. Not long ago, as we shall remind them, the Hellenes were of the opinion, which is still generally received among the barbarians, that the sight of a naked man was ridiculous and improper; and when first the Cretans and then the Lacedaemonians introduced the custom, the wits of that day might equally have ridiculed the innovation.

Convention should not be permitted to stand in the way of a higher good.

No doubt.

But when experience showed that to let all things be uncovered was far better than to cover them up, and the ludicrous effect to the outward eye vanished before the better principle which reason asserted, then the man was perceived to be a fool who directs the shafts of his ridicule at any other sight but that of folly and vice, or seriously inclines to weigh the beautiful by any other standard but that of the good¹.

Very true, he replied.

First, then, whether the question is to be put in jest or in earnest, let us come to an understanding about the nature of woman: Is she capable of sharing either wholly or partially in the actions of men, or not at all? And is the art of war one of those arts in which she can or can not share? That will be the best way of commencing the enquiry, and will probably lead to the fairest conclusion.

That will be much the best way.

Shall we take the other side first and begin by arguing against ourselves; in this manner the adversary's position will not be undefended.

Why not? he said.

Then let us put a speech into the mouths of our opponents. They will say: 'Socrates and Glaucon, no adversary need convict you, for you yourselves, at the first foundation of the State, admitted the principle that everybody was to do the one work suited to his own nature.' And certainly, if I am not mistaken, such an admission was made by us. 'And do not the natures of men and women differ very much indeed?' And we shall reply: Of course they do. Then we shall be asked, 'Whether the tasks assigned to men and to women should not be different, and such as are agreeable to their different natures?' Certainly they should. 'But if so, have you not fallen into a serious inconsistency in saying that men and women, whose natures are so entirely different, ought to perform the same actions?'—What defence will you make for us, my good Sir, against any one who offers these objections?

Objection: We were saying that every one should do his own work: Have not women and men severally a work of their own?

That is not an easy question to answer when asked suddenly; and I shall and I do beg of you to draw out the case on our side.

These are the objections, Glaucon, and there are many others of a like kind, which I foresaw long ago; they made me afraid and reluctant to take in hand any law about the possession and nurture of women and children.

By Zeus, he said, the problem to be solved is anything but easy.

Why yes, I said, but the fact is that when a man is out of his depth, whether he has fallen into a little swimming bath or into mid ocean, he has to swim all the same.

Very true.

And must not we swim and try to reach the shore: we will hope that Arion's dolphin or some other miraculous help may save us?

I suppose so, he said.

Well then, let us see if any way of escape can be found. We acknowledged—did we not? that different natures ought to have different pursuits, and that men's and

women's natures are different. And now what are we saying?—that different natures ought to have the same pursuits,—this is the inconsistency which is charged upon us.

Precisely.

454 Verily, Glaucon, I said, glorious is the power of the art of contradiction!

Why do you say so?

Because I think that many a man falls into the practice against his will. When he thinks that he is reasoning he is really disputing, just because he cannot define and divide, and so know that of which he is speaking; and he will pursue a merely verbal opposition in the spirit of contention and not of fair discussion.

The seeming inconsistency arises out of a verbal opposition.

Yes, he replied, such is very often the case; but what has that to do with us and our argument?

A great deal; for there is certainly a danger of our getting unintentionally into a verbal opposition.

In what way?

Why we valiantly and pugnaciously insist upon the verbal truth, that different natures ought to have different pursuits, but we never considered at all what was the meaning of sameness or difference of nature, or why we distinguished them when we assigned different pursuits to different natures and the same to the same natures.

When we assigned to different natures different pursuits, we meant only those differences of nature which affected the pursuits.

Why, no, he said, that was never considered by us.

I said: Suppose that by way of illustration we were to ask the question whether there is not an opposition in nature between bald men and hairy men; and if this is admitted by us, then, if bald men are cobblers, we should forbid the hairy men to be cobblers, and conversely?

That would be a jest, he said.

Yes, I said, a jest; and why? because we never meant when we constructed the State, that the opposition of natures should extend to every difference, but only to those differences which affected the pursuit in which the individual is engaged; we should have argued, for example, that a physician and one who is in mind a physician¹ may be said to have the same nature.

True.

Whereas the physician and the carpenter have different natures?

Certainly.

And if, I said, the male and female sex appear to differ in their fitness for any art or pursuit, we should say that such pursuit or art ought to be assigned to one or the other of them; but if the difference consists only in women bearing and men begetting children, this does not amount to a proof that a woman differs from a man in respect of the sort of education she should receive; and we shall therefore continue to maintain that our guardians and their wives ought to have the same pursuits.

Very true, he said.

Next, we shall ask our opponent how, in reference to any 455 of the pursuits or arts of civic life, the nature of a woman differs from that of a man?

That will be quite fair.

And perhaps he, like yourself, will reply that to give a sufficient answer on the instant is not easy; but after a little reflection there is no difficulty.

Yes, perhaps.

Suppose then that we invite him to accompany us in the argument, and then we may hope to show him that there is nothing peculiar in the constitution of women which would affect them in the administration of the State.

By all means.

Let us say to him: Come now, and we will ask you a question:—when you spoke of a nature gifted or not gifted in any respect, did you mean to say that one man will acquire a thing easily, another with difficulty; a little learning will lead the one to discover a great deal; whereas the other, after much study and application, no sooner learns than he forgets; or again, did you mean, that the one has a body which is a good servant to his mind, while the body of the other is a hindrance to him?—would not these be the sort of differences which distinguish the man gifted by nature from the one who is ungifted?

The same natural gifts are found in both sexes, but they are possessed in a higher degree by men than women.

No one will deny that.

And can you mention any pursuit of mankind in which the male sex has not all these gifts and qualities in a higher degree than the female? Need I waste time in speaking of the art of weaving, and the management of pancakes and preserves, in which womankind does really appear to be great, and in which for her to be beaten by a man is of all things the most absurd?

You are quite right, he replied, in maintaining the general inferiority of the female sex: although many women are in many things superior to many men, yet on the whole what you say is true.

And if so, my friend, I said, there is no special faculty of administration in a state which a woman has because she is a woman, or which a man has by virtue of his sex, but the gifts of nature are alike diffused in both; all the pursuits of men are the pursuits of women also, but in all of them a woman is inferior to a man.

Very true.

Then are we to impose all our enactments on men and none of them on women?

Men and women are to be governed by the same laws and to have the same pursuits.

That will never do.

456One woman has a gift of healing, another not; one is a musician, and another has no music in her nature?

Very true.

And one woman has a turn for gymnastic and military exercises, and another is unwarlike and hates gymnastics?

Certainly.

And one woman is a philosopher, and another is an enemy of philosophy; one has spirit, and another is without spirit?

That is also true.

Then one woman will have the temper of a guardian, and another not. Was not the selection of the male guardians determined by differences of this sort?

Yes.

Men and women alike possess the qualities which make a guardian; they differ only in their comparative strength or weakness.

Obviously.

And those women who have such qualities are to be selected as the companions and colleagues of men who have similar qualities and whom they resemble in capacity and in character?

Very true.

And ought not the same natures to have the same pursuits?

They ought.

Then, as we were saying before, there is nothing unnatural in assigning music and gymnastic to the wives of the guardians—to that point we come round again.

Certainly not.

The law which we then enacted was agreeable to nature, and therefore not an impossibility or mere aspiration; and the contrary practice, which prevails at present, is in reality a violation of nature.

That appears to be true.

We had to consider, first, whether our proposals were possible, and secondly whether they were the most beneficial?

Yes.

And the possibility has been acknowledged?

Yes.

The very great benefit has next to be established?

Quite so.

You will admit that the same education which makes a man a good guardian will make a woman a good guardian; for their original nature is the same?

There are different degrees of goodness both in women and in men.

Yes.

I should like to ask you a question.

What is it?

Would you say that all men are equal in excellence, or is one man better than another?

The latter.

And in the commonwealth which we were founding do you conceive the guardians who have been brought up on our model system to be more perfect men, or the cobblers whose education has been cobbling?

What a ridiculous question!

You have answered me, I replied: Well, and may we not further say that our guardians are the best of our citizens?

By far the best.

And will not their wives be the best women?

Yes, by far the best.

And can there be anything better for the interests of the State than that the men and women of a State should be as good as possible?

There can be nothing better.

457 And this is what the arts of music and gymnastic, when present in such manner as we have described, will accomplish?

Certainly.

Then we have made an enactment not only possible but in the highest degree beneficial to the State?

True.

Then let the wives of our guardians strip, for their virtue will be their robe, and let them share in the toils of war and the defence of their country; only in the distribution of labours the lighter are to be assigned to the women, who are the weaker natures, but in other respects their duties are to be the same. And as for the man who laughs at naked women exercising their bodies from the best of motives, in his laughter he is plucking

‘A fruit of unripe wisdom,’

and he himself is ignorant of what he is laughing at, or what he is about;—for that is, and ever will be, the best of sayings, *That the useful is the noble and the hurtful is the base.*

The noble saying.

Very true.

Here, then, is one difficulty in our law about women, which we may say that we have now escaped; the wave has not swallowed us up alive for enacting that the guardians of either sex should have all their pursuits in common; to the utility and also to the possibility of this arrangement the consistency of the argument with itself bears witness.

Yes, that was a mighty wave which you have escaped.

Yes, I said, but a greater is coming; you will not think much of this when you see the next.

The second and greater wave.

Go on; let me see.

The law, I said, which is the sequel of this and of all that has preceded, is to the following effect,—‘that the wives of our guardians are to be common, and their children are to be common, and no parent is to know his own child, nor any child his parent.’

Yes, he said, that is a much greater wave than the other; and the possibility as well as the utility of such a law are far more questionable.

I do not think, I said, that there can be any dispute about the very great utility of having wives and children in common; the possibility is quite another matter, and will be very much disputed.

I think that a good many doubts may be raised about both.

You imply that the two questions must be combined, I replied. Now I meant that you should admit the utility; and in this way, as I thought, I should escape from one of them, and then there would remain only the possibility.

The utility and possibility of a community of wives and children.

But that little attempt is detected, and therefore you will please to give a defence of both.

Well, I said, I submit to my fate. Yet grant me a little favour: let me feast my mind with the dream as day dreamers are in the habit of feasting themselves when they are walking alone; for before they have discovered any means of effecting their wishes—that is a matter which never troubles them—they would rather not tire themselves by thinking about possibilities; but assuming that what they desire is already granted to them, they proceed with their plan, and delight in detailing what they mean to do when their wish has come true—that is a way which they have of not doing much good to a capacity which was never good for much. Now I myself am beginning to lose heart, and I should like, with your permission, to pass over the question of possibility at present. Assuming therefore the possibility of the proposal, I shall now proceed to enquire how the rulers will carry out these arrangements, and I shall demonstrate that our plan, if executed, will be of the greatest benefit to the State and to the guardians. First of all, then, if you have no objection, I will endeavour with your help to consider the advantages of the measure; and hereafter the question of possibility.

The utility to be considered first, the possibility afterwards.

I have no objection; proceed.

First, I think that if our rulers and their auxiliaries are to be worthy of the name which they bear, there must be willingness to obey in the one and the power of command in the other; the guardians must themselves obey the laws, and they must also imitate the spirit of them in any details which are entrusted to their care.

That is right, he said.

You, I said, who are their legislator, having selected the men, will now select the women and give them to them;—they must be as far as possible of like natures with them; and they must live in common houses and meet at common meals. None of them will have anything specially his or her own; they will be together, and will be brought up together, and will associate at gymnastic exercises. And so they will be drawn by a

The legislator will select guardians male and female, who will

necessity of their natures to have intercourse with each other—necessity is not too strong a word, I think?

Yes, he said;—necessity, not geometrical, but another sort of necessity which lovers know, and which is far more convincing and constraining to the mass of mankind.

meet at common meals and exercises, and will be drawn to one another by an irresistible necessity.

True, I said; and this, Glaucon, like all the rest, must proceed after an orderly fashion; in a city of the blessed, licentiousness is an unholy thing which the rulers will forbid.

Yes, he said, and it ought not to be permitted.

Then clearly the next thing will be to make matrimony sacred in the highest degree, and what is most beneficial will be deemed sacred?

459Exactly.

And how can marriages be made most beneficial?—that is a question which I put to you, because I see in your house dogs for hunting, and of the nobler sort of birds not a few. Now, I beseech you, do tell me, have you ever attended to their pairing and breeding?

The breeding of human beings, as of animals, to be from the best and from those who are of a ripe age.

In what particulars?

Why, in the first place, although they are all of a good sort, are not some better than others?

True.

And do you breed from them all indifferently, or do you take care to breed from the best only?

From the best.

And do you take the oldest or the youngest, or only those of ripe age?

I choose only those of ripe age.

And if care was not taken in the breeding, your dogs and birds would greatly deteriorate?

Certainly.

And the same of horses and of animals in general?

Undoubtedly.

Good heavens! my dear friend, I said, what consummate skill will our rulers need if the same principle holds of the human species!

Certainly, the same principle holds; but why does this involve any particular skill?

Because, I said, our rulers will often have to practise upon the body corporate with medicines. Now you know that when patients do not require medicines, but have only to be put under a regimen, the inferior sort of practitioner is deemed to be good enough; but when medicine has to be given, then the doctor should be more of a man.

Useful lies 'very honest knaveries.'

That is quite true, he said; but to what are you alluding?

I mean, I replied, that our rulers will find a considerable dose of falsehood and deceit necessary for the good of their subjects: we were saying that the use of all these things regarded as medicines might be of advantage.

And we were very right.

And this lawful use of them seems likely to be often needed in the regulations of marriages and births.

How so?

Why, I said, the principle has been already laid down that the best of either sex should be united with the best as often, and the inferior with the inferior, as seldom as possible; and that they should rear the offspring of the one sort of union, but not of the other, if the flock is to be maintained in first-rate condition. Now these goings on must be a secret which the rulers only know, or there will be a further danger of our herd, as the guardians may be termed, breaking out into rebellion.

Arrangements for the improvement of the breed;

Very true.

Had we not better appoint certain festivals at which we will bring together the brides and bridegrooms, and sacrifices will be offered and suitable hymeneal songs composed by our poets: the number of weddings is a matter which must be left to the discretion of the rulers, whose aim will be to preserve the average of population? There are many other things which they will have to consider, such as the effects of wars and diseases and any similar agencies, in order as far as this is possible to prevent the State from becoming either too large or too small.

and for the regulation of population.

Certainly, he replied.

We shall have to invent some ingenious kind of lots which the less worthy may draw on each occasion of our bringing them together, and then they will accuse their own ill-luck and not the rulers.

Pairing by lot.

To be sure, he said.

And I think that our braver and better youth, besides their other honours and rewards, might have greater facilities of intercourse with women given them; their bravery will be a reason, and such fathers ought to have as many sons as possible.

The brave deserve the fair.

True.

And the proper officers, whether male or female or both, for offices are to be held by women as well as by men—

Yes—

The proper officers will take the offspring of the good parents to the pen or fold, and there they will deposit them with certain nurses who dwell in a separate quarter; but the offspring of the inferior, or of the better when they chance to be deformed, will be put away in some mysterious, unknown place, as they should be.

What is to be done with the children?

Yes, he said, that must be done if the breed of the guardians is to be kept pure.

They will provide for their nurture, and will bring the mothers to the fold when they are full of milk, taking the greatest possible care that no mother recognises her own child; and other wet-nurses may be engaged if more are required. Care will also be taken that the process of suckling shall not be protracted too long; and the mothers will have no getting up at night or other trouble, but will hand over all this sort of thing to the nurses and attendants.

You suppose the wives of our guardians to have a fine easy time of it when they are having children.

Why, said I, and so they ought. Let us, however, proceed with our scheme. We were saying that the parents should be in the prime of life?

Very true.

And what is the prime of life? May it not be defined as a period of about twenty years in a woman's life, and thirty in a man's?

Which years do you mean to include?

A woman, I said, at twenty years of age may begin to bear children to the State, and continue to bear them until forty; a man may begin at five-and-twenty, when he has passed the point at which the pulse of life beats quickest, and continue to beget children until he be fifty-five.

A woman to bear children from

461 Certainly, he said, both in men and women those years are the prime of physical as well as of intellectual vigour.

Any one above or below the prescribed ages who takes part in the public hymeneals shall be said to have done an unholy and unrighteous thing; the child of which he is the father, if it steals into life, will have been conceived under auspices very unlike the sacrifices and prayers, which at each hymeneal priestesses and priests and the whole city will offer, that the new generation may be better and more useful than their good and useful parents, whereas his child will be the offspring of darkness and strange lust.

twenty to forty; a man to beget them from twenty-five to fifty-five.

Very true, he replied.

And the same law will apply to any one of those within the prescribed age who forms a connection with any woman in the prime of life without the sanction of the rulers; for we shall say that he is raising up a bastard to the State, uncertified and unconsecrated.

Very true, he replied.

This applies, however, only to those who are within the specified age: after that we allow them to range at will, except that a man may not marry his daughter or his daughter's daughter, or his mother or his mother's mother; and women, on the other hand, are prohibited from marrying their sons or fathers, or son's son or father's father, and so on in either direction. And we grant all this, accompanying the permission with strict orders to prevent any embryo which may come into being from seeing the light; and if any force a way to the birth, the parents must understand that the offspring of such an union cannot be maintained, and arrange accordingly.

After the prescribed age has been passed, more licence is allowed: but all who were born after certain hymeneal festivals at which their parents or grandparents came together must be kept separate.

That also, he said, is a reasonable proposition. But how will they know who are fathers and daughters, and so on?

They will never know. The way will be this:—dating from the day of the hymeneal, the bridegroom who was then married will call all the male children who are born in the seventh and the tenth month afterwards his sons, and the female children his daughters, and they will call him father, and he will call their children his grandchildren, and they will call the elder generation grandfathers and grandmothers. All who were begotten at the time when their fathers and mothers came together will be called their brothers and sisters, and these, as I was saying, will be forbidden to intermarry. This, however, is not to be understood as an absolute prohibition of the marriage of brothers and sisters; if the lot favours them, and they receive the sanction of the Pythian oracle, the law will allow them.

Quite right, he replied.

Such is the scheme, Glaucon, according to which the guardians of our State are to have their wives and families in common. And now you would have the argument show that this community is consistent with the rest of our polity, and also that nothing can be better—would you not?

462 Yes, certainly.

Shall we try to find a common basis by asking of ourselves what ought to be the chief aim of the legislator in making laws and in the organization of a State,—what is the greatest good, and what is the greatest evil, and then consider whether our previous description has the stamp of the good or of the evil?

By all means.

Can there be any greater evil than discord and distraction and plurality where unity ought to reign? or any greater good than the bond of unity?

The greatest good of States, unity; the greatest evil, discord. The one the result of public, the other of private feelings.

There cannot.

And there is unity where there is community of pleasures and pains—where all the citizens are glad or grieved on the same occasions of joy and sorrow?

No doubt.

Yes; and where there is no common but only private feeling a State is disorganized—when you have one half of the world triumphing and the other plunged in grief at the same events happening to the city or the citizens?

Certainly.

Such differences commonly originate in a disagreement about the use of the terms ‘mine’ and ‘not mine,’ ‘his’ and ‘not his.’

Exactly so.

And is not that the best-ordered State in which the greatest number of persons apply the terms ‘mine’ and ‘not mine’ in the same way to the same thing?

Quite true.

Or that again which most nearly approaches to the condition of the individual—as in the body, when but a finger of one of us is hurt, the whole frame, drawn towards the soul as a centre and forming one kingdom under the ruling power therein, feels the hurt and sympathizes all together with the part affected, and we say that the man has a pain in his finger; and the same expression is used about any

The State like a living being which feels altogether when hurt in any part.

other part of the body, which has a sensation of pain at suffering or of pleasure at the alleviation of suffering.

Very true, he replied; and I agree with you that in the best-ordered State there is the nearest approach to this common feeling which you describe.

Then when any one of the citizens experiences any good or evil, the whole State will make his case their own, and will either rejoice or sorrow with him?

Yes, he said, that is what will happen in a well-ordered State.

It will now be time, I said, for us to return to our State and see whether this or some other form is most in accordance with these fundamental principles.

How different are the terms which are applied to the rulers in other States and in our own!

Very good.

463 Our State like every other has rulers and subjects?

True.

All of whom will call one another citizens?

Of course.

But is there not another name which people give to their rulers in other States?

Generally they call them masters, but in democratic States they simply call them rulers.

And in our State what other name besides that of citizens do the people give the rulers?

They are called saviours and helpers, he replied.

And what do the rulers call the people?

Their maintainers and foster-fathers.

And what do they call them in other States?

Slaves.

And what do the rulers call one another in other States?

Fellow-rulers.

And what in ours?

Fellow-guardians.

Did you ever know an example in any other State of a ruler who would speak of one of his colleagues as his friend and of another as not being his friend?

Yes, very often.

And the friend he regards and describes as one in whom he has an interest, and the other as a stranger in whom he has no interest?

Exactly.

But would any of your guardians think or speak of any other guardian as a stranger?

Certainly he would not; for every one whom they meet will be regarded by them either as a brother or sister, or father or mother, or son or daughter, or as the child or parent of those who are thus connected with him.

Capital, I said; but let me ask you once more: Shall they be a family in name only; or shall they in all their actions be true to the name? For example, in the use of the word ‘father,’ would the care of a father be implied and the filial reverence and duty and obedience to him which the law commands; and is the violator of these duties to be regarded as an impious and unrighteous person who is not likely to receive much good either at the hands of God or of man? Are these to be or not to be the strains which the children will hear repeated in their ears by all the citizens about those who are intimated to them to be their parents and the rest of their kinsfolk?

The State one family.

These, he said, and none other; for what can be more ridiculous than for them to utter the names of family ties with the lips only and not to act in the spirit of them?

Using the same terms, they will have the same modes of thinking and acting, and this is to be attributed mainly to the community of women and children.

Then in our city the language of harmony and concord will be more often heard than in any other. As I was describing before, when any one is well or ill, the universal word will be ‘with me it is well’ or ‘it is ill.’

464Most true.

And agreeably to this mode of thinking and speaking, were we not saying that they will have their pleasures and pains in common?

Yes, and so they will.

And they will have a common interest in the same thing which they will alike call ‘my own,’ and having this common interest they will have a common feeling of pleasure and pain?

Yes, far more so than in other States.

And the reason of this, over and above the general constitution of the State, will be that the guardians will have a community of women and children?

That will be the chief reason.

And this unity of feeling we admitted to be the greatest good, as was implied in our own comparison of a well-ordered State to the relation of the body and the members, when affected by pleasure or pain?

That we acknowledged, and very rightly.

Then the community of wives and children among our citizens is clearly the source of the greatest good to the State?

Certainly.

And this agrees with the other principle which we were affirming,—that the guardians were not to have houses or lands or any other property; their pay was to be their food, which they were to receive from the other citizens, and they were to have no private expenses; for we intended them to preserve their true character of guardians.

Right, he replied.

Both the community of property and the community of families, as I am saying, tend to make them more truly guardians; they will not tear the city in pieces by differing about ‘mine’ and ‘not mine;’ each man dragging any acquisition which he has made into a separate house of his own, where he has a separate wife and children and private pleasures and pains; but all will be affected as far as may be by the same pleasures and pains because they are all of one opinion about what is near and dear to them, and therefore they all tend towards a common end.

There will be no private interests among them, and therefore no lawsuits or trials for assault or violence to elders.

Certainly, he replied.

And as they have nothing but their persons which they can call their own, suits and complaints will have no existence among them; they will be delivered from all those quarrels of which money or children or relations are the occasion.

Of course they will.

Neither will trials for assault or insult ever be likely to occur among them. For that equals should defend themselves against equals we shall maintain to be honourable
465and right; we shall make the protection of the person a matter of necessity.

That is good, he said.

Yes; and there is a further good in the law; viz. that if a man has a quarrel with another he will satisfy his resentment then and there, and not proceed to more dangerous lengths.

Certainly.

To the elder shall be assigned the duty of ruling and chastising the younger.

Clearly.

Nor can there be a doubt that the younger will not strike or do any other violence to an elder, unless the magistrates command him; nor will he slight him in any way. For there are two guardians, shame and fear, mighty to prevent him: shame, which makes men refrain from laying hands on those who are to them in the relation of parents; fear, that the injured one will be succoured by the others who are his brothers, sons, fathers.

That is true, he replied.

Then in every way the laws will help the citizens to keep the peace with one another?

Yes, there will be no want of peace.

And as the guardians will never quarrel among themselves there will be no danger of the rest of the city being divided either against them or against one another.

From how many other evils will our citizens be delivered!

None whatever.

I hardly like even to mention the little meannesses of which they will be rid, for they are beneath notice: such, for example, as the flattery of the rich by the poor, and all the pains and pangs which men experience in bringing up a family, and in finding money to buy necessities for their household, borrowing and then repudiating, getting how they can, and giving the money into the hands of women and slaves to keep—the many evils of so many kinds which people suffer in this way are mean enough and obvious enough, and not worth speaking of.

Yes, he said, a man has no need of eyes in order to perceive that.

And from all these evils they will be delivered, and their life will be blessed as the life of Olympic victors and yet more blessed.

How so?

The Olympic victor, I said, is deemed happy in receiving a part only of the blessedness which is secured to our citizens, who have won a more glorious victory and have a more complete maintenance at the public cost. For the victory which they have won is the salvation of the whole State; and the crown with which they and their

children are crowned is the fulness of all that life needs; they receive rewards from the hands of their country while living, and after death have an honourable burial.

Yes, he said, and glorious rewards they are.

Do you remember, I said, how in the course of the previous discussion¹ some one who shall be nameless accused us of making our guardians unhappy—they had nothing and might have possessed all things—to whom we replied that, if an occasion offered, we might perhaps hereafter consider this question, but that, as at present advised, we would make our guardians truly guardians, and that we were fashioning the State with a view to the greatest happiness, not of any particular class, but of the whole?

Answer to the charge of Adeimantus that we made our citizens unhappy for their own good.

Yes, I remember.

And what do you say, now that the life of our protectors is made out to be far better and nobler than that of Olympic victors—is the life of shoemakers, or any other artisans, or of husbandmen, to be compared with it?

Their life not to be compared with that of citizens in ordinary States.

Certainly not.

At the same time I ought here to repeat what I have said elsewhere, that if any of our guardians shall try to be happy in such a manner that he will cease to be a guardian, and is not content with this safe and harmonious life, which, in our judgment, is of all lives the best, but infatuated by some youthful conceit of happiness which gets up into his head shall seek to appropriate the whole state to himself, then he will have to learn how wisely Hesiod spoke, when he said, ‘half is more than the whole.’

He who seeks to be more than a guardian is naught.

If he were to consult me, I should say to him: Stay where you are, when you have the offer of such a life.

You agree then, I said, that men and women are to have a common way of life such as we have described—common education, common children; and they are to watch over the citizens in common whether abiding in the city or going out to war; they are to keep watch together, and to hunt together like dogs; and always and in all things, as far as they are able, women are to share with the men? And in so doing they will do what is best, and will not violate, but preserve the natural relation of the sexes.

The common way of life includes common education, common children, common services and duties of men and women.

I agree with you, he replied.

The enquiry, I said, has yet to be made, whether such a community will be found possible—as among other animals, so also among men—and if possible, in what way possible?

You have anticipated the question which I was about to suggest.

There is no difficulty, I said, in seeing how war will be carried on by them.

How?

Why, of course they will go on expeditions together; and will take with them any of their children who are strong enough, that, after the manner of the artisan's child, they may look on at the work which they will have to do when they are grown up; and besides looking on they will have to help and be of use in war, and to wait upon their fathers and mothers. Did you never observe in the arts how the potters' boys look on and help, long before they touch the wheel?

The children to accompany their parents on military expeditions;

Yes, I have.

And shall potters be more careful in educating their children and in giving them the opportunity of seeing and practising their duties than our guardians will be?

The idea is ridiculous, he said.

There is also the effect on the parents, with whom, as with other animals, the presence of their young ones will be the greatest incentive to valour.

That is quite true, Socrates; and yet if they are defeated, which may often happen in war, how great the danger is! the children will be lost as well as their parents, and the State will never recover.

True, I said; but would you never allow them to run any risk?

I am far from saying that.

Well, but if they are ever to run a risk should they not do so on some occasion when, if they escape disaster, they will be the better for it?

Clearly.

Whether the future soldiers do or do not see war in the days of their youth is a very important matter, for the sake of which some risk may fairly be incurred.

but care must be taken that they do not run any serious risk.

Yes, very important.

This then must be our first step,—to make our children spectators of war; but we must also contrive that they shall be secured against danger; then all will be well.

True.

Their parents may be supposed not to be blind to the risks of war, but to know, as far as human foresight can, what expeditions are safe and what dangerous?

That may be assumed.

And they will take them on the safe expeditions and be cautious about the dangerous ones?

True.

And they will place them under the command of experienced veterans who will be their leaders and teachers?

Very properly.

Still, the dangers of war cannot be always foreseen; there is a good deal of chance about them?

True.

Then against such chances the children must be at once furnished with wings, in order that in the hour of need they may fly away and escape.

What do you mean? he said.

I mean that we must mount them on horses in their earliest youth, and when they have learnt to ride, take them on horseback to see war: the horses must not be spirited and warlike, but the most tractable and yet the swiftest that can be had. In this way they will get an excellent view of what is hereafter to be their own business; and if there is danger they have only to follow their elder leaders and escape.

I believe that you are right, he said.

Next, as to war; what are to be the relations of your soldiers to one another and to their enemies? I should be inclined to propose that the soldier who leaves his rank or throws away his arms, or is guilty of any other act of cowardice, should be degraded into the rank of a husbandman or artisan. What do you think?

The coward is to be degraded into a lower rank.

By all means, I should say.

And he who allows himself to be taken prisoner may as well be made a present of to his enemies; he is their lawful prey, and let them do what they like with him.

Certainly.

The hero to receive honour from his

But the hero who has distinguished himself, what shall be done to him? In the first place, he shall receive honour in the army from his youthful comrades; every one of them in succession shall crown him. What do you say?

comrades and favour
from his beloved,

I approve.

And what do you say to his receiving the right hand of fellowship?

To that too, I agree.

But you will hardly agree to my next proposal.

What is your proposal?

That he should kiss and be kissed by them.

Most certainly, and I should be disposed to go further, and say: Let no one whom he has a mind to kiss refuse to be kissed by him while the expedition lasts. So that if there be a lover in the army, whether his love be youth or maiden, he may be more eager to win the prize of valour.

Capital, I said. That the brave man is to have more wives than others has been already determined: and he is to have first choices in such matters more than others, in order that he may have as many children as possible?

Agreed.

Again, there is another manner in which, according to Homer, brave youths should be honoured; for he tells how Ajax¹, after he had distinguished himself in battle, was rewarded with long chins, which seems to be a compliment appropriate to a hero in the flower of his age, being not only a tribute of honour but also a very strengthening thing.

and to have
precedence, and a
larger share of meats
and drinks;

Most true, he said.

Then in this, I said, Homer shall be our teacher; and we too, at sacrifices and on the like occasions, will honour the brave according to the measure of their valour, whether men or women, with hymns and those other distinctions which we were mentioning; also with

‘seats of precedence, and meats and full cups¹’;

and in honouring them, we shall be at the same time training them.

That, he replied, is excellent.

Yes, I said; and when a man dies gloriously in war shall we not say, in the first place, that he is of the golden race?

To be sure.

Nay, have we not the authority of Hesiod for affirming that when they are dead

also to be worshipped after death.

469‘They are holy angels upon the earth, authors of good, averters of evil, the guardians of speech-gifted men’?[2](#)

Yes; and we accept his authority.

We must learn of the god how we are to order the sepulture of divine and heroic personages, and what is to be their special distinction; and we must do as he bids?

By all means.

And in ages to come we will reverence them and kneel before their sepulchres as at the graves of heroes. And not only they but any who are deemed pre-eminently good, whether they die from age, or in any other way, shall be admitted to the same honours.

That is very right, he said.

Next, how shall our soldiers treat their enemies? What about this?

Behaviour to enemies.

In what respect do you mean?

First of all, in regard to slavery? Do you think it right that Hellenes should enslave Hellenic States, or allow others to enslave them, if they can help? Should not their custom be to spare them, considering the danger which there is that the whole race may one day fall under the yoke of the barbarians?

To spare them is infinitely better.

Then no Hellene should be owned by them as a slave; that is a rule which they will observe and advise the other Hellenes to observe.

Certainly, he said; they will in this way be united against the barbarians and will keep their hands off one another.

No Hellene shall be made a slave.

Next as to the slain; ought the conquerors, I said, to take anything but their armour? Does not the practice of despoiling an enemy afford an excuse for not facing the battle? Cowards skulk about the dead, pretending that they are fulfilling a duty, and many an army before now has been lost from this love of plunder.

Very true.

And is there not illiberality and avarice in robbing a corpse, and also a degree of meanness and womanishness in making an enemy of the dead body when the real enemy has flown away and left only his fighting gear behind him,—is not this rather like a dog who cannot get at his assailant, quarrelling with the stones which strike him instead?

Those who fall in battle are not to be despoiled.

Very like a dog, he said.

Then we must abstain from spoiling the dead or hindering their burial?

Yes, he replied, we most certainly must.

Neither shall we offer up arms at the temples of the gods, 470 least of all the arms of Hellenes, if we care to maintain good feeling with other Hellenes; and, indeed, we have reason to fear that the offering of spoils taken from kinsmen may be a pollution unless commanded by the god himself?

The arms of Hellenes are not to be offered at temples;

Very true.

Again, as to the devastation of Hellenic territory or the burning of houses, what is to be the practice?

May I have the pleasure, he said, of hearing your opinion?

Both should be forbidden, in my judgment; I would take the annual produce and no more. Shall I tell you why?

Pray do.

Why, you see, there is a difference in the names ‘discord’ and ‘war,’ and I imagine that there is also a difference in their natures; the one is expressive of what is internal and domestic, the other of what is external and foreign; and the first of the two is termed discord, and only the second, war.

nor Hellenic territory devastated.

That is a very proper distinction, he replied.

And may I not observe with equal propriety that the Hellenic race is all united together by ties of blood and friendship, and alien and strange to the barbarians?

Very good, he said.

And therefore when Hellenes fight with barbarians and barbarians with Hellenes, they will be described by us as being at war when they fight, and by nature enemies, and this kind of antagonism should be called war; but when Hellenes fight with

Hellenic warfare is only a kind of discord not intended to be lasting.

one another we shall say that Hellas is then in a state of disorder and discord, they being by nature friends; and such enmity is to be called discord.

I agree.

Consider then, I said, when that which we have acknowledged to be discord occurs, and a city is divided, if both parties destroy the lands and burn the houses of one another, how wicked does the strife appear! No true lover of his country would bring himself to tear in pieces his own nurse and mother: There might be reason in the conqueror depriving the conquered of their harvest, but still they would have the idea of peace in their hearts and would not mean to go on fighting for ever.

Yes, he said, that is a better temper than the other.

And will not the city, which you are founding, be an Hellenic city?

It ought to be, he replied.

Then will not the citizens be good and civilized?

Yes, very civilized.

And will they not be lovers of Hellas, and think of Hellas as their own land, and share in the common temples?

The lover of his own city will also be a lover of Hellas.

Most certainly.

And any difference which arises among them will be regarded by them as discord only—a quarrel among friends, which is not to be called a war?

Certainly not.

Then they will quarrel as those who intend some day to be reconciled?

Certainly.

They will use friendly correction, but will not enslave or destroy their opponents; they will be correctors, not enemies?

Just so.

And as they are Hellenes themselves they will not devastate Hellas, nor will they burn houses, nor ever suppose that the whole population of a city—men, women, and children—are equally their enemies, for they know that the guilt of war is always confined to a few persons and that the many are their friends. And for all these reasons they will be unwilling to waste their lands and rase their houses; their enmity to them will only last until the many innocent sufferers have compelled the guilty few to give satisfaction?

Hellenes should deal mildly with Hellenes; and with barbarians as Hellenes now deal with one another.

I agree, he said, that our citizens should thus deal with their Hellenic enemies; and with barbarians as the Hellenes now deal with one another.

Then let us enact this law also for our guardians:—that they are neither to devastate the lands of Hellenes nor to burn their houses.

Agreed; and we may agree also in thinking that these, like all our previous enactments, are very good.

But still I must say, Socrates, that if you are allowed to go on in this way you will entirely forget the other question which at the commencement of this discussion you thrust aside:—Is such an order of things possible, and how, if at all? For I am quite ready to acknowledge that the plan which you propose, if only feasible, would do all sorts of good to the State. I will add, what you have omitted, that your citizens will be the bravest of warriors, and will never leave their ranks, for they will all know one another, and each will call the other father, brother, son; and if you suppose the women to join their armies, whether in the same rank or in the rear, either as a terror to the enemy, or as auxiliaries in case of need, I know that they will then be absolutely invincible; and there are many domestic advantages which might also be mentioned and which I also fully acknowledge: but, as I admit all these advantages and as many more as you please, if only this State of yours were to come into existence, we need say no more about them; assuming then the existence of the State, let us now turn to the question of possibility and ways and means—the rest may be left.

The complaint of Glaucon respecting the hesitation of Socrates.

472If I loiter¹ for a moment, you instantly make a raid upon me, I said, and have no mercy; I have hardly escaped the first and second waves, and you seem not to be aware that you are now bringing upon me the third, which is the greatest and heaviest. When you have seen and heard the third wave, I think you will be more considerate and will acknowledge that some fear and hesitation was natural respecting a proposal so extraordinary as that which I have now to state and investigate.

Socrates excuses himself and makes one or two remarks preparatory to a final effort.

The more appeals of this sort which you make, he said, the more determined are we that you shall tell us how such a State is possible: speak out and at once.

Let me begin by reminding you that we found our way hither in the search after justice and injustice.

True, he replied; but what of that?

I was only going to ask whether, if we have discovered them, we are to require that the just man should in nothing fail of absolute justice; or may we be satisfied with an approximation, and the attainment in him of a higher degree of justice than is to be found in other men?

The approximation will be enough.

We were enquiring into the nature of absolute justice and into the character of the perfectly just, and into injustice and the perfectly unjust, that we might have an ideal. We were to look at these in order that we might judge of our own happiness and unhappiness according to the standard which they exhibited and the degree in which we resembled them, but not with any view of showing that they could exist in fact.

(1) The ideal is a standard only which can never be perfectly realized;

True, he said.

Would a painter be any the worse because, after having delineated with consummate art an ideal of a perfectly beautiful man, he was unable to show that any such man could ever have existed?

He would be none the worse.

Well, and were we not creating an ideal of a perfect State?

To be sure.

And is our theory a worse theory because we are unable to prove the possibility of a city being ordered in the manner described?

Surely not, he replied.

That is the truth, I said. But if, at your request, I am to try and show how and under what conditions the possibility is highest, I must ask you, having this in view, to repeat your former admissions.

(2) but is none the worse for this.

What admissions?

473I want to know whether ideals are ever fully realized in language? Does not the word express more than the fact, and must not the actual, whatever a man may think, always, in the nature of things, fall short of the truth? What do you say?

I agree.

Then you must not insist on my proving that the actual State will in every respect coincide with the ideal: if we are only able to discover how a city may be governed nearly as we proposed, you will admit that we have discovered the possibility which you demand; and will be contented. I am sure that I should be contented—will not you?

Yes, I will.

(3) Although the ideal cannot be realized, one or two changes,

Let me next endeavour to show what is that fault in States which is the cause of their present maladministration, and what is the least change which will enable a State to pass into the truer form; and let the change, if possible, be of one thing only, or, if not, of two; at any rate, let the changes be as few and slight as possible.

or rather a single change, might revolutionize a State.

Certainly, he replied.

I think, I said, that there might be a reform of the State if only one change were made, which is not a slight or easy though still a possible one.

What is it? he said.

Now then, I said, I go to meet that which I liken to the greatest of the waves; yet shall the word be spoken, even though the wave break and drown me in laughter and dishonour; and do you mark my words.

Socrates goes forth to meet the wave.

Proceed.

I said: *Until philosophers are kings, or the kings and princes of this world have the spirit and power of philosophy, and political greatness and wisdom meet in one, and those commoner natures who pursue either to the exclusion of the other are compelled to stand aside, cities will never have rest from their evils,—no, nor the human race, as I believe,—and then only will this our State have a possibility of life and behold the light of day.* Such was the thought, my dear Glaucon, which I would fain have uttered if it had not seemed too extravagant; for to be convinced that in no other State can there be happiness private or public is indeed a hard thing.

‘Cities will never cease from ill until they are governed by philosophers.’

Socrates, what do you mean? I would have you consider that the word which you have uttered is one at which numerous persons, and very respectable persons too, in a 474figure pulling off their coats all in a moment, and seizing any weapon that comes to hand, will run at you might and main, before you know where you are, intending to do heaven knows what; and if you don’t prepare an answer, and put yourself in motion, you will be ‘pared by their fine wits,’ and no mistake.

What will the world say to this?

You got me into the scrape, I said.

And I was quite right; however, I will do all I can to get you out of it; but I can only give you good-will and good advice, and, perhaps, I may be able to fit answers to your questions better than another—that is all. And now, having such an auxiliary, you must do your best to show the unbelievers that you are right.

I ought to try, I said, since you offer me such invaluable assistance. And I think that, if there is to be a chance of our escaping, we must explain to them whom we mean when we say that philosophers are to rule in the State; then we shall be able to defend ourselves:

But who is a philosopher?

There will be discovered to be some natures who ought to study philosophy and to be leaders in the State; and others who are not born to be philosophers, and are meant to be followers rather than leaders.

Then now for a definition, he said.

Follow me, I said, and I hope that I may in some way or other be able to give you a satisfactory explanation.

Proceed.

I dare say that you remember, and therefore I need not remind you, that a lover, if he is worthy of the name, ought to show his love, not to some one part of that which he loves, but to the whole.

Parallel of the lover.

I really do not understand, and therefore beg of you to assist my memory.

Another person, I said, might fairly reply as you do; but a man of pleasure like yourself ought to know that all who are in the flower of youth do somehow or other raise a pang or emotion in a lover's breast, and are thought by him to be worthy of his affectionate regards. Is not this a way which you have with the fair: one has a snub nose, and you praise his charming face; the hook-nose of another has, you say, a royal look; while he who is neither snub nor hooked has the grace of regularity: the dark visage is manly, the fair are children of the gods; and as to the sweet 'honey pale,' as they are called, what is the very name but the invention of a lover who talks in diminutives, and is not averse to paleness if appearing on the cheek of youth? In a word, there is no excuse which you will not make, and nothing which you will not say, in order not to lose a single flower that blooms in the spring-time of youth.

The lover of the fair loves them all;

If you make me an authority in matters of love, for the sake of the argument, I assent.

And what do you say of lovers of wine? Do you not see them doing the same? They are glad of any pretext of drinking any wine.

the lover of wines all wines;

Very good.

And the same is true of ambitious men; if they cannot command an army, they are willing to command a file; and if they cannot be honoured by really great and important persons, they are glad to be honoured by lesser and meaner people,—but honour of some kind they must have.

the lover of honour all honour;

Exactly.

Once more let me ask: Does he who desires any class of goods, desire the whole class or a part only?

The whole.

And may we not say of the philosopher that he is a lover, not of a part of wisdom only, but of the whole?

the philosopher, or lover of wisdom, all knowledge.

Yes, of the whole.

And he who dislikes learning, especially in youth, when he has no power of judging what is good and what is not, such an one we maintain not to be a philosopher or a lover of knowledge, just as he who refuses his food is not hungry, and may be said to have a bad appetite and not a good one?

Very true, he said.

Whereas he who has a taste for every sort of knowledge and who is curious to learn and is never satisfied, may be justly termed a philosopher? Am I not right?

Glaucon said: If curiosity makes a philosopher, you will find many a strange being will have a title to the name. All the lovers of sights have a delight in learning, and must therefore be included. Musical amateurs, too, are a folk strangely out of place among philosophers, for they are the last persons in the world who would come to anything like a philosophical discussion, if they could help, while they run about at the Dionysiac festivals as if they had let out their ears to hear every chorus; whether the performance is in town or country—that makes no difference—they are there. Now are we to maintain that all these and any who have similar tastes, as well as the professors of quite minor arts, are philosophers?

Under knowledge, however, are not to be included sights and sounds, or under the lovers of knowledge, musical amateurs and the like.

Certainly not, I replied; they are only an imitation.

He said: Who then are the true philosophers?

Those, I said, who are lovers of the vision of truth.

That is also good, he said; but I should like to know what you mean?

To another, I replied, I might have a difficulty in explaining; but I am sure that you will admit a proposition which I am about to make.

What is the proposition?

That since beauty is the opposite of ugliness, they are two?

Certainly.

476And inasmuch as they are two, each of them is one?

True again.

And of just and unjust, good and evil, and of every other class, the same remark holds: taken singly, each of them is one; but from the various combinations of them with actions and things and with one another, they are seen in all sorts of lights and appear many?

Very true.

And this is the distinction which I draw between the sight-loving, art-loving, practical class and those of whom I am speaking, and who are alone worthy of the name of philosophers.

How do you distinguish them? he said.

The lovers of sounds and sights, I replied, are, as I conceive, fond of fine tones and colours and forms and all the artificial products that are made out of them, but their mind is incapable of seeing or loving absolute beauty.

True, he replied.

Few are they who are able to attain to the sight of this.

Very true.

And he who, having a sense of beautiful things has no sense of absolute beauty, or who, if another lead him to a knowledge of that beauty is unable to follow—of such an one I ask, Is he awake or in a dream only? Reflect: is not the dreamer, sleeping or waking, one who likens dissimilar things, who puts the copy in the place of the real object?

I should certainly say that such an one was dreaming.

But take the case of the other, who recognises the existence of absolute beauty and is able to distinguish the idea from the objects which participate in the idea, neither putting the objects in the place of the idea nor the idea in the place of the objects—is he a dreamer, or is he awake?

True knowledge is the ability to distinguish between the one and many, between the idea and the objects which partake of the idea.

He is wide awake.

And may we not say that the mind of the one who knows has knowledge, and that the mind of the other, who opines only, has opinion?

Certainly.

But suppose that the latter should quarrel with us and dispute our statement, can we administer any soothing cordial or advice to him, without revealing to him that there is sad disorder in his wits?

We must certainly offer him some good advice, he replied.

Come, then, and let us think of something to say to him. Shall we begin by assuring him that he is welcome to any knowledge which he may have, and that we are rejoiced at his having it? But we should like to ask him a question: Does he who has knowledge know something or nothing? (You must answer for him.)

I answer that he knows something.

Something that is or is not?

Something that is; for how can that which is not ever be known?

477 And are we assured, after looking at the matter from many points of view, that absolute being is or may be absolutely known, but that the utterly non-existent is utterly unknown?

Nothing can be more certain.

Good. But if there be anything which is of such a nature as to be and not to be, that will have a place intermediate between pure being and the absolute negation of being?

There is an intermediate between being and not being, and a corresponding intermediate between ignorance and knowledge. This intermediate is a faculty termed opinion.

Yes, between them.

And, as knowledge corresponded to being and ignorance of necessity to not-being, for that intermediate between being and not-being there has to be discovered a corresponding intermediate between ignorance and knowledge, if there be such?

Certainly.

Do we admit the existence of opinion?

Undoubtedly.

As being the same with knowledge, or another faculty?

Another faculty.

Then opinion and knowledge have to do with different kinds of matter corresponding to this difference of faculties?

Yes.

And knowledge is relative to being and knows being. But before I proceed further I will make a division.

What division?

I will begin by placing faculties in a class by themselves: they are powers in us, and in all other things, by which we do as we do. Sight and hearing, for example, I should call faculties. Have I clearly explained the class which I mean?

Yes, I quite understand.

Then let me tell you my view about them. I do not see them, and therefore the distinctions of figure, colour, and the like, which enable me to discern the differences of some things, do not apply to them. In speaking of a faculty I think only of its sphere and its result; and that which has the same sphere and the same result I call the same faculty, but that which has another sphere and another result I call different. Would that be your way of speaking?

Yes.

And will you be so very good as to answer one more question? Would you say that knowledge is a faculty, or in what class would you place it?

Certainly knowledge is a faculty, and the mightiest of all faculties.

And is opinion also a faculty?

Certainly, he said; for opinion is that with which we are able to form an opinion.

And yet you were acknowledging a little while ago that knowledge is not the same as opinion?

478Why, yes, he said: how can any reasonable being ever identify that which is infallible with that which errs?

Opinion differs from knowledge because the one errs and the other is unerring.

An excellent answer, proving, I said, that we are quite conscious of a distinction between them.

Yes.

Then knowledge and opinion having distinct powers have also distinct spheres or subject-matters?

That is certain.

Being is the sphere or subject-matter of knowledge, and knowledge is to know the nature of being?

Yes.

And opinion is to have an opinion?

Yes.

And do we know what we opine? or is the subject-matter of opinion the same as the subject-matter of knowledge?

Nay, he replied, that has been already disproven; if difference in faculty implies difference in the sphere or subject-matter, and if, as we were saying, opinion and knowledge are distinct faculties, then the sphere of knowledge and of opinion cannot be the same.

Then if being is the subject-matter of knowledge, something else must be the subject-matter of opinion?

Yes, something else.

Well then, is not-being the subject-matter of opinion? or, rather, how can there be an opinion at all about not-being? Reflect: when a man has an opinion, has he not an opinion about something? Can he have an opinion which is an opinion about nothing?

It also differs from ignorance, which is concerned with nothing.

Impossible.

He who has an opinion has an opinion about some one thing?

Yes.

And not-being is not one thing but, properly speaking, nothing?

True.

Of not-being, ignorance was assumed to be the necessary correlative; of being, knowledge?

True, he said.

Then opinion is not concerned either with being or with not-being?

Not with either.

And can therefore neither be ignorance nor knowledge?

That seems to be true.

But is opinion to be sought without and beyond either of them, in a greater clearness than knowledge, or in a greater darkness than ignorance?

Its place is not to be sought without or beyond knowledge or ignorance, but between them.

In neither.

Then I suppose that opinion appears to you to be darker than knowledge, but lighter than ignorance?

Both; and in no small degree.

And also to be within and between them?

Yes.

Then you would infer that opinion is intermediate?

No question.

But were we not saying before, that if anything appeared to be of a sort which is and is not at the same time, that sort of thing would appear also to lie in the interval between pure being and absolute not-being; and that the corresponding faculty is neither knowledge nor ignorance, but will be found in the interval between them?

True.

And in that interval there has now been discovered something which we call opinion?

There has.

Then what remains to be discovered is the object which partakes equally of the nature of being and not-being, and cannot rightly be termed either, pure and simple; this unknown term, when discovered, we may truly call the subject of opinion, and assign each to their proper faculty,—the extremes to the faculties of the extremes and the mean to the faculty of the mean.

True.

479 This being premised, I would ask the gentleman who is of opinion that there is no absolute or unchangeable idea of beauty—in whose opinion the beautiful is the manifold—he, I say, your lover of beautiful sights, who cannot bear to be told that the beautiful is one, and the just is one, or that anything is one—to him I would appeal, saying, Will you be so very kind, sir, as to tell us whether, of all these beautiful things, there is one which will not be found ugly; or of the just, which will not be found unjust; or of the holy, which will not also be unholy?

The absoluteness of the one and the relativity of the many.

No, he replied; the beautiful will in some point of view be found ugly; and the same is true of the rest.

And may not the many which are doubles be also halves?—doubles, that is, of one thing, and halves of another?

Quite true.

And things great and small, heavy and light, as they are termed, will not be denoted by these any more than by the opposite names?

True; both these and the opposite names will always attach to all of them.

And can any one of those many things which are called by particular names be said to be this rather than not to be this?

He replied: They are like the punning riddles which are asked at feasts or the children's puzzle about the eunuch aiming at the bat, with what he hit him, as they say in the puzzle, and upon what the bat was sitting. The individual objects of which I am speaking are also a riddle, and have a double sense: nor can you fix them in your mind, either as being or not-being, or both, or neither.

Then what will you do with them? I said. Can they have a better place than between being and not-being? For they are clearly not in greater darkness or negation than not-being, or more full of light and existence than being.

That is quite true, he said.

Thus then we seem to have discovered that the many ideas which the multitude entertain about the beautiful and about all other things are tossing about in some region which is half-way between pure being and pure not-being?

We have.

Yes; and we had before agreed that anything of this kind which we might find was to be described as matter of opinion, and not as matter of knowledge; being the intermediate flux which is caught and detained by the intermediate faculty.

Quite true.

Then those who see the many beautiful, and who yet neither see absolute beauty, nor can follow any guide who points the way thither; who see the many just, and not absolute justice, and the like,—such persons may be said to have opinion but not knowledge?

Opinion is the knowledge, not of the absolute, but of the many.

That is certain.

But those who see the absolute and eternal and immutable may be said to know, and not to have opinion only?

Neither can that be denied.

The one love and embrace the subjects of knowledge, the other those of opinion? The latter are the same, as I dare say you will remember, who listened to sweet sounds and gazed upon fair colours, but would not tolerate the existence of absolute beauty.

Yes, I remember.

Shall we then be guilty of any impropriety in calling them lovers of opinion rather than lovers of wisdom, and will they be very angry with us for thus describing them?

I shall tell them not to be angry; no man should be angry at what is true.

But those who love the truth in each thing are to be called lovers of wisdom and not lovers of opinion.

Assuredly.

BOOK VI.

484And thus, Glaucon, after the argument has gone a weary way, the true and the false philosophers have at length appeared in view.

Republic VI.

Socrates, Glaucom.

I do not think, he said, that the way could have been shortened.

I suppose not, I said; and yet I believe that we might have had a better view of both of them if the discussion could have been confined to this one subject and if there were not many other questions awaiting us, which he who desires to see in what respect the life of the just differs from that of the unjust must consider.

If we had time, we might have a nearer view of the true and false philosopher.

And what is the next question? he asked.

Surely, I said, the one which follows next in order. Inasmuch as philosophers only are able to grasp the eternal and unchangeable, and those who wander in the region of the many and variable are not philosophers, I must ask you which of the two classes should be the rulers of our State?

And how can we rightly answer that question?

Whichever of the two are best able to guard the laws and institutions of our State—let them be our guardians.

Which of them shall be our guardians?

Very good.

Neither, I said, can there be any question that the guardian who is to keep anything should have eyes rather than no eyes?

A question hardly to be asked.

There can be no question of that.

And are not those who are verily and indeed wanting in the knowledge of the true being of each thing, and who have in their souls no clear pattern, and are unable as with a painter's eye to look at the absolute truth and to that original to repair, and having perfect vision of the other world to order the laws about beauty, goodness, justice in this, if not already ordered, and to guard and preserve the order of them—are not such persons, I ask, simply blind?

Truly, he replied, they are much in that condition.

And shall they be our guardians when there are others who, besides being their equals in experience and falling short of them in no particular of virtue, also know the very truth of each thing?

There can be no reason, he said, for rejecting those who have this greatest of all great qualities; they must always have the first place unless they fail in some other respect.

Suppose then, I said, that we determine how far they can unite this and the other excellences.

By all means.

In the first place, as we began by observing, the nature of the philosopher has to be ascertained. We must come to an understanding about him, and, when we have done so, then, if I am not mistaken, we shall also acknowledge that such a union of qualities is possible, and that those in whom they are united, and those only, should be rulers in the State.

The philosopher is a lover of truth and of all true being.

What do you mean?

Let us suppose that philosophical minds always love knowledge of a sort which shows them the eternal nature not varying from generation and corruption.

Agreed.

And further, I said, let us agree that they are lovers of all true being; there is no part whether greater or less, or more or less honourable, which they are willing to renounce; as we said before of the lover and the man of ambition.

True.

And if they are to be what we were describing, is there not another quality which they should also possess?

What quality?

Truthfulness: they will never intentionally receive into their mind falsehood, which is their detestation, and they will love the truth.

Yes, that may be safely affirmed of them.

‘May be,’ my friend, I replied, is not the word; say rather, ‘must be affirmed:’ for he whose nature is amorous of anything cannot help loving all that belongs or is akin to the object of his affections.

Right, he said.

And is there anything more akin to wisdom than truth?

How can there be?

Can the same nature be a lover of wisdom and a lover of falsehood?

Never.

The true lover of learning then must from his earliest youth, as far as in him lies, desire all truth?

Assuredly.

But then again, as we know by experience, he whose desires are strong in one direction will have them weaker in others; they will be like a stream which has been drawn off into another channel.

True.

He whose desires are drawn towards knowledge in every form will be absorbed in the pleasures of the soul, and will hardly feel bodily pleasure—I mean, if he be a true philosopher and not a sham one.

He will be absorbed in the pleasures of the soul, and therefore temperate and the reverse of covetous or mean.

That is most certain.

Such an one is sure to be temperate and the reverse of covetous; for the motives which make another man desirous of having and spending, have no place in his character.

Very true.

486 Another criterion of the philosophical nature has also to be considered.

What is that?

There should be no secret corner of illiberality; nothing can be more antagonistic than meanness to a soul which is ever longing after the whole of things both divine and human.

Most true, he replied.

Then how can he who has magnificence of mind and is the spectator of all time and all existence, think much of human life?

In the magnificence of his contemplations he will not think much of human life.

He cannot.

Or can such an one account death fearful?

No indeed.

Then the cowardly and mean nature has no part in true philosophy?

Certainly not.

Or again: can he who is harmoniously constituted, who is not covetous or mean, or a boaster, or a coward—can he, I say, ever be unjust or hard in his dealings?

Impossible.

Then you will soon observe whether a man is just and gentle, or rude and unsociable; these are the signs which distinguish even in youth the philosophical nature from the unphilosophical.

He will be of a gentle, sociable, harmonious nature; a lover of learning, having a good memory and moving spontaneously in the world of being.

True.

There is another point which should be remarked.

What point?

Whether he has or has not a pleasure in learning; for no one will love that which gives him pain, and in which after much toil he makes little progress.

Certainly not.

And again, if he is forgetful and retains nothing of what he learns, will he not be an empty vessel?

That is certain.

Labouring in vain, he must end in hating himself and his fruitless occupation?

Yes.

Then a soul which forgets cannot be ranked among genuine philosophic natures; we must insist that the philosopher should have a good memory?

Certainly.

And once more, the inharmonious and unseemly nature can only tend to disproportion?

Undoubtedly.

And do you consider truth to be akin to proportion or to disproportion?

To proportion.

Then, besides other qualities, we must try to find a naturally well-proportioned and gracious mind, which will move spontaneously towards the true being of everything.

Certainly.

Well, and do not all these qualities, which we have been enumerating, go together, and are they not, in a manner, necessary to a soul, which is to have a full and perfect participation of being?

487They are absolutely necessary, he replied.

And must not that be a blameless study which he only can pursue who has the gift of a good memory, and is quick to learn,—noble, gracious, the friend of truth, justice, courage, temperance, who are his kindred?

Socrates, Glaucon, Adeimantus.

Conclusion: What a blameless study then is philosophy!

The god of jealousy himself, he said, could find no fault with such a study.

And to men like him, I said, when perfected by years and education, and to these only you will entrust the State.

Here Adeimantus interposed and said: To these statements, Socrates, no one can offer a reply; but when you talk in this way, a strange feeling passes over the minds of your hearers: They fancy that they are led astray a little at each step in the argument, owing to their own want of skill in asking and answering questions; these littles accumulate, and at the end of the discussion they are found to have sustained a mighty overthrow and all their former notions appear to be turned upside down. And as unskilful players of draughts are at last shut up by their more skilful adversaries and have no piece to move, so they too find themselves shut up at last; for they have nothing to say in this new game of which words are the counters; and yet all the time they are in the right. The observation is suggested to me by what is now occurring. For any one of us might say, that although in words he is not able to meet you at each step of the argument, he sees as a fact that the votaries of philosophy, when they carry on the study, not only in youth as a part of education, but as the pursuit of their maturer years, most of them become strange monsters, not to say utter rogues, and that those who may be considered the best of them are made useless to the world by the very study which you extol.

Nay, says Adeimantus, you can prove anything, but your hearers are unconvinced all the same.

Common opinion declares philosophers to be either rogues or useless.

Well, and do you think that those who say so are wrong?

I cannot tell, he replied; but I should like to know what is your opinion.

Hear my answer; I am of opinion that they are quite right.

Socrates, instead of denying this statement, admits the truth of it.

Then how can you be justified in saying that cities will not cease from evil until philosophers rule in them, when philosophers are acknowledged by us to be of no use to them?

You ask a question, I said, to which a reply can only be given in a parable.

Yes, Socrates; and that is a way of speaking to which you are not at all accustomed, I suppose.

I perceive, I said, that you are vastly amused at having plunged me into such a hopeless discussion; but now hear the parable, and then you will be still more amused at the meagreness of my imagination: for the manner in which the best men are treated in their own States is so grievous that no single thing on earth is comparable to it; and therefore, if I am to plead their cause, I must have recourse to fiction, and put together a figure made up of many things, like the fabulous unions of goats and stags which are found in pictures. Imagine then a fleet or a ship in which there is a captain who is taller and stronger than any of the crew, but he is a little deaf and has a similar infirmity in sight, and his knowledge of navigation is not much better. The sailors are quarrelling with one another about the steering—every one is of opinion that he has a right to steer, though he has never learned the art of navigation and cannot tell who taught him or when he learned, and will further assert that it cannot be taught, and they are ready to cut in pieces any one who says the contrary. They throng about the captain, begging and praying him to commit the helm to them; and if at any time they do not prevail, but others are preferred to them, they kill the others or throw them overboard, and having first chained up the noble captain's senses with drink or some narcotic drug, they mutiny and take possession of the ship and make free with the stores; thus, eating and drinking, they proceed on their voyage in such manner as might be expected of them. Him who is their partisan and cleverly aids them in their plot for getting the ship out of the captain's hands into their own whether by force or persuasion, they compliment with the name of sailor, pilot, able seaman, and abuse the other sort of man, whom they call a good-for-nothing; but that the true pilot must pay attention to the year and seasons and sky and stars and winds, and whatever else belongs to his art, if he intends to be really qualified for the command of a ship, and that he must and will be the steerer, whether other people like or not—the possibility of this union of authority with the steerer's art has never seriously entered into their thoughts or been made part of their calling¹. Now in vessels which are in a state of mutiny and by sailors who are mutineers, how will the true pilot be regarded? Will he not be called by them a prater, a star-gazer, a good-for-nothing?

Socrates, Adeimantus.

A parable.

The noble captain whose senses are rather dull (the people in their better mind); the mutinous crew (the mob of politicians); and the pilot (the true philosopher).

Of course, said Adeimantus.

Then you will hardly need, I said, to hear the interpretation of the figure, which describes the true philosopher in his relation to the State; for you understand already.

The interpretation.

Certainly.

Then suppose you now take this parable to the gentleman who is surprised at finding that philosophers have no honour in their cities; explain it to him and try to convince him that their having honour would be far more extraordinary.

I will.

Say to him, that, in deeming the best votaries of philosophy to be useless to the rest of the world, he is right; but also tell him to attribute their uselessness to the fault of those who will not use them, and not to themselves. The pilot should not humbly beg the sailors to be commanded by him—that is not the order of nature; neither are ‘the wise to go to the doors of the rich’—the ingenious author of this saying told a lie—but the truth is, that, when a man is ill, whether he be rich or poor, to the physician he must go, and he who wants to be governed, to him who is able to govern. The ruler who is good for anything ought not to beg his subjects to be ruled by him; although the present governors of mankind are of a different stamp; they may be justly compared to the mutinous sailors, and the true helmsmen to those who are called by them good-for-nothings and stargazers.

The uselessness of philosophers arises out of the unwillingness of mankind to make use of them.

Precisely so, he said.

For these reasons, and among men like these, philosophy, the noblest pursuit of all, is not likely to be much esteemed by those of the opposite faction; not that the greatest and most lasting injury is done to her by her opponents, but by her own professing followers, the same of whom you suppose the accuser to say, that the greater number of them are arrant rogues, and the best are useless; in which opinion I agreed.

The real enemies of philosophy her professing followers.

Yes.

And the reason why the good are useless has now been explained?

True.

Then shall we proceed to show that the corruption of the majority is also unavoidable, and that this is not to be laid to the charge of philosophy any more than the other?

The corruption of philosophy due to many causes.

By all means.

And let us ask and answer in turn, first going back to the 490description of the gentle and noble nature. Truth, as you will remember, was his leader, whom he followed always and in all things; failing in this, he was an impostor, and had no part or lot in true philosophy.

Yes, that was said.

Well, and is not this one quality, to mention no others, greatly at variance with present notions of him?

Certainly, he said.

And have we not a right to say in his defence, that the true lover of knowledge is always striving after being—that is his nature; he will not rest in the multiplicity of individuals which is an appearance only, but will go on—the keen edge will not be blunted, nor the force of his desire abate until he have attained the knowledge of the true nature of every essence by a

But before considering this, let us re-enumerate the qualities of the philosopher:

sympathetic and kindred power in the soul, and by that power drawing near and mingling and becoming incorporate with very being, having begotten mind and truth, he will have knowledge and will live and grow truly, and then, and not till then, will he cease from his travail.

Nothing, he said, can be more just than such a description of him.

And will the love of a lie be any part of a philosopher's nature? Will he not utterly hate a lie?

his love of essence, of truth, of justice, besides his other virtues and natural gifts.

He will.

And when truth is the captain, we cannot suspect any evil of the band which he leads?

Impossible.

Justice and health of mind will be of the company, and temperance will follow after?

True, he replied.

Neither is there any reason why I should again set in array the philosopher's virtues, as you will doubtless remember that courage, magnificence, apprehension, memory, were his natural gifts. And you objected that, although no one could deny what I then said, still, if you leave words and look at facts, the persons who are thus described are some of them manifestly useless, and the greater number utterly depraved; we were then led to enquire into the grounds of these accusations, and have now arrived at the point of asking why are the majority bad, which question of necessity brought us back to the examination and definition of the true philosopher.

Exactly.

And we have next to consider the corruptions of the philosophic nature, why so many are spoiled and so few escape spoiling—I am speaking of those who were said to be useless 491 but not wicked—and, when we have done with them, we will speak of the imitators of philosophy, what manner of men are they who aspire after a profession which is above them and of which they are unworthy, and then, by their manifold inconsistencies, bring upon philosophy, and upon all philosophers, that universal reprobation of which we speak.

The reasons why philosophical natures so easily deteriorate.

What are these corruptions? he said.

I will see if I can explain them to you. Every one will admit that a nature having in perfection all the qualities which we required in a philosopher, is a rare plant which is seldom seen among men.

(1) There are but a few of them;

Rare indeed.

And what numberless and powerful causes tend to destroy these rare natures!

What causes?

In the first place there are their own virtues, their courage, temperance, and the rest of them, every one of which praiseworthy qualities (and this is a most singular circumstance) destroys and distracts from philosophy the soul which is the possessor of them.

(2) and they may be distracted from philosophy by their own virtues;

That is very singular, he replied.

Then there are all the ordinary goods of life—beauty, wealth, strength, rank and great connections in the State—you understand the sort of things—these also have a corrupting and distracting effect.

I understand; but I should like to know more precisely what you mean about them.

and also, (3), by the ordinary goods of life.

Grasp the truth as a whole, I said, and in the right way; you will then have no difficulty in apprehending the preceding remarks, and they will no longer appear strange to you.

And how am I to do so? he asked.

Why, I said, we know that all germs or seeds, whether vegetable or animal, when they fail to meet with proper nutriment or climate or soil, in proportion to their vigour, are all the more sensitive to the want of a suitable environment, for evil is a greater enemy to what is good than to what is not.

Very true.

There is reason in supposing that the finest natures, when under alien conditions, receive more injury than the inferior, because the contrast is greater.

(4) The finer natures more liable to injury than the inferior.

Certainly.

And may we not say, Adeimantus, that the most gifted minds, when they are ill-educated, become pre-eminently bad? Do not great crimes and the spirit of pure evil spring out of a fulness of nature ruined by education rather than from any inferiority, whereas weak natures are scarcely capable of any very great good or very great evil?

There I think that you are right.

492 And our philosopher follows the same analogy—he is like a plant which, having proper nurture, must necessarily grow and mature into all virtue, but, if sown and planted in an alien soil, becomes the most noxious of all weeds, unless he be preserved by some divine power. Do you really think, as people so often say, that our youth are corrupted by Sophists, or that private teachers of the art corrupt them in any degree worth speaking of? Are not the public who say these things the greatest of all Sophists? And do they not educate to perfection young and old, men and women alike, and fashion them after their own hearts?

(5) They are not corrupted by private sophists, but compelled by the opinion of the world meeting in the assembly or in some other place of resort.

When is this accomplished? he said.

When they meet together, and the world sits down at an assembly, or in a court of law, or a theatre, or a camp, or in any other popular resort, and there is a great uproar, and they praise some things which are being said or done, and blame other things, equally exaggerating both, shouting and clapping their hands, and the echo of the rocks and the place in which they are assembled redoubles the sound of the praise or blame—at such a time will not a young man's heart, as they say, leap within him? Will any private training enable him to stand firm against the overwhelming flood of popular opinion? or will he be carried away by the stream? Will he not have the notions of good and evil which the public in general have—he will do as they do, and as they are, such will he be?

Yes, Socrates; necessity will compel him.

And yet, I said, there is a still greater necessity, which has not been mentioned.

(6) The other compulsion of violence and death.

What is that?

The gentle force of attainder or confiscation or death, which, as you are aware, these new Sophists and educators, who are the public, apply when their words are powerless.

Indeed they do; and in right good earnest.

Now what opinion of any other Sophist, or of any private person, can be expected to overcome in such an unequal contest?

None, he replied.

No, indeed, I said, even to make the attempt is a great piece of folly; there neither is, nor has been, nor is ever likely to be, any different type of character [1](#) which has had no other training in virtue but that which is supplied by public opinion [1](#)—I speak, my friend, of human virtue only; what is more than human, as the proverb says, is not

They must be saved, if at all, by the power of God.

included: for I would not have you ignorant that, in the present evil state of governments, whatever is saved and comes to good is saved 493by the power of God, as we may truly say.

I quite assent, he replied.

Then let me crave your assent also to a further observation.

What are you going to say?

Why, that all those mercenary individuals, whom the many call Sophists and whom they deem to be their adversaries, do, in fact, teach nothing but the opinion of the many, that is to say, the opinions of their assemblies; and this is their wisdom. I might compare them to a man who should study the tempers and desires of a mighty strong beast who is fed by him—he would learn how to approach and handle him, also at what times and from what causes he is dangerous or the reverse, and what is the meaning of his several cries, and by what sounds, when another utters them, he is soothed or infuriated; and you may suppose further, that when, by continually attending upon him, he has become perfect in all this, he calls his knowledge wisdom, and makes of it a system or art, which he proceeds to teach, although he has no real notion of what he means by the principles or passions of which he is speaking, but calls this honourable and that dishonourable, or good or evil, or just or unjust, all in accordance with the tastes and tempers of the great brute. Good he pronounces to be that in which the beast delights and evil to be that which he dislikes; and he can give no other account of them except that the just and noble are the necessary, having never himself seen, and having no power of explaining to others the nature of either, or the difference between them, which is immense. By heaven, would not such an one be a rare educator?

The great brute; his behaviour and temper (the people looked at from their worse side).

Indeed he would.

And in what way does he who thinks that wisdom is the discernment of the tempers and tastes of the motley multitude, whether in painting or music, or, finally, in politics, differ from him whom I have been describing? For when a man consorts with the many, and exhibits to them his poem or other work of art or the service which he has done the State, making them his judges 1 when he is not obliged, the so-called necessity of Diomede will oblige him to produce whatever they praise. And yet the reasons are utterly ludicrous which they give in confirmation of their own notions about the honourable and good. Did you ever hear any of them which were not?

He who associates with the people will conform to their tastes and will produce only what pleases them.

No, nor am I likely to hear.

You recognise the truth of what I have been saying? Then let me ask you to consider further whether the world will ever be induced to believe in the existence of absolute

beauty 494rather than of the many beautiful, or of the absolute in each kind rather than of the many in each kind?

Certainly not.

Then the world cannot possibly be a philosopher?

Impossible.

And therefore philosophers must inevitably fall under the censure of the world?

They must.

And of individuals who consort with the mob and seek to please them?

That is evident.

Then, do you see any way in which the philosopher can be preserved in his calling to the end? and remember what we were saying of him, that he was to have quickness and memory and courage and magnificence—these were admitted by us to be the true philosopher's gifts.

Yes.

Will not such an one from his early childhood be in all things first among all, especially if his bodily endowments are like his mental ones?

The youth who has great bodily and mental gifts will be flattered from his childhood,

Certainly, he said.

And his friends and fellow-citizens will want to use him as he gets older for their own purposes?

No question.

Falling at his feet, they will make requests to him and do him honour and flatter him, because they want to get into their hands now, the power which he will one day possess.

That often happens, he said.

And what will a man such as he is be likely to do under such circumstances, especially if he be a citizen of a great city, rich and noble, and a tall proper youth? Will he not be full of boundless aspirations, and fancy himself able to manage the affairs of Hellenes and of barbarians, and having got such notions into his head will he not dilate and elevate himself in the fulness of vain pomp and senseless pride?

To be sure he will.

Now, when he is in this state of mind, if some one gently comes to him and tells him that he is a fool and must get understanding, which can only be got by slaving for it, do you think that, under such adverse circumstances, he will be easily induced to listen?

and being incapable of having

Far otherwise.

And even if there be some one who through inherent goodness or natural reasonableness has had his eyes opened a little and is humbled and taken captive by philosophy, how will his friends behave when they think that they are likely to lose the advantage which they were hoping to reap from his companionship? Will they not do and say anything to prevent him from yielding to his better nature and to render his teacher powerless, using to this end private intrigues as well as public prosecutions?

reason, will be easily drawn away from philosophy.

495 There can be no doubt of it.

And how can one who is thus circumstanced ever become a philosopher?

Impossible.

Then were we not right in saying that even the very qualities which make a man a philosopher may, if he be illeducated, divert him from philosophy, no less than riches and their accompaniments and the other so-called goods of life?

The very qualities which make a man a philosopher may also divert him from philosophy.

We were quite right.

Thus, my excellent friend, is brought about all that ruin and failure which I have been describing of the natures best adapted to the best of all pursuits; they are natures which we maintain to be rare at any time; this being the class out of which come the men who are the authors of the greatest evil to States and individuals; and also of the greatest good when the tide carries them in that direction; but a small man never was the doer of any great thing either to individuals or to States.

Great natures alone are capable, either of great good, or great evil.

That is most true, he said.

And so philosophy is left desolate, with her marriage rite incomplete: for her own have fallen away and forsaken her, and while they are leading a false and unbecoming life, other unworthy persons, seeing that she has no kinsmen to be her protectors, enter in and dishonour her; and fasten upon her the reproaches which, as you say, her reprovers utter, who affirm of her votaries that some are good for nothing, and that the greater number deserve the severest punishment.

That is certainly what people say.

Yes; and what else would you expect, I said, when you think of the puny creatures who, seeing this land open to them—a land well stocked with fair names and showy titles—like prisoners running out of prison into a sanctuary, take a leap out of their trades into philosophy; those who do so being probably the cleverest hands at their own miserable crafts? For, although philosophy be in this evil case, still there remains a dignity about her which is not to be found in the arts. And many are thus attracted by her whose natures are imperfect and whose souls are maimed and disfigured by their meannesses, as their bodies are by their trades and crafts. Is not this unavoidable?

The attractiveness of philosophy to the vulgar.

Yes.

Are they not exactly like a bald little tinker who has just got out of durance and come into a fortune; he takes a bath and puts on a new coat, and is decked out as a bridegroom going to marry his master's daughter, who is left poor and desolate?

496A most exact parallel.

What will be the issue of such marriages? Will they not be vile and bastard?

There can be no question of it.

And when persons who are unworthy of education approach philosophy and make an alliance with her who is in a rank above them, what sort of ideas and opinions are likely to be generated?

The *mésalliance* of philosophy.

1 Will they not be sophisms captivating to the ear1, having nothing in them genuine, or worthy of or akin to true wisdom?

No doubt, he said.

Then, Adeimantus, I said, the worthy disciples of philosophy will be but a small remnant: perchance some noble and well-educated person, detained by exile in her service, who in the absence of corrupting influences remains devoted to her; or some lofty soul born in a mean city, the politics of which he contemns and neglects; and there may be a gifted few who leave the arts, which they justly despise, and come to her;—or peradventure there are some who are restrained by our friend Theages' bridle; for everything in the life of Theages conspired to divert him from philosophy; but ill-health kept him away from politics. My own case of the internal sign is hardly worth mentioning, for rarely, if ever, has such a monitor been given to any other man. Those who belong to this small class have tasted how sweet and blessed a possession philosophy is, and have also seen enough of the madness of the multitude; and they know that no politician is honest, nor is there any champion of justice at whose side they may fight and be saved. Such an one may be compared to a man who has fallen among wild beasts—he will not join in the wickedness of his fellows, but neither is he able singly to resist all

Few are the worthy disciples:

and these are unable to resist the madness of the world;

they therefore in order to escape the storm take shelter behind a wall and live their own life.

their fierce natures, and therefore seeing that he would be of no use to the State or to his friends, and reflecting that he would have to throw away his life without doing any good either to himself or others, he holds his peace, and goes his own way. He is like one who, in the storm of dust and sleet which the driving wind hurries along, retires under the shelter of a wall; and seeing the rest of mankind full of wickedness, he is content, if only he can live his own life and be pure from evil or unrighteousness, and depart in peace and good-will, with bright hopes.

Yes, he said, and he will have done a great work before he departs.

A great work—yes; but not the greatest, unless he find 497a State suitable to him; for in a State which is suitable to him, he will have a larger growth and be the saviour of his country, as well as of himself.

The causes why philosophy is in such an evil name have now been sufficiently explained: the injustice of the charges against her has been shown—is there anything more which you wish to say?

Nothing more on that subject, he replied; but I should like to know which of the governments now existing is in your opinion the one adapted to her.

Not any of them, I said; and that is precisely the accusation which I bring against them—not one of them is worthy of the philosophic nature, and hence that nature is warped and estranged;—as the exotic seed which is sown in a foreign land becomes denaturalized, and is wont to be overpowered and to lose itself in the new soil, even so this growth of philosophy, instead of persisting, degenerates and receives another character. But if philosophy ever finds in the State that perfection which she herself is, then will be seen that she is in truth divine, and that all other things, whether natures of men or institutions, are but human;—and now, I know, that you are going to ask, What that State is:

No existing State suited to philosophy.

No, he said; there you are wrong, for I was going to ask another question—whether it is the State of which we are the founders and inventors, or some other?

Yes, I replied, ours in most respects; but you may remember my saying before, that some living authority would always be required in the State having the same idea of the constitution which guided you when as legislator you were laying down the laws.

Even our own State requires the addition of the living authority.

That was said, he replied.

Yes, but not in a satisfactory manner; you frightened us by interposing objections, which certainly showed that the discussion would be long and difficult; and what still remains is the reverse of easy.

What is there remaining?

The question how the study of philosophy may be so ordered as not to be the ruin of the State: All great attempts are attended with risk; 'hard is the good,' as men say.

Still, he said, let the point be cleared up, and the enquiry will then be complete.

I shall not be hindered, I said, by any want of will, but, if at all, by a want of power: my zeal you may see for yourselves; and please to remark in what I am about to say how boldly and unhesitatingly I declare that States should pursue philosophy, not as they do now, but in a different spirit.

In what manner?

498At present, I said, the students of philosophy are quite young; beginning when they are hardly past childhood, they devote only the time saved from moneymaking and housekeeping to such pursuits; and even those of them who are reputed to have most of the philosophic spirit, when they come within sight of the great difficulty of the subject, I mean dialectic, take themselves off. In after life when invited by some one else, they may, perhaps, go and hear a lecture, and about this they make much ado, for philosophy is not considered by them to be their proper business: at last, when they grow old, in most cases they are extinguished more truly than Heracleitus' sun, inasmuch as they never light up again¹.

The superficial study of philosophy which exists in the present day.

But what ought to be their course?

Just the opposite. In childhood and youth their study, and what philosophy they learn, should be suited to their tender years: during this period while they are growing up towards manhood, the chief and special care should be given to their bodies that they may have them to use in the service of philosophy; as life advances and the intellect begins to mature, let them increase the gymnastics of the soul; but when the strength of our citizens fails and is past civil and military duties, then let them range at will and engage in no serious labour, as we intend them to live happily here, and to crown this life with a similar happiness in another.

How truly in earnest you are, Socrates! he said; I am sure of that; and yet most of your hearers, if I am not mistaken, are likely to be still more earnest in their opposition to you, and will never be convinced; Thrasymachus least of all.

Thrasymachus once more.

Do not make a quarrel, I said, between Thrasymachus and me, who have recently become friends, although, indeed, we were never enemies; for I shall go on striving to the utmost until I either convert him and other men, or do something which may profit them against the day when they live again, and hold the like discourse in another state of existence.

You are speaking of a time which is not very near.

Rather, I replied, of a time which is as nothing in comparison with eternity. Nevertheless, I do not wonder that the many refuse to believe; for they have never seen that of which we are now speaking realized; they have seen only a conventional imitation of philosophy, consisting of words artificially brought together, not like these of ours having a natural unity. But a human being who in word and work is perfectly moulded, as far as he can be, into the proportion and likeness of virtue—such a man ruling in a city which bears the same image, they have never yet seen, neither one nor many of them—do you think that they ever did?

The people hate philosophy because they have only known bad and conventional imitations of it.

No indeed.

No, my friend, and they have seldom, if ever, heard free and noble sentiments; such as men utter when they are earnestly and by every means in their power seeking after truth for the sake of knowledge, while they look coldly on the subtleties of controversy, of which the end is opinion and strife, whether they meet with them in the courts of law or in society.

They are strangers, he said, to the words of which you speak.

And this was what we foresaw, and this was the reason why truth forced us to admit, not without fear and hesitation, that neither cities nor States nor individuals will ever attain perfection until the small class of philosophers whom we termed useless but not corrupt are providentially compelled, whether they will or not, to take care of the State, and until a like necessity be laid on the State to obey them¹; or until kings, or if not kings, the sons of kings or princes, are divinely inspired with a true love of true philosophy. That either or both of these alternatives are impossible, I see no reason to affirm: if they were so, we might indeed be justly ridiculed as dreamers and visionaries. Am I not right?

Quite right.

If then, in the countless ages of the past, or at the present hour in some foreign clime which is far away and beyond our ken, the perfected philosopher is or has been or hereafter shall be compelled by a superior power to have the charge of the State, we are ready to assert to the death, that this our constitution has been, and is—yea, and will be whenever the Muse of Philosophy is queen. There is no impossibility in all this; that there is a difficulty, we acknowledge ourselves.

Somewhere, at some time, there may have been or may be a philosopher who is also the ruler of a State.

My opinion agrees with yours, he said.

But do you mean to say that this is not the opinion of the multitude?

I should imagine not, he replied.

O my friend, I said, do not attack the multitude: they will change their minds, if, not in an aggressive spirit, but gently and with the view of soothing them and removing

their dislike of over-education, you show them your philosophers as they really are and describe as you were just now doing 500their character and profession, and then mankind will see that he of whom you are speaking is not such as they supposed—if they view him in this new light, they will surely change their notion of him, and answer in another strain¹. Who can be at enmity with one who loves them, who that is himself gentle and free from envy will be jealous of one in whom there is no jealousy? Nay, let me answer for you, that in a few this harsh temper may be found but not in the majority of mankind.

I quite agree with you, he said.

And do you not also think, as I do, that the harsh feeling which the many entertain towards philosophy originates in the pretenders, who rush in uninvited, and are always abusing them, and finding fault with them, who make persons instead of things the theme of their conversation? and nothing can be more unbecoming in philosophers than this.

The feeling against philosophy is really a feeling against pretended philosophers who are always talking about persons.

It is most unbecoming.

For he, Adeimantus, whose mind is fixed upon true being, has surely no time to look down upon the affairs of earth, or to be filled with malice and envy, contending against men; his eye is ever directed towards things fixed and immutable, which he sees neither injuring nor injured by one another, but all in order moving according to reason; these he imitates, and to these he will, as far as he can, conform himself. Can a man help imitating that with which he holds reverential converse?

The true philosopher, who has his eye fixed upon immutable principles, will fashion States after the heavenly image.

Impossible.

And the philosopher holding converse with the divine order, becomes orderly and divine, as far as the nature of man allows; but like every one else, he will suffer from detraction.

Of course.

And if a necessity be laid upon him of fashioning, not only himself, but human nature generally, whether in States or individuals, into that which he beholds elsewhere, will he, think you, be an unskilful artificer of justice, temperance, and every civil virtue?

Anything but unskilful.

And if the world perceives that what we are saying about him is the truth, will they be angry with philosophy? Will they disbelieve us, when we tell them that no State can be happy which is not designed by artists who imitate the heavenly pattern?

They will not be angry if they understand, he said. But 501how will they draw out the plan of which you are speaking?

They will begin by taking the State and the manners of men, from which, as from a tablet, they will rub out the picture, and leave a clean surface. This is no easy task. But whether easy or not, herein will lie the difference between them and every other legislator,—they will have nothing to do either with individual or State, and will inscribe no laws, until they have either found, or themselves made, a clean surface.

He will begin with a 'tabula rasa' and there inscribe his laws.

They will be very right, he said.

Having effected this, they will proceed to trace an outline of the constitution?

No doubt.

And when they are filling in the work, as I conceive, they will often turn their eyes upwards and downwards: I mean that they will first look at absolute justice and beauty and temperance, and again at the human copy; and will mingle and temper the various elements of life into the image of a man; and this they will conceive according to that other image, which, when existing among men, Homer calls the form and likeness of God.

Very true, he said.

And one feature they will erase, and another they will put in, until they have made the ways of men, as far as possible, agreeable to the ways of God?

Indeed, he said, in no way could they make a fairer picture.

And now, I said, are we beginning to persuade those whom you described as rushing at us with might and main, that the painter of constitutions is such an one as we were praising; at whom they were so very indignant because to his hands we committed the State; and are they growing a little calmer at what they have just heard?

The enemies of philosophy, when they hear the truth, are gradually propitiated,

Much calmer, if there is any sense in them.

Why, where can they still find any ground for objection? Will they doubt that the philosopher is a lover of truth and being?

They would not be so unreasonable.

Or that his nature, being such as we have delineated, is akin to the highest good?

Neither can they doubt this.

But again, will they tell us that such a nature, placed under favourable circumstances, will not be perfectly good and wise if any ever was? Or will they prefer those whom we have rejected?

Surely not.

Then will they still be angry at our saying, that, until philosophers bear rule, States and individuals will have no rest from evil, nor will this our imaginary State ever be realized?

I think that they will be less angry.

Shall we assume that they are not only less angry but quite gentle, and that they have been converted and for very shame, if for no other reason, cannot refuse to come to terms?

and at length become quite gentle.

By all means, he said.

Then let us suppose that the reconciliation has been effected. Will any one deny the other point, that there may be sons of kings or princes who are by nature philosophers?

There may have been one son of a king a philosopher who has remained uncorrupted and has a State obedient to his will.

Surely no man, he said.

And when they have come into being will any one say that they must of necessity be destroyed; that they can hardly be saved is not denied even by us; but that in the whole course of ages no single one of them can escape—who will venture to affirm this?

Who indeed!

But, said I, one is enough; let there be one man who has a city obedient to his will, and he might bring into existence the ideal polity about which the world is so incredulous.

Yes, one is enough.

The ruler may impose the laws and institutions which we have been describing, and the citizens may possibly be willing to obey them?

Certainly.

And that others should approve, of what we approve, is no miracle or impossibility?

I think not.

But we have sufficiently shown, in what has preceded, that all this, if only possible, is assuredly for the best.

We have.

Our constitution then is not unattainable.

And now we say not only that our laws, if they could be enacted, would be for the best, but also that the enactment of them, though difficult, is not impossible.

Very good.

And so with pain and toil we have reached the end of one subject, but more remains to be discussed;—how and by what studies and pursuits will the saviours of the constitution be created, and at what ages are they to apply themselves to their several studies?

Certainly.

I omitted the troublesome business of the possession of women, and the procreation of children, and the appointment of the rulers, because I knew that the perfect State would be eyed with jealousy and was difficult of attainment; but that piece of cleverness was not of much service to me, for I had to discuss them all the same. The women and children are now disposed of, but the other question of the rulers must be investigated from the very beginning. We were saying, as you will remember, that they were to be lovers of their country, tried by the test of pleasures and pains, and neither in hardships, nor in dangers, nor at any other critical moment were to lose their patriotism—he was to be rejected who failed, but he who always came forth pure, like gold tried in the refiner's fire, was to be made a ruler, and to receive honours and rewards in life and after death. This was the sort of thing which was being said, and then the argument turned aside and veiled her face; not liking to stir the question which has now arisen.

Recapitulation.

I perfectly remember, he said.

Yes, my friend, I said, and I then shrank from hazarding the bold word; but now let me dare to say—that the perfect guardian must be a philosopher.

Yes, he said, let that be affirmed.

And do not suppose that there will be many of them; for the gifts which were deemed by us to be essential rarely grow together; they are mostly found in shreds and patches.

The guardian must be a philosopher, and a philosopher must be a person of rare gifts.

What do you mean? he said.

You are aware, I replied, that quick intelligence, memory, sagacity, cleverness, and similar qualities, do not often grow together, and that persons who possess them and are at the same time high-spirited and magnanimous are not so constituted by nature as to live orderly and in a peaceful and settled manner; they are driven any way by their impulses, and all solid principle goes out of them.

The contrast of the quick and solid temperaments.

Very true, he said.

On the other hand, those steadfast natures which can better be depended upon, which in a battle are impregnable to fear and immovable, are equally immovable when there is anything to be learned; they are always in a torpid state, and are apt to yawn and go to sleep over any intellectual toil.

Quite true.

And yet we were saying that both qualities were necessary in those to whom the higher education is to be imparted, and who are to share in any office or command.

They must be united.

Certainly, he said.

And will they be a class which is rarely found?

Yes, indeed.

Then the aspirant must not only be tested in those labours and dangers and pleasures which we mentioned before, but there is another kind of probation which we did not mention—he must be exercised also in many kinds of knowledge, to see whether the soul will be able to endure the highest of all, or will faint under them, as in any other studies and exercises.

He who is to hold command must be tested in many kinds of knowledge.

Yes, he said, you are quite right in testing him. But what do you mean by the highest of all knowledge?

You may remember, I said, that we divided the soul into three parts; and distinguished the several natures of justice, temperance, courage, and wisdom?

Indeed, he said, if I had forgotten, I should not deserve to hear more.

And do you remember the word of caution which preceded the discussion of them¹ ?

To what do you refer?

We were saying, if I am not mistaken, that he who wanted to see them in their perfect beauty must take a longer and more circuitous way, at the end of which they would appear; but that we could add on a popular exposition of them on a level with the discussion which had preceded. And you replied that such an exposition would be enough for you, and so the enquiry was continued in what to me seemed to be a very inaccurate manner; whether you were satisfied or not, it is for you to say.

The shorter exposition of education, which has been already given, inadequate.

Yes, he said, I thought and the others thought that you gave us a fair measure of truth.

But, my friend, I said, a measure of such things which in any degree falls short of the whole truth is not fair measure; for nothing imperfect is the measure of anything,

although persons are too apt to be contented and think that they need search no further.

Not an uncommon case when people are indolent.

Yes, I said; and there cannot be any worse fault in a guardian of the State and of the laws.

True.

The guardian then, I said, must be required to take the longer circuit, and toil at learning as well as at gymnastics, or he will never reach the highest knowledge of all which, as we were just now saying, is his proper calling.

The guardian must take the longer road of the higher learning.

What, he said, is there a knowledge still higher than this—higher than justice and the other virtues?

Yes, I said, there is. And of the virtues too we must behold not the outline merely, as at present—nothing short of the most finished picture should satisfy us. When little things are elaborated with an infinity of pains, in order that they may appear in their full beauty and utmost clearness, how ridiculous that we should not think the highest truths worthy of attaining the highest accuracy!

A right noble thought²; but do you suppose that we shall refrain from asking you what is this highest knowledge?

Nay, I said, ask if you will; but I am certain that you have heard the answer many times, and now you either do not understand me or, as I rather think, you are disposed to be troublesome; for you have often been told that the idea of good is the highest knowledge, and that all other things become useful and advantageous only by their use of this. You can hardly be ignorant that of this I was about to speak, concerning which, as you have often heard me say, we know so little; and, without which, any other knowledge or possession of any kind will profit us nothing. Do you think that the possession of all other things is of any value if we do not possess the good? or the knowledge of all other things if we have no knowledge of beauty and goodness?

which leads upwards at last to the idea of good.

Assuredly not.

You are further aware that most people affirm pleasure to be the good, but the finer sort of wits say it is knowledge?

Yes.

And you are aware too that the latter cannot explain what they mean by knowledge, but are obliged after all to say knowledge of the good?

But what is the good? Some say pleasure, others knowledge, which they absurdly explain to mean knowledge of the good.

How ridiculous!

Yes, I said, that they should begin by reproaching us with our ignorance of the good, and then presume our knowledge of it—for the good they define to be knowledge of the good, just as if we understood them when they use the term ‘good’—this is of course ridiculous.

Most true, he said.

And those who make pleasure their good are in equal perplexity; for they are compelled to admit that there are bad pleasures as well as good.

Certainly.

And therefore to acknowledge that bad and good are the same?

True.

There can be no doubt about the numerous difficulties in which this question is involved.

There can be none.

Further, do we not see that many are willing to do or to have or to seem to be what is just and honourable without the reality; but no one is satisfied with the appearance of good—the reality is what they seek; in the case of the good, appearance is despised by every one.

Very true, he said.

Of this then, which every soul of man pursues and makes the end of all his actions, having a presentiment that there is such an end, and yet hesitating because neither knowing the nature nor having the same assurance of this as of other things, and therefore losing whatever good there is in other things, — of a principle such and so great as this ought the best men in our State, to whom everything is entrusted, to be in the darkness of ignorance?

Every man pursues the good, but without knowing the nature of it.

Certainly not, he said.

I am sure, I said, that he who does not know how the beautiful and the just are likewise good will be but a sorry guardian of them; and I suspect that no one who is ignorant of the good will have a true knowledge of them.

That, he said, is a shrewd suspicion of yours.

And if we only have a guardian who has this knowledge our State will be perfectly ordered?

Of course, he replied; but I wish that you would tell me whether you conceive this supreme principle of the good to be knowledge or pleasure, or different from either?

The guardian ought to know these things.

Aye, I said, I knew all along that a fastidious gentleman¹ like you would not be contented with the thoughts of other people about these matters.

True, Socrates; but I must say that one who like you has passed a lifetime in the study of philosophy should not be always repeating the opinions of others, and never telling his own.

Well, but has any one a right to say positively what he does not know?

Not, he said, with the assurance of positive certainty; he has no right to do that: but he may say what he thinks, as a matter of opinion.

And do you not know, I said, that all mere opinions are bad, and the best of them blind? You would not deny that those who have any true notion without intelligence are only like blind men who feel their way along the road?

Very true.

Socrates, Adeimantus, Glaucon.

And do you wish to behold what is blind and crooked and base, when others will tell you of brightness and beauty?

Still, I must implore you, Socrates, said Glaucon, not to turn away just as you are reaching the goal; if you will only give such an explanation of the good as you have already given of justice and temperance and the other virtues, we shall be satisfied.

Yes, my friend, and I shall be at least equally satisfied, but I cannot help fearing that I shall fail, and that my indiscreet zeal will bring ridicule upon me. No, sweet sirs, let us not at present ask what is the actual nature of the good, for to reach what is now in my thoughts would be an effort too great for me. But of the child of the good who is likest him, I would fain speak, if I could be sure that you wished to hear—otherwise, not.

We can only attain to the things of mind through the things of sense. The 'child' of the good.

By all means, he said, tell us about the child, and you shall remain in our debt for the account of the parent.

507I do indeed wish, I replied, that I could pay, and you receive, the account of the parent, and not, as now, of the offspring only; take, however, this latter by way of interest¹, and at the same time have a care that I do not render a false account, although I have no intention of deceiving you.

Yes, we will take all the care that we can: proceed.

Yes, I said, but I must first come to an understanding with you, and remind you of what I have mentioned in the course of this discussion, and at many other times.

What?

The old story, that there is a many beautiful and a many good, and so of other things which we describe and define; to all of them the term 'many' is applied.

True, he said.

And there is an absolute beauty and an absolute good, and of other things to which the term 'many' is applied there is an absolute; for they may be brought under a single idea, which is called the essence of each.

Very true.

The many, as we say, are seen but not known, and the ideas are known but not seen.

Exactly.

Socrates, Glaucon.

And what is the organ with which we see the visible things?

The sight, he said.

And with the hearing, I said, we hear, and with the other senses perceive the other objects of sense?

True.

But have you remarked that sight is by far the most costly and complex piece of workmanship which the artificer of the senses ever contrived?

Sight the most complex of the senses,

No, I never have, he said.

Then reflect: has the ear or voice need of any third or additional nature in order that the one may be able to hear and the other to be heard?

Nothing of the sort.

No, indeed, I replied; and the same is true of most, if not all, the other senses—you would not say that any of them requires such an addition?

Certainly not.

But you see that without the addition of some other nature there is no seeing or being seen?

How do you mean?

and, unlike the other senses, requires the

Sight being, as I conceive, in the eyes, and he who has eyes wanting to see; colour being also present in them, still unless there be a third nature specially adapted to the purpose, the owner of the eyes will see nothing and the colours will be invisible.

addition of a third nature before it can be used. This third nature is light.

Of what nature are you speaking?

Of that which you term light, I replied.

True, he said.

508Noble, then, is the bond which links together sight and visibility, and great beyond other bonds by no small difference of nature; for light is their bond, and light is no ignoble thing?

Nay, he said, the reverse of ignoble.

And which, I said, of the gods in heaven would you say was the lord of this element? Whose is that light which makes the eye to see perfectly and the visible to appear?

You mean the sun, as you and all mankind say.

May not the relation of sight to this deity be described as follows?

How?

Neither sight nor the eye in which sight resides is the sun?

No.

Yet of all the organs of sense the eye is the most like the sun?

The eye like the sun, but not the same with it.

By far the most like.

And the power which the eye possesses is a sort of effluence which is dispensed from the sun?

Exactly.

Then the sun is not sight, but the author of sight who is recognised by sight?

True, he said.

And this is he whom I call the child of the good, whom the good begat in his own likeness, to be in the visible world, in relation to sight and the things of sight, what the good is in the intellectual world in relation to mind and the things of mind:

Will you be a little more explicit? he said.

Why, you know, I said, that the eyes, when a person directs them towards objects on which the light of day is no longer shining, but the moon and stars only, see dimly, and are nearly blind; they seem to have no clearness of vision in them?

Very true.

But when they are directed towards objects on which the sun shines, they see clearly and there is sight in them?

Visible objects are to be seen only when the sun shines upon them; truth is only known when illuminated by the idea of good.

Certainly.

And the soul is like the eye: when resting upon that on which truth and being shine, the soul perceives and understands, and is radiant with intelligence; but when turned towards the twilight of becoming and perishing, then she has opinion only, and goes blinking about, and is first of one opinion and then of another, and seems to have no intelligence?

Just so.

Now, that which imparts truth to the known and the power of knowing to the knower is what I would have you term the idea of good, and this you will deem to be the cause of science¹, and of truth in so far as the latter becomes the subject of knowledge; beautiful too, as are both truth and knowledge, you will be right in esteeming this other nature as more beautiful than either; and, as in the previous instance, light and sight may be truly said to be like the sun, and yet not to be the sun, so in this other sphere, science and truth may be deemed to be like the good, but not the good; the good has a place of honour yet higher.

The idea of good higher than science or truth (the objective than the subjective).

What a wonder of beauty that must be, he said, which is the author of science and truth, and yet surpasses them in beauty; for you surely cannot mean to say that pleasure is the good?

God forbid, I replied; but may I ask you to consider the image in another point of view?

In what point of view?

You would say, would you not, that the sun is not only the author of visibility in all visible things, but of generation and nourishment and growth, though he himself is not generation?

Certainly.

In like manner the good may be said to be not only the author of knowledge to all things known, but of their being and essence, and yet the good is not essence, but far exceeds essence in dignity and power.

As the sun is the cause of generation, so the good is the cause of being and essence.

Glaucon said, with a ludicrous earnestness: By the light of heaven, how amazing!

Yes, I said, and the exaggeration may be set down to you; for you made me utter my fancies.

And pray continue to utter them; at any rate let us hear if there is anything more to be said about the similitude of the sun.

Yes, I said, there is a great deal more.

Then omit nothing, however slight.

I will do my best, I said; but I should think that a great deal will have to be omitted.

I hope not, he said.

You have to imagine, then, that there are two ruling powers, and that one of them is set over the intellectual world, the other over the visible. I do not say heaven, lest you should fancy that I am playing upon the name (οὐρανός, ἡρατός). May I suppose that you have this distinction of the visible and intelligible fixed in your mind?

I have.

Now take a line which has been cut into two unequal 1 parts, and divide each of them again in the same proportion, and suppose the two main divisions to answer, one to the visible and the other to the intelligible, and then compare the subdivisions in respect of their clearness and want of clearness, and you will find that the first section in the sphere of the visible consists of images. And by images I mean, in the first place, shadows, and in the second place, reflections in water and in solid, smooth and polished bodies and the like: Do you understand?

The two spheres of sight and knowledge are represented by a line which is divided into two unequal parts.

Yes, I understand.

Imagine, now, the other section, of which this is only the resemblance, to include the animals which we see, and everything that grows or is made.

Very good.

Would you not admit that both the sections of this division have different degrees of truth, and that the copy is to the original as the sphere of opinion is to the sphere of knowledge?

Most undoubtedly.

Next proceed to consider the manner in which the sphere of the intellectual is to be divided.

In what manner?

Thus:—There are two subdivisions, in the lower of which the soul uses the figures given by the former division as images; the enquiry can only be hypothetical, and instead of going upwards to a principle descends to the other end; in the higher of the two, the soul passes out of hypotheses, and goes up to a principle which is above hypotheses, making no use of images² as in the former case, but proceeding only in and through the ideas themselves.

Images and hypotheses.

I do not quite understand your meaning, he said.

Then I will try again; you will understand me better when I have made some preliminary remarks. You are aware that students of geometry, arithmetic, and the kindred sciences assume the odd and the even and the figures and three kinds of angles and the like in their several branches of science; these are their hypotheses, which they and every body are supposed to know, and therefore they do not deign to give any account of them either to themselves or others; but they begin with them, and go on until they arrive at last, and in a consistent manner, at their conclusion?

The hypotheses of mathematics.

Yes, he said, I know.

And do you not know also that although they make use of the visible forms and reason about them, they are thinking not of these, but of the ideals which they resemble; not of the figures which they draw, but of the absolute square and the absolute diameter, and so on—the forms which they draw or make, and which have shadows and reflections in water of their own, are converted by them into images, but they are really seeking to behold the things themselves, which can only be seen with the eye of the mind?

In both spheres hypotheses are used, in the lower taking the form of images, but in the higher the soul ascends above hypotheses to the idea of good.

511 That is true.

And of this kind I spoke as the intelligible, although in the search after it the soul is compelled to use hypotheses; not ascending to a first principle, because she is unable to rise above the region of hypothesis, but employing the objects of which the shadows below are resemblances in their turn as images, they having in relation to the shadows and reflections of them a greater distinctness, and therefore a higher value.

I understand, he said, that you are speaking of the province of geometry and the sister arts.

And when I speak of the other division of the intelligible, you will understand me to speak of that other sort of knowledge which reason herself attains by the power of dialectic, using the hypotheses not as first principles, but only as hypotheses—that is to say, as steps and points of departure into a world which is above hypotheses, in

Dialectic by the help of hypotheses rises above hypotheses.

order that she may soar beyond them to the first principle of the whole; and clinging to this and then to that which depends on this, by successive steps she descends again without the aid of any sensible object, from ideas, through ideas, and in ideas she ends.

I understand you, he replied; not perfectly, for you seem to me to be describing a task which is really tremendous; but, at any rate,

Return to psychology.

I understand you to say that knowledge and being, which the science of dialectic contemplates, are clearer than the notions of the arts, as they are termed, which proceed from hypotheses only: these are also contemplated by the understanding, and not by the senses: yet, because they start from hypotheses and do not ascend to a principle, those who contemplate them appear to you not to exercise the higher reason upon them, although when a first principle is added to them they are cognizable by the higher reason. And the habit which is concerned with geometry and the cognate sciences I suppose that you would term understanding and not reason, as being intermediate between opinion and reason.

You have quite conceived my meaning, I said; and now, corresponding to these four divisions, let there be four faculties in the soul—reason answering to the highest, understanding to the second, faith (or conviction) to the third, and perception of shadows to the last—and let there be a scale of them, and let us suppose that the several faculties have clearness in the same degree that their objects have truth.

Four faculties:
Reason,
understanding, faith,
perception of
shadows.

I understand, he replied, and give my assent, and accept your arrangement.

[\[Back to Table of Contents\]](#)

BOOK VII.

514 And now, I said, let me show in a figure how far our nature is enlightened or unenlightened:—Behold! human beings living in an underground den, which has a mouth open towards the light and reaching all along the den; here they have been from their childhood, and have their legs and necks chained so that they cannot move, and can only see before them, being prevented by the chains from turning round their heads. Above and behind them a fire is blazing at a distance, and between the fire and the prisoners there is a raised way; and you will see, if you look, a low wall built along the way, like the screen which marionette players have in front of them, over which they show the puppets.

The den, the prisoners; the light at a distance;

I see.

And do you see, I said, men passing along the wall carrying all sorts of vessels, and statues and figures of animals 515 made of wood and stone and various materials, which appear over the wall? Some of them are talking, others silent.

the low wall, and the moving figures of which the shadows are seen on the opposite wall of the den.

You have shown me a strange image, and they are strange prisoners.

Like ourselves, I replied; and they see only their own shadows, or the shadows of one another, which the fire throws on the opposite wall of the cave?

True, he said; how could they see anything but the shadows if they were never allowed to move their heads?

And of the objects which are being carried in like manner they would only see the shadows?

Yes, he said.

And if they were able to converse with one another, would they not suppose that they were naming what was actually before them [1](#) ?

Very true.

And suppose further that the prison had an echo which came from the other side, would they not be sure to fancy when one of the passers-by spoke that the voice which they heard came from the passing shadow?

The prisoners would mistake the shadows for realities.

No question, he replied.

To them, I said, the truth would be literally nothing but the shadows of the images.

That is certain.

And now look again, and see what will naturally follow if the prisoners are released and disabused of their error. At first, when any of them is liberated and compelled suddenly to stand up and turn his neck round and walk and look towards the light, he will suffer sharp pains; the glare will distress him, and he will be unable to see the realities of which in his former state he had seen the shadows; and then conceive some one saying to him, that what he saw before was an illusion, but that now, when he is approaching nearer to being and his eye is turned towards more real existence, he has a clearer vision,—what will be his reply? And you may further imagine that his instructor is pointing to the objects as they pass and requiring him to name them,—will he not be perplexed? Will he not fancy that the shadows which he formerly saw are truer than the objects which are now shown to him?

And when released, they would still persist in maintaining the superior truth of the shadows.

Far truer.

And if he is compelled to look straight at the light, will he not have a pain in his eyes which will make him turn away to take refuge in the objects of vision which he can see, and which he will conceive to be in reality clearer than the things which are now being shown to him?

True, he said.

And suppose once more, that he is reluctantly dragged up a steep and rugged ascent, and held fast until he is forced into the presence of the sun himself, is he not likely to be 516pained and irritated? When he approaches the light his eyes will be dazzled, and he will not be able to see anything at all of what are now called realities.

When dragged upwards, they would be dazzled by excess of light.

Not all in a moment, he said.

He will require to grow accustomed to the sight of the upper world. And first he will see the shadows best, next the reflections of men and other objects in the water, and then the objects themselves; then he will gaze upon the light of the moon and the stars and the spangled heaven; and he will see the sky and the stars by night better than the sun or the light of the sun by day?

Certainly.

Last of all he will be able to see the sun, and not mere reflections of him in the water, but he will see him in his own proper place, and not in another; and he will contemplate him as he is.

At length they will see the sun and understand his nature.

Certainly.

He will then proceed to argue that this is he who gives the season and the years, and is the guardian of all that is in the visible world, and in a certain way the cause of all things which he and his fellows have been accustomed to behold?

Clearly, he said, he would first see the sun and then reason about him.

And when he remembered his old habitation, and the wisdom of the den and his fellow-prisoners, do you not suppose that he would felicitate himself on the change, and pity them?

They would then pity their old companions of the den.

Certainly, he would.

And if they were in the habit of conferring honours among themselves on those who were quickest to observe the passing shadows and to remark which of them went before, and which followed after, and which were together; and who were therefore best able to draw conclusions as to the future, do you think that he would care for such honours and glories, or envy the possessors of them? Would he not say with Homer,

‘Better to be the poor servant of a poor master,’

and to endure anything, rather than think as they do and live after their manner?

Yes, he said, I think that he would rather suffer anything than entertain these false notions and live in this miserable manner.

Imagine once more, I said, such an one coming suddenly out of the sun to be replaced in his old situation; would he not be certain to have his eyes full of darkness?

To be sure, he said.

And if there were a contest, and he had to compete in measuring the shadows with the prisoners who had never moved out of the den, while his sight was still weak, and before his eyes had become steady (and the time which would be needed to acquire this new habit of sight might be very considerable), would he not be ridiculous? Men would say of him that up he went and down he came without his eyes; and that it was better not even to think of ascending; and if any one tried to loose another and lead him up to the light, let them only catch the offender, and they would put him to death.

But when they returned to the den they would see much worse than those who had never left it.

No question, he said.

This entire allegory, I said, you may now append, dear Glaucon, to the previous argument; the prison-house is the world of sight, the light of the fire is the sun, and you will not misapprehend me if you interpret the journey upwards to be the ascent of the soul into the intellectual world according to my poor belief, which, at your desire, I have expressed—whether rightly or wrongly God knows. But, whether

The prison is the world of sight, the light of the fire is the sun.

true or false, my opinion is that in the world of knowledge the idea of good appears last of all, and is seen only with an effort; and, when seen, is also inferred to be the universal author of all things beautiful and right, parent of light and of the lord of light in this visible world, and the immediate source of reason and truth in the intellectual; and that this is the power upon which he who would act rationally either in public or private life must have his eye fixed.

I agree, he said, as far as I am able to understand you.

Moreover, I said, you must not wonder that those who attain to this beatific vision are unwilling to descend to human affairs; for their souls are ever hastening into the upper world where they desire to dwell; which desire of theirs is very natural, if our allegory may be trusted.

Yes, very natural.

And is there anything surprising in one who passes from divine contemplations to the evil state of man, misbehaving himself in a ridiculous manner; if, while his eyes are blinking and before he has become accustomed to the surrounding darkness, he is compelled to fight in courts of law, or in other places, about the images or the shadows of images of justice, and is endeavouring to meet the conceptions of those who have never yet seen absolute justice?

Nothing extraordinary in the philosopher being unable to see in the dark.

Anything but surprising, he replied.

518Any one who has common sense will remember that the bewilderments of the eyes are of two kinds, and arise from two causes, either from coming out of the light or from going into the light, which is true of the mind's eye, quite as much as of the bodily eye; and he who remembers this when he sees any one whose vision is perplexed and weak, will not be too ready to laugh; he will first ask whether that soul of man has come out of the brighter life, and is unable to see because unaccustomed to the dark, or having turned from darkness to the day is dazzled by excess of light. And he will count the one happy in his condition and state of being, and he will pity the other; or, if he have a mind to laugh at the soul which comes from below into the light, there will be more reason in this than in the laugh which greets him who returns from above out of the light into the den.

The eyes may be blinded in two ways, by excess or by defect of light.

That, he said, is a very just distinction.

But then, if I am right, certain professors of education must be wrong when they say that they can put a knowledge into the soul which was not there before, like sight into blind eyes.

The conversion of the soul is the turning round the eye from darkness to light.

They undoubtedly say this, he replied.

Whereas, our argument shows that the power and capacity of learning exists in the soul already; and that just as the eye was unable to turn from darkness to light without

the whole body, so too the instrument of knowledge can only by the movement of the whole soul be turned from the world of becoming into that of being, and learn by degrees to endure the sight of being, and of the brightest and best of being, or in other words, of the good.

Very true.

And must there not be some art which will effect conversion in the easiest and quickest manner; not implanting the faculty of sight, for that exists already, but has been turned in the wrong direction, and is looking away from the truth?

Yes, he said, such an art may be presumed.

And whereas the other so-called virtues of the soul seem to be akin to bodily qualities, for even when they are not originally innate they can be implanted later by habit and exercise, the virtue of wisdom more than anything else contains a divine element which always remains, and by this conversion is rendered useful and profitable; or, on the other hand, hurtful and useless. Did you never observe the narrow intelligence flashing from the keen eye of a clever rogue—how eager he is, how clearly his paltry soul sees the way to his end; he is the reverse of blind, but his keen eye-sight is forced into the service of evil, and he is mischievous in proportion to his cleverness?

The virtue of wisdom has a divine power which may be turned either towards good or towards evil.

Very true, he said.

But what if there had been a circumcision of such natures in the days of their youth; and they had been severed from those sensual pleasures, such as eating and drinking, which, like leaden weights, were attached to them at their birth, and which drag them down and turn the vision of their souls upon the things that are below—if, I say, they had been released from these impediments and turned in the opposite direction, the very same faculty in them would have seen the truth as keenly as they see what their eyes are turned to now.

Very likely.

Yes, I said; and there is another thing which is likely, or rather a necessary inference from what has preceded, that neither the uneducated and uninformed of the truth, nor yet those who never make an end of their education, will be able ministers of State; not the former, because they have no single aim of duty which is the rule of all their actions, private as well as public; nor the latter, because they will not act at all except upon compulsion, fancying that they are already dwelling apart in the islands of the blest.

Neither the uneducated nor the overeducated will be good servants of the State.

Very true, he replied.

Then, I said, the business of us who are the founders of the State will be to compel the best minds to attain that knowledge which we have already shown to be the greatest

of all—they must continue to ascend until they arrive at the good; but when they have ascended and seen enough we must not allow them to do as they do now.

What do you mean?

I mean that they remain in the upper world: but this must not be allowed; they must be made to descend again among the prisoners in the den, and partake of their labours and honours, whether they are worth having or not.

Men should ascend to the upper world, but they should also return to the lower.

But is not this unjust? he said; ought we to give them a worse life, when they might have a better?

You have again forgotten, my friend, I said, the intention of the legislator, who did not aim at making any one class in the State happy above the rest; the happiness was to be in the whole State, and he held the citizens together by persuasion and necessity, making them benefactors of the State, and therefore benefactors of one another; to this end he created them, not to please themselves, but to be his instruments in binding up the State.

True, he said, I had forgotten.

Observe, Glaucon, that there will be no injustice in compelling our philosophers to have a care and providence of others; we shall explain to them that in other States, men of their class are not obliged to share in the toils of politics: and this is reasonable, for they grow up at their own sweet will, and the government would rather not have them. Being self-taught, they cannot be expected to show any gratitude for a culture which they have never received. But we have brought you into the world to be rulers of the hive, kings of yourselves and of the other citizens, and have educated you far better and more perfectly than they have been educated, and you are better able to share in the double duty. Wherefore each of you, when his turn comes, must go down to the general underground abode, and get the habit of seeing in the dark. When you have acquired the habit, you will see ten thousand times better than the inhabitants of the den, and you will know what the several images are, and what they represent, because you have seen the beautiful and just and good in their truth. And thus our State, which is also yours, will be a reality, and not a dream only, and will be administered in a spirit unlike that of other States, in which men fight with one another about shadows only and are distracted in the struggle for power, which in their eyes is a great good. Whereas the truth is that the State in which the rulers are most reluctant to govern is always the best and most quietly governed, and the State in which they are most eager, the worst.

The duties of philosophers.

Their obligations to their country will induce them to take part in her government.

Quite true, he replied.

And will our pupils, when they hear this, refuse to take their turn at the toils of State, when they are allowed to spend the greater part of their time with one another in the heavenly light?

Impossible, he answered; for they are just men, and the commands which we impose upon them are just; there can be no doubt that every one of them will take office as a stern necessity, and not after the fashion of our present rulers of State.

They will be willing but not anxious to rule.

Yes, my friend, I said; and there lies the point. You must contrive for your future rulers another and a better life than that of a ruler, and then you may have a well-ordered State; for only in the State which offers this, will they rule who are truly rich, not in silver and gold, but in virtue and wisdom, which are the true blessings of life. Whereas if they go to the administration of public affairs, poor and hungering after their own private advantage, thinking that hence they are to snatch the chief good, order there can never be; for they will be fighting about office, and the civil and domestic broils which thus arise will be the ruin of the rulers themselves and of the whole State.

The statesman must be provided with a better life than that of a ruler; and then he will not covet office.

Most true, he replied.

And the only life which looks down upon the life of political ambition is that of true philosophy. Do you know of any other?

Indeed, I do not, he said.

And those who govern ought not to be lovers of the task? For, if they are, there will be rival lovers, and they will fight.

No question.

Who then are those whom we shall compel to be guardians? Surely they will be the men who are wisest about affairs of State, and by whom the State is best administered, and who at the same time have other honours and another and a better life than that of politics?

They are the men, and I will choose them, he replied.

And now shall we consider in what way such guardians will be produced, and how they are to be brought from darkness to light,—as some are said to have ascended from the world below to the gods?

By all means, he replied.

The process, I said, is not the turning over of an oyster-shell¹, but the turning round of a soul passing from a day which is little better than night to the true day of being, that is, the ascent from below², which we affirm to be true philosophy?

The training of the guardians.

Quite so.

And should we not enquire what sort of knowledge has the power of effecting such a change?

What knowledge will draw the soul upwards?

Certainly.

What sort of knowledge is there which would draw the soul from becoming to being? And another consideration has just occurred to me: You will remember that our young men are to be warrior athletes?

Yes, that was said.

Then this new kind of knowledge must have an additional quality?

What quality?

Usefulness in war.

Yes, if possible.

There were two parts in our former scheme of education, were there not?

Recapitulation.

Just so.

There was gymnastic which presided over the growth and decay of the body, and may therefore be regarded as having to do with generation and corruption?

The first education had two parts, music and gymnastic.

True.

522 Then that is not the knowledge which we are seeking to discover?

No.

But what do you say of music, what also entered to a certain extent into our former scheme?

Music, he said, as you will remember, was the counterpart of gymnastic, and trained the guardians by the influences of habit, by harmony making them harmonious, by rhythm rhythmical, but not giving them science; and the words, whether fabulous or possibly true, had kindred elements of rhythm and harmony in them. But in music there was nothing which tended to that good which you are now seeking.

You are most accurate, I said, in your recollection; in music there certainly was nothing of the kind. But what branch of knowledge is there, my dear Glaucon, which is of the desired nature; since all the useful arts were reckoned mean by us?

Undoubtedly; and yet if music and gymnastic are excluded, and the arts are also excluded, what remains?

Well, I said, there may be nothing left of our special subjects; and then we shall have to take something which is not special, but of universal application.

What may that be?

A something which all arts and sciences and intelligences use in common, and which every one first has to learn among the elements of education.

There remains for the second education, arithmetic;

What is that?

The little matter of distinguishing one, two, and three—in a word, number and calculation:—do not all arts and sciences necessarily partake of them?

Yes.

Then the art of war partakes of them?

To be sure.

Then Palamedes, whenever he appears in tragedy, proves Agamemnon ridiculously unfit to be a general. Did you never remark how he declares that he had invented number, and had numbered the ships and set in array the ranks of the army at Troy; which implies that they had never been numbered before, and Agamemnon must be supposed literally to have been incapable of counting his own feet—how could he if he was ignorant of number? And if that is true, what sort of general must he have been?

I should say a very strange one, if this was as you say.

Can we deny that a warrior should have a knowledge of arithmetic?

Certainly he should, if he is to have the smallest understanding of military tactics, or indeed, I should rather say, if he is to be a man at all.

I should like to know whether you have the same notion which I have of this study?

What is your notion?

It appears to me to be a study of the kind which we are seeking, and which leads naturally to reflection, but never to have been rightly used; for the true use of it is simply to draw the soul towards being.

that being a study which leads naturally to reflection, for

Will you explain your meaning? he said.

I will try, I said; and I wish you would share the enquiry with me, and say 'yes' or 'no' when I attempt to distinguish in my own mind what branches of knowledge have this attracting power, in order that we may have clearer proof that arithmetic is, as I suspect, one of them.

Explain, he said.

I mean to say that objects of sense are of two kinds; some of them do not invite thought because the sense is an adequate judge of them; while in the case of other objects sense is so untrustworthy that further enquiry is imperatively demanded.

reflection is aroused
by contradictory
impressions of sense.

You are clearly referring, he said, to the manner in which the senses are imposed upon by distance, and by painting in light and shade.

No, I said, that is not at all my meaning.

Then what is your meaning?

When speaking of uninviting objects, I mean those which do not pass from one sensation to the opposite; inviting objects are those which do; in this latter case the sense coming upon the object, whether at a distance or near, gives no more vivid idea of anything in particular than of its opposite. An illustration will make my meaning clearer:—here are three fingers—a little finger, a second finger, and a middle finger.

Very good.

You may suppose that they are seen quite close: And here comes the point.

What is it?

Each of them equally appears a finger, whether seen in the middle or at the extremity, whether white or black, or thick or thin—it makes no difference; a finger is a finger all the same. In these cases a man is not compelled to ask of thought the question what is a finger? for the sight never intimates to the mind that a finger is other than a finger.

No difficulty in
simple perception.

True.

And therefore, I said, as we might expect, there is nothing here which invites or excites intelligence.

There is not, he said.

But the same senses at
the same time give
different impressions
which are at first
indistinct and have to

But is this equally true of the greatness and smallness of the fingers? Can sight adequately perceive them? and is no difference made by the circumstance that one of the fingers is in the middle and another at the extremity? And in like manner does the touch adequately perceive the qualities of thickness or thinness, of softness or hardness? And so of the other senses; do they give perfect intimations of such matters? Is not their mode of operation on this wise—the sense which is concerned with the quality of hardness is necessarily concerned also with the quality of softness, and only intimates to the soul that the same thing is felt to be both hard and soft?

be distinguished by the mind.

You are quite right, he said.

And must not the soul be perplexed at this intimation which the sense gives of a hard which is also soft? What, again, is the meaning of light and heavy, if that which is light is also heavy, and that which is heavy, light?

Yes, he said, these intimations which the soul receives are very curious and require to be explained.

Yes, I said, and in these perplexities the soul naturally summons to her aid calculation and intelligence, that she may see whether the several objects announced to her are one or two.

The aid of numbers is invoked in order to remove the confusion.

True.

And if they turn out to be two, is not each of them one and different?

Certainly.

And if each is one, and both are two, she will conceive the two as in a state of division, for if they were undivided they could only be conceived of as one?

True.

The eye certainly did see both small and great, but only in a confused manner; they were not distinguished.

Yes.

Whereas the thinking mind, intending to light up the chaos, was compelled to reverse the process, and look at small and great as separate and not confused.

The chaos then begins to be defined.

Very true.

Was not this the beginning of the enquiry ‘What is great?’ and ‘What is small?’

Exactly so.

And thus arose the distinction of the visible and the intelligible.

The parting of the visible and intelligible.

Most true.

This was what I meant when I spoke of impressions which invited the intellect, or the reverse—those which are simultaneous with opposite impressions, invite thought; those which are not simultaneous do not.

I understand, he said, and agree with you.

And to which class do unity and number belong?

I do not know, he replied.

Think a little and you will see that what has preceded will supply the answer; for if simple unity could be adequately perceived by the sight or by any other sense, then, as we were saying in the case of the finger, there would be nothing to attract towards being; but when there is some contradiction always present, and one is the reverse of one and involves the conception of plurality, then thought begins to be aroused within us, and the soul perplexed and wanting to arrive at a decision asks ‘What is absolute unity?’ This is the way in which the study of the one has a power of drawing and converting the mind to the contemplation of true being.

Thought is aroused by the contradiction of the one and many.

And surely, he said, this occurs notably in the case of one; for we see the same thing to be both one and infinite in multitude?

Yes, I said; and this being true of one must be equally true of all number?

Certainly.

And all arithmetic and calculation have to do with number?

Yes.

And they appear to lead the mind towards truth?

Yes, in a very remarkable manner.

Then this is knowledge of the kind for which we are seeking, having a double use, military and philosophical; for the man of war must learn the art of number or he will not know how to array his troops, and the philosopher also, because he has to rise out of the sea of change and lay hold of true being, and therefore he must be an arithmetician.

Arithmetic has a practical and also a philosophical use, the latter the higher.

That is true.

And our guardian is both warrior and philosopher?

Certainly.

Then this is a kind of knowledge which legislation may fitly prescribe; and we must endeavour to persuade those who are to be the principal men of our State to go and learn arithmetic, not as amateurs, but they must carry on the study until they see the nature of numbers with the mind only; nor again, like merchants or retail-traders, with a view to buying or selling, but for the sake of their military use, and of the soul herself; and because this will be the easiest way for her to pass from becoming to truth and being.

That is excellent, he said.

Yes, I said, and now having spoken of it, I must add how charming the science is! and in how many ways it conduces to our desired end, if pursued in the spirit of a philosopher, and not of a shopkeeper!

How do you mean?

I mean, as I was saying, that arithmetic has a very great and elevating effect, compelling the soul to reason about abstract number, and rebelling against the introduction of visible or tangible objects into the argument. You know how steadily the masters of the art repel and ridicule any one who attempts to divide absolute unity when he is calculating, and if you divide, they multiply¹, taking care that one shall continue one and not become lost in fractions.

The higher arithmetic is concerned, not with visible or tangible objects, but with abstract numbers.

That is very true.

526Now, suppose a person were to say to them: O my friends, what are these wonderful numbers about which you are reasoning, in which, as you say, there is a unity such as you demand, and each unit is equal, invariable, indivisible,—what would they answer?

They would answer, as I should conceive, that they were speaking of those numbers which can only be realized in thought.

Then you see that this knowledge may be truly called necessary, necessitating as it clearly does the use of the pure intelligence in the attainment of pure truth?

Yes; that is a marked characteristic of it.

And have you further observed, that those who have a natural talent for calculation are generally quick at every other kind of knowledge; and even the dull, if they have had an arithmetical training, although they may derive no other advantage from it, always become much quicker than they would otherwise have been.

The arithmetician is naturally quick, and the study of arithmetic gives him still greater quickness.

Very true, he said.

And indeed, you will not easily find a more difficult study, and not many as difficult.

You will not.

And, for all these reasons, arithmetic is a kind of knowledge in which the best natures should be trained, and which must not be given up.

I agree.

Let this then be made one of our subjects of education. And next, shall we enquire whether the kindred science also concerns us?

You mean geometry?

Exactly so.

Clearly, he said, we are concerned with that part of geometry which relates to war; for in pitching a camp, or taking up a position, or closing or extending the lines of an army, or any other military manœuvre, whether in actual battle or on a march, it will make all the difference whether a general is or is not a geometrician.

Geometry has practical applications;

Yes, I said, but for that purpose a very little of either geometry or calculation will be enough; the question relates rather to the greater and more advanced part of geometry—whether that tends in any degree to make more easy the vision of the idea of good; and thither, as I was saying, all things tend which compel the soul to turn her gaze towards that place, where is the full perfection of being, which she ought, by all means, to behold.

these however are trifling in comparison with that greater part of the science which tends towards the good,

True, he said.

Then if geometry compels us to view being, it concerns us; if becoming only, it does not concern us?

527Yes, that is what we assert.

Yet anybody who has the least acquaintance with geometry will not deny that such a conception of the science is in flat contradiction to the ordinary language of geometers.

How so?

They have in view practice only, and are always speaking, in a narrow and ridiculous manner, of squaring and extending and applying and the like—they confuse the necessities of geometry with those of daily life; whereas knowledge is the real object of the whole science.

Certainly, he said.

Then must not a further admission be made?

What admission?

That the knowledge at which geometry aims is knowledge of the eternal, and not of aught perishing and transient.

and is concerned with the eternal.

That, he replied, may be readily allowed, and is true.

Then, my noble friend, geometry will draw the soul towards truth, and create the spirit of philosophy, and raise up that which is now unhappily allowed to fall down.

Nothing will be more likely to have such an effect.

Then nothing should be more sternly laid down than that the inhabitants of your fair city should by all means learn geometry. Moreover the science has indirect effects, which are not small.

Of what kind? he said.

There are the military advantages of which you spoke, I said; and in all departments of knowledge, as experience proves, any one who has studied geometry is infinitely quicker of apprehension than one who has not.

Yes indeed, he said, there is an infinite difference between them.

Then shall we propose this as a second branch of knowledge which our youth will study?

Let us do so, he replied.

And suppose we make astronomy the third—what do you say?

I am strongly inclined to it, he said; the observation of the seasons and of months and years is as essential to the general as it is to the farmer or sailor.

Astronomy, like the previous sciences, is at first praised by Glaucon for its practical uses.

I am amused, I said, at your fear of the world, which makes you guard against the appearance of insisting upon useless studies; and I quite admit the difficulty of believing that in every man there is an eye of the soul which, when by other pursuits lost and dimmed, is by these purified and re-illuminated; and is more precious far than ten thousand bodily eyes, for by it alone is truth seen. Now there are two classes of persons: one class of those who will agree with you and will take your words as a revelation; another class to whom they will be utterly unmeaning, and who will naturally deem them to be idle tales, for they see no sort of profit which is to be obtained from them. And therefore you had better decide at once with which of the two you are proposing to argue. You will very likely

say with neither, and that your chief aim in carrying on the argument is your own improvement; at the same time you do not grudge to others any benefit which they may receive.

I think that I should prefer to carry on the argument mainly on my own behalf.

Then take a step backward, for we have gone wrong in the order of the sciences.

Correction of the order.

What was the mistake? he said.

After plane geometry, I said, we proceeded at once to solids in revolution, instead of taking solids in themselves; whereas after the second dimension the third, which is concerned with cubes and dimensions of depth, ought to have followed.

That is true, Socrates; but so little seems to be known as yet about these subjects.

Why, yes, I said, and for two reasons:—in the first place, no government patronises them; this leads to a want of energy in the pursuit of them, and they are difficult; in the second place, students cannot learn them unless they have a director. But then a director can hardly be found, and even if he could, as matters now stand, the students, who are very conceited, would not attend to him. That, however, would be otherwise if the whole State became the director of these studies and gave honour to them; then disciples would want to come, and there would be continuous and earnest search, and discoveries would be made; since even now, disregarded as they are by the world, and maimed of their fair proportions, and although none of their votaries can tell the use of them, still these studies force their way by their natural charm, and very likely, if they had the help of the State, they would some day emerge into light.

The pitiable condition of solid geometry.

Yes, he said, there is a remarkable charm in them. But I do not clearly understand the change in the order. First you began with a geometry of plane surfaces?

Yes, I said.

And you placed astronomy next, and then you made a step backward?

Yes, and I have delayed you by my hurry; the ludicrous state of solid geometry, which, in natural order, should have followed, made me pass over this branch and go on to astronomy, or motion of solids.

The motion of solids.

True, he said.

Then assuming that the science now omitted would come into existence if encouraged by the State, let us go on to astronomy, which will be fourth.

The right order, he replied. And now, Socrates, as you rebuked the vulgar manner in which I praised astronomy 529before, my praise shall be given in your own spirit. For every one, as I think, must see that astronomy compels the soul to look upwards and leads us from this world to another.

Glaucón grows sentimental about astronomy.

Every one but myself, I said; to every one else this may be clear, but not to me.

And what then would you say?

I should rather say that those who elevate astronomy into philosophy appear to me to make us look downwards and not upwards.

What do you mean? he asked.

You, I replied, have in your mind a truly sublime conception of our knowledge of the things above. And I dare say that if a person were to throw his head back and study the fretted ceiling, you would still think that his mind was the percipient, and not his eyes. And you are very likely right, and I may be a simpleton: but, in my opinion, that knowledge only which is of being and of the unseen can make the soul look upwards, and whether a man gapes at the heavens or blinks on the ground, seeking to learn some particular of sense, I would deny that he can learn, for nothing of that sort is matter of science; his soul is looking downwards, not upwards, whether his way to knowledge is by water or by land, whether he floats, or only lies on his back.

He is rebuked by Socrates,

I acknowledge, he said, the justice of your rebuke. Still, I should like to ascertain how astronomy can be learned in any manner more conducive to that knowledge of which we are speaking?

who explains that the higher astronomy is an abstract science.

I will tell you, I said: The starry heaven which we behold is wrought upon a visible ground, and therefore, although the fairest and most perfect of visible things, must necessarily be deemed inferior far to the true motions of absolute swiftness and absolute slowness, which are relative to each other, and carry with them that which is contained in them, in the true number and in every true figure. Now, these are to be apprehended by reason and intelligence, but not by sight.

True, he replied.

The spangled heavens should be used as a pattern and with a view to that higher knowledge; their beauty is like the beauty of figures or pictures excellently wrought by the hand of Daedalus, or some other great artist, which we may chance to behold; any geometrician who saw them would appreciate the exquisiteness of their workmanship, but he would never dream of thinking that in them he could find the true equal or the true double, or the truth of any 530other proportion.

No, he replied, such an idea would be ridiculous.

And will not a true astronomer have the same feeling when he looks at the movements of the stars? Will he not think that heaven and the things in heaven are framed by the Creator of them in the most perfect manner? But he will never imagine that the proportions of night and day, or of both to the month, or of the month to the year, or of the stars to these and to one another, and any other things that are material and visible can also be eternal and subject to no deviation—that would be absurd; and it is equally absurd to take so much pains in investigating their exact truth.

I quite agree, though I never thought of this before.

Then, I said, in astronomy, as in geometry, we should employ problems, and let the heavens alone if we would approach the subject in the right way and so make the natural gift of reason to be of any real use.

The real knowledge of astronomy or geometry is to be attained by the use of abstractions.

That, he said, is a work infinitely beyond our present astronomers.

Yes, I said; and there are many other things which must also have a similar extension given to them, if our legislation is to be of any value. But can you tell me of any other suitable study?

No, he said, not without thinking.

Motion, I said, has many forms, and not one only; two of them are obvious enough even to wits no better than ours; and there are others, as I imagine, which may be left to wiser persons.

But where are the two?

There is a second, I said, which is the counterpart of the one already named.

And what may that be?

The second, I said, would seem relatively to the ears to be what the first is to the eyes; for I conceive that as the eyes are designed to look up at the stars, so are the ears to hear harmonious motions; and these are sister sciences—as the Pythagoreans say, and we, Glaucon, agree with them?

What astronomy is to the eye, harmonics are to the ear.

Yes, he replied.

But this, I said, is a laborious study, and therefore we had better go and learn of them; and they will tell us whether there are any other applications of these sciences. At the same time, we must not lose sight of our own higher object.

What is that?

There is a perfection which all knowledge ought to reach, and which our pupils ought also to attain, and not to fall short of, as I was saying that they did in astronomy. For 531 in the science of harmony, as you probably know, the same thing happens. The teachers of harmony compare the sounds and consonances which are heard only, and their labour, like that of the astronomers, is in vain.

They must be studied with a view to the good and not after the fashion of the empirics or even of the Pythagoreans.

Yes, by heaven! he said; and 'tis as good as a play to hear them talking about their condensed notes, as they call them; they put their ears close alongside of the strings like persons catching a sound from their neighbour's wall¹—one set of them declaring that they distinguish an intermediate note and have found the least interval which should be the unit of measurement; the others insisting that the two sounds have passed into the same—either party setting their ears before their understanding.

You mean, I said, those gentlemen who tease and torture the strings and rack them on the pegs of the instrument: I might carry on the metaphor and speak after their manner of the blows which the plectrum gives, and make accusations against the strings, both of backwardness and forwardness to sound; but this would be tedious, and therefore I will only say that these are not the men, and that I am referring to the Pythagoreans, of whom I was just now proposing to enquire about harmony. For they too are in error, like the astronomers; they investigate the numbers of the harmonies which are heard, but they never attain to problems—that is to say, they never reach the natural harmonies of number, or reflect why some numbers are harmonious and others not.

That, he said, is a thing of more than mortal knowledge.

A thing, I replied, which I would rather call useful; that is, if sought after with a view to the beautiful and good; but if pursued in any other spirit, useless.

Very true, he said.

Now, when all these studies reach the point of intercommunion and connection with one another, and come to be considered in their mutual affinities, then, I think, but not till then, will the pursuit of them have a value for our objects; otherwise there is no profit in them.

All these studies must be correlated with one another.

I suspect so; but you are speaking, Socrates, of a vast work.

What do you mean? I said; the prelude or what? Do you not know that all this is but the prelude to the actual strain which we have to learn? For you surely would not regard the skilled mathematician as a dialectician?

Assuredly not, he said; I have hardly ever known a mathematician who was capable of reasoning.

Want of reasoning power in mathematicians.

But do you imagine that men who are unable to give 532 and take a reason will have the knowledge which we require of them?

Neither can this be supposed.

And so, Glaucon, I said, we have at last arrived at the hymn of dialectic. This is that strain which is of the intellect only, but which the faculty of sight will nevertheless be found to imitate; for sight, as you may remember, was imagined by us after a while to behold the real animals and stars, and last of all the sun himself. And so with dialectic; when a person starts on the discovery of the absolute by the light of reason only, and without any assistance of sense, and perseveres until by pure intelligence he arrives at the perception of the absolute good, he at last finds himself at the end of the intellectual world, as in the case of sight at the end of the visible.

Dialectic proceeds by reason only, without any help of sense.

Exactly, he said.

Then this is the progress which you call dialectic?

True.

But the release of the prisoners from chains, and their translation from the shadows to the images and to the light, and the ascent from the underground den to the sun, while in his presence they are vainly trying to look on animals and plants and the light of the sun, but are able to perceive even with their weak eyes the images¹ in the water [which are divine], and are the shadows of true existence (not shadows of images cast by a light of fire, which compared with the sun is only an image)—this power of elevating the highest principle in the soul to the contemplation of that which is best in existence, with which we may compare the raising of that faculty which is the very light of the body to the sight of that which is brightest in the material and visible world—this power is given, as I was saying, by all that study and pursuit of the arts which has been described.

The gradual acquirement of dialectic by the pursuit of the arts anticipated in the allegory of the den.

I agree in what you are saying, he replied, which may be hard to believe, yet, from another point of view, is harder still to deny. This however is not a theme to be treated of in passing only, but will have to be discussed again and again. And so, whether our conclusion be true or false, let us assume all this, and proceed at once from the prelude or preamble to the chief strain¹, and describe that in like manner. Say, then, what is the nature and what are the divisions of dialectic, and what are the paths which lead thither; for these paths will also lead to our final rest.

533Dear Glaucon, I said, you will not be able to follow me here, though I would do my best, and you should behold not an image only but the absolute truth, according to my notion. Whether what I told you would or would not have been a reality I cannot venture to say; but you would have seen something like reality; of that I am confident.

The nature of dialectic can only be revealed to those who have been students of the preliminary sciences,

Doubtless, he replied.

But I must also remind you, that the power of dialectic alone can reveal this, and only to one who is a disciple of the previous sciences.

Of that assertion you may be as confident as of the last.

And assuredly no one will argue that there is any other method of comprehending by any regular process all true existence or of ascertaining what each thing is in its own nature; for the arts in general are concerned with the desires or opinions of men, or are cultivated with a view to production and construction, or for the preservation of such productions and constructions; and as to the mathematical sciences which, as we were saying, have some apprehension of true being—geometry and the like—they only dream about being, but never can they behold the waking reality so long as they leave the hypotheses which they use unexamined, and are unable to give an account of them. For when a man knows not his own first principle, and when the conclusion and intermediate steps are also constructed out of he knows not what, how can he imagine that such a fabric of convention can ever become science?

Impossible, he said.

Then dialectic, and dialectic alone, goes directly to the first principle and is the only science which does away with hypotheses in order to make her ground secure; the eye of the soul, which is literally buried in an outlandish slough, is by her gentle aid lifted upwards; and she uses as handmaids and helpers in the work of conversion, the sciences which we have been discussing. Custom terms them sciences, but they ought to have some other name, implying greater clearness than opinion and less clearness than science: and this, in our previous sketch, was called understanding. But why should we dispute about names when we have realities of such importance to consider?

which are her handmaids.

Why indeed, he said, when any name will do which expresses the thought of the mind with clearness?

At any rate, we are satisfied, as before, to have four divisions; two for intellect and two for opinion, and to call the first division science, the second understanding, the third belief, and the fourth perception of shadows, opinion being concerned with becoming, and intellect with being; and so to make a proportion:—

Two divisions of the mind, intellect and opinion, each having two subdivisions.

As being is to becoming, so is pure intellect to opinion.

And as intellect is to opinion, so is science to belief, and understanding to the perception of shadows.

But let us defer the further correlation and subdivision of the subjects of opinion and of intellect, for it will be a long enquiry, many times longer than this has been.

As far as I understand, he said, I agree.

And do you also agree, I said, in describing the dialectician as one who attains a conception of the essence of each thing? And he who does not possess and is therefore unable to impart this conception, in whatever degree he fails, may in that degree also be said to fail in intelligence? Will you admit so much?

Yes, he said; how can I deny it?

And you would say the same of the conception of the good?

Until the person is able to abstract and define rationally the idea of good, and unless he can run the gauntlet of all objections, and is ready to disprove them, not by appeals to opinion, but to absolute truth, never faltering at any step of the argument—unless he can do all this, you would say that he knows neither the idea of good nor any other good; he apprehends only a shadow, if anything at all, which is given by opinion and not by science;—dreaming and slumbering in this life, before he is well awake here, he arrives at the world below, and has his final quietus.

No truth which does not rest on the idea of good

In all that I should most certainly agree with you.

And surely you would not have the children of your ideal State, whom you are nurturing and educating—if the ideal ever becomes a reality—you would not allow the future rulers to be like posts [1](#), having no reason in them, and yet to be set in authority over the highest matters?

Certainly not.

Then you will make a law that they shall have such an education as will enable them to attain the greatest skill in asking and answering questions?

Yes, he said, you and I together will make it.

Dialectic, then, as you will agree, is the coping-stone of the sciences, and is set over them; no other science can be placed higher—the nature of knowledge can no further go?

ought to have a high place.

I agree, he said.

535But to whom we are to assign these studies, and in what way they are to be assigned, are questions which remain to be considered.

Yes, clearly.

You remember, I said, how the rulers were chosen before?

Certainly, he said.

The natural gifts which are required in the dialectician: a

The same natures must still be chosen, and the preference again given to the surest and the bravest, and, if possible, to the fairest; and, having noble and generous tempers, they should also have the natural gifts which will facilitate their education.

towardly
understanding; a good
memory;

And what are these?

Such gifts as keenness and ready powers of acquisition; for the mind more often faints from the severity of study than from the severity of gymnastics: the toil is more entirely the mind's own, and is not shared with the body.

Very true, he replied.

Further, he of whom we are in search should have a good memory, and be an unwearied solid man who is a lover of labour in any line; or he will never be able to endure the great amount of bodily exercise and to go through all the intellectual discipline and study which we require of him.

strength of character;

Certainly, he said; he must have natural gifts.

The mistake at present is, that those who study philosophy have no vocation, and this, as I was before saying, is the reason why she has fallen into disrepute: her true sons should take her by the hand and not bastards.

What do you mean?

In the first place, her votary should not have a lame or halting industry—I mean, that he should not be half industrious and half idle: as, for example, when a man is a lover of gymnastic and hunting, and all other bodily exercises, but a hater rather than a lover of the labour of learning or listening or enquiring. Or the occupation to which he devotes himself may be of an opposite kind, and he may have the other sort of lameness.

industry;

Certainly, he said.

And as to truth, I said, is not a soul equally to be deemed halt and lame which hates voluntary falsehood and is extremely indignant at herself and others when they tell lies, but is patient of involuntary falsehood, and does not mind wallowing like a swinish beast in the mire of ignorance, and has no shame at being detected?

love of truth;

To be sure.

536And, again, in respect of temperance, courage, magnificence, and every other virtue, should we not carefully distinguish between the true son and the bastard? for where there is no discernment of such qualities states and individuals unconsciously err; and the state makes a ruler, and the individual a friend, of one who, being defective in some part of virtue, is in a figure lame or a bastard.

the moral virtues.

That is very true, he said.

All these things, then, will have to be carefully considered by us; and if only those whom we introduce to this vast system of education and training are sound in body and mind, justice herself will have nothing to say against us, and we shall be the saviours of the constitution and of the State; but, if our pupils are men of another stamp, the reverse will happen, and we shall pour a still greater flood of ridicule on philosophy than she has to endure at present.

That would not be creditable.

Certainly not, I said; and yet perhaps, in thus turning jest into earnest I am equally ridiculous.

Socrates plays a little with himself and his subject.

In what respect?

I had forgotten, I said, that we were not serious, and spoke with too much excitement. For when I saw philosophy so undeservedly trampled under foot of men I could not help feeling a sort of indignation at the authors of her disgrace: and my anger made me too vehement.

Indeed! I was listening, and did not think so.

For the study of dialectic the young must be selected.

But I, who am the speaker, felt that I was. And now let me remind you that, although in our former selection we chose old men, we must not do so in this. Solon was under a delusion when he said that a man when he grows old may learn many things—for he can no more learn much than he can run much; youth is the time for any extraordinary toil.

Of course.

And, therefore, calculation and geometry and all the other elements of instruction, which are a preparation for dialectic, should be presented to the mind in childhood; not, however, under any notion of forcing our system of education.

The preliminary studies should be commenced in childhood, but never forced.

Why not?

Because a freeman ought not to be a slave in the acquisition of knowledge of any kind. Bodily exercise, when compulsory, does no harm to the body; but knowledge which is acquired under compulsion obtains no hold on the mind.

Very true.

Then, my good friend, I said, do not use compulsion, but let early education be a sort of amusement; you will then be better able to find out the natural bent.

That is a very rational notion, he said.

Do you remember that the children, too, were to be taken to see the battle on horseback; and that if there were no danger they were to be brought close up and, like young hounds, have a taste of blood given them?

Yes, I remember.

The same practice may be followed, I said, in all these things—labours, lessons, dangers—and he who is most at home in all of them ought to be enrolled in a select number.

At what age?

At the age when the necessary gymnastics are over: the period whether of two or three years which passes in this sort of training is useless for any other purpose; for sleep and exercise are unpropitious to learning; and the trial of who is first in gymnastic exercises is one of the most important tests to which our youth are subjected.

The necessary gymnastics must be completed first.

Certainly, he replied.

After that time those who are selected from the class of twenty years old will be promoted to higher honour, and the sciences which they learned without any order in their early education will now be brought together, and they will be able to see the natural relationship of them to one another and to true being.

At twenty years of age the disciples will begin to be taught the correlation of the sciences.

Yes, he said, that is the only kind of knowledge which takes lasting root.

Yes, I said; and the capacity for such knowledge is the great criterion of dialectical talent: the comprehensive mind is always the dialectical.

I agree with you, he said.

These, I said, are the points which you must consider; and those who have most of this comprehension, and who are most steadfast in their learning, and in their military and other appointed duties, when they have arrived at the age of thirty will have to be chosen by you out of the select class, and elevated to higher honour; and you will have to prove them by the help of dialectic, in order to learn which of them is able to give up the use of sight and the other senses, and in company with truth to attain absolute being: And here, my friend, great caution is required.

At thirty the most promising will be placed in a select class.

Why great caution?

Do you not remark, I said, how great is the evil which dialectic has introduced?

The growth of scepticism

What evil? he said.

The students of the art are filled with lawlessness.

Quite true, he said.

Do you think that there is anything so very unnatural or inexcusable in their case? or will you make allowance for them?

In what way make allowance?

I want you, I said, by way of parallel, to imagine a supposititious son who is brought up in great wealth; he is one of a great and numerous family, and has many flatterers. When he grows up to manhood, he learns that his alleged are not his real parents; but who the real are he is unable to discover. Can you guess how he will be likely to behave towards his flatterers and his supposed parents, first of all during the period when he is ignorant of the false relation, and then again when he knows? Or shall I guess for you?

in the minds of the young illustrated by the case of a supposititious son,

If you please.

Then I should say, that while he is ignorant of the truth he will be likely to honour his father and his mother and his supposed relations more than the flatterers; he will be less inclined to neglect them when in need, or to do or say anything against them; and he will be less willing to disobey them in any important matter.

who ceases to honour his father when he discovers that he is not his father.

He will.

But when he has made the discovery, I should imagine that he would diminish his honour and regard for them, and would become more devoted to the flatterers; their influence over him would greatly increase; he would now live after their ways, and openly associate with them, and, unless he were of an unusually good disposition, he would trouble himself no more about his supposed parents or other relations.

Well, all that is very probable. But how is the image applicable to the disciples of philosophy?

In this way: you know that there are certain principles about justice and honour, which were taught us in childhood, and under their parental authority we have been brought up, obeying and honouring them.

That is true.

There are also opposite maxims and habits of pleasure which flatter and attract the soul, but do not influence those of us who have any sense of right, and they continue to obey and honour the maxims of their fathers.

True.

Now, when a man is in this state, and the questioning spirit asks what is fair or honourable, and he answers as the legislator has taught him, and then arguments many and diverse refute his words, until he is driven into believing that nothing is honourable any more than dishonourable, or just and good any more than the reverse, and so of all the notions which he most valued, do you think that he will still honour and obey them as before?

So men who begin to analyse the first principles of morality cease to respect them.

Impossible.

And when he ceases to think them honourable and natural 539as heretofore, and he fails to discover the true, can he be expected to pursue any life other than that which flatters his desires?

He cannot.

And from being a keeper of the law he is converted into a breaker of it?

Unquestionably.

Now all this is very natural in students of philosophy such as I have described, and also, as I was just now saying, most excusable.

Yes, he said; and, I may add, pitiable.

Therefore, that your feelings may not be moved to pity about our citizens who are now thirty years of age, every care must be taken in introducing them to dialectic.

Certainly.

There is a danger lest they should taste the dear delight too early; for youngsters, as you may have observed, when they first get the taste in their mouths, argue for amusement, and are always contradicting and refuting others in imitation of those who refute them; like puppy-dogs, they rejoice in pulling and tearing at all who come near them.

Young men are fond of pulling truth to pieces and thus bring disgrace upon themselves and upon philosophy.

Yes, he said, there is nothing which they like better.

And when they have made many conquests and received defeats at the hands of many, they violently and speedily get into a way of not believing anything which they believed before, and hence, not only they, but philosophy and all that relates to it is apt to have a bad name with the rest of the world.

Too true, he said.

But when a man begins to get older, he will no longer be guilty of such insanity; he will imitate the dialectician who is seeking for truth, and not the eristic, who is contradicting for the sake of

The dialectician and the eristic.

amusement; and the greater moderation of his character will increase instead of diminishing the honour of the pursuit.

Very true, he said.

And did we not make special provision for this, when we said that the disciples of philosophy were to be orderly and steadfast, not, as now, any chance aspirant or intruder?

Very true.

Suppose, I said, the study of philosophy to take the place of gymnastics and to be continued diligently and earnestly and exclusively for twice the number of years which were passed in bodily exercise—will that be enough?

Would you say six or four years? he asked.

The study of philosophy to continue for five years; 30-35.

Say five years, I replied; at the end of the time they must be sent down again into the den and compelled to hold any military or other office which young men are qualified to hold: in this way they will get their experience of life, and there will be an opportunity of trying whether, when they are drawn all manner of ways by temptation, they will stand firm or flinch.

540And how long is this stage of their lives to last?

Fifteen years, I answered; and when they have reached fifty years of age, then let those who still survive and have distinguished themselves in every action of their lives and in every branch of knowledge come at last to their consummation: the time has now arrived at which they must raise the eye of the soul to the universal light which lightens all things, and behold the absolute good; for that is the pattern according to which they are to order the State and the lives of individuals, and the remainder of their own lives also; making philosophy their chief pursuit, but, when their turn comes, toiling also at politics and ruling for the public good, not as though they were performing some heroic action, but simply as a matter of duty; and when they have brought up in each generation others like themselves and left them in their place to be governors of the State, then they will depart to the Islands of the Blest and dwell there; and the city will give them public memorials and sacrifices and honour them, if the Pythian oracle consent, as demigods, but if not, as in any case blessed and divine.

During fifteen years, 35-50, they are to hold office.

At the end of that time they are to live chiefly in the contemplation of the good, but occasionally to return to politics.

You are a sculptor, Socrates, and have made statues of our governors faultless in beauty.

Yes, I said, Glaucon, and of our governesses too; for you must not suppose that what I have been saying applies to men only and not to women as far as their natures can go.

There you are right, he said, since we have made them to share in all things like the men.

Well, I said, and you would agree (would you not?) that what has been said about the State and the government is not a mere dream, and although difficult not impossible, but only possible in the way which has been supposed; that is to say, when the true philosopher kings are born in a State, one or more of them, despising the honours of this present world which they deem mean and worthless, esteeming above all things right and the honour that springs from right, and regarding justice as the greatest and most necessary of all things, whose ministers they are, and whose principles will be exalted by them when they set in order their own city?

How will they proceed?

They will begin by sending out into the country all the inhabitants of the city who are more than ten years old, and will take possession of their children, who will be unaffected by the habits of their parents; these they will train in their own habits and laws, I mean in the laws which we have given them: and in this way the State and constitution of which we were speaking will soonest and most easily attain happiness, and the nation which has such a constitution will gain most.

Practical measures for the speedy foundation of the State.

Yes, that will be the best way. And I think, Socrates, that you have very well described how, if ever, such a constitution might come into being.

Enough then of the perfect State, and of the man who bears its image—there is no difficulty in seeing how we shall describe him.

There is no difficulty, he replied; and I agree with you in thinking that nothing more need be said.

[\[Back to Table of Contents\]](#)

BOOK VIII.

543And so, Glaucon, we have arrived at the conclusion that in the perfect State wives and children are to be in common; and that all education and the pursuits of war and peace are also to be common, and the best philosophers and the bravest warriors are to be their kings?

Republic VIII.

Recapitulation of Book V.

That, replied Glaucon, has been acknowledged.

Yes, I said; and we have further acknowledged that the governors, when appointed themselves, will take their soldiers and place them in houses such as we were describing, which are common to all, and contain nothing private, or individual; and about their property, you remember what we agreed?

Yes, I remember that no one was to have any of the ordinary possessions of mankind; they were to be warrior athletes and guardians, receiving from the other citizens, in lieu of annual payment, only their maintenance, and they were to take care of themselves and of the whole State.

True, I said; and now that this division of our task is concluded, let us find the point at which we digressed, that we may return into the old path.

There is no difficulty in returning; you implied, then as now, that you had finished the description of the State: you said that such a State was good, and that the man was good who answered to it, although, as now appears, you had more 544excellent things to relate both of State and man. And you said further, that if this was the true form, then the others were false; and of the false forms, you said, as I remember, that there were four principal ones, and that their defects, and the defects of the individuals corresponding to them, were worth examining. When we had seen all the individuals, and finally agreed as to who was the best and who was the worst of them, we were to consider whether the best was not also the happiest, and the worst the most miserable. I asked you what were the four forms of government of which you spoke, and then Polemarchus and Adeimantus put in their word; and you began again, and have found your way to the point at which we have now arrived.

Return to the end of Book IV.

Your recollection, I said, is most exact.

Then, like a wrestler, he replied, you must put yourself again in the same position; and let me ask the same questions, and do you give me the same answer which you were about to give me then.

Yes, if I can, I will, I said.

I shall particularly wish to hear what were the four constitutions of which you were speaking.

That question, I said, is easily answered: the four governments of which I spoke, so far as they have distinct names, are, first, those of Crete and Sparta, which are generally applauded; what is termed oligarchy comes next; this is not equally approved, and is a form of government which teems with evils: thirdly, democracy, which naturally follows oligarchy, although very different: and lastly comes tyranny, great and famous, which differs from them all, and is the fourth and worst disorder of a State. I do not know, do you? of any other constitution which can be said to have a distinct character. There are lordships and principalities which are bought and sold, and some other intermediate forms of government. But these are nondescripts and may be found equally among Hellenes and among barbarians.

Four imperfect constitutions, the Cretan or Spartan, Oligarchy, Democracy, Tyranny.

Yes, he replied, we certainly hear of many curious forms of government which exist among them.

Do you know, I said, that governments vary as the dispositions of men vary, and that there must be as many of the one as there are of the other? For we cannot suppose that States are made of 'oak and rock,' and not out of the human natures which are in them, and which in a figure turn the scale and draw other things after them?

States are like men, because they are made up of men.

Yes, he said, the States are as the men are; they grow out of human characters.

Then if the constitutions of States are five, the dispositions of individual minds will also be five?

Certainly.

Him who answers to aristocracy, and whom we rightly call just and good, we have already described.

We have.

Then let us now proceed to describe the inferior sort of natures, being the contentious and ambitious, who answer to the Spartan polity; also the oligarchical, democratical, and tyrannical. Let us place the most just by the side of the most unjust, and when we see them we shall be able to compare the relative happiness or unhappiness of him who leads a life of pure justice or pure injustice. The enquiry will then be completed. And we shall know whether we ought to pursue injustice, as Thrasymachus advises, or in accordance with the conclusions of the argument to prefer justice.

Certainly, he replied, we must do as you say.

Shall we follow our old plan, which we adopted with a view to clearness, of taking the State first and then proceeding to the individual, and begin with the government of honour?—I know of no name for such a government other than timocracy, or perhaps timarchy. We will compare with this the like character in the individual; and, after that, consider oligarchy and the oligarchical man; and then again we will turn our attention to democracy and the democratical man; and lastly, we will go and view the city of tyranny, and once more take a look into the tyrant's soul, and try to arrive at a satisfactory decision.

The State and the individual.

That way of viewing and judging of the matter will be very suitable.

First, then, I said, let us enquire how timocracy (the government of honour) arises out of aristocracy (the government of the best). Clearly, all political changes originate in divisions of the actual governing power; a government which is united, however small, cannot be moved.

How timocracy arises out of aristocracy.

Very true, he said.

In what way, then, will our city be moved, and in what manner will the two classes of auxiliaries and rulers disagree among themselves or with one another? Shall we, after the manner of Homer, pray the Muses to tell us 'how discord first arose'? Shall we imagine them in solemn mockery, to play and jest with us as if we were children, and to address us in a lofty tragic vein, making believe to be in earnest?

How would they address us?

546After this manner:—A city which is thus constituted can hardly be shaken; but, seeing that everything which has a beginning has also an end, even a constitution such as yours will not last for ever, but will in time be dissolved. And this is the dissolution:—In plants that grow in the earth, as well as in animals that move on the earth's surface, fertility and sterility of soul and body occur when the circumferences of the circles of each are completed, which in short-lived existences pass over a

The intelligence which is alloyed with sense will not know how to regulate births and deaths in accordance with the number which controls them.

short space, and in long-lived ones over a long space. But to the knowledge of human fecundity and sterility all the wisdom and education of your rulers will not attain; the laws which regulate them will not be discovered by an intelligence which is alloyed with sense, but will escape them, and they will bring children into the world when they ought not. Now that which is of divine birth has a period which is contained in a perfect number,¹ but the period of human birth is comprehended in a number in which first increments by involution and evolution [*or* squared and cubed] obtaining three intervals and four terms of like and unlike, waxing and waning numbers, make all the terms commensurable and agreeable to one another.² The base of these (3) with a third added (4) when combined with five (20) and raised to the third power furnishes two harmonies; the first a square which is a hundred times as great ($400 = 4 \times 100$),³ and the other a figure having one side equal to the former, but oblong,⁴ consisting of a hundred numbers squared upon rational diameters of a square (i. e.

omitting fractions), the side of which is five ($7 \times 7 = 49 \times 100 = 4900$), each of them being less by one (than the perfect square which includes the fractions, sc. 50) or less by 1 two perfect squares of irrational diameters (of a square the side of which is five = $50 + 50 = 100$); and a hundred cubes of three ($27 \times 100 = 2700 + 4900 + 400 = 8000$). Now this number represents a geometrical figure which has control over the good and evil of births. For when your guardians are ignorant of the law of births, and unite bride and bridegroom out of season, the children will not be goodly or fortunate. And though only the best of them will be appointed by their predecessors, still they will be unworthy to hold their fathers' places, and when they come into power as guardians, they will soon be found to fail in taking care of us, the Muses, first by undervaluing music; which neglect will soon extend to gymnastic; and hence the young men of your State will be less cultivated. In the succeeding generation rulers will be appointed who have lost the guardian power of testing the metal of your different races, which, like Hesiod's, are of gold and silver ⁵⁴and brass and iron. And so iron will be mingled with silver, and brass with gold, and hence there will arise dissimilarity and inequality and irregularity, which always and in all places are causes of hatred and war. This the Muses affirm to be the stock from which discord has sprung, wherever arising; and this is their answer to us.

Yes, and we may assume that they answer truly.

Why, yes, I said, of course they answer truly; how can the Muses speak falsely?

And what do the Muses say next?

When discord arose, then the two races were drawn different ways: the iron and brass fell to acquiring money and land and houses and gold and silver; but the gold and silver races, not wanting money but having the true riches in their own nature, inclined towards virtue and the ancient order of things. There was a battle between them, and at last they agreed to distribute their land and houses among individual owners; and they enslaved their friends and maintainers, whom they had formerly protected in the condition of freemen, and made of them subjects and servants; and they themselves were engaged in war and in keeping a watch against them.

Then discord arose and individual took the place of common property.

I believe that you have rightly conceived the origin of the change.

And the new government which thus arises will be of a form intermediate between oligarchy and aristocracy?

Very true.

Such will be the change, and after the change has been made, how will they proceed? Clearly, the new State, being in a mean between oligarchy and the perfect State, will partly follow one and partly the other, and will also have some peculiarities.

True, he said.

In the honour given to rulers, in the abstinence of the warrior class from agriculture, handicrafts, and trade in general, in the institution of common meals, and in the attention paid to gymnastics and military training—in all these respects this State will resemble the former.

True.

But in the fear of admitting philosophers to power, because they are no longer to be had simple and earnest, but are made up of mixed elements; and in turning from them to passionate and less complex characters, who are by nature fitted for war rather than peace; and in the value set by them upon military stratagems and contrivances, and in the waging of everlasting wars—this State will be for the most part peculiar.

Timocracy will retain the military and reject the philosophical character of the perfect State.

Yes.

Yes, I said; and men of this stamp will be covetous of money, like those who live in oligarchies; they will have a fierce secret longing after gold and silver, which they will hoard in dark places, having magazines and treasuries of their own for the deposit and concealment of them; also castles which are just nests for their eggs, and in which they will spend large sums on their wives, or on any others whom they please.

The soldier class miserly and covetous.

That is most true, he said.

And they are miserly because they have no means of openly acquiring the money which they prize; they will spend that which is another man's on the gratification of their desires, stealing their pleasures and running away like children from the law, their father: they have been schooled not by gentle influences but by force, for they have neglected her who is the true Muse, the companion of reason and philosophy, and have honoured gymnastic more than music.

Socrates, Glaucon, Adeimantus.

Undoubtedly, he said, the form of government which you describe is a mixture of good and evil.

Why, there is a mixture, I said; but one thing, and one thing only, is predominantly seen, — the spirit of contention and ambition; and these are due to the prevalence of the passionate or spirited element.

The spirit of ambition predominates in such States.

Assuredly, he said.

Such is the origin and such the character of this State, which has been described in outline only; the more perfect execution was not required, for a sketch is enough to show the type of the most perfectly just and most perfectly unjust; and to go through all the States and all the characters of men, omitting none of them, would be an interminable labour.

Very true, he replied.

Now what man answers to this form of government—how did he come into being, and what is he like?

I think, said Adeimantus, that in the spirit of contention which characterises him, he is not unlike our friend Glaucon.

Perhaps, I said, he may be like him in that one point; but there are other respects in which he is very different.

In what respects?

The timocratic man, uncultured, but fond of culture, ambitious, contentious, rough with slaves, and courteous to freemen; a soldier, athlete, hunter; a despiser of riches while young, fond of them when he grows old.

He should have more of self-assertion and be less cultivated, and yet a friend of culture; and he should be a good listener, but no speaker. Such a person is apt to be rough with slaves, unlike the educated man, who is too proud for that; and he will also be courteous to freemen, and remarkably obedient to authority; he is a lover of power and a lover of honour; claiming to be a ruler, not because he is eloquent, or on any ground of that sort, but because he is a soldier and has performed feats of arms; he is also a lover of gymnastic exercises and of the chase.

Yes, that is the type of character which answers to timocracy.

Such an one will despise riches only when he is young; but as he gets older he will be more and more attracted to them, because he has a piece of the avaricious nature in him, and is not single-minded towards virtue, having lost his best guardian.

Socrates, Adeimantus.

Who was that? said Adeimantus.

Philosophy, I said, tempered with music, who comes and takes up her abode in a man, and is the only saviour of his virtue throughout life.

Good, he said.

Such, I said, is the timocratical youth, and he is like the timocratical State.

Exactly.

His origin is as follows:—He is often the young son of a brave father, who dwells in an ill-governed city, of which he declines the honours and offices, and will not go to law, or exert himself in any way, but is ready to waive his rights in order that he may escape trouble.

And how does the son come into being?

The timocratic man often originates in a reaction against his

The character of the son begins to develop when he hears his mother complaining that her husband has no place in the government, of which the consequence is that she has no precedence among other women. Further, when she sees her husband not very eager about money, and instead of battling and railing in the law courts or assembly, taking whatever happens to him quietly; and when she observes that his thoughts always centre in himself, while he treats her with very considerable indifference, she is annoyed, and says to her son that his father is only half a man and far too easy-going: adding all the other complaints about her own ill-treatment which women are so fond of rehearsing.

father's character,
which is encouraged
by his mother,

Yes, said Adeimantus, they give us plenty of them, and their complaints are so like themselves.

And you know, I said, that the old servants also, who are supposed to be attached to the family, from time to time talk privately in the same strain to the son; and if they see any one who owes money to his father, or is wronging him in any way, and he fails to prosecute them, they tell the youth that 550 when he grows up he must retaliate upon people of this sort, and be more of a man than his father. He has only to walk abroad and he hears and sees the same sort of thing: those who do their own business in the city are called simpletons, and held in no esteem, while the busy-bodies are honoured and applauded. The result is that the young man, hearing and seeing all these things—hearing, too, the words of his father, and having a nearer view of his way of life, and making comparisons of him and others—is drawn opposite ways: while his father is watering and nourishing the rational principle in his soul, the others are encouraging the passionate and appetitive; and he being not originally of a bad nature, but having kept bad company, is at last brought by their joint influence to a middle point, and gives up the kingdom which is within him to the middle principle of contentiousness and passion, and becomes arrogant and ambitious.

and by the old
servants of the
household.

You seem to me to have described his origin perfectly.

Then we have now, I said, the second form of government and the second type of character?

We have.

Next, let us look at another man who, as Aeschylus says,

'Is set over against another State;'

or rather, as our plan requires, begin with the State.

By all means.

I believe that oligarchy follows next in order.

Oligarchy

And what manner of government do you term oligarchy?

A government resting on a valuation of property, in which the rich have power and the poor man is deprived of it.

I understand, he replied.

Ought I not to begin by describing how the change from timocracy to oligarchy arises?

Yes.

Well, I said, no eyes are required in order to see how the one passes into the other.

How?

The accumulation of gold in the treasury of private individuals is the ruin of timocracy; they invent illegal modes of expenditure; for what do they or their wives care about the law?

arises out of increased accumulation and increased expenditure among the citizens.

Yes, indeed.

And then one, seeing another grow rich, seeks to rival him, and thus the great mass of the citizens become lovers of money.

Likely enough.

And so they grow richer and richer, and the more they think of making a fortune the less they think of virtue; for when riches and virtue are placed together in the scales of the balance, the one always rises as the other falls.

As riches increase, virtue decreases: the one is honoured, the other despised; the one cultivated, the other neglected.

True.

551 And in proportion as riches and rich men are honoured in the State, virtue and the virtuous are dishonoured.

Clearly.

And what is honoured is cultivated, and that which has no honour is neglected.

That is obvious.

And so at last, instead of loving contention and glory, men become lovers of trade and money; they honour and look up to the rich man, and make a ruler of him, and dishonour the poor man.

They do so.

They next proceed to make a law which fixes a sum of money as the qualification of citizenship; the sum is higher in one place and lower in another, as the oligarchy is more or less exclusive; and they allow no one whose property falls below the amount fixed to have any share in the government. These changes in the constitution they effect by force of arms, if intimidation has not already done their work.

In an oligarchy a money qualification is established.

Very true.

And this, speaking generally, is the way in which oligarchy is established.

Yes, he said; but what are the characteristics of this form of government, and what are the defects of which we were speaking¹ ?

First of all, I said, consider the nature of the qualification. Just think what would happen if pilots were to be chosen according to their property, and a poor man were refused permission to steer, even though he were a better pilot?

A ruler is elected because he is rich: Who would elect a pilot on this principle?

You mean that they would shipwreck?

Yes; and is not this true of the government of anything² ?

I should imagine so.

Except a city?—or would you include a city?

Nay, he said, the case of a city is the strongest of all, inasmuch as the rule of a city is the greatest and most difficult of all.

This, then, will be the first great defect of oligarchy?

Clearly.

And here is another defect which is quite as bad.

What defect?

The inevitable division: such a State is not one, but two States, the one of poor, the other of rich men; and they are living on the same spot and always conspiring against one another.

The extreme division of classes in such a State.

That, surely, is at least as bad.

Another discreditable feature is, that, for a like reason, they are incapable of carrying on any war. Either they arm the multitude, and then they are more afraid of them than of the enemy; or, if they do not call them out in the hour of battle, they are oligarchs indeed, few to fight

They dare not go to war.

as they are few to rule. And at the same time their fondness for money makes them unwilling to pay taxes.

How discreditable!

And, as we said before, under such a constitution the 552 same persons have too many callings—they are husbandmen, tradesmen, warriors, all in one. Does that look well?

Anything but well.

There is another evil which is, perhaps, the greatest of all, and to which this State first begins to be liable.

What evil?

A man may sell all that he has, and another may acquire his property; yet after the sale he may dwell in the city of which he is no longer a part, being neither trader, nor artisan, nor horseman, nor hoplite, but only a poor, helpless creature.

The ruined man, who has no occupation, once a spendthrift, now a pauper, still exists in the State.

Yes, that is an evil which also first begins in this State.

The evil is certainly not prevented there; for oligarchies have both the extremes of great wealth and utter poverty.

True.

But think again: In his wealthy days, while he was spending his money, was a man of this sort a whit more good to the State for the purposes of citizenship? Or did he only seem to be a member of the ruling body, although in truth he was neither ruler nor subject, but just a spendthrift?

As you say, he seemed to be a ruler, but was only a spendthrift.

May we not say that this is the drone in the house who is like the drone in the honeycomb, and that the one is the plague of the city as the other is of the hive?

Just so, Socrates.

And God has made the flying drones, Adeimantus, all without stings, whereas of the walking drones he has made some without stings but others have dreadful stings; of the stingless class are those who in their old age end as paupers; of the stingers come all the criminal class, as they are termed.

Most true, he said.

Clearly then, whenever you see paupers in a State, somewhere in that neighbourhood there are hidden away thieves and cut-purses and robbers of temples, and all sorts of malefactors.

Where there are paupers, there are thieves

Clearly.

Well, I said, and in oligarchical States do you not find paupers?

Yes, he said; nearly everybody is a pauper who is not a ruler.

And may we be so bold as to affirm that there are also many criminals to be found in them, rogues who have stings, and whom the authorities are careful to restrain by force?

and other criminals.

Certainly, we may be so bold.

The existence of such persons is to be attributed to want of education, ill-training, and an evil constitution of the State?

True.

Such, then, is the form and such are the evils of oligarchy; and there may be many other evils.

Very likely.

553 Then oligarchy, or the form of government in which the rulers are elected for their wealth, may now be dismissed. Let us next proceed to consider the nature and origin of the individual who answers to this State.

By all means.

Does not the timocratical man change into the oligarchical on this wise?

How?

A time arrives when the representative of timocracy has a son: at first he begins by emulating his father and walking in his footsteps, but presently he sees him of a sudden foundering against the State as upon a sunken reef, and he and all that he has is lost; he may have been a general or some other high officer who is brought to trial under a prejudice raised by informers, and either put to death, or exiled, or deprived of the privileges of a citizen, and all his property taken from him.

The ruin of the timocratical man gives birth to the oligarchical.

Nothing more likely.

And the son has seen and known all this—he is a ruined man, and his fear has taught him to knock ambition and passion headforemost from his bosom's throne; humbled by poverty he takes to money-making and by mean and miserly savings and hard work gets a fortune together. Is not such an one likely to seat the concupiscent and covetous element on the vacant throne and to suffer it to play the great king within him, girt with tiara and chain and scimitar?

His son begins life a ruined man and takes to money-making.

Most true, he replied.

And when he has made reason and spirit sit down on the ground obediently on either side of their sovereign, and taught them to know their place, he compels the one to think only of how lesser sums may be turned into larger ones, and will not allow the other to worship and admire anything but riches and rich men, or to be ambitious of anything so much as the acquisition of wealth and the means of acquiring it.

Of all changes, he said, there is none so speedy or so sure as the conversion of the ambitious youth into the avaricious one.

And the avaricious, I said, is the oligarchical youth?

Yes, he said; at any rate the individual out of whom he came is like the State out of which oligarchy came.

The oligarchical man and State resemble one another in their estimation of wealth:

Let us then consider whether there is any likeness between them.

554Very good.

First, then, they resemble one another in the value which they set upon wealth?

Certainly.

Also in their penurious, laborious character; the individual only satisfies his necessary appetites, and confines his expenditure to them; his other desires he subdues, under the idea that they are unprofitable.

In their toiling and saving ways, in their want of cultivation.

True.

He is a shabby fellow, who saves something out of everything and makes a purse for himself; and this is the sort of man whom the vulgar applaud. Is he not a true image of the State which he represents?

He appears to me to be so; at any rate money is highly valued by him as well as by the State.

You see that he is not a man of cultivation, I said.

I imagine not, he said; had he been educated he would never have made a blind god director of his chorus, or given him chief honour¹.

Excellent! I said. Yet consider: Must we not further admit that owing to this want of cultivation there will be found in him dronelike desires as of pauper and rogue, which are forcibly kept down by his general habit of life?

True.

Do you know where you will have to look if you want to discover his rogueries?

Where must I look?

You should see him where he has some great opportunity of acting dishonestly, as in the guardianship of an orphan.

The oligarchical man keeps up a fair outside, but he has only an enforced virtue and will cheat when he can.

Aye.

It will be clear enough then that in his ordinary dealings which give him a reputation for honesty he coerces his bad passions by an enforced virtue; not making them see that they are wrong, or taming them by reason, but by necessity and fear constraining them, and because he trembles for his possessions.

To be sure.

Yes, indeed, my dear friend, but you will find that the natural desires of the drone commonly exist in him all the same whenever he has to spend what is not his own.

Yes, and they will be strong in him too.

The man, then, will be at war with himself; he will be two men, and not one; but, in general, his better desires will be found to prevail over his inferior ones.

True.

For these reasons such an one will be more respectable than most people; yet the true virtue of a unanimous and harmonious soul will flee far away and never come near him.

I should expect so.

555And surely, the miser individually will be an ignoble competitor in a State for any prize of victory, or other object of honourable ambition; he will not spend his money in the contest for glory; so afraid is he of awakening his expensive appetites and inviting them to help and join in the struggle; in true oligarchical fashion he fights with a small part only of his resources, and the result commonly is that he loses the prize and saves his money.

His meanness in a contest; he saves his money and loses the prize.

Very true.

Can we any longer doubt, then, that the miser and money-maker answers to the oligarchical State?

There can be no doubt.

Next comes democracy; of this the origin and nature have still to be considered by us; and then we will enquire into the ways of the democratic man, and bring him up for judgment.

Democracy arises out of the extravagance and indebtedness of men of family and position,

That, he said, is our method.

Well, I said, and how does the change from oligarchy into democracy arise? Is it not on this wise?—The good at which such a State aims is to become as rich as possible, a desire which is insatiable?

What then?

The rulers, being aware that their power rests upon their wealth, refuse to curtail by law the extravagance of the spendthrift youth because they gain by their ruin; they take interest from them and buy up their estates and thus increase their own wealth and importance?

To be sure.

There can be no doubt that the love of wealth and the spirit of moderation cannot exist together in citizens of the same state to any considerable extent; one or the other will be disregarded.

That is tolerably clear.

And in oligarchical States, from the general spread of carelessness and extravagance, men of good family have often been reduced to beggary?

Yes, often.

And still they remain in the city; there they are, ready to sting and fully armed, and some of them owe money, some have forfeited their citizenship; a third class are in both predicaments; and they hate and conspire against those who have got their property, and against everybody else, and are eager for revolution.

who remain in the city, and form a dangerous class ready to head a revolution.

That is true.

On the other hand, the men of business, stooping as they walk, and pretending not even to see those whom they have already ruined, insert their sting—that is, their money—into some one else who is not on his guard against them, and recover the parent sum many times over multiplied into a family of children: and so they make drone and pauper to abound in the State.

556Yes, he said, there are plenty of them—that is certain.

The evil blazes up like a fire; and they will not extinguish it, either by restricting a man's use of his own property, or by another remedy:

Two remedies: (1) restrictions on the free use of property;

What other?

One which is the next best, and has the advantage of compelling the citizens to look to their characters:—Let there be a general rule that every one shall enter into voluntary contracts at his own risk, and there will be less of this scandalous money-making, and the evils of which we were speaking will be greatly lessened in the State.

(2) contracts to be made at a man's own risk.

Yes, they will be greatly lessened.

At present the governors, induced by the motives which I have named, treat their subjects badly; while they and their adherents, especially the young men of the governing class, are habituated to lead a life of luxury and idleness both of body and mind; they do nothing, and are incapable of resisting either pleasure or pain.

Very true.

They themselves care only for making money, and are as indifferent as the pauper to the cultivation of virtue.

Yes, quite as indifferent.

Such is the state of affairs which prevails among them. And often rulers and their subjects may come in one another's way, whether on a journey or on some other occasion of meeting, on a pilgrimage or a march, as fellow-soldiers or fellow-sailors; aye and they may observe the behaviour of each other in the very moment of danger—for where danger is, there is no fear that the poor will be despised by the rich—and very likely the wiry sunburnt poor man may be placed in battle at the side of a wealthy one who has never spoilt his complexion and has plenty of superfluous flesh—when he sees such an one puffing and at his wits' end, how can he avoid drawing the conclusion that men like him are only rich because no one has the courage to despoil them? And when they meet in private will not people be saying to one another 'Our warriors are not good for much'?

The subjects discover the weakness of their rulers.

Yes, he said, I am quite aware that this is their way of talking.

And, as in a body which is diseased the addition of a touch from without may bring on illness, and sometimes even when there is no external provocation a commotion may arise within—in the same way wherever there is weakness in the State there is also likely to be illness, of which the occasion may be very slight, the one party introducing from without their oligarchical, the other their democratical allies, and then the State falls sick, and is at war with herself; and may be at times distracted, even when there is no external cause.

A slight cause, internal or external, may produce revolution.

Yes, surely.

And then democracy comes into being after the poor have conquered their opponents, slaughtering some and banishing some, while to the remainder they give an equal share of freedom and power; and this is the form of government in which the magistrates are commonly elected by lot.

Such is the origin and nature of democracy.

Yes, he said, that is the nature of democracy, whether the revolution has been effected by arms, or whether fear has caused the opposite party to withdraw.

And now what is their manner of life, and what sort of a government have they? for as the government is, such will be the man.

Clearly, he said.

In the first place, are they not free; and is not the city full of freedom and frankness—a man may say and do what he likes?

'Tis said so, he replied.

And where freedom is, the individual is clearly able to order for himself his own life as he pleases?

Democracy allows a man to do as he likes, and therefore contains the greatest variety of characters and constitutions.

Clearly.

Then in this kind of State there will be the greatest variety of human natures?

There will.

This, then, seems likely to be the fairest of States, being like an embroidered robe which is spangled with every sort of flower¹. And just as women and children think a variety of colours to be of all things most charming, so there are many men to whom this State, which is spangled with the manners and characters of mankind, will appear to be the fairest of States.

Yes.

Yes, my good Sir, and there will be no better in which to look for a government.

Why?

Because of the liberty which reigns there—they have a complete assortment of constitutions; and he who has a mind to establish a State, as we have been doing, must go to a democracy as he would to a bazaar at which they sell them, and pick out the one that suits him; then, when he has made his choice, he may found his State.

He will be sure to have patterns enough.

And there being no necessity, I said, for you to govern in this State, even if you have the capacity, or to be governed, unless you like, or to go to war when the rest go to war, or to be at peace when others are at peace, unless you are so disposed—there being no necessity also, because some law forbids you to hold office or be a dicast, that you should not hold office or be a dicast, if you have a fancy—is not ⁵⁵⁸this a way of life which for the moment is supremely delightful?

The law falls into abeyance.

For the moment, yes.

And is not their humanity to the condemned ¹ in some cases quite charming? Have you not observed how, in a democracy, many persons, although they have been sentenced to death or exile, just stay where they are and walk about the world—the gentleman parades like a hero, and nobody sees or cares?

Yes, he replied, many and many a one.

See too, I said, the forgiving spirit of democracy, and the ‘don’t care’ about trifles, and the disregard which she shows of all the fine principles which we solemnly laid down at the foundation of the city—as when we said that, except in the case of some rarely gifted nature, there never will be a good man who has not from his childhood been used to play amid things of beauty and make of them a joy and a study—how grandly does she trample all these fine notions of ours under her feet, never giving a thought to the pursuits which make a statesman, and promoting to honour any one who professes to be the people’s friend.

All principles of order and good taste are trampled under foot by democracy.

Yes, she is of a noble spirit.

These and other kindred characteristics are proper to democracy, which is a charming form of government, full of variety and disorder, and dispensing a sort of equality to equals and unequals alike.

We know her well.

Consider now, I said, what manner of man the individual is, or rather consider, as in the case of the State, how he comes into being.

Very good, he said.

Is not this the way—he is the son of the miserly and oligarchical father who has trained him in his own habits?

Exactly.

And, like his father, he keeps under by force the pleasures which are of the spending and not of the getting sort, being those which are called unnecessary?

Which are the necessary and which the unnecessary pleasures?

Obviously.

Would you like, for the sake of clearness, to distinguish which are the necessary and which are the unnecessary pleasures?

I should.

Are not necessary pleasures those of which we cannot get rid, and of which the satisfaction is a benefit to us? And they are rightly called so, because we are framed by nature to desire both what is beneficial and what is necessary, and cannot help it.

Necessary desires
cannot be got rid of,

559 True.

We are not wrong therefore in calling them necessary?

We are not.

And the desires of which a man may get rid, if he takes pains from his youth upwards—of which the presence, moreover, does no good, and in some cases the reverse of good—shall we not be right in saying that all these are unnecessary?

Yes, certainly.

Suppose we select an example of either kind, in order that we may have a general notion of them?

Very good.

Will not the desire of eating, that is, of simple food and condiments, in so far as they are required for health and strength, be of the necessary class?

That is what I should suppose.

The pleasure of eating is necessary in two ways; it does us good and it is essential to the continuance of life?

Yes.

But the condiments are only necessary in so far as they are good for health?

but may be indulged
to excess.

Certainly.

And the desire which goes beyond this, of more delicate food, or other luxuries, which might generally be got rid of, if controlled and trained in youth, and is hurtful to the body, and hurtful to the soul in the pursuit of wisdom and virtue, may be rightly called unnecessary?

Illustration taken from
eating and drinking.

Very true.

May we not say that these desires spend, and that the others make money because they conduce to production?

Certainly.

And of the pleasures of love, and all other pleasures, the same holds good?

True.

And the drone of whom we spoke was he who was surfeited in pleasures and desires of this sort, and was the slave of the unnecessary desires, whereas he who was subject to the necessary only was miserly and oligarchical?

Very true.

Again, let us see how the democratical man grows out of the oligarchical: the following, as I suspect, is commonly the process.

What is the process?

When a young man who has been brought up as we were just now describing, in a vulgar and miserly way, has tasted drones' honey and has come to associate with fierce and crafty natures who are able to provide for him all sorts of refinements and varieties of pleasure—then, as you may imagine, the change will begin of the oligarchical principle within him into the democratical?

The young oligarch is led away by his wild associates.

Inevitably.

And as in the city like was helping like, and the change was effected by an alliance from without assisting one division of the citizens, so too the young man is changed by a class of desires coming from without to assist the desires within him, that which is akin and alike again helping that which is akin and alike?

There are allies to either part of his nature.

Certainly.

And if there be any ally which aids the oligarchical principle within him, whether the influence of a father or of kindred, advising or rebuking him, then there arises in his soul a faction and an opposite faction, and he goes to war with himself.

It must be so.

And there are times when the democratical principle gives way to the oligarchical, and some of his desires die, and others are banished; a spirit of reverence enters into the young man's soul and order is restored.

Yes, he said, that sometimes happens.

And then, again, after the old desires have been driven out, fresh ones spring up, which are akin to them, and because he their father does not know how to educate them, wax fierce and numerous.

Yes, he said, that is apt to be the way.

They draw him to his old associates, and holding secret intercourse with them, breed and multiply in him.

Very true.

At length they seize upon the citadel of the young man's soul, which they perceive to be void of all accomplishments and fair pursuits and true words, which make their abode in the minds of men who are dear to the gods, and are their best guardians and sentinels.

None better.

False and boastful conceits and phrases mount upwards and take their place.

They are certain to do so.

And so the young man returns into the country of the lotus-eaters, and takes up his dwelling there in the face of all men; and if any help be sent by his friends to the oligarchical part of him, the aforesaid vain conceits shut the gate of the king's fastness; and they will neither allow the embassy itself to enter, nor if private advisers offer the fatherly counsel of the aged will they listen to them or receive them. There is a battle and they gain the day, and then modesty, which they call silliness, is ignominiously thrust into exile by them, and temperance, which they nickname unmanliness, is trampled in the mire and cast forth; they persuade men that moderation and orderly expenditure are vulgarity and meanness, and so, by the help of a rabble of evil appetites, they drive them beyond the border.

The progress of the oligarchic young man told in an allegory.

Yes, with a will.

And when they have emptied and swept clean the soul of him who is now in their power and who is being initiated by them in great mysteries, the next thing is to bring back to their house insolence and anarchy and waste and impudence in bright array having garlands on their heads, and a great company with them, hymning their praises and calling them by sweet names; insolence they term breeding, and anarchy liberty, and waste magnificence, and impudence courage. And so the young man passes out of his original nature, which was trained in the school of necessity, into the freedom and libertinism of useless and unnecessary pleasures.

Yes, he said, the change in him is visible enough.

After this he lives on, spending his money and labour and time on unnecessary pleasures quite as much as on necessary ones; but if he be fortunate, and is not too much disordered in his wits, when years have elapsed, and the heyday of passion is over—supposing that he then re-admits into the city some part of the exiled virtues, and does not wholly give himself up to their successors—in that case he balances his pleasures and lives in a sort of equilibrium, putting the government of himself into the hands of the one which comes first and wins the turn; and when he has had enough of that, then into the hands of another; he despises none of them but encourages them all equally.

He becomes a rake; but

he also sometimes stops short in his career and gives way to pleasures good and bad indifferently.

Very true, he said.

Neither does he receive or let pass into the fortress any true word of advice; if any one says to him that some pleasures are the satisfactions of good and noble desires, and others of evil desires, and that he ought to use and honour some and chastise and master the others—whenever this is repeated to him he shakes his head and says that they are all alike, and that one is as good as another.

He rejects all advice,

Yes, he said; that is the way with him.

Yes, I said, he lives from day to day indulging the appetite of the hour; and sometimes he is lapped in drink and strains of the flute; then he becomes a water-drinker, and tries to get thin; then he takes a turn at gymnastics; sometimes idling and neglecting everything, then once more living the life of a philosopher; often he is busy with politics, and starts to his feet and says and does whatever comes into his head; and, if he is emulous of any one who is a warrior, off he is in that direction, or of men of business, once more in that. His life has neither law nor order; and this distracted existence he terms joy and bliss and freedom; and so he goes on.

passing his life in the alternation from one extreme to another.

Yes, he replied, he is all liberty and equality.

Yes, I said; his life is motley and manifold and an epitome of the lives of many;—he answers to the State which we described as fair and spangled. And many a man and many a woman will take him for their pattern, and many a constitution and many an example of manners is contained in him.

He is 'not one, but all mankind's epitome.'

Just so.

562Let him then be set over against democracy; he may truly be called the democratic man.

Let that be his place, he said.

Last of all comes the most beautiful of all, man and State alike, tyranny and the tyrant; these we have now to consider.

Quite true, he said.

Tyranny and the tyrant.

Say then, my friend, In what manner does tyranny arise?—that it has a democratic origin is evident.

Clearly.

And does not tyranny spring from democracy in the same manner as democracy from oligarchy—I mean, after a sort?

How?

The good which oligarchy proposed to itself and the means by which it was maintained was excess of wealth — am I not right?

The insatiable desire of wealth creates a demand for democracy, the insatiable desire of freedom creates a demand for tyranny.

Yes.

And the insatiable desire of wealth and the neglect of all other things for the sake of money-getting was also the ruin of oligarchy?

True.

And democracy has her own good, of which the insatiable desire brings her to dissolution?

What good?

Freedom, I replied; which, as they tell you in a democracy, is the glory of the State—and that therefore in a democracy alone will the freeman of nature deign to dwell.

Yes; the saying is in every body's mouth.

I was going to observe, that the insatiable desire of this and the neglect of other things introduces the change in democracy, which occasions a demand for tyranny.

How so?

When a democracy which is thirsting for freedom has evil cup-bearers presiding over the feast, and has drunk too deeply of the strong wine of freedom, then, unless her rulers are very amenable and give a plentiful draught, she calls them to account and punishes them, and says that they are cursed oligarchs.

Yes, he replied, a very common occurrence.

Yes, I said; and loyal citizens are insultingly termed by her slaves who hug their chains and men of naught; she would have subjects who are like rulers, and rulers who are like subjects: these are men after her own heart, whom she praises and honours both in private and public. Now, in such a State, can liberty have any limit?

Freedom in the end means anarchy.

Certainly not.

By degrees the anarchy finds a way into private houses, and ends by getting among the animals and infecting them.

How do you mean?

I mean that the father grows accustomed to descend to the level of his sons and to fear them, and the son is on a level with his father, he having no respect or reverence for either of his parents; and this is his freedom, and the metic is equal with the citizen and the citizen with the metic, and the 563stranger is quite as good as either.

Yes, he said, that is the way.

And these are not the only evils, I said—there are several lesser ones: In such a state of society the master fears and flatters his scholars, and the scholars despise their masters and tutors; young and old are all alike; and the young man is on a level with the old, and is ready to compete with him in word or deed; and old men condescend to the young and are full of pleasantry and gaiety; they are loth to be thought morose and authoritative, and therefore they adopt the manners of the young.

The inversion of all social relations.

Quite true, he said.

The last extreme of popular liberty is when the slave bought with money, whether male or female, is just as free as his or her purchaser; nor must I forget to tell of the liberty and equality of the two sexes in relation to each other.

Why not, as Aeschylus says, utter the word which rises to our lips?

That is what I am doing, I replied; and I must add that no one who does not know would believe, how much greater is the liberty which the animals who are under the dominion of man have in a democracy than in any other State: for truly, the she-dogs, as the proverb says, are as good as their she-mistresses, and the horses and asses have a way of marching along with all the rights and dignities of freemen; and they will run at any body who comes in their way if he does not leave the road clear for them: and all things are just ready to burst with liberty.

Freedom among the animals.

When I take a country walk, he said, I often experience what you describe. You and I have dreamed the same thing.

And above all, I said, and as the result of all, see how sensitive the citizens become; they chafe impatiently at the least touch of authority, and at length, as you know, they cease to care even for the laws, written or unwritten; they will have no one over them.

No law, no authority.

Yes, he said, I know it too well.

Such, my friend, I said, is the fair and glorious beginning out of which springs tyranny.

Glorious indeed, he said. But what is the next step?

The ruin of oligarchy is the ruin of democracy; the same disease magnified and intensified by liberty overmasters democracy—the truth being that the excessive increase of anything often causes a reaction in the opposite direction; and this is the case not only in the seasons and in vegetable and animal life, but above all in forms of government.

True.

The excess of liberty, whether in States or individuals, seems only to pass into excess of slavery.

Yes, the natural order.

And so tyranny naturally arises out of democracy, and the most aggravated form of tyranny and slavery out of the most extreme form of liberty?

As we might expect.

That, however, was not, as I believe, your question—you rather desired to know what is that disorder which is generated alike in oligarchy and democracy, and is the ruin of both?

The common evil of oligarchy and democracy is the class of idle spend-thrifts.

Just so, he replied.

Well, I said, I meant to refer to the class of idle spend-thrifts, of whom the more courageous are the leaders and the more timid the followers, the same whom we were comparing to drones, some stingless, and others having stings.

A very just comparison.

These two classes are the plagues of every city in which they are generated, being what phlegm and bile are to the body. And the good physician and lawgiver of the State ought, like the wise bee-master, to keep them at a distance and prevent, if possible, their ever coming in; and if they have anyhow found a way in, then he should have them and their cells cut out as speedily as possible.

Illustration.

Yes, by all means, he said.

Then, in order that we may see clearly what we are doing, let us imagine democracy to be divided, as indeed it is, into three classes; for in the first place freedom creates rather more drones in the democratic than there were in the oligarchical State.

Altogether three classes in a democracy.

That is true.

And in the democracy they are certainly more intensified.

How so?

Because in the oligarchical State they are disqualified and driven from office, and therefore they cannot train or gather strength; whereas in a democracy they are almost the entire ruling power, and while the keener sort speak and act, the rest keep buzzing about the bema and do not suffer a word to be said on the other side; hence in democracies almost everything is managed by the drones.

(1) The drones or spend-thrifts who are more numerous and active than in the oligarchy.

Very true, he said.

Then there is another class which is always being severed from the mass.

What is that?

They are the orderly class, which in a nation of traders is sure to be the richest.

(2) The orderly or wealthy class who are fed upon by the drones.

Naturally so.

They are the most squeezable persons and yield the largest amount of honey to the drones.

Why, he said, there is little to be squeezed out of people who have little.

And this is called the wealthy class, and the drones feed upon them.

565 That is pretty much the case, he said.

The people are a third class, consisting of those who work with their own hands; they are not politicians, and have not much to live upon. This, when assembled, is the largest and most powerful class in a democracy.

(3) The working class who also get a share.

True, he said; but then the multitude is seldom willing to congregate unless they get a little honey.

And do they not share? I said. Do not their leaders deprive the rich of their estates and distribute them among the people; at the same time taking care to reserve the larger part for themselves?

Why, yes, he said, to that extent the people do share.

And the persons whose property is taken from them are compelled to defend themselves before the people as they best can?

The well-to-do have to defend themselves against the people.

What else can they do?

And then, although they may have no desire of change, the others charge them with plotting against the people and being friends of oligarchy?

True.

And the end is that when they see the people, not of their own accord, but through ignorance, and because they are deceived by informers, seeking to do them wrong, then at last they are forced to become oligarchs in reality; they do not wish to be, but the sting of the drones torments them and breeds revolution in them.

That is exactly the truth.

Then come impeachments and judgments and trials of one another.

True.

The people have always some champion whom they set over them and nurse into greatness.

The people have a protector who, when once he tastes blood, is converted into a tyrant.

Yes, that is their way.

This and no other is the root from which a tyrant springs; when he first appears above ground he is a protector.

Yes, that is quite clear.

How then does a protector begin to change into a tyrant? Clearly when he does what the man is said to do in the tale of the Arcadian temple of Lycaean Zeus.

What tale?

The tale is that he who has tasted the entrails of a single human victim minced up with the entrails of other victims is destined to become a wolf. Did you never hear it?

O yes.

And the protector of the people is like him; having a mob entirely at his disposal, he is not restrained from shedding the blood of kinsmen; by the favourite method of false accusation he brings them into court and murders them, making the life of man to disappear, and with unholy tongue and lips tasting the blood of his fellow citizens; some he kills and others he banishes, at the same time hinting at the abolition of debts and partition of lands: and after this, what will be his destiny? Must he not either perish at the hands of his enemies, or from being a man become a wolf—that is, a tyrant?

Inevitably.

This, I said, is he who begins to make a party against the rich?

The same.

After a while he is driven out, but comes back, in spite of his enemies, a tyrant full grown.

After a time he is driven out, but comes back a full-blown tyrant.

That is clear.

And if they are unable to expel him, or to get him condemned to death by a public accusation, they conspire to assassinate him.

Yes, he said, that is their usual way.

Then comes the famous request for a body-guard, which is the device of all those who have got thus far in their tyrannical career—‘Let not the people’s friend,’ as they say, ‘be lost to them.’

The body-guard.

Exactly.

The people readily assent; all their fears are for him—they have none for themselves.

Very true.

And when a man who is wealthy and is also accused of being an enemy of the people sees this, then, my friend, as the oracle said to Croesus,

‘By pebbly Hermus’ shore he flees and rests not, and is not ashamed to be a coward¹.

And quite right too, said he, for if he were, he would never be ashamed again.

But if he is caught he dies.

Of course.

And he, the protector of whom we spoke, is to be seen, not 'larding the plain' with his bulk, but himself the overthrower of many, standing up in the chariot of State with the reins in his hand, no longer protector, but tyrant absolute.

The protector standing up in the chariot of State.

No doubt, he said.

And now let us consider the happiness of the man, and also of the State in which a creature like him is generated.

Yes, he said, let us consider that.

At first, in the early days of his power, he is full of smiles, and he salutes every one whom he meets;—he to be called a tyrant, who is making promises in public and also in private! liberating debtors, and distributing land to the people and his followers, and wanting to be so kind and good to every one!

Of course, he said.

But when he has disposed of foreign enemies by conquest ⁵⁶⁷or treaty, and there is nothing to fear from them, then he is always stirring up some war or other, in order that the people may require a leader.

He stirs up wars, and impoverishes his subjects by the imposition of taxes.

To be sure.

Has he not also another object, which is that they may be impoverished by payment of taxes, and thus compelled to devote themselves to their daily wants and therefore less likely to conspire against him?

Clearly.

And if any of them are suspected by him of having notions of freedom, and of resistance to his authority, he will have a good pretext for destroying them by placing them at the mercy of the enemy; and for all these reasons the tyrant must be always getting up a war.

He must.

Now he begins to grow unpopular.

A necessary result.

Then some of those who joined in setting him up, and who are in power, speak their minds to him and to one another, and the more courageous of them cast in his teeth what is being done.

Yes, that may be expected.

And the tyrant, if he means to rule, must get rid of them; he cannot stop while he has a friend or an enemy who is good for anything.

He gets rid of his bravest and boldest followers.

He cannot.

And therefore he must look about him and see who is valiant, who is high-minded, who is wise, who is wealthy; happy man, he is the enemy of them all, and must seek occasion against them whether he will or no, until he has made a purgation of the State.

Yes, he said, and a rare purgation.

Yes, I said, not the sort of purgation which the physicians make of the body; for they take away the worse and leave the better part, but he does the reverse.

His purgation of the State.

If he is to rule, I suppose that he cannot help himself.

What a blessed alternative, I said:—to be compelled to dwell only with the many bad, and to be by them hated, or not to live at all!

Yes, that is the alternative.

And the more detestable his actions are to the citizens the more satellites and the greater devotion in them will he require?

Certainly.

And who are the devoted band, and where will he procure them?

They will flock to him, he said, of their own accord, if he pays them.

By the dog! I said, here are more drones, of every sort and from every land.

More drones.

Yes, he said, there are.

But will he not desire to get them on the spot?

How do you mean?

He will rob the citizens of their slaves; he will then set them free and enrol them in his body-guard.

To be sure, he said; and he will be able to trust them best of all.

He puts to death his friends and lives with

What a blessed creature, I said, must this tyrant be; he has put to death the others and has these for his trusted friends.

the slaves whom he has enfranchised.

Yes, he said; they are quite of his sort.

Yes, I said, and these are the new citizens whom he has called into existence, who admire him and are his companions, while the good hate and avoid him.

Of course.

Verily, then, tragedy is a wise thing and Euripides a great tragedian.

Euripides and the tragedians

Why so?

Why, because he is the author of the pregnant saying,

‘Tyrants are wise by living with the wise;’

and he clearly meant to say that they are the wise whom the tyrant makes his companions.

praise tyranny, which is an excellent reason for expelling them from our State.

Yes, he said, and he also praises tyranny as godlike; and many other things of the same kind are said by him and by the other poets.

And therefore, I said, the tragic poets being wise men will forgive us and any others who live after our manner if we do not receive them into our State, because they are the eulogists of tyranny.

Yes, he said, those who have the wit will doubtless forgive us.

But they will continue to go to other cities and attract mobs, and hire voices fair and loud and persuasive, and draw the cities over to tyrannies and democracies.

Very true.

Moreover, they are paid for this and receive honour—the greatest honour, as might be expected, from tyrants, and the next greatest from democracies; but the higher they ascend our constitution hill, the more their reputation fails, and seems unable from shortness of breath to proceed further.

True.

But we are wandering from the subject: Let us therefore return and enquire how the tyrant will maintain that fair and numerous and various and ever-changing army of his.

If, he said, there are sacred treasures in the city, he will confiscate and spend them; and in so far as the fortunes of attainted persons may suffice, he will be able to diminish the taxes which he would otherwise have to impose upon the people.

The tyrant seizes the treasures in the temples, and when these fail feeds upon the people.

And when these fail?

Why, clearly, he said, then he and his boon companions, whether male or female, will be maintained out of his father's estate.

You mean to say that the people, from whom he has derived his being, will maintain him and his companions?

Yes, he said; they cannot help themselves.

But what if the people fly into a passion, and aver that a grown-up son ought not to be supported by his father, but that the father should be supported by the son? The father did not bring him into being, or settle him in life, in order that when his son became a man he should himself be the servant of his own servants and should support him and his rabble of slaves and companions; but that his son should protect him, and that by his help he might be emancipated from the government of the rich and aristocratic, as they are termed. And so he bids him and his companions depart, just as any other father might drive out of the house a riotous son and his undesirable associates.

They rebel, and then he beats his own parent, i. e. the people.

By heaven, he said, then the parent will discover what a monster he has been fostering in his bosom; and, when he wants to drive him out, he will find that he is weak and his son strong.

Why, you do not mean to say that the tyrant will use violence? What! beat his father if he opposes him?

Yes, he will, having first disarmed him.

Then he is a parricide, and a cruel guardian of an aged parent; and this is real tyranny, about which there can be no longer a mistake: as the saying is, the people who would escape the smoke which is the slavery of freemen, has fallen into the fire which is the tyranny of slaves. Thus liberty, getting out of all order and reason, passes into the harshest and bitterest form of slavery.

True, he said.

Very well; and may we not rightly say that we have sufficiently discussed the nature of tyranny, and the manner of the transition from democracy to tyranny?

Yes, quite enough, he said.

[\[Back to Table of Contents\]](#)

BOOK IX.

571 Last of all comes the tyrannical man; about whom we have once more to ask, how is he formed out of the democratical? and how does he live, in happiness or in misery?

Republic IX.

Yes, he said, he is the only one remaining.

There is, however, I said, a previous question which remains unanswered.

What question?

I do not think that we have adequately determined the nature and number of the appetites, and until this is accomplished the enquiry will always be confused.

A digression having a purpose.

Well, he said, it is not too late to supply the omission.

Very true, I said; and observe the point which I want to understand: Certain of the unnecessary pleasures and appetites I conceive to be unlawful; every one appears to have them, but in some persons they are controlled by the laws and by reason, and the better desires prevail over them—either they are wholly banished or they become few and weak; while in the case of others they are stronger, and there are more of them.

The wild beast latent in man peers forth in sleep.

Which appetites do you mean?

I mean those which are awake when the reasoning and human and ruling power is asleep; then the wild beast within us, gorged with meat or drink, starts up and having shaken off sleep, goes forth to satisfy his desires; and there is no conceivable folly or crime — not excepting incest or any other unnatural union, or parricide, or the eating of forbidden food—which at such a time, when he has parted company with all shame and sense, a man may not be ready to commit.

Most true, he said.

But when a man's pulse is healthy and temperate, and when before going to sleep he has awakened his rational powers, and fed them on noble thoughts and enquiries, collecting himself in meditation; after having first indulged his appetites neither too much nor too little, but just enough to lay them to sleep, and prevent them and their enjoyments 572 and pains from interfering with the higher principle—which he leaves in the solitude of pure abstraction, free to contemplate and aspire to the knowledge of the unknown, whether in past, present, or future: when again he has allayed the passionate element, if he has a quarrel against

The contrast of the temperate

man whose passions are under the control of reason.

any one—I say, when, after pacifying the two irrational principles, he rouses up the third, which is reason, before he takes his rest, then, as you know, he attains truth most nearly, and is least likely to be the sport of fantastic and lawless visions.

I quite agree.

In saying this I have been running into a digression; but the point which I desire to note is that in all of us, even in good men, there is a lawless wild-beast nature, which peers out in sleep. Pray, consider whether I am right, and you agree with me.

Yes, I agree.

And now remember the character which we attributed to the democratic man. He was supposed from his youth upwards to have been trained under a miserly parent, who encouraged the saving appetites in him, but discountenanced the unnecessary, which aim only at amusement and ornament?

Recapitulation.

True.

And then he got into the company of a more refined, licentious sort of people, and taking to all their wanton ways rushed into the opposite extreme from an abhorrence of his father's meanness. At last, being a better man than his corruptors, he was drawn in both directions until he halted midway and led a life, not of vulgar and slavish passion, but of what he deemed moderate indulgence in various pleasures. After this manner the democrat was generated out of the oligarch?

Yes, he said; that was our view of him, and is so still.

And now, I said, years will have passed away, and you must conceive this man, such as he is, to have a son, who is brought up in his father's principles.

I can imagine him.

Then you must further imagine the same thing to happen to the son which has already happened to the father:—he is drawn into a perfectly lawless life, which by his seducers is termed perfect liberty; and his father and friends take part with his moderate desires, and the opposite party assist the opposite ones. As soon as these dire magicians and tyrant-makers find that they are losing their hold on him, they contrive to implant in him a master passion, to be lord over his idle and spendthrift lusts—a sort of monstrous winged drone—that is the only image which will adequately describe him.

Yes, he said, that is the only adequate image of him.

And when his other lusts, amid clouds of incense and perfumes and garlands and wines, and all the pleasures of a dissolute life, now let loose, come buzzing around him, nourishing to the utmost the sting of desire which they implant in his drone-like nature, then at last this lord of the soul, having Madness for the captain of his guard, breaks out into a frenzy; and if he finds in himself any good opinions or appetites in

process of formation¹, and there is in him any sense of shame remaining, to these better principles he puts an end, and casts them forth until he has purged away temperance and brought in madness to the full.

Yes, he said, that is the way in which the tyrannical man is generated.

The tyrannical man is made up of lusts and appetites. Love, drink, madness are but different forms of tyranny.

And is not this the reason why of old love has been called a tyrant?

I should not wonder.

Further, I said, has not a drunken man also the spirit of a tyrant?

He has.

And you know that a man who is deranged and not right in his mind, will fancy that he is able to rule, not only over men, but also over the gods?

That he will.

And the tyrannical man in the true sense of the word comes into being when, either under the influence of nature, or habit, or both, he becomes drunken, lustful, passionate? O my friend, is not that so?

Assuredly.

Such is the man and such is his origin. And next, how does he live?

Suppose, as people facetiously say, you were to tell me.

I imagine, I said, at the next step in his progress, that there will be feasts and carousals and revellings and courtezans, and all that sort of thing; Love is the lord of the house within him, and orders all the concerns of his soul.

That is certain.

Yes; and every day and every night desires grow up many and formidable, and their demands are many.

They are indeed, he said.

His revenues, if he has any, are soon spent.

True.

Then comes debt and the cutting down of his property.

Of course.

When he has nothing left, must not his desires, crowding in the nest like young ravens, be crying aloud for food; and 574he, goaded on by them, and especially by love himself, who is in a manner the captain of them, is in a frenzy, and would fain discover whom he can defraud or despoil of his property, in order that he may gratify them?

His desires become greater and his means less.

Yes, that is sure to be the case.

He must have money, no matter how, if he is to escape horrid pains and pangs.

He must.

And as in himself there was a succession of pleasures, and the new got the better of the old and took away their rights, so he being younger will claim to have more than his father and his mother, and if he has spent his own share of the property, he will take a slice of theirs.

He will rob his father and mother.

No doubt he will.

And if his parents will not give way, then he will try first of all to cheat and deceive them.

Very true.

And if he fails, then he will use force and plunder them.

Yes, probably.

And if the old man and woman fight for their own, what then, my friend? Will the creature feel any compunction at tyrannizing over them?

Nay, he said, I should not feel at all comfortable about his parents.

But, O heavens! Adeimantus, on account of some newfangled love of a harlot, who is anything but a necessary connection, can you believe that he would strike the mother who is his ancient friend and necessary to his very existence, and would place her under the authority of the other, when she is brought under the same roof with her; or that, under like circumstances, he would do the same to his withered old father, first and most indispensable of friends, for the sake of some newly-found blooming youth who is the reverse of indispensable?

He will prefer the love of a girl or a youth to his aged parents, and may even be induced to strike them.

Yes, indeed, he said; I believe that he would.

Truly, then, I said, a tyrannical son is a blessing to his father and mother.

He is indeed, he replied.

He first takes their property, and when that fails, and pleasures are beginning to swarm in the hive of his soul, then he breaks into a house, or steals the garments of some nightly wayfarer; next he proceeds to clear a temple. Meanwhile the old opinions which he had when a child, and which gave judgment about good and evil, are overthrown by those others which have just been emancipated, and are now the body-guard of love and share his empire. These in his democratic days, when he was still subject to the laws and to his father, were only let loose in the dreams of sleep. But now that he is under the dominion of Love, he

He turns highwayman, robs temples, loses all his early principles, and becomes in waking reality the evil dream which he had in sleep.

He gathers followers about him.

becomes always and in waking reality what he was then very rarely and in a dream only; he will commit the foulest murder, or eat forbidden food, or be guilty of any other horrid act. 575 Love is his tyrant, and lives lordly in him and lawlessly, and being himself a king, leads him on, as a tyrant leads a State, to the performance of any reckless deed by which he can maintain himself and the rabble of his associates, whether those whom evil communications have brought in from without, or those whom he himself has allowed to break loose within him by reason of a similar evil nature in himself. Have we not here a picture of his way of life?

Yes, indeed, he said.

And if there are only a few of them in the State, and the rest of the people are well disposed, they go away and become the body-guard or mercenary soldiers of some other tyrant who may probably want them for a war; and if there is no war, they stay at home and do many little pieces of mischief in the city.

What sort of mischief?

For example, they are the thieves, burglars, cut-purses, foot-pads, robbers of temples, man-stealers of the community; or if they are able to speak they turn informers, and bear false witness, and take bribes.

A small catalogue of evils, even if the perpetrators of them are few in number.

Yes, I said; but small and great are comparative terms, and all these things, in the misery and evil which they inflict upon a State, do not come within a thousand miles of the tyrant; when this noxious class and their followers grow numerous and become conscious of their strength, assisted by the infatuation of the people, they choose from among themselves the one who has most of the tyrant in his own soul, and him they create their tyrant.

A private person can do but little harm in comparison of the tyrant.

Yes, he said, and he will be the most fit to be a tyrant.

If the people yield, well and good; but if they resist him, as he began by beating his own father and mother, so now, if he has the power, he beats them, and will keep his dear old fatherland or motherland, as the Cretans say, in subjection to his young

retainers whom he has introduced to be their rulers and masters. This is the end of his passions and desires.

Exactly.

When such men are only private individuals and before they get power, this is their character; they associate entirely with their own flatterers or ready tools; or if they want anything from anybody, they in their turn are equally ready to bow down before them: they profess every sort of affection for them; but when they have gained their point they know them no more.

The behaviour of the tyrant to his early supporters.

Yes, truly.

They are always either the masters or servants and never the friends of anybody; the tyrant never tastes of true freedom or friendship.

He is always either

Certainly not.

And may we not rightly call such men treacherous?

No question.

Socrates, Adeimantus, Glaucon.

Also they are utterly unjust, if we were right in our notion of justice?

master or servant, always treacherous, unjust, the waking reality of our dream, a tyrant by nature, a tyrant in fact.

Yes, he said, and we were perfectly right.

Let us then sum up in a word, I said, the character of the worst man: he is the waking reality of what we dreamed.

Most true.

And this is he who being by nature most of a tyrant bears rule, and the longer he lives the more of a tyrant he becomes.

That is certain, said Glaucon, taking his turn to answer.

And will not he who has been shown to be the wickedest, be also the most miserable? and he who has tyrannized longest and most, most continually and truly miserable; although this may not be the opinion of men in general?

The wicked are also the most miserable.

Yes, he said, inevitably.

And must not the tyrannical man be like the tyrannical State, and the democratical man like the democratical State; and the same of the others?

Like man, like State.

Certainly.

And as State is to State in virtue and happiness, so is man in relation to man?

To be sure.

Then comparing our original city, which was under a king, and the city which is under a tyrant, how do they stand as to virtue?

The opposite of the king.

They are the opposite extremes, he said, for one is the very best and the other is the very worst.

There can be no mistake, I said, as to which is which, and therefore I will at once enquire whether you would arrive at a similar decision about their relative happiness and misery. And here we must not allow ourselves to be panic-stricken at the apparition of the tyrant, who is only a unit and may perhaps have a few retainers about him; but let us go as we ought into every corner of the city and look all about, and then we will give our opinion.

A fair invitation, he replied; and I see, as every one must, that a tyranny is the wretchedest form of government, and the rule of a king the happiest.

And in estimating the men too, may I not fairly make a 577like request, that I should have a judge whose mind can enter into and see through human nature? he must not be like a child who looks at the outside and is dazzled at the pompous aspect which the tyrannical nature assumes to the beholder, but let him be one who has a clear insight. May I suppose that the judgment is given in the hearing of us all by one who is able to judge, and has dwelt in the same place with him, and been present at his daily life and known him in his family relations, where he may be seen stripped of his tragedy attire, and again in the hour of public danger—he shall tell us about the happiness and misery of the tyrant when compared with other men?

Socrates, Glaucon.

That again, he said, is a very fair proposal.

Shall I assume that we ourselves are able and experienced judges and have before now met with such a person? We shall then have some one who will answer our enquiries.

By all means.

Let me ask you not to forget the parallel of the individual and the State; bearing this in mind, and glancing in turn from one to the other of them, will you tell me their respective conditions?

What do you mean? he asked.

Beginning with the State, I replied, would you say that a city which is governed by a tyrant is free or enslaved?

The State is not free, but enslaved.

No city, he said, can be more completely enslaved.

And yet, as you see, there are freemen as well as masters in such a State?

Yes, he said, I see that there are—a few; but the people, speaking generally, and the best of them are miserably degraded and enslaved.

Then if the man is like the State, I said, must not the same rule prevail? his soul is full of meanness and vulgarity—the best elements in him are enslaved; and there is a small ruling part, which is also the worst and maddest.

Like a slave, the tyrant is full of meanness, and the ruling part of him is madness.

Inevitably.

And would you say that the soul of such an one is the soul of a freeman, or of a slave?

He has the soul of a slave, in my opinion.

And the State which is enslaved under a tyrant is utterly incapable of acting voluntarily?

Utterly incapable.

And also the soul which is under a tyrant (I am speaking of the soul taken as a whole) is least capable of doing what she desires; there is a gadfly which goads her, and she is full of trouble and remorse?

The city which is subject to him is goaded by a gadfly;

Certainly.

And is the city which is under a tyrant rich or poor?

Poor.

578And the tyrannical soul must be always poor and insatiable?

poor;

True.

And must not such a State and such a man be always full of fear?

Yes, indeed.

Is there any State in which you will find more of lamentation and sorrow and groaning and pain?

full of misery.

Certainly not.

And is there any man in whom you will find more of this sort of misery than in the tyrannical man, who is in a fury of passions and desires?

Impossible.

Reflecting upon these and similar evils, you held the tyrannical State to be the most miserable of States?

And I was right, he said.

Certainly, I said. And when you see the same evils in the tyrannical man, what do you say of him?

Also the tyrannical man is most miserable.

I say that he is by far the most miserable of all men.

There, I said, I think that you are beginning to go wrong.

Yet there is a still more miserable being, the tyrannical man who is a public tyrant.

What do you mean?

I do not think that he has as yet reached the utmost extreme of misery.

Then who is more miserable?

One of whom I am about to speak.

Who is that?

He who is of a tyrannical nature, and instead of leading a private life has been cursed with the further misfortune of being a public tyrant.

From what has been said, I gather that you are right.

Yes, I replied, but in this high argument you should be a little more certain, and should not conjecture only; for of all questions, this respecting good and evil is the greatest.

Very true, he said.

Let me then offer you an illustration, which may, I think, throw a light upon this subject.

What is your illustration?

The case of rich individuals in cities who possess many slaves: from them you may form an idea of the tyrant's condition, for they both have slaves; the only difference is that he has more slaves.

In cities there are many great slaveowners, and they help to protect one another.

Yes, that is the difference.

You know that they live securely and have nothing to apprehend from their servants?

What should they fear?

Nothing. But do you observe the reason of this?

Yes; the reason is, that the whole city is leagued together for the protection of each individual.

Very true, I said. But imagine one of these owners, the master say of some fifty slaves, together with his family and property and slaves, carried off by a god into the wilderness, where there are no freemen to help him—will he not be in an agony of fear lest he and his wife and children should be put to death by his slaves?

But suppose a slaveowner and his slaves carried off into the wilderness, what will happen then? Such is the condition of the tyrant.

579 Yes, he said, he will be in the utmost fear.

The time has arrived when he will be compelled to flatter divers of his slaves, and make many promises to them of freedom and other things, much against his will—he will have to cajole his own servants.

Yes, he said, that will be the only way of saving himself.

And suppose the same god, who carried him away, to surround him with neighbours who will not suffer one man to be the master of another, and who, if they could catch the offender, would take his life?

His case will be still worse, if you suppose him to be everywhere surrounded and watched by enemies.

He is the daintiest of all men and has to endure the hardships of a prison;

And is not this the sort of prison in which the tyrant will be bound—he who being by nature such as we have described, is full of all sorts of fears and lusts? His soul is dainty and greedy, and yet alone, of all men in the city, he is never allowed to go on a journey, or to see the things which other freemen desire to see, but he lives in his hole like a woman hidden in the house, and is jealous of any other citizen who goes into foreign parts and sees anything of interest.

Very true, he said.

And amid evils such as these will not he who is ill-governed in his own person—the tyrannical man, I mean—whom you just now decided to be the most miserable of all—will not he be yet more miserable when, instead of leading a private life, he is constrained by fortune to be a public tyrant? He has to be master of others when he is not master of himself: he is like a diseased or paralytic man who

Miserable in himself, he is still more miserable if he be in a public station.

is compelled to pass his life, not in retirement, but fighting and combating with other men.

Yes, he said, the similitude is most exact.

Is not his case utterly miserable? and does not the actual tyrant lead a worse life than he whose life you determined to be the worst?

He then leads a life worse than the worst,

Certainly.

He who is the real tyrant, whatever men may think, is the real slave, and is obliged to practise the greatest adulation and servility, and to be the flatterer of the vilest of mankind. He has desires which he is utterly unable to satisfy, and has more wants than any one, and is truly poor, if you know how to inspect the whole soul of him: all his life long he is beset with fear and is full of convulsions and distractions, even as the State which he resembles: and surely the resemblance holds?

in unhappiness,

Very true, he said.

Moreover, as we were saying before, he grows worse from having power: he becomes and is of necessity more jealous, more faithless, more unjust, more friendless, more impious, than he was at first; he is the purveyor and cherisher of every sort of vice, and the consequence is that he is supremely miserable, and that he makes everybody else as miserable as himself.

and in wickedness.

No man of any sense will dispute your words.

Come then, I said, and as the general umpire in theatrical contests proclaims the result, do you also decide who in your opinion is first in the scale of happiness, and who second, and in what order the others follow: there are five of them in all—they are the royal, timocratical, oligarchical, democratical, tyrannical.

The umpire decides that

The decision will be easily given, he replied; they shall be choruses coming on the stage, and I must judge them in the order in which they enter, by the criterion of virtue and vice, happiness and misery.

Need we hire a herald, or shall I announce, that the son of Ariston [the best] has decided that the best and justest is also the happiest, and that this is he who is the most royal man and king over himself; and that the worst and most unjust man is also the most miserable, and that this is he who being the greatest tyrant of himself is also the greatest tyrant of his State?

the best is the happiest and the worst is the most miserable. This is the proclamation of the son of Ariston.

Make the proclamation yourself, he said.

And shall I add, ‘whether seen or unseen by gods and men’?

Let the words be added.

Then this, I said, will be our first proof; and there is another, which may also have some weight.

What is that?

The second proof is derived from the nature of the soul: seeing that the individual soul, like the State, has been divided by us into three principles, the division may, I think, furnish a new demonstration.

Proof, derived from the three principles of the soul.

Of what nature?

It seems to me that to these three principles three pleasures correspond; also three desires and governing powers.

How do you mean? he said.

There is one principle with which, as we were saying, a man learns, another with which he is angry; the third, having many forms, has no special name, but is denoted by the general term appetitive, from the extraordinary strength and vehemence of the desires of eating and drinking and the other sensual appetites which are the main elements of it; 581also money-loving, because such desires are generally satisfied by the help of money.

That is true, he said.

If we were to say that the loves and pleasures of this third part were concerned with gain, we should then be able to fall back on a single notion; and might truly and intelligibly describe this part of the soul as loving gain or money.

(1) The appetitive:

I agree with you.

Again, is not the passionate element wholly set on ruling and conquering and getting fame?

True.

Suppose we call it the contentious or ambitious—would the term be suitable?

(2) The ambitious;

Extremely suitable.

On the other hand, every one sees that the principle of knowledge is wholly directed to the truth, and cares less than either of the others for gain or fame.

(3) The principle of knowledge and truth.

Far less.

‘Lover of wisdom,’ ‘lover of knowledge,’ are titles which we may fitly apply to that part of the soul?

Certainly.

One principle prevails in the souls of one class of men, another in others, as may happen?

Yes.

Then we may begin by assuming that there are three classes of men—lovers of wisdom, lovers of honour, lovers of gain?

Exactly.

And there are three kinds of pleasure, which are their several objects?

Very true.

Now, if you examine the three classes of men, and ask of them in turn which of their lives is pleasantest, each will be found praising his own and depreciating that of others: the money-maker will contrast the vanity of honour or of learning if they bring no money with the solid advantages of gold and silver?

Each will depreciate the others, but only the philosopher has the power to judge,

True, he said.

And the lover of honour—what will be his opinion? Will he not think that the pleasure of riches is vulgar, while the pleasure of learning, if it brings no distinction, is all smoke and nonsense to him?

Very true.

And are we to suppose ¹, I said, that the philosopher sets any value on other pleasures in comparison with the pleasure of knowing the truth, and in that pursuit abiding, ever learning, not so far indeed from the heaven of pleasure? Does he not call the other pleasures necessary, under the idea that if there were no necessity for them, he would rather not have them?

because he alone has experience of the highest pleasures and is also acquainted with the lower.

There can be no doubt of that, he replied.

Since, then, the pleasures of each class and the life of each are in dispute, and the question is not which life is more or less honourable, or better or worse, but which is the more pleasant or painless—how shall we know who speaks truly?

I cannot myself tell, he said.

Well, but what ought to be the criterion? Is any better than experience and wisdom and reason?

There cannot be a better, he said.

Then, I said, reflect. Of the three individuals, which has the greatest experience of all the pleasures which we enumerated? Has the lover of gain, in learning the nature of essential truth, greater experience of the pleasure of knowledge than the philosopher has of the pleasure of gain?

The philosopher, he replied, has greatly the advantage; for he has of necessity always known the taste of the other pleasures from his childhood upwards: but the lover of gain in all his experience has not of necessity tasted—or, I should rather say, even had he desired, could hardly have tasted—the sweetness of learning and knowing truth.

Then the lover of wisdom has a great advantage over the lover of gain, for he has a double experience?

Yes, very great.

Again, has he greater experience of the pleasures of honour, or the lover of honour of the pleasures of wisdom?

Nay, he said, all three are honoured in proportion as they attain their object; for the rich man and the brave man and the wise man alike have their crowd of admirers, and as they all receive honour they all have experience of the pleasures of honour; but the delight which is to be found in the knowledge of true being is known to the philosopher only.

His experience, then, will enable him to judge better than any one?

Far better.

And he is the only one who has wisdom as well as experience?

Certainly.

The philosopher alone having both judgment and experience,

Further, the very faculty which is the instrument of judgment is not possessed by the covetous or ambitious man, but only by the philosopher?

What faculty?

Reason, with whom, as we were saying, the decision ought to rest.

Yes.

And reasoning is peculiarly his instrument?

Certainly.

If wealth and gain were the criterion, then the praise or blame of the lover of gain would surely be the most trustworthy?

Assuredly.

Or if honour or victory or courage, in that case the judgment of the ambitious or pugnacious would be the truest?

Clearly.

But since experience and wisdom and reason are the judges—

The only inference possible, he replied, is that pleasures which are approved by the lover of wisdom and reason are the truest.

And so we arrive at the result, that the pleasure of the intelligent part of the soul is the pleasantest of the three, and that he of us in whom this is the ruling principle has the pleasantest life.

the pleasures which he approves are the true pleasures: he places (1) the love of wisdom, (2) the love of honour, (3) and lowest the love of gain.

Unquestionably, he said, the wise man speaks with authority when he approves of his own life.

And what does the judge affirm to be the life which is next, and the pleasure which is next?

Clearly that of the soldier and lover of honour; who is nearer to himself than the money-maker.

Last comes the lover of gain?

Very true, he said.

Twice in succession, then, has the just man overthrown the unjust in this conflict; and now comes the third trial, which is dedicated to Olympian Zeus the saviour: a sage whispers in my ear that no pleasure except that of the wise is quite true and pure—all others are a shadow only; and surely this will prove the greatest and most decisive of falls?

True pleasure is not relative but absolute.

Yes, the greatest; but will you explain yourself?

I will work out the subject and you shall answer my questions.

Proceed.

Say, then, is not pleasure opposed to pain?

True.

And there is a neutral state which is neither pleasure nor pain?

There is.

A state which is intermediate, and a sort of repose of the soul about either—that is what you mean?

Yes.

You remember what people say when they are sick?

What do they say?

That after all nothing is pleasanter than health. But then they never knew this to be the greatest of pleasures until they were ill.

Yes, I know, he said.

And when persons are suffering from acute pain, you must have heard them say that there is nothing pleasanter than to get rid of their pain?

I have.

The states intermediate between pleasure and pain are termed pleasures or pains only in relation to their opposites.

And there are many other cases of suffering in which the mere rest and cessation of pain, and not any positive enjoyment, is extolled by them as the greatest pleasure?

Yes, he said; at the time they are pleased and well content to be at rest.

Again, when pleasure ceases, that sort of rest or cessation will be painful?

Doubtless, he said.

Then the intermediate state of rest will be pleasure and will also be pain?

So it would seem.

But can that which is neither become both?

I should say not.

And both pleasure and pain are motions of the soul, are they not?

Yes.

Pleasure and pain are said to be states of

584But that which is neither was just now shown to be rest and not motion, and in a mean between them?

rest, but they are really motions.

Yes.

How, then, can we be right in supposing that the absence of pain is pleasure, or that the absence of pleasure is pain?

Impossible.

This then is an appearance only and not a reality; that is to say, the rest is pleasure at the moment and in comparison of what is painful, and painful in comparison of what is pleasant; but all these representations, when tried by the test of true pleasure, are not real but a sort of imposition?

That is the inference.

Look at the other class of pleasures which have no antecedent pains and you will no longer suppose, as you perhaps may at present, that pleasure is only the cessation of pain, or pain of pleasure.

All pleasures are not merely cessations of pains, or pains of pleasures; e. g. the pleasures of smell are not.

What are they, he said, and where shall I find them?

There are many of them: take as an example the pleasures of smell, which are very great and have no antecedent pains; they come in a moment, and when they depart leave no pain behind them.

Most true, he said.

Let us not, then, be induced to believe that pure pleasure is the cessation of pain, or pain of pleasure.

No.

Still, the more numerous and violent pleasures which reach the soul through the body are generally of this sort—they are reliefs of pain.

That is true.

And the anticipations of future pleasures and pains are of a like nature?

Yes.

Shall I give you an illustration of them?

Let me hear.

You would allow, I said, that there is in nature an upper and lower and middle region?

I should.

And if a person were to go from the lower to the middle region, would he not imagine that he is going up; and he who is standing in the middle and sees whence he has come, would imagine that he is already in the upper region, if he has never seen the true upper world?

Illustrations of the unreality of certain pleasures.

To be sure, he said; how can he think otherwise?

But if he were taken back again he would imagine, and truly imagine, that he was descending?

No doubt.

All that would arise out of his ignorance of the true upper and middle and lower regions?

Yes.

Then can you wonder that persons who are inexperienced in the truth, as they have wrong ideas about many other things, should also have wrong ideas about pleasure and pain and the intermediate state; so that when they are only being drawn towards the painful they feel pain and think the pain which they experience to be real, and in like manner, when drawn away from pain to the neutral or intermediate state, they firmly believe that they have reached the goal of satiety and pleasure; they, not knowing pleasure, err in contrasting pain with the absence of pain, which is like contrasting black with grey instead of white—can you wonder, I say, at this?

No, indeed; I should be much more disposed to wonder at the opposite.

Look at the matter thus:—Hunger, thirst, and the like, are inanitions of the bodily state?

Yes.

And ignorance and folly are inanitions of the soul?

True.

And food and wisdom are the corresponding satisfactions of either?

Certainly.

And is the satisfaction derived from that which has less or from that which has more existence the truer?

The intellectual more real than the sensual.

Clearly, from that which has more.

What classes of things have a greater share of pure existence in your judgment—those of which food and drink and condiments and all kinds of sustenance are examples, or the class which contains true opinion and knowledge and mind and all the different kinds of virtue? Put the question in this way:—Which has a more pure being—that which is concerned with the invariable, the immortal, and the true, and is of such a nature, and is found in such natures; or that which is concerned with and found in the variable and mortal, and is itself variable and mortal?

Far purer, he replied, is the being of that which is concerned with the invariable.

And does the essence of the invariable partake of knowledge in the same degree as of essence?

Yes, of knowledge in the same degree.

And of truth in the same degree?

Yes.

And, conversely, that which has less of truth will also have less of essence?

Necessarily.

Then, in general, those kinds of things which are in the service of the body have less of truth and essence than those which are in the service of the soul?

Far less.

And has not the body itself less of truth and essence than the soul?

Yes.

What is filled with more real existence, and actually has a more real existence, is more really filled than that which is filled with less real existence and is less real?

Of course.

And if there be a pleasure in being filled with that which is according to nature, that which is more really filled with more real being will more really and truly enjoy true pleasure; whereas that which participates in less real being will be less truly and surely satisfied, and will participate in an illusory and less real pleasure?

The pleasures of the sensual and also of the passionate element are unreal and mixed.

Unquestionably.

586Those then who know not wisdom and virtue, and are always busy with gluttony and sensuality, go down and up again as far as the mean; and in this region they move at random throughout life, but they never pass into the true upper world; thither they

neither look, nor do they ever find their way, neither are they truly filled with true being, nor do they taste of pure and abiding pleasure. Like cattle, with their eyes always looking down and their heads stooping to the earth, that is, to the dining-table, they fatten and feed and breed, and, in their excessive love of these delights, they kick and butt at one another with horns and hoofs which are made of iron; and they kill one another by reason of their insatiable lust. For they fill themselves with that which is not substantial, and the part of themselves which they fill is also unsubstantial and incontinent.

Verily, Socrates, said Glaucon, you describe the life of the many like an oracle.

Their pleasures are mixed with pains—how can they be otherwise? For they are mere shadows and pictures of the true, and are coloured by contrast, which exaggerates both light and shade, and so they implant in the minds of fools insane desires of themselves; and they are fought about as Stesichorus says that the Greeks fought about the shadow of Helen at Troy in ignorance of the truth.

Something of that sort must inevitably happen.

And must not the like happen with the spirited or passionate element of the soul? Will not the passionate man who carries his passion into action, be in the like case, whether he is envious and ambitious, or violent and contentious, or angry and discontented, if he be seeking to attain honour and victory and the satisfaction of his anger without reason or sense?

Yes, he said, the same will happen with the spirited element also.

Then may we not confidently assert that the lovers of money and honour, when they seek their pleasures under the guidance and in the company of reason and knowledge, and pursue after and win the pleasures which wisdom shows them, will also have the truest pleasures in the highest degree which is attainable to them, inasmuch as they follow truth; and they will have the pleasures which are natural to them, if that which is best for each one is also most natural to him?

Both kinds of pleasures are attained in the highest degree when the desires which seek them are under the guidance of reason.

Yes, certainly; the best is the most natural.

And when the whole soul follows the philosophical principle, and there is no division, the several parts are just, 587and do each of them their own business, and enjoy severally the best and truest pleasures of which they are capable?

Exactly.

But when either of the two other principles prevails, it fails in attaining its own pleasure, and compels the rest to pursue after a pleasure which is a shadow only and which is not their own?

True.

And the greater the interval which separates them from philosophy and reason, the more strange and illusive will be the pleasure?

Yes.

And is not that farthest from reason which is at the greatest distance from law and order?

Clearly.

And the lustful and tyrannical desires are, as we saw, at the greatest distance?

Yes.

And the royal and orderly desires are nearest?

Yes.

Then the tyrant will live at the greatest distance from true or natural pleasure, and the king at the least?

Certainly.

But if so, the tyrant will live most unpleasantly, and the king most pleasantly?

Inevitably.

Would you know the measure of the interval which separates them?

Will you tell me?

The measure of the interval which separates the king from the tyrant.

There appear to be three pleasures, one genuine and two spurious: now the transgression of the tyrant reaches a point beyond the spurious; he has run away from the region of law and reason, and taken up his abode with certain slave pleasures which are his satellites, and the measure of his inferiority can only be expressed in a figure.

How do you mean?

I assume, I said, that the tyrant is in the third place from the oligarch; the democrat was in the middle?

Yes.

And if there is truth in what has preceded, he will be wedded to an image of pleasure which is thrice removed as to truth from the pleasure of the oligarch?

He will.

And the oligarch is third from the royal; since we count as one royal and aristocratical?

Yes, he is third.

Then the tyrant is removed from true pleasure by the space of a number which is three times three?

Manifestly.

The shadow then of tyrannical pleasure determined by the number of length will be a plane figure.

expressed under the symbol of a cube corresponding to the number 729.

Certainly.

And if you raise the power and make the plane a solid, there is no difficulty in seeing how vast is the interval by which the tyrant is parted from the king.

Yes; the arithmetician will easily do the sum.

Or if some person begins at the other end and measures the interval by which the king is parted from the tyrant in truth of pleasure, he will find him, when the multiplication is completed, living 729 times more pleasantly, and the tyrant more painfully by this same interval.

What a wonderful calculation! And how enormous is the distance which separates the just from the unjust in regard to pleasure and pain!

Yet a true calculation, I said, and a number which nearly concerns human life, if human beings are concerned with days and nights and months and years¹.

which is *nearly* the number of days and nights in a year.

Yes, he said, human life is certainly concerned with them.

Then if the good and just man be thus superior in pleasure to the evil and unjust, his superiority will be infinitely greater in propriety of life and in beauty and virtue?

Immeasurably greater.

Well, I said, and now having arrived at this stage of the argument, we may revert to the words which brought us hither: Was not some one saying that injustice was a gain to the perfectly unjust who was reputed to be just?

Refutation of Thrasymachus.

Yes, that was said.

Now then, having determined the power and quality of justice and injustice, let us have a little conversation with him.

What shall we say to him?

Let us make an image of the soul, that he may have his own words presented before his eyes.

Of what sort?

An ideal image of the soul, like the composite creations of ancient mythology, such as the Chimera or Scylla or Cerberus, and there are many others in which two or more different natures are said to grow into one.

The triple animal who has outwardly the image of a man.

There are said to have been such unions.

Then do you now model the form of a multitudinous, many-headed monster, having a ring of heads of all manner of beasts, tame and wild, which he is able to generate and metamorphose at will.

You suppose marvellous powers in the artist; but, as language is more pliable than wax or any similar substance, let there be such a model as you propose.

Suppose now that you make a second form as of a lion, and a third of a man, the second smaller than the first, and the third smaller than the second.

That, he said, is an easier task; and I have made them as you say.

And now join them, and let the three grow into one.

That has been accomplished.

Next fashion the outside of them into a single image, as of a man, so that he who is not able to look within, and sees only the outer hull, may believe the beast to be a single human creature.

I have done so, he said.

And now, to him who maintains that it is profitable for the human creature to be unjust, and unprofitable to be just, let us reply that, if he be right, it is profitable for this creature to feast the multitudinous monster and strengthen the lion and 589the lion-like qualities, but to starve and weaken the man, who is consequently liable to be dragged about at the mercy of either of the other two; and he is not to attempt to familiarize or harmonize them with one another—he ought rather to suffer them to fight and bite and devour one another.

Will any one say that we should strengthen the monster and the lion at the expense of the man?

Certainly, he said; that is what the approver of injustice says.

To him the supporter of justice makes answer that he should ever so speak and act as to give the man within him in some way or other the most complete mastery over the

entire human creature. He should watch over the manyheaded monster like a good husbandman, fostering and cultivating the gentle qualities, and preventing the wild ones from growing; he should be making the lion-heart his ally, and in common care of them all should be uniting the several parts with one another and with himself.

Yes, he said, that is quite what the maintainer of justice will say.

And so from every point of view, whether of pleasure, honour, or advantage, the approver of justice is right and speaks the truth, and the disapprover is wrong and false and ignorant?

Yes, from every point of view.

Come, now, and let us gently reason with the unjust, who is not intentionally in error. 'Sweet Sir,' we will say to him, 'what think you of things esteemed noble and ignoble? Is not the noble that which subjects the beast to the man, or rather to the god in man; and the ignoble that which subjects the man to the beast?' He can hardly avoid saying Yes—can he now?

For the noble principle subjects the beast to the man, the ignoble the man to the beast.

Not if he has any regard for my opinion.

But, if he agree so far, we may ask him to answer another question: 'Then how would a man profit if he received gold and silver on the condition that he was to enslave the noblest part of him to the worst? Who can imagine that a man who sold his son or daughter into slavery for money, especially if he sold them into the hands of fierce and evil men, would be the gainer, however large might be the sum which he received? And will any one say that he is not a miserable caitiff who remorselessly sells his own divine being to that which is most godless and detestable? Eriphyle took the necklace as the price of her husband's life, but he is taking a bribe in order to compass a worse ruin.'

A man would not be the gainer if he sold his child: how much worse to sell his soul!

Yes, said Glaucon, far worse—I will answer for him.

Has not the intemperate been censured of old, because in him the huge multiform monster is allowed to be too much at large?

Clearly.

And men are blamed for pride and bad temper when the lion and serpent element in them disproportionately grows and gains strength?

Proofs:— (1) Men are blamed for the predominance of the lower nature,

Yes.

And luxury and softness are blamed, because they relax and weaken this same creature, and make a coward of him?

Very true.

And is not a man reproached for flattery and meanness who subordinates the spirited animal to the unruly monster, and, for the sake of money, of which he can never have enough, habituates him in the days of his youth to be trampled in the mire, and from being a lion to become a monkey?

True, he said.

And why are mean employments and manual arts a reproach? Only because they imply a natural weakness of the higher principle; the individual is unable to control the creatures within him, but has to court them, and his great study is how to flatter them.

as well as for the meanness of their employments and character:

Such appears to be the reason.

And therefore, being desirous of placing him under a rule like that of the best, we say that he ought to be the servant of the best, in whom the Divine rules; not, as Thrasymachus supposed, to the injury of the servant, but because every one had better be ruled by divine wisdom dwelling within him; or, if this be impossible, then by an external authority, in order that we may be all, as far as possible, under the same government, friends and equals.

(2) It is admitted that every one should be the servant of a divine rule, or at any rate be kept under control by an external authority:

True, he said.

And this is clearly seen to be the intention of the law, which is the ally of the whole city; and is seen also in the authority which we exercise over children, and the refusal to let them be free until we have established in them a principle ⁵⁹¹analogous to the constitution of a state, and by cultivation of this higher element have set up in their hearts a guardian and ruler like our own, and when this is done they may go their ways.

(3) The care taken of children shows that we seek to establish in them a higher principle.

Yes, he said, the purpose of the law is manifest.

From what point of view, then, and on what ground can we say that a man is profited by injustice or intemperance or other baseness, which will make him a worse man, even though he acquire money or power by his wickedness?

From no point of view at all.

The wise man will employ his energies in freeing and harmonizing the nobler elements of his nature and in

What shall he profit, if his injustice be undetected and unpunished? He who is undetected only gets worse, whereas he who is detected and punished has the brutal part of his nature silenced and humanized; the gentler element in him is liberated, and his whole soul is perfected and ennobled by the acquirement of justice and temperance and wisdom, more than the body ever is by receiving gifts of beauty, strength and health, in proportion as the soul is more honourable than the body.

regulating his bodily habits.

Certainly, he said.

To this nobler purpose the man of understanding will devote the energies of his life. And in the first place, he will honour studies which impress these qualities on his soul, and will disregard others?

Clearly, he said.

In the next place, he will regulate his bodily habit and training, and so far will he be from yielding to brutal and irrational pleasures, that he will regard even health as quite a secondary matter; his first object will be not that he may be fair or strong or well, unless he is likely thereby to gain temperance, but he will always desire so to attemper the body as to preserve the harmony of the soul?

His first aim not health but harmony of soul.

Certainly he will, if he has true music in him.

And in the acquisition of wealth there is a principle of order and harmony which he will also observe; he will not allow himself to be dazzled by the foolish applause of the world, and heap up riches to his own infinite harm?

Certainly not, he said.

He will look at the city which is within him, and take heed that no disorder occur in it, such as might arise either from superfluity or from want; and upon this principle he will regulate his property and gain or spend according to his means.

He will not heap up riches,

Very true.

And, for the same reason, he will gladly accept and enjoy such honours as he deems likely to make him a better man; but those, whether private or public, which are likely to disorder his life, he will avoid?

Then, if that is his motive, he will not be a statesman.

By the dog of Egypt, he will! in the city which is his own he certainly will, though in the land of his birth perhaps not, unless he have a divine call.

and he will only accept such political honours as will not deteriorate his character.

I understand; you mean that he will be a ruler in the city of which we are the founders, and which exists in idea only; for I do not believe that there is such an one anywhere on earth?

He has a city of his own, and the ideal pattern of this will be the law of his life.

In heaven, I replied, there is laid up a pattern of it, methinks, which he who desires may behold, and beholding, may set his own house in order¹. But whether such an one exists, or ever will exist in fact, is no matter; for he will live after the manner of that city, having nothing to do with any other.

I think so, he said.

BOOK X.

595 Of the many excellences which I perceive in the order of our State, there is none which upon reflection pleases me better than the rule about poetry.

Republic X.

Socrates, Glaucon.

To what do you refer?

To the rejection of imitative poetry, which certainly ought not to be received; as I see far more clearly now that the parts of the soul have been distinguished.

What do you mean?

Speaking in confidence, for I should not like to have my words repeated to the tragedians and the rest of the imitative tribe—but I do not mind saying to you, that all poetical imitations are ruinous to the understanding of the hearers, and that the knowledge of their true nature is the only antidote to them.

Poetical imitations are ruinous to the mind of the hearer.

Explain the purport of your remark.

Well, I will tell you, although I have always from my earliest youth had an awe and love of Homer, which even now makes the words falter on my lips, for he is the great captain and teacher of the whole of that charming tragic company; but a man is not to be revered more than the truth, and therefore I will speak out.

Very good, he said.

Listen to me then, or rather, answer me.

Put your question.

Can you tell me what imitation is? for I really do not know.

The nature of imitation.

A likely thing, then, that I should know.

596 Why not? for the duller eye may often see a thing sooner than the keener.

Very true, he said; but in your presence, even if I had any faint notion, I could not muster courage to utter it. Will you enquire yourself?

Well then, shall we begin the enquiry in our usual manner: Whenever a number of individuals have a common name, we assume them to have also a corresponding idea or form:— do you understand me?

I do.

Let us take any common instance; there are beds and tables in the world—plenty of them, are there not?

The idea is one, but the objects comprehended under it are many.

Yes.

But there are only two ideas or forms of them—one the idea of a bed, the other of a table.

True.

And the maker of either of them makes a bed or he makes a table for our use, in accordance with the idea—that is our way of speaking in this and similar instances—but no artificer makes the ideas themselves: how could he?

Impossible.

And there is another artist,—I should like to know what you would say of him.

Who is he?

One who is the maker of all the works of all other workmen.

What an extraordinary man!

The universal creator an extraordinary person. But note also that everybody is a creator in a sense. For all things may be made by the reflection of them in a mirror.

Wait a little, and there will be more reason for your saying so. For this is he who is able to make not only vessels of every kind, but plants and animals, himself and all other things—the earth and heaven, and the things which are in heaven or under the earth; he makes the gods also.

He must be a wizard and no mistake.

Oh! you are incredulous, are you? Do you mean that there is no such maker or creator, or that in one sense there might be a maker of all these things but in another not? Do you see that there is a way in which you could make them all yourself?

What way?

An easy way enough; or rather, there are many ways in which the feat might be quickly and easily accomplished, none quicker than that of turning a mirror round and round—you would soon enough make the sun and the heavens, and the earth and yourself, and other animals and plants, and all the other things of which we were just now speaking, in the mirror.

Yes, he said; but they would be appearances only.

But this is an appearance only: and

Very good, I said, you are coming to the point now. And the painter too is, as I conceive, just such another—a creator of appearances, is he not?

the painter too is a maker of appearances.

Of course.

But then I suppose you will say that what he creates is untrue. And yet there is a sense in which the painter also creates a bed?

Yes, he said, but not a real bed.

597 And what of the maker of the bed? were you not saying that he too makes, not the idea which, according to our view, is the essence of the bed, but only a particular bed?

Yes, I did.

Then if he does not make that which exists he cannot make true existence, but only some semblance of existence; and if any one were to say that the work of the maker of the bed, or of any other workman, has real existence, he could hardly be supposed to be speaking the truth.

At any rate, he replied, philosophers would say that he was not speaking the truth.

No wonder, then, that his work too is an indistinct expression of truth.

No wonder.

Suppose now that by the light of the examples just offered we enquire who this imitator is?

If you please.

Well then, here are three beds: one existing in nature, which is made by God, as I think that we may say—for no one else can be the maker?

Three beds and three makers of beds.

No.

There is another which is the work of the carpenter?

Yes.

And the work of the painter is a third?

Yes.

Beds, then, are of three kinds, and there are three artists who superintend them: God, the maker of the bed, and the painter?

Yes, there are three of them.

God, whether from choice or from necessity, made one bed in nature and one only; two or more such ideal beds neither ever have been nor ever will be made by God.

Why is that?

Because even if He had made but two, a third would still appear behind them which both of them would have for their idea, and that would be the ideal bed and not the two others.

(1) The creator. God could only make one bed; if he made two, a third would still appear behind them.

Very true, he said.

God knew this, and He desired to be the real maker of a real bed, not a particular maker of a particular bed, and therefore He created a bed which is essentially and by nature one only.

So we believe.

Shall we, then, speak of Him as the natural author or maker of the bed?

Yes, he replied; inasmuch as by the natural process of creation He is the author of this and of all other things.

And what shall we say of the carpenter—is not he also the maker of the bed?

(2) The human maker.

Yes.

But would you call the painter a creator and maker?

Certainly not.

Yet if he is not the maker, what is he in relation to the bed?

I think, he said, that we may fairly designate him as the imitator of that which the others make.

(3) The imitator, i. e. the painter or poet,

Good, I said; then you call him who is third in the descent from nature an imitator?

Certainly, he said.

And the tragic poet is an imitator, and therefore, like all other imitators, he is thrice removed from the king and from the truth?

That appears to be so.

Then about the imitator we are agreed. And what about 598the painter?—I would like to know whether he may be thought to imitate that which originally exists in nature, or only the creations of artists?

The latter.

As they are or as they appear? you have still to determine this.

What do you mean?

I mean, that you may look at a bed from different points of view, obliquely or directly or from any other point of view, and the bed will appear different, but there is no difference in reality. And the same of all things.

whose art is one of imitation or appearance and a long way removed from the truth.

Yes, he said, the difference is only apparent.

Now let me ask you another question: Which is the art of painting designed to be — an imitation of things as they are, or as they appear — of appearance or of reality?

Of appearance.

Then the imitator, I said, is a long way off the truth, and can do all things because he lightly touches on a small part of them, and that part an image. For example: A painter will paint a cobbler, carpenter, or any other artist, though he knows nothing of their arts; and, if he is a good artist, he may deceive children or simple persons, when he shows them his picture of a carpenter from a distance, and they will fancy that they are looking at a real carpenter.

Any one who does all things does only a very small part of them.

Certainly.

And whenever any one informs us that he has found a man who knows all the arts, and all things else that anybody knows, and every single thing with a higher degree of accuracy than any other man—whoever tells us this, I think that we can only imagine him to be a simple creature who is likely to have been deceived by some wizard or actor whom he met, and whom he thought all-knowing, because he himself was unable to analyse the nature of knowledge and ignorance and imitation.

Any one who pretends to know all things is ignorant of the very nature of knowledge.

Most true.

And so, when we hear persons saying that the tragedians, and Homer, who is at their head, know all the arts and all things human, virtue as well as vice, and divine things too, for that the good poet cannot compose well unless he knows his subject, and that he who has not this knowledge can never be a poet, we ought to consider whether here also there may not be a similar

And he who attributes such universal knowledge to the poets is similarly deceived.

illusion. Perhaps they may have come across imitators and been deceived by them; they may not have remembered when they saw their works that 599 these were but imitations thrice removed from the truth, and could easily be made without any knowledge of the truth, because they are appearances only and not realities? Or, after all, they may be in the right, and poets do really know the things about which they seem to the many to speak so well?

The question, he said, should by all means be considered.

Now do you suppose that if a person were able to make the original as well as the image, he would seriously devote himself to the image-making branch? Would he allow imitation to be the ruling principle of his life, as if he had nothing higher in him?

He who could make the original would not make the image.

I should say not.

The real artist, who knew what he was imitating, would be interested in realities and not in imitations; and would desire to leave as memorials of himself works many and fair; and, instead of being the author of encomiums, he would prefer to be the theme of them.

Yes, he said, that would be to him a source of much greater honour and profit.

Then, I said, we must put a question to Homer; not about medicine, or any of the arts to which his poems only incidentally refer: we are not going to ask him, or any other poet, whether he has cured patients like Asclepius, or left behind him a school of medicine such as the Asclepiads were, or whether he only talks about medicine and other arts at second-hand; but we have a right to know respecting military tactics, politics, education, which are the chiefest and noblest subjects of his poems, and we may fairly ask him about them. ‘Friend Homer,’ then we say to him, ‘if you are only in the second remove from truth in what you say of virtue, and not in the third—not an image maker or imitator—and if you are able to discern what pursuits make men better or worse in private or public life, tell us what State was ever better governed by your help? The good order of Lacedaemon is due to Lycurgus, and many other cities great and small have been similarly benefited by others; but who says that you have been a good legislator to them and have done them any good? Italy and Sicily boast of Charondas, and there is Solon who is renowned among us; but what city has anything to say about you?’ Is there any city which he might name?

If Homer had been a legislator, or general, or inventor,

I think not, said Glaucon; not even the Homerids themselves pretend that he was a legislator.

600 Well, but is there any war on record which was carried on successfully by him, or aided by his counsels, when he was alive?

There is not.

Or is there any invention¹ of his, applicable to the arts or to human life, such as Thales the Milesian or Anacharsis the Scythian, and other ingenious men have conceived, which is attributed to him?

There is absolutely nothing of the kind.

But, if Homer never did any public service, was he privately a guide or teacher of any? Had he in his lifetime friends who loved to associate with him, and who handed down to posterity an Homeric way of life, such as was established by Pythagoras who was so greatly beloved for his wisdom, and whose followers are to this day quite celebrated for the order which was named after him?

Nothing of the kind is recorded of him. For surely, Socrates, Creophylus, the companion of Homer, that child of flesh, whose name always makes us laugh, might be more justly ridiculed for his stupidity, if, as is said, Homer was greatly neglected by him and others in his own day when he was alive?

Yes, I replied, that is the tradition. But can you imagine, Glaucon, that if Homer had really been able to educate and improve mankind—if he had possessed knowledge and not been a mere imitator—can you imagine, I say, that he would not have had many followers, and been honoured and loved by them?

or had done anything else for the improvement of mankind, he would not have been allowed to starve.

Protagoras of Abdera, and Prodicus of Ceos, and a host of others, have only to whisper to their contemporaries: ‘You will never be able to manage either your own house or your own State until you appoint us to be your ministers of education’—and this ingenious device of theirs has such an effect in making men love them that their companions all but carry them about on their shoulders. And is it conceivable that the contemporaries of Homer, or again of Hesiod, would have allowed either of them to go about as rhapsodists, if they had really been able to make mankind virtuous? Would they not have been as unwilling to part with them as with gold, and have compelled them to stay at home with them? Or, if the master would not stay, then the disciples would have followed him about everywhere, until they had got education enough?

Yes, Socrates, that, I think, is quite true.

Then must we not infer that all these poetical individuals, beginning with Homer, are only imitators; they copy images of virtue and the like, but the truth they never reach? The poet is like a painter who, as we have already observed, will make a likeness of a cobbler though he understands nothing of cobbling; and his picture is good enough for those who know no more than he does, and judge only by colours and figures.

The poets, like the painters, are but imitators;

Quite so.

In like manner the poet with his words and phrases¹ may be said to lay on the colours of the several arts, himself understanding their nature only enough to imitate them;

and other people, who are as ignorant as he is, and judge only from his words, imagine that if he speaks of cobbling, or of military tactics, or of anything else, in metre and harmony and rhythm, he speaks very well—such is the sweet influence which melody and rhythm by nature have. And I think that you must have observed again and again what a poor appearance the tales of poets make when stripped of the colours which music puts upon them, and recited in simple prose.

Yes, he said.

They are like faces which were never really beautiful, but only blooming; and now the bloom of youth has passed away from them?

Exactly.

Here is another point: The imitator or maker of the image knows nothing of true existence; he knows appearances only. Am I not right?

they know nothing of true existence.

Yes.

Then let us have a clear understanding, and not be satisfied with half an explanation.

Proceed.

Of the painter we say that he will paint reins, and he will paint a bit?

Yes.

And the worker in leather and brass will make them?

Certainly.

But does the painter know the right form of the bit and reins? Nay, hardly even the workers in brass and leather who make them; only the horseman who knows how to use them—he knows their right form.

The maker has more knowledge than the imitator, but less than the user. Three arts, using, making, imitating.

Most true.

And may we not say the same of all things?

What?

That there are three arts which are concerned with all things: one which uses, another which makes, a third which imitates them?

Yes.

And the excellence or beauty or truth of every structure, animate or inanimate, and of every action of man, is relative to the use for which nature or the artist has intended them.

Goodness of things relative to use; hence the maker of them is instructed by the user.

True.

Then the user of them must have the greatest experience of them, and he must indicate to the maker the good or bad qualities which develop themselves in use; for example, the flute-player will tell the flute-maker which of his flutes is satisfactory to the performer; he will tell him how he ought to make them, and the other will attend to his instructions?

Of course.

The one knows and therefore speaks with authority about the goodness and badness of flutes, while the other, confiding in him, will do what he is told by him?

True.

The instrument is the same, but about the excellence or badness of it the maker will only attain to a correct belief; and this he will gain from him who knows, by talking to him and being compelled to hear what he has to say, whereas the user will have knowledge?

The maker has belief and not knowledge, the imitator neither.

True.

But will the imitator have either? Will he know from use whether or no his drawing is correct or beautiful? or will he have right opinion from being compelled to associate with another who knows and gives him instructions about what he should draw?

Neither.

Then he will no more have true opinion than he will have knowledge about the goodness or badness of his imitations?

I suppose not.

The imitative artist will be in a brilliant state of intelligence about his own creations?

Nay, very much the reverse.

And still he will go on imitating without knowing what makes a thing good or bad, and may be expected therefore to imitate only that which appears to be good to the ignorant multitude?

Just so.

Thus far then we are pretty well agreed that the imitator has no knowledge worth mentioning of what he imitates. Imitation is only a kind of play or sport, and the tragic poets, whether they write in Iambic or in Heroic verse, are imitators in the highest degree?

Very true.

And now tell me, I conjure you, has not imitation been shown by us to be concerned with that which is thrice removed from the truth?

Imitation has been proved to be thrice removed from the truth.

Certainly.

And what is the faculty in man to which imitation is addressed?

What do you mean?

I will explain: The body which is large when seen near, appears small when seen at a distance?

True.

And the same objects appear straight when looked at out of the water, and crooked when in the water; and the concave becomes convex, owing to the illusion about colours to which the sight is liable. Thus every sort of confusion is revealed within us; and this is that weakness of the human mind on which the art of conjuring and of deceiving by light and shadow and other ingenious devices imposes, having an effect upon us like magic.

True.

And the arts of measuring and numbering and weighing come to the rescue of the human understanding—there is the beauty of them—and the apparent greater or less, or more or heavier, no longer have the mastery over us, but give way before calculation and measure and weight?

Most true.

And this, surely, must be the work of the calculating and rational principle in the soul?

The art of measuring given to man that he may correct the variety of appearances.

To be sure.

And when this principle measures and certifies that some things are equal, or that some are greater or less than others, there occurs an apparent contradiction?

True.

But were we not saying that such a contradiction is impossible—the 603 same faculty cannot have contrary opinions at the same time about the same thing?

Very true.

Then that part of the soul which has an opinion contrary to measure is not the same with that which has an opinion in accordance with measure?

True.

And the better part of the soul is likely to be that which trusts to measure and calculation?

Certainly.

And that which is opposed to them is one of the inferior principles of the soul?

No doubt.

This was the conclusion at which I was seeking to arrive when I said that painting or drawing, and imitation in general, when doing their own proper work, are far removed from truth, and the companions and friends and associates of a principle within us which is equally removed from reason, and that they have no true or healthy aim.

Exactly.

The imitative art is an inferior who marries an inferior, and has inferior offspring.

The productions of the imitative arts are bastard and illegitimate.

Very true.

And is this confined to the sight only, or does it extend to the hearing also, relating in fact to what we term poetry?

Probably the same would be true of poetry.

Do not rely, I said, on a probability derived from the analogy of painting; but let us examine further and see whether the faculty with which poetical imitation is concerned is good or bad.

By all means.

We may state the question thus:—Imitation imitates the actions of men, whether voluntary or involuntary, on which, as they imagine, a good or bad result has ensued, and they rejoice or sorrow accordingly. Is there anything more?

No, there is nothing else.

But in all this variety of circumstances is the man at unity with himself—or rather, as in the instance of sight there was confusion and opposition in his opinions about the same things, so here also is there not strife and inconsistency in his life? Though I need hardly raise the question again, for I remember that all this has been already admitted; and the soul has been acknowledged by us to be full of these and ten thousand similar oppositions occurring at the same moment?

They imitate opposites;

And we were right, he said.

Yes, I said, thus far we were right; but there was an omission which must now be supplied.

What was the omission?

Were we not saying that a good man, who has the misfortune to lose his son or anything else which is most dear to him, will bear the loss with more equanimity than another?

Yes.

But will he have no sorrow, or shall we say that although he cannot help sorrowing, he will moderate his sorrow?

they encourage weakness;

The latter, he said, is the truer statement.

604 Tell me: will he be more likely to struggle and hold out against his sorrow when he is seen by his equals, or when he is alone?

It will make a great difference whether he is seen or not.

When he is by himself he will not mind saying or doing many things which he would be ashamed of any one hearing or seeing him do?

True.

There is a principle of law and reason in him which bids him resist, as well as a feeling of his misfortune which is forcing him to indulge his sorrow?

True.

But when a man is drawn in two opposite directions, to and from the same object, this, as we affirm, necessarily implies two distinct principles in him?

Certainly.

One of them is ready to follow the guidance of the law?

How do you mean?

The law would say that to be patient under suffering is best, and that we should not give way to impatience, as there is no knowing whether such things are good or evil; and nothing is gained by impatience; also, because no human thing is of serious importance, and grief stands in the way of that which at the moment is most required.

they are at variance with the exhortations of philosophy;

What is most required? he asked.

That we should take counsel about what has happened, and when the dice have been thrown order our affairs in the way which reason deems best; not, like children who have had a fall, keeping hold of the part struck and wasting time in setting up a howl, but always accustoming the soul forthwith to apply a remedy, raising up that which is sickly and fallen, banishing the cry of sorrow by the healing art.

Yes, he said, that is the true way of meeting the attacks of fortune.

Yes, I said; and the higher principle is ready to follow this suggestion of reason?

Clearly.

And the other principle, which inclines us to recollection of our troubles and to lamentation, and can never have enough of them, we may call irrational, useless, and cowardly?

they recall trouble and sorrow;

Indeed, we may.

And does not the latter—I mean the rebellious principle—furnish a great variety of materials for imitation? Whereas the wise and calm temperament, being always nearly equable, is not easy to imitate or to appreciate when imitated, especially at a public festival when a promiscuous crowd is assembled in a theatre. For the feeling represented is one to which they are strangers.

Certainly.

605 Then the imitative poet who aims at being popular is not by nature made, nor is his art intended, to please or to affect the rational principle in the soul; but he will prefer the passionate and fitful temper, which is easily imitated?

Clearly.

And now we may fairly take him and place him by the side of the painter, for he is like him in two ways: first, inasmuch as his creations have an inferior degree of truth—in this, I say, he is like him; and he is also like him in being concerned with an inferior part of the soul; and therefore we shall be right in refusing to admit him into a well-ordered State, because he awakens and nourishes and strengthens the feelings and impairs the reason. As in a city when the evil are permitted to have authority and the good are put out of the way, so in the soul of man, as we maintain, the imitative poet implants an evil constitution, for he indulges the

they minister in an inferior manner to an inferior principle in the soul.

irrational nature which has no discernment of greater and less, but thinks the same thing at one time great and at another small—he is a manufacturer of images and is very far removed from the truth¹.

Exactly.

But we have not yet brought forward the heaviest count in our accusation:—the power which poetry has of harming even the good (and there are very few who are not harmed), is surely an awful thing?

Yes, certainly, if the effect is what you say.

Hear and judge: The best of us, as I conceive, when we listen to a passage of Homer, or one of the tragedians, in which he represents some pitiful hero who is drawling out his sorrows in a long oration, or weeping, and smiting his breast—the best of us, you know, delight in giving way to sympathy, and are in raptures at the excellence of the poet who stirs our feelings most.

How can we be right in sympathizing with the sorrows of poetry when we would fain restrain those of real life?

Yes, of course I know.

But when any sorrow of our own happens to us, then you may observe that we pride ourselves on the opposite quality—we would fain be quiet and patient; this is the manly part, and the other which delighted us in the recitation is now deemed to be the part of a woman.

Very true, he said.

Now can we be right in praising and admiring another who is doing that which any one of us would abominate and be ashamed of in his own person?

No, he said, that is certainly not reasonable.

606Nay, I said, quite reasonable from one point of view.

What point of view?

If you consider, I said, that when in misfortune we feel a natural hunger and desire to relieve our sorrow by weeping and lamentation, and that this feeling which is kept under control in our own calamities is satisfied and delighted by the poets;—the better nature in each of us, not having been sufficiently trained by reason or habit, allows the sympathetic element to break loose because the sorrow is another's; and the spectator fancies that there can be no disgrace to himself in praising and pitying any one who comes telling him what a good man he is, and making a fuss about his troubles; he thinks that the pleasure is a gain, and why should he be supercilious and lose this and the poem too? Few persons ever reflect, as I should imagine, that from the evil of other men something of evil is communicated to

We fail to observe that a sentimental pity soon creates a real weakness.

themselves. And so the feeling of sorrow which has gathered strength at the sight of the misfortunes of others is with difficulty repressed in our own.

How very true!

And does not the same hold also of the ridiculous? There are jests which you would be ashamed to make yourself, and yet on the comic stage, or indeed in private, when you hear them, you are greatly amused by them, and are not at all disgusted at their unseemliness;—the case of pity is repeated;—there is a principle in human nature which is disposed to raise a laugh, and this which you once restrained by reason, because you were afraid of being thought a buffoon, is now let out again; and having stimulated the risible faculty at the theatre, you are betrayed unconsciously to yourself into playing the comic poet at home.

In like manner the love of comedy may turn a man into a buffoon.

Quite true, he said.

And the same may be said of lust and anger and all the other affections, of desire and pain and pleasure, which are held to be inseparable from every action—in all of them poetry feeds and waters the passions instead of drying them up; she lets them rule, although they ought to be controlled, if mankind are ever to increase in happiness and virtue.

I cannot deny it.

Therefore, Glaucon, I said, whenever you meet with any of the eulogists of Homer declaring that he has been the educator of Hellas, and that he is profitable for education and for the ordering of human things, and that you should take him up again and again and get to know him and regulate your whole life according to him, we may love and honour those who say these things—they are excellent people, as far as their lights extend; and we are ready to acknowledge that Homer is the greatest of poets and first of tragedy writers; but we must remain firm in our conviction that hymns to the gods and praises of famous men are the only poetry which ought to be admitted into our State. For if you go beyond this and allow the honeyed muse to enter, either in epic or lyric verse, not law and the reason of mankind, which by common consent have ever been deemed best, but pleasure and pain will be the rulers in our State.

We are lovers of Homer, but we must expel him from our State.

That is most true, he said.

And now since we have reverted to the subject of poetry, let this our defence serve to show the reasonableness of our former judgment in sending away out of our State an art having the tendencies which we have described; for reason constrained us. But that she may not impute to us any harshness or want of politeness, let us tell her that there is an ancient quarrel between philosophy and poetry; of which there are many proofs, such as the saying of ‘the yelping hound howling at her lord,’ or of one ‘mighty in the vain talk of fools,’ and

Apology to the poets.

‘the mob of sages circumventing Zeus,’ and the ‘subtle thinkers who are beggars after all’; and there are innumerable other signs of ancient enmity between them. Notwithstanding this, let us assure our sweet friend and the sister arts of imitation, that if she will only prove her title to exist in a well-ordered State we shall be delighted to receive her—we are very conscious of her charms; but we may not on that account betray the truth. I dare say, Glaucon, that you are as much charmed by her as I am, especially when she appears in Homer?

Yes, indeed, I am greatly charmed.

Shall I propose, then, that she be allowed to return from exile, but upon this condition only—that she make a defence of herself in lyrical or some other metre?

Certainly.

And we may further grant to those of her defenders who are lovers of poetry and yet not poets the permission to speak in prose on her behalf: let them show not only that she is pleasant but also useful to States and to human life, and we will listen in a kindly spirit; for if this can be proved we shall surely be the gainers—I mean, if there is a use in poetry as well as a delight?

Certainly, he said, we shall be the gainers.

If her defence fails, then, my dear friend, like other persons who are enamoured of something, but put a restraint upon themselves when they think their desires are opposed to their interests, so too must we after the manner of lovers give her up, though not without a struggle. We too are inspired by that love of poetry which the education of noble States has implanted in us, and therefore we would have her appear at her best and truest; but so long as she is unable to make good her defence, this argument of ours shall be a charm to us, which we will repeat to ourselves while we listen to her strains; that we may not fall away into the childish love of her which captivates the many. At all events we are well aware¹ that poetry being such as we have described is not to be regarded seriously as attaining to the truth; and he who listens to her, fearing for the safety of the city which is within him, should be on his guard against her seductions and make our words his law.

Poetry is attractive but not true.

Yes, he said, I quite agree with you.

Yes, I said, my dear Glaucon, for great is the issue at stake, greater than appears, whether a man is to be good or bad. And what will any one be profited if under the influence of honour or money or power, aye, or under the excitement of poetry, he neglect justice and virtue?

Yes, he said; I have been convinced by the argument, as I believe that any one else would have been.

And yet no mention has been made of the greatest prizes and rewards which await virtue.

What, are there any greater still? If there are, they must be of an inconceivable greatness.

Why, I said, what was ever great in a short time? The whole period of three score years and ten is surely but a little thing in comparison with eternity?

The rewards of virtue extend not only to this little space of human life but to the whole of existence.

Say rather 'nothing,' he replied.

And should an immortal being seriously think of this little space rather than of the whole?

Of the whole, certainly. But why do you ask?

Are you not aware, I said, that the soul of man is immortal and imperishable?

He looked at me in astonishment, and said: No, by heaven: And are you really prepared to maintain this?

Yes, I said, I ought to be, and you too—there is no difficulty in proving it.

I see a great difficulty; but I should like to hear you state this argument of which you make so light.

Listen then.

I am attending.

There is a thing which you call good and another which you call evil?

Yes, he replied.

Would you agree with me in thinking that the corrupting and destroying element is the evil, and the saving and improving element the good?

609Yes.

And you admit that everything has a good and also an evil; as ophthalmia is the evil of the eyes and disease of the whole body; as mildew is of corn, and rot of timber, or rust of copper and iron: in everything, or in almost everything, there is an inherent evil and disease?

Everything has a good and an evil, and if not destroyed by its own evil, will not be destroyed by that of another.

Yes, he said.

And anything which is infected by any of these evils is made evil, and at last wholly dissolves and dies?

True.

The vice and evil which is inherent in each is the destruction of each; and if this does not destroy them there is nothing else that will; for good certainly will not destroy them, nor again, that which is neither good nor evil.

Certainly not.

If, then, we find any nature which having this inherent corruption cannot be dissolved or destroyed, we may be certain that of such a nature there is no destruction?

That may be assumed.

Well, I said, and is there no evil which corrupts the soul?

Yes, he said, there are all the evils which we were just now passing in review: unrighteousness, intemperance, cowardice, ignorance.

But does any of these dissolve or destroy her?—and here do not let us fall into the error of supposing that the unjust and foolish man, when he is detected, perishes through his own injustice, which is an evil of the soul. Take the analogy of the body: The evil of the body is a disease which wastes and reduces and annihilates the body; and all the things of which we were just now speaking come to annihilation through their own corruption attaching to them and inhering in them and so destroying them. Is not this true?

Therefore, if the soul cannot be destroyed by moral evil, she certainly will not be destroyed by physical evil.

Yes.

Consider the soul in like manner. Does the injustice or other evil which exists in the soul waste and consume her? do they by attaching to the soul and inhering in her at last bring her to death, and so separate her from the body?

Certainly not.

And yet, I said, it is unreasonable to suppose that anything can perish from without through affection of external evil which could not be destroyed from within by a corruption of its own?

It is, he replied.

Consider, I said, Glaucon, that even the badness of food, whether staleness, decomposition, or any other bad quality, when confined to the actual food, is not supposed to destroy the body; although, if the badness of food communicates corruption to the body, then we should say that the body has been destroyed by a corruption of itself, which is disease, brought on by this; but that the body, being one thing, can be destroyed by the badness of food, which is another, and which does not engender any natural infection—this we shall absolutely deny?

Very true.

And, on the same principle, unless some bodily evil can produce an evil of the soul, we must not suppose that the soul, which is one thing, can be dissolved by any merely external evil which belongs to another?

Evil means the contagion of evil, and the evil of the body does not infect the soul.

Yes, he said, there is reason in that.

Either, then, let us refute this conclusion, or, while it remains unrefuted, let us never say that fever, or any other disease, or the knife put to the throat, or even the cutting up of the whole body into the minutest pieces, can destroy the soul, until she herself is proved to become more unholy or unrighteous in consequence of these things being done to the body; but that the soul, or anything else if not destroyed by an internal evil, can be destroyed by an external one, is not to be affirmed by any man.

And surely, he replied, no one will ever prove that the souls of men become more unjust in consequence of death.

But if some one who would rather not admit the immortality of the soul boldly denies this, and says that the dying do really become more evil and unrighteous, then, if the speaker is right, I suppose that injustice, like disease, must be assumed to be fatal to the unjust, and that those who take this disorder die by the natural inherent power of destruction which evil has, and which kills them sooner or later, but in quite another way from that in which, at present, the wicked receive death at the hands of others as the penalty of their deeds?

Nay, he said, in that case injustice, if fatal to the unjust, will not be so very terrible to him, for he will be delivered from evil. But I rather suspect the opposite to be the truth, and that injustice which, if it have the power, will murder others, keeps the murderer alive—aye, and well awake too; so far removed is her dwelling-place from being a house of death.

True, I said; if the inherent natural vice or evil of the soul is unable to kill or destroy her, hardly will that which is appointed to be the destruction of some other body, destroy a soul or anything else except that of which it was appointed to be the destruction.

Yes, that can hardly be.

But the soul which cannot be destroyed by an evil, whether 611 inherent or external, must exist for ever, and if existing for ever, must be immortal?

Certainly.

That is the conclusion, I said; and, if a true conclusion, then the souls must always be the same, for if none be destroyed they will not diminish in number. Neither will they increase, for the increase of the immortal natures must come from something mortal, and all things would thus end in immortality.

If the soul is indestructible, the number of souls can never increase or diminish.

Very true.

But this we cannot believe—reason will not allow us—any more than we can believe the soul, in her truest nature, to be full of variety and difference and dissimilarity.

What do you mean? he said.

The soul, I said, being, as is now proven, immortal, must be the fairest of compositions and cannot be compounded of many elements?

Certainly not.

Her immortality is demonstrated by the previous argument, and there are many other proofs; but to see her as she really is, not as we now behold her, marred by communion with the body and other miseries, you must contemplate her with the eye of reason, in her original purity; and then her beauty will be revealed, and justice and injustice and all the things which we have described will be manifested more clearly. Thus far, we have spoken the truth concerning her as she appears at present, but we must remember also that we have seen her only in a condition which may be compared to that of the sea-god Glaucus, whose original image can hardly be discerned because his natural members are broken off and crushed and damaged by the waves in all sorts of ways, and incrustations have grown over them of seaweed and shells and stones, so that he is more like some monster than he is to his own natural form. And the soul which we behold is in a similar condition, disfigured by ten thousand ills. But not there, Glaucon, not there must we look.

The soul, if she is to be seen truly, should be stripped of the accidents of earth.

Where then?

At her love of wisdom. Let us see whom she affects, and what society and converse she seeks in virtue of her near kindred with the immortal and eternal and divine; also how different she would become if wholly following this superior principle, and borne by a divine impulse out of the ocean in which she now is, and disengaged from the stones and shells and things of earth and rock which in wild variety spring up around her because she feeds upon earth, and is overgrown by the good things of this life as they are termed: then you would see her as she is, and know whether she have one shape only or many, or what her nature is. Of her affections and of the forms which she takes in this present life I think that we have now said enough.

Her true conversation is with the eternal.

True, he replied.

And thus, I said, we have fulfilled the conditions of the argument¹; we have not introduced the rewards and glories of justice, which, as you were saying, are to be found in Homer and Hesiod; but justice in her own nature has been shown to be best for the soul in her own nature. Let a man do what is just, whether he have the ring of Gyges or not, and even if in addition to the ring of Gyges he put on the helmet of Hades.

Having put aside for argument's sake the rewards of virtue, we may now claim to have them restored.

Very true.

And now, Glaucon, there will be no harm in further enumerating how many and how great are the rewards which justice and the other virtues procure to the soul from gods and men, both in life and after death.

Certainly not, he said.

Will you repay me, then, what you borrowed in the argument?

What did I borrow?

The assumption that the just man should appear unjust and the unjust just: for you were of opinion that even if the true state of the case could not possibly escape the eyes of gods and men, still this admission ought to be made for the sake of the argument, in order that pure justice might be weighed against pure injustice. Do you remember?

I should be much to blame if I had forgotten.

Then, as the cause is decided, I demand on behalf of justice that the estimation in which she is held by gods and men and which we acknowledge to be her due should now be restored to her by us¹; since she has been shown to confer reality, and not to deceive those who truly possess her, let what has been taken from her be given back, that so she may win that palm of appearance which is hers also, and which she gives to her own.

The demand, he said, is just.

In the first place, I said—and this is the first thing which you will have to give back—the nature both of the just and unjust is truly known to the gods.

Granted.

And if they are both known to them, one must be the friend and the other the enemy of the gods, as we admitted from the beginning?

The just man is the friend of the gods, and all things work together for his good.

True.

613 And the friend of the gods may be supposed to receive from them all things at their best, excepting only such evil as is the necessary consequence of former sins?

Certainly.

Then this must be our notion of the just man, that even when he is in poverty or sickness, or any other seeming misfortune, all things will in the end work together for good to him in life and death: for the gods have a care of any one whose desire is to

become just and to be like God, as far as man can attain the divine likeness, by the pursuit of virtue?

Yes, he said; if he is like God he will surely not be neglected by him.

And of the unjust may not the opposite be supposed?

The unjust is the opposite.

Certainly.

Such, then, are the palms of victory which the gods give the just?

That is my conviction.

And what do they receive of men? Look at things as they really are, and you will see that the clever unjust are in the case of runners, who run well from the starting-place to the goal but not back again from the goal: they go off at a great pace, but in the end only look foolish, slinking away with their ears dragging on their shoulders, and without a crown; but the true runner comes to the finish and receives the prize and is crowned. And this is the way with the just; he who endures to the end of every action and occasion of his entire life has a good report and carries off the prize which men have to bestow.

He may be compared to a runner who is only good at the start.

True.

And now you must allow me to repeat of the just the blessings which you were attributing to the fortunate unjust. I shall say of them, what you were saying of the others, that as they grow older, they become rulers in their own city if they care to be; they marry whom they like and give in marriage to whom they will; all that you said of the others I now say of these. And, on the other hand, of the unjust I say that the greater number, even though they escape in their youth, are found out at last and look foolish at the end of their course, and when they come to be old and miserable are flouted alike by stranger and citizen; they are beaten and then come those things unfit for ears polite, as you truly term them; they will be racked and have their eyes burned out, as you were saying. And you may suppose that I have repeated the remainder of your tale of horrors. But will you let me assume, without reciting them, that these things are true?

Recapitulation of things unfit for ears polite which had been described by Glaucon in Book II.

Certainly, he said, what you say is true.

614 These, then, are the prizes and rewards and gifts which are bestowed upon the just by gods and men in this present life, in addition to the other good things which justice of herself provides.

Yes, he said; and they are fair and lasting.

And yet, I said, all these are as nothing either in number or greatness in comparison with those other recompenses which await both just and unjust after death. And you

ought to hear them, and then both just and unjust will have received from us a full payment of the debt which the argument owes to them.

Speak, he said; there are few things which I would more gladly hear.

Well, I said, I will tell you a tale; not one of the tales which Odysseus tells to the hero Alcinous, yet this too is a tale of a hero, Er the son of Armenius, a Pamphylian by birth. He was slain in battle, and ten days afterwards, when the bodies of the dead were taken up already in a state of corruption, his body was found unaffected by decay, and carried away home to be buried. And on the twelfth day, as he was lying on the funeral pile, he returned to life and told them what he had seen in the other world. He said that when his soul left the body he went on a journey with a great company, and that they came to a mysterious place at which there were two openings in the earth; they were near together, and over against them were two other openings in the heaven above. In the intermediate space there were judges seated, who commanded the just, after they had given judgment on them and had bound their sentences in front of them, to ascend by the heavenly way on the right hand; and in like manner the unjust were bidden by them to descend by the lower way on the left hand; these also bore the symbols of their deeds, but fastened on their backs. He drew near, and they told him that he was to be the messenger who would carry the report of the other world to men, and they bade him hear and see all that was to be heard and seen in that place. Then he beheld and saw on one side the souls departing at either opening of heaven and earth when sentence had been given on them; and at the two other openings other souls, some ascending out of the earth dusty and worn with travel, some descending out of heaven clean and bright. And arriving ever and anon they seemed to have come from a long journey, and they went forth with gladness into the meadow, where they encamped as at a festival; and those who knew one another embraced and conversed, the souls which came from earth curiously enquiring about the things above, and the souls which came from heaven about the things beneath. And they told one another of what had happened by the way, those from below weeping and sorrowing at the remembrance of the things which they had endured and seen in their journey beneath the earth (now the journey lasted a thousand years), while those from above were describing heavenly delights and visions of inconceivable beauty. The story, Glaucon, would take too long to tell; but the sum was this:—He said that for every wrong which they had done to any one they suffered tenfold; or once in a hundred years—such being reckoned to be the length of man's life, and the penalty being thus paid ten times in a thousand years. If, for example, there were any who had been the cause of many deaths, or had betrayed or enslaved cities or armies, or been guilty of any other evil behaviour, for each and all of their offences they received punishment ten times over, and the rewards of beneficence and justice and holiness were in the same proportion. I need hardly repeat what he said concerning young children dying almost as soon as they were born. Of piety and impiety to gods and parents, and of

Ardiaeus the tyrant.

Incurable sinners.

murderers¹, there were retributions other and greater far which he described. He mentioned that he was present when one of the spirits asked another, ‘Where is Ardiaeus the Great?’ (Now this Ardiaeus lived a thousand years before the time of Er: he had been the tyrant of some city of Pamphylia, and had murdered his aged father and his elder brother, and was said to have committed many other abominable crimes.) The answer of the other spirit was: ‘He comes not hither and will never come. And this,’ said he, ‘was one of the dreadful sights which we ourselves witnessed. We were at the mouth of the cavern, and, having completed all our experiences, were about to reascend, when of a sudden Ardiaeus appeared and several others, most of whom were tyrants; and there were also besides the tyrants private individuals who had been great criminals: they were just, as they fancied, about to return into the upper world, but the mouth, instead of admitting them, gave a roar, whenever any of these incurable sinners or some one who had not been sufficiently punished tried to ascend; and then wild men of fiery aspect, who were standing by and heard the sound, seized and carried them off; and Ardiaeus and others they bound head and foot and hand, and threw them down and flayed them with scourges, and dragged them along the road at the side, carding them on thorns like wool, and declaring to the passers-by what were their crimes, and that² they were being taken away to be cast into hell.’ And of all the many terrors which they had endured, he said that there was none like the terror which each of them felt at that moment, lest they should hear the voice; and when there was silence, one by one they ascended with exceeding joy. These, said Er, were the penalties and retributions, and there were blessings as great.

Now when the spirits which were in the meadow had tarried seven days, on the eighth they were obliged to proceed on their journey, and, on the fourth day after, he said that they came to a place where they could see from above a line of light, straight as a column, extending right through the whole heaven and through the earth, in colour resembling the rainbow, only brighter and purer; another day’s journey brought them to the place, and there, in the midst of the light, they saw the ends of the chains of heaven let down from above: for this light is the belt of heaven, and holds together the circle of the universe, like the undergirders of a trireme. From these ends is extended the spindle of Necessity, on which all the revolutions turn. The shaft and hook of this spindle are made of steel, and the whorl is made partly of steel and also partly of other materials. Now the whorl is in form like the whorl used on earth; and the description of it implied that there is one large hollow whorl which is quite scooped out, and into this is fitted another lesser one, and another, and another, and four others, making eight in all, like vessels which fit into one another; the whorls show their edges on the upper side, and on their lower side all together form one continuous whorl. This is pierced by the spindle, which is driven home through the centre of the eighth. The first and outermost whorl has the rim broadest, and the seven inner whorls are narrower, in the following proportions—the sixth is next to the first in size, the fourth next to the sixth; then comes the eighth; the seventh is fifth, the fifth is sixth, the third is seventh, last and eighth comes the second. The largest [or fixed stars] is spangled, and the seventh [or sun] is brightest; the eighth [or moon] is coloured by the reflected light of the seventh; the second and fifth [Saturn and Mercury] are in colour like one another, and yellower than the preceding; the third

The whorls representing the spheres of the heavenly bodies.

[Venus] has the whitest light; the fourth [Mars] is reddish; the sixth [Jupiter] is in whiteness second. Now the whole spindle has the same motion; but, as the whole revolves in one direction, the seven inner circles move slowly in the other, and of these the swiftest is the eighth; next in swiftness are the seventh, sixth, and fifth, which move together; third in swiftness appeared to move according to the law of this reversed motion the fourth; the third appeared fourth and the second fifth. The spindle turns on the knees of Necessity; and on the upper surface of each circle is a siren, who goes round with them, hymning a single tone or note. The eight together form one harmony; and round about, at equal intervals, there is another band, three in number, each sitting upon her throne: these are the Fates, daughters of Necessity, who are clothed in white robes and have chaplets upon their heads, Lachesis and Clotho and Atropos, who accompany with their voices the harmony of the sirens—Lachesis singing of the past, Clotho of the present, Atropos of the future; Clotho from time to time assisting with a touch of her right hand the revolution of the outer circle of the whorl or spindle, and Atropos with her left hand touching and guiding the inner ones, and Lachesis laying hold of either in turn, first with one hand and then with the other.

When Er and the spirits arrived, their duty was to go at once to Lachesis; but first of all there came a prophet who arranged them in order; then he took from the knees of Lachesis lots and samples of lives, and having mounted a high pulpit, spoke as follows: ‘Hear the word of Lachesis, the daughter of Necessity. Mortal souls, behold a new cycle of life and mortality. Your genius will not be allotted to you, but you will choose your genius; and let him who draws the first lot have the first choice, and the life which he chooses shall be his destiny. Virtue is free, and as a man honours or dishonours her he will have more or less of her; the responsibility is with the chooser—God is justified.’ When the Interpreter had thus spoken he scattered lots indifferently among them all, and each of them took up the lot which fell near him, all but Er himself (he was not allowed), and each as he took his lot perceived the number which he had obtained. Then the Interpreter placed on the ground before them the samples of lives; and there were many more lives than the souls present, and they were of all sorts. There were lives of every animal and of man in every condition. And there were tyrannies among them, some lasting out the tyrant’s life, others which broke off in the middle and came to an end in poverty and exile and beggary; and there were lives of famous men, some who were famous for their form and beauty as well as for their strength and success in games, or, again, for their birth and the qualities of their ancestors; and some who were the reverse of famous for the opposite qualities. And of women likewise; there was not, however, any definite character in them, because the soul, when choosing a new life, must of necessity become different. But there was every other quality, and they all mingled with one another, and also with elements of wealth and poverty, and disease and health; and there were mean states also. And here, my dear Glaucon, is the supreme peril of our human state; and therefore the utmost care should be taken. Let each one of us leave every other kind of knowledge and seek and follow one thing only, if peradventure he may be able to learn and may find some one who will make him able to learn and discern between good and evil, and so to choose always and everywhere the better life as he has opportunity. He should consider the bearing of all these things which have been

The proclamation of the free choice.

The complexity of circumstances,

and their relation to the human soul.

mentioned severally and collectively upon virtue; he should know what the effect of beauty is when combined with poverty or wealth in a particular soul, and what are the good and evil consequences of noble and humble birth, of private and public station, of strength and weakness, of cleverness and dullness, and of all the natural and acquired gifts of the soul, and the operation of them when conjoined; he will then look at the nature of the soul, and from the consideration of all these qualities he will be able to determine which is the better and which is the worse; and so he will choose, giving the name of evil to the life which will make his soul more unjust, and good to the life which will make his soul more just; all else he will disregard. For we have seen and know that this is ⁶¹⁹the best choice both in life and after death. A man must take with him into the world below an adamant faith in truth and right, that there too he may be undazzled by the desire of wealth or the other allurements of evil, lest, coming upon tyrannies and similar villanies, he do irremediable wrongs to others and suffer yet worse himself; but let him know how to choose the mean and avoid the extremes on either side, as far as possible, not only in this life but in all that which is to come. For this is the way of happiness.

And according to the report of the messenger from the other world this was what the prophet said at the time: 'Even for the last comer, if he chooses wisely and will live diligently, there is appointed a happy and not undesirable existence. Let not him who chooses first be careless, and let not the last despair.' And when he had spoken, he who had the first choice came forward and in a moment chose the greatest tyranny; his mind having been darkened by folly and sensuality, he had not thought out the whole matter before he chose, and did not at first sight perceive that he was fated, among other evils, to devour his own children. But when he had time to reflect, and saw what was in the lot, he began to beat his breast and lament over his choice, forgetting the proclamation of the prophet; for, instead of throwing the blame of his misfortune on himself, he accused chance and the gods, and everything rather than himself. Now he was one of those who came from heaven, and in a former life had dwelt in a well-ordered State, but his virtue was a matter of habit only, and he had no philosophy. And it was true of others who were similarly overtaken, that the greater number of them came from heaven and therefore they had never been schooled by trial, whereas the pilgrims who came from earth having themselves suffered and seen others suffer were not in a hurry to choose. And owing to this inexperience of theirs, and also because the lot was a chance, many of the souls exchanged a good destiny for an evil or an evil for a good. For if a man had always on his arrival in this world dedicated himself from the first to sound philosophy, and had been moderately fortunate in the number of the lot, he might, as the messenger reported, be happy here, and also his journey to another life and return to this, instead of being rough and underground, would be smooth and heavenly. Most curious, he said, was the spectacle—sad and laughable and strange; for the choice of the souls ⁶²⁰was in most cases based on their experience of a previous life. There he saw the soul which had once been Orpheus choosing the life of a swan out of enmity to the race of women, hating to be born of a woman because they had been his murderers; he beheld also the soul of Thamyras choosing the life of a nightingale; birds, on the other hand, like the swan and other musicians, wanting to be men. The soul which obtained the twentieth ¹lot chose the life of a lion, and this

Habit not enough without philosophy when circumstances change.

The spectacle of the election.

was the soul of Ajax the son of Telamon, who would not be a man, remembering the injustice which was done him in the judgment about the arms. The next was Agamemnon, who took the life of an eagle, because, like Ajax, he hated human nature by reason of his sufferings. About the middle came the lot of Atalanta; she, seeing the great fame of an athlete, was unable to resist the temptation: and after her there followed the soul of Epeus the son of Panopeus passing into the nature of a woman cunning in the arts; and far away among the last who chose, the soul of the jester Thersites was putting on the form of a monkey. There came also the soul of Odysseus having yet to make a choice, and his lot happened to be the last of them all. Now the recollection of former toils had disenchanted him of ambition, and he went about for a considerable time in search of the life of a private man who had no cares; he had some difficulty in finding this, which was lying about and had been neglected by everybody else; and when he saw it, he said that he would have done the same had his lot been first instead of last, and that he was delighted to have it. And not only did men pass into animals, but I must also mention that there were animals tame and wild who changed into one another and into corresponding human natures—the good into the gentle and the evil into the savage, in all sorts of combinations.

All the souls had now chosen their lives, and they went in the order of their choice to Lachesis, who sent with them the genius whom they had severally chosen, to be the guardian of their lives and the fulfiller of the choice: this genius led the souls first to Clotho, and drew them within the revolution of the spindle impelled by her hand, thus ratifying the destiny of each; and then, when they were fastened to this, carried them to Atropos, who spun the threads and made them irreversible, whence without turning round they passed beneath the throne of Necessity; and when they had all passed, they marched on in a scorching heat to the plain of Forgetfulness, which was a barren waste destitute of trees and verdure; and then towards evening they encamped by the river of Unmindfulness, whose water no vessel can hold; of this they were all obliged to drink a certain quantity, and those who were not saved by wisdom drank more than was necessary; and each one as he drank forgot all things. Now after they had gone to rest, about the middle of the night there was a thunderstorm and earthquake, and then in an instant they were driven upwards in all manner of ways to their birth, like stars shooting. He himself was hindered from drinking the water. But in what manner or by what means he returned to the body he could not say; only, in the morning, awaking suddenly, he found himself lying on the pyre.

And thus, Glaucon, the tale has been saved and has not perished, and will save us if we are obedient to the word spoken; and we shall pass safely over the river of Forgetfulness and our soul will not be defiled. Wherefore my counsel is, that we hold fast ever to the heavenly way and follow after justice and virtue always, considering that the soul is immortal and able to endure every sort of good and every sort of evil. Thus shall we live dear to one another and to the gods, both while remaining here and when, like conquerors in the games who go round to gather gifts, we receive our reward. And it shall be well with us both in this life and in the pilgrimage of a thousand years which we have been describing.

TIMAEUS.

persons of the dialogue.

Socrates. Timaeus. Critias. Hermocrates.

SOCRATES.

17One, two, three; but where, my dear Timaeus, is the fourth of those who were yesterday my guests and are to be my entertainers to-day?

Timaeus.

TIMAEUS.

He has been taken ill, Socrates; for he would not willingly have been absent from this gathering.

The appointed meeting.

SOC.

Then, if he is not coming, you and the two others must supply his place.

TIM.

Certainly, and we will do all that we can; having been handsomely entertained by you yesterday, those of us who remain should be only too glad to return your hospitality.

SOC.

Do you remember what were the points of which I required you to speak?

The chief points in the Republic:—

TIM.

We remember some of them, and you will be here to remind us of anything which we have forgotten: or rather, if we are not troubling you, will you briefly recapitulate the whole, and then the particulars will be more firmly fixed in our memories?

SOC.

To be sure I will: the chief theme of my yesterday's discourse was the State—how constituted and of what citizens composed it would seem likely to be most perfect.

TIM.

Yes, Socrates; and what you said of it was very much to our mind.

SOC.

Did we not begin by separating the husbandmen and the artisans from the class of defenders of the State?

(1) Separation of classes.

TIM.

Yes.

SOC.

And when we had given to each one that single employment and particular art which was suited to his nature, we spoke of those who were intended to be our warriors, and said that they were to be guardians of the city against attacks from within as well as from without, and to have no other employment; they were to be merciful in judging their subjects, of whom they were by nature friends, but fierce to their enemies, when they came across them in battle.

(2) Division of labour.

TIM.

Exactly.

SOC.

We said, if I am not mistaken, that the guardians should be gifted with a temperament in a high degree both passionate and philosophical; and that then they would be as they ought to be, gentle to their friends and fierce with their enemies.

(3) The double character of the guardians.

TIM.

Certainly.

SOC.

And what did we say of their education? Were they not to be trained in gymnastic, and music, and all other sorts of knowledge which were proper for them 1 ?

(4) Their education.

TIM.

Very true.

SOC.

And being thus trained they were not to consider gold or silver or anything else to be their own private property; they were to be like hired troops, receiving pay for keeping guard from those who were protected by them—the pay was to be no more than would suffice for men of simple life; and they were to spend in common, and to live together in the continual practice of virtue, which was to be their sole pursuit.

(5) Community of goods.

TIM.

That was also said.

SOC.

Neither did we forget the women; of whom we declared, that their natures should be assimilated and brought into harmony with those of the men, and that common pursuits should be assigned to them both in time of war and in their ordinary life.

(6) The women to share in the pursuits of the men.

TIM.

That, again, was as you say.

SOC.

And what about the procreation of children? Or rather was not the proposal too singular to be forgotten? for all wives and children were to be in common, to the intent that no one should ever know his own child, but they were to imagine that they were all one family; those who were within a suitable limit of age were to be brothers and sisters, those who were of an elder generation parents and grandparents, and those of a younger, children and grandchildren.

(7) Community of wives and children.

TIM.

Yes, and the proposal is easy to remember, as you say.

SOC.

And do you also remember how, with a view of securing as far as we could the best breed, we said that the chief magistrates, male and female, should contrive secretly, by the use of certain lots, so to arrange the

(8) The nuptial lots.

nuptial meeting, that the bad of either sex and the good of either sex might pair with their like; and there was to be no quarrelling on this account, for they would imagine that the union was a mere accident, and was to be attributed to the lot?

TIM.

I remember.

SOC.

And you remember how we said that the children of the good parents were to be educated, and the children of the bad secretly dispersed among the inferior citizens; and while they were all growing up the rulers were to be on the look-out, and to bring up from below in their turn those who were worthy, and those among themselves who were unworthy were to take the places of those who came up?

(9) Transposition of good and bad citizens.

TIM.

True.

SOC.

Then have I now given you all the heads of our yesterday's discussion? Or is there anything more, my dear Timaeus, which has been omitted?

TIM.

Nothing, Socrates; it was just as you have said.

SOC.

Socrates desires to breathe life into his state; he would like to describe its infant struggles. But he has not the gift of description himself, and he finds the poets

equally incapable. The Sophists have no state of their own, and therefore are not politicians.

I should like, before proceeding further, to tell you how I feel about the State which we have described. I might compare myself to a person who, on beholding beautiful animals either created by the painter's art, or, better still, alive but at rest, is seized with a desire of seeing them in motion or engaged in some struggle or conflict to which their forms appear suited; this is my feeling about the State which we have been describing. There are conflicts which all cities undergo, and I should like to hear some one tell of our own city carrying on a struggle against her neighbours, and how she went out to war in a becoming manner, and when at war showed by the greatness of her actions and the magnanimity of her words in dealing with other cities a result worthy of her training and education. Now I, Critias and Hermocrates, am conscious that I myself should never be able to celebrate the city and her citizens in a befitting manner, and I am not surprised at my own incapacity; to me the wonder is rather that the poets present as well as past are no better—not that I mean to depreciate them; but every one can see that they are a tribe of imitators, and will imitate best and most easily the life in which they have been brought up; while that which is beyond the range of a man's education he finds hard to carry out in action, and still harder adequately to represent in language. I am aware that the Sophists have plenty of brave words and fair conceits, but I am afraid that being only wanderers from one city to another, and having never had habitations of their own, they may fail in their conception of philosophers and statesmen, and may not know what they do and say in time of war, when they are fighting or holding parley with their enemies. And thus people of your class are the only ones remaining who are fitted by nature and education to take part at once both in politics and philosophy. Here is Timaeus, of Locris 20in Italy, a city which has admirable laws, and who is himself in wealth and rank the equal of any of his fellow-citizens; he has held the most important and honourable offices in his own state, and, as I believe, has scaled the heights of all philosophy; and here is Critias, whom every Athenian knows to be no novice in the matters of which we are speaking; and as to Hermocrates, I am assured by many witnesses that his genius and education qualify him to take part in any speculation of the kind. And therefore yesterday when I saw that you wanted me to describe the formation of the State, I readily assented, being very well aware, that, if you only would, none were better qualified to carry the discussion further, and that when you had engaged our city in a suitable war, you of all men living could best exhibit her playing a fitting part. When I had completed my task, I in return imposed this other task upon you. You conferred together and agreed to entertain me to-day, as I had entertained you, with a feast of discourse. Here am I in festive array, and no man can be more ready for the promised banquet.

He turns to Timaeus, Critias, and Hermocrates.

HER.

Socrates, Timaeus, Hermocrates, Critias.

Hermocrates tells Socrates how Critias had narrated a story

And we too, Socrates, as Timaeus says, will not be wanting in enthusiasm; and there is no excuse for not complying with your request. As soon as we arrived yesterday at the guest-chamber of Critias, with whom we are staying, or rather on our way thither, we talked the matter over, and he told us an ancient tradition, which I wish, Critias, that you would repeat to Socrates, so that he may help us to judge whether it will satisfy his requirements or not.

which may satisfy his demands.

CRIT.

I will, if Timaeus, who is our other partner, approves.

TIM.

I quite approve.

CRIT.

Then listen, Socrates, to a tale which, though strange, is certainly true, having been attested by Solon, who was the wisest of the seven sages. He was a relative and a dear friend of my great-grandfather, Dropides, as he himself says in many passages of his poems; and he told the story to Critias, my grandfather, who remembered and repeated it to us. There were of old, he said, great and marvellous actions of the Athenian city, which have passed into oblivion through lapse of time and the destruction of mankind, and one in particular, greater than all the rest. This we will now rehearse. It will be a fitting monument of our gratitude to you, and a hymn of praise true and worthy of the goddess, on this her day of festival.

Critias consents to repeat it. He had heard the tale from his grandfather, who received it from Solon. It told of the glories of ancient Athens.

SOC.

Very good. And what is this ancient famous action of the Athenians,¹ which Critias declared, on the authority of Solon, to be not a mere legend, but an actual fact¹ ?

CRIT.

I will tell an old-world story which I heard from an aged man; for Critias, at the time of telling it, was, as he said, nearly ninety years of age, and I was about ten. Now the day was that day of the Apaturia which is called the Registration of Youth, at which, according to custom, our parents gave prizes for recitations, and the poems of several poets were recited by us boys, and many of us sang the poems of Solon, which at that time had not gone out of fashion. One of our tribe, either because he thought so or to please Critias, said that in his judgment Solon was not only the wisest of men, but also the noblest of poets. The old man, as I very well remember, brightened up at hearing this and said, smiling: Yes, Amynander, if Solon had only,

Critias.

Solon brought it from Egypt,—

like other poets, made poetry the business of his life, and had completed the tale which he brought with him from Egypt, and had not been compelled, by reason of the factions and troubles which he found stirring in his own country when he came home, to attend to other matters, in my opinion he would have been as famous as Homer or Hesiod, or any poet.

And what was the tale about, Critias? said Amynder.

About the greatest action which the Athenians ever did, and which ought to have been the most famous, but, through the lapse of time and the destruction of the actors, it has not come down to us.

Tell us, said the other, the whole story, and how and from whom Solon heard this veritable tradition.

He replied:—In the Egyptian Delta, at the head of which the river Nile divides, there is a certain district which is called the district of Sais, and the great city of the district is also called Sais, and is the city from which King Amasis came. The citizens have a deity for their foundress; she is called in the Egyptian tongue Neith, and is asserted by them to be the same whom the Hellenes call Athene; they are great lovers of the Athenians, and say that they are in some way related to them. To this city came Solon, and was received there with great honour; he asked the priests who were most skilful in such matters, about antiquity, and made the discovery that neither he nor any other Hellenes knew anything worth mentioning about the times of old. On one occasion, wishing to draw them on to speak of antiquity, he began to tell about the most ancient things in our part of the world—about Phoroneus, who is called ‘the first man,’ and about Niobe; and after the Deluge, of the survival of Deucalion and Pyrrha; and he traced the genealogy of their descendants, and reckoning up the dates, tried to compute how many years ago the events of which he was speaking happened. Thereupon one of the priests, who was of a very great age, said: O Solon, Solon, you Hellenes are never anything but children, and there is not an old man among you. Solon in return asked him what he meant. I mean to say, he replied, that in mind you are all young; there is no old opinion handed down among you by ancient tradition, nor any science which is hoary with age. And I will tell you why. There have been, and will be again, many destructions of mankind arising out of many causes; the greatest have been brought about by the agencies of fire and water, and other lesser ones by innumerable other causes. There is a story, which even you have preserved, that once upon a time Phaëthon, the son of Helios, having yoked the steeds in his father’s chariot, because he was not able to drive them in the path of his father, burnt up all that was upon the earth, and was himself destroyed by a thunderbolt. Now this has the form of a myth, but really signifies a declination of the bodies moving in the heavens around the earth, and a great conflagration of things upon the earth, which recurs after long intervals; at such times those who live upon

from Sais, a city founded by Neith, the Greek Athene.

The priests of Sais declared the traditions of Egypt to be far older than those of Hellas,

because Greek history had been frequently interrupted by deluges.

Athens one thousand years more ancient than Sais. The goddess Athene was the foundress of both: this explains the similarity of their institutions.

the mountains and in dry and lofty places are more liable to destruction than those who dwell by rivers or on the seashore. And from this calamity the Nile, who is our neverfailing saviour, delivers and preserves us. When, on the other hand, the gods purge the earth with a deluge of water, the survivors in your country are herdsmen and shepherds who dwell on the mountains, but those who, like you, live in cities are carried by the rivers into the sea. Whereas in this land, neither then nor at any other time, does the water come down from above on the fields, having always a tendency to come up from below; for which reason the traditions preserved here are the most ancient. The fact is, that wherever the extremity of winter frost or of summer sun does not prevent, mankind exist, sometimes in greater, sometimes in 23 lesser numbers. And whatever happened either in your country or in ours, or in any other region of which we are informed — if there were any actions noble or great or in any other way remarkable, they have all been written down by us of old, and are preserved in our temples. Whereas just when you and other nations are beginning to be provided with letters and the other requisites of civilized life, after the usual interval, the stream from heaven, like a pestilence, comes pouring down, and leaves only those of you who are destitute of letters and education; and so you have to begin all over again like children, and know nothing of what happened in ancient times, either among us or among yourselves. As for those genealogies of yours which you just now recounted to us, Solon, they are no better than the tales of children. In the first place you remember a single deluge only, but there were many previous ones; in the next place, you do not know that there formerly dwelt in your land the fairest and noblest race of men which ever lived, and that you and your whole city are descended from a small seed or remnant of them which survived. And this was unknown to you, because, for many generations, the survivors of that destruction died, leaving no written word. For there was a time, Solon, before the great deluge of all, when the city which now is Athens was first in war and in every way the best governed of all cities, and is said to have performed the noblest deeds and to have had the fairest constitution of any of which tradition tells, under the face of heaven. Solon marvelled at his words, and earnestly requested the priests to inform him exactly and in order about these former citizens. You are welcome to hear about them, Solon, said the priest, both for your own sake and for that of your city, and above all, for the sake of the goddess who is the common patron and parent and educator of both our cities. She founded your city a thousand years before ours¹, receiving from the Earth and Hephaestus the seed of your race, and afterwards she founded ours, of which the constitution is recorded in our sacred registers to be 8000 years old. As touching your citizens of 9000 years ago, I will briefly inform² you of their laws and of their most famous action; the exact particulars of the whole we will hereafter go through at our leisure in the sacred registers themselves. If you compare these very laws with ours you will find that many of ours are the counterpart of yours as they were in the olden time. In the first place, there is the caste of priests, which is separated from all the others; next, there are the artificers, who ply their several crafts by themselves and do not intermix; and also there is the class of shepherds and of hunters³, as well as that of husbandmen; and you will observe, too, that the warriors in Egypt are distinct from all the other classes, and are commanded by the law to devote themselves solely to military pursuits; moreover, the weapons which they carry are shields and spears, a style of equipment which the goddess taught of Asiatics first to us, as in your part of the world first to you. Then as to wisdom, do you observe how our law from the very first made

a study of the whole order of things, extending even to prophecy and medicine which gives health; out of these divine elements deriving what was needful for human life, and adding every sort of knowledge which was akin to them. All this order and arrangement the goddess first imparted to you when establishing your city; and she chose the spot of earth in which you were born, because she saw that the happy temperament of the seasons in that land would produce the wisest of men. Wherefore the goddess, who was a lover both of war and of wisdom, selected and first of all settled that spot which was the most likely to produce men likest herself. And there you dwelt, having such laws as these and still better ones, and excelled all mankind in all virtue, as became the children and disciples of the gods.

Many great and wonderful deeds are recorded of your state in our histories. But one of them exceeds all the rest in greatness and valour. For these histories tell of a mighty power which unprovoked made an expedition against the whole of Europe and Asia, and to which your city put an end. This power came forth out of the Atlantic Ocean, for in those days the Atlantic was navigable; and there was an island situated in front of the straits which are by you called the pillars of Heracles; the island was larger than Libya and 25Asia put together, and was the way to other islands, and from these you might pass to the whole of the opposite continent which surrounded the true ocean; for this sea which is within the Straits of Heracles is only a harbour, having a narrow entrance, but that other is a real sea, and the surrounding land may be most truly called a boundless continent. Now in this island of Atlantis there was a great and wonderful empire which had rule over the whole island and several others, and over parts of the continent, and, furthermore, the men of Atlantis had subjected the parts of Libya within the columns of Heracles as far as Egypt, and of Europe as far as Tyrrhenia. This vast power, gathered into one, endeavoured to subdue at a blow our country and yours and the whole of the region within the straits; and then, Solon, your country shone forth, in the excellence of her virtue and strength, among all mankind. She was preeminent in courage and military skill, and was the leader of the Hellenes. And when the rest fell off from her, being compelled to stand alone, after having undergone the very extremity of danger, she defeated and triumphed over the invaders, and preserved from slavery those who were not yet subjugated, and generously liberated all the rest of us who dwell within the pillars. But afterwards there occurred violent earthquakes and floods; and in a single day and night of misfortune all your warlike men in a body sank into the earth, and the island of Atlantis in like manner disappeared in the depths of the sea. For which reason the sea in those parts is impassable and impenetrable, because there is a shoal of mud in the way; and this was caused by the subsidence of the island.

The most glorious act of ancient Athens was the deliverance of Europe and Libya from the power of Atlantis.

Soon afterwards both empires disappeared.

I have told you briefly, Socrates, what the aged Critias heard from Solon and related to us. And when you were speaking yesterday about your city and citizens, the tale which I have just been repeating to you came into my mind, and I remarked with astonishment how, by some mysterious coincidence, you agreed in almost every particular with the narrative of Solon; but I did not like to speak at the moment. 26For a long time had elapsed, and I had forgotten too much; I thought that I

The arrangements of the ideal state recalled to Critias' mind the narrative of Solon.

must first of all run over the narrative in my own mind, and then I would speak. And so I readily assented to your request yesterday, considering that in all such cases the chief difficulty is to find a tale suitable to our purpose, and that with such a tale we should be fairly well provided.

And therefore, as Hermocrates has told you, on my way home yesterday I at once communicated the tale to my companions as I remembered it; and after I left them, during the night by thinking I recovered nearly the whole of it. Truly, as is often said, the lessons of our childhood make a wonderful impression on our memories; for I am not sure that I could remember all the discourse of yesterday, but I should be much surprised if I forgot any of these things which I have heard very long ago. I listened at the time with childlike interest to the old man's narrative; he was very ready to teach me, and I asked him again and again to repeat his words, so that like an indelible picture they were branded into my mind. As soon as the day broke, I rehearsed them as he spoke them to my companions, that they, as well as myself, might have something to say. And now, Socrates, to make an end of my preface, I am ready to tell you the whole tale. I will give you not only the general heads, but the particulars, as they were told to me. The city and citizens, which you yesterday described to us in fiction, we will now transfer to the world of reality. It shall be the ancient city of Athens, and we will suppose that the citizens whom you imagined, were our veritable ancestors, of whom the priest spoke; they will perfectly harmonize, and there will be no inconsistency in saying that the citizens of your republic are these ancient Athenians. Let us divide the subject among us, and all endeavour according to our ability gracefully to execute the task which you have imposed upon us. Consider then, Socrates, if this narrative is suited to the purpose, or whether we should seek for some other instead.

SOC.

And what other, Critias, can we find that will be better than this, which is natural and suitable to the festival of the goddess, and has the very great advantage of being a fact and not a fiction? How or where shall we find another if we abandon this? We cannot, and therefore you must tell the tale, and good luck to you; and I in return for my yesterday's discourse will now rest and be a listener.

Socrates is satisfied that the rehearsal of this narrative will be a suitable continuation of the discussion. But Timaeus will begin the feast by describing the generation of the

CRIT.

Let me proceed to explain to you, Socrates, the order in which we have arranged our entertainment. Our intention is, that Timaeus, who is the most of an astronomer amongst us, and has made the nature of the universe his special study, should speak first, beginning with the generation of the world and going down to the creation of man; next, I am to receive the men whom he has created, and of whom some will have profited by the excellent education which you have given them; and then, in accordance with the tale of Solon, and equally with his law, we will bring them into court and make them citizens, as if they were those very Athenians whom

Universe down to the creation of man: Critias will follow him.

the sacred Egyptian record has recovered from oblivion, and thenceforward we will speak of them as Athenians and fellow-citizens.

SOC.

I see that I shall receive in my turn a perfect and splendid feast of reason. And now, Timaeus, you, I suppose, should speak next, after duly calling upon the Gods.

TIM.

All men, Socrates, who have any degree of right feeling, at the beginning of every enterprise, whether small or great, always call upon God. And we, too, who are going to discourse of the nature of the universe, how created or how existing without creation, if we be not altogether out of our wits, must invoke the aid of Gods and Goddesses and pray that our words may be acceptable to them and consistent with themselves. Let this, then, be our invocation of the Gods, to which I add an exhortation of myself to speak in such manner as will be most intelligible to you, and will most accord with my own intent.

At the commencement Timaeus invokes the gods.

First then, in my judgment, we must make a distinction and ask, What is that which always is and has no becoming; and what is that which is always becoming and never is? That which is apprehended by intelligence and reason is always in the same state; but that which is conceived by opinion with the help of sensation and without reason, is always in a process of becoming and perishing and never really is. Now everything that becomes or is created must of necessity be created by some cause, for without a cause nothing can be created. The work of the creator, whenever he looks to the unchangeable and fashions the form and nature of his work after an unchangeable pattern, must necessarily be made fair and perfect; but when he looks to the created only, and uses a created pattern, it is not fair or perfect. Was the heaven then or the world, whether called by this or by any other more appropriate name—assuming the name, I am asking a question which has to be asked at the beginning of an enquiry about anything—was the world, I say, always in existence and without beginning? or created, and had it a beginning? Created, I reply, being visible and tangible and having a body, and therefore sensible; and sensible things are apprehended by opinion and sense and are in a process of creation and created. Now that which is created must, as we affirm, of necessity be created by a cause. But the father and maker of all this universe is past finding out; and even if we found him, to tell of him to all men would be impossible. And there is still a question to be asked about him: Which of the patterns had the artificer in view when he made the world,—the pattern of the unchangeable, 29or of that which is created? If the world be indeed fair and the artificer good, it is manifest that he must have looked to that which is eternal; but if what cannot be said without blasphemy is true, then to the created pattern. Every one will see that he must have looked to the eternal; for the

The world was created, and is therefore apprehended by sense.

God was the cause of it, and he fashioned it after the eternal pattern.

The eternal pattern can be spoken of with certainty; the created copy can only be described in the language of probability.

world is the fairest of creations and he is the best of causes. And having been created in this way, the world has been framed in the likeness of that which is apprehended by reason and mind and is unchangeable, and must therefore of necessity, if this is admitted, be a copy of something. Now it is all-important that the beginning of everything should be according to nature. And in speaking of the copy and the original we may assume that words are akin to the matter which they describe; when they relate to the lasting and permanent and intelligible, they ought to be lasting and unalterable, and, as far as their nature allows, irrefutable and immovable—nothing less. But when they express only the copy or likeness and not the eternal things themselves, they need only be likely and analogous to the real words. As being is to becoming, so is truth to belief. If then, Socrates, amid the many opinions about the gods and the generation of the universe, we are not able to give notions which are altogether and in every respect exact and consistent with one another, do not be surprised. Enough, if we adduce probabilities as likely as any others; for we must remember that I who am the speaker, and you who are the judges, are only mortal men, and we ought to accept the tale which is probable and enquire no further.

SOC.

Excellent, Timaeus; and we will do precisely as you bid us. The prelude is charming, and is already accepted by us — may we beg of you to proceed to the strain?

TIM.

Let me tell you then why the creator made this world of generation. He was good, and the good can never have any jealousy of anything. And being free from jealousy, he desired that all things should be as like himself as they could be. This is in the truest sense the origin of creation and of the world, as we shall do well in believing on the testimony of wise men: God desired that all things should be good and nothing bad, so far as this was attainable. Wherefore also finding the whole visible sphere not at rest, but moving in an irregular and disorderly fashion, out of disorder he brought order, considering that this was in every way better than the other. Now the deeds of the best could never be or have been other than the fairest; and the creator, reflecting on the things which are by nature visible, found that no unintelligent creature taken as a whole was fairer than the intelligent taken as a whole; and that intelligence could not be present in anything which was devoid of soul. For which reason, when he was framing the universe, he put intelligence in soul, and soul in body, that he might be the creator of a work which was by nature fairest and best. Wherefore, using the language of probability, we may say that the world became a living creature truly endowed with soul and intelligence by the providence of God.

God made the world good, wishing everything to be like himself. To this end he brought order into it and endowed it with soul and intelligence.

The original of the universe is a perfect animal, which comprehends all intelligible animals,

This being supposed, let us proceed to the next stage: In the likeness of what animal did the Creator make the world? It would be an unworthy thing to liken it to any nature which exists as a part only; for nothing can be beautiful which is like any imperfect thing; but let us suppose the world to be the very image of that whole of which all other animals both individually and in their tribes are portions. For the original of the universe contains in itself all intelligible beings, just as this world comprehends us and all other visible creatures. For the Deity, intending to make this world like the fairest and most perfect of intelligible beings, framed one visible animal comprehending within itself all 31 other animals of a kindred nature. Are we right in saying that there is one world, or that they are many and infinite? There must be one only, if the created copy is to accord with the original. For that which includes all other intelligible creatures cannot have a second or companion; in that case there would be need of another living being which would include both, and of which they would be parts, and the likeness would be more truly said to resemble not them, but that other which included them. In order then that the world might be solitary, like the perfect animal, the creator made not two worlds or an infinite number of them; but there is and ever will be one only-begotten and created heaven.

just as the copy contains all visible animals.

Now that which is created is of necessity corporeal, and also visible and tangible. And nothing is visible where there is no fire, or tangible which has no solidity, and nothing is solid without earth. Wherefore also God in the beginning of creation made the body of the universe to consist of fire and earth. But two things cannot be rightly put together without a third; there must be some bond of union between them. And the fairest bond is that which makes the most complete fusion of itself and the things which it combines; and proportion is best adapted to effect such a union. For whenever in any three numbers, whether cube or square, there is a mean, which is to the last term what the first term 32 is to it; and again, when the mean is to the first term as the last term is to the mean,—then the mean becoming first and last, and the first and last both becoming means, they will all of them of necessity come to be the same, and having become the same with one another will be all one. If the universal frame had been created a surface only and having no depth, a single mean would have sufficed to bind together itself and the other terms; but now, as the world must be solid, and solid bodies are always compacted not by one mean but by two, God placed water and air in the mean between fire and earth, and made them to have the same proportion so far as was possible (as fire is to air so is air to water, and as air is to water so is water to earth); and thus he bound and put together a visible and tangible heaven. And for these reasons, and out of such elements which are in number four, the body of the world was created, and it was harmonized by proportion, and therefore has the spirit of friendship; and having been reconciled to itself, it was indissoluble by the hand of any other than the framer.

The world is visible and tangible, and therefore composed of fire and earth. These elements, being solids, required two means to unite them, water and air.

All the four elements were included entire in the composition of the world, which was

Now the creation took up the whole of each of the four elements; for the Creator compounded the world out of all the fire and all the water and all the air and all the earth, leaving no part of any of them nor any power of them outside. His intention was, in the first place, that the animal should be as far as possible a perfect whole and of perfect 33parts: secondly, that it should be one, leaving no remnants out of which another such world might be created: and also that it should be free from old age and unaffected by disease. Considering that if heat and cold and other powerful forces which unite bodies surround and attack them from without when they are unprepared, they decompose them, and by bringing diseases and old age upon them, make them waste away—for this cause and on these grounds he made the world one whole, having every part entire, and being therefore perfect and not liable to old age and disease. And he gave to the world the figure which was suitable and also natural. Now to the animal which was to comprehend all animals, that figure was suitable which comprehends within itself all other figures. Wherefore he made the world in the form of a globe, round as from a lathe, having its extremes in every direction equidistant from the centre, the most perfect and the most like itself of all figures; for he considered that the like is infinitely fairer than the unlike. This he finished off, making the surface smooth all round for many reasons; in the first place, because the living being had no need of eyes when there was nothing remaining outside him to be seen; nor of ears when there was nothing to be heard; and there was no surrounding atmosphere to be breathed; nor would there have been any use of organs by the help of which he might receive his food or get rid of what he had already digested, since there was nothing which went from him or came into him: for there was nothing beside him. Of design he was created thus, his own waste providing his own food, and all that he did or suffered taking place in and by himself. For the Creator conceived that a being which was self-sufficient would be far more excellent than one which lacked anything; and, as he had no need to take anything or defend himself against any one, the Creator did not think it necessary to bestow upon him hands: nor had he any need 34of feet, nor of the whole apparatus of walking; but the movement suited to his spherical form was assigned to him, being of all the seven that which is most appropriate to mind and intelligence; and he was made to move in the same manner and on the same spot, within his own limits revolving in a circle. All the other six motions were taken away from him, and he was made not to partake of their deviations. And as this circular movement required no feet, the universe was created without legs and without feet.

therefore perfect and not subject to decay; for nothing was left outside which could hurt or destroy it.

It received a spherical form,—without eyes, ears, mouth, hands, feet, and was made to revolve in a circle on the same spot.

Such was the whole plan of the eternal God about the god that was to be, to whom for this reason he gave a body, smooth and even, having a surface in every direction equidistant from the centre, a body entire and perfect, and formed out of perfect bodies. And in the centre he put the soul, which he diffused throughout the body, making it also to be the exterior environment of it; and he made the universe a circle moving in a circle, one and solitary, yet by reason of its excellence able to converse with itself, and needing no other friendship or acquaintance. Having these purposes in view he created the world a blessed god.

In the centre was placed the soul, which pervaded the whole, and even surrounded it.

Now God did not make the soul after the body, although we are speaking of them in this order; for having brought them together he would never have allowed that the elder should be ruled by the younger; but this is a random manner of speaking which we have, because somehow we ourselves too are very much under the dominion of chance. Whereas he made the soul in origin and excellence prior to and older than the body, to be the ruler and mistress, of whom the body was to be the subject. And he made her out of the 35 following elements and on this wise: Out of the indivisible and unchangeable, and also out of that which is divisible and has to do with material bodies, he compounded a third and intermediate kind of essence, partaking of the nature of the same¹ and of the other, and this compound he placed accordingly in a mean between the indivisible, and the divisible and material. He took the three elements of the same, the other, and the essence, and mingled them into one form, compressing by force the reluctant and unsociable nature of the other into the same. When he had mingled them with the essence and out of three made one, he again divided this whole into as many portions as was fitting, each portion being a compound of the same, the other, and the essence. And he proceeded to divide after this manner:—First of all, he took away one part of the whole [1], and then he separated a second part which was double the first [2], and then he took away a third part which was half as much again as the second and three times as much as the first [3], and then he took a fourth part which was twice as much as the second [4], and a fifth part which was three times the third [9], and a sixth part which was eight times the first [8], and a seventh part which was twenty-seven times the first [27]. After this 36 he filled up the double intervals [i. e. between 1, 2, 4, 8] and the triple [i. e. between 1, 3, 9, 27], cutting off yet other portions from the mixture and placing them in the intervals, so that in each interval there were two kinds of means, the one exceeding and exceeded by equal parts of its extremes [as for example 1, $\frac{4}{3}$, 2, in which the mean $\frac{4}{3}$ is one-third of 1 more than 1, and one-third of 2 less than 2], the other being that kind of mean which exceeds and is exceeded by an equal number¹. Where there were intervals of $\frac{3}{2}$ and of $\frac{4}{3}$ and of $\frac{9}{8}$, made by the connecting terms in the former intervals, he filled up all the intervals of $\frac{4}{3}$ with the interval of $\frac{9}{8}$, leaving a fraction over; and the interval which this fraction expressed was in the ratio of 256 to 243². And thus the whole mixture out of which he cut these portions was all exhausted by him. This entire compound he divided length-ways into two parts, which he joined to one another at the centre like the letter X, and bent them into a circular form, connecting them with themselves and each other at the point opposite to their original meeting-point; and, comprehending them in a uniform revolution upon the same axis, he made the one the outer and the other the inner circle. Now the motion of the outer circle he called the motion of the same, and the motion of the inner circle the motion of the other or diverse. The motion of the same he carried round by the side¹ to the right,

Though posterior to the body in the order of our exposition, in the order of creation it is prior to it.

It was created thus. First out of the indivisible (i. e. the Same) and the divisible (i. e. the Other) God made Essence. He then mingled

these three elements and divided the whole mixture into parts, according to the proportions of the Pythagorean Tetractys and of the Diatonic scale.

The compound was cut into two strips, which were crossed and then bent round into an outer circle, revolving to the right (i. e. the circle of the Same), and an inner, revolving diagonally

to the left (i. e. the circle of the Other). The latter was subdivided into seven unequal circles (i. e. the orbits of the seven planets).

and the motion of the diverse diagonally² to the left. And he gave dominion to the motion of the same and like, for that he left single and undivided; but the inner motion he divided in six places and made seven unequal circles having their intervals in ratios of two and three, three of each, and bade the orbits proceed in a direction opposite to one another; and three [Sun, Mercury, Venus] he made to move with equal swiftness, and the remaining four [Moon, Saturn, Mars, Jupiter] to move with unequal swiftness to the three and to one another, but in due proportion.

Now when the Creator had framed the soul according to his will, he formed within her the corporeal universe, and brought the two together, and united them centre to centre. The soul, interfused everywhere from the centre to the circumference of heaven, of which also she is the external envelopment, herself turning in herself, began a divine beginning of never-ceasing and rational life enduring throughout all time. The body of heaven is visible, but the soul is invisible, and partakes of reason and harmony, and being made by the best of intellectual and everlasting natures, is the best of things created. And because she is composed of the same and of the other and of the essence, these three, and is divided and united in due proportion, and in her revolutions returns upon herself, the soul, when touching anything which has essence, whether dispersed in parts or undivided, is stirred through all her powers, to declare the sameness or difference of that thing and some other; and to what individuals are related, and by what affected, and in what way and how and when, both in the world of generation and in the world of immutable being. And when reason, which works with equal truth, whether she be in the circle of the diverse or of the same—in voiceless silence holding her onward course in the sphere of the self-moved—when reason, I say, is hovering around the sensible world and when the circle of the diverse also moving truly imparts the intimations of sense to the whole soul, then arise opinions and beliefs sure and certain. But when reason is concerned with the rational, and the circle of the same moving smoothly declares it, then intelligence and knowledge are necessarily perfected. And if any one affirms that in which these two are found to be other than the soul, he will say the very opposite of the truth.

After framing the soul, God formed within her the body of the universe.

The soul, being compounded of the Same, the Other, and the Essence, is moved to utter the sameness or otherness of any essence which she touches. When contemplating the sensible world, she attains to true opinion; when the rational, to knowledge.

When the father and creator saw the creature which he had made moving and living, the created image of the eternal gods, he rejoiced, and in his joy determined to make the copy still more like the original; and as this was eternal, he sought to make the universe eternal, so far as might be. Now the nature of the ideal being was everlasting, but to bestow this attribute in its fulness upon a creature was impossible. Wherefore he resolved to have a moving image of eternity, and when he set in order the heaven, he made this image eternal but moving according to number, while eternity itself rests in unity; and this image we call time. For there were no days and nights and months and years before the heaven was created, but when he constructed the heaven he created them also.

God, to make creation more perfect, endowed it with the immortality of which it is capable. To this end he made time,—a moving image of eternity, which is immoveable. The modes of time are not to be applied to the eternal essence.

They are all parts of time, and the past and future are created species of time, which we unconsciously but wrongly transfer to the eternal essence; for we say that he 'was,' he 'is,' he 'will be,' but the truth is 38that 'is' alone is properly attributed to him, and that 'was' and 'will be' are only to be spoken of becoming in time, for they are motions, but that which is immovably the same cannot become older or younger by time, nor ever did or has become, or hereafter will be, older or younger, nor is subject at all to any of those states which affect moving and sensible things and of which generation is the cause. These are the forms of time, which imitates eternity and revolves according to a law of number. Moreover, when we say that what has become *is* become and what becomes *is* becoming, and that what will become *is* about to become and that the non-existent *is* non-existent,—all these are inaccurate modes of expression¹. But perhaps this whole subject will be more suitably discussed on some other occasion.

Time, then, and the heaven came into being at the same instant in order that, having been created together, if ever there was to be a dissolution of them, they might be dissolved together. It was framed after the pattern of the eternal nature, that it might resemble this as far as was possible; for the pattern exists from eternity, and the created heaven has been, and is, and will be, in all time. Such was the mind and thought of God in the creation of time. The sun and moon and five other stars, which are called the planets, were created by him in order to distinguish and preserve the numbers of time; and when he had made their several bodies, he placed them in the orbits in which the circle of the other was revolving (cp. 36 D),—in seven orbits seven stars. First, there was the moon in the orbit nearest the earth, and next the sun, in the second orbit above the earth; then came the morning star and the star sacred to Hermes, moving in orbits which have an equal swiftness with the sun, but in an opposite direction; and this is the reason why the sun and Hermes and Lucifer overtake and are overtaken by each other. To enumerate the places which he assigned to the other stars, and to give all the reasons why he assigned them, although a secondary matter, would give more trouble than the primary. These things at some future time, when we are at leisure, may have the consideration which they deserve, but not at present.

The seven planets were intended to preserve the numbers of time.

The circle of the Same controls the circle of the Other, which moves diagonally to it. Thus the planets in their revolutions describe spirals, and the slowest seem to overtake the fastest.

The sun was created to afford a visible measure of the swiftness of the planets. Night and

Now, when all the stars which were necessary to the creation of time had attained a motion suitable to them, and had become living creatures having bodies fastened by vital chains, and learnt their appointed task, moving in the motion 39of the diverse, which is diagonal, and passes through and is governed by the motion of the same, they revolved, some in a larger and some in a lesser orbit,—those which had the lesser orbit revolving faster, and those which had the larger more slowly. Now by reason of the motion of the same, those which revolved fastest appeared to be overtaken by those which moved slower although they really overtook them; for the motion of the same made them all turn in a spiral, and, because some went one way and some another, that which receded most slowly from the sphere of the same, which was the swiftest, appeared to follow it most nearly. That there might be some visible measure of their relative swiftness and slowness as they proceeded in their eight courses, God lighted a fire, which we now call the sun, in the second from the earth of these orbits, that it might give light to the whole of heaven, and that the animals, as many as nature intended, might participate in number, learning arithmetic from the revolution of the same and the like. Thus, then, and for this reason the night and the day were created, being the period of the one most intelligent revolution. And the month is accomplished when the moon has completed her orbit and overtaken the sun, and the year when the sun has completed his own orbit. Mankind, with hardly an exception, have not remarked the periods of the other stars, and they have no name for them, and do not measure them against one another by the help of number, and hence they can scarcely be said to know that their wanderings, being infinite in number and admirable for their variety, make up time. And yet there is no difficulty in seeing that the perfect number of time fulfils the perfect year when all the eight revolutions, having their relative degrees of swiftness, are accomplished together and attain their completion at the same time, measured by the rotation of the same and equally moving. After this manner, and for these reasons, came into being such of the stars as in their heavenly progress received reversals of motion, to the end that the created heaven might imitate the eternal nature, and be as like as possible to the perfect and intelligible animal.

day. The month and year.

The cyclic year.

After the creation of time God fashions in the created animal four species like those which exist in the ideal: e. g. the gods of heaven (i. e. fixed stars and planets), birds, sea and land animals.

The fixed stars revolve on their axes and are carried round in the sphere of the Same. The motions of the planets have been already (38 ff.)

Thus far and until the birth of time the created universe was made in the likeness of the original, but inasmuch as all animals were not yet comprehended therein, it was still unlike. What remained, the creator then proceeded to fashion after the nature of the pattern. Now as in the ideal animal the mind perceives ideas or species of a certain nature and number, he thought that this created animal ought to have species of a like nature and number. There are four such; one of them is the heavenly race of the gods; another, the race of birds whose way is in the air; the third, the watery species; and the fourth, the pedestrian and land creatures. Of the heavenly and divine, he created the greater part out of fire, that they might be the brightest of all things and fairest to behold, and he fashioned them after the likeness of the universe in the figure of a circle, and made them follow the intelligent motion of the supreme, distributing them over the whole circumference of heaven, which was to be a true cosmos or glorious world spangled with them all over. And he gave to each of them two movements: the first, a movement on the same spot after the same manner, whereby they ever continue to think consistently the same thoughts about the same things; the second, a forward movement, in which they are controlled by the revolution of the same and the like; but by the other five motions they were unaffected (cp. 43 B), in order that each of them might attain the highest perfection. And for this reason the fixed stars were created, to be divine and eternal animals, ever-abiding and revolving after the same manner and on the same spot; and the other stars which reverse their motion and are subject to deviations of this kind, were created in the manner already described. The earth, which is our nurse, clinging¹ around the pole which is extended through the universe, he framed to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven. Vain would be the attempt to tell all the figures of them circling as in dance, and their juxtapositions, and the return of them in their revolutions upon themselves, and their approximations, and to say which of these deities in their conjunctions meet, and which of them are in opposition, and in what order they get behind and before one another, and when they are severally eclipsed to our sight and again reappear, sending terrors and intimations of the future to those who cannot calculate their movements—to attempt to tell of all this without a visible representation of the heavenly system² would be labour in vain. Enough on this head; and now let what we have said about the nature of the created and visible gods have an end.

described. The earth is the immoveable(?) centre of the universe.

To know or tell the origin of the other divinities is beyond us, and we must accept the traditions of the men of old time who affirm themselves to be the offspring of the gods—that is what they say—and they must surely have known their own ancestors. How can we doubt the word of the children of the gods? Although they give no probable or certain proofs, still, as they declare that they are speaking of what took place in their own family, we must conform to custom and believe them. In this manner, then, according to them, the genealogy of these gods is to be received and set forth.

As for the Gods of mythology, we must

accept the statements of their children about them.

Oceanus and Tethys were the children of Earth and Heaven, and from these sprang Phorcys and Cronos and Rhea, and all that generation; and from Cronos and Rhea

41sprang Zeus and Herè, and all those who are said to be their brethren, and others who were the children of these.

Now, when all of them, both those who visibly appear in their revolutions as well as those other gods who are of a more retiring nature, had come into being, the creator of the universe addressed them in these words: ‘Gods, children of gods, who are my works, and of whom I am the artificer and father, my creations are indissoluble, if so I will. All that is bound may be undone, but only an evil being would wish to undo that which is harmonious and happy. Wherefore, since ye are but creatures, ye are not altogether immortal and indissoluble, but ye shall certainly not be dissolved, nor be liable to the fate of death, having in my will a greater and mightier bond than those with which ye were bound at the time of your birth. And now listen to my instructions:—Three tribes of mortal beings remain to be created—without them the universe will be incomplete, for it will not contain every kind of animal which it ought to contain, if it is to be perfect. On the other hand, if they were created by me and received life at my hands, they would be on an equality with the gods. In order then that they may be mortal, and that this universe may be truly universal, do ye, according to your natures, betake yourselves to the formation of animals, imitating the power which was shown by me in creating you. The part of them worthy of the name immortal, which is called divine and is the guiding principle of those who are willing to follow justice and you—of that divine part I will myself sow the seed, and having made a beginning, I will hand the work over to you. And do ye then interweave the mortal with the immortal, and make and beget living creatures, and give them food, and make them to grow, and receive them again in death.’

The creator of the universe bids the created gods fashion the mortal bodies of man and of the lower animals: he himself will furnish the immortal principle of the soul.

Thus he spake, and once more into the cup in which he had previously mingled the soul of the universe he poured the remains of the elements, and mingled them in much the same manner; they were not, however, pure as before, but diluted to the second and third degree. And having made it he divided the whole mixture into souls equal in number to the stars, and assigned each soul to a star; and having there placed them as in a chariot, he showed them the nature of the universe, and declared to them the laws of destiny, according to which their first birth would be one and the same for all,—no one should suffer a disadvantage at his hands; they were to be sown in the instruments of time severally adapted to them, and to come forth the most religious 42of animals; and as human nature was of two kinds, the superior race would hereafter be called man. Now, when they should be implanted in bodies by necessity, and be always gaining or losing some part of their bodily substance, then in the first place it would be necessary that they should all have in them one and the same faculty of sensation, arising out of irresistible impressions; in the second place, they must have love, in which pleasure and pain mingle; also fear and anger, and the feelings which are akin or opposite to them; if they conquered these they would live righteously, and if they were conquered

He makes the human soul of the same elements as the universal; and having distributed it into souls equal in number to the stars, sets one soul in each star and reveals to them their future life on the planets, when they will have mortal bodies.

Those who then live well will return to their original star; those who live badly will take a lower form at their next birth.

by them, unrighteously. He who lived well during his appointed time was to return and dwell in his native star, and there he would have a blessed and congenial existence. But if he failed in attaining this, at the second birth he would pass into a woman, and if, when in that state of being, he did not desist from evil, he would continually be changed into some brute who resembled him in the evil nature which he had acquired, and would not cease from his toils and transformations until he followed the revolution of the same and the like within him, and overcame by the help of reason the turbulent and irrational mob of later accretions, made up of fire and air and water and earth, and returned to the form of his first and better state. Having given all these laws to his creatures, that he might be guiltless of future evil in any of them, the creator sowed some of them in the earth, and some in the moon, and some in the other instruments of time; and when he had sown them he committed to the younger gods the fashioning of their mortal bodies, and desired them to furnish what was still lacking to the human soul, and having made all the suitable additions, to rule over them, and to pilot the mortal animal in the best and wisest manner which they could, and avert from him all but self-inflicted evils.

When the creator had made all these ordinances he remained in his own accustomed nature, and his children heard and were obedient to their father's word, and receiving from him the immortal principle of a mortal creature, in imitation of their own creator they borrowed portions of fire, and earth, and water, and air from the world, which were hereafter to be restored—these they took and welded them together, not with the indissoluble chains by which they were themselves bound, but with little pegs too small to be visible, making up out of all the four elements each separate body, and fastening the courses of the immortal soul in a body which was in a state of perpetual influx and efflux. Now these courses, detained as in a vast river, neither overcame nor were overcome; but were hurrying and hurried to and fro, so that the whole animal was moved and progressed, irregularly however and irrationally and anyhow, in all the six directions of motion, wandering backwards and forwards, and right and left, and up and down, and in all the six directions. For great as was the advancing and retiring flood which provided nourishment, the affections produced by external contact caused still greater tumult—when the body of any one met and came into collision with some external fire, or with the solid earth or the gliding waters, or was caught in the tempest borne on the air, and the motions produced by any of these impulses were carried through the body to the soul. All such motions have consequently received the general name of 'sensations,' which they still retain. And they did in fact at that time create a very great and mighty movement; uniting with the ever-flowing stream in stirring up and violently shaking the courses of the soul, they completely stopped the revolution of the same by their opposing current, and hindered it from predominating and advancing; and they so disturbed the nature of the other or diverse, that the three double intervals [i. e. between 1, 2, 4, 8], and the three triple intervals [i. e. between 1, 3, 9, 27], together with the mean terms and connecting links which are expressed by the ratios of 3 : 2, and 4 : 3, and of 9 : 8, —

The created gods provide for the human soul bodies compounded of earth, air, fire and water.

The courses of the soul, when placed in them, are so disturbed by the ebbing and flowing stream of nutriment and by external sensations, that the revolution of the same is stopped,

and the mean terms which unite the sphere of the other are disordered. Thus at first the soul does not attain to truth and wisdom.

these, although they cannot be wholly undone except by him who united them, were twisted by them in all sorts of ways, and the circles were broken and disordered in every possible manner, so that when they moved they were tumbling to pieces, and moved irrationally, at one time in a reverse direction, and then again obliquely, and then upside down, as you might imagine a person who is upside down and has his head leaning upon the ground and his feet up against something in the air; and when he is in such a position, both he and the spectator fancy that the right of either is his left, and the left right. If, when powerfully experiencing these and similar effects, the revolutions of the soul come in contact with some external thing, either of the class of the same or of the other, they speak of the same or of the other in a manner the very opposite of the truth; and they become false and foolish, and there is no course or revolution in them which has a guiding or directing power; and if again any sensations enter in violently from without and drag after them the whole vessel of the soul, then the courses of the soul, though they seem to conquer, are really conquered.

And by reason of all these affections, the soul, when encased in a mortal body, now, as in the beginning, is at first without intelligence; but when the flood of growth and nutriment abates, and the courses of the soul, calming down, go their own way and become steadier as time goes on, then the several circles return to their natural form, and their revolutions are corrected, and they call the same and the other by their right names, and make the possessor of them to become a rational being. And if these combine in him with any true nurture or education, he attains the fulness and health of the perfect man, and escapes the worst disease of all; but if he neglects education he walks lame to the end of his life, and returns imperfect and good for nothing to the world below. This, however, is a later stage; at present we must treat more exactly the subject before us, which involves a preliminary enquiry into the generation of the body and its members, and as to how the soul was created,—for what reason and by what providence of the gods; and holding fast to probability, we must pursue our way.

As the stream of nutriment abates, the courses of the soul regain their proper motions, and the man becomes a rational creature. True education renders him perfect.

These courses were encased in the head, which, like the universe, is in the form of a sphere. The body, with its four limbs, is the vehicle of the head; it moves forward because the front part of us is the more honourable.

In the front part of the head the face was inserted, and in the face, eyes. Sight arises thus:—The light from the eyes

First, then, the gods, imitating the spherical shape of the universe, enclosed the two divine courses in a spherical body, that, namely, which we now term the head, being the most divine part of us and the lord of all that is in us: to this the gods, when they put together the body, gave all the other members to be servants, considering that it partook of every sort of motion. In order then that it might not tumble about among the high and deep places of the earth, but might be able to get over the one and out of the other, they provided the body to be its vehicle and means of locomotion; which consequently had length and was furnished with four limbs extended and flexible; these God contrived to be instruments of locomotion with which it might take hold and find ⁴⁵support, and so be able to pass through all places, carrying on high the dwelling-place of the most sacred and divine part of us. Such was the origin of legs and hands, which for this reason were attached to every man; and the gods, deeming the front part of man to be more honourable and more fit to command than the hinder part, made us to move mostly in a forward direction. Wherefore man must needs have his front part unlike and distinguished from the rest of his body. And so in the vessel of the head, they first of all put a face in which they inserted organs to minister in all things to the providence of the soul, and they appointed this part, which has authority, to be by nature the part which is in front. And of the organs they first contrived the eyes to give light, and the principle according to which they were inserted was as follows: So much of fire as would not burn, but gave a gentle light, they formed into a substance akin to the light of every-day life; and the pure fire which is within us and related thereto they made to flow through the eyes in a stream smooth and dense, compressing the whole eye, and especially the centre part, so that it kept out everything of a coarser nature, and allowed to pass only this pure element. When the light of day surrounds the stream of vision, then like falls upon like, and they coalesce, and one body is formed by natural affinity in the line of vision, wherever the light that falls from within meets with an external object. And the whole stream of vision, being similarly affected in virtue of similarity, diffuses the motions of what it touches or what touches it over the whole body, until they reach the soul, causing that perception which we call sight. But when night comes on and the external and kindred fire departs, then the stream of vision is cut off; for going forth to an unlike element it is changed and extinguished, being no longer of one nature with the surrounding atmosphere which is now deprived of fire; and so the eye no longer sees, and we feel disposed to sleep. For when the eyelids, which the gods invented for the preservation of sight, are closed, they keep in the internal fire; and the power of the fire diffuses and equalizes the inward motions; when they are equalized, there is rest, and when the rest is profound, sleep comes over us ⁴⁶scarce disturbed by dreams; but where the greater motions still remain, of whatever nature and in whatever locality, they engender corresponding visions in dreams, which are remembered by us when we are awake and in the external world. And now there is no longer any difficulty in understanding the creation of images in mirrors and all smooth and bright surfaces. For from the communion of the internal and external fires, and again from the union of them and their numerous

and the light of day, which is akin to it, combine; and when they meet with the

light from an object, all three form one body, which transmits to the soul the motions of the object.

In the case of reflections in plane mirrors, the transposition of right and left is due to the fact that the light from the eye and the object meet in an unusual manner. In a concave mirror, if held horizontally, there is no transposition; but if it be held vertically.

transformations when they meet in the mirror, all these appearances of necessity arise, when the fire from the face coalesces with the fire from the eye on the bright and smooth surface. And right appears left and left right, because the visual rays come into contact with the rays emitted by the object in a manner contrary to the usual mode of meeting; but the right appears right, and the left left, when the position of one of the two concurring lights is reversed; and this happens when the mirror is concave and its smooth surface repels the right stream of vision to the left side, and the left to the right¹. Or if the mirror be turned vertically, then the concavity makes the countenance appear to be all upside down, and the lower rays are driven upwards and the upper downwards.

All these are to be reckoned among the second and co-operative causes which God, carrying into execution the idea of the best as far as possible, uses as his ministers. They are thought by most men not to be the second, but the prime causes of all things, because they freeze and heat, and contract and dilate, and the like. But they are not so, for they are incapable of reason or intellect; the only being which can properly have mind is the invisible soul, whereas fire and water, and earth and air, are all of them visible bodies. The lover of intellect and knowledge ought to explore causes of intelligent nature first of all, and, secondly, of those things which, being moved by others, are compelled to move others. And this is what we too must do. Both kinds of causes should be acknowledged by us, but a distinction should be made between those which are endowed with mind and are the workers of things fair and good, and those which are deprived of intelligence and always produce chance effects without order or design. Of the second or co-operative causes of sight, which help to give to the eyes the power which they now possess, enough has been said. I will therefore now proceed to speak of the higher use and purpose for which God has given them to us. The sight in my opinion is the source of the greatest benefit to us, for had we never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered. But now the sight of day and night, and the months and the revolutions of the years, have created number, and have given us a conception of time, and the power of enquiring about the nature of the universe; and from this source we have derived philosophy, than which no greater good ever was or will be given by the gods to mortal man. This is the greatest boon of sight: and of the lesser benefits why should I speak? even the ordinary man if he were deprived of them would bewail his loss, but in vain. Thus much let me say however: God invented and gave us sight to the end that we might behold the courses of intelligence in the heaven, and apply them to the courses of our own intelligence which are akin to them, the unperturbed to the perturbed; and that we, learning them and partaking of the natural truth of reason, might imitate the absolutely unerring courses of God and regulate our own vagaries. The same may be affirmed of speech and hearing: they have been given by the gods to the same end and for a like reason. For this is the principal end of speech, whereto it most contributes. Moreover, so much of music as is adapted to the sound of the

the image is inverted. Enough of the secondary or irrational causes of sight; the first or intelligent cause is the purpose for which God gave it.

From sight we derive number and philosophy;

and the observation of the intelligent motions of the heavens

enables us to correct the erring courses of our souls.

Speech, hearing, harmony, and rhythm have the same object in view.

voice¹ and to the sense of hearing is granted to us for the sake of harmony; and harmony, which has motions akin to the revolutions of our souls, is not regarded by the intelligent votary of the Muses as given by them with a view to irrational pleasure, which is deemed to be the purpose of it in our day, but as meant to correct any discord which may have arisen in the courses of the soul, and to be our ally in bringing her into harmony and agreement with herself; and rhythm too was given by them for the same reason, on account of the irregular and graceless ways which prevail among mankind generally, and to help us against them.

Thus far in what we have been saying, with small exceptions, the works of intelligence have been set forth; and now we must place by the side of them in our discourse the things which come into being through necessity—for the creation is mixed, being made up of necessity and mind. Mind, the ruling power, persuaded necessity to bring the greater part of created things to perfection, and thus and after this manner in the beginning, when the influence of reason got the better of necessity, the universe was created. But if a person will truly tell of the way in which the work was accomplished, he must include the other influence of the variable cause as well. Wherefore, we must return again

So far we have spoken chiefly of the works of mind; now we must tell of the works of necessity and of the variable cause.

Thus we are led to consider the nature of the four elements.

and find another suitable beginning, as about the former matters, so also about these. To which end we must consider the nature of fire, and water, and air, and earth, such as they were prior to the creation of the heaven, and what was happening to them in this previous state²; for no one has as yet explained the manner of their generation, but we speak of fire and the rest of them, whatever they mean, as though men knew their natures, and we maintain them to be the first principles and letters or elements of the whole, when they cannot reasonably be compared by a man of any sense even to syllables or first compounds. And let me say thus much: I will not now speak of the first principle or principles of all things, or by whatever name they are to be called, for this reason,—because it is difficult to set forth my opinion according to the method of discussion which we are at present employing. Do not imagine, any more than I can bring myself to imagine, that I should be right in undertaking so great and difficult a task. Remembering what I said at first about probability, I will do my best to give as probable an explanation as any other,—or rather, more probable; and I will first go back to the beginning and try to speak of each thing and of all¹. Once more, then, at the commencement of my discourse, I call upon God, and beg him to be our saviour out of a strange and unwonted enquiry, and to bring us to the haven of probability. So now let us begin again.

This new beginning of our discussion of the universe requires a fuller division than the former; for then we made two classes, now a third must be revealed. The two sufficed for the former discussion: one, which we assumed, was a pattern intelligible and always the same; and the second⁴⁹ was only the imitation of the pattern, generated and visible. There is also a third kind which we did not distinguish at the time, conceiving that the two would be enough. But now the argument seems to require that we should set forth in words another kind, which is difficult of

At the beginning of our discourse we assumed two natures: (1) an intelligible pattern; (2) a created copy. Now we must add a third—(3) the receptacle of all generation. i. e. space.

explanation and dimly seen. What nature are we to attribute to this new kind of being? We reply, that it is the receptacle, and in a manner the nurse, of all generation. I have spoken the truth; but I must express myself in clearer language, and this will be an arduous task for many reasons, and in particular because I must first raise questions concerning fire and the other elements, and determine what each of them is; for to say, with any probability or certitude, which of them should be called water rather than fire, and which should be called any of them rather than all or some one of them, is a difficult matter. How, then, shall we settle this point, and what questions about the elements may be fairly raised?

In the first place, we see that what we just now called water, by condensation, I suppose, becomes stone and earth; and this same element, when melted and dispersed, passes into vapour and air. Air, again, when inflamed, becomes fire; and again fire, when condensed and extinguished, passes once more into the form of air; and once more, air, when collected and condensed, produces cloud and mist; and from these, when still more compressed, comes flowing water, and from water comes earth and stones once more; and thus generation appears to be transmitted from one to the other in a circle. Thus, then, as the several elements never present themselves in the same form, how can any one have the assurance to assert positively that any of them, whatever it may be, is one thing rather than another? No one can. But much the safest plan is to speak of them as follows:—Anything which we see to be continually changing, as, for example, fire, we must not call ‘this’ or ‘that,’ but rather say that it is ‘of such a nature;’ nor let us speak of water as ‘this,’ but always as ‘such;’ nor must we imply that there is any stability in any of those things which we indicate by the use of the words ‘this’ and ‘that,’ supposing ourselves to signify something thereby; for they are too volatile to be detained in any such expressions as ‘this,’ or ‘that,’ or ‘relative to this,’ or any other mode of speaking which represents them as permanent. We ought not to apply ‘this’ to any of them, but rather the word ‘such,’ which expresses the similar principle circulating in each and all of them; for example, that should be called ‘fire’ which is of such a nature always, and so of everything that has generation. That in which the elements severally grow up, and appear, and decay, is alone to be called by the name 50 ‘this’ or ‘that;’ but that which is of a certain nature, hot or white, or anything which admits of opposite qualities, and all things that are compounded of them, ought not to be so denominated. Let me make another attempt to explain my meaning more clearly. Suppose a person to make all kinds of figures of gold and to be always transmuting one form into all the rest;—somebody points to one of them and asks what it is. By far the safest and truest answer is, That is gold; and not to call the triangle or any other figures which are formed in the gold ‘these,’ as though they had existence, since they are in process of change while he is making the assertion; but if the questioner be willing to take the safe and indefinite expression, ‘such,’ we should be satisfied. And the same argument applies to the universal nature which receives all

Since the elements are perpetually changing into and out of one another and have in them nothing permanent, they should be called, not ‘this’ or ‘that,’ but always ‘such.’ Unchanging space is the only fixed nature.

An illustration.

Space is that which, being without form, can receive any form, i. e. the impress of any *idea*

The three natures which have been assumed may be likened to a father, child, and mother.

The elements are only affections of space, produced by the impression of ideas.

bodies—that must be always called the same; for, while receiving all things, she never departs at all from her own nature, and never in any way, or at any time, assumes a form like that of any of the things which enter into her; she is the natural recipient of all impressions, and is stirred and informed by them, and appears different from time to time by reason of them. But the forms which enter into and go out of her are the likenesses of real existences modelled after their patterns in a wonderful and inexplicable manner, which we will hereafter investigate. For the present we have only to conceive of three natures: first, that which is in process of generation; secondly, that in which the generation takes place; and thirdly, that of which the thing generated is a resemblance. And we may liken the receiving principle to a mother, and the source or spring to a father, and the intermediate nature to a child; and may remark further, that if the model is to take every variety of form, then the matter in which the model is fashioned will not be duly prepared, unless it is formless, and free from the impress of any of those shapes which it is hereafter to receive from without. For if the matter were like any of the supervening forms, then whenever any opposite or entirely different nature was stamped upon its surface, it would take the impression badly, because it would intrude its own shape. Wherefore, that which is to receive all forms should have no form; as in making perfumes they first contrive that the liquid substance which is to receive the scent shall be as inodorous as possible; or as those who wish to impress figures on soft substances do not allow any previous impression to remain, but begin by making the surface as even and smooth as possible. In the same way that which is to receive perpetually and through its whole extent the resemblances of all eternal beings ought to be devoid of any particular form. Wherefore, the mother and receptacle of all created and visible and in any way sensible things, is not to be termed earth, or air, or fire, or water, or any of their compounds, or any of the elements from which these are derived, but is an invisible and formless being which receives all things and in some mysterious way partakes of the intelligible, and is most incomprehensible. In saying this we shall not be far wrong; as far, however, as we can attain to a knowledge of her from the previous considerations, we may truly say that fire is that part of her nature which from time to time is inflamed, and water that which is moistened, and that the mother substance becomes earth and air, in so far as she receives the impressions of them.

Let us consider this question more precisely. Is there any self-existent fire? and do all those things which we call self-existent exist? or are only those things which we see, or in some way perceive through the bodily organs, truly existent, and nothing whatever besides them? And is all that which we call an intelligible essence nothing at all, and only a name? Here is a question which we must not leave unexamined or undetermined, nor must we affirm too confidently that there can be no decision; neither must we interpolate in our present long discourse a digression equally long, but if it is possible to set forth a great principle in a few words, that is just what we want.

But have ideas any existence?

We must admit that they have, if, as is the case, mind and true opinion differ; for corresponding to the

Thus I state my view:—If mind and true opinion are two distinct classes, then I say that there certainly are these self-existent ideas unperceived by sense, and apprehended only by the mind; if, however, as some say, true opinion differs in no respect from mind, then everything that we perceive through the body is to be regarded as most real and certain. But we must affirm them to be distinct, for they have a distinct origin and are of a different nature; the one is implanted in us by instruction, the other by persuasion; the one is always accompanied by true reason, the other is without reason; the one cannot be overcome by persuasion, but the other can: and lastly, every man may be said to share in true opinion, but mind is the attribute of the gods and of very few men. Wherefore also we must acknowledge that there is one kind of being which is always the same, uncreated and indestructible, never receiving anything into itself from without, nor itself going out to any other, but invisible and imperceptible by any sense, and of which the contemplation is granted to intelligence only. And there is another nature of the same name with it, and like to it, perceived by sense, created, always in motion, becoming in place and again vanishing out of place, which is apprehended by opinion and sense. And there is a third nature, which is space, and is eternal, and admits not of destruction and provides a home for all created things, and is apprehended without the help of sense, by a kind of spurious reason, and is hardly real; which we beholding as in a dream, say of all existence that it must of necessity be in some place and occupy a space, but that what is neither in heaven nor in earth has no existence. Of these and other things of the same kind, relating to the true and waking reality of nature, we have only this dreamlike sense, and we are unable to cast off sleep and determine the truth about them. For an image, since the reality, after which it is modelled, does not belong to it¹, and it exists ever as the fleeting shadow of some other, must be inferred to be in another [i. e. in space], grasping existence in some way or other, or it could not be at all. But true and exact reason, vindicating the nature of true being, maintains that while two things [i. e. the image and space] are different they cannot exist one of them in the other and so be one and also two at the same time.

difference between these mental states, there must be a difference

between the objects apprehended by them.

Space is not perceived by sense, but by a kind of spurious reason.

Space, being, and generation existed before the heaven. Space, on taking the forms of the elements, was filled with dissimilar

forces, which swayed her to and fro. Thus earth, air, fire and water, were sifted into their proper places, while they were yet in a rudimentary state, before God perfected

Thus have I concisely given the result of my thoughts; and my verdict is that being and space and generation, these three, existed in their three ways before the heaven; and that the nurse of generation, moistened by water and inflamed by fire, and receiving the forms of earth and air, and experiencing all the affections which accompany these, presented a strange variety of appearances; and being full of powers which were neither similar nor equally balanced, was never in any part in a state of equipoise, but swaying unevenly evenly hither and thither, was shaken by them, and by its motion again shook them; and the elements when moved were separated and carried continually, some one way, some another; as, when grain is shaken and winnowed by fans and other instruments used in the threshing of corn, the close and heavy particles are borne away and settle in one direction, and the loose and light particles in another. In this manner, the four kinds or elements were then shaken by the receiving vessel, which, moving like a winnowing machine, scattered far away from one another the elements most unlike, and forced the most similar elements into close contact. Wherefore also the various elements had different places before they were arranged so as to form the universe. At first, they were all without reason and measure. But when the world began to get into order, fire and water and earth and air had only certain faint traces of themselves, and were altogether such as everything might be expected to be in the absence of God; this, I say, was their nature at that time, and God fashioned them by form and number. Let it be consistently maintained by us in all that we say that God made them as far as possible the fairest and best, out of things which were not fair and good. And now I will endeavour to show you the disposition and generation of them by an unaccustomed argument, which I am compelled to use; but I believe that you will be able to follow me, for your education has made you familiar with the methods of science.

them by form and number.

The manner of their generation was as follows:— The four elements are solid bodies, and all solids are made up of plane surfaces, and all plane surfaces of triangles. All triangles

are ultimately of two kinds,—i. e. the rectangular isosceles, and the rectangular scalene.

The rectangular isosceles, which has but one form, and that one of the many forms of scalene which is half of an equilateral triangle

In the first place, then, as is evident to all, fire and earth and water and air are bodies. And every sort of body possesses solidity, and every solid must necessarily be contained in planes; and every plane rectilinear figure is composed of triangles; and all triangles are originally of two kinds, both of which are made up of one right and two acute angles; one of them has at either end of the base the half of a divided right angle, having equal sides, while in the other the right angle is divided into unequal parts, having unequal sides. These, then, proceeding by a combination of probability with demonstration, we assume to be the original elements of fire and the other bodies; but the principles which are prior to these God only knows, and he of men who is the friend of God. And next we have to determine what are the four most beautiful bodies which are unlike one another, and of which some are capable of resolution into one another; for having discovered thus much, we shall know the true origin of earth and fire and of the proportionate and intermediate elements. And then we shall not be willing to allow that there are any distinct kinds of visible bodies fairer than these. Wherefore we must endeavour to construct the four forms of bodies which excel in beauty, and then we shall be able to say that we have sufficiently apprehended their nature. Now of the two triangles, the isosceles has one form only; the scalene or unequal-sided has an infinite number. Of the infinite forms we must select the most beautiful, if we are to proceed in due order, and any one who can point out a more beautiful form than ours for the construction of these bodies, shall carry off the palm, not as an enemy, but as a friend. Now, the one which we maintain to be the most beautiful of all the many triangles (and we need not speak of the others) is that of which the double forms a third triangle which is equilateral; the reason of this would be long to tell; he who disproves what we are saying, and shows that we are mistaken, may claim a friendly victory. Then let us choose two triangles, out of which fire and the other elements have been constructed, one isosceles, the other having the square of the longer side equal to three times the square of the lesser side.

were chosen for making the elements.

Three of them are generated out of the latter: the fourth alone from the former. Therefore only three can pass into each other.

The first and simplest solid, the pyramid, has four equilateral triangular surfaces, each formed by the union of six rectangular scalene triangles.

The second species, the octahedron, has eight such surfaces, and the third, the icosahedron, twenty.

Now is the time to explain what was before obscurely said: there was an error in imagining that all the four elements might be generated by and into one another; this, I say, was an erroneous supposition, for there are generated from the triangles which we have selected four kinds—three from the one which has the sides unequal; the fourth alone is framed out of the isosceles triangle. Hence they cannot all be resolved into one another, a great number of small bodies being combined into a few large ones, or the converse. But three of them can be thus resolved and compounded, for they all spring from one, and when the greater bodies are broken up, many small bodies will spring up out of them and take their own proper figures; or, again, when many small bodies are dissolved into their triangles, if they become one, they will form one large mass of another kind. So much for their passage into one another. I have now to speak of their several kinds, and show out of what combinations of numbers each of them was formed. The first will be the simplest and smallest construction, and its element is that triangle which has its hypothenuse twice the lesser side. When two such triangles are joined at the diagonal, and this is repeated three times, and the triangles rest their diagonals and shorter sides on the same point as a centre, a single equilateral triangle is formed out of six triangles; and four equilateral triangles, if put together, make out of every three plane angles one solid angle, being 55 that which is nearest to the most obtuse of plane angles; and out of the combination of these four angles arises the first solid form which distributes into equal and similar parts the whole circle in which it is inscribed. The second species of solid is formed out of the same triangles, which unite as eight equilateral triangles and form one solid angle out of four plane angles, and out of six such angles the second body is completed. And the third body is made up of 120 triangular elements, forming twelve solid angles, each of them included in five plane equilateral triangles, having altogether twenty bases, each of which is an equilateral triangle. The one element [that is, the triangle which has its hypothenuse twice the lesser side] having generated these figures, generated no more; but the isosceles triangle produced the fourth elementary figure, which is compounded of four such triangles, joining their right angles in a centre, and forming one equilateral quadrangle. Six of these united form eight solid angles, each of which is made by the combination of three plane right angles; the figure of the body thus composed is a cube, having six plane quadrangular equilateral bases. There was yet a fifth combination which God used in the delineation of the universe.

The fourth, the cube, has six square surfaces, each formed of four rectangular isosceles triangles. There is also a fifth species. Although there are five elementary solids, there is but one world.

Now, he who, duly reflecting on all this, enquires whether the worlds are to be regarded as indefinite or definite in number, will be of opinion that the notion of their indefiniteness is characteristic of a sadly indefinite and ignorant mind. He, however, who raises the question whether they are to be truly regarded as one or five, takes up a more reasonable position. Arguing from probabilities, I am of opinion that they are one; another, regarding the question from another point of view, will be of another mind. But, leaving this enquiry, let us proceed to distribute the elementary forms, which have now been created in idea, among the four elements.

We have now to assign to the four

To earth, then, let us assign the cubical form; for earth is the most immoveable of the four and the most plastic of all bodies, and that which has the most stable bases must of necessity be of such a nature. Now, of the triangles which we assumed at first, that which has two equal sides is by nature more firmly based than that which has unequal sides; and of the compound figures which are formed out of either, the plane equilateral quadrangle has necessarily a more stable basis than the equilateral triangle, both in the whole and in 56the parts. Wherefore, in assigning this figure to earth, we adhere to probability; and to water we assign that one of the remaining forms which is the least moveable; and the most moveable of them to fire; and to air that which is intermediate. Also we assign the smallest body to fire, and the greatest to water, and the intermediate in size to air; and, again, the acutest body to fire, and the next in acuteness to air, and the third to water. Of all these elements, that which has the fewest bases must necessarily be the most moveable, for it must be the acutest and most penetrating in every way, and also the lightest as being composed of the smallest number of similar particles: and the second body has similar properties in a second degree, and the third body in the third degree. Let it be agreed, then, both according to strict reason and according to probability, that the pyramid is the solid which is the original element and seed of fire; and let us assign the element which was next in the order of generation to air, and the third to water. We must imagine all these to be so small that no single particle of any of the four kinds is seen by us on account of their smallness: but when many of them are collected together their aggregates are seen. And the ratios of their numbers, motions, and other properties, everywhere God, as far as necessity allowed or gave consent, has exactly perfected, and harmonized in due proportion.

elements their respective forms,—to earth the cube, to water the icosahedron, to air the octahedron, to fire the pyramid.

Individual particles cannot be seen: masses of each kind are visible.

From all that we have just been saying about the elements or kinds, the most probable conclusion is as follows:—earth, when meeting with fire and dissolved by its sharpness, whether the dissolution take place in the fire itself or perhaps in some mass of air or water, is borne hither and thither, until its parts, meeting together and mutually harmonizing, again become earth; for they can never take any other form. But water, when divided by fire or by air, on re-forming, may become one part fire and two parts air; and a single volume of air divided becomes two of fire. Again, when a small body of fire is contained in a larger body of air or water or earth, and both are moving, and the fire struggling is overcome and broken up, then two volumes of fire form one volume of air; and when air is overcome and cut up into small pieces, two and a half parts of air are condensed into one part of water. Let us consider the matter in another way. When one of the other elements is 57fastened upon by fire, and is cut by the sharpness of its angles and sides, it coalesces with the fire, and then ceases to be cut by them any longer. For no element which is one and the same with itself can be changed by or change another of the same kind and in the same state. But so long as in the process of transition the weaker is fighting against the stronger, the dissolution continues. Again, when a few small particles, enclosed in many larger ones, are in

Of the three elements, fire, air, water, a denser, if overpowered by a rarer, is forced to change into a rarer, and *vice versa*. Earth, however, which is the densest of all, cannot change, because its component triangles are unlike those of the other elements.

Change of nature is accompanied by change of place.

process of decomposition and extinction, they only cease from their tendency to extinction when they consent to pass into the conquering nature, and fire becomes air and air water. But if bodies of another kind go and attack them [i. e. the small particles], the latter continue to be dissolved until, being completely forced back and dispersed, they make their escape to their own kindred, or else, being overcome and assimilated to the conquering power, they remain where they are and dwell with their victors, and from being many become one. And owing to these affections, all things are changing their place, for by the motion of the receiving vessel the bulk of each class is distributed into its proper place; but those things which become unlike themselves and like other things, are hurried by the shaking into the place of the things to which they grow like.

Now all unmixed and primary bodies are produced by such causes as these. As to the subordinate species which are included in the greater kinds, they are to be attributed to the varieties in the structure of the two original triangles. For either structure did not originally produce the triangle of one size only, but some larger and some smaller, and there are as many sizes as there are species of the four elements. Hence when they are mingled with themselves and with one another there is an endless variety of them, which those who would arrive at the probable truth of nature ought duly to consider.

The varieties of the four elements are due to differences in the size of the elementary triangles.

Unless a person comes to an understanding about the nature and conditions of rest and motion, he will meet with many difficulties in the discussion which follows. Something has been said of this matter already, and something more remains to be said, which is, that motion never exists in what is uniform. For to conceive that anything can be moved without a mover is hard or indeed impossible, and equally impossible to conceive that there can be a mover unless there be something which can be moved;—motion cannot exist where either of these are wanting, and for these to be uniform is impossible; wherefore we must assign rest to uniformity and motion to the want of uniformity. Now inequality is the cause of the nature which is wanting in uniformity; and of this we have already described the origin. But there still remains the further point—why things when divided after their kinds do not cease to pass through one another and to change their place—which we will now proceed to explain. In the revolution of the universe are comprehended all the four elements, and this being circular and having a tendency to come together, compresses everything and will not allow any place to be left void. Wherefore, also, fire above all things penetrates everywhere, and air next, as being next in rarity of the elements; and the two other elements in like manner penetrate according to their degrees of rarity. For those things which are composed of the largest particles have the largest void left in their compositions, and those which are composed of the smallest particles have the least. And the contraction caused by the compression thrusts the smaller particles into the interstices of the larger. And thus, when the small parts are placed side by side with the larger, and the lesser divide

How is it that the elements are perpetually moving?—i. e. How is absence of uniformity, the condition of motion, secured for them?

We have seen that there is a continual tendency to produce uniformity, due to the motion of the receiving vessel. There is also a tendency to destroy it, due to the revolution of the universe, which thrusts the elements into each other.

the greater and the greater unite the lesser, all the elements are borne up and down and hither and thither towards their own places; for the change in the size of each changes its position in space. And these causes generate an inequality which is always maintained, and is continually creating a perpetual motion of the elements in all time.

In the next place we have to consider that there are divers kinds of fire. There are, for example, first, flame; and secondly, those emanations of flame which do not burn but only give light to the eyes; thirdly, the remains of fire, which are seen in red-hot embers after the flame has been extinguished. There are similar differences in the air; of which the brightest part is called the aether, and the most turbid sort mist and darkness; and there are various other nameless kinds which arise from the inequality of the triangles. Water, again, admits in the first place of a division into two kinds; the one liquid and the other fusile. The liquid kind is composed of the small and unequal particles of water; and moves itself and is moved by other bodies owing to the want of uniformity and the shape of its particles; whereas the fusile kind, being formed of large and uniform particles, is more stable than the other, and is heavy and compact by reason of its uniformity. But when fire gets in and dissolves the particles and destroys the uniformity, it has greater mobility, and becoming fluid is thrust forth by the neighbouring air and spreads upon the earth; and this dissolution of the solid masses is called melting, and their spreading out upon the earth flowing. Again, when the fire goes out of the fusile substance, it does not pass into a vacuum, but into the neighbouring air; and the air which is displaced forces together the liquid and still moveable mass into the place which was occupied by the fire, and unites it with itself. Thus compressed the mass resumes its equability, and is again at unity with itself, because the fire which was the author of the inequality has retreated; and this departure of the fire is called cooling, and the coming together which follows upon it is termed congealment. Of all the kinds termed fusile, that which is the densest and is formed out of the finest and most uniform parts is that most precious possession called gold, which is hardened by filtration through rock; this is unique in kind, and has both a glittering and a yellow colour. A shoot of gold, which is so dense as to be very hard, and takes a black colour, is termed adamant. There is also another kind which has parts nearly like gold, and of which there are several species; it is denser than gold, and it contains a small and fine portion of earth, and is therefore harder, yet also lighter because of the great interstices which it has within itself; and this substance, which is one of the bright and denser kinds of water, when solidified is called copper. There is an alloy of earth mingled with it, which, when the two parts grow old and are disunited, shows itself separately and is called rust. The remaining phenomena of the same kind there will be no difficulty in reasoning out by the method of probabilities. A man may sometimes set aside meditations about eternal things, and for recreation turn to consider the truths of generation which are probable only; he will thus gain a pleasure not to be repented of, and secure for himself while

Kinds of fire:—(i) flame; (ii) light; (iii) red heat. Kinds of air:—(i) aether; (ii) mist. There are also other kinds without names. Kinds of water:—(i) liquid; (ii) fusile. The former is mobile; the latter is solid, but melts when heated,—congealing again as it cools.

Of the fusile kind are

(1) gold, (2) adamant,

(3) copper.

The phenomenon of rust.

To natural science the student of the eternal may turn for recreation.

he lives a wise and moderate pastime. Let us grant ourselves this indulgence, and go through the probabilities relating to the same subjects which follow next in order.

Water which is mingled with fire, so much as is fine and liquid (being so called by reason of its motion and the way in which it rolls along the ground), and soft, because its bases give way and are less stable than those of earth, when separated from fire and air and isolated, becomes more uniform, and by their retirement is compressed into itself; and if the condensation be very great, the water above the earth becomes hail, but on the earth, ice; and that which is congealed in a less degree and is only half solid, when above the earth is called snow, and when upon the earth, and condensed from dew, hoar-frost. Then, again, there are the numerous kinds of water which have been mingled with one another, and are distilled through plants which grow in the earth; and this whole class is called by the name of juices ⁶⁰or saps.

The unequal admixture of these fluids creates a variety of species; most of them are nameless, but four which are of a fiery nature are clearly distinguished and have names. First, there is wine, which warms the soul as well as the body: secondly, there is the oily nature, which is smooth and divides the visual ray, and for this reason is bright and shining and of a glistening appearance, including pitch, the juice of the castor berry, oil itself, and other things of a like kind: thirdly, there is the class of substances which expand the contracted parts ¹ of the mouth, until they return to their natural state, and by reason of this property create sweetness;—these are included under the general name of honey: and, lastly, there is a frothy nature, which differs from all juices, having a burning quality which dissolves the flesh; it is called *opos* (a vegetable acid).

From water of the liquid kind are formed

(1) hail or ice,

(2) snow,

(3) hoar-frost,

(4) juices in general and four in particular,—i. e.

(a) wine, (b) oil,

(c) honey,

(d) vegetable acid.

Kinds of earth:—(i) rock, of which there are two species;

(ii) earthenware;

(iii) a certain stone of a black colour;

(iv) soda;

(v) salt;

(vi) compounds of earth and

water, including *a.* glass and fusile stones, and *b.* wax and incense.—These compounds, like compressed earth or

As to the kinds of earth, that which is filtered through water passes into stone in the following manner:—The water which mixes with the earth and is broken up in the process changes into air, and taking this form mounts into its own place. But as there is no surrounding vacuum it thrusts away the neighbouring air, and this being rendered heavy, and, when it is displaced, having been poured around the mass of earth, forcibly compresses it and drives it into the vacant space whence the new air had come up; and the earth when compressed by the air into an indissoluble union with water becomes rock. The fairer sort is that which is made up of equal and similar parts and is transparent; that which has the opposite qualities is inferior. But when all the watery part is suddenly drawn out by fire, a more brittle substance is formed, to which we give the name of pottery. Sometimes also moisture may remain, and the earth which has been fused by fire becomes, when cool, a certain stone of a black colour. A like separation of the water which had been copiously mingled with them may occur in two substances composed of finer particles of earth and of a briny nature; out of either of them a half-solid body is then formed, soluble in water—the one, soda, which is used for purging away oil and earth, the other, salt, which harmonizes so well in combinations pleasing to the palate, and is, as the law testifies, a substance dear to the gods. The compounds of earth and water are not soluble by water, but by fire only, and for this reason:—Neither fire nor air melt masses of earth; for their particles, being smaller than the interstices in its structure, have plenty of room to move without forcing their way, and so they leave the earth unmelted and undissolved; but particles of water, which are larger, force a passage, and dissolve and melt the earth. Wherefore earth when not consolidated by force is dissolved by water only; when consolidated, by nothing but fire; for this is the only body which can find an entrance. The cohesion of water again, when very strong, is dissolved by fire only—when weaker, then either by air or fire—the former entering the interstices, and the latter penetrating even the triangles. But nothing can dissolve air, when strongly condensed, which does not reach the elements or triangles; or if not strongly condensed, then only fire can dissolve it. As to bodies composed of earth and water, while the water occupies the vacant interstices of the earth in them which are compressed by force, the particles of water which approach them from without, finding no entrance, flow around the entire mass and leave it undissolved; but the particles of fire, entering into the interstices of the water, do to the water what water does to earth and fire to air¹, and are the sole causes of the compound body of earth and water liquefying and becoming fluid. Now these bodies are of two kinds; some of them, such as glass and the fusible sort of stones, have less water than they have earth; on the other hand, substances of the nature of wax and incense have more of water entering into their composition.

water, are soluble by fire only, which penetrates the water in them. Earth and water, however, in their natural state are soluble, the former by water only, the latter by fire and air.

I have thus shown the various classes of bodies as they are diversified by their forms and combinations and changes into one another, and now I must endeavour to set forth their affections and the causes of them. In the first place, the bodies which I have been describing are necessarily objects of sense. But we have not yet considered the origin of flesh, or what belongs to flesh, or of that part of the soul which is mortal. And these things cannot be adequately explained

From objects of sense we pass on to consider flesh, which perceives sensations, and sensations themselves.

without also explaining the affections which are concerned with sensation, nor the latter without the former: and yet to explain them together is hardly possible; for which reason we must assume first one or the other and afterwards examine the nature of our hypothesis¹. In order, then, that the affections may follow regularly after the elements, let us presuppose the existence of body and soul.

First, let us enquire what we mean by saying that fire is hot; and about this we may reason from the dividing or cutting power which it exercises on our bodies. We all of us feel that fire is sharp; and we may further consider the fineness of the sides, and the sharpness of the angles, and the smallness of the particles, and the swiftness of the motion;—all this makes the action of fire violent and sharp, so that it cuts whatever it meets. And we must not forget that the original figure of fire [i. e. the pyramid], more than any other form, has a dividing power which cuts our bodies into small pieces (κερματίζει), and thus naturally produces that affection which we call heat; and hence the origin of the name (θερμός, κέρμα). Now, the opposite of this is sufficiently manifest; nevertheless we will not fail to describe it. For the larger particles of moisture which surround the body, entering in and driving out the lesser, but not being able to take their places, compress the moist principle in us; and this from being unequal and disturbed, is forced by them into a state of rest, which is due to equability and compression. But things which are contracted contrary to nature are by nature at war, and force themselves apart; and to this war and convulsion the name of shivering and trembling is given; and the whole affection and the cause of the affection are both termed cold. That is called hard to which our flesh yields, and soft which yields to our flesh; and things are also termed hard and soft relatively to one another. That which yields has a small base; but that which rests on quadrangular bases is firmly posed and belongs to the class which offers the greatest resistance; so too does that which is the most compact and therefore most repellent. The nature of the light and the heavy will be best understood when examined in connexion with our notions of above and below; for it is quite a mistake to suppose that the universe is parted into two regions, separate from and opposite to each other, the one a lower to which all things tend which have any bulk, and an upper to which things only ascend against their will. For as the universe is in the form of a sphere, all the extremities, being equidistant from the centre, are equally extremities, and the centre, which is equidistant from them, is equally to be regarded as the opposite of them all. Such being the nature of the world, when a person says that any of these points is above or below, may he not be justly charged with using an improper expression? For the centre of the world cannot be rightly called either above or below, but is the centre and nothing else; and the circumference is not the centre, and has in no one part of itself a different relation to

i. Sensations common to the whole body:—(1) Heat, due to the sharpness of fire, which cuts the flesh.

(2) Cold, due to contraction.

(3) Hardness, and (4) Softness, the qualities in things which make them resist or yield. (5) Lightness, and (6) Heaviness, are not to be

explained by dividing the world into an upper and a lower region. For the universe is shaped like a globe, and its extremes, being similarly related to the centre, cannot have opposite predicates applied to them.

Lightness and heaviness are really due to attraction. Bodies are drawn towards the mass of their kindred with a force proportionate to their size. The greater this force, the greater the weight.

(7) Roughness; and

(8) Smoothness.

the centre from what it has in any of the opposite parts. Indeed, when it is in every direction similar, how can one rightly give to it names which imply opposition? For if 63there were any solid body in equipoise at the centre of the universe, there would be nothing to draw it to this extreme rather than to that, for they are all perfectly similar; and if a person were to go round the world in a circle, he would often, when standing at the antipodes of his former position, speak of the same point as above and below; for, as I was saying just now, to speak of the whole which is in the form of a globe as having one part above and another below is not like a sensible man. The reason why these names are used, and the circumstances under which they are ordinarily applied by us to the division of the heavens, may be elucidated by the following supposition:—If a person were to stand in that part of the universe which is the appointed place of fire, and where there is the great mass of fire to which fiery bodies gather—if, I say, he were to ascend thither, and, having the power to do this, were to abstract particles of fire and put them in scales and weigh them, and then, raising the balance, were to draw the fire by force towards the uncongenial element of the air, it would be very evident that he could compel the smaller mass more readily than the larger; for when two things are simultaneously raised by one and the same power, the smaller body must necessarily yield to the superior power with less reluctance than the larger; and the larger body is called heavy and said to tend downwards, and the smaller body is called light and said to tend upwards. And we may detect ourselves who are upon the earth doing precisely the same thing. For we often separate earthy natures, and sometimes earth itself, and draw them into the uncongenial element of air by force and contrary to nature, both clinging to their kindred elements. But that which is smaller yields to the impulse given by us towards the dissimilar element more easily than the larger; and so we call the former light, and the place towards which it is impelled we call above, and the contrary state and place we call heavy and below respectively. Now the relations of these must necessarily vary, because the principal masses of the different elements hold opposite positions; for that which is light, heavy, below or above in one place will be found to be and become contrary and transverse and every way diverse in relation to that which is light, heavy, below or above in an opposite place. And about all of them this has to be considered:—that the tendency of each towards its kindred element makes the body which is moved heavy, and the place towards which the motion tends below, but things which have an opposite tendency we call by an opposite name. Such are the causes which we assign to these phenomena. As to the smooth and the rough, any one who sees them can explain the reason of them to another. For roughness is hardness mingled with 64irregularity, and smoothness is produced by the joint effect of uniformity and density.

How is it that sensations are accompanied by pleasure and pain? Sensations arise thus. An object comes into contact with an organ of sense. This, if composed of fine

The most important of the affections which concern the whole body remains to be considered,—that is, the cause of pleasure and pain in the perceptions of which I have been speaking, and in all other things which are perceived by sense through the parts of the body, and have both pains and pleasures attendant on them. Let us imagine the causes of every affection, whether of sense or not, to be of the following nature, remembering that we have already distinguished between the nature which is easy and which is hard to move; for this is the direction in which we must hunt the prey which we mean to take. A body which is of a nature to be easily moved, on receiving an impression however slight, spreads abroad the motion in a circle, the parts communicating with each other, until at last, reaching the principle of mind, they announce the quality of the agent. But a body of the opposite kind, being immobile, and not extending to the surrounding region, merely receives the impression, and does not stir any of the neighbouring parts; and since the parts do not distribute the original impression to other parts, it has no effect of motion on the whole animal, and therefore produces no effect on the patient. This is true of the bones and hair and other more earthy parts of the human body; whereas what was said above relates mainly to sight and hearing, because they have in them the greatest amount of fire and air. Now we must conceive of pleasure and pain in this way. An impression produced in us contrary to nature and violent, if sudden, is painful; and, again, the sudden return to nature is pleasant; but a gentle and gradual return is imperceptible and *vice versa*. On the other hand the impression of sense which is most easily produced is most readily felt, but is not accompanied by pleasure or pain; such, for example, are the affections of the sight, which, as we said above, is a body naturally uniting with our body in the day-time (45); for cuttings and burnings and other affections which happen to the sight do not give pain, nor is there pleasure when the sight returns to its natural state; but the sensations are clearest and strongest according to the manner in which the eye is affected by the object, and itself strikes and touches it; there is no violence either in the contraction or dilation of the eye. But bodies formed of larger particles yield to the agent only with a struggle; and then they impart their motions to the whole and cause pleasure and pain—pain when alienated from their natural conditions, 65and pleasure when restored to them. Things which experience gradual withdrawals and emptyings of their nature, and great and sudden replenishments, fail to perceive the emptying, but are sensible of the replenishment; and so they occasion no pain, but the greatest pleasure, to the mortal part of the soul, as is manifest in the case of perfumes. But things which are changed all of a sudden, and only gradually and with difficulty return to their own nature, have effects in every way opposite to the former, as is evident in the case of burnings and cuttings of the body.

particles, like the eye or ear.

readily transmits the motion to the soul; if of larger, like the bones, less readily. The result is sensation.—As regards pleasure and pain—an organ consisting of large particles is more liable to them than an organ of the opposite kind. Pain arises when the particles are suddenly disturbed, pleasure when they are suddenly restored to their natural state.

ii. Affections of particular organs:—(1) of the tongue,—produced by contraction and

Thus have we discussed the general affections of the whole body, and the names of the agents which produce them. And now I will endeavour to speak of the affections of particular parts, and the causes and agents of them, as far as I am able. In the first place let us set forth what was omitted when we were speaking of juices, concerning the affections peculiar to the tongue. These too, like most of the other affections, appear to be caused by certain contractions and dilations, but they have besides more of roughness and smoothness than is found in other affections; for whenever earthy particles enter into the small veins which are the testing instruments of the tongue, reaching to the heart, and fall upon the moist, delicate portions of flesh — when, as they are dissolved, they contract and dry up the little veins, they are astringent if they are rougher, but if not so rough, then only harsh. Those of them which are of an abstergent nature, and purge the whole surface of the tongue, if they do it in excess, and so encroach as to consume some part of the flesh itself, like potash and soda, are all termed bitter. But the particles which are deficient in the alkaline quality, and which cleanse only moderately, are called salt, and having no bitterness or roughness, are regarded as rather agreeable than otherwise. Bodies which share in and are made smooth by the heat of the mouth, and which are inflamed, and again in turn inflame that which heats them, and which are so light that they are carried upwards to the sensations of the head, and cut all that comes in their way, by reason of these qualities in them, are all termed pungent. But when these same particles, refined by putrefaction, enter into the narrow veins, and are duly proportioned to the particles of earth and air which are there, they set them whirling about one another, and while they are in a whirl cause them to dash against and enter into one another, and so form hollows surrounding the particles that enter—which watery vessels of air (for a film of moisture, sometimes earthy, sometimes pure, is spread around the air) are hollow spheres of water; and those of them which are pure, are transparent, and are called bubbles, while those composed of the earthy liquid, which is in a state of general agitation and effervescence, are said to boil or ferment;—of all these affections the cause is termed acid. And there is the opposite affection arising from an opposite cause, when the mass of entering particles, immersed in the moisture of the mouth, is congenial to the tongue, and smooths and oils over the roughness, and relaxes the parts which are unnaturally contracted, and contracts the parts which are relaxed, and disposes them all according to their nature;—that sort of remedy of violent affections is pleasant and agreeable to every man, and has the name sweet. But enough of this.

dilation of the veins.
They are as follows:
a. Astringency. *b.*
Harshness. *c.*
Bitterness. *d.*
Saltiness.

e. Pungency.

f. Acidity.

g. Sweetness.

The faculty of smell does not admit of differences of kind; for all smells are of a half-formed nature, and no element is so proportioned as to have any smell. The veins about the nose are too narrow to admit earth and water, and too wide to detain fire and air; and for this reason no one ever perceives the smell of any of them; but smells always proceed from bodies that are damp, or putrefying, or liquefying, or evaporating, and are perceptible only in the intermediate state, when water is changing into air and air into water; and all of them are either vapour or mist. That which is passing out of air into water is

(2) Of the nostrils.
Smells can only be distinguished as pleasant or the reverse. The substances which emit them, vapour and mist, are half-formed, being intermediate between water and air.

mist, and that which is passing from water into air is vapour; and hence all smells are thinner than water and thicker than air. The proof of this is, that when there is any obstruction to the respiration, and a man draws in his breath by force, then no smell filters through, but the air without the smell alone penetrates. 67Wherefore the varieties of smell have no name, and they have not many, or definite and simple kinds; but they are distinguished only as painful and pleasant, the one sort irritating and disturbing the whole cavity which is situated between the head and the navel, the other having a soothing influence, and restoring this same region to an agreeable and natural condition.

In considering the third kind of sense, hearing, we must speak of the causes in which it originates. We may in general assume sound to be a blow which passes through the ears, and is transmitted by means of the air, the brain, and the blood, to the soul, and that hearing is the vibration of this blow, which begins in the head and ends in the region of the liver. The sound which moves swiftly is acute, and the sound which moves slowly is grave, and that which is regular is equable and smooth, and the reverse is harsh. A great body of sound is loud, and a small body of sound the reverse. Respecting the harmonies of sound I must hereafter speak.

(3) Of the ear. Sounds are blows which pass through the ears to the soul. They are acute and grave, smooth and harsh, &c.

There is a fourth class of sensible things, having many intricate varieties, which must now be distinguished. They are called by the general name of colours, and are a flame which emanates from every sort of body, and has particles corresponding to the sense of sight. I have spoken already, in what has preceded, of the causes which generate sight, and in this place it will be natural and suitable to give a rational theory of colours.

(4) Of the eye. Colours are flames emitted by objects.

Of the particles coming from other bodies which fall upon the sight, some are smaller and some are larger, and some are equal to the parts of the sight itself. Those which are equal are imperceptible, and we call them transparent. The larger produce contraction, the smaller dilation, in the sight, exercising a power akin to that of hot and cold bodies on the flesh, or of astringent bodies on the tongue, or of those heating bodies which we termed pungent. White and black are similar effects of contraction and dilation in another sphere, and for this reason have a different appearance. Wherefore, we ought to term white that which dilates the visual ray, and the opposite of this black. There is also a swifter motion of a different sort of fire which strikes and dilates the ray of sight until it reaches the eyes, forcing a way through their passages and melting them, and eliciting from them a union of fire and water which we call tears, being itself an opposite fire which comes to them from an opposite direction—the inner fire flashes forth like lightning, and the outer finds a way in and is extinguished in the moisture, and all sorts of colours are generated by the mixture. This affection is termed dazzling,

Simple colours are:

a. Transparent.

b. White. *c.* Black. *d.* Bright.

c. Red.

The compound colours are: *a.* Auburn.

b. Purple. *c.* Umber.

d. Flamecolour. *e.* Dun. *f.* Pale yellow. *g.* Dark blue. *h.* Light blue. *i.* Leek green.

and the object which produces it is called bright and flashing. There is another sort of fire which is intermediate, and which reaches and mingles with the moisture of the eye without flashing; and in this, the fire mingling with the ray of the moisture, produces a colour like blood, to which we give the name of red. A bright hue mingled with red and white gives the colour called auburn (ξανθόν). The law of proportion, however, according to which the several colours are formed, even if a man knew he would be foolish in telling, for he could not give any necessary reason, nor indeed any tolerable or probable explanation of them. Again, red, when mingled with black and white, becomes purple, but it becomes umber (πορνίον) when the colours are burnt as well as mingled and the black is more thoroughly mixed with them. Flame-colour (πυρρόν) is produced by a union of auburn and dun (αἰνόν), and dun by an admixture of black and white; pale yellow (χρόν), by an admixture of white and auburn. White and bright meeting, and falling upon a full black, become dark blue (κυανόν), and when dark blue mingles with white, a light blue (γλαυκόν) colour is formed, as flame-colour with black makes leek green (πράσιον). There will be no difficulty in seeing how and by what mixtures the colours derived from these are made according to the rules of probability. He, however, who should attempt to verify all this by experiment, would forget the difference of the human and divine nature. For God only has the knowledge and also the power which are able to combine many things into one and again resolve the one into many. But no man either is or ever will be able to accomplish either the one or the other operation.

These are the elements, thus of necessity then subsisting, which the creator of the fairest and best of created things associated with himself, when he made the self-sufficing and most perfect God, using the necessary causes as his ministers in the accomplishment of his work, but himself contriving the good in all his creations. Wherefore we may distinguish two sorts of causes, the one divine and the other necessary, and may seek for the divine in all things, as far as our nature admits, with a view to the blessed life; but the necessary kind only for the sake of the divine, considering that without them and when isolated from them, these higher things for which we look cannot be apprehended or received or in any way shared by us.

These are the necessary causes which God used in creating the universe. They are subservient to the divine, which we must seek, if we wish to attain bliss.

Seeing, then, that we have now prepared for our use the various classes of causes which are the material out of which the remainder of our discourse must be woven, just as wood is the material of the carpenter, let us revert in a few words to the point at which we began, and then endeavour to add on a suitable ending to the beginning of our tale.

We must complete our account of creation.

As we have seen, God, by reducing chaos to order, made the world-animal, which contains all other animals, mortal and immortal. The immortal soul of man

As I said at first, when all things were in disorder God created in each thing in relation to itself, and in all things in relation to each other, all the measures and harmonies which they could possibly receive. For in those days nothing had any proportion except by accident; nor did any of the things which now have names deserve to be named at all—as, for example, fire, water, and the rest of the elements. All these the creator first set in order, and out of them he constructed the universe, which was a single animal comprehending in itself all other animals, mortal and immortal. Now of the divine, he himself was the creator, but the creation of the mortal he committed to his offspring. And they, imitating him, received from him the immortal principle of the soul; and around this they proceeded to fashion a mortal body, and made it to be the vehicle of the soul, and constructed within the body a soul of another nature which was mortal, subject to terrible and irresistible affections,—first of all, pleasure, the greatest incitement to evil; then, pain, which deters from good; also rashness and fear, two foolish counsellors, anger hard to be appeased, and hope easily led astray;—these they mingled with irrational sense and with all-daring love¹ according to necessary laws, and so framed man. Wherefore, fearing to pollute the divine any more than was absolutely unavoidable, they gave to the mortal nature a separate habitation in another part of the body, placing the neck between them to be the isthmus and boundary, which they constructed between the head and breast, to keep them apart. And in the breast, and in what is termed the thorax, they encased the mortal soul; and as the one part of this was superior and the other inferior they divided the cavity of the thorax into two parts, as the women's and men's apartments are divided in houses, and placed the midriff to be a wall of partition between them. That part of the inferior soul which is endowed with courage and passion and loves contention they settled nearer the head, midway between the midriff and the neck, in order that it might be under the rule of reason and might join with it in controlling and restraining the desires when they are no longer willing of their own accord to obey the word of command issuing from the citadel.

was created by God, the mortal by his children: the former was set in the head, the latter in the breast and thorax.

Of the mortal soul there are two parts:—(1) Passion, seated between the midriff and the neck, and intended to assist reason against desire.

The heart, the knot¹ of the veins and the fountain of the blood which races through all the limbs, was set in the place of guard, that when the might of passion was roused by reason making proclamation of any wrong assailing them from without or being perpetrated by the desires within, quickly the whole power of feeling in the body, perceiving these commands and threats, might obey and follow through every turn and alley, and thus allow the principle of the best to have the command in all of them. But the gods, foreknowing that the palpitation of the heart in the expectation of danger and the swelling and excitement of passion was caused by fire, formed and implanted as a supporter to the heart the lung, which was, in the first place, soft and bloodless, and also had within hollows like the pores of a sponge, in order that by receiving the breath and the drink, it might give coolness and the power of respiration and alleviate the heat. Wherefore they cut the air-channels leading to the lung, and placed the lung about the heart as a soft spring, that, when passion was rife within, the heart, beating against a yielding body, might

The heart acts as herald and executive of reason, carrying its commands throughout the body.

It is sustained and refreshed by the softness and coolness of the lung.

be cooled and suffer less, and might thus become more ready to join with passion in the service of reason.

The part of the soul which desires meats and drinks and the other things of which it has need by reason of the bodily nature, they placed between the midriff and the boundary of the navel, contriving in all this region a sort of manger for the food of the body; and there they bound it down like a wild animal which was chained up with man, and must be nourished if man was to exist. They appointed this lower creation his place here in order that he might be always feeding at the manger, and have his dwelling as far as might be from the council-chamber, making as little noise 71 and disturbance as possible, and permitting the best part to advise quietly for the good of the whole. And knowing that this lower principle in man would not comprehend reason, and even if attaining to some degree of perception would never naturally care for rational notions, but that it would be led away by phantoms and visions night and day,—to be a remedy for this, God combined with it the liver, and placed it in the house of the lower nature, contriving that it should be solid and smooth, and bright and sweet, and should also have a bitter quality, in order that the power of thought, which proceeds from the mind, might be reflected as in a mirror which receives likenesses of objects and gives back images of them to the sight; and so might strike terror into the desires, when, making use of the bitter part of the liver, to which it is akin, it comes threatening and invading, and diffusing this bitter element swiftly through the whole liver produces colours like bile, and contracting every part makes it wrinkled and rough; and twisting out of its right place and contorting the lobe and closing and shutting up the vessels and gates, causes pain and loathing. And the converse happens when some gentle inspiration of the understanding pictures images of an opposite character, and allays the bile and bitterness by refusing to stir or touch the nature opposed to itself, but by making use of the natural sweetness of the liver, corrects all things and makes them to be right and smooth and free, and renders the portion of the soul which resides about the liver happy and joyful, enabling it to pass the night in peace, and to practise divination in sleep, inasmuch as it has no share in mind and reason. For the authors of our being, remembering the command of their father when he bade them create the human race as good as they could, that they might correct our inferior parts and make them to attain a measure of truth, placed in the liver the seat of divination. And herein is a proof that God has given the art of divination not to the wisdom, but to the foolishness of man. No man, when in his wits, attains prophetic truth and inspiration; but when he receives the inspired word, either his intelligence is enthralled in sleep, or he is demented by some distemper or possession. And he who would understand what he remembers to have been 72 said, whether in a dream or when he was awake, by the prophetic and inspired nature, or would determine by reason the meaning of the apparitions which he has seen, and what indications they afford to this man or that, of past, present or future good and evil, must first recover his wits. But, while he continues demented, he cannot judge of the visions which he sees or the words which he utters; the ancient saying is very true,

(2) Desire, chained up between the midriff and the navel, far away from the council-chamber.

Knowing that this part would be guided

by images alone, God constructed the liver with its mirror-like surface, in which are imaged the intimations of reason.

These intimations are given to men when asleep or demented, but can only be interpreted by the sane man who is awake.

that ‘only a man who has his wits can act or judge about himself and his own affairs.’ And for this reason it is customary to appoint interpreters to be judges of the true inspiration. Some persons call them prophets; they are quite unaware that they are only the expositors of dark sayings and visions, and are not to be called prophets at all, but only interpreters of prophecy.

Such is the nature of the liver, which is placed as we have described in order that it may give prophetic intimations. During the life of each individual these intimations are plainer, but after his death the liver becomes blind, and delivers oracles too obscure to be intelligible. The neighbouring organ [the spleen] is situated on the left-hand side, and is constructed with a view of keeping the liver bright and pure,—like a napkin, always ready prepared and at hand to clean the mirror. And hence, when any impurities arise in the region of the liver by reason of disorders of the body, the loose nature of the spleen, which is composed of a hollow and bloodless tissue, receives them all and clears them away, and when filled with the unclean matter, swells and festers, but, again, when the body is purged, settles down into the same place as before, and is humbled.

The spleen, like a napkin, keeps the liver clean.

Concerning the soul, as to which part is mortal and which divine, and how and why they are separated, and where located, if God acknowledges that we have spoken the truth, then, and then only, can we be confident; still, we may venture to assert that what has been said by us is probable, and will be rendered more probable by investigation. Let us assume thus much.

Our account of the soul is probable: God only knows if it is true.

The creation of the rest of the body follows next in order, and this we may investigate in a similar manner. And it appears to be very meet that the body should be framed on the following principles:—

The authors of our race were aware that we should be intemperate in eating and drinking, and take a good deal more than was necessary or proper, by reason of gluttony. In order then that disease might not quickly destroy us, and lest our mortal race should perish without fulfilling its end—intending to provide against this, the gods made what is called the lower belly, to be a receptacle for the superfluous meat and drink, and formed the convolution of the bowels; so that the food might be prevented from passing quickly through and compelling the body to require more food, thus producing insatiable gluttony, and making the whole race an enemy to philosophy and music, and rebellious against the divinest element within us.

The bowels intended to prevent the food from passing

away too quickly, that men might not be perpetually occupied in eating and drinking.

Bone, flesh, and similar substances are all formed from marrow. Marrow is composed of the most

The bones and flesh, and other similar parts of us, were made as follows. The first principle of all of them was the generation of the marrow. For the bonds of life which unite the soul with the body are made fast there, and they are the root and foundation of the human race. The marrow itself is created out of other materials: God took such of the primary triangles as were straight and smooth, and were adapted by their perfection to produce fire and water, and air and earth—these, I say, he separated from their kinds, and mingling them in due proportions with one another, made the marrow out of them to be a universal seed of the whole race of mankind; and in this seed he then planted and enclosed the souls, and in the original distribution gave to the marrow as many and various forms as the different kinds of souls were hereafter to receive. That which, like a field, was to receive the divine seed, he made round every way, and called that portion of the marrow, brain, intending that, when an animal was perfected, the vessel containing this substance should be the head; but that which was intended to contain the remaining and mortal part of the soul he distributed into figures at once round and elongated, and he called them all by the name ‘marrow;’ and to these, as to anchors, fastening the bonds of the whole soul, he proceeded to fashion around them the entire framework of our body, constructing for the marrow, first of all, a complete covering of bone.

perfect of the elementary triangles, mingled in due proportion. To the marrow of the head the divine soul is fastened, to the marrow of the spine the mortal soul.

Bone is made of fine earth, kneaded with marrow, and dipped repeatedly

in fire and water. Of bone were fashioned coverings for the brain and the spinal marrow, i. e. the skull and vertebrae. Joints were inserted to give flexion; the sinews were intended to hold the bones together, the flesh to protect them.

Flesh was formed by blending earth, fire and water, and then mingling with them a ferment of acid and salt; the sinews by mixing bone and unfermented flesh.

The most sensitive of the bones, as well as the joints, are thinly

Bone was composed by him in the following manner. Having sifted pure and smooth earth he kneaded it and wetted it with marrow, and after that he put it into fire and then into water, and once more into fire and again into water—in this way by frequent transfers from one to the other he made it insoluble by either. Out of this he fashioned, as in a lathe, 74a globe made of bone, which he placed around the brain, and in this he left a narrow opening; and around the marrow of the neck and back he formed vertebrae which he placed under one another like pivots, beginning at the head and extending through the whole of the trunk. Thus wishing to preserve the entire seed, he enclosed it in a stone-like casing, inserting joints, and using in the formation of them the power of the other or diverse as an intermediate nature, that they might have motion and flexure. Then again, considering that the bone would be too brittle and inflexible, and when heated and again cooled would soon mortify and destroy the seed within—having this in view, he contrived the sinews and the flesh, that so binding all the members together by the sinews, which admitted of being stretched and relaxed about the vertebrae, he might thus make the body capable of flexion and extension, while the flesh would serve as a protection against the summer heat and against the winter cold, and also against falls, softly and easily yielding to external bodies, like articles made of felt; and containing in itself a warm moisture which in summer exudes and makes the surface damp, would impart a natural coolness to the whole body; and again in winter by the help of this internal warmth would form a very tolerable defence against the frost which surrounds it and attacks it from without. He who modelled us, considering these things, mixed earth with fire and water and blended them; and making a ferment of acid and salt, he mingled it with them and formed soft and succulent flesh. As for the sinews, he made them of a mixture of bone and unfermented flesh, attempered so as to be in a mean, and gave them a yellow colour; wherefore the sinews have a firmer and more glutinous nature than flesh, but a softer and moister nature than the bones. With these God covered the bones and marrow, binding them together by sinews, and then enshrouded them all in an upper covering of flesh. The more living and sensitive of the bones he enclosed in the thinnest film of flesh, and those which had the least life within them in the thickest and most solid flesh. So again on the joints of the bones, where reason indicated that no more was required, he placed only a thin covering of flesh, that it might not interfere with the flexion of our bodies and make them unwieldy because difficult to move; and also that it might not, by being crowded and pressed and matted together, destroy sensation by reason of its hardness, and 75impair the memory and dull the edge of intelligence. Wherefore also the thighs and the shanks and the hips, and the bones of the arms and the forearms, and other parts which have no joints, and the inner bones, which on account of the rarity of the soul in the marrow are destitute of reason — all

covered with flesh; the least sensitive are thickly covered.

Flesh, however, without bone, is sometimes highly sensitive: e. g. the tongue. But this is exceptional; for the chief purpose of the flesh is to give protection, not sensation. And because God wished us to live a rational and not a long life, the head was not covered with flesh.

The mouth was constructed with a view to the necessary and the good.

The skull was not left bare, but enveloped with skin (= the film which forms on flesh as it dries).

The sutures and their diversity.

Out of punctures in the skin of the head grew the hair.

Nails are compounded of sinew, skin and bone; they were made with a view to the time when women and animals should

spring from man.

these are abundantly provided with flesh; but such as have mind in them are in general less fleshy, except where the creator has made some part solely of flesh in order to give sensation, — as, for example, the tongue. But commonly this is not the case. For the nature which comes into being and grows up in us by a law of necessity, does not admit of the combination of solid bone and much flesh with acute perceptions. More than any other part the framework of the head would have had them, if they could have co-existed, and the human race, having a strong and fleshy and sinewy head, would have had a life twice or many times as long as it now has, and also more healthy and free from pain. But our creators, considering whether they should make a longer-lived race which was worse, or a shorter-lived race which was better, came to the conclusion that every one ought to prefer a shorter span of life, which was better, to a longer one, which was worse; and therefore they covered the head with thin bone, but not with flesh and sinews, since it had no joints; and thus the head was added, having more wisdom and sensation than the rest of the body, but also being in every man far weaker. For these reasons and after this manner God placed the sinews at the extremity of the head, in a circle round the neck, and glued them together by the principle of likeness and fastened the extremities of the jawbones to them below the face, and the other sinews he dispersed throughout the body, fastening limb to limb. The framers of us framed the mouth, as now arranged, having teeth and tongue and lips, with a view to the necessary and the good, contriving the way in for necessary purposes, the way out for the best purposes; for that is necessary which enters in and gives food to the body; but the river of speech, which flows out of a man and ministers to the intelligence, is the fairest and noblest of all streams. Still the head could neither be left a bare frame of bones, on account of the extremes of heat and cold in the different seasons, nor yet be allowed to be wholly covered, and so become dull and senseless by reason of an overgrowth of flesh. The fleshy nature was not therefore wholly dried up, but a large sort of peel was parted off and remained over, which is now called the skin. This met and grew by the help of the cerebral moisture, and became the circular envelopment of the head. And the moisture, rising up under the sutures, watered and closed in the skin upon the crown, forming a sort of knot. The diversity of the sutures was caused by the power of the courses of the soul and of the food, and the more these struggled against one another the more numerous they became, and fewer if the struggle were less violent. This skin the divine power pierced all round with fire, and out of the punctures which were thus made the moisture issued forth, and the liquid and heat which was pure came away, and a mixed part which was composed of the same material as the skin, and had a fineness equal to the punctures, was borne up by its own impulse and extended far outside the head, but being too slow to escape, was thrust back by the external air, and rolled up underneath the skin, where it took root. Thus the hair sprang up in the skin, being akin to it because it is like threads of leather, but rendered harder and closer through the pressure of the cold, by which each hair, while in process of separation from the skin, is compressed and cooled. Wherefore the creator formed the head hairy, making use of the causes which I have mentioned, and reflecting also that instead of flesh the brain needed the hair to be a light covering or guard, which would give shade in summer and shelter in winter, and at the same time would not impede our quickness of perception. From the combination of sinew, skin, and bone, in the structure of the finger, there arises a triple compound, which, when dried up, takes the form of one hard skin partaking of all three natures, and was fabricated by these second causes,

but designed by mind which is the principal cause with an eye to the future. For our creators well knew that women and other animals would some day be framed out of men, and they further knew that many animals would require the use of nails for many purposes; wherefore they fashioned in men at their first creation the rudiments of nails. For this purpose and for these reasons they caused skin, hair, and nails to grow at the extremities of the limbs.

And now that all the parts and members of the mortal ⁷⁷animal had come together, since its life of necessity consisted of fire and breath, and it therefore wasted away by dissolution and depletion, the gods contrived the following remedy: They mingled a nature akin to that of man with other forms and perceptions, and thus created another kind of animal. These are the trees and plants and seeds which have been improved by cultivation and are now domesticated among us; anciently there were only the wild kinds, which are older than the cultivated. For everything that partakes of life may be truly called a living being, and the animal of which we are now speaking partakes of the third kind of soul, which is said to be seated between the midriff and the navel, having no part in opinion or reason or mind, but only in feelings of pleasure and pain and the desires which accompany them. For this nature is always in a passive state, revolving in and about itself, repelling the motion from without and using its own, and accordingly is not endowed by nature with the power of observing or reflecting on its own concerns. Wherefore it lives and does not differ from a living being, but is fixed and rooted in the same spot, having no power of self-motion.

Seeing that mankind would need food, trees and plants were created. These are animals and have life, being endowed with the lower mortal soul.

Now after the superior powers had created all these natures to be food for us who are of the inferior nature, they cut various channels through the body as through a garden, that it might be watered as from a running stream. In the first place, they cut two hidden channels or veins down the back where the skin and the flesh join, which answered severally to the right and left side of the body. These they let down along the backbone, so as to have the marrow of generation between them, where it was most likely to flourish, and in order that the stream coming down from above might flow freely to the other parts, and equalize the irrigation. In the next place, they divided the veins about the head, and interlacing them, they sent them in opposite directions; those coming from the right side they sent to the left of the body, and those from the left they diverted towards the right, so that they and the skin might together form a bond which should fasten the head to the body, since the crown of the head was not encircled by sinews; and also in order that the sensations from both sides might be distributed over the whole body. And next, they ordered the water-courses of the body in a manner which ⁷⁸I will describe, and which will be more easily understood if we begin by admitting that all things which have lesser parts retain the greater, but the greater cannot retain the lesser. Now of all natures fire has the smallest parts, and therefore penetrates through earth and water and air and their compounds, nor can anything hold it. And a similar principle applies to the human belly; for when meats

Next the gods cut two channels down the back, one on either side of the spine. After this they diverted the veins on the right of the head to the left of the body, and *vice versa*.

The underlying principle of the irrigation of the body is that finer elements can penetrate larger, but not larger elements finer.

and drinks enter it, it holds them, but it cannot hold air and fire, because the particles of which they consist are smaller than its own structure.

These elements, therefore, God employed for the sake of distributing moisture from the belly into the veins, weaving together a network of fire and air like a wheel, having at the entrance two lesser wheels; further he constructed one of these with two openings, and from the lesser wheels he extended cords reaching all round to the extremities of the network. All the interior of the net he made of fire, but the lesser wheels and their cavity, of air. The network he took and spread over the newly-formed animal in the following manner:—He let the lesser wheels pass into the mouth; there were two of them, and one he let down by the air-pipes into the lungs, the other by the side of the air-pipes into the belly. The former he divided into two branches, both of which he made to meet at the channels of the nose, so that when the way through the mouth did not act, the streams of the mouth as well were replenished through the nose. With the other cavity (i. e. of the greater wheel) he enveloped the hollow parts of the body, and at one time he made all this to flow into the lesser wheels, quite gently, for they are composed of air, and at another time he caused the lesser wheels to flow back again; and the net he made to find a way in and out through the pores of the body, and the rays of fire which are bound fast within followed the passage of the air either way, never at any time ceasing so long as the mortal being holds together. This process, as we affirm, the name-giver named inspiration and expiration. And all this movement, active as well as passive, takes place in order that the body, being watered and cooled, may receive nourishment and life; for when the respiration is going in and out, and the fire, which is fast bound within, follows it, and ever and anon moving to and fro, enters through the belly and reaches the meat and drink, it dissolves them, and dividing them into small portions and guiding them through the passages where it goes, pumps them as from a fountain into the channels of the veins, and makes the stream of the veins flow through the body as through a conduit.

So the surface of the trunk was made like a wheel of fire and air, containing within itself two lesser wheels (the chest and belly) of air. Alternately the interior of the greater wheel which consists of fire flows into the lesser wheels, and the lesser wheels into it. The outer wheel also finds its way in and out of the body,—the fire within

following the air in either direction. The motion of the fire into and out of the belly dissolves the food and pumps the blood into the veins.

Expiration and inspiration take place through the pores as well as through the mouth and nostrils. Expiration is due to the attraction of similars: the air on entering the body is heated, and then moves outward, seeking the place of fire. Inspiration is due to the impossibility of a vacuum; thus while

Let us once more consider the phenomena of respiration, and enquire into the causes which have made it what it is. They are as follows:—Seeing that there is no such thing as a vacuum into which any of those things which are moved can enter, and the breath is carried from us into the external air, the next point is, as will be clear to every one, that it does not go into a vacant space, but pushes its neighbour out of its place, and that which is thrust out in turn drives out its neighbour; and in this way everything of necessity at last comes round to that place from whence the breath came forth, and enters in there, and following the breath, fills up the vacant space; and this goes on like the rotation of a wheel, because there can be no such thing as a vacuum. Wherefore also the breast and the lungs, when they emit the breath, are replenished by the air which surrounds the body and which enters in through the pores of the flesh and is driven round in a circle; and again, the air which is sent away and passes out through the body forces the breath inwards through the passage of the mouth and the nostrils. Now the origin of this movement may be supposed to be as follows. In the interior of every animal the hottest part is that which is around the blood and veins; it is in a manner an internal fountain of fire, which we compare to the network of a creel, being woven all of fire and extended through the centre of the body, while the outer parts are composed of air. Now we must admit that heat naturally proceeds outward to its own place and to its kindred element; and as there are two exits for the heat, the one out through the body, and the other through the mouth and nostrils, when it moves towards the one, it drives round the air at the other, and that which is driven round falls into the fire and becomes warm, and that which goes forth is cooled. But when the heat changes its place, and the particles at the other exit grow warmer, the hotter air inclining in that direction and carried towards its native element, fire, pushes round the air at the other; and this being affected in the same way and communicating the same impulse, a circular motion swaying to and fro is produced by the double process, which we call inspiration and expiration.

air is breathed out of the body, other air must enter to fill the vacancy.

The phenomena of medical cupping-glasses and of the swallowing of drink and of the projection of bodies, whether discharged in the air or bowled along the ground, are to be investigated on a similar principle; and swift and slow sounds, which appear to be high and low, and are sometimes discordant on account of their inequality, and then again harmonical on account of the equality of the motion which they excite in us. For when the motions of the antecedent swifter sounds begin to pause and the two are equalized, the slower sounds overtake the swifter and then propel them. When they overtake them they do not intrude a new and discordant motion, but introduce the beginnings of a slower, which answers to the swifter as it dies away, thus producing a single mixed expression out of high and low, whence arises a pleasure which even the unwise feel, and which to the wise becomes a higher sort of delight, being an imitation of divine harmony in mortal motions. Moreover, as to the flowing of water, the fall of the thunderbolt, and the marvels that are observed about the attraction of amber and the Heracleian stones,—in none of these cases is there any attraction; but he who investigates rightly, will find that such wonderful phenomena are attributable to the combination of certain conditions,—the non-existence of a vacuum, the fact that

Other phenomena to be explained on a similar principle:—Cupping-glasses, swallowing of drink, projection of bodies, sounds swift and slow, flowing of water, fall of thunderbolts, magnetic stones.

objects push one another round, and that they change places, passing severally into their proper positions as they are divided or combined.

Such, as we have seen, is the nature and such are the causes of respiration,—the subject in which this discussion originated. For the fire cuts the food and following the breath surges up within, fire and breath rising together and filling the veins by drawing up out of the belly and pouring into them the cut portions of the food; and so the streams of food are kept flowing through the whole body in all animals. And fresh cuttings from kindred substances, whether the fruits of the earth or herb of the field, which God planted to be our daily food, acquire all sorts of colours by their intermixture; but red is the most pervading of them, being created by the cutting action of fire and by the impression which it makes on a moist substance; and hence the liquid which circulates in the body has a colour such as we have described. The liquid itself we call blood, which nourishes the flesh and the whole body, whence all parts are watered and empty places filled.

The red colour of blood is due to the action of fire.

Now the process of repletion and evacuation is effected after the manner of the universal motion by which all kindred substances are drawn towards one another. For the external elements which surround us are always causing us to consume away, and distributing and sending off like to like; the particles of blood, too, which are divided and contained within the frame of the animal as in a sort of heaven, are compelled to imitate the motion of the universe. Each, therefore, of the divided parts within us, being carried to its kindred nature, replenishes the void. When more is taken away than flows in, then we decay, and when less, we grow and increase.

The bodily processes of repletion and evacuation are caused by attraction.

The frame of the entire creature when young has the triangles of each kind new, and may be compared to the keel of a vessel which is just off the stocks; they are locked firmly together and yet the whole mass is soft and delicate, being freshly formed of marrow and nurtured on milk. Now when the triangles out of which meats and drinks are composed come in from without, and are comprehended in the body, being older and weaker than the triangles already there, the frame of the body gets the better of them and its newer triangles cut them up, and so the animal grows great, being nourished by a multitude of similar particles. But when the roots of the triangles are loosened by having undergone many conflicts with many things in the course of time, they are no longer able to cut or assimilate the food which enters, but are themselves easily divided by the bodies which come in from without. In this way every animal is overcome and decays, and this affection is called old age. And at last, when the bonds by which the triangles of the marrow are united no longer hold, and are parted by the strain of existence, they in turn loosen the bonds of the soul, and she, obtaining a natural release, flies away with joy. For that which takes place according to nature is pleasant, but that which is contrary to nature is painful. And thus death, if caused by

When the body is young, the triangles of which it is composed are new and strong, and overcome the triangles of the food; but in old age they are overcome by them.

Death takes place when the triangles of the marrow, becoming disunited, loosen the soul's bonds. A natural death is pleasant, a violent, painful.

disease or produced by wounds, is painful and violent; but that sort of death which comes with old age and fulfils the debt of nature is the easiest of deaths, and is accompanied with pleasure rather than with pain.

Now every one can see whence diseases arise. There are four natures out of which the body is compacted, earth and fire and water and air, and the unnatural excess or defect of these, or the change of any of them from its own natural place into another, or—since there are more kinds than one of fire and of the other elements—the assumption by any of these of a wrong kind, or any similar irregularity, produces disorders and diseases; for when any of them is produced or changed in a manner contrary to nature, the parts which were previously cool grow warm, and those which were dry become moist, and the light become heavy, and the heavy light; all sorts of changes occur. For, as we affirm, a thing can only remain the same with itself, whole and sound, when the same is added to it, or subtracted from it, in the same respect and in the same manner and in due proportion; and whatever comes or goes away in violation of these laws causes all manner of changes and infinite diseases and corruptions. Now there is a second class of structures which are also natural, and this affords a second opportunity of observing diseases to him who would understand them. For whereas marrow and bone and flesh and sinews are composed of the four elements, and the blood, though after another manner, is likewise formed out of them, most diseases originate in the way which I have described; but the worst of all owe their severity to the fact that the generation of these substances proceeds in a wrong order; they are then destroyed. For the natural order is that the flesh and sinews should be made of blood, the sinews out of the fibres to which they are akin, and the flesh out of the clots which are formed when the fibres are separated. And the glutinous and rich matter which comes away from the sinews and the flesh, not only glues the flesh to the bones, but nourishes and imparts growth to the bone which surrounds the marrow; and by reason of the solidity of the bones, that which filters through consists of the purest and smoothest and oiliest sort of triangles, dropping like dew from the bones and watering the marrow. Now when each process takes place in this order, health commonly results; when in the opposite order, disease. For when the flesh becomes decomposed and sends back the wasting substance into the veins, then an oversupply of blood of diverse kinds, mingling with air in the veins, having variegated colours and bitter properties, as well as acid and saline qualities, contains all sorts of bile and serum and phlegm. For all things go the wrong way, and having become corrupted, first they taint the blood itself, and then ceasing to give nourishment to the body they are carried along the veins in all directions, no longer preserving the order of their natural courses, but

Diseases of the body arise (i) when any of the four elements is out of place or there is too much or too little of them in any part:

and (ii) when blood, flesh, and sinews are produced in a wrong order.

The proper order is that flesh and sinew should be formed from blood, flesh from the liquid and sinew from the fibrous part of it; and that from these should exude a glutinous matter which nourishes bone and marrow. When this order is reversed, all sorts of bile and phlegm are generated.

The various kinds of bile.

Of phlegm there is an acid and a white sort.

Stages of the disease:—(1) When the flesh is attacked, if the foundations remain sound, there is less danger. (2) There is more when the flesh falls away from the sinews and bones. (3) Worse still are the prior disorders, such as crumbling away and gangrene of the bones; and (4) worst of all is disease of the spinal marrow.

at war with themselves, because they receive no good from one another, and are hostile to the abiding constitution of the body, which they corrupt and dissolve. The oldest part of the flesh which is corrupted, being hard to decompose, from long burning grows black, and from being everywhere corroded becomes bitter, and is injurious to every part of the body which is still uncorrupted. Sometimes, when the bitter element is refined away, the black part assumes an acidity which takes the place of the bitterness; at other times the bitterness being tinged with blood has a redder colour; and this, when mixed with black, takes the hue of grass¹; and again, an auburn colour mingles with the bitter matter when new flesh is decomposed by the fire which surrounds the internal flame;—to all which symptoms some physician perhaps, or rather some philosopher, who had the power of seeing in many dissimilar things one nature deserving of a name, has assigned the common name of bile. But the other kinds of bile are variously distinguished by their colours. As for serum, that sort which is the watery part of blood is innocent, but that which is a secretion of black and acid bile is malignant when mingled by the power of heat with any salt substance, and is then called acid phlegm. Again, the substance which is formed by the liquefaction of new and tender flesh when air is present, if inflated and encased in liquid so as to form bubbles, which separately are invisible owing to their small size, but when collected are of a bulk which is visible, and have a white colour arising out of the generation of foam—all this decomposition of tender flesh when intermingled with air is termed by us white phlegm. And the whey or sediment of newly-formed phlegm is sweat and tears, and includes the various daily discharges by which the body is purified. Now all these become causes of disease when the blood is not replenished in a natural manner by food and drink but gains bulk from opposite² sources in violation of the laws of nature. When the several parts of the flesh are separated by disease, if the foundation remains, the power of the disorder is only half as great, and there is still a prospect of an easy recovery; but when that which binds the flesh to the bones is diseased, and no longer being separated from the muscles and sinews³, ceases to give nourishment to the bone and to unite flesh and bone, and from being oily and smooth and glutinous becomes rough and salt and dry, owing to bad regimen, then all the substance thus corrupted crumbles away under the flesh and the sinews, and separates from the bone, and the fleshy parts fall away from their foundation and leave the sinews bare and full of brine, and the flesh again gets into the circulation of the blood and makes the previously-mentioned disorders still greater. And if these bodily affections be severe, still worse are the prior disorders; as when the bone itself, by reason of the density of the flesh, does not obtain sufficient air, but becomes mouldy and hot and gangrened and receives no nutriment, and the natural process is inverted, and the bone crumbling passes into the food, and the food into the flesh, and the flesh again falling into the blood makes all maladies that may occur more virulent than those already mentioned. But the worst case of all is when the marrow is diseased, either from excess or defect; and this is the cause of the very greatest and most fatal disorders, in which the whole course of the body is reversed.

(iii) A third class of diseases is produced
a. by wind—i. e.
 disorders of the lungs,

There is a third class of diseases which may be conceived of as arising in three ways; for they are produced sometimes by wind, and sometimes by phlegm, and sometimes by bile. When the lung, which is the dispenser of the air to the body, is obstructed by rheums and its passages are not free, some of them not acting, while through others too much air enters, then the parts which are unrefreshed by air corrode, while in other parts the excess of air forcing its way through the veins distorts them and decomposing the body is enclosed in the midst of it and occupies the midriff; thus numberless painful diseases are produced, accompanied by copious sweats. And oftentimes when the flesh is dissolved in the body, wind, generated within and unable to escape, is the source of quite as much pain as the air coming in from without; but the greatest pain is felt when the wind gets about the sinews and the veins of the shoulders, and swells them up, and so twists back the great tendons and the sinews which are connected with them. These disorders are called tetanus and opisthotonus, by reason of the tension which accompanies them. The cure of them is difficult; relief is in most cases ⁸⁵given by fever supervening. The white phlegm, though dangerous when detained within by reason of the air-bubbles, yet if it can communicate with the outside air, is less severe, and only discolours the body, generating leprous eruptions and similar diseases. When it is mingled with black bile and dispersed about the courses of the head, which are the divinest part of us, the attack if coming on in sleep, is not so severe; but when assailing those who are awake it is hard to be got rid of, and being an affection of a sacred part, is most justly called sacred. An acid and salt phlegm, again, is the source of all those diseases which take the form of catarrh, but they have many names because the places into which they flow are manifold.

tetanus and
opisthotonus;

b. by phlegm—i. e.
leprosy,

epilepsy,

and catarrh;

Inflammations of the body come from burnings and inflamings, and all of them originate in bile. When bile finds a means of discharge, it boils up and sends forth all sorts of tumours; but when imprisoned within, it generates many inflammatory diseases, above all when mingled with pure blood; since it then displaces the fibres which are scattered about in the blood and are designed to maintain the balance of rare and dense, in order that the blood may not be so liquefied by heat as to exude from the pores of the body, nor again become too dense and thus find a difficulty in circulating through the veins. The fibres are so constituted as to maintain this balance; and if any one brings them all together when the blood is dead and in process of cooling, then the blood which remains becomes fluid, but if they are left alone, they soon congeal by reason of the surrounding cold. The fibres having this power over the blood, bile, which is only stale blood, and which from being flesh is dissolved again into blood, at the first influx coming in little by little, hot and liquid, is congealed by the power of the fibres; and so congealing and made to cool, it produces internal cold and shuddering. When it enters with more of a flood and overcomes the fibres by its heat, and boiling up throws them into disorder, if it have power enough to maintain its supremacy, it penetrates the marrow and burns up what

quartan.

may be termed the cables of the soul, and sets her free; but when there is not so much of it, and the body though wasted still holds out, the bile is itself mastered, and is either utterly banished, or is thrust through the veins into the lower or upper belly, and is driven out of the body like an exile from 86a state in which there has been civil war; whence arise diarrhoeas and dysenteries, and all such disorders. When the constitution is disordered by excess of fire, continuous heat and fever are the result; when excess of air is the cause, then the fever is quotidian; when of water, which is a more sluggish element than either fire or air, then the fever is a tertian; when of earth, which is the most sluggish of the four, and is only purged away in a four-fold period, the result is a quartan fever, which can with difficulty be shaken off.

Such is the manner in which diseases of the body arise; the disorders of the soul, which depend upon the body, originate as follows. We must acknowledge disease of the mind to be a want of intelligence; and of this there are two kinds; to wit, madness and ignorance. In whatever state a man experiences either of them, that state may be called disease; and excessive pains and pleasures are justly to be regarded as the greatest diseases to which the soul is liable. For a man who is in great joy or in great pain, in his unseasonable eagerness to attain the one and to avoid the other, is not able to see or to hear anything rightly; but he is mad, and is at the time utterly incapable of any participation in reason. He who has the seed about the spinal marrow too

There are two kinds of mental disease,

madness and ignorance. Vice is due to an ill-disposition of the body,

and is involuntary.

Bad education and bad government increase the evil.

plentiful and overflowing, like a tree overladen with fruit, has many throes, and also obtains many pleasures in his desires and their offspring, and is for the most part of his life deranged, because his pleasures and pains are so very great; his soul is rendered foolish and disordered by his body; yet he is regarded not as one diseased, but as one who is voluntarily bad, which is a mistake. The truth is that the intemperance of love is a disease of the soul due chiefly to the moisture and fluidity which is produced in one of the elements by the loose consistency of the bones. And in general, all that which is termed the incontinence of pleasure and is deemed a reproach under the idea that the wicked voluntarily do wrong is not justly a matter for reproach. For no man is voluntarily bad; but the bad become bad by reason of an ill disposition of the body and bad education, things which are hateful to every man and happen to him against his will. And in the case of pain too in like manner the soul suffers much evil from the body. For where the acid and briny phlegm and other bitter and bilious humours wander about in the body, and find no exit or escape, but are pent up within and mingle their own vapours with the motions of 87the soul, and are blended, with them, they produce all sorts of diseases, more or fewer, and in every degree of intensity; and being carried to the three places of the soul, whichever they may severally assail, they create infinite varieties of illtemper and melancholy, of rashness and cowardice, and also of forgetfulness and stupidity. Further, when to this evil constitution of body evil forms of government are added and evil discourses are uttered in private as well as in public, and no sort of instruction is given in youth to cure these evils, then all of us who are bad become bad from two causes which are entirely beyond our control. In such cases the planters are to blame rather than the plants, the educators rather than the educated. But however that may be, we should

endeavour as far as we can by education, and studies, and learning, to avoid vice and attain virtue; this, however, is part of another subject.

There is a corresponding enquiry concerning the mode of treatment by which the mind and the body are to be preserved, about which it is meet and right that I should say a word in turn; for it is more our duty to speak of the good than of the evil. Everything that is good is fair, and the fair is not without proportion, and the animal which is to be fair must have due proportion. Now we perceive lesser symmetries or proportions and reason about them, but of the highest and greatest we take no heed; for there is no proportion or disproportion more productive of health and disease, and virtue and vice, than that between soul and body. This however we do not perceive, nor do we reflect that when a weak or small frame is the vehicle of a great and mighty soul, or conversely, when a little soul is encased in a large body, then the whole animal is not fair, for it lacks the most important of all symmetries; but the due proportion of mind and body is the fairest and loveliest of all sights to him who has the seeing eye. Just as a body which has a leg too long, or which is unsymmetrical in some other respect, is an unpleasant sight, and also, when doing its share of work, is much distressed and makes convulsive efforts, and often stumbles through awkwardness, and is the cause of infinite evil to its own self—in like manner we should conceive of the double nature which we call the living being; and when in this compound there is an impassioned soul more powerful than the body, that soul, I say, convulses and fills with disorders the whole inner nature of man; and when eager in the pursuit of some sort of learning or study, causes wasting; or again, when teaching or disputing in private or in public, and strifes and controversies arise, inflames and dissolves the composite frame of man and introduces rheums; and the nature of this phenomenon is not understood by most professors of medicine, who ascribe it to the opposite of the real cause. And once more, when a body large and too strong for the soul is united to a small and weak intelligence, then inasmuch as there are two desires natural to man,—one of food for the sake of the body, and one of wisdom for the sake of the diviner part of us—then, I say, the motions of the stronger, getting the better and increasing their own power, but making the soul dull, and stupid, and forgetful, engender ignorance, which is the greatest of diseases. There is one protection against both kinds of disproportion:—that we should not move the body without the soul or the soul without the body, and thus they will be on their guard against each other, and be healthy and well balanced. And therefore the mathematician or any one else whose thoughts are much absorbed in some intellectual pursuit, must allow his body also to have due exercise, and practise gymnastic; and he who is careful to fashion the body, should in turn impart to the soul its proper motions, and should cultivate music and all philosophy, if he would deserve to be called truly fair and truly good. And the separate parts should be treated in the same

The great means of preventing disease is to preserve the due proportion of mind and body.

The soul should not be allowed to wear out the body;

nor the body to enbrute the soul.

Both should be equally exercised: the mathematician should practise gymnastic, and the gymnast should study music.

Motion, as in the universe, so in the body, produces order and harmony.

The best exercise and purification is the spontaneous

motion of the body, as in gymnastic; less good is an external motion, as in sailing; least good the external motion of a part only produced by medicine. The last should be employed only in extreme cases.

manner, in imitation of the pattern of the universe; for as the body is heated and also cooled within by the elements which enter into it, and is again dried up and moistened by external things, and experiences these and the like affections from both kinds of motions, the result is that the body if given up to motion when in a state of quiescence is overmastered and perishes; but if any one, in imitation of that which we call the foster-mother and nurse of the universe, will not allow the body ever to be inactive, but is always producing motions and agitations through its whole extent, which form the natural defence against other motions both internal and external, and by moderate exercise reduces to order according to their affinities the particles and affections which are wandering about the body, as we have already said when speaking of the universe¹, he will not allow enemy placed by the side of enemy to stir up wars and disorders in the body, but he will place friend by the side of friend, so as to create health. Now of all motions that is the best which is produced in a thing by itself, for it is most akin to the motion of thought and of the universe; but that motion which is caused by others is not so good, and worst of all is that which moves the body, when at rest, in parts only and by some external agency. Wherefore of all modes of purifying and re-uniting the body the best is gymnastic; the next best is a surging motion, as in sailing or any other mode of conveyance which is not fatiguing; the third sort of motion may be of use in a case of extreme necessity, but in any other will be adopted by no man of sense: I mean the purgative treatment of physicians; for diseases unless they are very dangerous should not be irritated by medicines, since every form of disease is in a manner akin to the living being, whose complex frame has an appointed term of life. For not the whole race only, but each individual—barring inevitable accidents—comes into the world having a fixed span, and the triangles in us are originally framed with power to last for a certain time, beyond which no man can prolong his life. And this holds also of the constitution of diseases; if any one regardless of the appointed time tries to subdue them by medicine, he only aggravates and multiplies them. Wherefore we ought always to manage them by regimen, as far as a man can spare the time, and not provoke a disagreeable enemy by medicines.

Enough of the composite animal, and of the body which is a part of him, and of the manner in which a man may train and be trained by himself so as to live most according to reason: and we must above and before all provide that the element which is to train him shall be the fairest and best adapted to that purpose. A minute discussion of this subject would be a serious task; but if, as before, I am to give only an outline, the subject may not unfitly be summed up as follows.

Enough of the body. The soul, which trains it, must be tended with the utmost care.

I have often remarked that there are three kinds of soul located within us, having each of them motions, and I must now repeat in the fewest words possible, that one part, if remaining inactive and ceasing from its natural motion, must necessarily become very weak, but that which is trained and exercised, very strong. Wherefore we should take care that the movements of the different parts of the soul should be in due proportion.

The three parts of the soul should be duly exercised,

And we should consider that God gave the sovereign part of the human soul to be the divinity of each one, being that part which, as we say, dwells at the top of the body, and inasmuch as we are a plant not of an earthly but of a heavenly growth, raises us from earth to our kindred who are in heaven. And in this we say truly; for the divine power suspended the head and root of us from that place where the generation of the soul first began, and thus made the whole body upright. When a man is always occupied with the cravings of desire and ambition, and is eagerly striving to satisfy them, all his thoughts must be mortal, and, as far as it is possible altogether to become such, he must be mortal every whit, because he has cherished his mortal part. But he who has been earnest in the love of knowledge and of true wisdom, and has exercised his intellect more than any other part of him, must have thoughts immortal and divine, if he attain truth, and in so far as human nature is capable of sharing in immortality, he must altogether be immortal; and since he is ever cherishing the divine power, and has the divinity within him in perfect order, he will be perfectly happy. Now there is only one way of taking care of things, and this is to give to each the food and motion which are natural to it. And the motions which are naturally akin to the divine principle within us are the thoughts and revolutions of the universe. These each man should follow, and correct the courses of the head which were corrupted at our birth, and by learning the harmonies and revolutions of the universe, should assimilate the thinking being to the thought, renewing his original nature, and having assimilated them should attain to that perfect life which the gods have set before mankind, both for the present and the future.

especially the divine part.

For if a man neglects it and is the slave of desire and ambition, he cannot attain to immortality.

The motions of reason are akin to the thoughts and revolutions of the universe.

Thus our original design of discoursing about the universe down to the creation of man is nearly completed. A brief mention may be made of the generation of other animals, so far as the subject admits of brevity; in this manner our argument will best attain a due proportion. On the subject of animals, then, the following remarks may be offered. Of the men who came into the world, those who were cowards or led unrighteous lives may with reason be supposed to have changed into the nature of women in the second generation. 91 And this was the reason why at that time the gods created in us the desire of sexual intercourse, contriving in man one animated substance, and in woman another, which they formed respectively in the following manner. The outlet for drink by which liquids pass through the lung under the kidneys and into the bladder, which receives and then by the pressure of the air emits them, was so fashioned by them as to penetrate also into the body of the marrow, which passes from the head along the neck and through the back, and which in the preceding discourse we have named the seed. And the seed having life, and becoming endowed with respiration, produces in that part in which it respire a lively desire of emission, and thus creates in us the love of procreation. Wherefore also in men the organ of generation becoming rebellious and masterful, like an animal disobedient to reason, and maddened with the sting of lust, seeks to gain absolute sway; and the same is the case with the so-called womb or matrix of women; the animal within them is desirous of procreating children, and when remaining unfruitful

We have spoken of the origin of man. Women and the other animals were generated on this wise. Cowardly and unjust men became women in the second generation.

long beyond its proper time, gets discontented and angry, and wandering in every direction through the body, closes up the passages of the breath, and, by obstructing respiration, drives them to extremity, causing all varieties of disease, until at length the desire and love of the man and the woman, bringing them together¹ and as it were plucking the fruit from the tree, sow in the womb, as in a field, animals unseen by reason of their smallness and without form; these again are separated and matured within; they are then finally brought out into the light, and thus the generation of animals is completed.

Thus were created women and the female sex in general. But the race of birds was created out of innocent light-minded men, who, although their minds were directed toward heaven, imagined, in their simplicity, that the clearest demonstration of the things above was to be obtained by sight; these were remodelled and transformed into birds, and they grew feathers instead of hair. The race of wild pedestrian animals, again, came from those who had no philosophy in any of their thoughts, and never considered at all about the nature of the heavens, because they had ceased to use the courses of the head, but followed the guidance of those parts of the soul which are in the breast. In consequence of these habits of theirs they had their front-legs and their heads resting upon the earth to which they were drawn by natural affinity; and the crowns of their heads were elongated and of all sorts of shapes, into which the courses of the soul were crushed by reason of disuse. And this was the reason why they were created quadrupeds and polypods: God gave the more senseless of them the more support that they might be more attracted to the earth. And the most foolish of them, who trail their bodies entirely upon the ground and have no longer any need of feet, he made without feet to crawl upon the earth. The fourth class were the inhabitants of the water: these were made out of the most entirely senseless and ignorant of all, whom the transformers did not think any longer worthy of pure respiration, because they possessed a soul which was made impure by all sorts of transgression; and instead of the subtle and pure medium of air, they gave them the deep and muddy sea to be their element of respiration; and hence arose the race of fishes and oysters, and other aquatic animals, which have received the most remote habitations as a punishment of their outlandish ignorance. These are the laws by which animals pass into one another, now, as ever, changing as they lose or gain wisdom and folly.

Simple-minded men passed into birds;

those who were the slaves of passion into beasts;

the most foolish into reptiles;

the most ignorant and impure into fish.

We may now say that our discourse about the nature of the universe has an end. The world has received animals, mortal and immortal, and is fulfilled with them, and has become a visible animal containing the visible—the sensible God who is the image of the intellectual¹, the greatest, best, fairest, most perfect—the one only-begotten heaven.

Our task is now completed.

TIMAEUS.

106 How thankful I am, Socrates, that I have arrived at last, and, like a weary traveller after a long journey, may be at rest! And I pray the being who always was of old, and has now been by me revealed, to grant that my words may endure in so far as they have been spoken truly and acceptably to him; but if unintentionally I have said anything wrong, I pray that he will impose upon me a just retribution, and the just retribution of him who errs is that he should be set right. Wishing, then, to speak truly in future concerning the generation of the gods, I pray him to give me knowledge, which of all medicines is the most perfect and best. And now having offered my prayer I deliver up the argument to Critias, who is to speak next according to our agreement¹.

Critias.

Timaeus, Critias.

Timaeus prays to the 'ancient of days' that the truth of his words may endure, and for enlightenment where he has erred.

CRITIAS.

And I, Timaeus, accept the trust, and as you at first said that you were going to speak of high matters, and begged that some forbearance might be shown to you, I too ask the same or greater forbearance for what I am about to say. And although I very well know that my request may appear to be somewhat ambitious and discourteous, I must make it nevertheless. For will any man of sense deny that you have spoken well? I can only attempt to show that I ought to have more indulgence than you, because my theme is more difficult; and I shall argue that to seem to speak well of the gods to men is far easier than to speak well of men to men: for the inexperience and utter ignorance of his hearers about any subject is a great assistance to him who has to speak of it, and we know how ignorant we are concerning the gods. But I should like to make my meaning clearer, if you will follow me. All that is said by any of us can only be imitation and representation. For if we consider the likenesses which painters make of bodies divine and heavenly, and the different degrees of gratification with which the eye of the spectator receives them, we shall see that we are satisfied

Critias asks for greater indulgence than was shown to Timaeus on the ground that it is easier to speak well of the Gods, whom we do not

Critias, Socrates.

know, than of men, whom we do. An illustration.

with the artist who is able in any degree to imitate the earth and its mountains, and the rivers, and the woods, and the universe, and the things that are and move therein, and further, that knowing nothing precise about such matters, we do not examine or analyze the painting; all that is required is a sort of indistinct and deceptive mode of shadowing them forth. But when a person endeavours to paint the human form we are quick at finding out defects, and our familiar knowledge makes us severe judges of any one who does not render every point of similarity. And we may observe the same thing to happen in discourse; we are satisfied with a picture of divine and heavenly things which has very little likeness to them; but we are more precise in our criticism of mortal and human things. Wherefore if at the moment of speaking I cannot suitably express my meaning, you must excuse me, considering that to form approved likenesses of human things is the reverse of easy. This is what I want to suggest to you, and at the same time to beg, Socrates, that I may have not less, but more indulgence conceded to me in what I am about to say. Which favour, if I am right in asking, I hope that you will be ready to grant.

SOCRATES.

Certainly, Critias, we will grant your request, and we will grant the same by anticipation to Hermocrates, as well as to you and Timaeus; for I have no doubt that when his turn comes a little while hence, he will make the same request which you have made. In order, then, that he may provide himself with a fresh beginning, and not be compelled to say the same things over again, let him understand that the indulgence is already extended by anticipation to him. And now, friend Critias, I will announce to you the judgment of the theatre. They are of opinion that the last performer was wonderfully successful, and that you will need a great deal of indulgence before you will be able to take his place.

Socrates grants the indulgence, and, not to have the same request repeated, extends it to Hermocrates.

Socrates, Critias, Hermocrates.

HERMOCRATES.

The warning, Socrates, which you have addressed to him, I must also take to myself. But remember, Critias, that faint heart never yet raised a trophy; and therefore you must go and attack the argument like a man. First invoke Apollo and the Muses, and then let us hear you sound the praises and show forth the virtues of your ancient citizens.

CRIT.

Friend Hermocrates, you, who are stationed last and have another in front of you, have not lost heart as yet; the gravity of the situation will soon be revealed to you; meanwhile I accept your exhortations and encouragements. But besides the gods and goddesses whom you have mentioned, I would specially invoke Mnemosyne; for all the important part of my discourse is dependent on her favour, and if I can recollect and recite enough of what was said by the priests and brought hither by Solon, I doubt not that I shall

Critias invokes the aid of Mnemosyne.

satisfy the requirements of this theatre. And now, making no more excuses, I will proceed.

Let me begin by observing first of all, that nine thousand was the sum of years which had elapsed since the war which was said to have taken place between those who dwelt outside the pillars of Heracles and all who dwelt within them; this war I am going to describe. Of the combatants on the one side, the city of Athens was reported to have been the leader and to have fought out the war; the combatants on the other side were commanded by the kings of Atlantis, which, as I was saying, was an island greater in extent than Libya and Asia, and when afterwards sunk by an earthquake, became an impassable barrier of mud to voyagers sailing from hence to any part of the ocean. The progress of the history will unfold the various nations of barbarians and families of Hellenes which then existed, as they successively appear on the scene; but I must describe first of all the Athenians of that day, and their enemies who fought with them, and then the respective powers and governments of the two kingdoms. Let us give the precedence to Athens.

The subject is the war between Athens and Atlantis.

He proposes to speak first of Athens.

Critias.

In the days of old, the gods had the whole earth distributed among them by allotment¹. There was no quarrelling; for you cannot rightly suppose that the gods did not know what was proper for each of them to have, or, knowing this, that they would seek to procure for themselves by contention that which more properly belonged to others. They all of them by just apportionment obtained what they wanted, and people their own districts; and when they had peopled them they tended us, their nurselings and possessions, as shepherds tend their flocks, excepting only that they did not use blows or bodily force, as shepherds do, but governed us like pilots from the stern of the vessel, which is an easy way of guiding animals, holding our souls by the rudder of persuasion according to their own pleasure;—thus did they guide all mortal creatures. Now different gods had their allotments in different places which they set in order. Hephaestus and Athene, who were brother and sister, and sprang from the same father, having a common nature, and being united also in the love of philosophy and art, both obtained as their common portion this land, which was naturally adapted for wisdom and virtue; and there they implanted brave children of the soil, and put into their minds the order of government; their names are preserved, but their actions have disappeared by reason of the destruction of those who received the tradition, and the lapse of ages. For when there were any survivors, as I have already said, they were men who dwelt in the mountains; and they were ignorant of the art of writing, and had heard only the names of the chiefs of the land, but very little about their actions. The names they were willing enough to give to their children; but the virtues and the laws of their predecessors, they knew only by obscure traditions; and as they themselves and their children lacked for many generations the necessities of life, they directed their attention to the supply of their wants, and of them they conversed, to the neglect of events that had happened in times long past; for mythology and the enquiry into

When the Gods divided the earth, the land of Attica was allotted to Hephaestus and Athene, who implanted there brave children of the soil. Of these the history was lost, but their names remained.

The men and women had military pursuits in common.

antiquity are first introduced into cities when they begin to have leisure¹, and when they see that the necessities of life have already been provided, but not before. And this is the reason why the names of the ancients have been preserved to us and not their actions. This I infer because Solon said that the priests in their narrative of that war mentioned most of the names which are recorded prior to the time of Theseus, such as Cecrops, and Erechtheus, and Erichthonius, and Erysichthon, and the names of the women in like manner. Moreover, since military pursuits were then common to men and women, the men of those days in accordance with the custom of the time set up a figure and image of the goddess in full armour, to be a testimony that all animals which associate together, male as well as female, may, if they please, practise in common the virtue which belongs to them without distinction of sex.

Now the country was inhabited in those days by various classes of citizens;—there were artisans, and there were husbandmen, and there was also a warrior class originally set apart by divine men. The latter dwelt by themselves, and had all things suitable for nurture and education; neither had any of them anything of their own, but they regarded all that they had as common property; nor did they claim to receive of the other citizens anything more than their necessary food. And they practised all the pursuits which we yesterday described as those of our imaginary guardians. Concerning the country the Egyptian priests said what is not only probable but manifestly true, that the boundaries were in those days fixed by the Isthmus, and that in the direction of the continent they extended as far as the heights of Cithaeron and Parnes; the boundary line came down in the direction of the sea, having the district of Oropus on the right, and with the river Asopus as the limit on the left. The land was the best in the world, and was therefore able in those days to support a vast army, raised from the surrounding people. Even the remnant of Attica which now exists may compare with any region in the world for the variety and excellence of its fruits and the suitability of its pastures to every sort of animal, which proves what I am saying; but in those days the country was fair as now and yielded far more abundant produce. How shall I establish my words? and what part of it can be truly called a remnant of the land that then was? The whole country is only a long promontory extending far into the sea away from the rest of the continent, while the surrounding basin of the sea is everywhere deep in the neighbourhood of the shore. Many great deluges have taken place during the nine thousand years, for that is the number of years which have elapsed since the time of which I am speaking; and during all this time and through so many changes, there has never been any considerable accumulation of the soil coming down from the mountains, as in other places, but the earth has fallen away all round and sunk out of sight. The consequence is, that in comparison of what then was, there are remaining only the bones of the wasted body, as they may be called, as in the case of small islands, all the richer and softer parts of the soil having fallen away, and the mere skeleton of the land being left. But in the primitive state of the country, its mountains were high hills covered with soil, and the plains, as they are termed by us, of Phelleus were full of rich earth, and there was abundance of wood in the mountains. Of this last the traces still remain,

Castes.

although the land is a
mere skeleton from
which the richer and
softer parts have been
washed away.

for although some of the mountains now only afford sustenance to bees, not so very long ago there were still to be seen roofs of timber cut from trees growing there, which were of a size sufficient to cover the largest houses; and there were many other high trees, cultivated by man and bearing abundance of food for cattle. Moreover, the land reaped the benefit of the annual rainfall, not as now losing the water which flows off the bare earth into the sea, but, having an abundant supply in all places, and receiving it into herself and treasuring it up in the close clay soil, it let off into the hollows the streams which it absorbed from the heights, providing everywhere abundant fountains and rivers, of which there may still be observed sacred memorials in places where fountains once existed; and this proves the truth of what I am saying.

Such was the natural state of the country, which was cultivated, as we may well believe, by true husbandmen, who made husbandry their business, and were lovers of honour, and of a noble nature, and had a soil the best in the world, and abundance of water, and in the heaven above an excellently tempered climate. Now the city in those days was arranged on this wise. In the first place the Acropolis was 112not as now. For the fact is that a single night of excessive rain washed away the earth and laid bare the rock; at the same time there were earthquakes, and then occurred the extraordinary inundation, which was the third before the great destruction of Deucalion. But in primitive times the hill of the Acropolis extended to the Eridanus and Ilissus, and included the Pnyx on one side, and the Lycabettus as a boundary on the opposite side to the Pnyx, and was all well covered with soil, and level at the top, except in one or two places. Outside the Acropolis and under the sides of the hill there dwelt artisans, and such of the husbandmen as were tilling the ground near; the

warrior class dwelt by themselves around the temples of Athene and Hephaestus at the summit, which moreover they had enclosed with a single fence like the garden of a single house. On the north side they had dwellings in common and had erected halls for dining in winter, and had all the buildings which they needed for their common life, besides temples, but there was no adorning of them with gold and silver, for they made no use of these for any purpose; they took a middle course between meanness and ostentation, and built modest houses in which they and their children's children grew old, and they handed them down to others who were like themselves, always the same. But in summer-time they left their gardens and gymnasia and dining halls, and then the southern side of the hill was made use of by them for the same purpose. Where the Acropolis now is there was a fountain, which was choked by the earthquake, and has left only the few small streams which still exist in the vicinity, but in those days the fountain gave an abundant supply of water for all and of suitable temperature in summer and in winter. This is how they dwelt, being the guardians of their own citizens and the leaders of the Hellenes, who were their willing followers. And they took care to preserve the same number of men and women through all time, being so many as were required for warlike purposes, then as now,—that is to say, about twenty thousand. Such were the ancient Athenians, and after this manner they righteously administered their own land and the rest of Hellas; they were renowned all over Europe and Asia for the beauty of their persons and for the many virtues of their

souls, and of all men who lived in those days they were the most illustrious. And next, if I have not forgotten what I heard when I was a child, I will impart to you the character and origin of their adversaries. For friends should not keep their stories to themselves, but have them in common.

113 Yet, before proceeding further in the narrative, I ought to warn you, that you must not be surprised if you should perhaps hear Hellenic names given to foreigners. I will tell you the reason of this: Solon, who was intending to use the tale for his poem, enquired into the meaning of the names, and found that the early Egyptians in writing them down had translated them into their own language, and he recovered the meaning of the several names and when copying them out again translated them into our language. My great-grandfather, Dropides, had the original writing, which is still in my possession, and was carefully studied by me when I was a child. Therefore if you hear names such as are used in this country, you must not be surprised, for I have told how they came to be introduced. The tale, which was of great length, began as follows:—

Explanation of the occurrence of Greek names in the narrative.

The originals still in existence.

I have before remarked in speaking of the allotments of the gods, that they distributed the whole earth into portions differing in extent, and made for themselves temples and instituted sacrifices. And Poseidon, receiving for his lot the island of Atlantis, begat children by a mortal woman, and settled them in a part of the island, which I will describe. Looking towards the sea, but in the centre of the whole island, there was a plain which is said to have been the fairest of all plains and very fertile. Near the plain again, and also in the centre of the island at a distance of about fifty stadia, there was a mountain not very high on any side. In this mountain there dwelt one of the earth-born primeval men of that country, whose name was Evenor, and he had a wife named Leucippe, and they had an only daughter who was called Cleito. The maiden had already reached womanhood, when her father and mother died; Poseidon fell in love with her and had intercourse with her, and breaking the ground, inclosed the hill in which she dwelt all round, making alternate zones of sea and land larger and smaller, encircling one another; there were two of land and three of water, which he turned as with a lathe, each having its circumference equidistant every way from the centre, so that no man could get to the island, for ships and voyages were not as yet. He himself, being a god, found no difficulty in making special arrangements for the centre island, bringing up two springs of water from beneath the earth, one of warm water and the other of cold, and making every variety of food to spring up abundantly from the soil. He also begat and brought up five pairs of twin male children; and dividing the island of 114 Atlantis into ten portions, he gave to the first-born of the eldest pair his mother's dwelling and the surrounding allotment, which was the largest and best, and made him king over the rest; the others he made princes, and gave them rule over many men, and a large territory. And he named them all; the eldest, who was the first king, he named Atlas,

and after him the whole island and the ocean were called Atlantic. To his twin brother, who was born after him, and obtained as his lot the extremity of the island towards the pillars of Heracles, facing the country which is now called the region of Gades in that part of the world, he gave the name which in the Hellenic language is Eumelus, in the language of the country which is named after him, Gadeirus. Of the second pair of twins he called one Ampheres, and the other Evaemon. To the elder of the third pair of twins he gave the name Mneseus, and Autochthon to the one who followed him. Of the fourth pair of twins he called the elder Elasippus, and the younger Mestor. And of the fifth pair he gave to the elder the name of Azaes, and to the younger that of Diaprepes. All these and their descendants for many generations were the inhabitants and rulers of divers islands in the open sea; and also, as has been already said, they held sway in our direction over the country within the pillars as far as Egypt and Tyrrhenia. Now Atlas had a numerous and honourable family, and they retained the kingdom, the eldest son handing it on to his eldest for many generations; and they had such an amount of wealth as was never before possessed by kings and potentates, and is not likely ever to be again, and they were furnished with everything which they needed, both in the city and country. For because of the greatness of their empire many things were brought to them from foreign countries, and the island itself provided most of what was required by them for the uses of life. In the first place, they dug out of the earth whatever was to be found there, solid as well as fusile, and that which is now only a name and was then something more than a name, orichalcum, was dug out of the earth in many parts of the island, being more precious in those days than anything except gold. There was an abundance of wood for carpenter's work, and sufficient maintenance for tame and wild animals. Moreover, there were a great number of elephants 115 in the island; for as there was provision for all other sorts of animals, both for those which live in lakes and marshes and rivers, and also for those which live in mountains and on plains, so there was for the animal which is the largest and most voracious of all. Also whatever fragrant things there now are in the earth, whether roots, or herbage, or woods, or essences which distil from fruit and flower, grew and thrived in that land; also the fruit which admits of cultivation, both the dry sort, which is given us for nourishment and any other which we use for food—we call them all by the common name of pulse, and the fruits having a hard rind, affording drinks and meats and ointments, and good store of chestnuts and the like, which furnish pleasure and amusement, and are fruits which spoil with keeping, and the pleasant kinds of dessert, with which we console ourselves after dinner, when we are tired of eating—all these that sacred island which then beheld the light of the sun, brought forth fair and wondrous and in infinite abundance. With such blessings the earth freely furnished them; meanwhile they went on constructing their temples and palaces and harbours and docks. And they arranged the whole country in the following manner:—

The bridges over the zones. The royal palace.

The great canal.

The harbour.

First of all they bridged over the zones of sea which surrounded the ancient metropolis, making a road to and from the royal palace. And at the very beginning they built the palace in the habitation of the god and of their ancestors, which they continued to ornament in successive generations, every king surpassing the one who went before him to the utmost of his power, until they made the building a marvel to behold for size and for beauty. And beginning from the sea they bored a canal of three hundred feet in width and one hundred feet in depth and fifty stadia in length, which they carried through to the outermost zone, making a passage from the sea up to this, which became a harbour, and leaving an opening sufficient to enable the largest vessels to find ingress. Moreover, they divided at the bridges the zones of land which parted the zones of sea, leaving room for a single trireme to pass out of one zone into another, and they covered over the channels so as to leave a way underneath for the ships; for the banks were raised considerably above the water. Now the largest of the zones into which a passage was cut from the sea was three stadia in breadth, and the zone of land which came next of equal breadth; but the next two zones, the one of water, the other of land, were two stadia, and the one which surrounded the central island was a 116stadium only in width. The island in which the palace was situated had a diameter of five stadia. All this including the zones and the bridge, which was the sixth part of a stadium in width, they surrounded by a stone wall on every side, placing towers and gates on the bridges where the sea passed in. The stone which was used in the work they quarried from underneath the centre island, and from underneath the zones, on the outer as well as the inner side. One kind was white, another black, and a third red, and as they quarried, they at the same time hollowed out double docks, having roofs formed out of the native rock. Some of their buildings were simple, but in others they put together different stones, varying the colour to please the eye, and to be a natural source of delight. The entire circuit of the wall, which went round the outermost zone, they covered with a coating of brass, and the circuit of the next wall they coated with tin, and the third, which encompassed the citadel, flashed with the red light of orichalcum. The palaces in the interior of the citadel were constructed on this wise:—In the centre was a holy temple dedicated to Cleito and Poseidon, which remained inaccessible, and was surrounded by an enclosure of gold; this was the spot where the family of the ten princes first saw the light, and thither the people annually brought the fruits of the earth in their season from all the ten portions, to be an offering to each of the ten. Here was Poseidon's own temple which was a stadium in length, and half a stadium in width, and of a proportionate height, having a strange barbaric appearance. All the outside of the temple, with the exception of the pinnacles, they covered with silver, and the pinnacles with gold. In the interior of the temple the roof was of ivory, curiously wrought everywhere with gold and silver and orichalcum; and all the other parts, the walls and pillars and floor, they coated with orichalcum. In the temple they placed statues of gold: there was the god himself standing in a chariot—the charioteer of six winged horses—and of such a size that he touched the roof of the building with his head; around him there were a hundred Nereids riding on dolphins, for such was thought to be the number of them by the men of those days. There were also in the interior of the temple other images which had

and of the centre island.
The walls surrounding the zones: their variegated appearance.
The temple of Cleito and Poseidon.
Splendour of Poseidon's own temple.

been dedicated by private persons. And around the temple on the outside were placed statues of gold of all the descendants of the ten kings and of their wives, and there were many other great offerings of kings and of private persons, coming both from the city itself and from the foreign cities over which they held sway. There was an altar too, which in size and workmanship corresponded to this magnificence, 117 and the palaces, in like manner, answered to the greatness of the kingdom and the glory of the temple.

In the next place, they had fountains, one of cold and another of hot water, in gracious plenty flowing; and they were wonderfully adapted for use by reason of the pleasantness and excellence of their waters¹. They constructed buildings about them and planted suitable trees; also they made cisterns, some open to the heaven, others roofed over, to be used in winter as warm baths; there were the kings' baths, and the baths of private persons, which were kept apart; and there were separate baths for women, and for horses and cattle, and to each of them they gave as much adornment as was suitable. Of the water which ran off they carried some to the grove of Poseidon, where were growing all manner of trees of wonderful height and beauty, owing to the excellence of the soil, while the remainder was conveyed by aqueducts along the bridges to the outer circles; and there were many temples built and dedicated to many gods; also gardens and places of exercise, some for men, and others for horses in both of the two islands formed by the zones; and in the centre of the larger of the two there was set apart a race-course of a stadium in width, and in length allowed to extend all round the island, for horses to race in. Also there were guard-houses at intervals for the guards, the more trusted of whom were appointed to keep watch in the lesser zone, which was nearer the Acropolis; while the most trusted of all had houses given them within the citadel, near the persons of the kings. The docks were full of triremes and naval stores, and all things were quite ready for use. Enough of the plan of the royal palace.

Springs.

Baths.

The grove of Poseidon.

Guardhouses.

Docks.

Leaving the palace and passing out across the three harbours, you came to a wall which began at the sea and went all round: this was everywhere distant fifty stadia from the largest zone or harbour, and enclosed the whole, the ends meeting at the mouth of the channel which led to the sea. The entire area was densely crowded with habitations; and the canal and the largest of the harbours were full of vessels and merchants coming from all parts, who, from their numbers, kept up a multitudinous sound of human voices, and din and clatter of all sorts night and day.

Between the outermost wall and the great harbour was the mercantile quarter.

The city lay in an oblong plain, surrounded by mountains, which

I have described the city and the environs of the ancient palace nearly in the words of Solon, and now I must endeavour to represent to you the nature and arrangement of the rest of the land. The whole country was said by him to be very lofty and precipitous on the side of the sea, but the country immediately about and surrounding the city was a level plain, itself surrounded by mountains which descended towards the sea; it was smooth and even, and of an oblong shape, extending in one direction three thousand stadia, but across the centre inland it was two thousand stadia. This part of the island looked towards the south, and was sheltered from the north. The surrounding mountains were celebrated for their number and size and beauty, far beyond any which still exist, having in them also many wealthy villages of country folk, and rivers, and lakes, and meadows supplying food enough for every animal, wild or tame, and much wood of various sorts, abundant for each and every kind of work.

descended abruptly into the sea.

I will now describe the plain, as it was fashioned by nature and by the labours of many generations of kings through long ages. It was for the most part rectangular and oblong, and where falling out of the straight line followed the circular ditch. The depth, and width, and length of this ditch were incredible, and gave the impression that a work of such extent, in addition to so many others, could never have been artificial. Nevertheless I must say what I was told. It was excavated to the depth of a hundred feet, and its breadth was a stadium everywhere; it was carried round the whole of the plain, and was ten thousand stadia in length. It received the streams which came down from the mountains, and winding round the plain and meeting at the city, was there let off into the sea. Further inland, likewise, straight canals of a hundred feet in width were cut from it through the plain, and again let off into the ditch leading to the sea: these canals were at intervals of a hundred stadia, and by them they brought down the wood from the mountains to the city, and conveyed the fruits of the earth in ships, cutting transverse passages from one canal into another, and to the city. Twice in the year they gathered the fruits of the earth—in winter having the benefit of the rains of heaven, and in summer the water which the land supplied by introducing streams from the canals.

The great foss, 100 feet in depth, 600 in width, and 10,000 stadia in length.

The cross canals.

Two harvests.

As to the population, each of the lots in the plain had to find a leader for the men who were fit for military service, and the size of a lot was a square of ten stadia each way, and the total number of all the lots was sixty thousand. And of the inhabitants of the mountains and of the rest of the country there was also a vast multitude, which was distributed among the lots and had leaders assigned to them according to their districts and villages. The leader was required to furnish for the war the sixth portion of a war-chariot, so as to make up a total of ten thousand chariots; also two horses and riders for them, and a pair of chariot-horses without a seat, accompanied by a horseman who could fight on foot carrying a small shield, and having a charioteer who stood behind the man-at-arms to guide the two horses; also, he was bound to furnish two heavy-armed soldiers, two archers, two slingers, three stone-shooters and three javelinmen, who were light-armed, and four sailors to make up the complement of twelve hundred ships. Such

60,000 lots and 60,000 officers.

Military strength: 10,000 chariots, 1,200 ships, &c.

was the military order of the royal city—the order of the other nine governments varied, and it would be wearisome to recount their several differences.

As to offices and honours, the following was the arrangement from the first. Each of the ten kings in his own division and in his own city had the absolute control of the citizens, and, in most cases, of the laws, punishing and slaying whomsoever he would. Now the order of precedence among them and their mutual relations were regulated by the commands of Poseidon which the law had handed down. These were inscribed by the first kings on a pillar of orichalcum, which was situated in the middle of the island, at the temple of Poseidon, whither the kings were gathered together every fifth and every sixth year alternately, thus giving equal honour to the odd and to the even number. And when they were gathered together they consulted about their common interests, and enquired if any one had transgressed in anything, and passed judgment, and before they passed judgment they gave their pledges to one another on this wise:—There were bulls who had the range of the temple of Poseidon; and the ten kings, being left alone in the temple, after they had offered prayers to the god that they might capture the victim which was acceptable to him, hunted the bulls, without weapons, but with staves and nooses; and the bull which they caught they led up to the pillar and cut its throat over the top of it so that the blood fell upon the sacred inscription. Now on the pillar, besides the laws, there was inscribed an oath invoking mighty curses on the disobedient. When therefore, after slaying the bull in the accustomed manner, they had burnt its limbs, they filled a bowl of wine and cast in a clot of blood for each of them; the rest of the victim they put in the fire, after having purified the column all round. Then they drew from the bowl in golden cups, and pouring a libation on the fire, they swore that they would judge according to the laws on the pillar, and would punish him who in any point had already transgressed them, and that for the future they would not, if they could help, offend against the writing on the pillar, and would neither command others, nor obey any ruler who commanded them, to act otherwise than according to the laws of their father Poseidon. This was the prayer which each of them offered up for himself and for his descendants, at the same time drinking and dedicating the cup out of which he drank in the temple of the god; and after they had supped and satisfied their needs, when darkness came on, and the fire about the sacrifice was cool, all of them put on most beautiful azure robes, and, sitting on the ground, at night, over the embers of the sacrifices by which they had sworn, and extinguishing all the fire about the temple, they received and gave judgment, if any of them had an accusation to bring against any one; and when they had given judgment, at daybreak they wrote down their sentences on a golden tablet, and dedicated it together with their robes to be a memorial.

Laws affecting the kings inscribed on a column of orichalcum.

Administration of these laws by the ten kings in the temple of Poseidon, after sacrifice and prayer.

They put on azure robes when they gave judgment, and recorded their decisions on golden tablets.

The kings were not to take up arms against one another, but were

There were many special laws affecting the several kings inscribed about the temples, but the most important was the following: They were not to take up arms against one another, and they were all to come to the rescue if any one in any of their cities attempted to overthrow the royal house; like their ancestors, they were to deliberate in common about war and other matters, giving the supremacy to the descendants of Atlas. And the king was not to have the power of life and death over any of his kinsmen unless he had the assent of the majority of the ten.

to unite for mutual defence.

Such was the vast power which the god settled in the lost island of Atlantis; and this he afterwards directed against our land for the following reasons, as tradition tells: For many generations, as long as the divine nature lasted in them, they were obedient to the laws, and well-affectioned towards the god, whose seed they were; for they possessed true and in every way great spirits, uniting gentleness with wisdom in the various chances of life, and in their intercourse with one another. They despised everything but virtue, caring little for their present state of life, and thinking lightly of the possession of gold and other property, which seemed only a burden to them; neither were they intoxicated by luxury; nor did wealth deprive them of their self-control; but they were sober, and saw clearly that all these goods are increased by virtue and friendship with one another, whereas by too great regard and respect for them, they are lost and friendship with them. By such reflections and by the continuance in them of a divine nature, the qualities which we have described grew and increased among them; but when the divine portion began to fade away, and became diluted too often and too much with the mortal admixture, and the human nature got the upper hand, they then, being unable to bear their fortune, behaved unseemly, and to him who had an eye to see, grew visibly debased, for they were losing the fairest of their precious gifts; but to those who had no eye to see the true happiness, they appeared glorious and blessed at the very time when they were full of avarice and unrighteous power. Zeus, the god of gods, who rules according to law, and is able to see into such things, perceiving that an honourable race was in a woeful plight, and wanting to inflict punishment on them, that they might be chastened and improve, collected all the gods into their [1](#) most holy habitation, which, being placed in the centre of the world, beholds all created things. And when he had called them together, he spake as follows:—

The virtues of the people of Atlantis were great so long as the divine element

lasted in them; but when this grew weaker, they degenerated.

Intimation of the overthrow of Atlantis.

[\[1\]](#) Cp. Sir G. C. Lewis in the Classical Museum, vol. ii. p. 1.

[\[1\]](#) Cp. Sir G. C. Lewis in the Classical Museum, vol. ii. p. 1.

[\[1\]](#) Pol. v. 12, § 8 :—‘He only says that nothing is abiding, but that all things change in a certain cycle; and that the origin of the change is a base of numbers which are in the ratio of 4 : 3; and this when combined with a figure of five gives two harmonies; he means when the number of this figure becomes solid.’

[\[1\]](#) The Platonic Tetractys consisted of a series of seven terms, 1, 2, 3, 4, 9, 8, 27.

[1] ‘Having a desire to see those ancients who were most renowned for wit and learning, I set apart one day on purpose. I proposed that Homer and Aristotle might appear at the head of all their commentators; but these were so numerous that some hundreds were forced to attend in the court and outward rooms of the palace. I knew, and could distinguish these two heroes, at first sight, not only from the crowd, but from each other. Homer was the taller and comelier person of the two, walked very erect for one of his age, and his eyes were the most quick and piercing I ever beheld. Aristotle stooped much, and made use of a staff. His visage was meagre, his hair lank and thin, and his voice hollow. I soon discovered that both of them were perfect strangers to the rest of the company, and had never seen or heard of them before. And I had a whisper from a ghost, who shall be nameless, “That these commentators always kept in the most distant quarters from their principals, in the lower world, through a consciousness of shame and guilt, because they had so horribly misrepresented the meaning of these authors to posterity.” I introduced Didymus and Eustathius to Homer, and prevailed on him to treat them better than perhaps they deserved, for he soon found they wanted a genius to enter into the spirit of a poet. But Aristotle was out of all patience with the account I gave him of Scotus and Ramns, as I presented them to him; and he asked them “whether the rest of the tribe were as great dunces as themselves?” ’

[1] ‘Howbeit, I think this was no small help and furtherance in the matter, that they heard us say that Christ instituted among his, all things common, and that the same community doth yet remain in the rightest Christian communities’ (Utopia, English Reprints, p. 144).

[1] ‘These things (I say), when I consider with myself, I hold well with Plato, and do nothing marvel that he would make no laws for them that refused those laws, whereby all men should have and enjoy equal portions of riches and commodities. For the wise man did easily foresee this to be the one and only way to the wealth of a community, if equality of all things should be brought in and established’ (Utopia, English Reprints, pp. 67, 68).

[1] ‘One of our company in my presence was sharply punished. He, as soon as he was baptised, began, against our wills, with more earnest affection than wisdom, to reason of Christ’s religion, and began to wax so hot in his matter, that he did not only prefer our religion before all other, but also did despise and condemn all other, calling them profane, and the followers of them wicked and devilish, and the children of everlasting damnation. When he had thus long reasoned the matter, they laid hold on him, accused him, and condemned him into exile, not as a despiser of religion, but as a seditious person and a raiser up of dissension among the people’ (p. 145).

[1] Compare his satirical observation: ‘They (the Utopians) have priests of exceeding holiness, and therefore very few’ (p. 150).

[1] When the ambassadors came arrayed in gold and peacocks’ feathers ‘to the eyes of all the Utopians except very few, which had been in other countries for some reasonable cause, all that gorgeousness of apparel seemed shameful and reproachful. In so much that they most reverently saluted the vilest and most abject of them for

lords—passing over the ambassadors themselves without any honour, judging them by their wearing of golden chains to be bondmen. You should have seen children also, that had cast away their pearls and precious stones, when they saw the like sticking upon the ambassadors' caps, dig and push their mothers under the sides, saying thus to them "Look, mother, how great a lubber doth yet wear pearls and precious stones, as though he were a little child still." But the mother; yea and that also in good earnest: "Peace, son," saith she. "I think he be some of the ambassadors' fools" (p. 102).

[2] Cp. an exquisite passage nt p. 25 of which the conclusion is as follows: 'And verily it is naturally given . . . suppressed and ended.'

[3] 'For they have not devised one of all those rules of restrictions, amplifications, and suppositions, very wittily invented in the small Logicals, which here our children in every place do learn. Furthermore, they were never yet able to find out the second intentions; insomuch that none of them all could ever see man himself in common, as they call him, though he be (as you know) bigger than was ever any giant, yea, and pointed to of us even with our finger' (p. 105).

[1] 'And yet the most part of them is more dissident from the manners of the world now a days, than my communication was. But preachers, sly and wily men, following your counsel (as I suppose) because they saw men evil-willing to frame their manners to Christ's rule, they have wrested and wried his doctrine, and, like a rule of lead, have applied it to men's manners, that by some means at the least way, they might agree together' (p. 66).

PARMENIDES.

PERSONS OF THE DIALOGUE.

Cephalus.

Adeimantus.

Glaucou.

Antiphon.

Pythodorus.

Socrates.

Zeno.

Parmenides.

Aristoteles.

SCENE:

Cephalus rehearses a dialogue which is supposed to have been narrated in his presence by Antiphon, the half-brother of Adeimantus and Glaucon, to certain Clazomenians.

126 We had come from our home at Clazomenae to Athens, and met Adeimantus and Glaucon in the Agora. Welcome, Cephalus, said Adeimantus, taking me by the hand; is there anything which we can do for you in Athens?

Parmenides.

Cephalus,
Adeimantus.

Yes; that is why I am here; I wish to ask a favour of you.

Preface.

What may that be? he said.

The request of the
Clazomenians.

I want you to tell me the name of your half-brother, which I have forgotten; he was a mere child when I last came hither from Clazomenae, but that was a long time ago; his father's name, if I remember rightly, was Pyrilampes?

Yes, he said, and the name of our brother, Antiphon; but why do you ask?

Let me introduce some countrymen of mine, I said; they are lovers of philosophy, and have heard that Antiphon was intimate with a certain Pythodorus, a friend of Zeno, and remembers a conversation which took place between Socrates, Zeno, and Parmenides many years ago, Pythodorus having often recited it to him.

Quite true.

And could we hear it? I asked.

Nothing easier, he replied; when he was a youth he made a careful study of the piece; at present his thoughts run in another direction; like his grandfather Antiphon he is devoted to horses. But, if that is what you want, let us go and look for him; he

Cephalus,
Adeimantus,
Antiphon, Socrates,
Zeno.

dwells at Melita, which is quite near, and he has only just left us to go home.

Accordingly we went to look for him; he was at home, and 127in the act of giving a bridle to a smith to be fitted. When he had done with the smith, his brothers told him the purpose of our visit; and he saluted me as an acquaintance whom he remembered from my former visit, and we asked him to repeat the dialogue. At first he was not very willing, and complained of the trouble, but at length he consented. He told us that Pythodorus had described to him the appearance of Parmenides and Zeno; they came to Athens, as he said, at the great Panathenaea; the former was, at the time of his visit, about 65 years old, very white with age, but well favoured. Zeno was nearly 40 years of age, tall and fair to look upon; in the days of his youth he was reported to have been beloved by Parmenides. He said that they lodged with Pythodorus in the Ceramicus, outside the wall, whither Socrates, then a very young man, came to see them, and many others with him; they wanted to hear the writings of Zeno, which had been brought to Athens for the first time on the occasion of their visit. These Zeno himself read to them in the absence of Parmenides, and had very nearly finished when Pythodorus entered, and with him Parmenides and Aristoteles who was afterwards one of the Thirty, and heard the little that remained of the dialogue. Pythodorus had heard Zeno repeat them before.

Descriptive.

When the recitation was completed, Socrates requested that the first thesis of the first argument might be read over again, and this having been done, he said: What is your meaning, Zeno? Do you maintain that if being is many, it must be both like and unlike, and that this is impossible, for neither can the like be unlike, nor the unlike like—is that your position?

The contention of Zeno is, that being cannot be many, because, if it were, it would be like and unlike at the same time, which is impossible.

Just so, said Zeno.

And if the unlike cannot be like, or the like unlike, then according to you, being could not be many; for this would involve an impossibility. In all that you say have you any other purpose except to disprove the being of the many? and is not each division of your treatise intended to furnish a separate proof of this, there being in all as many proofs of the not-being of the many as you have composed arguments? Is that your meaning, or have I misunderstood you?

Socrates, Zeno.

128No, said Zeno; you have correctly understood my general purpose.

I see, Parmenides, said Socrates, that Zeno would like to be not only one with you in friendship but your second self in his writings too; he puts what you say in another way, and would fain make believe that he is telling us something which is new. For you, in your poems, say The All is one, and of this you adduce excellent proofs; and he on the other hand says There is no many; and on behalf of this he offers overwhelming evidence. You affirm unity, he denies plurality. And so you deceive the world into believing that you are saying

‘The many are not’ is only another way of expressing the thesis of Parmenides that ‘All is one.’

different things when really you are saying much the same. This is a strain of art beyond the reach of most of us.

Yes, Socrates, said Zeno. But although you are as keen as a Spartan hound in pursuing the track, you do not fully apprehend the true motive of the composition, which is not really such an artificial work as you imagine; for what you speak of was an accident; there was no pretence of a great purpose; nor any serious intention of deceiving the world. The truth is, that these writings of mine were meant to protect the arguments of Parmenides against those who make fun of him and seek to show the many ridiculous and contradictory results which they suppose to follow from the affirmation of the one. My answer is addressed to the partisans of the many, whose attack I return with interest by retorting upon them that their hypothesis of the being of many, if carried out, appears to be still more ridiculous than the hypothesis of the being of one. Zeal for my master led me to write the book in the days of my youth, but some one stole the copy; and therefore I had no choice whether it should be published or not; the motive, however, of writing, was not the ambition of an elder man, but the pugnacity of a young one. This you do not seem to see, Socrates; though in other respects, as I was saying, your notion is a very just one.

A misunderstanding.

I understand, said Socrates, and quite accept your account. But tell me, Zeno, do you not further think that there is an idea of likeness in itself, and another idea of unlikeness, 129 which is the opposite of likeness, and that in these two, you and I and all other things to which we apply the term many, participate—things which participate in likeness become in that degree and manner like; and so far as they participate in unlikeness become in that degree unlike, or both like and unlike in the degree in which they participate in both? And may not all things partake of both opposites, and be both like and unlike, by reason of this participation?—Where is the wonder? Now if a person could prove the absolute like to become unlike, or the absolute unlike to become like, that, in my opinion, would indeed be a wonder; but there is nothing extraordinary, Zeno, in showing that the things which only partake of likeness and unlikeness experience both. Nor, again, if a person were to show that all is one by partaking of one, and at the same time many by partaking of many, would that be very astonishing. But if he were to show me that the absolute one was many, or the absolute many one, I should be truly amazed. And so of all the rest: I should be surprised to hear that the natures or ideas themselves had these opposite qualities; but not if a person wanted to prove of me that I was many and also one. When he wanted to show that I was many he would say that I have a right and a left side, and a front and a back, and an upper and a lower half, for I cannot deny that I partake of multitude; when, on the other hand, he wants to prove that I am one, he will say, that we who are here assembled are seven, and that I am one and partake of the one. In both instances he proves his case. So again, if a person shows that such things as wood, stones, and the like, being many are also one, we admit that he shows the coexistence of the one and many, but he does not show that the many are one or the one many; he is uttering not a paradox but a truism. If however, as I just now suggested, some one were to abstract simple notions of like, unlike, one, many, rest,

Differences between absolute ideas or natures, and the things which partake of them.

Socrates, Parmenides.

motion, and similar ideas, and then to show that these admit of admixture and separation in themselves, I should be very much astonished. This part of the argument appears to be treated by you, Zeno, in a very spirited manner; but, as I was saying, I should be far more amazed if any one found in the ideas themselves which are apprehended by reason, the same puzzle and entanglement which you have shown to exist in visible objects.

While Socrates was speaking, Pythodorus thought that Parmenides and Zeno were not altogether pleased at the successive steps of the argument; but still they gave the closest attention, and often looked at one another, and smiled as if in admiration of him. When he had finished, Parmenides expressed their feelings in the following words:—

Socrates, he said, I admire the bent of your mind towards philosophy; tell me now, was this your own distinction between ideas in themselves and the things which partake of them? and do you think that there is an idea of likeness apart from the likeness which we possess, and of the one and many, and of the other things which Zeno mentioned?

I think that there are such ideas, said Socrates.

Parmenides proceeded: And would you also make absolute ideas of the just and the beautiful and the good, and of all that class?

Parmenides asks Socrates whether he would make ideas of all things.

Yes, he said, I should.

And would you make an idea of man apart from us and from all other human creatures, or of fire and water?

I am often undecided, Parmenides, as to whether I ought to include them or not.

And would you feel equally undecided, Socrates, about things of which the mention may provoke a smile?—I mean such things as hair, mud, dirt, or anything else which is vile and paltry; would you suppose that each of these has an idea distinct from the actual objects with which we come into contact, or not?

Certainly not, said Socrates; visible things like these are such as they appear to us, and I am afraid that there would be an absurdity in assuming any idea of them, although I sometimes get disturbed, and begin to think that there is nothing without an idea; but then again, when I have taken up this position, I run away, because I am afraid that I may fall into a bottomless pit of nonsense, and perish; and so I return to the ideas of which I was just now speaking, and occupy myself with them.

Socrates fears to extend his idealism to mud, dirt, etc.,

Yes, Socrates, said Parmenides; that is because you are still young; the time will come, if I am not mistaken, when philosophy will have a firmer grasp of you, and then you will not despise even the meanest things; at your age, you are too much disposed to regard the opinions of men. But I should like to

and is rebuked by Parmenides for exhibiting an unphilosophic temper.

know whether you mean that there are certain ideas of which all other things partake, and from which they derive their names; that similars, for example, become similar, because they partake of similarity; and great things become great, because they partake of greatness; and that just and beautiful things become just and beautiful, because they partake of justice and beauty?

Yes, certainly, said Socrates, that is my meaning.

Then each individual partakes either of the whole of the idea or else of a part of the idea? Can there be any other mode of participation?

There cannot be, he said.

Then do you think that the whole idea is one, and yet, being one, is in each one of the many?

The whole idea cannot exist in different objects at the same time;

Why not, Parmenides? said Socrates.

Because one and the same thing will exist as a whole at the same time in many separate individuals, and will therefore be in a state of separation from itself.

Nay, but the idea may be like the day which is one and the same in many places at once, and yet continuous with itself; in this way each idea may be one and the same in all at the same time.

I like your way, Socrates, of making one in many places at once. You mean to say, that if I were to spread out a sail and cover a number of men, there would be one whole including many—is not that your meaning?

I think so.

And would you say that the whole sail includes each man, or a part of it only, and different parts different men?

The latter.

Then, Socrates, the ideas themselves will be divisible, and things which participate in them will have a part of them only and not the whole idea existing in each of them?

That seems to follow.

Then would you like to say, Socrates, that the one idea is really divisible and yet remains one?

Certainly not, he said.

nor can objects contain only parts of ideas, for this would

Suppose that you divide absolute greatness, and that of the many great things, each one is great in virtue of a portion of greatness less than absolute greatness—is that conceivable?

equally involve an absurdity. Things cannot become great or equal or small by addition of a part of greatness or equality or smallness.

No.

Or will each equal thing, if possessing some small portion of equality less than absolute equality, be equal to some other thing by virtue of that portion only?

Impossible.

Or suppose one of us to have a portion of smallness; this is but a part of the small, and therefore the absolutely small is greater; if the absolutely small be greater, that to which the part of the small is added will be smaller and not greater than before.

How absurd!

Then in what way, Socrates, will all things participate in the ideas, if they are unable to participate in them either as parts or wholes?

Indeed, he said, you have asked a question which is not easily answered.

Well, said Parmenides, and what do you say of another question?

What question?

I imagine that the way in which you are led to assume one idea of each kind is as follows:—You see a number of great objects, and when you look at them there seems to you to be one and the same idea (or nature) in them all; hence you conceive of greatness as one.

Ideas are given by generalization.

Very true, said Socrates.

And if you go on and allow your mind in like manner to embrace in one view the idea of greatness and of great things which are not the idea, and to compare them, will not another greatness arise, which will appear to be the source of all these?

But the general and its particulars together form a new idea;

It would seem so.

Then another idea of greatness now comes into view over and above absolute greatness, and the individuals which partake of it; and then another, over and above all these, by virtue of which they will all be great, and so each idea instead of being one will be infinitely multiplied.

the new idea and its particulars another; and so *ad infinitum*. It is suggested that the ideas are thoughts only.—This solution is rejected.

But may not the ideas, asked Socrates, be thoughts only, and have no proper existence except in our minds, Parmenides? For in that case each idea may still be one, and not experience this infinite multiplication.

And can there be individual thoughts which are thoughts of nothing?

Impossible, he said.

The thought must be of something?

Yes.

Of something which is or which is not?

Of something which is.

Must it not be of a single something, which the thought recognizes as attaching to all, being a single form or nature?

Yes.

And will not the something which is apprehended as one and the same in all, be an idea?

From that, again, there is no escape.

Then, said Parmenides, if you say that everything else participates in the ideas, must you not say either that everything is made up of thoughts, and that all things think; or that they are thoughts but have no thought?

The latter view, Parmenides, is no more rational than the previous one. In my opinion, the ideas are, as it were, patterns fixed in nature, and other things are like them, and resemblances of them—what is meant by the participation of other things in the ideas, is really assimilation to them.

A fresh attempt. The ideas are patterns, and other things will be like them. But then there will be likeness of the like to the like, and a common idea including both; and so on *ad infinitum*.

But if, said he, the individual is like the idea, must not the idea also be like the individual, in so far as the individual is a resemblance of the idea? That which is like, cannot be conceived of as other than the like of like.

Impossible.

And when two things are alike, must they not partake of the same idea?

They must.

And will not that of which the two partake, and which makes them alike, be the idea itself?

Certainly.

Then the idea cannot be like the individual, or the individual like the idea; for if they are alike, some further idea of likeness will always be coming to light, and if that be like anything else, another; and new ideas will be always arising, if the idea resembles that which partakes of it?

Quite true.

The theory, then, that other things participate in the ideas by resemblance, has to be given up, and some other mode of participation devised?

Resemblance must be given up.

It would seem so.

Do you see then, Socrates, how great is the difficulty of affirming the ideas to be absolute?

Yes, indeed.

And, further, let me say that as yet you only understand a small part of the difficulty which is involved if you make of each thing a single idea, parting it off from other things.

What difficulty? he said.

There are many, but the greatest of all is this:—If an opponent argues that these ideas, being such as we say they ought to be, must remain unknown, no one can prove to him that he is wrong, unless he who denies their existence be a man of great ability and knowledge, and is willing to follow a long and laborious demonstration; he will remain unconvinced, and still insist that they cannot be known.

What do you mean, Parmenides? said Socrates.

In the first place, I think, Socrates, that you, or any one who maintains the existence of absolute essences, will admit that they cannot exist in us.

No, said Socrates; for then they would be no longer absolute.

True, he said; and therefore when ideas are what they are in relation to one another, their essence is determined by a relation among themselves, and has nothing to do with the resemblances, or whatever they are to be termed, which are in our sphere, and from which we receive this or that name when we partake of them. And the things which are within our sphere and have the same names with them, are likewise only relative to one another, and not to the ideas which have the same names with them, but belong to themselves and not to them.

Ideas would be no longer absolute, if they existed within us. And if without us, then they and their resemblances in our sphere are related among themselves only and not to one another. For example, we must distinguish the individual slave and master in the concrete from the ideas of mastership and slavery in the abstract.

What do you mean? said Socrates.

I may illustrate my meaning in this way, said Parmenides:—A master has a slave; now there is nothing absolute in the relation between them, which is simply a relation of one man to another. But there is also an idea of mastership in the abstract, which is relative to the idea of slavery in the abstract. These natures have nothing to do with us, nor we with them; they are concerned with themselves only, and we with ourselves. Do you see my meaning?

Yes, said Socrates, I quite see your meaning.

And will not knowledge—I mean absolute knowledge—answer to absolute truth?

Certainly.

And each kind of absolute knowledge will answer to each kind of absolute being?

Yes.

But the knowledge which we have, will answer to the truth which we have; and again, each kind of knowledge which we have, will be a knowledge of each kind of being which we have?

Certainly.

But the ideas themselves, as you admit, we have not, and cannot have?

No, we cannot.

And the absolute natures or kinds are known severally by the absolute idea of knowledge?

Yes.

And we have not got the idea of knowledge?

No.

Then none of the ideas are known to us, because we have no share in absolute knowledge?

I suppose not.

Then the nature of the beautiful in itself, and of the good in itself, and all other ideas which we suppose to exist absolutely, are unknown to us?

It would seem so.

The truth which we have will correspond to the knowledge which we have; and we have no knowledge of the absolute or of the ideas.

I think that there is a stranger consequence still.

What is it?

Would you, or would you not say, that absolute knowledge, if there is such a thing, must be a far more exact knowledge than our knowledge; and the same of beauty and of the rest?

Yes.

And if there be such a thing as participation in absolute knowledge, no one is more likely than God to have this most exact knowledge?

Certainly.

But then, will God, having absolute knowledge, have a knowledge of human things?

Why not?

Because, Socrates, said Parmenides, we have admitted that the ideas are not valid in relation to human things; nor human things in relation to them; the relations of either are limited to their respective spheres.

Yes, that has been admitted.

And if God has this perfect authority, and perfect knowledge, his authority cannot rule us, nor his knowledge know us, or any human thing; just as our authority does not extend to the gods, nor our knowledge know anything which is divine, so by parity of reason they, being gods, are not our masters, neither do they know the things of men.

Yet, surely, said Socrates, to deprive God of knowledge is monstrous.

135 These, Socrates, said Parmenides, are a few, and only a few of the difficulties in which we are involved if ideas really are and we determine each one of them to be an absolute unity. He who hears what may be said against them will deny the very existence of them—and even if they do exist, he will say that they must of necessity be unknown to man; and he will seem to have reason on his side, and as we were remarking just now, will be very difficult to convince; a man must be gifted with very considerable ability before he can learn that everything has a class and an absolute essence; and still more remarkable will he be who discovers all these things for himself, and having thoroughly investigated them is able to teach them to others.

I agree with you, Parmenides, said Socrates; and what you say is very much to my mind.

And yet, Socrates, said Parmenides, if a man, fixing his attention on these and the like difficulties, does away with ideas of things and will not admit that every individual thing has its own determinate idea which is always one and the same, he will have

Another objection.
God above has
absolute knowledge.
But if so, he cannot
have a knowledge of
human things,
because they are in
another sphere.

nothing on which his mind can rest; and so he will utterly destroy the power of reasoning, as you seem to me to have particularly noted.

Very true, he said.

But, then, what is to become of philosophy? Whither shall we turn, if the ideas are unknown?

I certainly do not see my way at present.

Yes, said Parmenides; and I think that this arises, Socrates, out of your attempting to define the beautiful, the just, the good, and the ideas generally, without sufficient previous training. I noticed your deficiency, when I heard you talking here with your friend Aristoteles, the day before yesterday. The impulse that carries you towards philosophy is assuredly noble and divine; but there is an art which is called by the vulgar idle talking, and which is often imagined to be useless; in that you must train and exercise yourself, now that you are young, or truth will elude your grasp.

Parmenides has observed Socrates to be untried in dialectic.

And what is the nature of this exercise, Parmenides, which you would recommend?

That which you heard Zeno practising; at the same time, I give you credit for saying to him that you did not care to examine the perplexity in reference to visible things, or to consider the question in that way; but only in reference to objects of thought, and to what may be called ideas.

Why, yes, he said, there appears to me to be no difficulty in showing by this method that visible things are like and unlike and may experience anything.

Quite true, said Parmenides; but I think that you should go a step further, and consider not only the consequences which flow from a given hypothesis, but also the consequences which flow from denying the hypothesis; and that will be still better training for you.

He suggests that the consequences of the not being, as well as of the being of anything, should be considered.

What do you mean? he said.

I mean, for example, that in the case of this very hypothesis of Zeno's about the many, you should inquire not only what will be the consequences to the many in relation to themselves and to the one, and to the one in relation to itself and the many, on the hypothesis of the being of the many, but also what will be the consequences to the one and the many in their relation to themselves and to each other, on the opposite hypothesis. Or, again, if likeness is or is not, what will be the consequences in either of these cases to the subjects of the hypothesis, and to other things, in relation both to themselves and to one another, and so of unlikeness; and the same holds good of motion and rest, of generation and destruction, and even of being and not-being. In a word, when you suppose anything to be or not to be, or to be in any way affected, you must look at the consequences in relation to the thing itself, and to any other things which you

Socrates, Parmenides, Zeno.

choose,—to each of them singly, to more than one, and to all; and so of other things, you must look at them in relation to themselves and to anything else which you suppose either to be or not to be, if you would train yourself perfectly and see the real truth.

That, Parmenides, is a tremendous business of which you speak, and I do not quite understand you; will you take some hypothesis and go through the steps?—then I shall apprehend you better.

Socrates asks him to give an example of this process.

That, Socrates, is a serious task to impose on a man of my years.

Parmenides is at first disinclined to engage in such a laborious pastime; but at the request of the company he proceeds.

Then will you, Zeno? said Socrates.

Zeno answered with a smile:—Let us make our petition to Parmenides himself, who is quite right in saying that you are hardly aware of the extent of the task which you are imposing on him; and if there were more of us I should not ask him, for these are not subjects which any one, especially at his age, can well speak of before a large audience; most people are not aware that this roundabout progress through all things is the only way in which the mind can attain truth and wisdom. And therefore, Parmenides, I join in the request of Socrates, that I may hear the process again which I have not heard for a long time.

When Zeno had thus spoken, Pythodorus, according to Antiphon's report of him, said, that he himself and Aristoteles and the whole company entreated Parmenides to give an example of the process. I cannot refuse, said Parmenides; and yet I feel rather like Ibycus, who, when in his 137old age, against his will, he fell in love, compared himself to an old racehorse, who was about to run in a chariot race, shaking with fear at the course he knew so well—this was his simile of himself. And I also experience a trembling when I remember through what an ocean of words I have to wade at my time of life. But I must indulge you, as Zeno says that I ought, and we are alone. Where shall I begin? And what shall be our first hypothesis, if I am to attempt this laborious pastime? Shall I begin with myself, and take my own hypothesis of the one? and consider the consequences which follow on the supposition either of the being or of the not-being of one?

Parmenides, Zeno, Aristoteles.

By all means, said Zeno.

And who will answer me? he said. Shall I propose the youngest? He will not make difficulties and will be the most likely to say what he thinks; and his answers will give me time to breathe.

I am the one whom you mean, Parmenides, said Aristoteles; for I am the youngest and at your service. Ask, and I will answer.

i. a. If the one is, it cannot be many, and

Parmenides proceeded: i. a. If one is, he said, the one cannot be many?

therefore cannot have parts, or be a whole, because a whole is made up of parts;

Impossible.

Then the one cannot have parts, and cannot be a whole?

Why not?

Because every part is part of a whole; is it not?

Yes.

And what is a whole? would not that of which no part is wanting be a whole?

Certainly.

Then, in either case, the one would be made up of parts; both as being a whole, and also as having parts?

To be sure.

And in either case, the one would be many, and not one?

True.

But, surely, it ought to be one and not many?

It ought.

Then, if the one is to remain one, it will not be a whole, and will not have parts?

No.

Parmenides,
Aristoteles.

But if it has no parts, it will have neither beginning, middle, nor end; for these would of course be parts of it.

and having no parts it cannot have a beginning, middle, and end; nor any limit or form.

Right.

But then, again, a beginning and an end are the limits of everything?

Certainly.

Then the one, having neither beginning nor end, is unlimited?

Yes, unlimited.

And therefore formless; for it cannot partake either of round or straight.

But why?

Why, because the round is that of which all the extreme points are equidistant from the centre?

It is neither circular nor straight;

Yes.

And the straight is that of which the centre intercepts the view of the extremes?

True.

138 Then the one would have parts and would be many, if it partook either of a straight or of a circular form?

Assuredly.

But having no parts, it will be neither straight nor round?

Right.

And, being of such a nature, it cannot be in any place, for it cannot be either in another or in itself.

it does not exist in any place;

How so?

Because if it were in another, it would be encircled by that in which it was, and would touch it at many places and with many parts; but that which is one and indivisible, and does not partake of a circular nature, cannot be touched all round in many places.

Certainly not.

But if, on the other hand, one were in itself, it would also be contained by nothing else but itself; that is to say, if it were really in itself; for nothing can be in anything which does not contain it.

Impossible.

But then, that which contains must be other than that which is contained? for the same whole cannot do and suffer both at once; and if so, one will be no longer one, but two?

True.

Then one cannot be anywhere, either in itself or in another?

No.

Further consider, whether that which is of such a nature can have either rest or motion.

it has neither rest nor motion.

Why not?

Why, because the one, if it were moved, would be either moved in place or changed in nature; for these are the only kinds of motion.

Two forms of motion—(1) change of nature; (2) locomotion.

Yes.

And the one, when it changes and ceases to be itself, cannot be any longer one.

It cannot.

It cannot therefore experience the sort of motion which is change of nature?

Clearly not.

Then can the motion of the one be in place?

Perhaps.

But if the one moved in place, must it not either move round and round in the same place, or from one place to another?

Two forms of locomotion—(a) in a place; (b) from one place to another.

It must.

And that which moves in a circle must rest upon a centre; and that which goes round upon a centre must have parts which are different from the centre; but that which has no centre and no parts cannot possibly be carried round upon a centre?

Impossible.

But perhaps the motion of the one consists in change of place?

Perhaps so, if it moves at all.

And have we not already shown that it cannot be in anything?

The one does not admit of change of nature, nor of either form of locomotion;

Yes.

Then its coming into being in anything is still more impossible; is it not?

I do not see why.

Why, because anything which comes into being in anything, can neither as yet be in that other thing while still coming into being, nor be altogether out of it, if already coming into being in it.

Certainly not.

And therefore whatever comes into being in another must have parts, and then one part may be in, and another part out of that other; but that which has no parts can never be at one and the same time neither wholly within nor wholly without anything.

True.

And is there not a still greater impossibility in that which has no parts, and is not a whole, coming into being anywhere, ¹³⁹since it cannot come into being either as a part or as a whole?

Clearly.

Then it does not change place by revolving in the same spot, nor by going somewhere and coming into being in something; nor again, by change in itself?

Very true.

Then in respect of any kind of motion the one is immoveable?

Immoveable.

But neither can the one be in anything, as we affirm?

Yes, we said so.

Then it is never in the same?

Why not?

Because if it were in the same it would be in something.

Certainly.

And we said that it could not be in itself, and could not be in other?

True.

Then one is never in the same place?

It would seem not.

But that which is never in the same place is never quiet or at rest?

Never.

One then, as would seem, is neither at rest nor in motion?

It certainly appears so.

Again, the one is never in the same any more than in the other, and is therefore in no place and therefore incapable of rest.

Neither will it be the same with itself or other; nor again, other than itself or other.

How is that?

If other than itself it would be other than one, and would not be one.

True.

And if the same with other, it would be that other, and not itself; so that upon this supposition too, it would not have the nature of one, but would be other than one?

Neither otherness nor sameness can be attributed to the one, in reference to itself or other;

It would.

Then it will not be the same with other, or other than itself?

It will not.

Neither will it be other than other, while it remains one; for not one, but only other, can be other than other, and nothing else.

True.

Then not by virtue of being one will it be other?

Certainly not.

But if not by virtue of being one, not by virtue of itself; and if not by virtue of itself, not itself, and itself not being other at all, will not be other than anything?

Right.

Neither will one be the same with itself.

How not?

Surely the nature of the one is not the nature of the same.

Why not?

It is not when anything becomes the same with anything that it becomes one.

What of that?

Anything which becomes the same with the many, necessarily becomes many and not one.

True.

But, if there were no difference between the one and the same, when a thing became the same, it would always become one; and when it became one, the same?

Certainly.

And, therefore, if one be the same with itself, it is not one with itself, and will therefore be one and also not one.

Surely that is impossible.

And therefore the one can neither be other than other, nor the same with itself.

Impossible.

And thus the one can neither be the same, nor other, either in relation to itself or other?

No.

Neither will the one be like anything or unlike itself or other.

Why not?

nor yet likeness,
which is sameness of
affections; nor
unlikeness,

Because likeness is sameness of affections.

Yes.

And sameness has been shown to be of a nature distinct from oneness?

That has been shown.

140But if the one had any other affection than that of being one, it would be affected in such a way as to be more than one; which is impossible.

True.

Then the one can never be so affected as to be the same either with another or with itself?

Clearly not.

Then it cannot be like another, or like itself?

No.

Nor can it be affected so as to be other, for then it would be affected in such a way as to be more than one.

It would.

That which is affected otherwise than itself or another, will be unlike itself or another, for sameness of affections is likeness.

True.

But the one, as appears, never being affected otherwise, is never unlike itself or other?

Never.

Then the one will never be either like or unlike itself or other?

Plainly not.

Again, being of this nature, it can neither be equal nor unequal either to itself or to other.

nor equality, nor
inequality of size;

How is that?

Why, because the one if equal must be of the same measures as that to which it is equal.

True.

And if greater or less than things which are commensurable with it, the one will have more measures than that which is less, and fewer than that which is greater?

Yes.

And so of things which are not commensurate with it, the one will have greater measures than that which is less and smaller than that which is greater.

Certainly.

But how can that which does not partake of sameness, have either the same measures or have anything else the same?

Impossible.

And not having the same measures, the one cannot be equal either with itself or with another?

It appears so.

But again, whether it have fewer or more measures, it will have as many parts as it has measures; and thus again the one will be no longer one but will have as many parts as measures.

Right.

And if it were of one measure, it would be equal to that measure; yet it has been shown to be incapable of equality.

It has.

Then it will neither partake of one measure, nor of many, nor of few, nor of the same at all, nor be equal to itself or another; nor be greater or less than itself, or other?

Certainly.

Well, and do we suppose that one can be older, or younger than anything, or of the same age with it?

nor equality or
inequality of age;

Why not?

Why, because that which is of the same age with itself or other, must partake of equality or likeness of time; and we said that the one did not partake either of equality or of likeness?

We did say so.

And we also said, that it did not partake of inequality or unlikeness.

Very true. 141

How then can one, being of this nature, be either older or younger than anything, or have the same age with it?

In no way.

Then one cannot be older or younger, or of the same age, either with itself or with another?

Clearly not.

Then the one, being of this nature, cannot be in time at all; for must not that which is in time, be always growing older than itself?

nor time,

Certainly.

And that which is older, must always be older than something which is younger?

True.

Then, that which becomes older than itself, also becomes at the same time younger than itself, if it is to have something to become older than.

What do you mean?

I mean this:—A thing does not need to become different from another thing which is already different; it *is* different, and if its different has become, it has become different; if its different will be, it will be different; but of that which is becoming different, there cannot have been, or be about to be, or yet be, a different—the only different possible is one which is becoming.

That is inevitable.

But, surely, the elder is a difference relative to the younger, and to nothing else.

True.

Then that which becomes older than itself must also, at the same time, become younger than itself?

Yes.

But again, it is true that it cannot become for a longer or for a shorter time than itself, but it must become, and be, and have become, and be about to be, for the same time with itself?

That again is inevitable.

Then things which are in time, and partake of time, must in every case, I suppose, be of the same age with themselves; and must also become at once older and younger than themselves?

Yes.

But the one did not partake of those affections?

Not at all.

Then it does not partake of time, and is not in any time?

So the argument shows.

Well, but do not the expressions ‘was,’ and ‘has become,’ and ‘was becoming,’ signify a participation of past time?

Certainly.

nor modes of time.

And do not ‘will be,’ ‘will become,’ ‘will have become,’ signify a participation of future time?

Yes.

And ‘is,’ or ‘becomes,’ signifies a participation of present time?

Certainly.

And if the one is absolutely without participation in time, it never had become, or was becoming, or was at any time, or is now become or is becoming, or is, or will become, or will have become, or will be, hereafter.

Most true.

But are there any modes of partaking of being other than these?

There are none.

Then the one cannot possibly partake of being?

That is the inference.

Then the one is not at all?

Clearly not.

Then the one does not exist in such way as to be one; for if it were and partook of being, it would already be; but if the argument is to be trusted, the one neither is nor is one?

True. 142

But that which is not admits of no attribute or relation?

Of course not.

Then there is no name, nor expression, nor perception, nor opinion, nor knowledge of it?

Clearly not.

Then it is neither named, nor expressed, nor opined, nor known, nor does anything that is perceive it.

So we must infer.

But can all this be true about the one?

I think not.

i. b. Suppose, now, that we return once more to the original hypothesis; let us see whether, on a further review, any new aspect of the question appears.

I shall be very happy to do so.

But these are the only modes of partaking of being, and if they are all denied of it, then the one is not, and has therefore no attribute or relation, etc.

The conclusion is unsatisfactory.

i. b. If one is, what will follow?

We say that we have to work out together all the consequences, whatever they may be, which follow, if the one is?

Yes.

Then we will begin at the beginning:—If one is, can one be, and not partake of being?

Impossible.

Then the one will have being, but its being will not be the same with the one; for if the same, it would not be the being of the one; nor would the one have participated in being, for the proposition that one is would have been identical with the proposition that one is one; but our hypothesis is not if one is one, what will follow, but if one is:—am I not right?

The one which is will partake of being, and will therefore have parts, one and being;

Quite right.

We mean to say, that being has not the same significance as one?

Of course.

And when we put them together shortly, and say ‘One is,’ that is equivalent to saying, ‘partakes of being’?

Quite true.

Once more then let us ask, if one is what will follow. Does not this hypothesis necessarily imply that one is of such a nature as to have parts?

and each part has one and being for the parts of itself; and so on *ad infinitum*.

How so?

In this way:—If being is predicated of the one, if the one is, and one of being, if being is one; and if being and one are not the same; and since the one, which we have assumed, is, must not the whole, if it is one, itself be, and have for its parts, one and being?

Certainly.

And is each of these parts—one and being—to be simply called a part, or must the word ‘part’ be relative to the word ‘whole’?

The latter.

Then that which is one is both a whole and has a part?

Certainly.

Again, of the parts of the one, if it is—I mean being and one—does either fail to imply the other? is the one wanting to being, or being to the one?

Impossible.

Thus, each of the parts also has in turn both one and being, and is at the least made up of two parts; and the same principle goes on for ever, and every part whatever has always these two parts; for being always involves one, and one being; so that one is always disappearing, and becoming two.

Certainly. 143

And so the one, if it is, must be infinite in multiplicity?

Clearly.

Let us take another direction.

What direction?

We say that the one partakes of being and therefore it is?

Yes.

And in this way, the one, if it has being, has turned out to be many?

Another argument.

True.

But now, let us abstract the one which, as we say, partakes of being, and try to imagine it apart from that of which, as we say, it partakes—will this abstract one be one only or many?

When one is abstracted from being, they are a pair of different.

One, I think.

Let us see:—Must not the being of one be other than one? for the one is not being, but, considered as one, only partook of being?

Certainly.

If being and the one be two different things, it is not because the one is one that it is other than being; nor because being is being that it is other than the one; but they differ from one another in virtue of otherness and difference.

Certainly.

So that the other is not the same—either with the one or with being?

Certainly not.

And therefore whether we take being and the other, or being and the one, or the one and the other, in every such case we take two things, which may be rightly called both.

How so.

In this way—you may speak of being?

Yes.

And also of one?

Yes.

Then now we have spoken of either of them?

Yes.

Well, and when I speak of being and one, I speak of them both?

Transition from one
to two,

Certainly.

And if I speak of being and the other, or of the one and the other,—in any such case do I not speak of both?

Yes.

And must not that which is correctly called both, be also two?

Undoubtedly.

And of two things how can either by any possibility not be one?

It cannot.

Then, if the individuals of the pair are together two, they must be severally one?

from odd to even
numbers,

Clearly.

And if each of them is one, then by the addition of any one to any pair, the whole becomes three?

Yes.

And three are odd, and two are even?

Of course.

And if there are two there must also be twice, and if there are three there must be thrice; that is, if twice one makes two, and thrice one three?

from addition to multiplication.

Certainly.

There are two, and twice, and therefore there must be twice two; and there are three, and there is thrice, and therefore there must be thrice three?

Of course.

If there are three and twice, there is twice three; and if there are two and thrice, there is thrice two?

Undoubtedly.

Here, then, we have even taken even times, and odd taken odd times, and even taken odd times, and odd taken even times.

True.

And if this is so, does any number remain which has no necessity to be?

None whatever.

Then if one is, number must also be?

It must.

Out of the one that is, has come difference, and from difference number of every sort.

But if there is number, there must also be many, and infinite multiplicity of being; for number is infinite in multiplicity, and partakes also of being: am I not right?

Certainly.

And if all number participates in being, every part of number will also participate?

Yes.

Then being is distributed over the whole multitude of things, and nothing that is, however small or however great, is devoid of it? And, indeed, the very supposition of this is absurd, for how can that which is, be devoid of being?

and number is co-extensive with being

In no way.

And it is divided into the greatest and into the smallest, and into being of all sizes, and is broken up more than all things; the divisions of it have no limit.

True.

Then it has the greatest number of parts?

Yes, the greatest number.

Is there any of these which is a part of being, and yet no part?

Impossible.

But if it is at all and so long as it is, it must be one, and cannot be none?

for every single part of being, however small, is one.

Certainly.

Then the one attaches to every single part of being, and does not fail in any part, whether great or small, or whatever may be the size of it?

True.

But reflect:—Can one, in its entirety, be in many places at the same time?

No; I see the impossibility of that.

And if not in its entirety, then it is divided; for it cannot be present with all the parts of being, unless divided.

True.

And that which has parts will be as many as the parts are?

Certainly.

Then we were wrong in saying just now, that being was distributed into the greatest number of parts. For it is not distributed into parts more than the one, but into parts equal to the one; the one is never wanting to being, or being to the one, but being two they are co-equal and co-extensive.

Again, one is in as many places as being, and must therefore be divided into as many parts.

Certainly that is true.

The one itself, then, having been broken up into parts by being, is many and infinite?

True.

The abstract one, as well as the one which is, is both one and

Then not only the one which has being is many, but the one itself distributed by being, must also be many?

many, finite and infinite.

Certainly.

Further, inasmuch as the parts are parts of a whole, the one, as a whole, will be limited; for are not the parts contained by the whole?

Certainly.

And that which contains, is a limit?

Of course.

Then the one if it has being is one and many, whole and parts, having limits and yet unlimited in number?

Clearly.

And because having limits, also having extremes?

Certainly.

And if a whole, having beginning and middle and end. For can anything be a whole without these three? And if any one of them is wanting to anything, will that any longer be a whole?

No.

Then the one, as appears, will have beginning, middle, and end.

It will.

The one, as being a whole and also finite, has a beginning, middle and end, and so partakes of figure.

But, again, the middle will be equidistant from the extremes; or it would not be in the middle?

Yes.

Then the one will partake of figure, either rectilinear or round, or a union of the two?

True.

And if this is the case, it will be both in itself and in another too.

How?

Every part is in the whole, and none is outside the whole.

Regarded as the sum of its parts, it is in itself;

True.

And all the parts are contained by the whole?

Yes.

And the one is all its parts, and neither more nor less than all?

No.

And the one is the whole?

Of course.

But if all the parts are in the whole, and the one is all of them and the whole, and they are all contained by the whole, the one will be contained by the one; and thus the one will be in itself.

That is true.

But then, again, the whole is not in the parts—neither in all the parts, nor in some one of them. For if it is in all, it must be in one; for if there were any one in which it was not, it could not be in all the parts; for the part in which it is wanting is one of all, and if the whole is not in this, how can it be in them all?

regarded as a whole, it is in other, because it is not in the parts, neither in one, nor more than one, nor in all,

It cannot.

Nor can the whole be in some of the parts; for if the whole were in some of the parts, the greater would be in the less, which is impossible.

Yes, impossible.

But if the whole is neither in one, nor in more than one, nor in all of the parts, it must be in something else, or cease to be anywhere at all?

Certainly.

If it were nowhere, it would be nothing; but being a whole, and not being in itself, it must be in another.

Very true.

The one then, regarded as a whole, is in another, but regarded as being all its parts, is in itself; and therefore the one must be itself in itself and also in another.

Certainly.

The one therefore is both at rest and in motion: at rest, if in

The one then, being of this nature, is of necessity both at rest and in motion?

itself; in motion, if in another.

How?

The one is at rest since it is in itself, for being in one, and not passing out of this, it is in the same, which is itself.

True.

And that which is ever in the same, must be ever at rest?

Certainly.

Well, and must not that, on the contrary, which is ever in other, never be in the same; and if never in the same, never at rest, and if not at rest, in motion?

True.

Then the one being always itself in itself and other, must always be both at rest and in motion?

Clearly.

And must be the same with itself, and other than itself; and also the same with the others, and other than the others; this follows from its previous affections.

How so?

Everything in relation to every other thing, is either the same or other; or if neither the same nor other, then in the relation of a part to a whole, or of a whole to a part.

Four possible relations of two things: (1) sameness, (2) otherness, (3) part and whole, (4) whole and part.

Clearly.

And is the one a part of itself?

Certainly not.

Since it is not a part in relation to itself it cannot be related to itself as whole to part?

It cannot.

But is the one other than one?

No.

And therefore not other than itself?

Certainly not.

If then it be neither other, nor a whole, nor a part in relation to itself, must it not be the same with itself?

The one stands to itself in the relation of sameness.

Certainly.

But then, again, a thing which is in another place from 'itself,' if this 'itself' remains in the same place with itself, must be other than 'itself,' for it will be in another place?

True.

Then the one has been shown to be at once in itself and in another?

Yes.

Thus, then, as appears, the one will be other than itself?

but, as existing in another place than itself, of otherness.

True.

Well, then, if anything be other than anything, will it not be other than that which is other?

Certainly.

And will not all things that are not one, be other than the one, and the one other than the not-one?

The one is proved to be also other than the not-one and so other than other.

Of course.

Then the one will be other than the others?

True.

But, consider:—Are not the absolute same, and the absolute other, opposites to one another?

Of course.

Then will the same ever be in the other, or the other in the same?

They will not.

Yet from another point of view neither the one nor the not-one can partake of otherness, and therefore cannot be other than one another.

If then the other is never in the same, there is nothing in which the other is during any space of time; for during that space of time, however small, the other would be in the same. Is not that true?

Yes.

And since the other is never in the same, it can never be in anything that is.

True.

Then the other will never be either in the not-one, or in the one?

Certainly not.

Then not by reason of otherness is the one other than the not-one, or the not-one other than the one.

No.

Nor by reason of themselves will they be other than one another, if not partaking of the other. 147

How can they be?

But if they are not other, either by reason of themselves or of the other, will they not altogether escape being other than one another?

They will.

Again, the not-one cannot partake of the one; otherwise it would not have been not-one, but would have been in some way one.

Again, the not-one cannot partake of the one; and therefore it cannot be number; and it cannot be part or whole of the one;

True.

Nor can the not-one be number; for having number, it would not have been not-one at all.

It would not.

Again, is the not-one part of the one; or rather, would it not in that case partake of the one?

It would.

If then, in every point of view, the one and the not-one are distinct, then neither is the one part or whole of the not-one, nor is the not-one part or whole of the one?

No.

and therefore, according to our former table of relations, the one is the same with the not-one, the same with

But we said that things which are neither parts nor wholes of one another, nor other than one another, will be the same with one another:—so we said?

and also other than itself and others.

Yes.

Then shall we say that the one, being in this relation to the not-one, is the same with it?

Let us say so.

Then it is the same with itself and the others, and also other than itself and the others.

That appears to be the inference.

And it will also be like and unlike itself and the others?

Perhaps.

Since the one was shown to be other than the others, the others will also be other than the one.

It is like and unlike itself and other; for one and other are other than one another, yet other in the same degree.

Yes.

And the one is other than the others in the same degree that the others are other than it, and neither more nor less?

True.

And if neither more nor less, then in a like degree?

Yes.

In virtue of the affection by which the one is other than others and others in like manner other than it, the one will be affected like the others and the others like the one.

And therefore they are affected in the same manner.

How do you mean?

I may take as an illustration the case of names: You give a name to a thing?

Yes.

And you may say the name once or oftener?

Yes.

For when we apply the same name, we imply the presence of the same nature.

And when you say it once, you mention that of which it is the name? and when more than once, is it something else which you mention? or must it

always be the same thing of which you speak, whether you utter the name once or more than once?

Of course it is the same.

And is not 'other' a name given to a thing?

Certainly.

Whenever, then, you use the word 'other,' whether once or oftener, you name that of which it is the name, and to no other do you give the name?

True.

Then when we say that the others are other than the one, and the one other than the others, in repeating the word 'other' we speak of that nature to which the name is applied, and of no other?

Quite true.

Then the one which is other than others, and the other which is other than the one, in that the word 'other' is applied to both, will be in the same condition; and that which is in the same condition is like?

Yes.

Then in virtue of the affection by which the one is other than the others, every thing will be like every thing, for every thing is other than every thing.

One, in that it is other than the others, is shown to be like; and therefore, in that it is the same with the others, to be unlike.

True.

Again, the like is opposed to the unlike?

Yes.

And the other to the same?

True again.

And the one was also shown to be the same with the others?

Yes.

And to be the same with the others is the opposite of being other than the others?

Certainly.

And in that it was other it was shown to be like?

Yes.

But in that it was the same it will be unlike by virtue of the opposite affection to that which made it like; and this was the affection of otherness.

Yes.

The same then will make it unlike; otherwise it will not be the opposite of the other.

True.

Then the one will be both like and unlike the others; like in so far as it is other, and unlike in so far as it is the same.

Yes, that argument may be used.

And there is another argument.

What?

In so far as it is affected in the same way it is not affected otherwise, and not being affected otherwise is not unlike, and not being unlike, is like; but in so far as it is affected by other it is otherwise, and being otherwise affected is unlike.

From another point of view the opposite consequences follow.

True.

Then because the one is the same with the others and other than the others, on either of these two grounds, or on both of them, it will be both like and unlike the others?

Certainly.

And in the same way as being other than itself and the same with itself, on either of these two grounds and on both of them, it will be like and unlike itself?

Of course.

Again, how far can the one touch or not touch itself and others?—consider.

Again, the one will and will not touch both itself and others.

I am considering.

The one was shown to be in itself which was a whole?

True.

And also in other things?

Being in both, it will touch both.

Yes.

In so far as it is in other things it would touch other things, but in so far as it is in itself it would be debarred from touching them, and would touch itself only.

Clearly.

Then the inference is that it would touch both?

It would.

But what do you say to a new point of view? Must not that which is to touch another be next to that which it is to touch, and occupy the place nearest to that in which what it touches is situated?

True.

Then the one, if it is to touch itself, ought to be situated next to itself, and occupy the place next to that in which itself is?

But if contact implies at least two separate things, one cannot touch itself,—for it cannot be two;

It ought.

And that would require that the one should be two, and be in two places at once, and this, while it is one, will never happen.

No.

Then the one cannot touch itself any more than it can be two?

It cannot.

Neither can it touch others.

or other,—for ‘other’ cannot be ‘one’ thing.

Why not?

The reason is, that whatever is to touch another must be in separation from, and next to, that which it is to touch, and no third thing can be between them.

True.

Two things, then, at the least are necessary to make contact possible?

They are.

And if to the two a third be added in due order, the number of terms will be three, and the contacts two?

Yes.

And every additional term makes one additional contact, whence it follows that the contacts are one less in number than the terms; the first two terms exceeded the

number of contacts by one, and the whole number of terms exceeds the whole number of contacts by one in like manner; and for every one which is afterwards added to the number of terms, one contact is added to the contacts.

True.

Whatever is the whole number of things, the contacts will be always one less.

True.

But if there be only one, and not two, there will be no contact?

How can there be?

And do we not say that the others being other than the one are not one and have no part in the one?

True.

Then they have no number, if they have no one in them?

Of course not.

Then the others are neither one nor two, nor are they called by the name of any number?

No.

One, then, alone is one, and two do not exist?

Clearly not.

And if there are not two, there is no contact?

There is not.

Then neither does the one touch the others, nor the others the one, if there is no contact?

Certainly not.

For all which reasons the one touches and does not touch itself and the others?

True.

Further—is the one equal and unequal to itself and others?

How do you mean?

The one is equal and unequal to itself and others;

It the one were greater or less than the others, or the others greater or less than the one, they would not be greater or less than each other in virtue of their being the one and the others; but, if in addition to their being what they are they had equality, they would be equal to one another, or if the one had smallness and the others greatness, or the one had greatness and the others smallness—whichever kind had greatness would be greater, and whichever had smallness would be smaller?

Certainly.

Then there are two such ideas as greatness and smallness; for if they were not they could not be opposed to each other and be present in that which is.

How could they?

150If, then, smallness is present in the one it will be present either in the whole or in a part of the whole?

Certainly.

Suppose the first; it will be either co-equal and co-extensive with the whole one, or will contain the one?

Clearly.

If it be co-extensive with the one it will be co-equal with the one, or if containing the one it will be greater than the one?

equal, because, not partaking of greatness and smallness, it must partake of equality to itself and others:

Of course.

But can smallness be equal to anything or greater than anything, and have the functions of greatness and equality and not its own functions?

Impossible.

Then smallness cannot be in the whole of one, but, if at all, in a part only?

Yes.

And surely not in all of a part, for then the difficulty of the whole will recur; it will be equal to or greater than any part in which it is.

Certainly.

Then smallness will not be in anything, whether in a whole or in a part; nor will there be anything small but actual smallness.

True.

Neither will greatness be in the one, for if greatness be in anything there will be something greater other and besides greatness itself, namely, that in which greatness is; and this too when the small itself is not there, which the one, if it is great, must exceed; this, however, is impossible, seeing that smallness is wholly absent.

True.

But absolute greatness is only greater than absolute smallness, and smallness is only smaller than absolute greatness.

Very true.

Then other things are not greater or less than the one, if they have neither greatness nor smallness; nor have greatness or smallness any power of exceeding or being exceeded in relation to the one, but only in relation to one another; nor will the one be greater or less than them or others, if it has neither greatness nor smallness.

Clearly not.

Then if the one is neither greater nor less than the others, it cannot either exceed or be exceeded by them?

Certainly not.

And that which neither exceeds nor is exceeded, must be on an equality; and being on an equality, must be equal.

Of course.

And this will be true also of the relation of the one to itself; having neither greatness nor smallness in itself, it will neither exceed nor be exceeded by itself, but will be on an equality with and equal to itself.

Certainly.

Then the one will be equal both to itself and the others?

Clearly so.

And yet the one, being itself in itself, will also surround and be without itself; and, as containing itself, will be greater than itself; and, as contained in itself, will be less; and will thus be greater and less than itself.

It will.

Unequal to itself,—because it contains and is contained in itself, and is therefore greater and less than itself.

Now there cannot possibly be anything which is not included in the one and the others?

Of course not.

But, surely, that which is must always be somewhere?

Yes.

But that which is in anything will be less, and that in which it is will be greater; in no otherway can one thing be in another.

True.

And since there is nothing other or besides the one and the others, and they must be in something, must they not be in one another, the one in the others and the others in the one, if they are to be anywhere?

Unequal to others,—because it contains and is contained in them, and is therefore greater and less than them.

That is clear.

But inasmuch as the one is in the others, the others will be greater than the one, because they contain the one, which will be less than the others, because it is contained in them; and inasmuch as the others are in the one, the one on the same principle will be greater than the others, and the others less than the one.

True.

The one, then, will be equal to and greater and less than itself and the others?

Clearly.

And if it be greater and less and equal, it will be of equal and more and less measures or divisions than itself and the others, and if of measures, also of parts?

Of course.

And if of equal and more and less measures or divisions, it will be in number more or less than itself and the others, and likewise equal in number to itself and to the others?

That which is equal and unequal to itself and others, must be of a number of divisions or parts equal and unequal to itself and others.

How is that?

It will be of more measures than those things which it exceeds, and of as many parts as measures; and so with that to which it is equal, and that than which it is less.

True.

And being greater and less than itself, and equal to itself, it will be of equal measures with itself and of more and fewer measures than itself; and if of measures then also of parts?

It will.

And being of equal parts with itself, it will be numerically equal to itself; and being of more parts, more, and being of less, less than itself?

Certainly.

And the same will hold of its relation to other things; inasmuch as it is greater than them, it will be more in number than them; and inasmuch as it is smaller, it will be less in number; and inasmuch as it is equal in size to other things, it will be equal to them in number.

Certainly.

Once more, then, as would appear, the one will be in number both equal to and more and less than both itself and all other things.

It will.

Does the one also partake of time? And is it and does it become older and younger than itself and others, and again, neither younger nor older than itself and others, by virtue of participation in time?

Does one partake of time and become older and younger, and neither older nor younger than itself and others?

How do you mean?

If one is, being must be predicated of it?

Yes.

But to be ($\epsilon\iota\sigma\tau\eta\kappa\alpha\iota$) is only participation of being in present time, and to have been is the participation of being at a past time, and to be about to be is the participation of being at a future time?

Very true.

Then the one, since it partakes of being, partakes of time?

The one is, and therefore partakes of time; and since time is always moving forward, it becomes older than itself.

Certainly.

And is not time always moving forward?

Yes.

Then the one is always becoming older than itself, since it moves forward in time?

Certainly.

And do you remember that the older becomes older than that which becomes younger?

I remember.

Then since the one becomes older than itself, it becomes younger at the same time?

But older and younger are relative terms, and therefore that which becomes older than itself must become also younger than itself.

Certainly.

Thus, then, the one becomes older as well as younger than itself?

Yes.

And it is older (is it not?) when in becoming, it gets to the point of time between 'was' and 'will be,' which is 'now': for surely in going from the past to the future, it cannot skip the present?

No.

And when it arrives at the present it stops from becoming older, and no longer becomes, but is older, for if it went on it would never be reached by the present, for it is the nature of that which goes on, to touch both the present and the future, letting go the present and seizing the future, while in process of becoming between them.

One becomes older until it reaches the now or present; then it ceases to become and is older;

True.

But that which is becoming cannot skip the present; when it reaches the present it ceases to become, and is then whatever it may happen to be becoming.

Clearly.

And so the one, when in becoming older it reaches the present, ceases to become, and is then older.

Certainly.

And it is older than that than which it was becoming older, and it was becoming older than itself.

Yes.

And that which is older is older than that which is younger?

and also younger.

True.

Then the one is younger than itself, when in becoming older it reaches the present?

It always is and becomes older and younger than itself;

Certainly.

But the present is always present with the one during all its being; for whenever it is it is always now.

Certainly.

Then the one always both is and becomes older and younger than itself?

Truly.

And is it or does it become a longer time than itself or an equal time with itself?

and since it is and becomes during the same time with itself is of the same age, and therefore neither older nor younger than itself.

An equal time.

But if it becomes or is for an equal time with itself, it is of the same age with itself?

Of course.

And that which is of the same age, is neither older nor younger?

No.

The one, then, becoming and being the same time with itself, neither is nor becomes older or younger than itself? 153

Is the one younger or older than other things? The less comes into being before the greater: the one is less than the many or others, and therefore comes into being before them and is older than they.

I should say not.

And what are its relations to other things? Is it or does it become older or younger than they?

I cannot tell you.

You can at least tell me that others than the one are more than the one—other would have been one, but the others have multitude, and are more than one?

They will have multitude.

And a multitude implies a number larger than one?

Of course.

And shall we say that the lesser or the greater is the first to come or to have come into existence?

The lesser.

Then the least is the first? And that is the one?

Yes.

Then the one of all things that have number is the first to come into being; but all other things have also number, being plural and not singular.

They have.

And since it came into being first it must be supposed to have come into being prior to the others, and the others later; and the things which came into being later, are younger than that which preceded them? And so the other things will be younger than the one, and the one older than other things?

True.

What would you say of another question? Can the one have come into being contrary to its own nature, or is that impossible?

Impossible.

And yet, surely, the one was shown to have parts; and if parts, then a beginning, middle and end?

The one has parts and comes into being with the last of them:

Yes.

And a beginning, both of the one itself and of all other things, comes into being first of all; and after the beginning, the others follow, until you reach the end?

Certainly.

And all these others we shall affirm to be parts of the whole and of the one, which, as soon as the end is reached, has become whole and one?

Yes; that is what we shall say.

But the end comes last, and the one is of such a nature as to come into being with the last; and, since the one cannot come into being except in accordance with its own nature, its nature will require that it should come into being after the others, simultaneously with the end.

and therefore it is younger than the others. But again, each part is one,

Clearly.

Then the one is younger than the others and the others older than the one.

That also is clear in my judgment.

Well, and must not a beginning or any other part of the one or of anything, if it be a part and not parts, being a part, be also of necessity one?

Certainly.

And will not the one come into being together with each part—together with the first part when that comes into being, and together with the second part and with all the rest, and will not be wanting to any part, which is added to any other part until it has reached the last and become one whole; it will be wanting neither to the middle, nor to the first, nor to the last, nor to any of them, while the process of becoming is going on?

and one comes into being together with each part, and so the one is neither older nor younger than the others but coeval.

True.

Then the one is of the same age with all the others, so that if the one itself does not contradict its own nature, it will be neither prior nor posterior to the others, but simultaneous; and according to this argument the one will be neither older nor younger than the others, nor the others than the one, but according to the previous argument the one will be older and younger than the others and the others than the one.

Certainly.

After this manner then the one is and has become. But as to its becoming older and younger than the others, and the others than the one, and neither older nor younger, what shall we say? Shall we say as of being so also of becoming, or otherwise?

Again, nothing can become older or younger than it was at first in relation to something else, if an equal amount of time be added to both. This is true of the one and the other.

I cannot answer.

But I can venture to say, that even if one thing were older or younger than another, it could not become older or younger in a greater degree than it was at first; for equals added to unequals, whether to periods of time or to anything else, leave the difference between them the same as at first.

Of course.

Then that which is, cannot become older or younger than that which is, since the difference of age is always the same; the one is and has become older and the other younger; but they are no longer becoming so.

True.

And the one which is does not therefore become either older or younger than the others which are.

No.

But consider whether they may not become older and younger in another way.

In what way?

Just as the one was proven to be older than the others and the others than the one.

And what of that?

If the one is older than the others, it has come into being a longer time than the others.

Yes.

But consider again; if we add equal time to a greater and a less time, will the greater differ from the less time by an equal or by a smaller portion than before?

But if an equal time be added to a greater and less, the relative difference between them diminishes; and so the one, which is older, will by such addition become younger than the others, and they in turn older than it.

By a smaller portion.

Then the difference between the age of the one and the age of the others will not be afterwards so great as at first, but if an equal time be added to both of them they will differ less and less in age?

Yes.

And that which differs in age from some other less than formerly, from being older will become younger in relation to that other than which it was older?

Yes, younger.

And if the one becomes younger the others aforesaid will become older than they were before, in relation to the one.

Certainly.

Then that which had become younger becomes older relatively to that which previously had become and was older; 155it never really is older, but is always becoming, for the one is always growing on the side of youth and the other on the side of age. And in like manner the older is always in process of becoming younger than the younger; for as they are always going in opposite directions they become in ways the opposite to one another, the younger older than the older, and the older younger than the younger. They cannot, however, have become; for if they had already become they would be and not merely become. But that is impossible; for they are always becoming both older and younger than one another: the one becomes younger than the others because it was seen to be older and prior, and the others become older than the one because they came into being later; and in the same way the others are in the same relation to the one, because they were seen to be older and prior to the one.

That is clear.

Inasmuch then, as one thing does not become older or younger than another, in that they always differ from each other by an equal number, the one cannot become older or younger than the others, nor the others than the one; but inasmuch as that which came into being earlier and that which came into being later must continually differ from each other by a different portion—in this point of view the others must become older and younger than the one, and the one than the others.

Certainly.

For all these reasons, then, the one is and becomes older and younger than itself and the others, and neither is nor becomes older or younger than itself or the others.

Certainly.

But since the one partakes of time, and partakes of becoming older and younger, must it not also partake of the past, the present, and the future?

Of course it must.

Then the one was and is and will be, and was becoming and is becoming and will become?

Certainly.

And there is and was and will be something which is in relation to it and belongs to it?

True.

And since we have at this moment opinion and knowledge and perception of the one, there is opinion and knowledge and perception of it?

Quite right.

Then there is name and expression for it, and it is named and expressed, and everything of this kind which appertains to other things appertains to the one.

Certainly, that is true.

Yet once more and for the third time, let us consider: If the one is both one and many, as we have described, and is neither one nor many, and participates in time, must it not, in as far as it is one, at times partake of being, and in as far as it is not one, at times not partake of being?

Opposites cannot be predicated of the same thing at the same time.

Certainly.

But can it partake of being when not partaking of being, or not partake of being when partaking of being?

Impossible.

Then the one partakes and does not partake of being at different times, for that is the only way in which it can partake and not partake of the same.

The one must therefore partake of being and not-being and assume and relinquish them at different times.

True.

156And is there not also a time at which it assumes being and relinquishes being—for how can it have and not have the same thing unless it receives and also gives it up at some time?

Impossible.

And the assuming of being is what you would call becoming?

I should.

And the relinquishing of being you would call destruction?

How does the change take place?

I should.

The one then, as would appear, becomes and is destroyed by taking and giving up being.

Certainly.

And being one and many and in process of becoming and being destroyed, when it becomes one it ceases to be many, and when many, it ceases to be one?

Certainly.

And as it becomes one and many, must it not inevitably experience separation and aggregation?

Inevitably.

And whenever it becomes like and unlike it must be assimilated and dissimilated?

Yes.

And when it becomes greater or less or equal it must grow or diminish or be equalized?

True.

And when being in motion it rests, and when being at rest it changes to motion, it can surely be in no time at all?

How can it?

But that a thing which is previously at rest should be afterwards in motion, or previously in motion and afterwards at rest, without experiencing change, is impossible.

Impossible.

And surely there cannot be a time in which a thing can be at once neither in motion nor at rest?

There cannot.

But neither can it change without changing.

True.

When then does it change; for it cannot change either when at rest, or when in motion, or when in time?

It cannot.

And does this strange thing in which it is at the time of changing really exist?

As the one is always partaking of one of two opposites, the transition takes place in a moment.

What thing?

The moment. For the moment seems to imply a something out of which change takes place into either of two states; for the change is not from the state of rest as such, nor from the state of motion as such; but there is this curious nature which we call the moment lying between rest and motion, not being in any time; and into this and out of this what is in motion changes into rest, and what is at rest into motion.

Nature of the moment.

So it appears.

And the one then, since it is at rest and also in motion, will change to either, for only in this way can it be in both. And in changing it changes in a moment, and when it is changing it will be in no time, and will not then be either in motion or at rest.

It will not.

And it will be in the same case in relation to the other ¹⁵⁷changes, when it passes from being into cessation of being, or from not-being into becoming—then it passes between certain states of motion and rest, and neither is nor is not, nor becomes nor is destroyed.

Very true.

And on the same principle, in the passage from one to many and from many to one, the one is neither one nor many, neither separated nor aggregated; and in the passage from like to unlike, and from unlike to like, it is neither like nor unlike, neither in a state of assimilation nor of dissimilation; and in the passage from small to great and equal and back again, it will be neither small nor great, nor equal, nor in a state of increase, or diminution, or equalization.

True.

All these, then, are the affections of the one, if the one has being.

Of course.

i. aa. But if one is, what will happen to the others—is not that also to be considered?

The affections of the others, if the one is.

Yes.

Let us show then, if one is, what will be the affections of the others than the one.

Let us do so.

Inasmuch as there are things other than the one, the others are not the one; for if they were they could not be other than the one.

Things other than one are not the one, and yet they participate in the one; for the others are parts of a whole which is one.

Very true.

Nor are the others altogether without the one, but in a certain way they participate in the one.

In what way?

Because the others are other than the one inasmuch as they have parts; for if they had no parts they would be simply one.

Right.

And parts, as we affirm, have relation to a whole?

So we say.

And a whole must necessarily be one made up of many; and the parts will be parts of the one, for each of the parts is not a part of many, but of a whole.

How do you mean?

If anything were a part of many, being itself one of them, it will surely be a part of itself, which is impossible, and it will be a part of each one of the other parts, if of all; for if not a part of some one, it will be a part of all the others but this one, and thus

will not be a part of each one; and if not a part of each one, it will not be a part of any one of the many; and not being a part of any one, it cannot be a part or anything else of all those things of none of which it is anything.

Clearly not.

Then the part is not a part of the many, nor of all, but is of a certain single form, which we call a whole, being one perfect unity framed out of all—of this the part will be a part.

Certainly.

If, then, the others have parts, they will participate in the whole and in the one.

Again, each part is not only a part but also a perfect whole in itself.

True.

Then the others than the one must be one perfect whole, having parts.

Certainly.

And the same argument holds of each part, for the part must participate in the one; for if each of the parts is a part, ¹⁵⁸this means, I suppose, that it is one separate from the rest and self-related; otherwise it is not each.

True.

But when we speak of the part participating in the one, it must clearly be other than one; for if not, it would not merely have participated, but would have been one; whereas only the one itself can be one.

Very true.

Both the whole and the part must participate in the one; for the whole will be one whole, of which the parts will be parts; and each part will be one part of the whole which is the whole of the part.

The whole and the part are both one, and therefore they must participate in the one and be other than the one, and more than one and infinite in number.

True.

And will not the things which participate in the one, be other than it?

Of course.

And the things which are other than the one will be many; for if the things which are other than the one were neither one nor more than one, they would be nothing.

True.

But, seeing that the things which participate in the one as a part, and in the one as a whole, are more than one, must not those very things which participate in the one be infinite in number?

How so?

Let us look at the matter thus:—Is it not a fact that in partaking of the one they are not one, and do not partake of the one at the very time when they are partaking of it?

Clearly.

They do so then as multitudes in which the one is not present?

Very true.

And if we were to abstract from them in idea the very smallest fraction, must not that least fraction, if it does not partake of the one, be a multitude and not one?

It must.

And if we continue to look at the other side of their nature, regarded simply, and in itself, will not they, as far as we see them, be unlimited in number?

The others unlimited and also limited in their nature,

Certainly.

And yet, when each several part becomes a part, then the parts have a limit in relation to the whole and to each other, and the whole in relation to the parts.

Just so.

The result to the others than the one is that the union of themselves and the one appears to create a new element in them which gives to them limitation in relation to one another; whereas in their own nature they have no limit.

That is clear.

Then the others than the one, both as whole and parts, are infinite, and also partake of limit.

both as whole and parts.

Certainly.

Then they are both like and unlike one another and themselves.

Wherefore also they are like and unlike.

How is that?

Inasmuch as they are unlimited in their own nature, they are all affected in the same way.

True.

And inasmuch as they all partake of limit, they are all affected in the same way.

Of course.

But inasmuch as their state is both limited and unlimited, they are affected in opposite ways.

Yes.

159 And opposites are the most unlike of things.

Certainly.

Considered, then, in regard to either one of their affections, they will be like themselves and one another; considered in reference to both of them together, most opposed and most unlike.

That appears to be true.

Then the others are both like and unlike themselves and one another?

True.

And they are the same and also different from one another, and in motion and at rest, and experience every sort of opposite affection, as may be proved without difficulty of them, since they have been shown to have experienced the affections aforesaid?

True.

i. bb. Suppose, now, that we leave the further discussion of these matters as evident, and consider again upon the hypothesis that the one is, whether the opposite of all this is or is not equally true of the others.

A reversal of former conclusions.

By all means.

Then let us begin again, and ask, If one is, what must be the affections of the others?

Let us ask that question.

Must not the one be distinct from the others, and the others from the one?

Why so?

Why, because there is nothing else beside them which is distinct from both of them; for the expression 'one and the others' includes all things.

Yes, all things.

Then we cannot suppose that there is anything different from them in which both the one and the others might exist?

There is nothing.

Then the one and the others are never in the same?

True.

Then they are separated from each other?

Yes.

And we surely cannot say that what is truly one has parts?

Impossible.

Then the one will not be in the others as a whole, nor as part, if it be separated from the others, and has no parts?

Impossible.

Then there is no way in which the others can partake of the one, if they do not partake either in whole or in part?

It would seem not.

Then there is no way in which the others are one, or have in themselves any unity?

There is not.

Nor are the others many; for if they were many, each part of them would be a part of the whole; but now the others, not partaking in any way of the one, are neither one nor many, nor whole, nor part.

True.

Then the others neither are nor contain two or three, if entirely deprived of the one?

True.

Then the others are neither like nor unlike the one, nor is likeness and unlikeness in them; for if they were like and unlike, or had in them likeness and unlikeness, they would have two natures in them opposite to one another.

One and the others are never in the same, for there is nothing outside them in which they can jointly partake, and therefore they must be always distinct.

And the others being separated from the one cannot be either one or many.

Nor can they be opposites; for they cannot partake of two things if they cannot partake of one.

That is clear.

But for that which partakes of nothing to partake of two things was held by us to be impossible?

Impossible.

160 Then the others are neither like nor unlike nor both, for if they were like or unlike they would partake of one of those two natures, which would be one thing, and if they were both they would partake of opposites which would be two things, and this has been shown to be impossible.

The others without the one = o.

True.

Therefore they are neither the same, nor other, nor in motion, nor at rest, nor in a state of becoming, nor of being destroyed, nor greater, nor less, nor equal, nor have they experienced anything else of the sort; for, if they are capable of experiencing any such affection, they will participate in one and two and three, and odd and even, and in these, as has been proved, they do not participate, seeing that they are altogether and in every way devoid of the one.

Very true.

Therefore if one is, the one is all things, and also nothing, both in relation to itself and to other things.

The one is all things; but also nothing (141 E. 142).

Certainly.

ii. a. Well, and ought we not to consider next what will be the consequence if the one is not?

Yes; we ought.

What is the meaning of the hypothesis—If the one is not; is there any difference between this and the hypothesis—If the not one is not?

If the one is not, what then?

There is a difference, certainly.

Is there a difference only, or rather are not the two expressions—if the one is not, and if the not one is not, entirely opposed?

They are entirely opposed.

And suppose a person to say:—If greatness is not, if smallness is not, or anything of that sort, does he not mean, whenever he uses such an expression, that ‘what is not’ is other than other things?

To be sure.

And so when he says 'If one is not' he clearly means, that what 'is not' is other than all others; we know what he means—do we not?

What is the meaning of 'the one which is not'?

Yes, we do.

When he says 'one,' he says something which is known; and secondly something which is other than all other things; it makes no difference whether he predicate of one being or not-being, for that which is said 'not to be' is known to be something all the same, and is distinguished from other things.

It sometimes means other than or different from other things; and therefore has difference, etc.

Certainly.

Then I will begin again, and ask: If one is not, what are the consequences? In the first place, as would appear, there is a knowledge of it, or the very meaning of the words, 'if one is not,' would not be known.

True.

Secondly, the others differ from it, or it could not be described as different from the others?

Certainly.

Difference, then, belongs to it as well as knowledge; for in speaking of the one as different from the others, we do not speak of a difference in the others, but in the one.

Clearly so.

Moreover, the one that is not is something and partakes of relation to 'that,' and 'this,' and 'these,' and the like, and is an attribute of 'this'; for the one, or the others than the one, could not have been spoken of, nor could any attribute or relative of the one that is not have been or been spoken of, nor could it have been said to be anything, if it did not partake of 'some,' or of the other relations just now mentioned.

True.

Being, then, cannot be ascribed to the one, since it is not; 161but the one that is not may or rather must participate in many things, if it and nothing else is not; if, however, neither the one nor the one that is not is supposed not to be, and we are speaking of something of a different nature, we can predicate nothing of it. But supposing that the one that is not and nothing else is not, then it must participate in the predicate 'that,' and in many others.

Certainly.

And it will have unlikeness in relation to the others, for the others being different from the one will be of a different kind.

It is unlike the others,
and must therefore
have likeness to itself.

Certainly.

And are not things of a different kind also other in kind?

Of course.

And are not things other in kind unlike?

They are unlike.

And if they are unlike the one, that which they are unlike will clearly be unlike them?

Clearly so.

Then the one will have unlikeness in respect of which the others are unlike it?

That would seem to be true.

And if unlikeness to other things is attributed to it, it must have likeness to itself.

How so?

If the one have unlikeness to one, something else must be meant; nor will the hypothesis relate to one; but it will relate to something other than one?

Quite so.

But that cannot be.

No.

Then the one must have likeness to itself?

It must.

Again, it is not equal to the others; for if it were equal, then it would at once be and be like them in virtue of the equality; but if one has no being, then it can neither be nor be like?

It cannot.

But since it is not equal to the others, neither can the others be equal to it?

The one which is not
is unequal to the
others and the others
to it.

Certainly not.

And things that are not equal are unequal?

True.

And they are unequal to an unequal?

Of course.

Then the one partakes of inequality, and in respect of this the others are unequal to it?

But partaking of inequality, it partakes also of greatness and smallness, and therefore of equality which lies between them;

Very true.

And inequality implies greatness and smallness?

Yes.

Then the one, if of such a nature, has greatness and smallness?

That appears to be true.

And greatness and smallness always stand apart?

True.

Then there is always something between them?

There is.

And can you think of anything else which is between them other than equality?

No, it is equality which lies between them.

Then that which has greatness and smallness also has equality, which lies between them?

That is clear.

Then the one, which is not, partakes, as would appear, of greatness and smallness and equality?

Clearly.

Further, it must surely in a sort partake of being?

it must surely partake of being in a sense;

How so?

It must be so, for if not, then we should not speak the truth in saying that the one is not. But if we speak the truth, clearly we must say what is. Am I not right?

Yes. 162

And since we affirm that we speak truly, we must also affirm that we say what is?

Certainly.

Then, as would appear, the one, when it is not, is; for if it were not to be when it is not, but 1 were to relinquish something of being, so as to become not-being, it would at once be.

for not-being implies being and being implies not-being.

Quite true.

Then the one which is not, if it is to maintain itself, must have the being of not-being as the bond of not-being, just as being must have as a bond the not-being of not-being in order to perfect its own being; for the truest assertion of the being of being and of the not-being of not-being is when being partakes of the being of being, and not of the being of not-being—that is, the perfection of being; and when not-being does not partake of the not-being of not-being but of the being of not-being—that is the perfection of not-being.

Most true.

Since then what is partakes of not-being, and what is not of being, must not the one also partake of being in order not to be?

Certainly.

Then the one, if it is not, clearly has being?

Clearly.

And has not-being also, if it is not?

Of course.

But can anything which is in a certain state not be in that state without changing?

But to be both, it must change from one to the other, and therefore be in motion.

Impossible.

Then everything which is and is not in a certain state, implies change?

Certainly.

And change is motion—we may say that?

Yes, motion.

And the one has been proved both to be and not to be?

Yes.

And therefore is and is not in the same state?

Yes.

Thus the one that is not has been shown to have motion also, because it changes from being to not-being?

That appears to be true.

But surely if it is nowhere among what is, as is the fact, since it is not, it cannot change from one place to another?

Impossible.

Then it cannot move by changing place?

No.

Nor can it turn on the same spot, for it nowhere touches the same, for the same is, and that which is not cannot be reckoned among things that are?

It cannot.

Then the one, if it is not, cannot turn in that in which it is not?

No.

Neither can the one, whether it is or is not, be altered into other than itself, for if it altered and became different from itself, then we could not be still speaking of the one, but of something else?

True.

But if the one neither suffers alteration, nor turns round in the same place, nor changes place, can it still be capable of motion?

Impossible.

Now that which is unmoved must surely be at rest, and that which is at rest must stand still?

Certainly.

Then the one that is not, stands still, and is also in motion?

How can it change?
Not (*a*) by change of place, nor (*b*) by revolving in the same place.

nor (*c*) by change of nature.

It is therefore unmoved;

and being unmoved, it must be at rest.

That seems to be true.

But if it be in motion it must necessarily undergo alteration, for anything which is moved, in so far as it is moved, is 163no longer in the same state, but in another?

But motion implies alteration.

Yes.

Then the one, being moved, is altered?

Yes.

And, further, if not moved in any way, it will not be altered in any way?

No.

Then, in so far as the one that is not is moved, it is altered, but in so far as it is not moved, it is not altered?

Right.

Then the one that is not is altered and is not altered?

That is clear.

And must not that which is altered become other than it previously was, and lose its former state and be destroyed; but that which is not altered can neither come into being nor be destroyed?

The one that is not becomes and is destroyed, and neither becomes nor is destroyed.

Very true.

And the one that is not, being altered, becomes and is destroyed; and not being altered, neither becomes nor is destroyed; and so the one that is not becomes and is destroyed, and neither becomes nor is destroyed?

True.

ii. b. And now, let us go back once more to the beginning, and see whether these or some other consequences will follow.

Let us do as you say.

If one is not, we ask what will happen in respect of one? That is the question.

If one is not, what then?

Yes.

Do not the words 'is not' signify absence of being in that to which we apply them?

'Is not' implies absence of being in the most absolute sense.

Just so.

And when we say that a thing is not, do we mean that it is not in one way but is in another? or do we mean, absolutely, that what is not has in no sort or way or kind participation of being?

Quite absolutely.

Then, that which is not cannot be, or in any way participate in being?

It cannot.

And did we not mean by becoming, and being destroyed, the assumption of being and the loss of being?

The one which is not cannot either have or lose or assume being.

Nothing else.

And can that which has no participation in being, either assume or lose being?

Impossible.

The one then, since it in no way is, cannot have or lose or assume being in any way?

True.

Then the one that is not, since it in no way partakes of being, neither perishes nor becomes?

No.

Then it is not altered at all; for if it were it would become and be destroyed?

True.

But if it be not altered it cannot be moved?

nor be altered nor be in motion,

Certainly not.

Nor can we say that it stands, if it is nowhere; for that which stands must always be in one and the same spot?

nor yet at rest.

Of course.

Then we must say that the one which is not never stands still and never moves?

Neither.

Nor is there any existing thing which can be attributed to it; for if there had been, it would partake of being? 164

It has no attributes and no conditions of any kind.

That is clear.

And therefore neither smallness, nor greatness, nor equality, can be attributed to it?

No.

Nor yet likeness nor difference, either in relation to itself or to others?

Clearly not.

Well, and if nothing should be attributed to it, can other things be attributed to it?

Certainly not.

And therefore other things can neither be like or unlike, the same, or different in relation to it?

They cannot.

Nor can what is not, be anything, or be this thing, or be related to or the attribute of this or that or other, or be past, present, or future. Nor can knowledge, or opinion, or perception, or expression, or name, or any other thing that is, have any concern with it?

No.

Then the one that is not has no condition of any kind?

Such appears to be the conclusion.

ii. aa. Yet once more; if one is not, what becomes of the others? Let us determine that.

Again, If one is not, what happens to the others?

Yes; let us determine that.

The others must surely be; for if they, like the one, were not, we could not be now speaking of them.

True.

But to speak of the others implies difference—the terms ‘other’ and ‘different’ are synonymous?

True.

Other means other than other, and different, different from the different?

Other implies difference; it cannot mean other than the one; and therefore the others are other than each other.

Yes.

Then, if there are to be others, there is something than which they will be other?

Certainly.

And what can that be?—for if the one is not, they will not be other than the one.

They will not.

Then they will be other than each other; for the only remaining alternative is that they are other than nothing.

True.

And they are each other than one another, as being plural and not singular; for if one is not, they cannot be singular, but every particle of them is infinite in number; and even if a person takes that which appears to be the smallest fraction, this, which seemed one, in a moment evanesces into many, as in a dream, and from being the smallest becomes very great, in comparison with the fractions into which it is split up?

and each of them, though devoid of the one, appears to be one.

Very true.

And in such particles the others will be other than one another, if others are, and the one is not?

Exactly.

And will there not be many particles, each appearing to be one, but not being one, if one is not?

True.

And it would seem that number can be predicated of them if each of them appears to be one, though it is really many?

It can.

And there will seem to be odd and even among them, which will also have no reality, if one is not?

Yes.

And there will appear to be a least among them; and even this will seem large and manifold in comparison with the 165 many small fractions which are contained in it?

Certainly.

And each particle will be imagined to be equal to the many and little; for it could not have appeared to pass from the greater to the less without having appeared to arrive at the middle; and thus would arise the appearance of equality.

Yes.

And having neither beginning, middle, nor end, each separate particle yet appears to have a limit in relation to itself and other.

How so?

Because, when a person conceives of any one of these as such, prior to the beginning another beginning appears, and there is another end, remaining after the end, and in the middle truer middles within but smaller, because no unity can be conceived of any of them, since the one is not.

Very true.

And so all being, whatever we think of, must be broken up into fractions, for a particle will have to be conceived of without unity?

Certainly.

And such being when seen indistinctly and at a distance, appears to be one; but when seen near and with keen intellect, every single thing appears to be infinite, since it is deprived of the one, which is not?

When seen at a distance the others appear to be one; when near, many and infinite.

Nothing more certain.

Then each of the others must appear to be infinite and finite, and one and many, if others than the one exist and not the one.

They must.

Then will they not appear to be like and unlike?

In what way?

Just as in a picture things appear to be all one to a person standing at a distance, and to be in the same state and alike?

True.

But when you approach them, they appear to be many and different; and because of the appearance of the difference, different in kind from, and unlike, themselves?

True.

And so must the particles appear to be like and unlike themselves and each other.

Certainly.

And must they not be the same and yet different from one another, and in contact with themselves, although they are separated, and having every sort of motion, and every sort of rest, and becoming and being destroyed, and in neither state, and the like, all which things may be easily enumerated, if the one is not and the many are?

Most true.

ii. bb. Once more, let us go back to the beginning, and ask if the one is not, and the others of the one are, what will follow.

If one is not and the others are, what then? The others are not one and therefore not many.

Let us ask that question.

In the first place, the others will not be one?

Impossible.

Nor will they be many; for if they were many one would be contained in them. But if no one of them is one, all of them are nought, and therefore they will not be many.

True.

If there be no one in the others, the others are neither many nor one.

166 They are not.

Nor do they appear either as one or many.

Why not?

Again, if the others appear to be one or many they must in some sense partake of not-being; but this is not the case.

Because the others have no sort or manner or way of communion with any sort of not-being, nor can anything which is not, be connected with any of the others; for that which is not has no parts.

True.

Nor is there an opinion or any appearance of not-being in connexion with the others, nor is not-being ever in any way attributed to the others.

No.

Then if one is not, there is no conception of any of the others either as one or many; for you cannot conceive the many without the one.

You cannot.

Then if one is not, the others neither are, nor can be conceived to be either one or many?

It would seem not.

Nor as like or unlike?

No.

Nor as the same or different, nor in contact or separation, nor in any of those states which we enumerated as appearing to be;—the others neither are nor appear to be any of these, if one is not?

Nor are they like or unlike, the same or different.

True.

Then may we not sum up the argument in a word and say truly: If one is not, then nothing is?

Certainly.

Let thus much be said; and further let us affirm what seems to be the truth, that, whether one is or is not, one and the others in relation to themselves and one another, all of them, in every way, are and are not, and appear to be and appear not to be.

Most true.

THEAETETUS.

PERSONS OF THE DIALOGUE.

Socrates.

Theodorus.

Theaetetus.

Euclid and Terpsion meet in front of Euclid's house in Megara; they enter the house, and the dialogue is read to them by a servant.

EUCLID.

Theaetetus.

142 Have you only just arrived from the country, Terpsion?

Euclid, Terpsion.

TERPSION.

The Preface.

No, I came some time ago: and I have been in the Agora looking for you, and wondering that I could not find you.

Euclid and Terpsion meet in front of Euclid's house in Megara; they converse about the dangerous condition of Theaetetus, who had been carried away dying from the camp at Corinth

EUC.

But I was not in the city.

TERP.

Where then?

EUC.

As I was going down to the harbour, I met Theaetetus—he was being carried up to Athens from the army at Corinth.

TERP.

Was he alive or dead?

EUC.

He was scarcely alive, for he has been badly wounded; but he was suffering even more from the sickness which has broken out in the army.

TERP.

The dysentery, you mean?

EUC.

Yes.

TERP.

Alas! what a loss he will be!

EUC.

Yes, Terpsion, he is a noble fellow; only to-day I heard some people highly praising his behaviour in this very battle.

TERP.

No wonder; I should rather be surprised at hearing anything else of him. But why did he go on, instead of stopping at Megara?

EUC.

He wanted to get home: although I entreated and advised him to remain, he would not listen to me; so I set him on his way, and turned back, and then I remembered what Socrates had said of him, and thought how remarkably this, like all his predictions, had been fulfilled. I believe that he had seen him a little before his own death, when Theaetetus was a youth, and he had a memorable conversation with him, which he repeated to me when I came to Athens; he was full of admiration of his genius, and said that he would most certainly be a great man, if he lived.

Euclid calls to mind the great things which Socrates had early prophesied of him: and he has preserved the report of a conversation of Theaetetus with Socrates which took place just before the latter's death.

TERP.

The prophecy has certainly been fulfilled; but what was the conversation? can you tell me?

EUC.

No, indeed, not offhand; but I took notes of it as soon as I got home; these I filled up from memory, writing them out at leisure; and whenever I went to Athens, I asked Socrates about any point which I had forgotten, and on my return I made corrections; thus I have nearly the whole conversation written down.

TERP.

I remember—you told me; and I have always been intending to ask you to show me the writing, but have put off doing so; and now, why should we not read it through?—having just come from the country, I should greatly like to rest.

EUC.

I too shall be very glad of a rest, for I went with Theaetetus as far as Erineum. Let us go in, then, and, while we are reposing, the servant shall read to us.

TERP.

Very good.

EUC.

Here is the roll, Terpsion; I may observe that I have introduced Socrates, not as narrating to me, but as actually conversing with the persons whom he mentioned—these were, Theodorus the geometrician (of Cyrene), and Theaetetus. I have omitted, for the sake of convenience, the interlocutory words ‘I said,’ ‘I remarked,’ which he used when he spoke of himself, and again, ‘he agreed,’ or ‘disagreed,’ in the answer, lest the repetition of them should be troublesome.

They enter the house, and Euclid produces the roll, which his servant reads to them.

TERP.

Quite right, Euclid.

EUC.

And now, boy, you may take the roll and read.

Euclid’S Servant Reads.

SOCRATES.

If I cared enough about the Cyrenians, Theodorus, I would ask you whether there are any rising geometricians or philosophers in that part of the world. But I am more interested in our own Athenian youth, and I would rather know who among them are likely to do well. I observe them as far as I can myself, and I enquire of any one whom they follow, and I see that a great many of them follow you, in which they are quite right, considering your eminence in geometry and in other ways. Tell me then, if you have met with any one who is good for anything.

The Dialogue.

Socrates, meeting Theodorus of Cyrene in an Athenian palaestra, asks what youths of promise he has discovered at Athens.

THEODORUS.

Yes, Socrates, I have become acquainted with one very remarkable Athenian youth, whom I commend to you as well worthy of your attention. If he had been a beauty I should have been afraid to praise him, lest you should suppose that I was in love with him; but he is no beauty, and you must not be offended if I say that he is very like you; for he has a snub nose and projecting eyes, although these features are less marked in him than in you.

Theodorus in answer expatiates on the merits of Theaetetus, who is however no beauty, but ugly, like Socrates.

144Seeing, then, that he has no personal attractions, I may freely say, that in all my acquaintance, which is very large, I never knew any one who was his equal in natural gifts: for he has a quickness of apprehension which is almost unrivalled, and he is exceedingly gentle, and also the most courageous of men; there is a union of qualities in him such as I have never seen in any other, and should scarcely have thought possible; for those who, like him, have quick and ready and retentive wits, have

generally also quick tempers; they are ships without ballast, and go darting about, and are mad rather than courageous; and the steadier sort, when they have to face study, prove stupid and cannot remember. Whereas he moves surely and smoothly and successfully in the path of knowledge and enquiry; and he is full of gentleness, flowing on silently like a river of oil; at his age, it is wonderful.

SOC.

That is good news; whose son is he?

THEOD.

The name of his father I have forgotten, but the youth himself is the middle one of those who are approaching us; he and his companions have been anointing themselves in the outer court, and now they seem to have finished, and are coming towards us. Look and see whether you know him.

The youth, who is the son of Euphronius, the Sunian, here enters, and he and Socrates converse.

SOC.

Socrates, Theodorus, Theaetetus.

I know the youth, but I do not know his name; he is the son of Euphronius the Sunian, who was himself an eminent man, and such another as his son is, according to your account of him; I believe that he left a considerable fortune.

THEOD.

Theaetetus, Socrates, is his name; but I rather think that the property disappeared in the hands of trustees; notwithstanding which he is wonderfully liberal.

SOC.

He must be a fine fellow; tell him to come and sit by me.

THEOD.

I will. Come hither, Theaetetus, and sit by Socrates.

SOC.

By all means, Theaetetus, in order that I may see the reflection of myself in your face, for Theodorus says that we are alike; and yet if each of us held in his hands a lyre, and he said that they were tuned alike, should we at once take his word, or should we ask whether he who said so was or was not a musician?

Theodorus says that Socrates and Theaetetus are alike.

THEAETETUS.

We should ask.

SOC.

And if we found that he was, we should take his word; and if not, not?

THEAET.

True.

SOC.

And if this supposed likeness of our faces is a matter of any interest to us, we should enquire whether he who says that we are alike is a painter or not?

THEAET.

Certainly we should. 145

SOC.

And is Theodorus a painter?

THEAET.

I never heard that he was.

SOC.

Is he a geometrician?

THEAET.

Of course he is, Socrates.

SOC.

And is he an astronomer and calculator and musician, and in general an educated man?

THEAET.

I think so.

But he is a
geometrician and
philosopher, not a
painter, and therefore
he need not be
believed.

SOC.

If, then, he remarks on a similarity in our persons, either by way of praise or blame, there is no particular reason why we should attend to him.

THEAET.

I should say not.

SOC.

But if he praises the virtue or wisdom which are the mental endowments of either of us, then he who hears the praises will naturally desire to examine him who is praised: and he again should be willing to exhibit himself.

Socrates, Theaetetus.

He also praised Theaetetus' intellect and disposition; and so Theaetetus must be examined, that Theodorus' praises may be shown to be well-deserved or not.

THEAET.

Very true, Socrates.

SOC.

Then now is the time, my dear Theaetetus, for me to examine, and for you to exhibit; since although Theodorus has praised many a citizen and stranger in my hearing, never did I hear him praise any one as he has been praising you.

THEAET.

I am glad to hear it, Socrates; but what if he was only in jest?

SOC.

Nay, Theodorus is not given to jesting; and I cannot allow you to retract your consent on any such pretence as that. If you do, he will have to swear to his words; and we are perfectly sure that no one will be found to impugn him. Do not be shy then, but stand to your word.

THEAET.

I suppose I must, if you wish it.

SOC.

In the first place, I should like to ask what you learn of Theodorus: something of geometry, perhaps?

THEAET.

Yes.

SOC.

And astronomy and harmony and calculation?

THEAET.

I do my best.

SOC.

Yes, my boy, and so do I; and my desire is to learn of him, or of anybody who seems to understand these things. And I get on pretty well in general; but there is a little difficulty which I want you and the company to aid me in investigating. Will you answer me a question: 'Is not learning growing wiser about that which you learn?'

Socrates' difficulty.
What is knowledge?

THEAET.

Of course.

SOC.

And by wisdom the wise are wise?

THEAET.

Yes.

SOC.

And is that different in any way from knowledge?

THEAET.

What?

SOC.

Wisdom; are not men wise in that which they know?

THEAET.

Certainly they are.

It is wisdom.

SOC.

Then wisdom and knowledge are the same?

THEAET.

Yes.

Socrates proposes a discussion on the subject.

SOC.

146 Herein lies the difficulty which I can never solve to my satisfaction—What is knowledge? Can we answer that question?

Socrates, Theodorus, Theaetetus.

What say you? which of us will speak first? whoever misses shall sit down, as at a game of ball, and shall be donkey, as the boys say; he who lasts out his competitors in the game without missing, shall be our king, and shall have the right of putting to us any questions which he pleases . . . Why is there no reply? I hope, Theodorus, that I am not betrayed into rudeness by my love of conversation? I only want to make us talk and be friendly and sociable.

Who will answer?—A pause.

THEOD.

The reverse of rudeness, Socrates: but I would rather that you would ask one of the young fellows; for the truth is, that I am unused to your game of question and answer, and I am too old to learn; the young will be more suitable, and they will improve more than I shall, for youth is always able to improve. And so having made a beginning with Theaetetus, I would advise you to go on with him and not let him off.

SOC.

Do you hear, Theaetetus, what Theodorus says? The philosopher, whom you would not like to disobey, and whose word ought to be a command to a young man, bids me interrogate you. Take courage, then, and nobly say what you think that knowledge is.

At the suggestion of Theodorus Theaetetus is invited to reply and consents.

THEAET.

Well, Socrates, I will answer as you and he bid me; and if I make a mistake, you will doubtless correct me.

SOC.

We will, if we can.

THEAET.

Then, I think that the sciences which I learn from Theodorus—geometry, and those which you just now mentioned—are knowledge; and I would include the art of the cobbler and other craftsmen; these, each and all of them, are knowledge.

In his answer, instead of giving a general definition of knowledge, he enumerates its parts.

SOC.

Too much, Theaetetus, too much; the nobility and liberality of your nature make you give many and diverse things, when I am asking for one simple thing.

THEAET.

What do you mean, Socrates?

SOC.

Perhaps nothing. I will endeavour, however, to explain what I believe to be my meaning: When you speak of cobbling, you mean the art or science of making shoes?

THEAET.

Just so.

SOC.

And when you speak of carpentering, you mean the art of making wooden implements?

THEAET.

I do.

SOC.

In both cases you define the subject-matter of each of the two arts?

Socrates, Theaetetus.

THEAET.

True.

SOC.

But that, Theaetetus, was not the point of my question: we wanted to know not the subjects, nor yet the number of the arts or sciences, for we were not going to count them, but we wanted to know the nature of knowledge in the abstract. Am I not right?

Such enumeration is not definition.

THEAET.

Perfectly right.

SOC.

147Let me offer an illustration: Suppose that a person were to ask about some very trivial and obvious thing—for example, What is clay? and we were to reply, that there is a clay of potters, there is a clay of oven-makers, there is a clay of brick-makers; would not the answer be ridiculous?

Socrates indicates by an illustration the sort of answer required.

THEAET.

Truly.

SOC.

In the first place, there would be an absurdity in assuming that he who asked the question would understand from our answer the nature of ‘clay,’ merely because we added ‘of the image-makers,’ or of any other workers. How can a man understand the name of anything, when he does not know the nature of it?

THEAET.

He cannot.

SOC.

Then he who does not know what science or knowledge is, has no knowledge of the art or science of making shoes?

THEAET.

None.

SOC.

Nor of any other science?

THEAET.

No.

SOC.

And when a man is asked what science or knowledge is, to give in answer the name of some art or science is ridiculous; for the question is, 'What is knowledge?' and he replies, 'A knowledge of this or that.'

THEAET.

True.

SOC.

Moreover, he might answer shortly and simply, but he makes an enormous circuit. For example, when asked about the clay, he might have said simply, that clay is moistened earth—what sort of clay is not to the point.

THEAET.

Yes, Socrates, there is no difficulty as you put the question. You mean, if I am not mistaken, something like what occurred to me and to my friend here, your namesake Socrates, in a recent discussion.

SOC.

What was that, Theaetetus?

THEAET.

Theodorus was writing out for us something about roots, such as the roots of three or five, showing that they are incommensurable by the unit: he selected other examples up to seventeen—there he stopped. Now as there are innumerable roots, the notion occurred to us of attempting to include them all under one name or class.

Theaetetus sees Socrates' drift, and tells how he had invented general terms for the two kinds of roots, lengths and powers.

SOC.

And did you find such a class?

THEAET.

I think that we did; but I should like to have your opinion.

SOC.

Let me hear.

THEAET.

We divided all numbers into two classes: those which are made up of equal factors multiplying into one another, which we compared to square figures and called square or equilateral numbers;—that was one class.

SOC.

Very good.

THEAET.

The intermediate numbers, such as three and five, and every other number which is made up of unequal factors, 148 either of a greater multiplied by a less, or of a less multiplied by a greater, and when regarded as a figure, is contained in unequal sides;—all these we compared to oblong figures, and called them oblong numbers.

SOC.

Capital; and what followed?

THEAET.

The lines, or sides, which have for their squares the equilateral plane numbers, were called by us lengths or magnitudes; and the lines which are the roots of (or whose squares are equal to) the oblong numbers, were called powers or roots; the reason of this latter name being, that they are commensurable with the former [i. e. with the so-called lengths or magnitudes] not in linear measurement, but in the value of the superficial content of their squares; and the same about solids.

SOC.

Excellent, my boys; I think that you fully justify the praises of Theodorus, and that he will not be found guilty of false witness.

THEAET.

But I am unable, Socrates, to give you a similar answer about knowledge, which is what you appear to want; and therefore Theodorus is a deceiver after all.

But he cannot give a definition of knowledge.

SOC.

Well, but if some one were to praise you for running, and to say that he never met your equal among boys, and afterwards you were beaten in a race by a grown-up man, who was a great runner—would the praise be any the less true?

THEAET.

Certainly not.

SOC.

And is the discovery of the nature of knowledge so small a matter, as I just now said? Is it not one which would task the powers of men perfect in every way?

THEAET.

By heaven, they should be the top of all perfection!

SOC.

Well, then, be of good cheer; do not say that Theodorus was mistaken about you, but do your best to ascertain the true nature of knowledge, as well as of other things.

THEAET.

I am eager enough, Socrates, if that would bring to light the truth.

SOC.

Come, you made a good beginning just now; let your own answer about roots be your model, and as you comprehended them all in one class, try and bring the many sorts of knowledge under one definition.

THEAET.

I can assure you, Socrates, that I have tried very often, when the report of questions asked by you was brought to me; but I can neither persuade myself that I have a satisfactory answer to give, nor hear of any one who answers as you would have him; and I cannot shake off a feeling of anxiety.

SOC.

These are the pangs of labour, my dear Theaetetus; you have something within you which you are bringing to the birth.

Socrates recognises the pangs of labour.

THEAET.

I do not know, Socrates; I only say what I feel.

SOC.

149And have you never heard, simpleton, that I am the son of a midwife, brave and burly, whose name was Phaenarete?

THEAET.

Yes, I have.

SOC.

And that I myself practise midwifery?

THEAET.

No, never.

SOC.

Let me tell you that I do though, my friend: but you must not reveal the secret, as the world in general have not found me out; and therefore they only say of me, that I am the strangest of mortals and drive men to their wits' end. Did you ever hear that too?

Socrates a midwife.
But this is a secret.

THEAET.

Yes.

SOC.

Shall I tell you the reason?

THEAET.

By all means.

SOC.

Bear in mind the whole business of the midwives, and then you will see my meaning better:—No woman, as you are probably aware, who is still able to conceive and bear, attends other women, but only those who are past bearing.

THEAET.

Yes, I know.

SOC.

The reason of this is said to be that Artemis—the goddess of childbirth—is not a mother, and she honours those who are like herself; but she could not allow the barren to be midwives, because human nature cannot know the mystery of an art without experience; and therefore she assigned this office to those who are too old to bear.

Like the midwives, he is past bearing.

THEAET.

I dare say.

SOC.

And I dare say too, or rather I am absolutely certain, that the midwives know better than others who is pregnant and who is not?

THEAET.

Very true.

SOC.

And by the use of potions and incantations they are able to arouse the pangs and to soothe them at will; they can make those bear who have a difficulty in bearing, and if they think fit they can smother the embryo in the womb.

THEAET.

They can.

SOC.

Did you ever remark that they are also most cunning matchmakers, and have a thorough knowledge of what unions are likely to produce a brave brood?

THEAET.

No, never.

SOC.

Then let me tell you that this is their greatest pride, more than cutting the umbilical cord. And if you reflect, you will see that the same art which cultivates and gathers in the fruits of the earth, will be most likely to know in what soils the several plants or seeds should be deposited.

THEAET.

Yes, the same art.

SOC.

And do you suppose that with women the case is otherwise?

THEAET.

I should think not. 150

SOC.

Certainly not; but midwives are respectable women who have a character to lose, and they avoid this department of their profession, because they are afraid of being called procuresses, which is a name given to those who join together man and woman in an unlawful and unscientific way; and yet the true midwife is also the true and only match-maker.

THEAET.

Clearly.

SOC.

Such are the midwives, whose task is a very important one, but not so important as mine; for women do not bring into the world at one time real children, and at another time counterfeits which are with difficulty distinguished from them; if they did, then the discernment of the true and false birth would be the crowning achievement of the art of midwifery—you would think so?

THEAET.

Indeed I should.

His business is more important than theirs, yet generally similar. He attends men, they women; he takes care of the mind, they of the body. But, unlike the midwives, he distinguishes the true birth from the counterfeit.

Soc.

Well, my art of midwifery is in most respects like theirs; but differs, in that I attend men and not women, and I look after their souls when they are in labour, and not after their bodies: and the triumph of my art is in thoroughly examining whether the thought which the mind of the young man brings forth is a false idol or a noble and true birth. And like the midwives, I am barren, and the reproach which is often made against me, that I ask questions of others and have not the wit to answer them myself, is very just—the reason is, that the god compels me to be a midwife, but does not allow me to bring forth. And therefore I am not myself at all wise, nor have I anything to show which is the invention or birth of my own soul, but those who converse with me profit. Some of them appear dull enough at first, but afterwards, as our acquaintance ripens, if the god is gracious to them, they all make astonishing progress; and this in the opinion of others as well as in their own. It is quite clear that they never learned anything from me; the many fine discoveries to which they cling are of their own making. But to me and the god they owe their delivery. And the proof of my words is, that many of them in their ignorance, either in their self-conceit despising me, or falling under the influence of others¹, have gone away too soon; and have not only lost the children of whom I had previously delivered them by an ill bringing up, but have stifled whatever else they had in them by evil communications, being fonder of lies and shams than of the truth; and they have at last ended by seeing themselves, as others see them, to be great fools. Aristides, the son of Lysimachus, is one of them, and there are many others. 151 The truants often return to me, and beg that I would consort with them again—they are ready to go to me on their knees—and then, if my familiar allows, which is not always the case, I receive them, and they begin to grow again. Dire are the pangs which my art is able to arouse and to allay in those who consort with me, just like the pangs of women in childbirth; night and day they are full of perplexity and travail which is even worse than that of the women. So much for them. And there are others, Theaetetus, who come to me apparently having nothing in them; and as I know that they have no need of my art, I coax them into marrying some one, and by the grace of God I can generally tell who is likely to do them good. Many of them I have given away to Prodicus, and many to other inspired sages. I tell you this long story, friend Theaetetus, because I suspect, as indeed you seem to think yourself, that you are in labour—great with some conception. Come then to me, who am a midwife's son and myself a midwife, and do your best to answer the questions which I will ask you. And if I abstract and expose your first-born, because I discover upon inspection that the conception which you have formed is a vain shadow, do not quarrel with me on that account, as the manner of women is when their first children are taken from them. For I have actually known some who were ready to bite me when I deprived them of a darling folly; they did not perceive that I acted from goodwill, not knowing that no god is the enemy of man—that was not within the range of their ideas; neither am I their enemy in all this, but it would be wrong for me to admit falsehood, or to stifle the truth. Once more, then, Theaetetus, I repeat my old question, 'What is

The behaviour of his patients.

Socrates.

Like midwives, he is a match-maker.

Theaetetus is exhorted to submit himself to the treatment, and not to wax wroth if some darling idol is taken from him.

knowledge?’—and do not say that you cannot tell; but quit yourself like a man, and by the help of God you will be able to tell.

THEAET.

At any rate, Socrates, after such an exhortation I should be ashamed of not trying to do my best. Now he who knows perceives what he knows, and, as far as I can see at present, knowledge is perception.

Socrates, Theaetetus.

In answer to the invitation he boldly replies: Knowledge is perception.

SOC.

Bravely said, boy; that is the way in which you should express your opinion. And now, let us examine together this conception of yours, and see whether it is a true birth or a mere wind-egg:—You say that knowledge is perception?

THEAET.

Yes.

SOC.

Well, you have delivered yourself of a very important doctrine about knowledge; it is indeed the opinion of Protagoras, who has another way of expressing it. Man, he says, is the measure of all things, of the existence of things that are, and of the non-existence of things that are not:—You have read him?

This is only another way of expressing Protagoras’ doctrine, ‘Man is the measure of all things,’ i. e. things are as they appear to you or me at any moment.

THEAET.

O yes, again and again.

SOC.

Does he not say that things are to you such as they appear to you, and to me such as they appear to me, and that you and I are men?

THEAET.

Yes, he says so.

SOC.

A wise man is not likely to talk nonsense. Let us try to understand him: the same wind is blowing, and yet one of us may be cold and the other not, or one may be slightly and the other very cold?

THEAET.

Quite true.

SOC.

Now is the wind, regarded not in relation to us but absolutely, cold or not; or are we to say, with Protagoras, that the wind is cold to him who is cold, and not to him who is not?

THEAET.

I suppose the last.

SOC.

Then it must appear so to each of them?

THEAET.

Yes.

SOC.

And ‘appears to him’ means the same as ‘he perceives.’

THEAET.

True.

SOC.

Then appearing and perceiving coincide in the case of hot and cold, and in similar instances; for things appear, or may be supposed to be, to each one such as he perceives them?

This is true in some cases.

THEAET.

Yes.

SOC.

Then perception is always of existence, and being the same as knowledge is unerring?

THEAET.

Clearly.

SOC.

In the name of the Graces, what an almighty wise man Protagoras must have been! He spoke these things in a parable to the common herd, like you and me, but told the truth, 'his Truth¹, ' in secret to his own disciples.

But Protagoras had also a hidden meaning,—'All things are relative and in motion.' In this the ancients agree with him.

THEAET.

What do you mean, Socrates?

SOC.

I am about to speak of a high argument, in which all things are said to be relative; you cannot rightly call anything by any name, such as great or small, heavy or light, for the great will be small and the heavy light—there is no single thing or quality, but out of motion and change and admixture all things are becoming relatively to one another, which 'becoming' is by us incorrectly called being, but is really becoming, for nothing ever is, but all things are becoming. Summon all philosophers — Protagoras, Heracleitus, Empedocles, and the rest of them, one after another, and with the exception of Parmenides they will agree with you in this. Summon the great masters of either kind of poetry—Epicharmus, the prince of Comedy, and Homer of Tragedy; when the latter sings of

'Ocean whence sprang the gods, and mother Tethys,'

does he not mean that all things are the offspring of flux and motion?

THEAET.

I think so.

SOC.

And who could take up arms against such a great army having Homer for its general, and not appear ridiculous²?

THEAET.

Who indeed, Socrates?

SOC.

Yes, Theaetetus; and there are plenty of other proofs which will show that motion is the source of what is called being and becoming, and inactivity of not-being and destruction; for fire and warmth, which are

The praises of motion.

supposed to be the parent and guardian of all other things, are born of movement and of friction, which is a kind of motion¹;—is not this the origin of fire?

THEAET.

It is.

SOC.

And the race of animals is generated in the same way?

THEAET.

Certainly.

SOC.

And is not the bodily habit spoiled by rest and idleness, but preserved for a long time² by motion and exercise?

THEAET.

True.

SOC.

And what of the mental habit? Is not the soul informed, and improved, and preserved by study and attention, which are motions; but when at rest, which in the soul only means want of attention and study, is uninformed, and speedily forgets whatever she has learned?

THEAET.

True.

SOC.

Then motion is a good, and rest an evil, to the soul as well as to the body?

THEAET.

Clearly.

By motion all things are generated, and body and soul, water and air, are alike preserved by it.

SOC.

I may add, that breathless calm, stillness and the like waste and impair, while wind and storm preserve; and the palmary argument of all, which I strongly urge, is the golden chain in Homer, by which he means the sun, thereby indicating that so long as the sun and the heavens go round in their orbits, all things human and divine are and are preserved, but if they were chained up and their motions ceased, then all things would be destroyed, and, as the saying is, turned upside down.

The clinching argument of the golden chain.

THEAET.

I believe, Socrates, that you have truly explained his meaning.

SOC.

Then now apply his doctrine to perception, my good friend, and first of all to vision; that which you call white colour is not in your eyes, and is not a distinct thing which exists out of them. And you must not assign any place to it: for if it had position it would be, and be at rest, and there would be no process of becoming.

Again, colour is a motion passing between the eye and its object.

THEAET.

Then what is colour?

SOC.

Let us carry out the principle which has just been affirmed, that nothing is self-existent, and then we shall see that white, black, and every other colour, arises out of the eye meeting the appropriate motion, and that what we call a colour is in each case neither the active nor the passive element, but something which passes between them, and is peculiar to each percipient; are you quite certain that the several colours appear to a dog or to any animal whatever as they appear to you?

THEAET.

Far from it.

SOC.

Or that anything appears the same to you as to another man? Are you so profoundly convinced of this? Rather would it not be true that it never appears exactly the same to you, because you are never exactly the same?

Nothing which is perceived by different men or by the same man at different times is the same.

THEAET.

The latter.

SOC.

And if that with which I compare myself in size [1](#), or which I apprehend by touch, were great or white or hot, it could not become different by mere contact with another unless it actually changed; nor again, if the comparing or apprehending subject were great or white or hot, could this, when unchanged from within, become changed by any approximation or affection of any other thing. The fact is that in our ordinary way of speaking we allow ourselves to be driven into most ridiculous and wonderful contradictions, as Protagoras and all who take his line of argument would remark.

THEAET.

How? and of what sort do you mean?

SOC.

A little instance will sufficiently explain my meaning: Here are six dice, which are more by a half when compared with four, and fewer by a half than twelve—they are more and also fewer. How can you or any one maintain the contrary?

Contradictions arising out of relations of numbers.

THEAET.

Very true.

SOC.

Well, then, suppose that Protagoras or some one asks whether anything can become greater or more if not by increasing, how would you answer him, Theaetetus?

THEAET.

I should say ‘No,’ Socrates, if I were to speak my mind in reference to this last question, and if I were not afraid of contradicting my former answer.

SOC.

Capital! excellent! spoken like an oracle, my boy! And if you reply ‘Yes,’ there will be a case for Euripides; for our tongue will be unconvinced, but not our mind [1](#).

THEAET.

Very true.

SOC.

The thoroughbred Sophists, who know all that can be known about the mind, and argue only out of the superfluity of their wits, would have had a regular sparring match over this, and would have knocked their arguments together finely. But you and I, who have no professional aims, only desire to see what is the mutual relation of these principles,—whether they are consistent with each other or not.

THEAET.

Yes, that would be my desire.

SOC.

And mine too. But since this is our feeling, and there is plenty of time, why should we not calmly and patiently review our own thoughts, and thoroughly examine and see what these appearances in us really are? If I am not mistaken, they will be described by us as follows:—first, that nothing can become greater or less, either in number or magnitude, while remaining equal to itself—you would agree?

Three laws of thought:—(1) Nothing, while remaining equal to itself, can become fewer or more, greater or less. (2) Without addition or subtraction nothing can increase or diminish. (3) Nothing can be what it was not without becoming. These axioms seem to jar in certain cases.

THEAET.

Yes.

SOC.

Secondly, that without addition or subtraction there is no increase or diminution of anything, but only equality.

THEAET.

Quite true.

SOC.

Thirdly, that what was not before cannot be afterwards, without becoming and having become.

THEAET.

Yes, truly.

SOC.

These three axioms, if I am not mistaken, are fighting with one another in our minds in the case of the dice, or, again, in such a case as this—if I were to say that I, who am of a certain height and taller than you, may within a year, without gaining or losing in height, be not so tall—not that I should have lost, but that you would have increased. In such a case, I am afterwards what I once was not, and yet I have not become; for I could not have become without becoming, neither could I have become less without losing somewhat of my height; and I could give you ten thousand examples of similar contradictions, if we admit them at all. I believe that you follow me, Theaetetus; for I suspect that you have thought of these questions before now.

THEAET.

Yes, Socrates, and I am amazed when I think of them; by the Gods I am! and I want to know what on earth they mean; and there are times when my head quite swims with the contemplation of them.

SOC.

I see, my dear Theaetetus, that Theodorus had a true insight into your nature when he said that you were a philosopher, for wonder is the feeling of a philosopher, and philosophy begins in wonder. He was not a bad genealogist who said that Iris (the messenger of heaven) is the child of Thaumas (wonder). But do you begin to see what is the explanation of this perplexity on the hypothesis which we attribute to Protagoras?

THEAET.

Not as yet.

SOC.

Then you will be obliged to me if I help you to unearth the hidden ‘truth’ of a famous man or school.

THEAET.

To be sure, I shall be very much obliged.

SOC.

Further developement of the doctrine of Protagoras to meet the difficulty.—The uninitiated who believe only in what they can hold in their hands are to be kept out of the secret.

Take a look round, then, and see that none of the uninitiated are listening. Now by the uninitiated I mean the people who believe in nothing but what they can grasp in their hands, and who will not allow that action or generation or anything invisible can have real existence.

THEAET.

Yes, indeed, Socrates, they are very hard and impenetrable mortals.

SOC.

Yes, my boy, outer barbarians. Far more ingenious ¹⁵⁶are the brethren whose mysteries I am about to reveal to you. Their first principle is, that all is motion, and upon this all the affections of which we were just now speaking are supposed to depend: there is nothing but motion, which has two forms, one active and the other passive, both in endless number; and out of the union and friction of them there is generated a progeny endless in number, having two forms, sense and the object of sense, which are ever breaking forth and coming to the birth at the same moment. The senses are variously named hearing, seeing, smelling; there is the sense of heat, cold, pleasure, pain, desire, fear, and many more which have names, as well as innumerable others which are without them; each has its kindred object,—each variety of colour has a corresponding variety of sight, and so with sound and hearing, and with the rest of the senses and the objects akin to them. Do you see, Theaetetus, the bearings of this tale on the preceding argument?

THEAET.

Indeed I do not.

SOC.

Then attend, and I will try to finish the story. The purport is that all these things are in motion, as I was saying, and that this motion is of two kinds, a slower and a quicker; and the slower elements have their motions in the same place and with reference to things near them, and so they beget; but what is begotten is swifter, for it is carried to and fro, and moves from place to place. Apply this to sense:—When the eye and the appropriate object meet together and give birth to whiteness and the sensation connatural with it, which could not have been given by either of them going elsewhere, then, while the sight is flowing from the eye, whiteness proceeds from the object which combines in producing the colour; and so the eye is fulfilled with sight, and really sees, and becomes, not sight, but a seeing eye; and the object which combined to form the colour is fulfilled with whiteness, and becomes not whiteness but a white thing, whether wood or stone or whatever the object may be which happens to be coloured white¹. And this is true of all sensible objects, hard, warm, and the like, which are similarly to be regarded, as I was saying before, ¹⁵⁷not as having any absolute existence, but as being all of them of whatever kind generated by motion in their intercourse with one another; for of the agent and patient, as existing in separation, no trustworthy conception, as they say, can be formed, for the agent has no existence

All things are in motion, of a slower and of a swifter kind. The slower objects move without changing place, and produce the swifter, which are in locomotion.

Application of the theory to vision.

Everything becomes, and becomes relatively to something else.

This applies not only to individuals, but also to classes.

until united with the patient, and the patient has no existence until united with the agent; and that which by uniting with something becomes an agent, by meeting with some other thing is converted into a patient. And from all these considerations, as I said at first, there arises a general reflection, that there is no one self-existent thing, but everything is becoming and in relation; and being must be altogether abolished, although from habit and ignorance we are compelled even in this discussion to retain the use of the term. But great philosophers tell us that we are not to allow either the word 'something,' or 'belonging to something,' or 'to me,' or 'this' or 'that,' or any other detaining name to be used; in the language of nature all things are being created and destroyed, coming into being and passing into new forms; nor can any name fix or detain them; he who attempts to fix them is easily refuted. And this should be the way of speaking, not only of particulars but of aggregates; such aggregates as are expressed in the word 'man,' or 'stone,' or any name of an animal or of a class. O Theaetetus, are not these speculations sweet as honey? And do you not like the taste of them in the mouth?

THEAET.

I do not know what to say, Socrates; for, indeed, I cannot make out whether you are giving your own opinion or only wanting to draw me out.

SOC.

You forget, my friend, that I neither know, nor profess to know, anything of these matters; you are the person who is in labour, I am the barren midwife; and this is why I soothe you, and offer you one good thing after another, that you may taste them. And I hope that I may at last help to bring your own opinion into the light of day: when this has been accomplished, then we will determine whether what you have brought forth is only a wind-egg or a real and genuine birth. Therefore, keep up your spirits, and answer like a man what you think.

Socrates is repeating these 'charming speculations' only to draw out Theaetetus.

THEAET.

Ask me.

SOC.

Then once more: Is it your opinion that nothing is but what becomes?—the good and the noble, as well as all the other things which we were just now mentioning?

THEAET.

When I hear you discoursing in this style, I think that there is a great deal in what you say, and I am very ready to assent.

SOC.

Let us not leave the argument unfinished, then; for there still remains to be considered an objection which may be raised about dreams and diseases, in particular about madness, and the various illusions of hearing and sight, or of other senses. For you know that in all these cases the *esse-percipi* theory appears to be unmistakably refuted, since in dreams and illusions we certainly have false perceptions; and far from saying that everything is which appears, we should rather say that nothing is which appears.

Dreams and illusions are a stumbling-block to the theory, as they imply falseness in perception.

THEAET.

Very true, Socrates.

SOC.

But then, my boy, how can any one contend that knowledge is perception, or that to every man what appears is?

THEAET.

I am afraid to say, Socrates, that I have nothing to answer, because you rebuked me just now for making this excuse; but I certainly cannot undertake to argue that madmen or dreamers think truly, when they imagine, some of them that they are gods, and others that they can fly, and are flying in their sleep.

SOC.

Do you see another question which can be raised about these phenomena, notably about dreaming and waking?

THEAET.

What question?

SOC.

A question which I think that you must often have heard persons ask:—How can you determine whether at this moment we are sleeping, and all our thoughts are a dream; or whether we are awake, and talking to one another in the waking state?

How, when awake, can we be sure that we are not asleep, and *vice versa*?

THEAET.

Indeed, Socrates, I do not know how to prove the one any more than the other, for in both cases the facts precisely correspond; and there is no difficulty in supposing that

during all this discussion we have been talking to one another in a dream; and when in a dream¹ we seem to be narrating dreams, the resemblance of the two states is quite astonishing.

SOC.

You see, then, that a doubt about the reality of sense is easily raised, since there may even be a doubt whether we are awake or in a dream. And as our time is equally divided between sleeping and waking, in either sphere of existence the soul contends that the thoughts which are present to our minds at the time are true; and during one half of our lives we affirm the truth of the one, and, during the other half, of the other; and are equally confident of both.

THEAET.

Most true.

SOC.

And may not the same be said of madness and other disorders? the difference is only that the times are not equal.

THEAET.

Certainly.

SOC.

And is truth or falsehood to be determined by duration of time?

THEAET.

That would be in many ways ridiculous.

SOC.

But can you certainly determine by any other means which of these opinions is true?

THEAET.

I do not think that I can.

SOC.

Resolution of the
difficulty by the
champions of

Listen, then, to a statement of the other side of the argument, which is made by the champions of appearance. They would say, as I imagine—Can that which is wholly other than something, have the same quality as that from which it differs? and observe, Theaetetus, that the word ‘other’ means not ‘partially,’ but ‘wholly other.’

appearance:—What is wholly other can in no way be the same,

THEAET.

Certainly, putting the question as you do, that 159 which is wholly other cannot either potentially or in any other way be the same.

SOC.

And must therefore be admitted to be unlike?

THEAET.

True.

SOC.

If, then, anything happens to become like or unlike itself or another, when it becomes like we call it the same—when unlike, other?

THEAET.

Certainly.

SOC.

Were we not saying that there are agents many and infinite, and patients many and infinite?

and different agents and patients, in conjunction, produce different results.

THEAET.

Yes.

SOC.

And also that different combinations will produce results which are not the same, but different?

THEAET.

Certainly.

SOC.

Let us take you and me, or anything as an example:—There is Socrates in health, and Socrates sick—Are they like or unlike?

THEAET.

You mean to compare Socrates in health as a whole, and Socrates in sickness as a whole?

SOC.

Exactly; that is my meaning.

THEAET.

I answer, they are unlike.

SOC.

Socrates in health is unlike Socrates in sickness;

And if unlike, they are other?

THEAET.

Certainly.

SOC.

And would you not say the same of Socrates sleeping and waking, or in any of the states which we were mentioning?

THEAET.

I should.

SOC.

All agents have a different patient in Socrates, accordingly as he is well or ill.

THEAET.

Of course.

SOC.

And I who am the patient, and that which is the agent, will produce something different in each of the two cases?

THEAET.

Certainly.

SOC.

The wine which I drink when I am in health, appears sweet and pleasant to me?

THEAET.

True.

SOC.

For, as has been already acknowledged, the patient and agent meet together and produce sweetness and a perception of sweetness, which are in simultaneous motion, and the perception which comes from the patient makes the tongue percipient, and the quality of sweetness which arises out of and is moving about the wine, makes the wine both to be and to appear sweet to the healthy tongue.

and therefore it is only natural that the same draught of wine should produce a sweet taste in the one case, a bitter in the other.

THEAET.

Certainly; that has been already acknowledged.

SOC.

But when I am sick, the wine really acts upon another and a different person?

THEAET.

Yes.

SOC.

The combination of the draught of wine, and the Socrates who is sick, produces quite another result; which is the sensation of bitterness in the tongue, and the motion and creation of bitterness in and about the wine, which becomes not bitterness but something bitter; as I myself become not perception but percipient?

THEAET.

True.

SOC.

There is no other object of which I shall ever have the same perception, for another object would give another perception, and would make the percipient other and different; nor can that object which affects me, meeting another subject, produce the same, or become similar, for that too will produce another result from another subject, and become different.

THEAET.

True.

SOC.

Neither can I by myself, have this sensation, nor the object by itself, this quality.

THEAET.

Certainly not.

SOC.

When I perceive I must become percipient of something—there can be no such thing as perceiving and perceiving nothing; the object, whether it become sweet, bitter, or of any other quality, must have relation to a percipient; nothing can become sweet which is sweet to no one.

THEAET.

Certainly not.

SOC.

Then the inference is, that we [the agent and patient] are or become in relation to one another; there is a law which binds us one to the other, but not to any other existence, nor each of us to himself; and therefore we can only be bound to one another; so that whether a person says that a thing is or becomes, he must say that it is or becomes to or of or in relation to something else; but he must not say or allow any one else to say that anything is or becomes absolutely:—such is our conclusion.

Socrates, Theaetetus,
Theodorus.

THEAET.

Very true, Socrates.

SOC.

Then, if that which acts upon me has relation to me and to no other, I and no other am the percipient of it?

Each object is relative to one percipient only, and he alone can judge of its truth.

THEAET.

Of course.

SOC.

Then my perception is true to me, being inseparable from my own being; and, as Protagoras says, to myself I am judge of what is and what is not to me.

THEAET.

I suppose so.

SOC.

How then, if I never err, and if my mind never trips in the conception of being or becoming, can I fail of knowing that which I perceive?

THEAET.

You cannot.

SOC.

Then you were quite right in affirming that knowledge is only perception; and the meaning turns out to be the same, whether with Homer and Heracleitus, and all that company, you say that all is motion and flux, or with the great sage Protagoras, that man is the measure of all things; or with Theaetetus, that, given these premises, perception is knowledge. Am I not right, Theaetetus, and is not this your new-born child, of which I have delivered you? What say you?

Thus knowledge is perception. Homer, Heracleitus, and their company agree in this with Protagoras.

THEAET.

I cannot but agree, Socrates.

SOC.

Then this is the child, however he may turn out, which you and I have with difficulty brought into the world. And now that he is born, we must run round the hearth with him, and see whether he is worth rearing, or is only a windegg and a sham. Is he to be reared in any case,

Let us inspect the new-born babe.

and not exposed? or will you bear to see him rejected, and not get into a passion if I take away your first-born?

THEOD.

Theaetetus will not be angry, for he is very good-natured. But tell me, Socrates, in heaven's name, is this, after all, not the truth?

Socrates, Theodorus.

SOC.

You, Theodorus, are a lover of theories, and now you innocently fancy that I am a bag full of them, and can easily pull one out which will overthrow its predecessor. But you do not see that in reality none of these theories come from me; they all come from him who talks with me. I only know just enough to extract them from the wisdom of another, and to receive them in a spirit of fairness. And now I shall say nothing myself, but shall endeavour to elicit something from our young friend.

THEOD.

Do as you say, Socrates; you are quite right.

SOC.

Shall I tell you, Theodorus, what amazes me in your acquaintance Protagoras.

THEOD.

What is it?

SOC.

I am charmed with his doctrine, that what appears is to each one, but I wonder that he did not begin his book on Truth with a declaration that a pig or a dog-faced baboon, or some other yet stranger monster which has sensation, is the measure of all things; then he might have shown a magnificent contempt for our opinion of him by informing us at the outset that while we were reverencing him like a God for his wisdom he was no better than a tadpole, not to speak of his fellow-men—would not this have produced an overpowering effect? For if truth is only sensation, and no man can discern another's feelings better than he, or has any superior right to determine whether his opinion is true or false, but each, as we have several times repeated, is to himself the sole judge, and everything that he judges is true and right, why, my friend, should Protagoras be preferred to the place of wisdom and instruction, and deserve to be well paid, and we poor ignoramuses have to go to him,

Why did not Protagoras say. 'A pig is the measure of all things'?—for a pig has sensation.

His doctrine is suicidal, and cuts away his own and all other claims to superior wisdom.

Socrates, Theodorus, Theaetetus.

if each one is the measure of his own wisdom? Must he not be talking ‘ad captandum’ in all this? I say nothing of the ridiculous predicament in which my own midwifery and the whole art of dialectic is placed; for the attempt to supervise or refute the notions or opinions of others would be a tedious and enormous piece of folly, if to each man his own are right; and this must be the case if Protagoras’ Truth is the real truth, and the philosopher is not merely amusing himself by giving oracles out of the shrine of his book.

THEOD.

He was a friend of mine, Socrates, as you were saying, and therefore I cannot have him refuted by my lips, nor can I oppose you when I agree with you; please, then, to take Theaetetus again; he seemed to answer very nicely.

SOC.

If you were to go into a Lacedaemonian palestra, Theodorus, would you have a right to look on at the naked wrestlers, some of them making a poor figure, if you did not strip and give them an opportunity of judging of your own person?

THEOD.

Why not, Socrates, if they would allow me, as I think you will, in consideration of my age and stiffness; let some more supple youth try a fall with you, and do not drag me into the gymnasium.

SOC.

Your will is my will, Theodorus, as the proverbial philosophers say, and therefore I will return to the sage Theaetetus: Tell me, Theaetetus, in reference to what I was saying, are you not lost in wonder, like myself, when you find that all of a sudden you are raised to the level of the wisest of men, or indeed of the gods?—for you would assume the measure of Protagoras to apply to the gods as well as men?

THEAET.

Certainly I should, and I confess to you that I am lost in wonder. At first hearing, I was quite satisfied with the doctrine, that whatever appears is to each one, but now the face of things has changed.

Theaetetus is shaken in his opinion of Protagoras’ theory.

SOC.

But Protagoras would say that he had been influenced by mere clap-trap.

Why, my dear boy, you are young, and therefore your ear is quickly caught and your mind influenced by popular arguments.

Socrates, Theaetetus.

Protagoras, or some one speaking on his behalf, will doubtless say in reply,—Good people, young and old, you meet and harangue, and bring in the gods, whose existence or non-existence I banish from writing and speech, or you talk about the reason of man being degraded to the level of the brutes, which is a telling argument with the multitude, but not one word of proof or demonstration do you offer. All is probability with you, and yet surely you and Theodorus had better reflect whether you are disposed to admit of probability and figures of speech in matters of such importance. 163He or any other mathematician who argued from probabilities and likelihoods in geometry, would not be worth an ace.

THEAET.

But neither you nor we, Socrates, would be satisfied with such arguments.

SOC.

Then you and Theodorus mean to say that we must look at the matter in some other way?

A new start.

THEAET.

Yes, in quite another way.

SOC.

And the way will be to ask whether perception is or is not the same as knowledge; for this was the real point of our argument, and with a view to this we raised (did we not?) those many strange questions.

Is perception knowledge?

THEAET.

Certainly.

SOC.

Shall we say that we know every thing which we see and hear? for example, shall we say that not having learned, we do not hear the language of foreigners when they speak to us? or shall we say that we not only hear, but know what they are saying? Or again, if we see letters which we do not understand, shall we say that we do not see them? or shall we aver that, seeing them, we must know them?

We know what we see and hear: but we see only certain forms or colours, and hear only sounds of different pitch. Yet it is possible to know more than this.

THEAET.

We shall say, Socrates, that we know what we actually see and hear of them—that is to say, we see and know the figure and colour of the letters, and we hear and know the elevation or depression of the sound of them; but we do not perceive by sight and hearing, or know, that which grammarians and interpreters teach about them.

SOC.

Capital, Theaetetus; and about this there shall be no dispute, because I want you to grow; but there is another difficulty coming, which you will also have to repulse.

THEAET.

What is it?

SOC.

Some one will say, Can a man who has ever known anything, and still has and preserves a memory of that which he knows, not know that which he remembers at the time when he remembers? I have, I fear, a tedious way of putting a simple question, which is only, whether a man who has learned, and remembers, can fail to know?

Again, according to the theory, a man cannot know what he remembers;

THEAET.

Impossible, Socrates; the supposition is monstrous.

SOC.

Am I talking nonsense, then? Think: is not seeing perceiving, and is not sight perception?

THEAET.

True.

SOC.

And if our recent definition holds, every man knows that which he has seen?

THEAET.

Yes.

SOC.

And you would admit that there is such a thing as memory?

THEAET.

Yes.

SOC.

And is memory of something or of nothing?

THEAET.

Of something, surely.

SOC.

Of things learned and perceived, that is?

THEAET.

Certainly.

SOC.

Often a man remembers that which he has seen?

THEAET.

True.

SOC.

And if he closed his eyes, would he forget?

THEAET.

Who, Socrates, would dare to say so? 164

SOC.

But we must say so, if the previous argument is to be maintained.

for, when remembering something which he has seen, he does not see, and not-seeing is not-knowing.

THEAET.

What do you mean? I am not quite sure that I understand you, though I have a strong suspicion that you are right.

SOC.

As thus: he who sees knows, as we say, that which he sees; for perception and sight and knowledge are admitted to be the same.

THEAET.

Certainly.

SOC.

But he who saw, and has knowledge of that which he saw, remembers, when he closes his eyes, that which he no longer sees.

THEAET.

True.

SOC.

And seeing is knowing, and therefore not-seeing is not-knowing?

THEAET.

Very true.

SOC.

Then the inference is, that a man may have attained the knowledge of something, which he may remember and yet not know, because he does not see; and this has been affirmed by us to be a monstrous supposition.

And it would be ridiculous to say that what is remembered is not known.

THEAET.

Most true.

SOC.

Thus, then, the assertion that knowledge and perception are one, involves a manifest impossibility?

THEAET.

Yes.

SOC.

Then they must be distinguished?

THEAET.

I suppose that they must.

SOC.

Once more we shall have to begin, and ask ‘What is knowledge?’ and yet, Theaetetus, what are we going to do?

Socrates, Theaetetus, Theodorus.

THEAET.

About what?

SOC.

Like a good-for-nothing cock, without having won the victory, we walk away from the argument and crow.

Socrates is dissatisfied with the mode of argument.

THEAET.

How do you mean?

SOC.

After the manner of disputers¹, we were satisfied with mere verbal consistency, and were well pleased if in this way we could gain an advantage. Although professing not to be mere Eristics, but philosophers, I suspect that we have unconsciously fallen into the error of that ingenious class of persons.

THEAET.

I do not as yet understand you.

SOC.

Then I will try to explain myself: just now we asked the question, whether a man who had learned and remembered could fail to know, and we showed that a person who had seen might remember when he had his eyes shut and could not see, and then he would at the same time remember and not know. But this was an impossibility. And

so the Protagorean fable came to nought, and yours also, who maintained that knowledge is the same as perception.

THEAET.

True.

SOC.

And yet, my friend, I rather suspect that the result would have been different if Protagoras, who was the father of the first of the two brats, had been alive; he would have had a great deal to say on their behalf. But he is dead, and we insult over his orphan child; and even the guardians whom he left, and of whom our friend Theodorus is one, are unwilling to give any help, and therefore I suppose that I must take up his cause myself, and see justice done?

If Protagoras had been alive he would not have allowed us to throw ridicule on his brats.

THEOD.

165Not I, Socrates, but rather Callias, the son of Hipponicus, is guardian of his orphans. I was too soon diverted from the abstractions of dialectic to geometry. Nevertheless, I shall be grateful to you if you assist him.

As Theodorus, their guardian, declines to protect them, Socrates takes up their defence.

SOC.

Very good, Theodorus; you shall see how I will come to the rescue. If a person does not attend to the meaning of terms as they are commonly used in argument, he may be involved even in greater paradoxes than these. Shall I explain this matter to you or to Theaetetus?

THEOD.

To both of us, and let the younger answer; he will incur less disgrace if he is discomfited.

SOC.

Then now let me ask the awful question, which is This:—Can a man know and also not know that which he knows?

Another difficulty:—A man can know and not know the same thing at the same time, if seeing is knowing.

THEOD.

How shall we answer, Theaetetus?

THEAET.

He cannot, I should say.

SOC.

He can, if you maintain that seeing is knowing. When you are imprisoned in a well, as the saying is, and the self-assured adversary closes one of your eyes with his hand, and asks whether you can see his cloak with the eye which he has closed, how will you answer the inevitable man?

THEAET.

I should answer, 'Not with that eye but with the other.'

SOC.

Then you see and do not see the same thing at the same time.

THEAET.

Yes, in a certain sense.

SOC.

None of that, he will reply; I do not ask or bid you answer in what sense you know, but only whether you know that which you do not know. You have been proved to see that which you do not see; and you have already admitted that seeing is knowing, and that not-seeing is not-knowing: I leave you to draw the inference.

THEAET.

Yes; the inference is the contradictory of my assertion.

SOC.

Yes, my marvel, and there might have been yet worse things in store for you, if an opponent had gone on to ask whether you can have a sharp and also a dull knowledge, and whether you can know near, but not at a distance, or know the same thing with more or less intensity, and so on without end. Such questions might have been put to you by a light-armed mercenary, who argued for pay. He would have lain in wait for you, and when you took up the position, that sense is knowledge, he would have made an assault upon hearing, smelling, and the other senses;—he would have shown you no mercy; and while you were lost in envy and admiration of his wisdom, he would have got you into his net, out of which you would not have escaped until you

But the case might have been made still more ridiculous by applying to knowledge terms proper to sense.

Socrates, Theaetetus.

had come to an understanding about the sum to be paid for your release. Well, you ask, and how will Protagoras reinforce his position? Shall I answer for him?

THEAET.

By all means.

SOC.

He will repeat all those things which we have been urging on his behalf, and then he will close with us in disdain, and say:—The worthy Socrates asked a little boy, whether the same man could remember and not know the same thing, and the boy said No, because he was frightened, and could not see what was coming, and then Socrates made fun of poor me. The truth is, O slatternly Socrates, that when you ask questions about any assertion of mine, and the person asked is found tripping, if he has answered as I should have answered, then I am refuted, but if he answers something else, then he is refuted and not I. For do you really suppose that any one would admit the memory which a man has of an impression which has passed away to be the same with that which he experienced at the time? Assuredly not. Or would he hesitate to acknowledge that the same man may know and not know the same thing? Or, if he is afraid of making this admission, would he ever grant that one who has become unlike is the same as before he became unlike? Or would he admit that a man is one at all, and not rather many and infinite as the changes which take place in him? I speak by the card in order to avoid entanglements of words. But, O my good sir, he will say, come to the argument in a more generous spirit; and either show, if you can, that our sensations are not relative and individual, or, if you admit them to be so, prove that this does not involve the consequence that the appearance becomes, or, if you will have the word, is, to the individual only. As to your talk about pigs and baboons, you are yourself behaving like a pig, and you teach your hearers to make sport of my writings in the same ignorant manner; but this is not to your credit. For I declare that the truth is as I have written, and that each of us is a measure of existence and of non-existence. Yet one man may be a thousand times better than another in proportion as different things are and appear to him. And I am far from saying that wisdom and the wise man have no existence; but I say that the wise man is he who makes the evils which appear and are to a man, into goods which are and appear to him. And I would beg you not to press my words in the letter, but to take the meaning of them as I will explain them. Remember what has been already said,—that to the sick man his food appears to be and is bitter, and to the man in health the opposite of bitter. Now I cannot conceive that one of these men can be or ought to be made wiser than the other: nor can you assert that the

Protagoras to the rescue:—‘If Socrates frightens a boy into admitting just what he pleases, I must not be held responsible.

‘What I maintain is, that sensations are relative and individual; that consequently what appears is.

Socrates.

‘A wise man is not he who has certain impressions, but he who can make what appears evil appear good.

‘This is what the Sophists attempt to do.

Socrates, Theodorus.

‘Let Socrates in his reply argue fairly, like a dialectician, not like a mere disputer.

‘He should not misrepresent when he ought to be trying to understand his adversary.’

sick man 167because he has one impression is foolish, and the healthy man because he has another is wise; but the one state requires to be changed into the other, the worse into the better. As in education, a change of state has to be effected, and the sophist accomplishes by words the change which the physician works by the aid of drugs. Not that any one ever made another think truly, who previously thought falsely. For no one can think what is not, or, think anything different from that which he feels; and this is always true. But as the inferior habit of mind has thoughts of a kindred nature, so I conceive that a good mind causes men to have good thoughts; and these which the inexperienced call true, I maintain to be only better, and not truer than others. And, O my dear Socrates, I do not call wise men tadpoles: far from it; I say that they are the physicians of the human body, and the husbandmen of plants—for the husbandmen also take away the evil and disordered sensations of plants, and infuse into them good and healthy sensations—aye and true ones¹; and the wise and good rhetoricians make the good instead of the evil to seem just to states; for whatever appears to a state to be just and fair, so long as it is regarded as such, is just and fair to it; but the teacher of wisdom causes the good to take the place of the evil, both in appearance and in reality. And in like manner the Sophist who is able to train his pupils in this spirit is a wise man, and deserves to be well paid by them. And so one man is wiser than another; and no one thinks falsely, and you, whether you will or not, must endure to be a measure. On these foundations the argument stands firm, which you, Socrates, may, if you please, overthrow by an opposite argument, or if you like you may put questions to me—a method to which no intelligent person will object, quite the reverse. But I must beg you to put fair questions: for there is great inconsistency in saying that you have a zeal for virtue, and then always behaving unfairly in argument. The unfairness of which I complain is that you do not distinguish between mere disputation and dialectic: the disputer may trip up his opponent as often as he likes, and make fun; but the dialectician will be in earnest, and only correct his adversary when necessary, telling him the errors into which he has fallen through his own fault, or that of the company which he has previously kept. If you do so, 168your adversary will lay the blame of his own confusion and perplexity on himself, and not on you. He will follow and love you, and will hate himself, and escape from himself into philosophy, in order that he may become different from what he was. But the other mode of arguing, which is practised by the many, will have just the opposite effect upon him; and as he grows older, instead of turning philosopher, he will come to hate philosophy. I would recommend you, therefore, as I said before, not to encourage yourself in this polemical and controversial temper, but to find out, in a friendly and congenial spirit, what we really mean when we say that all things are in motion, and that to every individual and state what appears, is. In this manner you will consider whether knowledge and sensation are the same or different, but you will not argue, as you were just now doing, from the customary use of names and words, which the vulgar pervert in all sorts of ways, causing infinite perplexity to one another. Such, Theodorus, is the very slight help which I am able to offer to your old friend¹; had he been living, he would have helped himself in a far more gloriose style.

THEOD.

You are jesting, Socrates; indeed, your defence of him has been most valorous.

SOC.

Thank you, friend; and I hope that you observed Protagoras bidding us be serious, as the text, 'Man is the measure of all things,' was a solemn one; and he reproached us with making a boy the medium of discourse, and said that the boy's timidity was made to tell against his argument; he also declared that we made a joke of him.

Socrates insists that out of respect for his old friend, Theodorus must reply instead of Theaetetus.

THEOD.

How could I fail to observe all that, Socrates?

SOC.

Well, and shall we do as he says?

THEOD.

By all means.

SOC.

But if his wishes are to be regarded, you and I must take up the argument, and in all seriousness¹, and ask and answer one another, for you see that the rest of us are nothing but boys. In no other way can we escape the imputation, that in our fresh analysis of his thesis we are making fun with boys.

THEOD.

Well, but is not Theaetetus better able to follow a philosophical enquiry than a great many men who have long beards?

SOC.

Yes, Theodorus, but not better than you; and therefore please not to imagine that I am to defend by every means in my power your departed friend; and that you are to defend nothing and nobody. At any rate, my good man, do not sheer off until we know whether you are a true measure of diagrams, or whether all men are equally measures and sufficient for themselves in astronomy and geometry, and the other branches of knowledge in which you are supposed to excel them.

THEOD.

He who is sitting by you, Socrates, will not easily avoid being drawn into an argument; and when I said just now that you would excuse me, and not, like the Lacedaemonians, compel me

Theodorus compares Socrates to Scirrhon and Antaeus.

to strip and fight, I was talking nonsense—I should rather compare you to Scirrhon, who threw travellers from the rocks; for the Lacedaemonian rule is ‘strip or depart,’ but you seem to go about your work more after the fashion of Antaeus: you will not allow any one who approaches you to depart until you have stripped him, and he has been compelled to try a fall with you in argument.

SOC.

There, Theodorus, you have hit off precisely the nature of my complaint; but I am even more pugnacious than the giants of old, for I have met with no end of heroes; many a Heracles, many a Theseus, mighty in words, has broken my head; nevertheless I am always at this rough exercise, which inspires me like a passion. Please, then, to try a fall with me, whereby you will do yourself good as well as me.

Socrates replies that he often gets a broken head for his pains; but that he can never have enough of fighting.

THEOD.

I consent; lead me whither you will, for I know that you are like destiny; no man can escape from any argument which you may weave for him. But I am not disposed to go further than you suggest.

SOC.

Once will be enough; and now take particular care that we do not again unwittingly expose ourselves to the reproach of talking childishly.

We must be serious.

THEOD.

I will do my best to avoid that error.

SOC.

In the first place, let us return to our old objection, and see whether we were right in blaming and taking offence at Protagoras on the ground that he assumed all to be equal and sufficient in wisdom; although he admitted that there was a better and worse, and that in respect of this, some who as he said were the wise excelled others.

THEOD.

Very true.

SOC.

Had Protagoras been living and answered for himself, instead of our answering for him, there would have been no need of our reviewing or reinforcing the argument. But

as he is not here, and some one may accuse us of speaking without authority on his behalf, had we not better come to a clearer agreement about his meaning, for a great deal may be at stake?

THEOD.

True.

SOC.

170 Then let us obtain, not through any third person, but from his own statement and in the fewest words possible, the basis of agreement.

THEOD.

In what way?

SOC.

In this way:—His words are, ‘What seems to a man, is to him.’

Protagoras’ thesis:
‘What appears to each
man, is to him.’

THEOD.

Yes, so he says.

SOC.

And are not we, Protagoras, uttering the opinion of man, or rather of all mankind, when we say that every one thinks himself wiser than other men in some things, and their inferior in others? In the hour of danger, when they are in perils of war, or of the sea, or of sickness, do they not look up to their commanders as if they were gods, and expect salvation from them, only because they excel them in knowledge? Is not the world full of men in their several employments, who are looking for teachers and rulers of themselves and of the animals? and there are plenty who think that they are able to teach and able to rule. Now, in all this is implied that ignorance and wisdom exist among them, at least in their own opinion.

Now every man will
admit that some know
more, some less than
he;

THEOD.

Certainly.

SOC.

And wisdom is assumed by them to be true thought, and ignorance to be false opinion.

THEOD.

Exactly.

SOC.

How then, Protagoras, would you have us treat the argument? Shall we say that the opinions of men are always true, or sometimes true and sometimes false? In either case, the result is the same, and their opinions are not always true, but sometimes true and sometimes false. For tell me, Theodorus, do you suppose that you yourself, or any other follower of Protagoras, would contend that no one deems another ignorant or mistaken in his opinion?

and this is enough to show that opinions clash,—a fact denied by Protagoras,

THEOD.

The thing is incredible, Socrates.

SOC.

And yet that absurdity is necessarily involved in the thesis which declares man to be the measure of all things.

THEOD.

How so?

SOC.

Why, suppose that you determine in your own mind something to be true, and declare your opinion to me; let us assume, as he argues, that this is true to you. Now, if so, you must either say that the rest of us are not the judges of this opinion or judgment of yours, or that we judge you always to have a true opinion? But are there not thousands upon thousands who, whenever you form a judgment, take up arms against you and are of an opposite judgment and opinion, deeming that you judge falsely?

though very obvious.

THEOD.

Yes, indeed, Socrates, thousands and tens of thousands, as Homer says, who give me a world of trouble.

SOC.

Well, but are we to assert that what you think is true to you and false to the ten thousand others?

THEOD.

No other inference seems to be possible.

SOC.

And how about Protagoras himself? If neither he nor the multitude thought, as indeed they do not think, that man is the measure of all things, must it not follow that the truth of which Protagoras wrote would be true to no one? But if you suppose that he himself thought this, and that the multitude does not agree with him, you must begin by allowing that in whatever proportion the many are more than one, in that proportion his truth is more untrue than true.

When opinions conflict, numbers ought to decide: this goes all against Protagoras.

THEOD.

That would follow if the truth is supposed to vary with individual opinion.

SOC.

And the best of the joke is, that he acknowledges the truth of their opinion who believe his own opinion to be false; for he admits that the opinions of all men are true.

In any case he acknowledges that their opinion is true who declare his to be false,

THEOD.

Certainly.

SOC.

And does he not allow that his own opinion is false, if he admits that the opinion of those who think him false is true?

THEOD.

Of course.

SOC.

Whereas the other side do not admit that they speak falsely?

THEOD.

They do not.

SOC.

And he, as may be inferred from his writings, agrees that this opinion is also true.

THEOD.

Clearly.

SOC.

Then all mankind, beginning with Protagoras, will contend, or rather, I should say that he will allow, when he concedes that his adversary has a true opinion—Protagoras, I say, will himself allow that neither a dog nor any ordinary man is the measure of anything which he has not learned—am I not right?

and so denies the truth of his own doctrine.

THEOD.

Yes.

SOC.

And the truth of Protagoras being doubted by all, will be true neither to himself nor to any one else?

THEOD.

I think, Socrates, that we are running my old friend too hard.

SOC.

But I do not know that we are going beyond the truth. Doubtless, as he is older, he may be expected to be wiser than we are. And if he could only just get his head out of the world below, he would have overthrown both of us again and again, me for talking nonsense and you for assenting to me, and have been off and underground in a trice. But as he is not within call, we must make the best use of our own faculties, such as they are, and speak out what appears to us to be true. And one thing which no one will deny is, that there are great differences in the understandings of men.

But are we doing him justice?

THEOD.

In that opinion I quite agree.

A concession.

SOC.

And is there not most likely to be firm ground in the distinction which we were indicating on behalf of Protagoras, viz. that most things, and all immediate sensations, such as hot, dry, sweet, are only such as they appear; if however difference of opinion is to be allowed at all, surely we must allow it in respect of health or disease? for every woman, child, or living creature has not such a knowledge of what conduces to health as to enable them to cure themselves.

His position is only true, if at all, in reference to sensible things;

THEOD.

I quite agree.

SOC.

Or again, in politics, while affirming that just and unjust, honourable and disgraceful, holy and unholy, are in reality to each state such as the state thinks and makes lawful, and that in determining these matters no individual or state is wiser than another, still the followers of Protagoras will not deny that in determining what is or is not expedient for the community one state is wiser and one counsellor better than another—they will scarcely venture to maintain, that what a city enacts in the belief that it is expedient will always be really expedient. But in the other case, I mean when they speak of justice and injustice, piety and impiety, they are confident that in nature these have no existence or essence of their own—the truth is that which is agreed on at the time of the agreement, and as long as the agreement lasts; and this is the philosophy of many who do not altogether go along with Protagoras. Here arises a new question, Theodorus, which threatens to be more serious than the last.

and he himself admits that in politics one man is wiser than another.

A larger question appears.

THEOD.

Well, Socrates, we have plenty of leisure.

SOC.

That is true, and your remark recalls to my mind an observation which I have often made, that those who have passed their days in the pursuit of philosophy are ridiculously at fault when they have to appear and speak in court. How natural is this!

THEOD.

What do you mean?

SOC.

I mean to say, that those who have been trained in philosophy and liberal pursuits are as unlike those who from their youth upwards have been knocking about in the courts and such places, as a freeman is in breeding unlike a slave.

THEOD.

In what is the difference seen?

SOC.

In the leisure spoken of by you, which a freeman can always command: he has his talk out in peace, and, like ourselves, he wanders at will from one subject to another, and from a second to a third,—if the fancy takes him, he begins again, as we are doing now, caring not whether his words are many or few; his only aim is to attain the truth. But the lawyer is always in a hurry; there is the water of the clepsydra driving him on, and not allowing him to expatiate at will: and there is his adversary standing over him, enforcing his rights; the indictment, which in their phraseology is termed the affidavit, is recited at the time: and from this he must not deviate. He is a servant, and is continually disputing about a fellow-servant before his master, who is seated, and has the cause in his hands; the trial is never about some indifferent matter, but always concerns himself; and often the race is for his life. The consequence has been, that he has become keen and shrewd; he has learned how to flatter his master in word and indulge him in deed; but his soul is small and unrighteous. His condition, which has been that of a slave from his youth upwards, has deprived him of growth and uprightness and independence; dangers and fears, which were too much for his truth and honesty, came upon him in early years, when the tenderness of youth was unequal to them, and he has been driven into crooked ways; from the first he has practised deception and retaliation, and has become stunted and warped. And so he has passed out of youth into manhood, having no soundness in him; and is now, as he thinks, a master in wisdom. Such is the lawyer, Theodorus. Will you have the companion picture of the philosopher, who is of our brotherhood; or shall we return to the argument? Do not let us abuse the freedom of digression which we claim.

An apparent digression, in which is set forth, not the opposition of sense and knowledge, but a parallel contrast between the ways of the lawyer and philosopher.

The lawyer is the slave of this world, the philosopher is the freeman.

THEOD.

Nay, Socrates, not until we have finished what we are about; for you truly said that we belong to a brotherhood which is free, and are not the servants of the argument; but the argument is our servant, and must wait our leisure. Who is our judge? Or where is the spectator having any right to censure or control us, as he might the poets?

SOC.

Then, as this is your wish, I will describe the leaders; for there is no use in talking about the inferior sort. In the first place, the lords of philosophy have never, from their youth upwards, known their way to the Agora, or the dicastery, or the council, or any other political assembly; they neither see nor hear the laws or decrees, as they are called, of the state written or recited; the eagerness of political societies in the attainment of offices—clubs, and banquets, and revels, and singing-maidens,—do not enter even into their dreams. Whether any event has turned out well or ill in the city, what disgrace may have descended to any one from his ancestors, male or female, are matters of which the philosopher no more knows than he can tell, as they say, how many pints are contained in the ocean. Neither is he conscious of his ignorance. For he does not hold aloof in order that he may gain a reputation; but the truth is, that the outer form of him only is in the city: his mind, disdaining the littlenesses and nothingnesses of human things, is ‘flying all abroad’ as Pindar says, measuring earth and heaven and the things which are under and on the earth and above the heaven, interrogating the whole nature of each and all in their entirety, but not condescending to anything which is within reach.

The simplicity of the philosopher.

THEOD.

What do you mean, Socrates?

SOC.

I will illustrate my meaning, Theodorus, by the jest which the clever witty Thracian handmaid is said to have made about Thales, when he fell into a well as he was looking up at the stars. She said, that he was so eager to know what was going on in heaven, that he could not see what was before his feet. This is a jest which is equally applicable to all philosophers. For the philosopher is wholly unacquainted with his next-door neighbour; he is ignorant, not only of what he is doing, but he hardly knows whether he is a man or an animal; he is searching into the essence of man, and busy in enquiring what belongs to such a nature to do or suffer different from any other;—I think that you understand me, Theodorus?

He cannot see what is tumbling out at his feet.

THEOD.

I do, and what you say is true.

SOC.

He is the laughing-stock of mankind whenever he appears in public.

And thus, my friend, on every occasion, private as well as public, as I said at first, when he appears in a law-court, or in any place in which he has to speak of things which are at his feet and before his eyes, he is the jest, not only of Thracian handmaids but of the general herd, tumbling into wells and every sort of disaster through his inexperience. His awkwardness is fearful, and gives the impression of imbecility. When he is reviled, he has nothing personal to say in answer to the civilities of his adversaries, for he knows no scandals of any one, and they do not interest him; and therefore he is laughed at for his sheepishness; and when others are being praised and glorified, in the simplicity of his heart he cannot help going into fits of laughter, so that he seems to be a downright idiot. When he hears a tyrant or king eulogized, he fancies that he is listening to the praises of some keeper of cattle—a swineherd, or shepherd, or perhaps a cowherd, who is congratulated on the quantity of milk which he squeezes from them; and he remarks that the creature whom they tend, and out of whom they squeeze the wealth, is of a less tractable and more insidious nature. Then, again, he observes that the great man is of necessity as ill-mannered and uneducated as any shepherd—for he has no leisure, and he is surrounded by a wall, which is his mountain-pen. Hearing of enormous landed proprietors of ten thousand acres and more, our philosopher deems this to be a trifle, because he has been accustomed to think of the whole earth; and when they sing the praises of family, and say that some one is a gentleman because he can show seven generations of wealthy ancestors, he thinks that their sentiments ¹⁷⁵only betray a dull and narrow vision in those who utter them, and who are not educated enough to look at the whole, nor to consider that every man has had thousands and ten thousands of progenitors, and among them have been rich and poor, kings and slaves, Hellenes and barbarians, innumerable. And when people pride themselves on having a pedigree of twenty-five ancestors, which goes back to Heracles, the son of Amphitryon, he cannot understand their poverty of ideas. Why are they unable to calculate that Amphitryon had a twenty-fifth ancestor, who might have been anybody, and was such as fortune made him, and he had a fiftieth, and so on? He amuses himself with the notion that they cannot count, and thinks that a little arithmetic would have got rid of their senseless vanity. Now, in all these cases our philosopher is derided by the vulgar, partly because he is thought to despise them, and also because he is ignorant of what is before him, and always at a loss.

His irony: his ideas of kings and tyrants,

of landed property, and of long pedigrees.

To the world he is a fool.

THEOD.

That is very true, Socrates.

SOC.

But, O my friend, when he draws the other into upper air, and gets him out of his pleas and rejoinders into the contemplation of justice and injustice in their own nature and in their difference from one another and from all other things; or from the commonplaces about the happiness of a king or of a rich man to the consideration of government, and of human happiness and misery in general—what they are, and how a man is to attain

He has his revenge upon the lawyer.

the one and avoid the other—when that narrow, keen, little legal mind is called to account about all this, he gives the philosopher his revenge; for dazzled by the height at which he is hanging, whence he looks down into space, which is a strange experience to him, he being dismayed, and lost, and stammering broken words, is laughed at, not by Thracian handmaidens or any other uneducated persons, for they have no eye for the situation, but by every man who has not been brought up a slave. Such are the two characters, Theodorus: the one of the freeman, who has been trained in liberty and leisure, whom you call the philosopher,—him we cannot blame because he appears simple and of no account when he has to perform some menial task, such as packing up bed-clothes, or flavouring a sauce or fawning speech; the other character is that of the man who is able to do all this kind of service smartly and neatly, but knows not how to wear his cloak like a gentleman; still less with the music of discourse can he hymn the true life aright which is lived by immortals or men blessed of heaven.

THEOD.

If you could only persuade everybody, Socrates, as you do me, of the truth of your words, there would be more peace and fewer evils among men.

SOC.

Evils, Theodorus, can never pass away; for there must always remain something which is antagonistic to good. Having no place among the gods in heaven, of necessity they hover around the mortal nature, and this earthly sphere. Wherefore we ought to fly away from earth to heaven as quickly as we can; and to fly away is to become like God, as far as this is possible; and to become like him, is to become holy, just, and wise. But, O my friend, you cannot easily convince mankind that they should pursue virtue or avoid vice, not merely in order that a man may seem to be good, which is the reason given by the world, and in my judgment is only a repetition of an old wives' fable. Whereas, the truth is that God is never in any way unrighteous—he is perfect righteousness; and he of us who is the most righteous is most like him. Herein is seen the true cleverness of a man, and also his nothingness and want of manhood. For to know this is true wisdom and virtue, and ignorance of this is manifest folly and vice. All other kinds of wisdom or cleverness, which seem only, such as the wisdom of politicians, or the wisdom of the arts, are coarse and vulgar. The unrighteous man, or the sayer and doer of unholy things, had far better not be encouraged in the illusion that his roguery is clever; for men glory in their shame—they fancy that they hear others saying of them, 'These are not mere good-for-nothing persons, mere burdens of the earth, but such as men should be who mean to dwell safely in a state.' Let us tell them that they are all the more truly what they do not think they are because they do not know it; for they do not know the penalty of injustice, which above all things they ought to know—not stripes and death, as they suppose, which evil-doers often escape, but a penalty which cannot be escaped.

Evil a necessary part of human nature, from which men can only fly away when they become like God.

THEOD.

What is that?

SOC.

There are two patterns eternally set before them; the one blessed and divine, the other godless and wretched: but they do not see them, or perceive that in their utter folly and infatuation they are growing like the one and unlike the other, by reason of their evil deeds; and the penalty is, that they lead a life answering to the pattern which they are growing like. And if we tell them, that unless they depart from their cunning, the place of innocence will not receive them after death; and that here on earth, they will live ever in the likeness of their own evil selves, and with evil friends—when they hear this they in their superior cunning will seem to be listening to the talk of idiots.

The wicked will only laugh at the truth.

THEOD.

Very true, Socrates.

SOC.

Too true, my friend, as I well know; there is, however, one peculiarity in their case: when they begin to reason in private about their dislike of philosophy, if they have the courage to hear the argument out, and do not run away, they grow at last strangely discontented with themselves; their rhetoric fades away, and they become helpless as children. These however are digressions from which we must now desist, or they will overflow, and drown the original argument; to which, if you please, we will now return.

A strange thing: when they consent to reason about philosophy, they are as helpless as children.

THEOD.

For my part, Socrates, I would rather have the digressions, for at my age I find them easier to follow; but if you wish, let us go back to the argument.

End of digression.

SOC.

Had we not reached the point at which the partisans of the perpetual flux, who say that things are as they seem to each one, were confidently maintaining that the ordinances which the state commanded and thought just, were just to the state which imposed them, while they were in force; this was especially asserted of justice; but as to the good, no one had any longer the hardihood to contend of any ordinances which the state thought and enacted to be good that these, while they were in force, were

The partisans of the flux were saying that the ordinances of a state were always just, but they did not venture to affirm that they were always good.

really good;—he who said so would be playing with the name ‘good,’ and would not touch the real question—it would be a mockery, would it not?

THEOD.

Certainly it would.

SOC.

He ought not to speak of the name, but of the thing which is contemplated under the name.

THEOD.

Right.

SOC.

Whatever be the term used, the good or expedient is the aim of legislation, and as far as she has an opinion, the state imposes all laws with a view to the greatest expediency; can legislation have any other aim?

THEOD.

Certainly not. 178

SOC.

But is the aim attained always? do not mistakes often happen?

THEOD.

Yes, I think that there are mistakes.

SOC.

The possibility of error will be more distinctly recognised, if we put the question in reference to the whole class under which the good or expedient falls. That whole class has to do with the future, and laws are passed under the idea that they will be useful in after-time; which, in other words, is the future.

Is every man equally a judge of the expedient, or, to speak generally, of the future?

THEOD.

Very true.

SOC.

Suppose now, that we ask Protagoras, or one of his disciples, a question:—O, Protagoras, we will say to him, Man is, as you declare, the measure of all things—white, heavy, light: of all such things he is the judge; for he has the criterion of them in himself, and when he thinks that things are such as he experiences them to be, he thinks what is and is true to himself. Is it not so?

THEOD.

Yes.

SOC.

And do you extend your doctrine, Protagoras (as we shall further say), to the future as well as to the present; and has he the criterion not only of what in his opinion is but of what will be, and do things always happen to him as he expected? For example, take the case of heat:—When an ordinary man thinks that he is going to have a fever, and that this kind of heat is coming on, and another person, who is a physician, thinks the contrary, whose opinion is likely to prove right? Or are they both right?—he will have a heat and fever in his own judgment, and not have a fever in the physician's judgment?

Certainly not in the case of medicine:

THEOD.

How ludicrous!

SOC.

And the vinegrower, if I am not mistaken, is a better judge of the sweetness or dryness of the vintage which is not yet gathered than the harp-player?

nor of vinegrowing:

THEOD.

Certainly.

SOC.

And in musical composition the musician will know better than the training master what the training master himself will hereafter think harmonious or the reverse?

THEOD.

Of course.

SOC.

And the cook will be a better judge than the guest, who is not a cook, of the pleasure to be derived from the dinner which is in preparation; for of present or past pleasure we are not as yet arguing; but can we say that every one will be to himself the best judge of the pleasure which will seem to be and will be to him in the future?—nay, would not you, Protagoras, better guess which arguments in a court would convince any one of us than the ordinary man?

nor of cookery;

THEOD.

Certainly, Socrates, he used to profess in the strongest manner that he was the superior of all men in this respect.

nor of rhetoric,
legislation, &c.

SOC.

To be sure, friend: who would have paid a large sum for the privilege of talking to him, if he had really persuaded his visitors that neither a prophet nor any other man was better able to judge what will be and seem to be in the future than every one could for himself?

Protagoras himself
was wiser than the
ordinary man about
the future, and was
well paid for it.

THEOD.

Who indeed?

SOC.

And legislation and expediency are all concerned with the future; and every one will admit that states, in passing laws, must often fail of their highest interests?

THEOD.

Quite true.

SOC.

Then we may fairly argue against your master, that he must admit one man to be wiser than another, and that the wiser is a measure: but I, who know nothing, am not at all obliged to accept the honour which the advocate of Protagoras was just now forcing upon me, whether I would or not, of being a measure of anything.

THEOD.

That is the best refutation of him, Socrates; although he is also caught when he ascribes truth to the opinions of others, who give the lie direct to his own opinion.

The refutation is
complete.

SOC.

There are many ways, Theodorus, in which the doctrine that every opinion of every man is true may be refuted; but there is more difficulty in proving that states of feeling, which are present to a man, and out of which arise sensations and opinions in accordance with them, are also untrue. And very likely I have been talking nonsense about them; for they may be unassailable, and those who say that there is clear evidence of them, and that they are matters of knowledge, may probably be right; in which case our friend Theaetetus was not so far from the mark when he identified perception and knowledge. And therefore let us draw nearer, as the advocate of Protagoras desires, and give the truth of the universal flux a ring: is the theory sound or not? at any rate, no small war is raging about it, and there are combatants not a few.

THEOD.

No small war, indeed, for in Ionia the sect makes rapid strides; the disciples of Heracleitus are most energetic upholders of the doctrine.

SOC.

Then we are the more bound, my dear Theodorus, to examine the question from the foundation as it is set forth by themselves.

THEOD.

Certainly we are. About these speculations of Heracleitus, which, as you say, are as old as Homer, or even older still, the Ephesians themselves, who profess to know them, are downright mad, and you cannot talk with them on the subject. For, in accordance with their text-books, they are always in motion; but as for dwelling upon an argument 180or a question, and quietly asking and answering in turn, they can no more do so than they can fly; or rather, the determination of these fellows not to have a particle of rest in them is more than the utmost powers of negation can express. If you ask any of them a question, he will produce, as from a quiver, sayings brief and dark, and shoot them at you; and if you enquire the reason of what he has said, you will be hit by some other new-fangled word, and will make no way with any of them, nor they with one another; their great care is, not to allow of any settled principle either in their arguments or in their minds, conceiving, as I imagine, that any such principle would be stationary; for they are at war with the stationary, and do what they can to drive it out everywhere.

SOC.

I suppose, Theodorus, that you have only seen them when they were fighting, and have never stayed with them in time of peace, for they are no friends of yours; and their peace doctrines are only communicated by them at leisure, as I imagine, to those disciples of theirs whom they want to make like themselves.

The friends of Heracleitus wage a violent controversy about the universal flux. But we must take the argument out of the hands of these lunatics and fanatics, if we would test it.

THEOD.

Disciples! my good sir, they have none; men of their sort are not one another's disciples, but they grow up at their own sweet will, and get their inspiration anywhere, each of them saying of his neighbour that he knows nothing. From these men, then, as I was going to remark, you will never get a reason, whether with their will or without their will; we must take the question out of their hands, and make the analysis ourselves, as if we were doing a geometrical problem.

SOC.

Quite right too; but as touching the aforesaid problem, have we not heard from the ancients, who concealed their wisdom from the many in poetical figures, that Oceanus and Tethys, the origin of all things, are streams, and that nothing is at rest? And now the moderns, in their superior wisdom, have declared the same openly, that the cobbler too may hear and learn of them, and no longer foolishly imagine that some things are at rest and others in motion—having learned that all is motion, he will duly honour his teachers. I had almost forgotten the opposite doctrine, Theodorus,

The ancients held similar views, which they veiled in poetical figures. Then came the opposite doctrine of Parmenides and Melissus.

‘Alone Being remains unmoved, which is the name for the all.’

This is the language of Parmenides, Melissus, and their followers, who stoutly maintain that all being is one and self-contained, and has no place in which to move. What shall we do, friend, with all these people; for, advancing step by step, we have imperceptibly got between the combatants, and, unless we can protect our retreat, we shall pay the penalty of our rashness—like the players in the palaestra who are caught upon the line, and are dragged different ways by the two parties. Therefore I think that we had better begin by considering those whom we first accosted, ‘the river-gods,’ and, if we find any truth in them, we will help them to pull us over, and try to get away from the others. But if the partisans of ‘the whole’ appear to speak more truly, we will fly off from the party which would move the immovable, to them. And if we find that neither of them have anything reasonable to say, we shall be in a ridiculous position, having so great a conceit of our own poor opinion and rejecting that of ancient and famous men. O Theodorus, do you think that there is any use in proceeding when the danger is so great?

Which side shall we take—motion or rest?

THEOD.

Nay, Socrates, not to examine thoroughly what the two parties have to say would be quite intolerable.

SOC.

Then examine we must, since you, who were so reluctant to begin, are so eager to proceed. The nature of motion appears to be the question with which we begin. What

do they mean when they say that all things are in motion? Is there only one kind of motion, or, as I rather incline to think, two? I should like to have your opinion upon this point in addition to my own, that I may err, if I must err, in your company; tell me, then, when a thing changes from one place to another, or goes round in the same place, is not that what is called motion?

THEOD.

Yes.

SOC.

Here then we have one kind of motion. But when a thing, remaining on the same spot, grows old, or becomes black from being white, or hard from being soft, or undergoes any other change, may not this be properly called motion of another kind?

The advocates of motion must of necessity maintain that all things partake of all kinds of motion.

THEOD.

I think so.

SOC.

Say rather that it must be so. Of motion then there are these two kinds, 'change,' and 'motion in place¹.'

THEOD.

You are right.

SOC.

And now, having made this distinction, let us address ourselves to those who say that all is motion, and ask them whether all things according to them have the two kinds of motion, and are changed as well as move in place, or is one thing moved in both ways, and another in one only?

THEOD.

Indeed, I do not know what to answer; but I think they would say that all things are moved in both ways.

SOC.

Yes, comrade; for, if not, they would have to say that the same things are in motion and at rest, and there would be no more truth in saying that all things are in motion, than that all things are at rest.

THEOD.

To be sure.

SOC.

And if they are to be in motion, and nothing is to be devoid of motion, all things must always have every sort of motion?

THEOD.

Most true.

SOC.

Consider a further point: did we not understand them to explain the generation of heat, whiteness, or anything else, in some such manner as the following:—were they not saying that each of them is moving between the agent and the patient, together with a perception, and that the patient ceases to be a perceiving power and becomes a percipient, and the agent a quale instead of a quality? I suspect that quality may appear a strange and uncouth term to you, and that you do not understand the abstract expression. Then I will take concrete instances: I mean to say that the producing power or agent becomes neither heat nor whiteness, but hot and white, and the like of other things. For I must repeat what I said before, that neither the agent nor patient have any absolute existence, but when they come together and generate sensations and their objects, the one becomes a thing of a certain quality, and the other a percipient. You remember?

Recapitulation of the Heraclitean theory of sensation and qualities.

THEOD.

Of course.

SOC.

We may leave the details of their theory unexamined, but we must not forget to ask them the only question with which we are concerned: Are all things in motion and flux?

THEOD.

Yes, they will reply.

SOC.

Since each quality not only moves in place,

And they are moved in both those ways which we distinguished; that is to say, they move in place and are also changed?

but changes at the same time, one name cannot be more appropriate to it than another.

THEOD.

Of course, if the motion is to be perfect.

SOC.

If they only moved in place and were not changed, we should be able to say what is the nature of the things which are in motion and flux?

THEOD.

Exactly.

SOC.

But now, since not even white continues to flow white, and whiteness itself is a flux or change which is passing into another colour, and is never to be caught standing still, can the name of any colour be rightly used at all?

THEOD.

How is that possible, Socrates, either in the case of this or of any other quality—if while we are using the word the object is escaping in the flux?

SOC.

And what would you say of perceptions, such as sight and hearing, or any other kind of perception? Is there any stopping in the act of seeing and hearing?

THEOD.

Certainly not, if all things are in motion.

SOC.

Then we must not speak of seeing any more than of not-seeing, nor of any other perception more than of any non-perception, if all things partake of every kind of motion?

So too with sensations: seeing might just as well be called not-seeing; and, to come to our definition, knowledge is no more perception than non-perception.

THEOD.

Certainly not.

SOC.

Yet perception is knowledge: so at least Theaetetus and I were saying.

Socrates, Theodorus,
Theaetetus.

THEOD.

Very true.

SOC.

Then when we were asked what is knowledge, we no more answered what is knowledge than what is not knowledge?

THEOD.

I suppose not.

SOC.

183Here, then, is a fine result: we corrected our first answer in our eagerness to prove that nothing is at rest. But if nothing is at rest, every answer upon whatever subject is equally right: you may say that a thing is or is not thus; or, if you prefer, 'becomes' thus; and if we say 'becomes,' we shall not then hamper them with words expressive of rest.

THEOD.

Quite true.

SOC.

Yes, Theodorus, except in saying 'thus' and 'not thus.' But you ought not to use the word 'thus,' for there is no motion in 'thus' or in 'not thus.' The maintainers of the doctrine have as yet no words in which to express themselves, and must get a new language. I know of no word that will suit them, except perhaps 'no how,' which is perfectly indefinite.

THEOD.

Yes, that is a manner of speaking in which they will be quite at home.

SOC.

And so, Theodorus, we have got rid of your friend without assenting to his doctrine, that every man is the measure of all things—a wise man only is a measure; neither can we allow that

The theory is refuted
so far as it is based on
a perpetual flux.

knowledge is perception, certainly not on the hypothesis of a perpetual flux, unless perchance our friend Theaetetus is able to convince us that it is.

THEOD.

Very good, Socrates; and now that the argument about the doctrine of Protagoras has been completed, I am absolved from answering; for this was the agreement.

THEAET.

Not, Theodorus, until you and Socrates have discussed the doctrine of those who say that all things are at rest, as you were proposing.

Theaetetus wishes to hear a discussion of the opposite doctrine of rest.

THEOD.

You, Theaetetus, who are a young rogue, must not instigate your elders to a breach of faith, but should prepare to answer Socrates in the remainder of the argument.

THEAET.

Yes, if he wishes; but I would rather have heard about the doctrine of rest.

THEOD.

Invite Socrates to an argument—invite horsemen to the open plain; do but ask him, and he will answer.

SOC.

Nevertheless, Theodorus, I am afraid that I shall not be able to comply with the request of Theaetetus.

THEOD.

Not comply! for what reason?

SOC.

My reason is that I have a kind of reverence; not so much for Melissus and the others, who say that ‘All is one and at rest,’ as for the great leader himself, Parmenides, venerable and awful, as in Homeric language he may be called;—him I should be ashamed to approach in a spirit unworthy of him. I met him when he was an old man, and I was a mere youth, and he appeared to me to have a glorious depth of mind. And I am afraid that we may not understand his words, and may be still

Socrates is afraid of entering on the question. He has so great an awe of Parmenides, and he has not yet ‘delivered’ Theaetetus of his conception of knowledge.

further from understanding his meaning; above all I fear that the nature of knowledge, which is the main subject of our discussion, may be thrust out of sight by the unbidden guests who will come pouring in upon our feast of discourse, if we let them in—besides, the question which is now stirring is of immense extent, and will be treated unfairly if only considered by the way; or if treated adequately and at length, will put into the shade the other question of knowledge. Neither the one nor the other can be allowed; but I must try by my art of midwifery to deliver Theaetetus of his conceptions about knowledge.

THEAET.

Very well; do so if you will.

SOC.

Then now, Theaetetus, take another view of the subject: you answered that knowledge is perception?

THEAET.

I did.

SOC.

And if any one were to ask you: With what does a man see black and white colours? and with what does he hear high and low sounds?—you would say, if I am not mistaken, ‘With the eyes and with the ears.’

Another point of view.

THEAET.

I should.

SOC.

The free use of words and phrases, rather than minute precision, is generally characteristic of a liberal education, and the opposite is pedantic; but sometimes precision is necessary, and I believe that the answer which you have just given is open to the charge of incorrectness; for which is more correct, to say that we see or hear with the eyes and with the ears, or through the eyes and through the ears.

Socrates, Theaetetus.

THEAET.

I should say ‘through,’ Socrates, rather than ‘with.’

SOC.

Yes, my boy, for no one can suppose that in each of us, as in a sort of Trojan horse, there are perched a number of unconnected senses, which do not all meet in some one nature, the mind, or whatever we please to call it, of which they are the instruments, and with which through them we perceive objects of sense.

THEAET.

I agree with you in that opinion.

SOC.

The reason why I am thus precise is, because I want to know whether, when we perceive black and white through the eyes, and again, other qualities through other organs, we do not perceive them with one and the same part of ourselves, and, if you were asked, you might refer all such perceptions to the body. Perhaps, however, I had better allow you to answer for yourself and not interfere. Tell me, then, are not the organs through which you perceive warm and hard and light and sweet, organs of the body?

We perceive sensible things not through, but with the mind, and not with, but through the senses.

THEAET.

Of the body, certainly.

SOC.

185And you would admit that what you perceive through one faculty you cannot perceive through another; the objects of hearing, for example, cannot be perceived through sight, or the objects of sight through hearing?

The senses differ from each other, and have no objects in common.

THEAET.

Of course not.

SOC.

If you have any thought about both of them, this common perception cannot come to you, either through the one or the other organ?

THEAET.

It cannot.

SOC.

How about sounds and colours: in the first place you would admit that they both exist?

THEAET.

Yes.

SOC.

And that either of them is different from the other, and the same with itself?

THEAET.

Certainly.

SOC.

And that both are two and each of them one?

THEAET.

Yes.

SOC.

You can further observe whether they are like or unlike one another?

THEAET.

I dare say.

SOC.

But through what do you perceive all this about them? for neither through hearing nor yet through seeing can you apprehend that which they have in common. Let me give you an illustration of the point at issue:—If there were any meaning in asking whether sounds and colours are saline or not, you would be able to tell me what faculty would consider the question. It would not be sight or hearing, but some other.

THEAET.

Certainly; the faculty of taste.

SOC.

Very good; and now tell me what is the power which discerns, not only in sensible objects, but in all things, universal notions, such as those which are called being and not-being, and those others about which we were just asking—what organs will you assign for the perception of these notions?

THEAET.

You are thinking of being and not-being, likeness and unlikeness, sameness and difference, and also of unity and other numbers which are applied to objects of sense; and you mean to ask, through what bodily organ the soul perceives odd and even numbers and other arithmetical conceptions.

General ideas are perceived by the mind alone without the help of the senses.

SOC.

You follow me excellently, Theaetetus; that is precisely what I am asking.

THEAET.

Indeed, Socrates, I cannot answer; my only notion is, that these, unlike objects of sense, have no separate organ, but that the mind, by a power of her own, contemplates the universals in all things.

SOC.

You are a beauty, Theaetetus, and not ugly, as Theodorus was saying; for he who utters the beautiful is himself beautiful and good. And besides being beautiful, you have done me a kindness in releasing me from a very long discussion, if you are clear that the soul views some things by herself and others through the bodily organs. For that was my own opinion, and I wanted you to agree with me.

THEAET.

I am quite clear.

SOC.

And to which class would you refer being or essence; 186for this, of all our notions, is the most universal?

THEAET.

I should say, to that class which the soul aspires to know of herself.

SOC.

And would you say this also of like and unlike, same and other?

THEAET.

Yes.

SOC.

And would you say the same of the noble and base, and of good and evil?

THEAET.

These I conceive to be notions which are essentially relative, and which the soul also perceives by comparing in herself things past and present with the future.

SOC.

And does she not perceive the hardness of that which is hard by the touch, and the softness of that which is soft equally by the touch?

The senses perceive objects of sense, but the mind alone can compare them.

THEAET.

Yes.

SOC.

But their essence and what they are, and their opposition to one another, and the essential nature of this opposition, the soul herself endeavours to decide for us by the review and comparison of them?

THEAET.

Certainly.

SOC.

The simple sensations which reach the soul through the body are given at birth to men and animals by nature, but their reflections on the being and use of them are slowly and hardly gained, if they are ever gained, by education and long experience.

Sensations are given at birth, but truth and being, which are essential to knowledge, are acquired by reflection later on.

THEAET.

Assuredly.

SOC.

And can a man attain truth who fails of attaining being?

THEAET.

Impossible.

SOC.

And can he who misses the truth of anything, have a knowledge of that thing?

THEAET.

He cannot.

SOC.

Then knowledge does not consist in impressions of sense, but in reasoning about them; in that only, and not in the mere impression, truth and being can be attained?

THEAET.

Clearly.

SOC.

And would you call the two processes by the same name, when there is so great a difference between them?

THEAET.

That would certainly not be right.

SOC.

And what name would you give to seeing, hearing, smelling, being cold and being hot?

THEAET.

I should call all of them perceiving—what other name could be given to them?

SOC.

Perception would be the collective name of them?

THEAET.

Certainly.

SOC.

Which, as we say, has no part in the attainment of truth any more than of being?

THEAET.

Certainly not.

SOC.

And therefore not in science or knowledge?

THEAET.

No.

SOC.

Then perception, Theaetetus, can never be the same as knowledge or science?

THEAET.

Clearly not, Socrates; and knowledge has now been most distinctly proved to be different from perception.

SOC.

But the original aim of our discussion was to find out¹⁸⁷ rather what knowledge is than what it is not; at the same time we have made some progress, for we no longer seek for knowledge in perception at all, but in that other process, however called, in which the mind is alone and engaged with being.

We have found out then what knowledge is not. But what is it?

THEAET.

You mean, Socrates, if I am not mistaken, what is called thinking or opining.

SOC.

You conceive truly. And now, my friend, please to begin again at this point; and having wiped out of your memory all that has preceded, see if you have arrived at any clearer view, and once more say what is knowledge.

THEAET.

I cannot say, Socrates, that all opinion is knowledge, because there may be a false opinion; but I will venture to assert, that knowledge is true opinion: let this then be my reply; and if this is hereafter disproved, I must try to find another.

Theaetetus boldly answers, 'True opinion.'

SOC.

That is the way in which you ought to answer, Theaetetus, and not in your former hesitating strain, for if we are bold we shall gain one of two advantages; either we shall find what we seek, or we shall be less likely to think that we know what we do not know—in either case we shall be richly rewarded. And now, what are you saying?—Are there two sorts of opinion, one true and the other false; and do you define knowledge to be the true?

THEAET.

Yes, according to my present view.

SOC.

Is it still worth our while to resume the discussion touching opinion?

THEAET.

To what are you alluding?

SOC.

There is a point which often troubles me, and is a great perplexity to me, both in regard to myself and others. I cannot make out the nature or origin of the mental experience to which I refer.

THEAET.

Pray what is it?

SOC.

How there can be false opinion—that difficulty still troubles the eye of my mind; and I am uncertain whether I shall leave the question, or begin over again in a new way.

But false opinion is impossible, (1) in the sphere of knowledge:

THEAET.

Begin again, Socrates,—at least if you think that there is the slightest necessity for doing so. Were not you and Theodorus just now remarking very truly, that in discussions of this kind we may take our own time?

SOC.

You are quite right, and perhaps there will be no harm in retracing our steps and beginning again. Better a little which is well done, than a great deal imperfectly.

THEAET.

Certainly.

SOC.

Well, and what is the difficulty? Do we not speak of false opinion, and say that one man holds a false and another a true opinion, as though there were some natural distinction between them?

THEAET.

We certainly say so.

SOC.

188All things and everything are either known or not known. I leave out of view the intermediate conceptions of learning and forgetting, because they have nothing to do with our present question.

for all things are either known or not known;

THEAET.

There can be no doubt, Socrates, if you exclude these, that there is no other alternative but knowing or not knowing a thing.

SOC.

That point being now determined, must we not say that he who has an opinion, must have an opinion about something which he knows or does not know?

THEAET.

He must.

SOC.

He who knows, cannot but know; and he who does not know, cannot know?

THEAET.

Of course.

SOC.

What shall we say then? When a man has a false opinion does he think that which he knows to be some other thing which he knows, and knowing both, is he at the same time ignorant of both?

THEAET.

That, Socrates, is impossible.

SOC.

But perhaps he thinks of something which he does not know as some other thing which he does not know; for example, he knows neither Theaetetus nor Socrates, and yet he fancies that Theaetetus is Socrates, or Socrates Theaetetus?

and a man cannot think one thing, which he knows or does not know, to be another thing which he knows or does not know; nor what he does not know to be what he knows, or *vice versa*:

THEAET.

How can he?

SOC.

But surely he cannot suppose what he knows to be what he does not know, or what he does not know to be what he knows?

THEAET.

That would be monstrous.

SOC.

Where, then, is false opinion? For if all things are either known or unknown, there can be no opinion which is not comprehended under this alternative, and so false opinion is excluded.

THEAET.

Most true.

SOC.

Suppose that we remove the question out of the sphere of knowing or not knowing, into that of being and not-being.

and (2) in the sphere of being:

THEAET.

What do you mean?

SOC.

May we not suspect the simple truth to be that he who thinks about anything, that which is not, will necessarily think what is false, whatever in other respects may be the state of his mind?

THEAET.

That, again, is not unlikely, Socrates.

SOC.

Then suppose some one to say to us, Theaetetus:—Is it possible for any man to think that which is not, either as a self-existent substance or as a predicate of something else? And suppose that we answer, ‘Yes, he can, when he thinks what is not true.’—That will be our answer?

THEAET.

Yes.

SOC.

But is there any parallel to this?

THEAET.

What do you mean?

SOC.

Can a man see something and yet see nothing?

THEAET.

Impossible.

for it is impossible when seeing or hearing not to see or hear some existing thing.

SOC.

But if he sees any one thing, he sees something that exists. Do you suppose that what is one is ever to be found among non-existing things?

THEAET.

I do not.

SOC.

He then who sees some one thing, sees something which is?

THEAET.

Clearly.

SOC.

189And he who hears anything, hears some one thing, and hears that which is?

THEAET.

Yes.

SOC.

And he who touches anything, touches something which is one and therefore is?

THEAET.

That again is true.

SOC.

And does not he who thinks, think some one thing?

THEAET.

Certainly.

SOC.

And does not he who thinks some one thing, think something which is?

THEAET.

I agree.

SOC.

Then he who thinks of that which is not, thinks of nothing?

To think what is not is not to think.

THEAET.

Clearly.

SOC.

And he who thinks of nothing, does not think at all?

THEAET.

Obviously.

SOC.

Then no one can think that which is not, either as a self-existent substance or as a predicate of something else?

THEAET.

Clearly not.

SOC.

Then to think falsely is different from thinking that which is not?

THEAET.

It would seem so.

SOC.

Then false opinion has no existence in us, either in the sphere of being or of knowledge?

False opinion must be sought elsewhere.

THEAET.

Certainly not.

SOC.

But may not the following be the description of what we express by this name?

THEAET.

What?

SOC.

May we not suppose that false opinion or thought is a sort of heterodoxy; a person may make an exchange in his mind, and say that one real object is another real object. For thus he always thinks that which is, but he puts one thing in place of another, and missing the aim of his thoughts, he may be truly said to have false opinion.

One real object may be thought to be some other real object.—This Theaetetus emphatically affirms to be truly false.

THEAET.

Now you appear to me to have spoken the exact truth: when a man puts the base in the place of the noble, or the noble in the place of the base, then he has truly false opinion.

SOC.

I see, Theaetetus, that your fear has disappeared, and that you are beginning to despise me.

THEAET.

What makes you say so?

SOC.

You think, if I am not mistaken, that your ‘truly false’ is safe from censure, and that I shall never ask whether there can be a swift which is slow, or a heavy which is light, or any other self-contradictory thing, which works, not according to its own nature, but according to that of its opposite. But I will not insist upon this, for I do not wish needlessly to discourage you. And so you are satisfied that false opinion is heterodoxy, or the thought of something else?

Socrates allows this contradiction to pass, and proceeds to ask whether a man ever believed one of two things which he had in his mind to be the other.

THEAET.

I am.

SOC.

It is possible then upon your view for the mind to conceive of one thing as another?

THEAET.

True.

SOC.

But must not the mind, or thinking power, which misplaces them, have a conception either of both objects or of one of them?

THEAET.

Certainly.

SOC.

Either together or in succession?

THEAET.

Very good.

SOC.

And do you mean by conceiving, the same which I mean?

THEAET.

What is that?

SOC.

I mean the conversation which the soul holds with herself in considering of anything. I speak of what I scarcely understand; but the soul when thinking appears to me to be just talking—asking questions of herself and answering them, affirming and denying. And when she has arrived at a decision, either gradually or by a sudden impulse, and has at last agreed, and does not doubt, this is called her opinion. I say, then, that to form an opinion is to speak, and opinion is a word spoken,—I mean, to oneself and in silence, not aloud or to another: What think you?

THEAET.

I agree.

SOC.

Then when any one thinks of one thing as another, he is saying to himself that one thing is another?

THEAET.

Yes.

SOC.

But do you ever remember saying to yourself that the noble is certainly base, or the unjust just; or, best of all—have you ever attempted to convince yourself that one thing is another? Nay, not even in sleep, did you ever venture to say to yourself that odd is even, or anything of the kind?

But how can one thing be thought to be another?

e. g. no one ever says to himself that the noble is the base, or that odd is even.

THEAET.

Never.

SOC.

And do you suppose that any other man, either in his senses or out of them, ever seriously tried to persuade himself that an ox is a horse, or that two are one?

THEAET.

Certainly not.

SOC.

But if thinking is talking to oneself, no one speaking and thinking of two objects, and apprehending them both in his soul, will say and think that the one is the other of them, and I must add, that even you, lover of dispute as you are, had better let the word ‘other’ alone [i. e. not insist that ‘one’ and ‘other’ are the same¹]. I mean to say, that no one thinks the noble to be base, or anything of the kind.

THEAET.

I will give up the word ‘other,’ Socrates; and I agree to what you say.

SOC.

It is admitted on all hands that no one can confuse two things,

If a man has both of them in his thoughts, he cannot think that the one of them is the other?

either when he has both in his mind, or when he has only one.

THEAET.

True.

SOC.

Neither, if he has one of them only in his mind and not the other, can he think that one is the other?

THEAET.

True; for we should have to suppose that he apprehends that which is not in his thoughts at all.

SOC.

Then no one who has either both or only one of the two objects in his mind can think that the one is the other. And therefore, he who maintains that false opinion is heterodoxy is talking nonsense; for neither in this, any more than in the previous way, can false opinion exist in us.

THEAET.

No.

SOC.

But if, Theaetetus, this is not admitted, we shall be driven into many absurdities.

THEAET.

What are they?

SOC.

I will not tell you until I have endeavoured to consider the matter from every point of view. For I should be ashamed of us if we were driven in our perplexity to admit the absurd consequences of which I speak. But if we find the solution, and get away from them, we may regard them only as the difficulties of others, and the ridicule will not attach to us. On the other hand, if we utterly fail, I suppose that we must be humble, and allow the argument to trample us under foot, as the sea-sick passenger is trampled upon by the sailor, and to do anything to

We are in great straits.

A way out of the difficulty: Theaetetus may know Socrates, and yet mistake another whom he sees, but does not know, for him.

us. Listen, then, while I tell you how I hope to find a way out of our difficulty.

THEAET.

Let me hear.

SOC.

I think that we were wrong in denying that a man could think what he knew to be what he did not know; and that there is a way in which such a deception is possible.

THEAET.

You mean to say, as I suspected at the time, that I may know Socrates, and at a distance see some one who is unknown to me, and whom I mistake for him—then the deception will occur?

SOC.

But has not that position been relinquished by us, because involving the absurdity that we should know and not know the things which we know?

THEAET.

True.

SOC.

Let us make the assertion in another form, which may or may not have a favourable issue; but as we are in a great strait, every argument should be turned over and tested. Tell me, then, whether I am right in saying that you may learn a thing which at one time you did not know?

THEAET.

Certainly you may.

SOC.

And another and another?

THEAET.

Yes.

SOC.

I would have you imagine, then, that there exists in the mind of man a block of wax, which is of different sizes in different men; harder, moister, and having more or less of purity in one than another, and in some of an intermediate quality.

THEAET.

I see.

SOC.

Let us say that this tablet is a gift of Memory, the mother of the Muses; and that when we wish to remember anything which we have seen, or heard, or thought in our own minds, we hold the wax to the perceptions and thoughts, and in that material receive the impression of them as from the seal of a ring; and that we remember and know what is imprinted as long as the image lasts; but when the image is effaced, or cannot be taken, then we forget and do not know.

The image of the waxen tablet having different qualities of wax.

THEAET.

Very good.

SOC.

Now, when a person has this knowledge, and is considering something which he sees or hears, may not false opinion arise in the following manner?

THEAET.

In what manner?

SOC.

When he thinks what he knows, sometimes to be what he knows, and sometimes to be what he does not know. We were wrong before in denying the possibility of this.

THEAET.

And how would you amend the former statement?

SOC.

Confusion is impossible, (1) between two things

192I should begin by making a list of the impossible cases which must be excluded. (1) No one can think one thing to be another when he does not perceive either of them, but has the memorial or seal of both of them in his mind; nor can any mistaking of one thing for another occur, when he only knows one, and does not know, and has no impression of the other; nor can he think that one thing which he does not know is another thing which he does not know, or that what he does not know is what he knows; nor (2) that one thing which he perceives is another thing which he perceives, or that something which he perceives is something which he does not perceive; or that something which he does not perceive is something else which he does not perceive; or that something which he does not perceive is something which he perceives; nor again (3) can he think that something which he knows and perceives, and of which he has the impression coinciding with sense, is something else which he knows and perceives, and of which he has the impression coinciding with sense;—this last case, if possible, is still more inconceivable than the others; nor (4) can he think that something which he knows and perceives, and of which he has the memorial coinciding with sense, is something else which he knows; nor so long as these agree, can he think that a thing which he knows and perceives is another thing which he perceives; or that a thing which he does not know and does not perceive, is the same as another thing which he does not know and does not perceive;—nor again, can he suppose that a thing which he does not know and does not perceive is the same as another thing which he does not know; or that a thing which he does not know and does not perceive is another thing which he does not perceive:—All these utterly and absolutely exclude the possibility of false opinion. The only cases, if any, which remain, are the following.

not perceived by sense, when we know one or both or neither of them; (2) between two things when we have a sensible impression of one or both or neither of them; (3) still more impossible between two things, both of which are known and perceived, and of which the impression coincides with sense; (4) between two things of which both or one only or neither are known and perceived and have an impression corresponding to sense.

THEAET.

What are they? If you tell me, I may perhaps understand you better; but at present I am unable to follow you.

SOC.

A person may think that some things which he knows, or which he perceives and does not know, are some other things which he knows and perceives; or that some things which he knows and perceives, are other things which he knows and perceives.

Confusion arises when for things already known and perceived we mistake other things, either known, or perceived and not known, or both known and perceived.

THEAET.

I understand you less than ever now.

SOC.

Hear me once more, then:—I, knowing Theodorus, and remembering in my own mind what sort of person he is, and also what sort of person Theaetetus is, at one time see them, and at another time do not see them, and sometimes I touch them, and at another time not, or at one time I may hear them or perceive them in some other way, and at another time not perceive them, but still I remember them, and know them in my own mind.

THEAET.

Very true.

SOC.

Then, first of all, I want you to understand that a man may or may not perceive sensibly that which he knows.

THEAET.

True.

SOC.

And that which he does not know will sometimes not be perceived by him and sometimes will be perceived and only perceived?

THEAET.

That is also true.

SOC.

See whether you can follow me better now: Socrates can recognize Theodorus and Theaetetus, but he sees neither of them, nor does he perceive them in any other way; he cannot then by any possibility imagine in his own mind that Theaetetus is Theodorus. Am I not right?

Recapitulation.

THEAET.

You are quite right.

SOC.

Then that was the first case of which I spoke.

THEAET.

Yes.

SOC.

The second case was, that I, knowing one of you and not knowing the other, and perceiving neither, can never think him whom I know to be him whom I do not know.

THEAET.

True.

SOC.

In the third case, not knowing and not perceiving either of you, I cannot think that one of you whom I do not know is the other whom I do not know. I need not again go over the catalogue of excluded cases, in which I cannot form a false opinion about you and Theodorus, either when I know both or when I am in ignorance of both, or when I know one and not the other. And the same of perceiving: do you understand me?

THEAET.

I do.

SOC.

The only possibility of erroneous opinion is, when knowing you and Theodorus, and having on the waxen block the impression of both of you given as by a seal, but seeing you imperfectly and at a distance, I try to assign the right impression of memory to the right visual impression, and to fit this into its own print: if I succeed, recognition will take place; but if I fail and transpose them, putting the foot into the wrong shoe—that is to say, putting the vision of either of you on to the wrong impression, or if my mind, like the sight in a mirror, which is transferred from right to left, err by reason of some similar affection, then ‘heterodoxy’ and false opinion ensues.

False opinion is the erroneous combination of sensation and thought.

THEAET.

Yes, Socrates, you have described the nature of opinion with wonderful exactness.

SOC.

Or again, when I know both of you, and perceive as well as know one of you, but not the other, and my knowledge of him does not accord with perception—that was the case put by me just now which you did not understand.

THEAET.

No, I did not.

SOC.

I meant to say, that when a person knows and perceives one of you, and his knowledge coincides with his perception, he will never think him to be some other person, whom he knows and perceives, and the knowledge of whom coincides with his perception—for that also was a case supposed.

THEAET.

True.

SOC.

But there was an omission of the further case, in which, as we now say, false opinion may arise, when knowing both, and seeing, or having some other sensible perception of both, I fail in holding the seal over against the corresponding sensation; like a bad archer, I miss and fall wide of the mark—and this is called falsehood.

THEAET.

Yes; it is rightly so called.

SOC.

When, therefore, perception is present to one of the seals or impressions but not to the other, and the mind fits the seal of the absent perception on the one which is present, in any case of this sort the mind is deceived; in a word, if our view is sound, there can be no error or deception about things which a man does not know and has never perceived, but only in things which are known and perceived; in these alone opinion turns and twists about, and becomes alternately true and false;—true when the seals and impressions of sense meet straight and opposite—false when they go awry and are crooked.

THEAET.

And is not that, Socrates, nobly said?

SOC.

Nobly! yes; but wait a little and hear the explanation, and then you will say so with more reason; for to think truly is noble and to be deceived is base.

THEAET.

Undoubtedly.

SOC.

And the origin of truth and error is as follows:—When the wax in the soul of any one is deep and abundant, and smooth and perfectly tempered, then the impressions which pass through the senses and sink into the heart of the soul, as Homer says in a parable, meaning to indicate the likeness of the soul to wax (κηρ κηρς); these, I say, being pure and clear, and having a sufficient depth of wax, are also lasting, and minds, such as these, easily learn and easily retain, and are not liable to confusion, but have true thoughts, for they have plenty of room, and having clear impressions of things, as we term them, quickly distribute them into their proper places on the block. And such men are called wise. Do you agree?

The differences in the kinds and degrees of knowledge depend on the extent and the qualities of the wax.

THEAET.

Entirely.

SOC.

But when the heart of any one is shaggy—a quality which the all-wise poet commends, or muddy and of impure wax, or very soft, or very hard, then there is a corresponding defect in the mind—the soft are good at learning, but apt to forget; and the hard are the reverse; the shaggy and rugged and gritty, or those who have an admixture of earth or dung 195 in their composition, have the impressions indistinct, as also the hard, for there is no depth in them; and the soft too are indistinct, for their impressions are easily confused and effaced. Yet greater is the indistinctness when they are all jostled together in a little soul, which has no room. These are the natures which have false opinion; for when they see or hear or think of anything, they are slow in assigning the right objects to the right impressions—in their stupidity they confuse them, and are apt to see and hear and think amiss—and such men are said to be deceived in their knowledge of objects, and ignorant.

THEAET.

No man, Socrates, can say anything truer than that.

SOC.

Then now we may admit the existence of false opinion in us?

THEAET.

Certainly.

SOC.

And of true opinion also?

THEAET.

Yes.

SOC.

We have at length satisfactorily proven that beyond a doubt there are these two sorts of opinion?

THEAET.

Undoubtedly.

SOC.

Alas, Theaetetus, what a tiresome creature is a man who is fond of talking!

THEAET.

What makes you say so?

SOC.

Because I am disheartened at my own stupidity and tiresome garrulity; for what other term will describe the habit of a man who is always arguing on all sides of a question; whose dulness cannot be convinced, and who will never leave off?

THEAET.

But what puts you out of heart?

SOC.

I am not only out of heart, but in positive despair; for I do not know what to answer if any one were to ask me:—O Socrates, have you indeed discovered that false opinion arises neither in the comparison of perceptions with one another nor yet in thought, but in the union of thought and perception? Yes, I shall say, with the complacency of one who thinks that he has made a noble discovery.

Our simile does not explain all the facts; for error may arise not only in the combination of thought and sense, but in pure thought.

THEAET.

I see no reason why we should be ashamed of our demonstration, Socrates.

SOC.

He will say: You mean to argue that the man whom we only think of and do not see, cannot be confused with the horse which we do not see or touch, but only think of and do not perceive? That I believe to be my meaning, I shall reply.

THEAET.

Quite right.

SOC.

Well, then, he will say, according to that argument, the number eleven, which is only thought, can never be mistaken for twelve, which is only thought: How would you answer him?

THEAET.

I should say that a mistake may very likely arise between the eleven or twelve which are seen or handled, but that no similar mistake can arise between the eleven and twelve which are in the mind.

SOC.

Well, but do you think that no one ever put before his own mind five and seven,—I do not mean five or seven 196 men or horses, but five or seven in the abstract, which, as we say, are recorded on the waxen block, and in which false opinion is held to be impossible;—did no man ever ask himself how many these numbers make when added together, and answer that they are eleven, while another thinks that they are twelve, or would all agree in thinking and saying that they are twelve?

For example, a man may think that $5+7=11$, instead of 12, and so confuse two impressions on the wax.

THEAET.

Certainly not; many would think that they are eleven, and in the higher numbers the chance of error is greater still; for I assume you to be speaking of numbers in general.

SOC.

Exactly; and I want you to consider whether this does not imply that the twelve in the waxen block are supposed to be eleven?

THEAET.

Yes, that seems to be the case.

SOC.

Then do we not come back to the old difficulty? For he who makes such a mistake does think one thing which he knows to be another thing which he knows; but this, as we said, was impossible, and afforded an irresistible proof of the non-existence of false opinion, because otherwise the same person would inevitably know and not know the same thing at the same time.

THEAET.

Most true.

SOC.

Then false opinion cannot be explained as a confusion of thought and sense, for in that case we could not have been mistaken about pure conceptions of thought; and thus we are obliged to say, either that false opinion does not exist, or that a man may not know that which he knows;—which alternative do you prefer?

We must therefore admit either that false opinion does not exist, or that a man may not know what he knows.

THEAET.

It is hard to determine, Socrates.

SOC.

And yet the argument will scarcely admit of both. But, as we are at our wits' end, suppose that we do a shameless thing?

THEAET.

What is it?

SOC.

Let us attempt to explain the verb 'to know.'

THEAET.

And why should that be shameless?

SOC.

You seem not to be aware that the whole of our discussion from the very beginning has been a search after knowledge, of which we are assumed not to know the nature.

THEAET.

Nay, but I am well aware.

SOC.

And is it not shameless when we do not know what knowledge is, to be explaining the verb 'to know'? The truth is, Theaetetus, that we have long been infected with logical impurity. Thousands of times have we repeated the words 'we know,' and 'do not know,' and 'we have or have not science or knowledge,' as if we could understand what we are saying to one another, so long as we remain ignorant about knowledge; and at this moment we are using the words 'we understand,' 'we are ignorant,' as though we could still employ them when deprived of knowledge or science.

THEAET.

But if you avoid these expressions, Socrates, how will you ever argue at all?

SOC.

I could not, being the man I am. The case would be different if I were a true hero of dialectic: and O that such an one were present! for he would have told us to avoid the use of these terms; at the same time he would not have spared in you and me the faults which I have noted. But, seeing that we are no great wits, shall I venture to say what knowing is? for I think that the attempt may be worth making.

THEAET.

Then by all means venture, and no one shall find fault with you for using the forbidden terms.

As a last resource let us ask. What is the meaning of 'knowing'?

But how can we answer the question while we are still ignorant of what knowledge is?

Still we had better try.

SOC.

You have heard the common explanation of the verb ‘to know’?

THEAET.

I think so, but I do not remember it at the moment.

SOC.

They explain the word ‘to know’ as meaning ‘to have knowledge.’

‘To know’ is not ‘to have,’ but ‘to possess knowledge.’

THEAET.

True.

SOC.

I should like to make a slight change, and say ‘to possess’ knowledge.

THEAET.

How do the two expressions differ?

SOC.

Perhaps there may be no difference; but still I should like you to hear my view, that you may help me to test it.

THEAET.

I will, if I can.

SOC.

I should distinguish ‘having’ from ‘possessing’: for example, a man may buy and keep under his control a garment which he does not wear; and then we should say, not that he has, but that he possesses the garment.

THEAET.

It would be the correct expression.

SOC.

Well, may not a man 'possess' and yet not 'have' knowledge in the sense of which I am speaking? As you may suppose a man to have caught wild birds—doves or any other birds—and to be keeping them in an aviary which he has constructed at home; we might say of him in one sense, that he always has them because he possesses them, might we not?

To illustrate this distinction let us compare the mind to an aviary which is gradually filled with different kinds of birds, corresponding to the varieties of knowledge.

THEAET.

Yes.

SOC.

And yet, in another sense, he has none of them; but they are in his power, and he has got them under his hand in an enclosure of his own, and can take and have them whenever he likes;—he can catch any which he likes, and let the bird go again, and he may do so as often as he pleases.

THEAET.

True.

SOC.

Once more, then, as in what preceded we made a sort of waxen figment in the mind, so let us now suppose that in the mind of each man there is an aviary of all sorts of birds—some flocking together apart from the rest, others in small groups, others solitary, flying anywhere and everywhere.

THEAET.

Let us imagine such an aviary—and what is to follow?

SOC.

We may suppose that the birds are kinds of knowledge, and that when we were children, this receptacle was empty; whenever a man has gotten and detained in the enclosure a kind of knowledge, he may be said to have learned or discovered the thing which is the subject of the knowledge: and this is to know.

Three stages of possession:—(1) the original capture; (2) the detention in the cage; (3) the second capture for use.

THEAET.

Granted.

SOC.

198 And further, when any one wishes to catch any of these knowledges or sciences, and having taken, to hold it, and again to let them go, how will he express himself?—will he describe the ‘catching’ of them and the original ‘possession’ in the same words? I will make my meaning clearer by an example:—You admit that there is an art of arithmetic?

THEAET.

To be sure.

SOC.

Conceive this under the form of a hunt after the science of odd and even in general.

THEAET.

I follow.

SOC.

Having the use of the art, the arithmetician, if I am not mistaken, has the conceptions of number under his hand, and can transmit them to another.

THEAET.

Yes.

SOC.

And when transmitting them he may be said to teach them, and when receiving to learn them, and when having them in possession in the aforesaid aviary he may be said to know them.

THEAET.

Exactly.

SOC.

Attend to what follows: must not the perfect arithmetician know all numbers, for he has the science of all numbers in his mind?

THEAET.

True.

SOC.

And he can reckon abstract numbers in his head, or things about him which are numerable?

THEAET.

Of course he can.

SOC.

And to reckon is simply to consider how much such and such a number amounts to?

THEAET.

Very true.

SOC.

And so he appears to be searching into something which he knows, as if he did not know it, for we have already admitted that he knows all numbers;—you have heard these perplexing questions raised?

THEAET.

I have.

SOC.

May we not pursue the image of the doves, and say that the chase after knowledge is of two kinds? one kind is prior to possession and for the sake of possession, and the other for the sake of taking and holding in the hands that which is possessed already. And thus, when a man has learned and known something long ago, he may resume and get hold of the knowledge which he has long possessed, but has not at hand in his mind.

The three stages of knowledge:—(1) acquisition; (2) latent possession; (3) conscious possession and use.

THEAET.

True.

SOC.

That was my reason for asking how we ought to speak when an arithmetician sets about numbering, or a grammarian about reading? Shall we say, that although he knows, he comes back to himself to learn what he already knows?

THEAET.

It would be too absurd, Socrates.

SOC.

Shall we say then that he is going to read or number what he does not know, although we have admitted that he knows all letters and all numbers?

THEAET.

That, again, would be an absurdity.

SOC.

Then shall we say that about names we care nothing?—any one may twist and turn the words ‘knowing’ and ‘learning’ in any way which he likes, but since we have determined that the possession of knowledge is not the having or using it, we do assert that a man cannot not possess that which he possesses; and, therefore, in no case can a man not know that which he knows, but he may get a false opinion about it; for he may have the knowledge, not of this particular thing, but of some other;—when the various numbers and forms of knowledge are flying about in the aviary, and wishing to capture a certain sort of knowledge out of the general store, he takes the wrong one by mistake, that is to say, when he thought eleven to be twelve, he got hold of the ring-dove which he had in his mind, when he wanted the pigeon.

False opinion arises if the arithmetician, when searching for a certain number, catches the wrong one.

THEAET.

A very rational explanation.

SOC.

But when he catches the one which he wants, then he is not deceived, and has an opinion of what is, and thus false and true opinion may exist, and the difficulties which were previously raised disappear. I dare say that you agree with me, do you not?

For a moment the explanation appears satisfactory.

THEAET.

Yes.

SOC.

But again the old difficulty returns; for

And so we are rid of the difficulty of a man's not knowing what he knows, for we are not driven to the inference that he does not possess what he possesses, whether he be or be not deceived. And yet I fear that a greater difficulty is looking in at the window.

when a man has knowledge in his hand, how can he mistake it for ignorance?

THEAET.

What is it?

SOC.

How can the exchange of one knowledge for another ever become false opinion?

THEAET.

What do you mean?

SOC.

In the first place, how can a man who has the knowledge of anything be ignorant of that which he knows, not by reason of ignorance, but by reason of his own knowledge? And, again, is it not an extreme absurdity that he should suppose another thing to be this, and this to be another thing;—that, having knowledge present with him in his mind, he should still know nothing and be ignorant of all things?—you might as well argue that ignorance may make a man know, and blindness make him see, as that knowledge can make him ignorant.

THEAET.

Perhaps, Socrates, we may have been wrong in making only forms of knowledge our birds: whereas there ought to have been forms of ignorance as well, flying about together in the mind, and then he who sought to take one of them might sometimes catch a form of knowledge, and sometimes a form of ignorance; and thus he would have a false opinion from ignorance, but a true one from knowledge, about the same thing.

Theaetetus suggests that there are forms of ignorance, as well as of knowledge, flying about in the aviary. But the man who makes a mistake will take a form of ignorance for a form of knowledge; and so we are brought back to the original difficulty.

SOC.

I cannot help praising you, Theaetetus, and yet I must beg you to reconsider your words. Let us grant what you say—then, according to you, he who takes ignorance will have a false opinion—am I right?

THEAET.

Yes.

SOC.

He will certainly not think that he has a false opinion?

THEAET.

Of course not.

SOC.

He will think that his opinion is true, and he will fancy that he knows the things about which he has been deceived?

THEAET.

Certainly.

SOC.

Then he will think that he has captured knowledge and not ignorance?

THEAET.

Clearly.

SOC.

And thus, after going a long way round, we are once more face to face with our original difficulty. The hero of dialectic will retort upon us:—‘O my excellent friends, he will say, laughing, if a man knows the form of ignorance and the form of knowledge, can he think that one of them which he knows is the other which he knows? or, if he knows neither of them, can he think that the one which he knows not is another which he knows not? or, if he knows one and not the other, can he think the one which he knows to be the one which he does not know? or the one which he does not know to be the one which he knows? or will you tell me that there are other forms of knowledge which distinguish the right and wrong birds, and which the owner keeps in some other aviaries or graven on waxen blocks according to your foolish images, and which he may be said to know while he possesses them, even though he have them not at hand in his mind? And thus, in a perpetual circle, you will be compelled to go round and round, and you will make no progress.’ What are we to say in reply, Theaetetus?

It will be ridiculous to attempt to get rid of this by the help of another aviary, containing other birds, i. e. forms of knowledge.

THEAET.

Our discomfiture is due to the fact that we

Indeed, Socrates, I do not know what we are to say.

seek false opinion
before knowledge.

SOC.

Are not his reproaches just, and does not the argument truly show that we are wrong in seeking for false opinion until we know what knowledge is; that must be first ascertained; then, the nature of false opinion?

THEAET.

I cannot but agree with you, Socrates, so far as we have yet gone.

SOC.

Then, once more, what shall we say that knowledge is?—for we are not going to lose heart as yet.

What then is
knowledge?

THEAET.

Certainly, I shall not lose heart, if you do not.

SOC.

What definition will be most consistent with our former views?

THEAET.

I cannot think of any but our old one, Socrates.

SOC.

What was it?

THEAET.

Knowledge was said by us to be true opinion; and true opinion is surely unerring, and the results which follow from it are all noble and good.

An old friend
reappears:
'Knowledge is true
opinion.'

SOC.

He who led the way into the river, Theaetetus, said 201 'The experiment will show;' and perhaps if we go forward in the search, we may stumble upon the thing which we are looking for; but if we stay where we are, nothing will come to light.

THEAET.

Very true; let us go forward and try.

SOC.

The trail soon comes to an end, for a whole profession is against us.

THEAET.

How is that, and what profession do you mean?

SOC.

The profession of the great wise ones who are called orators and lawyers; for these persuade men by their art and make them think whatever they like, but they do not teach them. Do you imagine that there are any teachers in the world so clever as to be able to convince others of the truth about acts of robbery or violence, of which they were not eye-witnesses, while a little water is flowing in the clepsydra?

But true opinion is not always knowledge; e. g. in the law courts.

THEAET.

Certainly not, they can only persuade them.

SOC.

And would you not say that persuading them is making them have an opinion?

THEAET.

To be sure.

SOC.

When, therefore, judges are justly persuaded about matters which you can know only by seeing them, and not in any other way, and when thus judging of them from report they attain a true opinion about them, they judge without knowledge, and yet are rightly persuaded, if they have judged well.

THEAET.

Certainly.

SOC.

And yet, O my friend, if true opinion in law courts¹ and knowledge are the same, the perfect judge could not have judged rightly without knowledge; and therefore I must infer that they are not the same.

THEAET.

That is a distinction, Socrates, which I have heard made by some one else, but I had forgotten it. He said that true opinion, combined with reason, was knowledge, but that the opinion which had no reason was out of the sphere of knowledge; and that things of which there is no rational account are not knowable—such was the singular expression which he used—and that things which have a reason or explanation are knowable.

Another notion:
Knowledge is true
opinion accompanied
by a reason.

SOC.

Excellent; but then, how did he distinguish between things which are and are not 'knowable'? I wish that you would repeat to me what he said, and then I shall know whether you and I have heard the same tale.

THEAET.

I do not know whether I can recall it; but if another person would tell me, I think that I could follow him.

SOC.

Let me give you, then, a dream in return for a dream:—Methought that I too had a dream, and I heard in my dream that the primeval letters or elements out of which you and I and all other things are compounded, have no reason or explanation; you can only name them, but no predicate can be either affirmed or denied of them, for in the one case existence, in the other non-existence is already implied, neither of which must be added, if you mean to speak of this or that thing by itself alone. It should not be called itself, or that, or each, or alone, or this, or the like; for these go about everywhere and are applied to all things, but are distinct from them; whereas, if the first elements could be described, and had a definition of their own, they would be spoken of apart from all else. But none of these primeval elements can be defined; they can only be named, for they have nothing but a name, and the things which are compounded of them, as they are complex, are expressed by a combination of names, for the combination of names is the essence of a definition. Thus, then, the elements or letters are only objects of perception, and cannot be defined or known; but the syllables or combinations of them are known and expressed, and are apprehended by true opinion. When, therefore, any one forms the true opinion of anything without

The same notion
expressed by Socrates
in a different manner.

The simple and
primeval elements can
only be named; it is
the combination of
them in the
proposition which
gives knowledge.

rational explanation, you may say that his mind is truly exercised, but has no knowledge; for he who cannot give and receive a reason for a thing, has no knowledge of that thing; but when he adds rational explanation, then, he is perfected in knowledge and may be all that I have been denying of him. Was that the form in which the dream appeared to you?

THEAET.

Precisely.

SOC.

And you allow and maintain that true opinion, combined with definition or rational explanation, is knowledge?

THEAET.

Exactly.

SOC.

Then may we assume, Theaetetus, that to-day, and in this casual manner, we have found a truth which in former times many wise men have grown old and have not found?

THEAET.

At any rate, Socrates, I am satisfied with the present statement.

SOC.

Which is probably correct—for how can there be knowledge apart from definition and true opinion? And yet there is one point in what has been said which does not quite satisfy me.

THEAET.

What was it?

SOC.

What might seem to be the most ingenious notion of all:—That the elements or letters are unknown, but the combination or syllables known.

The theory states that the elements are unknown, but that the combination of them is known. Can this be true?

THEAET.

And was that wrong?

SOC.

We shall soon know; for we have as hostages the instances which the author of the argument himself used.

THEAET.

What hostages?

SOC.

The letters, which are the elements; and the syllables, which are the combinations;—he reasoned, did he not, from the letters of the alphabet?

THEAET.

203 Yes; he did.

SOC.

Let us take them and put them to the test, or rather, test ourselves:—What was the way in which we learned letters? and, first of all, are we right in saying that syllables have a definition, but that letters have no definition?

We are, at any rate, right in saying that the elements have no definition.

THEAET.

I think so.

SOC.

I think so too; for, suppose that some one asks you to spell the first syllable of my name:—Theaetetus, he says, what is SO?

THEAET.

I should reply S and O.

SOC.

That is the definition which you would give of the syllable?

THEAET.

I should.

SOC.

I wish that you would give me a similar definition of the S.

THEAET.

But how can any one, Socrates, tell the elements of an element? I can only reply, that S is a consonant, a mere noise, as of the tongue hissing; B, and most other letters, again, are neither vowel-sounds nor noises. Thus letters may be most truly said to be undefined; for even the most distinct of them, which are the seven vowels, have a sound only, but no definition at all.

SOC.

Then, I suppose, my friend, that we have been so far right in our idea about knowledge?

THEAET.

Yes; I think that we have.

SOC.

Well, but have we been right in maintaining that the syllables can be known, but not the letters?

But are they therefore unknown?

THEAET.

I think so.

SOC.

And do we mean by a syllable two letters, or if there are more, all of them, or a single idea which arises out of the combination of them?

THEAET.

I should say that we mean all the letters.

If by syllable we mean the letters which compose it,

SOC.

Take the case of the two letters S and O, which form the first syllable of my own name; must not he who knows the syllable, know both of them?

THEAET.

Certainly.

SOC.

He knows, that is, the S and O?

THEAET.

Yes.

SOC.

But can he be ignorant of either singly and yet know both together?

a man cannot know the syllable without knowing the letters of it.

THEAET.

Such a supposition, Socrates, is monstrous and unmeaning.

SOC.

But if he cannot know both without knowing each, then if he is ever to know the syllable, he must know the letters first; and thus the fine theory has again taken wings and departed.

THEAET.

Yes, with wonderful celerity.

SOC.

Yes, we did not keep watch properly. Perhaps we ought to have maintained that a syllable is not the letters, but rather one single idea framed out of them, having a separate form distinct from them.

But we may mean something over and above the parts, which is indivisible.

THEAET.

Very true; and a more likely notion than the other.

and above the parts, which is indivisible.

SOC.

Take care; let us not be cowards and betray a great and imposing theory.

THEAET.

204No, indeed.

SOC.

Let us assume then, as we now say, that the syllable is a simple form arising out of the several combinations of harmonious elements—of letters or of any other elements.

THEAET.

Very good.

SOC.

And it must have no parts.

THEAET.

Why?

SOC.

Because that which has parts must be a whole of all the parts. Or would you say that a whole, although formed out of the parts, is a single notion different from all the parts?

THEAET.

I should.

SOC.

And would you say that all and the whole are the same, or different?

This implies that the whole differs from the all.

THEAET.

I am not certain; but, as you like me to answer at once, I shall hazard the reply, that they are different.

SOC.

I approve of your readiness, Theaetetus, but I must take time to think whether I equally approve of your answer.

THEAET.

Yes; the answer is the point.

SOC.

According to this new view, the whole is supposed to differ from all?

THEAET.

Yes.

SOC.

Well, but is there any difference between all [in the plural] and the all [in the singular]? Take the case of number:—When we say one, two, three, four, five, six; or when we say twice three, or three times two, or four and two, or three and two and one, are we speaking of the same or of different numbers?

But all in the singular does not differ from all in the plural; e.g. all of 6=all 6;

THEAET.

Of the same.

SOC.

That is of six?

THEAET.

Yes.

SOC.

And in each form of expression we spoke of all the six?

THEAET.

True.

SOC.

Again, in speaking of all [in the plural], is there not one thing which we express 1 ?

THEAET.

Of course there is.

SOC.

And that is six?

THEAET.

Yes.

SOC.

Then in predicating the word ‘all’ of things measured by number, we predicate at the same time a singular and a plural?

THEAET.

Clearly we do.

SOC.

Again, the number of the acre and the acre are the same; are they not?

THEAET.

Yes.

SOC.

And the number of the stadium in like manner is the stadium?

THEAET.

Yes.

SOC.

And the army is the number of the army; and in all similar cases, the entire number of anything is the entire thing?

THEAET.

True.

SOC.

And the number of each is the parts of each?

THEAET.

Exactly.

SOC.

Then as many things as have parts are made up of parts?

THEAET.

Clearly.

SOC.

But all the parts are admitted to be the all, if the entire number is the all?

and therefore it implies parts.

THEAET.

True.

SOC.

Then the whole is not made up of parts, for it would be the all, if consisting of all the parts?

But the whole being different from the all, cannot have parts:

THEAET.

That is the inference.

SOC.

But is a part a part of anything but the whole?

THEAET.

Yes, of the all.

SOC.

You make a valiant defence, Theaetetus. And yet is not the all that of which nothing is wanting?

THEAET.

Certainly.

which is absurd.

SOC.

And is not a whole likewise that from which nothing is absent? but that from which anything is absent is neither a whole nor all;—if wanting in anything, both equally lose their entirety of nature.

THEAET.

I now think that there is no difference between a whole and all.

SOC.

But were we not saying that when a thing has parts, all the parts will be a whole and all?

THEAET.

Certainly.

SOC.

Then, as I was saying before, must not the alternative be that either the syllable is not the letters, and then the letters are not parts of the syllable, or that the syllable will be the same with the letters, and will therefore be equally known with them?

THEAET.

You are right.

SOC.

And, in order to avoid this, we suppose it to be different from them?

THEAET.

Yes.

SOC.

But if letters are not parts of syllables, can you tell me of any other parts of syllables, which are not letters?

THEAET.

No, indeed, Socrates; for if I admit the existence of parts in a syllable, it would be ridiculous in me to give up letters and seek for other parts.

Accordingly there can be no difference between the whole and the all. But the whole, if distinct from the elements, cannot have these for its parts;

and, since it can have no other parts, it must be without parts altogether. The syllable is therefore an uncompounded element, and consequently unknown.

SOC.

Quite true, Theaetetus, and therefore, according to our present view, a syllable must surely be some indivisible form?

THEAET.

True.

SOC.

But do you remember, my friend, that only a little while ago we admitted and approved the statement, that of the first elements out of which all other things are compounded there could be no definition, because each of them when taken by itself is uncompounded; nor can one rightly attribute to them the words 'being' or 'this,' because they are alien and inappropriate words, and for this reason the letters or elements were indefinable and unknown?

THEAET.

I remember.

SOC.

And is not this also the reason why they are simple and indivisible? I can see no other.

THEAET.

No other reason can be given.

SOC.

Then is not the syllable in the same case as the elements or letters, if it has no parts and is one form?

THEAET.

To be sure.

SOC.

If the syllable is the sum of its letters, letters and syllable must be equally intelligible. If it is indivisible, letters and

If, then, a syllable is a whole, and has many parts or letters, the letters as well as the syllable must be intelligible and expressible, since all the parts are acknowledged to be the same as the whole?

syllable must be equally unknown. It is untrue to say that the syllables are known, but the letters unknown.

THEAET.

True.

SOC.

But if it be one and indivisible, then the syllables and the letters are alike undefined and unknown, and for the same reason?

THEAET.

I cannot deny that.

SOC.

We cannot, therefore, agree in the opinion of him who says that the syllable can be known and expressed, but not the letters.

THEAET.

Certainly not; if we may trust the argument.

SOC.

Well, but will you not be equally inclined to disagree with him, when you remember your own experience in learning to read?

THEAET.

What experience?

SOC.

Why, that in learning you were kept trying to distinguish the separate letters both by the eye and by the ear, in order that, when you heard them spoken or saw them written, you might not be confused by their position.

And in learning to read and play on the lyre we are taught the elements, which are the letters or notes, first of all.

THEAET.

Very true.

SOC.

And is the education of the harp-player complete unless he can tell what string answers to a particular note; the notes, as every one would allow, are the elements or letters of music?

THEAET.

Exactly.

SOC.

Then, if we argue from the letters and syllables which we know to other simples and compounds, we shall say that the letters or simple elements as a class are much more certainly known than the syllables, and much more indispensable to a perfect knowledge of any subject; and if some one says that the syllable is known and the letter unknown, we shall consider that either intentionally or unintentionally he is talking nonsense?

THEAET.

Exactly.

SOC.

And there might be given other proofs of this belief, if I am not mistaken. But do not let us in looking for them lose sight of the question before us, which is the meaning of the statement, that right opinion with rational definition or explanation is the most perfect form of knowledge.

We said that knowledge is right opinion with rational explanation.

THEAET.

We must not.

SOC.

Well, and what is the meaning of the term 'explanation'? I think that we have a choice of three meanings.

THEAET.

What are they?

SOC.

In the first place, the meaning may be, manifesting one's thought by the voice with verbs and nouns, imaging an opinion in the stream which flows from the lips, as in a mirror or water. Does not explanation appear to be of this nature?

But what is explanation?

(1) The reflection of thought in speech.—But this is not peculiar to those who know.

THEAET.

Certainly; he who so manifests his thought, is said to explain himself.

SOC.

And every one who is not born deaf or dumb is able sooner or later to manifest what he thinks of anything; and if so, all those who have a right opinion about anything will also have right explanation; nor will right opinion be anywhere found to exist apart from knowledge.

THEAET.

True.

SOC.

Let us not, therefore, hastily charge him who gave this account of knowledge with uttering an unmeaning word; for perhaps he only intended to say, that when a person was asked what was the nature of anything, he should be able to answer his questioner by giving the elements of the thing.

(2) The enumeration of the parts of a thing.

THEAET.

As for example, Socrates . . . ?

SOC.

As, for example, when Hesiod says that a waggon is made up of a hundred planks. Now, neither you nor I could describe all of them individually; but if any one asked what is a waggon, we should be content to answer, that a waggon consists of wheels, axle, body, rims, yoke.

THEAET.

Certainly.

SOC.

And our opponent will probably laugh at us, just as he would if we professed to be grammarians and to give a grammatical account of the name of Theaetetus, and yet could only tell the syllables and not the letters of your name—that would be true opinion, and not knowledge; for knowledge, as has been already remarked, is not attained until, combined with true opinion, there is an enumeration of the elements out of which anything is composed.

THEAET.

Yes.

SOC.

In the same general way, we might also have true opinion about a waggon; but he who can describe its essence by an enumeration of the hundred planks, adds rational explanation to true opinion, and instead of opinion has art and knowledge of the nature of a waggon, in that he attains to the whole through the elements.

THEAET.

And do you not agree in that view, Socrates?

SOC.

If you do, my friend; but I want to know first, whether you admit the resolution of all things into their elements to be a rational explanation of them, and the consideration of them in syllables or larger combinations of them to be irrational—is this your view?

THEAET.

Precisely.

SOC.

Well, and do you conceive that a man has knowledge of any element who at one time affirms and at another time denies that element of something, or thinks that the same thing is composed of different elements at different times?

But there may be enumeration of parts without knowledge.

THEAET.

Assuredly not.

SOC.

And do you not remember that in your case and in that of others this often occurred in the process of learning to read?

THEAET.

You mean that I mistook the letters and misspelt the syllables?

SOC.

Yes.

THEAET.

To be sure; I perfectly remember, and I am very far from supposing that they who are in this condition have knowledge.

SOC.

When a person at the time of learning writes the name of Theaetetus, and thinks that he ought to write and does write *Th* and *e*; but, again, meaning to write the name of Theodorus, thinks that he ought to write and does write *T* and *e*—can we suppose that he knows the first syllables of your two names?

THEAET.

We have already admitted that such a one has not yet attained knowledge.

SOC.

And in like manner he may enumerate without knowing them the second and third and fourth syllables of your name?

THEAET.

He may.

SOC.

And in that case, when he knows the order of the letters and can write them out correctly, he has right opinion?

THEAET.

Clearly.

SOC.

But although we admit that he has right opinion, he will still be without knowledge?

THEAET.

Yes.

SOC.

And yet he will have explanation, as well as right opinion, for he knew the order of the letters when he wrote; and this we admit to be explanation.

This is right opinion only.

THEAET.

True.

SOC.

Then, my friend, there is such a thing as right opinion united with definition or explanation, which does not as yet attain to the exactness of knowledge.

THEAET.

It would seem so.

SOC.

And what we fancied to be a perfect definition of knowledge is a dream only. But perhaps we had better not say so as yet, for were there not three explanations of knowledge, one of which must, as we said, be adopted by him who maintains knowledge to be true opinion combined with rational explanation? And very likely there may be found some one who will not prefer this but the third.

THEAET.

You are quite right; there is still one remaining. The first was the image or expression of the mind in speech; the second, which has just been mentioned, is a way of reaching the whole by an enumeration of the elements. But what is the third definition?

SOC.

(3) True opinion about a thing with the

There is, further, the popular notion of telling the mark or sign of difference which distinguishes the thing in question from all others.

addition of a mark or sign of difference.

THEAET.

Can you give me any example of such a definition?

SOC.

As, for example, in the case of the sun, I think that you would be contented with the statement that the sun is the brightest of the heavenly bodies which revolve about the earth.

THEAET.

Certainly.

SOC.

Understand why:—the reason is, as I was just now saying, that if you get at the difference and distinguishing characteristic of each thing, then, as many persons affirm, you will get at the definition or explanation of it; but while you lay hold only of the common and not of the characteristic notion, you will only have the definition of those things to which this common quality belongs.

THEAET.

I understand you, and your account of definition is in my judgment correct.

SOC.

But he, who having right opinion about anything, can find out the difference which distinguishes it from other things will know that of which before he had only an opinion.

THEAET.

Yes; that is what we are maintaining.

SOC.

Nevertheless, Theaetetus, on a nearer view, I find myself quite disappointed; the picture, which at a distance was not so bad, has now become altogether unintelligible.

THEAET.

What do you mean?

SOC.

I will endeavour to explain: I will suppose myself to have true opinion of you, and if to this I add your definition, then I have knowledge, but if not, opinion only.

THEAET.

Yes.

SOC.

The definition was assumed to be the interpretation of your difference.

THEAET.

True.

SOC.

But when I had only opinion, I had no conception of your distinguishing characteristics.

But right opinion already implies a knowledge of difference.

THEAET.

I suppose not.

SOC.

Then I must have conceived of some general or common nature which no more belonged to you than to another.

THEAET.

True.

SOC.

Tell me, now—How in that case could I have formed a judgment of you any more than of any one else? Suppose that I imagine Theaetetus to be a man who has nose, eyes, and mouth, and every other member complete; how would that enable me to distinguish Theaetetus from Theodorus, or from some outer barbarian?

THEAET.

How could it?

SOC.

Or if I had further conceived of you, not only as having nose and eyes, but as having a snub nose and prominent eyes, should I have any more notion of you than of myself and others who resemble me?

THEAET.

Certainly not.

SOC.

Surely I can have no conception of Theaetetus until your snub-nosedness has left an impression on my mind different from the snub-nosedness of all others whom I have ever seen, and until your other peculiarities have a like distinctness; and so when I meet you to-morrow the right opinion will be re-called?

THEAET.

Most true.

SOC.

Then right opinion implies the perception of differences?

THEAET.

Clearly.

SOC.

What, then, shall we say of adding reason or explanation to right opinion? If the meaning is, that we should form an opinion of the way in which something differs from another thing, the proposal is ridiculous.

THEAET.

How so?

SOC.

We are supposed to acquire a right opinion of the differences which distinguish one thing from another when we have already a right opinion of them, and so we go round

and round;—the revolution of the scytal, or pestle, or any other rotatory machine, in the same circles, is as nothing compared with such a requirement; and we may be truly described as the blind directing the blind; for to add those things which we already have, in order that we may learn what we already think, is like a soul utterly benighted.

THEAET.

Tell me; what were you going to say just now, when you asked the question?

SOC.

If, my boy, the argument, in speaking of adding the definition, had used the word to ‘know,’ and not merely ‘have an opinion’ of the difference, this which is the most promising of all the definitions of knowledge would have come to a pretty end, for to know is surely to acquire knowledge.

How absurd it would be to repeat the word we are defining in our definition, and say that knowledge is knowledge of difference!

THEAET.

210 True.

SOC.

And so, when the question is asked, What is knowledge? this fair argument will answer ‘Right opinion with knowledge,’—knowledge, that is, of difference, for this, as the said argument maintains, is adding the definition.

THEAET.

That seems to be true.

SOC.

But how utterly foolish, when we are asking what is knowledge, that the reply should only be, right opinion with knowledge of difference or of anything! And so, Theaetetus, knowledge is neither sensation nor true opinion, nor yet definition and explanation accompanying and added to true opinion?

THEAET.

I suppose not.

SOC.

And are you still in labour and travail, my dear friend, or have you brought all that you have to say about knowledge to the birth?

THEAET.

I am sure, Socrates, that you have elicited from me a good deal more than ever was in me.

SOC.

And does not my art show that you have brought forth wind, and that the offspring of your brain are not worth bringing up?

Theaetetus has brought forth wind. But to know that they know nothing makes men better and humbler.

THEAET.

Very true.

SOC.

But if, Theaetetus, you should ever conceive afresh, you will be all the better for the present investigation, and if not, you will be soberer and humbler and gentler to other men, and will be too modest to fancy that you know what you do not know. These are the limits of my art; I can no further go, nor do I know aught of the things which great and famous men know or have known in this or former ages. The office of a midwife I, like my mother, have received from God; she delivered women, and I deliver men; but they must be young and noble and fair.

And now I have to go to the porch of the King Archon, where I am to meet Meletus and his indictment. To-morrow morning, Theodorus, I shall hope to see you again at this place.

Socrates is expecting his trial (cp. Euthyph. *sub fin.*; Meno *sub fin.*).

SOPHIST.

PERSONS OF THE DIALOGUE.

Theodorus. Theaetetus. Socrates.

An Eleatic Stranger, whom Theodorus and Theaetetus bring with them. The younger Socrates, who is a silent auditor.

THEODORUS.

216 Here we are, Socrates, true to our agreement of yesterday; and we bring with us a stranger from Elea, who is a disciple of Parmenides and Zeno, and a true philosopher.

Sophist.

Theodorus, Socrates.

SOCRATES.

Is he not rather a god, Theodorus, who comes to us in the disguise of a stranger? For Homer says that all the gods, and especially the god of strangers, are companions of the meek and just, and visit the good and evil among men. And may not your companion be one of those higher powers, a cross-examining deity, who has come to spy out our weakness in argument, and to cross-examine us?

The Eleatic stranger, who is introduced by Theodorus, is taken by Socrates for some cross-examining deity; and Theodorus acknowledges that, though not a god, he is at any rate a divine man.

THEOD.

Nay, Socrates, he is not one of the disputatious sort—he is too good for that. And, in my opinion, he is not a god at all; but divine he certainly is, for this is a title which I should give to all philosophers.

SOC.

Capital, my friend! and I may add that they are almost as hard to be discerned as the gods. For the true philosophers, and such as are not merely made up for the occasion, appear in various forms unrecognized by the ignorance of men, and they ‘hover about cities,’ as Homer declares, looking from above upon human life; and some think nothing of them, and others can never think enough; and sometimes they appear as statesmen, and sometimes as sophists; and then, again, to many they seem to be no better than madmen. I should like to ask our Eleatic friend, if he would tell us, what is thought about them in Italy, and to 217 whom the terms are applied.

Socrates, Theodorus, Stranger.

THEOD.

What terms?

SOC.

Sophist, statesman, philosopher.

THEOD.

What is your difficulty about them, and what made you ask?

A question is put to him: Are the sophist, statesman, and philosopher different, or the same?

SOC.

I want to know whether by his countrymen they are regarded as one or two; or do they, as the names are three, distinguish also three kinds, and assign one to each name?

THEOD.

I dare say that the Stranger will not object to discuss the question. What do you say, Stranger?

STRANGER.

I am far from objecting, Theodorus, nor have I any difficulty in replying that by us they are regarded as three. But to define precisely the nature of each of them is by no means a slight or easy task.

THEOD.

You have happened to light, Socrates, almost on the very question which we were asking our friend before we came hither, and he excused himself to us, as he does now to you; although he admitted that the matter had been fully discussed, and that he remembered the answer.

SOC.

Then do not, Stranger, deny us the first favour which we ask of you: I am sure that you will not, and therefore I shall only beg of you to say whether you like and are accustomed to make a long oration on a subject which you want to explain to another, or to proceed by the method of question and answer. I remember hearing a very noble discussion in which Parmenides employed the latter of the two methods, when I was a young man, and he was far advanced in years¹.

The stranger may either speak at length or adopt the method of question and answer.

STR.

I prefer to talk with another when he responds pleasantly, and is light in hand; if not, I would rather have my own say.

SOC.

Any one of the present company will respond kindly to you, and you can choose whom you like of them; I should recommend you to take a young person—Theaetetus, for example—unless you have a preference for some one else.

STR.

I feel ashamed, Socrates, being a new-comer into your society, instead of talking a little and hearing others talk, to be spinning out a long soliloquy or address, as if I wanted to show off. For the true answer will certainly be a very long one, a great deal longer than might be expected from such a short and simple question. At the same time, I fear that I may seem rude and ungracious if I refuse your courteous request, especially after what you have said. For I certainly cannot object to your proposal, that Theaetetus should respond, having already conversed with him myself, and being recommended by you to take him.

Stranger, Theaetetus.

On the present occasion he prefers the latter, and accepts the proposal of Socrates that Theaetetus should be his respondent.

THEAETETUS.

But are you sure, Stranger, that this will be quite so acceptable to the rest of the company as Socrates imagines?

STR.

You hear them applauding, Theaetetus; after that, there is nothing more to be said. Well then, I am to argue with you, and if you tire of the argument, you may complain of your friends and not of me.

THEAET.

I do not think that I shall tire, and if I do, I shall get my friend here, young Socrates, the namesake of the elder Socrates, to help; he is about my own age, and my partner at the gymnasium, and is constantly accustomed to work with me.

STR.

First of all, What is the Sophist?

Very good; you can decide about that for yourself as we proceed. Meanwhile you and I will begin together and enquire into the nature of the Sophist, first of the three: I should like you to make out what he is and bring him to light in a discussion; for at present we are only agreed about the name, but of the thing to which we both apply the name possibly you have one notion and I another; whereas we ought always to come to an understanding about the thing itself in terms of a definition, and not merely about the name minus the definition. Now the tribe of Sophists which we are investigating is not easily caught or defined; and the world has long ago agreed, that if great subjects are to be adequately treated, they must be studied in the lesser and easier instances of them before we proceed to the greatest of all. And as I know that the tribe of Sophists is troublesome and hard to be caught, I should recommend that we practise beforehand the method which is to be applied to him on some simple and smaller thing, unless you can suggest a better way.

As he is not easy to catch, we had better begin with something simpler;

THEAET.

Indeed I cannot.

STR.

Then suppose that we work out some lesser example which will be a pattern of the greater?

THEAET.

Good.

STR.

What is there which is well known and not great, and is yet as susceptible of definition as any larger thing? Shall I say an angler? He is familiar to all of us, and not a very interesting or important person.

e. g. with the angler.

THEAET.

He is not.

STR.

Yet I suspect that he will furnish us with the sort of definition and line of enquiry which we want.

THEAET.

Very good.

STR.

Let us begin by asking whether he is a man having art or not having art, but some other power.

He is an artist, and all art is either creative or acquisitive.

THEAET.

He is clearly a man of art.

STR.

And of arts there are two kinds?

THEAET.

What are they?

STR.

There is agriculture, and the tending of mortal creatures, and the art of constructing or moulding vessels, and there is the art of imitation—all these may be appropriately called by a single name.

THEAET.

What do you mean? And what is the name?

STR.

He who brings into existence something that did not exist before is said to be a producer, and that which is brought into existence is said to be produced.

THEAET.

True.

STR.

And all the arts which were just now mentioned are characterized by this power of producing?

THEAET.

They are.

STR.

Then let us sum them up under the name of productive or creative art.

THEAET.

Very good.

STR.

Next follows the whole class of learning and cognition; then comes trade, fighting, hunting. And since none of these produces anything, but is only engaged in conquering by word or deed, or in preventing others from conquering, things which exist and have been already produced—in each and all of these branches there appears to be an art which may be called acquisitive.

THEAET.

Yes, that is the proper name.

STR.

Seeing, then, that all arts are either acquisitive or creative, in which class shall we place the art of the angler?

THEAET.

Clearly in the acquisitive class.

STR.

And the acquisitive may be subdivided into two parts: there is exchange, which is voluntary and is effected by gifts, hire, purchase; and the other part of acquisitive, which takes by force of word or deed, may be termed conquest?

The angler is to be placed in the acquisitive class.

THEAET.

That is implied in what has been said.

Acquisition is voluntary (= exchange) or forcible (= conquest).

STR.

And may not conquest be again subdivided?

THEAET.

How?

STR.

Open force may be called fighting, and secret force may have the general name of hunting?

THEAET.

Yes.

Conquest is open (= fighting) or secret (= hunting).

STR.

And there is no reason why the art of hunting should not be further divided.

THEAET.

How would you make the division?

STR.

Into the hunting of living and of lifeless prey.

There is hunting of animals, and of lifeless prey;

THEAET.

Yes, if both kinds exist.

STR.

Of course they exist; but the hunting after lifeless things having no special name, except some sorts of diving, and other small matters, may be omitted; the hunting after living things may be called animal hunting.

THEAET.

Yes.

STR.

And animal hunting may be truly said to have two divisions, land-animal hunting, which has many kinds and names, and water-animal hunting, or the hunting after animals who swim?

the former includes the hunting of land animals and of water animals.

THEAET.

True.

STR.

And of swimming animals, one class lives on the wing and the other in the water?

Water animals live on the wing or in the water: the fowler hunts the former, the fisherman the latter.

THEAET.

Certainly.

STR.

Fowling is the general term under which the hunting of all birds is included.

THEAET.

True.

STR.

The hunting of animals who live in the water has the general name of fishing.

THEAET.

Yes.

STR.

And this sort of hunting may be further divided also into two principal kinds?

There are two kinds of fishing—fishing with enclosures and by striking.

THEAET.

What are they?

STR.

There is one kind which takes them in nets, another which takes them by a blow.

THEAET.

What do you mean, and how do you distinguish them?

STR.

As to the first kind—all that surrounds and encloses anything to prevent egress, may be rightly called an enclosure.

THEAET.

Very true.

STR.

For which reason twig baskets, casting-nets, nooses, creels, and the like may all be termed 'enclosures'?

THEAET.

True.

STR.

And therefore this first kind of capture may be called by us capture with enclosures, or something of that sort?

THEAET.

Yes.

STR.

The other kind, which is practised by a blow with hooks and three-pronged spears, when summed up under one name, may be called striking, unless you, Theaetetus, can find some better name?

THEAET.

Never mind the name—what you suggest will do very well.

STR.

There is one mode of striking, which is done at night, and by the light of a fire, and is by the hunters themselves called firing, or spearing by firelight.

There is striking by day, and striking by night: the former is called barbing.

THEAET.

True.

STR.

And the fishing by day is called by the general name of barbing, because the spears, too, are barbed at the point.

THEAET.

Yes, that is the term.

STR.

Of this barb-fishing, that which strikes the fish who is below from above is called spearing, because this is the way in which the three-pronged spears are mostly used.

Barbing is of two kinds,—spearing and angling.

THEAET.

Yes, it is often called so.

STR.

Then now there is only one kind remaining.

THEAET.

What is that?

STR.

When a hook is used, and the fish is not struck in any chance part of his body, as he is with the spear, but only about the head and mouth, and is then drawn out from below upwards with reeds and rods:—What is the right name of that mode of fishing, Theaetetus?

THEAET.

I suspect that we have now discovered the object of our search.

STR.

Then now you and I have come to an understanding not only about the name of the angler's art, but about the definition of the thing itself. One half of all art was acquisitive—half of the acquisitive art was conquest or taking by force, half of this was hunting, and half of hunting—was hunting animals, half of this was hunting water animals—of this again, the under half was fishing, half of fishing was striking; a part of striking was fishing with a barb, and one half of this again, being the kind which strikes with a hook and draws the fish from below upwards, is the art which we have been seeking, and which from the nature of the operation is denoted angling or drawing up (ασπαλιευτικ?, ?νασπα?σθαι).

Recapitulation.

THEAET.

The result has been quite satisfactorily brought out.

STR.

And now, following this pattern, let us endeavour to find out what a Sophist is.

The definition of the Sophist:

THEAET.

By all means.

STR.

The first question about the angler was, whether he was a skilled artist or unskilled?

Like the angler, he is a skilled person

THEAET.

True.

STR.

And shall we call our new friend unskilled, or a thorough master of his craft?

THEAET.

Certainly not unskilled, for his name, as, indeed, you imply, must surely express his nature.

STR.

Then he must be supposed to have some art.

THEAET.

What art?

STR.

By heaven, they are cousins! it never occurred to us.

THEAET.

Who are cousins?

STR.

The angler and the Sophist.

THEAET.

In what way are they related?

STR.

They both appear to me to be hunters.

THEAET.

and a hunter,—not
however of a
swimming, but of a
land animal—man.

How the Sophist? Of the other we have spoken.

STR.

You remember our division of hunting, into hunting after swimming animals and land animals?

THEAET.

Yes.

STR.

And you remember that we subdivided the swimming and left the land animals, saying that there were many kinds of them?

THEAET.

222Certainly.

STR.

Thus far, then, the Sophist and the angler, starting from the art of acquiring, take the same road?

THEAET.

So it would appear.

STR.

Their paths diverge when they reach the art of animal hunting; the one going to the sea-shore, and to the rivers and to the lakes, and angling for the animals which are in them.

The angler goes to the rivers and to the sea; the Sophist to the broad meadow-lands of youth.

THEAET.

Very true.

STR.

While the other goes to land and water of another sort—rivers of wealth and broad meadow-lands of generous youth; and he also is intending to take the animals which are in them.

THEAET.

What do you mean?

STR.

Of hunting on land there are two principal divisions.

Hunting on land is of tame and of wild animals.

THEAET.

What are they?

STR.

One is the hunting of tame, and the other of wild animals.

THEAET.

But are tame animals ever hunted?

STR.

Yes, if you include man under tame animals. But if you like you may say that there are no tame animals, or that, if there are, man is not among them; or you may say that man is a tame animal but is not hunted—you shall decide which of these alternatives you prefer.

Under tame animals man is included.

THEAET.

I should say, Stranger, that man is a tame animal, and I admit that he is hunted.

STR.

Then let us divide the hunting of tame animals into two parts.

Tame animals are
hunted with violence,
or by persuasion.

THEAET.

How shall we make the division?

STR.

Let us define piracy, man-stealing, tyranny, the whole military art, by one name, as hunting with violence.

THEAET.

Very good.

STR.

But the art of the lawyer, of the popular orator, and the art of conversation may be called in one word the art of persuasion.

THEAET.

True.

STR.

And of persuasion, there may be said to be two kinds?

Persuasion is public
or private.

THEAET.

What are they?

STR.

One is private, and the other public.

THEAET.

Yes; each of them forms a class.

STR.

And of private hunting, one sort receives hire, and the other brings gifts.

The hunter in private
brings gifts, like the
lover, or receives hire.

THEAET.

I do not understand you.

STR.

You seem never to have observed the manner in which lovers hunt.

THEAET.

To what do you refer?

STR.

I mean that they lavish gifts on those whom they hunt in addition to other inducements.

THEAET.

Most true.

STR.

Let us admit this, then, to be the amatory art.

THEAET.

Certainly.

STR.

But that sort of hireling whose conversation is pleasing and who baits his hook only with pleasure and exacts nothing but his maintenance in return, we should all, if I am not mistaken, describe as possessing flattery or an art of making things pleasant.

The hireling may seek to give pleasure, or to teach virtue.

THEAET.

Certainly.

STR.

And that sort, which professes to form acquaintances only for the sake of virtue, and demands a reward in the shape of money, may be fairly called by another name?

THEAET.

To be sure.

STR.

And what is the name? Will you tell me?

THEAET.

It is obvious enough; for I believe that we have discovered the Sophist: which is, as I conceive, the proper name for the class described.

The latter is the Sophist.

STR.

Then now, Theaetetus, his art may be traced as a branch of the appropriative [1](#), acquisitive family—which hunts animals,—living—land—tame animals; which hunts man,—privately—for hire,—taking money in exchange—having the semblance of education; and this is termed Sophistry, and is a hunt after young men of wealth and rank—such is the conclusion.

Recapitulation.

THEAET.

Just so.

STR.

Let us take another branch of his genealogy; for he is a professor of a great and many-sided art; and if we look back at what has preceded we see that he presents another aspect, besides that of which we are speaking.

A new definition:

THEAET.

In what respect?

STR.

There were two sorts of acquisitive art; the one concerned with hunting, the other with exchange.

Acquisition is partly hunting, partly exchange; and the latter partly giving, partly selling.

THEAET.

There were.

STR.

And of the art of exchange there are two divisions, the one of giving, and the other of selling.

THEAET.

Let us assume that.

STR.

Next, we will suppose the art of selling to be divided into two parts.

THEAET.

How?

STR.

There is one part which is distinguished as the sale of a man's own productions; another, which is the exchange of the works of others.

The seller may sell his own productions, or exchange those of others: the exchanger may be a retailer or a merchant.

THEAET.

Certainly.

STR.

And is not that part of exchange which takes place in the city, being about half of the whole, termed retailing?

THEAET.

Yes.

STR.

And that which exchanges the goods of one city for those of another by selling and buying is the exchange of the merchant?

THEAET.

To be sure.

STR.

And you are aware that this exchange of the merchant is of two kinds: it is partly concerned with food for the use of the body, and partly with the food of the soul which is bartered and received in exchange for money.

The merchant may sell food for the body or food for the soul.

THEAET.

What do you mean?

STR.

You want to know what is the meaning of food for the soul; the other kind you surely understand.

THEAET.

Yes.

STR.

Take music in general and painting and marionette playing and many other things, which are purchased in one ²²⁴city, and carried away and sold in another—wares of the soul which are hawked about either for the sake of instruction or amusement;—may not he who takes them about and sells them be quite as truly called a merchant as he who sells meats and drinks?

THEAET.

To be sure he may.

STR.

And would you not call by the same name him who buys up knowledge and goes about from city to city exchanging his wares for money?

THEAET.

Certainly I should.

STR.

Of this merchandise of the soul, may not one part be fairly termed the art of display? And there is another part which is certainly not less ridiculous, but being a trade in learning must be called by some name germane to the matter?

The latter may be supplied by the art of display or by a trade in learning.

THEAET.

Certainly.

STR.

The latter should have two names,—one descriptive of the sale of the knowledge of virtue, and the other of the sale of other kinds of knowledge.

THEAET.

Of course.

STR.

The name of art-seller corresponds well enough to the latter; but you must try and tell me the name of the other.

The trader in learning is the art-seller, or the seller of virtue—the Sophist.

THEAET.

He must be the Sophist, whom we are seeking; no other name can possibly be right.

STR.

No other; and so this trader in virtue again turns out to be our friend the Sophist, whose art may now be traced from the art of acquisition through exchange, trade, merchandise, to a merchandise of the soul which is concerned with speech and the knowledge of virtue.

THEAET.

Quite true.

STR.

And there may be a third reappearance of him;—for he may have settled down in a city, and may fabricate as well as buy these same wares, intending to live by selling them, and he would still be called a Sophist?

The Sophist may fabricate, as well as buy, his wares.

THEAET.

Certainly.

STR.

Then that part of the acquisitive art which exchanges, and of exchange which either sells a man's own productions or retails those of others, as the case may be, and in either way sells the knowledge of virtue, you would again term Sophistry?

THEAET.

I must, if I am to keep pace with the argument.

STR.

Let us consider once more whether there may not be yet another aspect of sophistry.

A fresh start.

THEAET.

What is it?

STR.

225In the acquisitive there was a subdivision of the combative or fighting art.

The fighting art is a part of the acquisitive, and is either competitive or contentious.

THEAET.

There was.

STR.

Perhaps we had better divide it.

THEAET.

What shall be the divisions?

STR.

There shall be one division of the competitive, and another of the pugnacious.

THEAET.

Very good.

STR.

That part of the pugnacious which is a contest of bodily strength may be properly called by some such name as violent.

THEAET.

True.

STR.

And when the war is one of words, it may be termed controversy?

THEAET.

Yes.

Contention is either of bodily strength, or of words. The latter is controversy, which is also of two kinds, public (forensic) and private (disputation).

STR.

And controversy may be of two kinds.

THEAET.

What are they?

STR.

When long speeches are answered by long speeches, and there is public discussion about the just and unjust, that is forensic controversy.

THEAET.

Yes.

STR.

And there is a private sort of controversy, which is cut up into questions and answers, and this is commonly called disputation?

THEAET.

Yes, that is the name.

STR.

And of disputation, that sort which is only a discussion about contracts, and is carried on at random, and without rules of art, is recognized by the reasoning faculty to be a distinct class, but has hitherto had no distinctive name, and does not deserve to receive one from us.

THEAET.

No; for the different sorts of it are too minute and heterogeneous.

STR.

But that which proceeds by rules of art to dispute about justice and injustice in their own nature, and about things in general, we have been accustomed to call argumentation (Eristic)?

Disputation, when proceeding by rules of art, is called argumentation; and this either wastes or makes money.

THEAET.

Certainly.

STR.

And of argumentation, one sort wastes money, and the other makes money.

THEAET.

Very true.

STR.

Suppose we try and give to each of these two classes a name.

THEAET.

Let us do so.

STR.

I should say that the habit which leads a man to neglect his own affairs for the pleasure of conversation, of which the style is far from being agreeable to the majority of his hearers, may be fairly termed loquacity: such is my opinion.

THEAET.

That is the common name for it.

STR.

But now who the other is, who makes money out of private disputation, it is your turn to say.

THEAET.

There is only one true answer: he is the wonderful Sophist, of whom we are in pursuit, and who reappears again for the fourth time.

That which makes money is the art of the Sophist.

STR.

226Yes, and with a fresh pedigree, for he is the money-making species of the Eristic, disputatious, controversial, pugnacious, combative, acquisitive family, as the argument has already proven.

THEAET.

Certainly.

STR.

How true was the observation that he was a many-sided animal, and not to be caught with one hand, as they say!

THEAET.

Then you must catch him with two.

STR.

Yes, we must, if we can. And therefore let us try another track in our pursuit of him: You are aware that there are certain menial occupations which have names among servants?

Another track: There are arts of dividing used by servants.

THEAET.

Yes, there are many such; which of them do you mean?

STR.

I mean such as sifting, straining, winnowing, threshing¹.

THEAET.

Certainly.

STR.

And besides these there are a great many more, such as carding, spinning, adjusting the warp and the woof; and thousands of similar expressions are used in the arts.

THEAET.

Of what are they to be patterns, and what are we going to do with them all?

STR.

I think that in all of these there is implied a notion of division.

These afford examples of the great art of discerning,

THEAET.

Yes.

STR.

Then if, as I was saying, there is one art which includes all of them, ought not that art to have one name?

THEAET.

And what is the name of the art?

STR.

The art of discerning or discriminating.

THEAET.

Very good.

STR.

Think whether you cannot divide this.

THEAET.

I should have to think a long while.

STR.

In all the previously named processes either like has been separated from like or the better from the worse.

THEAET.

I see now what you mean.

STR.

There is no name for the first kind of separation; of the second, which throws away the worse and preserves the better, I do know a name.

which either separates like from like, or the better from the worse.

THEAET.

What is it?

STR.

Every discernment or discrimination of that kind, as I have observed, is called a purification.

In the latter case it is called purification.

THEAET.

Yes, that is the usual expression.

STR.

And any one may see that purification is of two kinds.

THEAET.

Perhaps so, if he were allowed time to think; but I do not see at this moment.

STR.

There are many purifications of bodies which may with propriety be comprehended under a single name.

THEAET.

What are they, and what is their name?

STR.

Purification is of bodies animate (which may be internal or external), and of bodies

There is the purification of living bodies in their inward and in their outward parts, of which the former is duly effected by medicine and gymnastic, the latter by the not very dignified art of the bath-man; and there is the purification of inanimate substances—to this the arts of fulling and of furbishing in general attend in a number of minute particulars, having a variety of names which are thought ridiculous.

inanimate: the latter sort has ridiculous names applied to it.

THEAET.

Very true.

STR.

There can be no doubt that they are thought ridiculous, Theaetetus; but then the dialectical art never considers whether the benefit to be derived from the purge is greater or less than that to be derived from the sponge, and has not more interest in the one than in the other; her endeavour is to know what is and is not kindred in all arts, with a view to the acquisition of intelligence; and having this in view, she honours them all alike, and when she makes comparisons, she counts one of them not a whit more ridiculous than another; nor does she esteem him who adduces as his example of hunting, the general's art, at all more decorous than another who cites that of the vermin-destroyer, but only as the greater pretender of the two. And as to your question concerning the name which was to comprehend all these arts of purification, whether of animate or inanimate bodies, the art of dialectic is in no wise particular about fine words, if she may be only allowed to have a general name for all other purifications, binding them up together and separating them off from the purification of the soul or intellect. For this is the purification at which she wants to arrive, and this we should understand to be her aim.

But scientific method ignores distinctions of high and low.

There is also a purification of the soul.

THEAET.

Yes, I understand; and I agree that there are two sorts of purification, and that one of them is concerned with the soul, and that there is another which is concerned with the body.

STR.

Excellent; and now listen to what I am going to say, and try to divide further the first of the two.

THEAET.

Whatever line of division you suggest, I will endeavour to assist you.

STR.

Do we admit that virtue is distinct from vice in the soul?

THEAET.

Certainly.

STR.

And purification was to leave the good and to cast out whatever is bad?

Purification is to take away evils.

THEAET.

True.

STR.

Then any taking away of evil from the soul may be properly called purification?

THEAET.

Yes.

STR.

And in the soul there are two kinds of evil.

THEAET.

What are they?

STR.

228The one may be compared to disease in the body, the other to deformity.

THEAET.

I do not understand.

STR.

There are two evils of the body,—disease or discord, and deformity or want of measure; and two corresponding evils of the soul,—vice and ignorance.

Perhaps you have never reflected that disease and discord are the same.

THEAET.

To this, again, I know not what I should reply.

STR.

Do you not conceive discord to be a dissolution of kindred elements, originating in some disagreement?

THEAET.

Just that.

STR.

And is deformity anything but the want of measure, which is always unsightly?

THEAET.

Exactly.

STR.

And do we not see that opinion is opposed to desire, pleasure to anger, reason to pain, and that all these elements are opposed to one another in the souls of bad men?

THEAET.

Certainly.

STR.

And yet they must all be akin?

THEAET.

Of course.

STR.

Then we shall be right in calling vice a discord and disease of the soul?

THEAET.

Most true.

STR.

And when things having motion, and aiming at an appointed mark, continually miss their aim and glance aside, shall we say that this is the effect of symmetry among them, or of the want of symmetry?

THEAET.

Clearly of the want of symmetry.

STR.

But surely we know that no soul is voluntarily ignorant of anything?

THEAET.

Certainly not.

STR.

And what is ignorance but the aberration of a mind which is bent on truth, and in which the process of understanding is perverted?

THEAET.

True.

STR.

Then we are to regard an unintelligent soul as deformed and devoid of symmetry?

THEAET.

Very true.

STR.

Then there are these two kinds of evil in the soul—the one which is generally called vice, and is obviously a disease of the soul . . .

THEAET.

Yes.

STR.

And there is the other, which they call ignorance, and which, because existing only in the soul¹, they will not allow to be vice.

THEAET.

I certainly admit what I at first disputed—that there are two kinds of vice in the soul, and that we ought to consider cowardice, intemperance, and injustice to be all alike forms of disease in the soul, and ignorance, of which there are all sorts of varieties, to be deformity.

STR.

And in the case of the body are there not two arts which have to do with the two bodily states?

The arts which take away the evils of the body are medicine and gymnastic.

THEAET.

What are they?

STR.

There is gymnastic, which has to do with deformity, and medicine, which has to do with disease.

THEAET.

True.

STR.

229And where there is insolence and injustice and cowardice, is not chastisement the art which is most required¹?

THEAET.

That certainly appears to be the opinion of mankind.

The arts which take away the evils of the soul are correction and instruction.

STR.

Again, of the various kinds of ignorance, may not instruction be rightly said to be the remedy?

THEAET.

True.

STR.

And of the art of instruction, shall we say that there is one or many kinds? At any rate there are two principal ones. Think.

THEAET.

I will.

STR.

I believe that I can see how we shall soonest arrive at the answer to this question.

THEAET.

How?

STR.

If we can discover a line which divides ignorance into two halves. For a division of ignorance into two parts will certainly imply that the art of instruction is also two-fold, answering to the two divisions of ignorance.

A division of instruction can only be obtained by dividing ignorance.

THEAET.

Well, and do you see what you are looking for?

STR.

I do seem to myself to see one very large and bad sort of ignorance which is quite separate, and may be weighed in the scale against all other sorts of ignorance put together.

One sort of ignorance is unconscious.

THEAET.

What is it?

STR.

When a person supposes that he knows, and does not know; this appears to be the great source of all the errors of the intellect.

THEAET.

True.

STR.

And this, if I am not mistaken, is the kind of ignorance which specially earns the title of stupidity.

THEAET.

True.

STR.

What name, then, shall be given to the sort of instruction which gets rid of this?

THEAET.

The instruction which you mean, Stranger, is, I should imagine, not the teaching of handicraft arts, but what, thanks to us, has been termed education in this part of the world.

STR.

Yes, Theaetetus, and by nearly all Hellenes. But we have still to consider whether education admits of any further division.

The instruction corresponding to this is called education.

THEAET.

We have.

STR.

I think that there is a point at which such a division is possible.

THEAET.

Where?

STR.

Of education there are two kinds: the old admonitory system, based on the doctrine that ignorance is voluntary, and another, based on the opposite doctrine, which proceeds by driving men into

Of education, one method appears to be rougher, and another smoother.

contradictions and so teaching them to think; and by refuting them and purging away their prejudices and vanity.

THEAET.

How are we to distinguish the two?

STR.

There is the time-honoured mode which our fathers commonly practised towards their sons, and which is still adopted by many—either of roughly reproving their errors, 230or of gently advising them; which varieties may be correctly included under the general term of admonition.

THEAET.

True.

STR.

But whereas some appear to have arrived at the conclusion that all ignorance is involuntary, and that no one who thinks himself wise is willing to learn any of those things in which he is conscious of his own cleverness, and that the admonitory sort of instruction gives much trouble and does little good—

THEAET.

There they are quite right.

STR.

Accordingly, they set to work to eradicate the spirit of conceit in another way.

THEAET.

In what way?

STR.

They cross-examine a man's words, when he thinks that he is saying something and is really saying nothing, and easily convict him of inconsistencies in his opinions; these they then collect by the dialectical process, and placing them side by side, show that they contradict one another about the same things, in relation to the same things, and in the same respect. He, seeing this, is angry with himself, and grows gentle towards others, and thus is entirely delivered from great prejudices and harsh notions, in a way which is most amusing to the hearer, and produces the most lasting good effect on the person who is the subject of the operation. For as the physician considers that the

body will receive no benefit from taking food until the internal obstacles have been removed, so the purifier of the soul is conscious that his patient will receive no benefit from the application of knowledge until he is refuted, and from refutation learns modesty; he must be purged of his prejudices first and made to think that he knows only what he knows, and no more.

THEAET.

That is certainly the best and wisest state of mind.

STR.

For all these reasons, Theaetetus, we must admit that refutation is the greatest and chiefest of purifications, and he who has not been refuted, though he be the Great King himself, is in an awful state of impurity; he is uninstructed and deformed in those things in which he who would be truly blessed ought to be fairest and purest.

Refutation is the greatest of purifications.

THEAET.

Very true.

STR.

And who are the ministers of this art? I am afraid ²³¹to say the Sophists.

THEAET.

Why?

STR.

Lest we should assign to them too high a prerogative.

THEAET.

Yet she Sophist has a certain likeness to our minister of purification.

STR.

Yes, the same sort of likeness which a wolf, who is the fiercest of animals, has to a dog, who is the gentlest. But he who would not be found tripping, ought to be very careful in this matter of comparisons, for they are most slippery things. Nevertheless, let us assume that the Sophists are the men. I say this provisionally, for I think that the line which divides them will be marked enough if proper care is taken.

Let us assume that the Sophist practises this art.

THEAET.

Likely enough.

STR.

Let us grant, then, that from the discerning art comes purification, and from purification let there be separated off a part which is concerned with the soul; of this mental purification instruction is a portion, and of instruction education, and of education, that refutation of vain conceit which has been discovered in the present argument; and let this be called by you and me the nobly-descended art of Sophistry.

Recapitulation.

THEAET.

Very well; and yet, considering the number of forms in which he has presented himself, I begin to doubt how I can with any truth or confidence describe the real nature of the Sophist.

STR.

You naturally feel perplexed; and yet I think that he must be still more perplexed in his attempt to escape us, for as the proverb says, when every way is blocked, there is no escape; now, then, is the time of all others to set upon him.

THEAET.

True.

STR.

First let us wait a moment and recover breath, and while we are resting, we may reckon up in how many forms he has appeared. In the first place, he was discovered to be a paid hunter after wealth and youth.

Thus far the Sophist has been (1) a paid hunter of wealth and youth;

THEAET.

Yes.

STR.

In the second place, he was a merchant in the goods of the soul.

(2) a merchant in the goods of the soul;

THEAET.

Certainly.

STR.

In the third place, he has turned out to be a retailer of the same sort of wares.

(3) a retailer,

THEAET.

Yes; and in the fourth place, he himself manufactured the learned wares which he sold.

and (4) a manufacturer of learned wares;

STR.

Quite right; I will try and remember the fifth myself. He belonged to the fighting class, and was further distinguished as a hero of debate, who professed the eristic art.

(5) a hero of debate;

THEAET.

True.

STR.

The sixth point was doubtful, and yet we at last agreed that he was a purger of souls, who cleared away notions obstructive to knowledge.

(6) a purger of souls.

THEAET.

Very true.

STR.

Do you not see that when the professor of any art has 232 one name and many kinds of knowledge, there must be something wrong? The multiplicity of names which is applied to him shows that the common principle to which all these branches of knowledge are tending, is not understood.

But what is the common principle which unites his many callings?

THEAET.

I should imagine this to be the case.

STR.

His chief characteristic is disputation and the

At any rate we will understand him, and no indolence shall prevent us. Let us begin again, then, and re-examine some of our statements concerning the Sophist; there was one thing which appeared to me especially characteristic of him.

teaching of
disputation.

THEAET.

To what are you referring?

STR.

We were saying of him, if I am not mistaken, that he was a disputer?

THEAET.

We were.

STR.

And does he not also teach others the art of disputation?

THEAET.

Certainly he does.

STR.

And about what does he profess that he teaches men to dispute? To begin at the beginning—Does he make them able to dispute about divine things, which are invisible to men in general?

THEAET.

At any rate, he is said to do so.

STR.

And what do you say of the visible things in heaven and earth, and the like?

THEAET.

Certainly he disputes, and teaches to dispute about them.

STR.

Then, again, in private conversation, when any universal assertion is made about generation and essence, we know that such persons are tremendous argufiers, and are able to impart their own skill to others.

THEAET.

Undoubtedly.

STR.

And do they not profess to make men able to dispute about law and about politics in general?

THEAET.

Why, no one would have anything to say to them, if they did not make these professions.

STR.

In all and every art, what the craftsman ought to say in answer to any question is written down in a popular form, and he who likes may learn.

THEAET.

I suppose that you are referring to the precepts of Protagoras about wrestling and the other arts?

STR.

Yes, my friend, and about a good many other things. In a word, is not the art of disputation a power of disputing about all things?

He can dispute about all things.

THEAET.

Certainly; there does not seem to be much which is left out.

STR.

But oh! my dear youth, do you suppose this possible? for perhaps your young eyes may see things which to our duller sight do not appear.

THEAET.

233To what are you alluding? I do not think that I understand your present question.

STR.

I ask whether anybody can understand all things.

THEAET.

Happy would mankind be if such a thing were possible!

STR.

But how can any one who is ignorant dispute in a rational manner against him who knows?

But he cannot know all things.

THEAET.

He cannot.

STR.

Then why has the sophistical art such a mysterious power?

THEAET.

To what do you refer?

STR.

How do the Sophists make young men believe in their supreme and universal wisdom? For if they neither disputed nor were thought to dispute rightly, or being thought to do so were deemed no wiser for their controversial skill, then, to quote your own observation, no one would give them money or be willing to learn their art.

Then why is he held in such esteem?

THEAET.

They certainly would not.

STR.

But they are willing.

THEAET.

Yes, they are.

STR.

Yes, and the reason, as I should imagine, is that they are supposed to have knowledge of those things about which they dispute?

Because he is supposed to know,

THEAET.

Certainly.

STR.

And they dispute about all things?

THEAET.

True.

STR.

And therefore, to their disciples, they appear to be all-wise?

THEAET.

Certainly.

STR.

But they are not; for that was shown to be impossible.

THEAET.

Impossible, of course.

STR.

Then the Sophist has been shown to have a sort of conjectural or apparent knowledge only of all things, which is not the truth?

and has the appearance of knowledge.

THEAET.

Exactly; no better description of him could be given.

STR.

Let us now take an illustration, which will still more clearly explain his nature.

THEAET.

What is it?

Let us, as an illustration, imagine a creator of all things, which he makes by a single art and with the greatest ease.—What would he be?

STR.

I will tell you, and you shall answer me, giving your very closest attention. Suppose that a person were to profess, not that he could speak or dispute, but that he knew how to make and do all things, by a single art.

THEAET.

All things?

STR.

I see that you do not understand the first word that I utter, for you do not understand the meaning of ‘all.’

THEAET.

No, I do not.

STR.

Under all things, I include you and me, and also animals and trees.

THEAET.

What do you mean?

STR.

Suppose a person to say that he will make you and me, and all creatures.

THEAET.

234What would he mean by ‘making’? He cannot be a husbandman;—for you said that he is a maker of animals.

STR.

Yes; and I say that he is also the maker of the sea, and the earth, and the heavens, and the gods, and of all other things; and, further, that he can make them in no time, and sell them for a few pence.

THEAET.

That must be a jest.

STR.

And when a man says that he knows all things, and can teach them to another at a small cost, and in a short time, is not that a jest?

THEAET.

Certainly.

STR.

And is there any more artistic or graceful form of jest than imitation?

THEAET.

Certainly not; and imitation is a very comprehensive term, which includes under one class the most diverse sorts of things.

STR.

We know, of course, that he who professes by one art to make all things is really a painter, and by the painter's art makes resemblances of real things which have the same name with them; and he can deceive the less intelligent sort of young children, to whom he shows his pictures at a distance, into the belief that he has the absolute power of making whatever he likes.

Not really a maker, but a painter or imitator.

THEAET.

Certainly.

STR.

So there is an imitative art of reasoning which imposes upon youth,

And may there not be supposed to be an imitative art of reasoning? Is it not possible to enchant the hearts of young men by words poured through their ears, when they are still at a distance from the truth of facts, by exhibiting to them fictitious arguments, and making them think that they are true, and that the speaker is the wisest of men in all things?

who see truth only at a distance.

THEAET.

Yes; why should there not be another such art?

STR.

But as time goes on, and their hearers advance in years, and come into closer contact with realities, and have learnt by sad experience to see and feel the truth of things, are not the greater part of them compelled to change many opinions which they formerly entertained, so that the great appears small to them, and the easy difficult, and all their dreamy speculations are overturned by the facts of life?

THEAET.

That is my view, as far as I can judge, although, at my age, I may be one of those who see things at a distance only.

STR.

And the wish of all of us, who are your friends, is and always will be to bring you as near to the truth as we can ²³⁵without the sad reality. And now I should like you to tell me, whether the Sophist is not visibly a magician and imitator of true being; or are we still disposed to think that he may have a true knowledge of the various matters about which he disputes?

The Sophist is a magician and imitator.

THEAET.

But how can he, Stranger? Is there any doubt, after what has been said, that he is to be located in one of the divisions of children's play?

STR.

Then we must place him in the class of magicians and mimics.

THEAET.

Certainly we must.

STR.

And now our business is not to let the animal out, for we have got him in a sort of dialectical net, and there is one thing which he decidedly will not escape.

THEAET.

What is that?

STR.

The inference that he is a juggler.

THEAET.

Precisely my own opinion of him.

STR.

Then, clearly, we ought as soon as possible to divide the image-making art, and go down into the net, and, if the Sophist does not run away from us, to seize him according to orders and deliver him over to reason, who is the lord of the hunt, and proclaim the capture of him; and if he creeps into the recesses of the imitative art, and secretes himself in one of them, to divide again and follow him up until in some subsection of imitation he is caught. For our method of tackling each and all is one which neither he nor any other creature will ever escape in triumph.

Accordingly we must subdivide imitation.

THEAET.

Well said; and let us do as you propose.

STR.

Well, then, pursuing the same analytic method as before, I think that I can discern two divisions of the imitative art, but I am not as yet able to see in which of them the desired form is to be found.

Two kinds of imitation:—There is (1) likeness-making, which reproduces exactly the proportions of the original.

THEAET.

Will you tell me first what are the two divisions of which you are speaking?

STR.

One is the art of likeness-making;—generally a likeness of anything is made by producing a copy which is executed according to the proportions of the original,

similar in length and breadth and depth, each thing receiving also its appropriate colour.

THEAET.

Is not this always the aim of imitation?

STR.

Not always; in works either of sculpture or of painting, which are of any magnitude, there is a certain degree of deception; for if artists were to give the true proportions of their fair works, the upper part, which is farther off, would appear to be out of proportion in comparison with the lower, which is nearer; and so they give up the truth in their images and make only the proportions which appear to be beautiful, disregarding the real ones.

But in colossal works of painting and sculpture a certain amount of deception is necessary;

THEAET.

Quite true.

STR.

And that which being other is also like, may we not fairly call a likeness or image?

THEAET.

Yes.

STR.

And may we not, as I did just now, call that part of the imitative art which is concerned with making such images the art of likeness-making?

THEAET.

Let that be the name.

STR.

And what shall we call those resemblances of the beautiful, which appear such owing to the unfavourable position of the spectator, whereas if a person had the power of getting a correct view of works of such magnitude, they would appear not even like that to which they profess to be like? May we not call these 'appearances,' since they appear only and are not really like?

THEAET.

Certainly.

STR.

There is a great deal of this kind of thing in painting, and in all imitation.

THEAET.

Of course.

STR.

And may we not fairly call the sort of art, which produces an appearance and not an image, phantastic art?

THEAET.

Most fairly.

STR.

These then are the two kinds of image-making—the art of making likenesses, and phantastic or the art of making appearances?

and therefore (2) there is another kind of imitation, phantastic, which makes appearances.

THEAET.

True.

STR.

I was doubtful before in which of them I should place the Sophist, nor am I even now able to see clearly; verily he is a wonderful and inscrutable creature. And now in the cleverest manner he has got into an impossible place.

In which shall we place the Sophist?

THEAET.

Yes, he has.

STR.

Do you speak advisedly, or are you carried away at the moment by the habit of assenting into giving a hasty answer?

THEAET.

May I ask to what you are referring?

STR.

My dear friend, we are engaged in a very difficult speculation—there can be no doubt of that; for how a thing can appear and seem, and not be, or how a man can say a thing which is not true, has always been and still remains a very perplexing question. Can any one say or think that falsehood really exists, and avoid being caught in a contradiction? Indeed, Theaetetus, the task is a difficult one.

A grave difficulty: If falsehood can exist, then what is not must be.

THEAET.

Why?

STR.

He who says that falsehood exists has the audacity to assert the being of not-being; for this is implied in the possibility of falsehood. But, my boy, in the days when I was a boy, the great Parmenides protested against this doctrine, and to the end of his life he continued to inculcate the same lesson—always repeating both in verse and out of verse:

But Parmenides always denied the existence of not-being.

‘Keep your mind from this way of enquiry, for never will you show 1 that not-being is.’

Such is his testimony, which is confirmed by the very expression when sifted a little. Would you object to begin with the consideration of the words themselves?

THEAET.

Never mind about me; I am only desirous that you should carry on the argument in the best way, and that you should take me with you.

STR.

Very good; and now say, do we venture to utter the forbidden word ‘not-being’?

THEAET.

Certainly we do.

STR.

Let us be serious then, and consider the question neither in strife nor play: suppose that one of the hearers of Parmenides was asked, 'To what is the term "not-being" to be applied?'—do you know what sort of object he would single out in reply, and what answer he would make to the enquirer?

Let us ask: Of what is not-being predicable?

THEAET.

That is a difficult question, and one not to be answered at all by a person like myself.

STR.

There is at any rate no difficulty in seeing that the predicate 'not-being' is not applicable to any being.

Certainly not of any being.

THEAET.

None, certainly.

STR.

And if not to being, then not to something.

and therefore not of something, or of two or more things.

THEAET.

Of course not.

STR.

It is also plain, that in speaking of something we speak of being, for to speak of an abstract something naked and isolated from all being is impossible.

THEAET.

Impossible.

STR.

You mean by assenting to imply that he who says something must say some one thing?

THEAET.

Yes.

STR.

Some in the singular (τ?) you would say is the sign of one, some in the dual (τινε?) of two, some in the plural (τινε?ς) of many?

THEAET.

Exactly.

STR.

Then he who says ‘not something’ must say absolutely nothing.

THEAET.

Most assuredly.

STR.

And as we cannot admit that a man speaks and says nothing, he who says ‘not-being’ does not speak at all.

It is nothing;

THEAET.

The difficulty of the argument can no further go.

STR.

238Not yet, my friend, is the time for such a word; for there still remains of all perplexities the first and greatest, touching the very foundation of the matter.

THEAET.

What do you mean? Do not be afraid to speak.

STR.

To that which is, may be attributed some other thing which is?

THEAET.

Certainly.

STR.

But can anything which is, be attributed to that which is not?

THEAET.

Impossible.

and nothing that is
can be predicated of
it; and therefore not
number either
singular or plural.

STR.

And all number is to be reckoned among things which are?

THEAET.

Yes, surely number, if anything, has a real existence.

STR.

Then we must not attempt to attribute to not-being number either in the singular or plural?

THEAET.

The argument implies that we should be wrong in doing so.

STR.

But how can a man either express in words or even conceive in thought things which are not or a thing which is not without number?

THEAET.

How indeed?

STR.

When we speak of things which are not, are we not attributing plurality to not-being?

And yet we do speak
of not-being, both in
the singular and
plural.

THEAET.

Certainly.

STR.

But, on the other hand, when we say 'what is not,' do we not attribute unity?

THEAET.

Manifestly.

STR.

Nevertheless, we maintain that you may not and ought not to attribute being to not-being?

THEAET.

Most true.

STR.

Do you see, then, that not-being in itself can neither be spoken, uttered, or thought, but that it is unthinkable, unutterable, unspeakable, indescribable?

THEAET.

Quite true.

STR.

But, if so, I was wrong in telling you just now that the difficulty which was coming is the greatest of all.

THEAET.

What! is there a greater still behind?

STR.

Well, I am surprised, after what has been said already, that you do not see the difficulty in which he who would refute the notion of not-being is involved. For he is compelled to contradict himself as soon as he makes the attempt.

The greatest difficulty: The mere use of the word is a contradiction.

THEAET.

What do you mean? Speak more clearly.

STR.

Do not expect clearness from me. For I, who maintain that not-being has no part either in the one or many, just now spoke and am still speaking of not-being as one; for I say 'not-being.' Do you understand?

THEAET.

Yes.

STR.

And a little while ago I said that not-being is unutterable, unspeakable, indescribable: do you follow?

THEAET.

I do after a fashion.

STR.

When I introduced the word 'is,' did I not contradict what I said before?

THEAET.

239Clearly.

STR.

And in using the singular verb, did I not speak of not-being as one?

THEAET.

Yes.

STR.

And when I spoke of not-being as indescribable and unspeakable and unutterable, in using each of these words in the singular, did I not refer to not-being as one?

THEAET.

Certainly.

STR.

And yet we say that, strictly speaking, it should not be defined either as one or many, and should not even be called 'it,' for the use of the word 'it' would imply a form of unity.

THEAET.

Quite true.

STR.

How, then, can any one put any faith in me? For now, as always, I am unequal to the refutation of not-being. And therefore, as I was saying, do not look to me for the right way of speaking about not-being; but come, let us try the experiment with you.

THEAET.

What do you mean?

STR.

Make a noble effort, as becomes youth, and endeavour with all your might to speak of not-being in a right manner, without introducing into it either existence or unity or plurality.

Let the youthful might of Theaetetus try to find some better expression.

THEAET.

It would be a strange boldness in me which would attempt the task when I see you thus discomfited.

STR.

Say no more of ourselves; but until we find some one or other who can speak of not-being without number, we must acknowledge that the Sophist is a clever rogue who will not be got out of his hole.

THEAET.

Most true.

STR.

And if we say to him that he professes an art of making appearances, he will grapple with us and retort our argument upon ourselves; and when we call him an image-maker he will say, 'Pray what do you mean at all by an image?'—and I should like to know, Theaetetus, how we can possibly answer the youngker's question?

If we call the Sophist an image-maker, he will ask us, out of his hole, 'What is an image?'—and will be satisfied with nothing short of a definition of the idea of it.

THEAET.

We shall doubtless tell him of the images which are reflected in water or in mirrors; also of sculptures, pictures, and other duplicates.

STR.

I see, Theaetetus, that you have never made the acquaintance of the Sophist.

THEAET.

Why do you think so?

STR.

He will make believe to have his eyes shut, or to have none.

THEAET.

What do you mean?

STR.

When you tell him of something existing in a mirror, or in sculpture, and address him as though he had eyes, he will laugh you to scorn, and will pretend that he knows nothing of mirrors and streams, or of sight at all; he will say that he is asking about an idea.

THEAET.

What can he mean?

STR.

The common notion pervading all these objects, which you speak of as many, and yet call by the single name of image, as though it were the unity under which they were all included. How will you maintain your ground against him?

THEAET.

How, Stranger, can I describe an image except as something fashioned in the likeness of the true?

It is a resemblance of the true or real, and is not itself real.

STR.

And do you mean this something to be some other true thing, or what do you mean?

THEAET.

Certainly not another true thing, but only a resemblance.

STR.

And you mean by true that which really is?

THEAET.

Yes.

STR.

And the not true is that which is the opposite of the true?

THEAET.

Exactly.

STR.

A resemblance, then, is not really real, if, as you say, not true?

THEAET.

Nay, but it is in a certain sense.

Yet it has a sort of reality.

STR.

You mean to say, not in a true sense?

THEAET.

Yes; it is in reality only an image.

STR.

Then what we call an image is in reality really unreal.

THEAET.

In what a strange complication of being and not-being we are involved!

It is really unreal.

STR.

Strange! I should think so. See how, by his reciprocation of opposites, the many-headed Sophist has compelled us, quite against our will, to admit the existence of not-being.

And thus we are forced to admit the existence of not-being.

THEAET.

Yes, indeed, I see.

STR.

The difficulty is how to define his art without falling into a contradiction.

THEAET.

How do you mean? And where does the danger lie?

STR.

When we say that he deceives us with an illusion, and that his art is illusory, do we mean that our soul is led by his art to think falsely, or what do we mean?

THEAET.

There is nothing else to be said.

STR.

Again, false opinion is that form of opinion which thinks the opposite of the truth:—You would assent?

THEAET.

Certainly.

STR.

You mean to say that false opinion thinks what is not?

THEAET.

Of course.

STR.

Does false opinion think that things which are not are not, or that in a certain sense they are?

THEAET.

Things that are not must be imagined to exist in a certain sense, if any degree of falsehood is to be possible.

Our definition of the Sophist's art, which creates false opinion, or again of a false proposition will contain the same paradox.

STR.

And does not false opinion also think that things which most certainly exist do not exist at all?

THEAET.

Yes.

STR.

And here, again, is falsehood?

THEAET.

Falsehood—yes.

STR.

And in like manner, a false proposition will be deemed to be one which asserts the non-existence of things which are, and the existence of things which are not.

THEAET.

There is no other way in which a false proposition can arise.

STR.

241 There is not; but the Sophist will deny these statements. And indeed how can any rational man assent to them, when the very expressions which we have just used were before acknowledged by us to be unutterable, unspeakable, indescribable, unthinkable? Do you see his point, Theaetetus?

The Sophist will show us no mercy.

THEAET.

Of course he will say that we are contradicting ourselves when we hazard the assertion, that falsehood exists in opinion and in words; for in maintaining this, we are compelled over and over again to assert being of not-being, which we admitted just now to be an utter impossibility.

STR.

How well you remember! And now it is high time to hold a consultation as to what we ought to do about the Sophist; for if we persist in looking for him in the class of false workers and magicians, you see that the handles for objection and the difficulties which will arise are very numerous and obvious.

THEAET.

They are indeed.

STR.

We have gone through but a very small portion of them, and they are really infinite.

THEAET.

If that is the case, we cannot possibly catch the Sophist.

STR.

Shall we then be so faint-hearted as to give him up?

THEAET.

Certainly not, I should say, if we can get the slightest hold upon him.

STR.

Will you then forgive me, and, as your words imply, not be altogether displeased if I flinch a little from the grasp of such a sturdy argument?

THEAET.

To be sure I will.

STR.

I have a yet more urgent request to make.

THEAET.

Which is — ?

STR.

That you will promise not to regard me as a parricide.

THEAET.

And why?

STR.

Because, in self-defence, I must test the philosophy of my father Parmenides, and try to prove by main force that in a certain sense not-being is, and that being, on the other hand, is not.

There is one way of escape: we must put the revered words of Parmenides to the test, and prove that there is a sense in which not-being is and being is not.

THEAET.

Some attempt of the kind is clearly needed.

STR.

Yes, a blind man, as they say, might see that, and, unless these questions are decided in one way or another, no one when he speaks of false words, or false opinion, or idols, or images, or imitations, or appearances, or about the arts which are concerned with them, can avoid falling into ridiculous contradictions.

THEAET.

Most true.

STR.

242And therefore I must venture to lay hands on my father's argument; for if I am to be over-scrupulous, I shall have to give the matter up.

THEAET.

Nothing in the world should ever induce us to do so.

STR.

I have a third little request which I wish to make.

THEAET.

What is it?

STR.

You heard me say what I have always felt and still feel—that I have no heart for this argument?

THEAET.

I did.

STR.

I tremble at the thought of what I have said, and expect that you will deem me mad, when you hear of my sudden changes and shiftings; let me therefore observe, that I am examining the question entirely out of regard for you.

THEAET.

There is no reason for you to fear that I shall impute any impropriety to you, if you attempt this refutation and proof; take heart, therefore, and proceed.

STR.

And where shall I begin the perilous enterprise? I think that the road which I must take is—

THEAET.

Which?—Let me hear.

STR.

I think that we had better, first of all, consider the points which at present are regarded as self-evident, lest we may have fallen into some confusion, and be too ready to assent to one another, fancying that we are quite clear about them.

We must examine some ideas which are thought to be clear, but may prove to be confused.

THEAET.

Say more distinctly what you mean.

STR.

I think that Parmenides, and all who ever yet undertook to determine the number and nature of existences, talked to us in rather a light and easy strain.

THEAET.

How?

STR.

As if we had been children, to whom they repeated each his own mythus or story;—one said that there were three principles, and that at one time there was war between certain of them; and then again there was peace, and they were married and begat children, and brought them up; and another spoke of two principles,—a moist and a dry, or a

The early Greek philosophers and their doctrines.

hot and a cold, and made them marry and cohabit. The Eleatics, however, in our part of the world, say that all things are many in name, but in nature one; this is their mythus, which goes back to Xenophanes, and is even older. Then there are Ionian, and in more recent times Sicilian muses, who have arrived at the conclusion that to unite the two principles is safer, and to say that being is one and many, and that these are held together by enmity and friendship, ever parting, ever meeting, as the severer Muses assert, while the gentler ones do not insist on the perpetual strife and peace, but admit a relaxation and alternation of them; peace and unity sometimes prevailing under the sway of Aphrodite, and then again plurality and war, by reason of a principle of strife. Whether any of them spoke the truth in all this is hard to determine; besides, antiquity and famous men should have reverence, and not be liable to accusations so serious. Yet one thing may be said of them without offence—

THEAET.

What thing?

STR.

That they went on their several ways disdaining to notice people like ourselves; they did not care whether they took us with them, or left us behind them.

These great men did not care to explain themselves to the common herd.

THEAET.

How do you mean?

STR.

I mean to say, that when they talk of one, two, or more elements, which are or have become or are becoming, or again of heat mingling with cold, assuming in some other part of their works separations and mixtures,—tell me, Theaetetus, do you understand what they mean by these expressions? When I was a younger man, I used to fancy that I understood quite well what was meant by the term ‘not-being,’ which is our present subject of dispute; and now you see in what a fix we are about it.

In the days of our youth we seemed to understand what not-being meant: now we are in difficulties about being.

THEAET.

I see.

STR.

And very likely we have been getting into the same perplexity about ‘being,’ and yet may fancy that when anybody utters the word, we understand him quite easily, although we do not know about not-being. But we may be equally ignorant of both.

THEAET.

I dare say.

STR.

And the same may be said of all the terms just mentioned.

THEAET.

True.

STR.

The consideration of most of them may be deferred; but we had better now discuss the chief captain and leader of them.

THEAET.

Of what are you speaking? You clearly think that we must first investigate what people mean by the word 'being.'

STR.

You follow close at my heels, Theaetetus. For the right method, I conceive, will be to call into our presence the dualistic philosophers and to interrogate them. 'Come,' we will say, 'Ye, who affirm that hot and cold or any other two principles are the universe, what is this term which you apply to both of them, and what do you mean when you say that both and each of them "are"? How are we to understand the word "are"? Upon your view, are we to suppose that there is a third principle over and above the other two,—three in all, and not two? For clearly you cannot say that one of the two principles is being, and yet attribute being equally to both of them; for, if you did, whichever of the two is identified with being, will comprehend the other; and so they will be one and not two.'

Let us examine the notion in the light of existing philosophies. First, let us ask the dualists whether being is a third principle over and above the other two, or one of them or both. In any case the two principles will be resolved into one.

THEAET.

Very true.

STR.

But perhaps you mean to give the name of 'being' to both of them together?

THEAET.

Quite likely.

STR.

244‘Then, friends,’ we shall reply to them, ‘the answer is plainly that the two will still be resolved into one.’

THEAET.

Most true.

STR.

‘Since, then, we are in a difficulty, please to tell us what you mean, when you speak of being; for there can be no doubt that you always from the first understood your own meaning, whereas we once thought that we understood you, but now we are in a great strait. Please to begin by explaining this matter to us, and let us no longer fancy that we understand you, when we entirely misunderstand you.’ There will be no impropriety in our demanding an answer to this question, either of the dualists or of the pluralists?

THEAET.

Certainly not.

STR.

And what about the assertors of the oneness of the all—must we not endeavour to ascertain from them what they mean by ‘being’?

THEAET.

By all means.

STR.

Then let them answer this question: One, you say, alone is? ‘Yes,’ they will reply.

THEAET.

True.

STR.

And there is something which you call ‘being’?

What again do those who assert the oneness of the all mean by being? Are being and unity two names for the same thing?—But to admit this, or to admit that the name is different from the thing, is to admit plurality.

THEAET.

‘Yes.’

STR.

And is being the same as one, and do you apply two names to the same thing?

THEAET.

What will be their answer, Stranger?

STR.

It is clear, Theaetetus, that he who asserts the unity of being will find a difficulty in answering this or any other question.

THEAET.

Why so?

STR.

To admit of two names, and to affirm that there is nothing but unity, is surely ridiculous?

THEAET.

Certainly.

STR.

And equally irrational to admit that a name is anything?

THEAET.

How so?

STR.

To distinguish the name from the thing, implies duality.

THEAET.

Yes.

STR.

And yet he who identifies the name with the thing will be compelled to say that it is the name of nothing, or if he says that it is the name of something, even then the name will only be the name of a name, and of nothing else.

And if the name be identified with the thing, it is either the name of nothing or of a name. This is true of the one.

THEAET.

True.

STR.

And the one will turn out to be only one of one, 1 and being absolute unity, will represent a mere name1.

THEAET.

Certainly.

STR.

And would they say that the whole is other than the one that is, or the same with it?

THEAET.

To be sure they would, and they actually say so.

They identify the whole with the one which is: but a whole, as having parts, cannot be absolute unity, which is indivisible.

STR.

If being is a whole, as Parmenides sings,—

‘Every way like unto the fullness of a well-rounded sphere,
Evenly balanced from the centre on every side,
And must needs be neither greater nor less in any way,
Neither on this side nor on that—’

then being has a centre and extremes, and, having these, must also have parts.

THEAET.

True.

STR.

245 Yet that which has parts may have the attribute of unity in all the parts, and in this way being all and a whole, may be one?

THEAET.

Certainly.

STR.

But that of which this is the condition cannot be absolute unity?

THEAET.

Why not?

STR.

Because, according to right reason, that which is truly one must be affirmed to be absolutely indivisible.

THEAET.

Certainly.

STR.

But this indivisible, if made up of many parts, will contradict reason.

THEAET.

I understand.

STR.

Shall we say that being [1](#) is one and a whole, because it has the attribute of unity? Or shall we say that being is not a whole at all?

Is being, then, one by participation in unity, or is it not a whole?

THEAET.

That is a hard alternative to offer.

STR.

Most true; for being, having in a certain sense the attribute of one, is yet proved not to be the same as one, and the all is therefore more than one.

In either case we have to admit plurality.

THEAET.

Yes.

STR.

And yet if being be not a whole, through having the attribute of unity, and there be such a thing as an absolute whole, being lacks something of its own nature?

THEAET.

Certainly.

STR.

Upon this view, again, being, having a defect of being, will become not-being?

THEAET.

True.

STR.

And, again, the all becomes more than one, for being and the whole will each have their separate nature.

THEAET.

Yes.

STR.

But if the whole does not exist at all, all the previous difficulties remain the same, and there will be the further difficulty, that besides having no being, being can never have come into being.

And if the whole does not exist at all, being cannot have come into being;

THEAET.

Why so?

STR.

Because that which comes into being always comes into being as a whole, so that he who does not give whole a place among beings, cannot speak either of essence or generation as existing.

for everything which comes into being, comes into being as a whole.

THEAET.

Yes, that certainly appears to be true.

STR.

Again; how can that which is not a whole have any quantity? For that which is of a certain quantity must necessarily be the whole of that quantity.

THEAET.

Exactly.

Nor can it partake of quantity.

STR.

And there will be innumerable other points, each of them causing infinite trouble to him who says that being is either one or two.

THEAET.

The difficulties which are dawning upon us prove this; for one objection connects with another, and they are always involving what has preceded in a greater and worse perplexity.

STR.

We are far from having exhausted the more exact thinkers who treat of being and not-being. But let us be content to leave them, and proceed to view those who speak less precisely; and we shall find as the result of all, that the nature of being is quite as difficult to comprehend as that of not-being.

THEAET.

Then now we will go to the others.

STR.

There appears to be a sort of war of Giants and Gods going on amongst them; they are fighting with one another about the nature of essence.

THEAET.

How is that?

STR.

Some of them are dragging down all things from heaven and from the unseen to earth, and they literally grasp in their hands rocks and oaks; of these they lay hold, and obstinately maintain, that the things only which can be touched or handled have being or essence, because they define being and body as one, and if any one else says that what is not a body exists they altogether despise him, and will hear of nothing but body.

Let us now ask the Materialists and Idealists to give an account of essence.

THEAET.

I have often met with such men, and terrible fellows they are.

STR.

And that is the reason why their opponents cautiously defend themselves from above, out of an unseen world, mightily contending that true essence consists of certain intelligible and incorporeal ideas; the bodies of the materialists, which by them are maintained to be the very truth, they break up into little bits by their arguments, and affirm them to be, not essence, but generation and motion. Between the two armies, Theaetetus, there is always an endless conflict raging concerning these matters.

THEAET.

True.

STR.

Let us ask each party in turn, to give an account of that which they call essence.

THEAET.

How shall we get it out of them?

STR.

With those who make being to consist in ideas, there will be less difficulty, for they are civil people enough; but there will be very great difficulty, or rather an absolute impossibility, in getting an opinion out of those who drag everything down to matter. Shall I tell you what we must do?

The Idealists are civil enough, but the Materialists must be improved before they can be reasoned with.

THEAET.

What?

STR.

Let us, if we can, really improve them; but if this is not possible, let us imagine them to be better than they are, and more willing to answer in accordance with the rules of argument, and then their opinion will be more worth having; for that which better men acknowledge has more weight than that which is acknowledged by inferior men. Moreover we are no respecters of persons, but seekers after truth.

THEAET.

Very good.

STR.

Then now, on the supposition that they are improved, let us ask them to state their views, and do you interpret them.

THEAET.

Agreed.

STR.

Let them say whether they would admit that there is such a thing as a mortal animal.

THEAET.

Of course they would.

STR.

And do they not acknowledge this to be a body having a soul?

THEAET.

Certainly they do.

STR.

Meaning to say that the soul is something which exists?

The latter would admit that in the mortal animal there is a soul, and that the soul may be just and wise; and whatever they may say of soul, they would never venture to assert that the moral qualities are corporeal.

THEAET.

247 True.

STR.

And do they not say that one soul is just, and another unjust, and that one soul is wise, and another foolish?

THEAET.

Certainly.

STR.

And that the just and wise soul becomes just and wise by the possession of justice and wisdom¹, and the opposite under opposite circumstances?

THEAET.

Yes, they do.

STR.

But surely that which may be present or may be absent will be admitted by them to exist?

THEAET.

Certainly.

STR.

And, allowing that justice, wisdom, the other virtues, and their opposites exist, as well as a soul in which they inhere, do they affirm any of them to be visible and tangible, or are they all invisible?

THEAET.

They would say that hardly any of them are visible.

STR.

And would they say that they are corporeal?

THEAET.

They would distinguish: the soul would be said by them to have a body; but as to the other qualities of justice, wisdom, and the like, about which you asked, they would not venture either to deny their existence, or to maintain that they were all corporeal.

STR.

Verily, Theaetetus, I perceive a great improvement in them; the real aborigines, children of the dragon's teeth, would have been deterred by no shame at all, but would have obstinately asserted that nothing is which they are not able to squeeze in their hands.

THEAET.

That is pretty much their notion.

STR.

Let us push the question; for if they will admit that any, even the smallest particle of being, is incorporeal, it is enough; they must then say what that nature is which is common to both the corporeal and incorporeal, and which they have in their mind's eye when they say of both of them that they 'are.' Perhaps they may be in a difficulty; and if this is the case, there is a possibility that they may accept a notion of ours respecting the nature of being, having nothing of their own to offer.

What is the nature, common to the corporeal and incorporeal, which we indicate when we say that both 'are'?

THEAET.

What is the notion? Tell me, and we shall soon see.

STR.

My notion would be, that anything which possesses any sort of power to affect another, or to be affected by another, if only for a single moment, however trifling the cause and however slight the effect, has real existence; and I hold that the definition of being is simply power.

It is a power of affecting and being affected by another.

THEAET.

They accept your suggestion, having nothing better of their own to offer.

STR.

Very good; perhaps we, as well as they, may one day ²⁴⁸change our minds; but, for the present, this may be regarded as the understanding which is established with them.

THEAET.

Agreed.

STR.

Let us now go to the friends of ideas; of their opinions, too, you shall be the interpreter.

THEAET.

I will.

STR.

To them we say—You would distinguish essence from generation?

THEAET.

‘Yes,’ they reply.

STR.

And you would allow that we participate in generation with the body, and through perception, but we participate with the soul through thought in true essence; and essence you would affirm to be always the same and immutable, whereas generation or becoming varies?

THEAET.

Yes; that is what we should affirm.

STR.

Well, fair sirs, we say to them, what is this participation, which you assert of both? Do you agree with our recent definition?

THEAET.

What definition?

Now we turn to the friends of ideas.—They acknowledge a distinction between generation and essence, and that we participate in the former with the body and in the latter with the soul.

And what is this participation? Is it to be defined, like being, to be a power of doing and suffering?

STR.

We said that being was an active or passive energy, arising out of a certain power which proceeds from elements meeting with one another. Perhaps your ears, Theaetetus, may fail to catch their answer, which I recognize because I have been accustomed to hear it.

THEAET.

And what is their answer?

STR.

They deny the truth of what we were just now saying to the aborigines about existence.

But they deny the appropriateness of this definition of being.

THEAET.

What was that?

STR.

Any power of doing or suffering in a degree however slight was held by us to be a sufficient definition of being?

THEAET.

True.

STR.

They deny this, and say that the power of doing or suffering is confined to becoming, and that neither power is applicable to being.

THEAET.

And is there not some truth in what they say?

STR.

Yes; but our reply will be, that we want to ascertain from them more distinctly, whether they further admit that the soul knows, and that being or essence is known.

They admit however that the soul knows and that being is known. But knowing and being known are active and passive.

THEAET.

There can be no doubt that they say so.

STR.

And is knowing and being known doing or suffering, or both, or is the one doing and the other suffering, or has neither any share in either?

THEAET.

Clearly, neither has any share in either; for if they say anything else, they will contradict themselves.

STR.

I understand; but they will allow that if to know is active, then, of course, to be known is passive. And on this view being, in so far as it is known, is acted upon by knowledge, and is therefore in motion; for that which is in a state of rest cannot be acted upon, as we affirm.

If being is acted upon, it must be in motion,—an attribute which, with life and soul, certainly belongs to perfect being.

THEAET.

True.

STR.

And, O heavens, can we ever be made to believe that motion and life and soul and mind are not present with perfect being? Can we imagine that being is devoid of life and mind, and exists in awful unmeaningness an everlasting fixture?

THEAET.

That would be a dreadful thing to admit, Stranger.

STR.

But shall we say that being has mind and not life?

THEAET.

How is that possible?

STR.

Or shall we say that both inhere in perfect being, but that it has no soul which contains them?

THEAET.

And in what other way can it contain them?

STR.

Or that being has mind and life and soul, but although endowed with soul remains absolutely unmoved?

THEAET.

All three suppositions appear to me to be irrational.

STR.

Under being, then, we must include motion, and that which is moved.

THEAET.

Certainly.

STR.

Then, Theaetetus, our inference is, that if there is no motion, neither is there any mind anywhere, or about anything or belonging to any one.

THEAET.

Quite true.

STR.

And yet this equally follows, if we grant that all things are in motion—upon this view too mind has no existence.

But rest, as well as motion, is necessary to the existence of mind;

THEAET.

How so?

STR.

Do you think that sameness of condition and mode and subject could ever exist without a principle of rest?

THEAET.

Certainly not.

STR.

Can you see how without them mind could exist, or come into existence anywhere?

THEAET.

No.

STR.

And surely contend we must in every possible way against him who would annihilate knowledge and reason and mind, and yet ventures to speak confidently about anything.

THEAET.

Yes, with all our might.

STR.

Then the philosopher, who has the truest reverence for these qualities, cannot possibly accept the notion of those who say that the whole is at rest, either as unity or in many forms: and he will be utterly deaf to those who assert universal motion. As children say entreatingly 'Give us both,' so he will include both the moveable and immoveable in his definition of being and all.

and the philosopher
will demand both.

THEAET.

Most true.

STR.

And now, do we not seem to have gained a fair notion of being?

THEAET.

Yes truly.

STR.

Alas, Theaetetus, methinks that we are now only beginning to see the real difficulty of the enquiry into the nature of it.

THEAET.

What do you mean?

STR.

O my friend, do you not see that nothing can exceed our ignorance, and yet we fancy that we are saying something good?

THEAET.

I certainly thought that we were; and I do not at all understand how we never found out our desperate case.

STR.

250 Reflect: after having made these admissions, may we not be justly asked the same questions which we ourselves were asking of those who said that all was hot and cold?

We must question ourselves as we questioned the Dualists.—Rest and motion, we say, both exist: but what is existence?

THEAET.

What were they? Will you recall them to my mind?

STR.

To be sure I will, and I will remind you of them, by putting the same questions to you which I did to them, and then we shall get on.

THEAET.

True.

STR.

Would you not say that rest and motion are in the most entire opposition to one another?

THEAET.

Of course.

STR.

And yet you would say that both and either of them equally are?

THEAET.

I should.

STR.

And when you admit that both or either of them are, do you mean to say that both or either of them are in motion?

THEAET.

Certainly not.

STR.

Or do you wish to imply that they are both at rest, when you say that they are?

THEAET.

Of course not.

STR.

Then you conceive of being as some third and distinct nature, under which rest and motion are alike included; and, observing that they both participate in being, you declare that they are.

It is some third thing including rest and motion, yet neither of them.

THEAET.

Truly we seem to have an intimation that being is some third thing, when we say that rest and motion are.

STR.

Then being is not the combination of rest and motion, but something different from them.

THEAET.

So it would appear.

STR.

Being, then, according to its own nature, is neither in motion nor at rest.

THEAET.

That is very much the truth.

STR.

Where, then, is a man to look for help who would have any clear or fixed notion of being in his mind?

THEAET.

Where, indeed?

STR.

I scarcely think that he can look anywhere; for that which is not in motion must be at rest, and again, that which is not at rest must be in motion; but being is placed outside of both these classes. Is this possible?

But how can a thing be neither at rest nor in motion?

THEAET.

Utterly impossible.

STR.

Here, then, is another thing which we ought to bear in mind.

THEAET.

What?

STR.

When we were asked to what we were to assign the appellation of not-being, we were in the greatest difficulty:—do you remember?

We are as perplexed about existence or being as we were about not-being.

THEAET.

To be sure.

STR.

And are we not now in as great a difficulty about being?

THEAET.

I should say, Stranger, that we are in one which is, if possible, even greater.

STR.

Then let us acknowledge the difficulty; and as being and not-being are involved in the same perplexity, there is hope that when the one appears more or less distinctly, the other will equally appear; and if we are able to see neither, there may still be a chance of steering our way in between them, without any great discredit.

THEAET.

Very good.

STR.

Let us enquire, then, how we come to predicate many names of the same thing.

A way of escape:
How is predication possible?

THEAET.

Give an example.

STR.

I mean that we speak of man, for example, under many names—that we attribute to him colours and forms and magnitudes and virtues and vices, in all of which instances and in ten thousand others we not only speak of him as a man, but also as good, and having numberless other attributes; and in the same way anything else which we originally supposed to be one is described by us as many, and under many names.

THEAET.

That is true.

STR.

And thus we provide a rich feast for tyros, whether young or old; for there is nothing easier than to argue that the one cannot be many, or the many one; and great is their delight in denying that a man is good; for man, they insist, is man and good is good. I dare say that you have met with persons who take an interest in such matters—they are often elderly men, whose meagre sense is thrown into amazement by these discoveries of theirs, which they believe to be the height of wisdom.

THEAET.

Certainly, I have.

STR.

Then, not to exclude any one who has ever speculated at all upon the nature of being, let us put our questions to them as well as to our former friends.

Let us interrogate those who deny it.

THEAET.

What questions?

STR.

Shall we refuse to attribute being to motion and rest, or anything to anything, and assume that they do not mingle, and are incapable of participating in one another? Or shall we gather all into one class of things communicable with one another? Or are some things communicable and others not?—Which of these alternatives, Theaetetus, will they prefer?

There are three alternatives:—(1) no participation; (2) indiscriminate participation; (3) participation of some with some.

THEAET.

I have nothing to answer on their behalf. Suppose that you take all these hypotheses in turn, and see what are the consequences which follow from each of them.

STR.

Very good, and first let us assume them to say that nothing is capable of participating in anything else in any respect; in that case rest and motion cannot participate in 252being at all.

The first cannot be accepted: it is disastrous to all philosophies.

THEAET.

They cannot.

STR.

But would either of them be if not participating in being?

THEAET.

No.

STR.

Then by this admission everything is instantly overturned, as well the doctrine of universal motion as of universal rest, and also the doctrine of those who distribute

being into immutable and everlasting kinds; for all these add on a notion of being, some affirming that things 'are' truly in motion, and others that they 'are' truly at rest.

THEAET.

Just so.

STR.

Again, those who would at one time compound, and at another resolve all things, whether making them into one and out of one creating infinity, or dividing them into finite elements, and forming compounds out of these; whether they suppose the processes of creation to be successive or continuous, would be talking nonsense in all this if there were no admixture.

THEAET.

True.

STR.

Most ridiculous of all will the men themselves be who want to carry out the argument and yet forbid us to call anything, because participating in some affection from another, by the name of that other.

and those who assert it, contradict themselves.

THEAET.

Why so?

STR.

Why, because they are compelled to use the words 'to be,' 'apart,' 'from others,' 'in itself,' and ten thousand more, which they cannot give up, but must make the connecting links of discourse; and therefore they do not require to be refuted by others, but their enemy, as the saying is, inhabits the same house with them; they are always carrying about with them an adversary, like the wonderful ventriloquist, Eurycles, who out of their own bellies audibly contradicts them.

THEAET.

Precisely so; a very true and exact illustration.

STR.

The second alternative is

And now, if we suppose that all things have the power of communion with one another—what will follow?

impossible; for if it were true, rest would move and motion would rest;

THEAET.

Even I can solve that riddle.

STR.

How?

THEAET.

Why, because motion itself would be at rest, and rest again in motion, if they could be attributed to one another.

STR.

But this is utterly impossible.

THEAET.

Of course.

STR.

Then only the third hypothesis remains.

The third alternative of communion of some with some.

THEAET.

True.

STR.

For, surely, either all things have communion with all; or nothing with any other thing; or some things communicate with some things and others not.

THEAET.

Certainly.

STR.

And two out of these three suppositions have been found to be impossible.

THEAET.

Yes.

STR.

Every one then, who desires to answer truly, will adopt the third and remaining hypothesis of the communion of some with some.

THEAET.

Quite true.

STR.

253 This communion of some with some may be illustrated by the case of letters; for some letters do not fit each other, while others do.

The analogy of letters,—vowels and consonants,

THEAET.

Of course.

STR.

And the vowels, especially, are a sort of bond which pervades all the other letters, so that without a vowel one consonant cannot be joined to another.

THEAET.

True.

STR.

But does every one know what letters will unite with what? Or is art required in order to do so l?

THEAET.

Art is required.

STR.

What art?

THEAET.

The art of grammar.

STR.

And is not this also true of sounds high and low?—Is not he who has the art to know what sounds mingle, a musician, and he who is ignorant, not a musician?

and of musical notes.

THEAET.

Yes.

STR.

And we shall find this to be generally true of art or the absence of art.

THEAET.

Of course.

STR.

And as classes are admitted by us in like manner to be some of them capable and others incapable of intermixture, must not he who would rightly show what kinds will unite and what will not, proceed by the help of science in the path of argument? And will he not ask if the connecting links are universal, and so capable of intermixture with all things; and again, in divisions, whether there are not other universal classes, which make them possible?

As the grammarian and musician know what letters and notes rightly combine with one another, so the dialectician knows what classes have communion with each other and what not.

THEAET.

To be sure he will require science, and, if I am not mistaken, the very greatest of all sciences.

STR.

How are we to call it? By Zeus, have we not lighted unwittingly upon our free and noble science, and in looking for the Sophist have we not entertained the philosopher unawares?

THEAET.

What do you mean?

STR.

Should we not say that the division according to classes, which neither makes the same other, nor makes other the same, is the business of the dialectical science?

THEAET.

That is what we should say.

STR.

Then, surely, he who can divide rightly is able to see clearly one form pervading a scattered multitude, and many different forms contained under one higher form; and again, one form knit together into a single whole and pervading many such wholes, and many forms, existing only in separation and isolation. This is the knowledge of classes which determines where they can have communion with one another and where not.

He is the classifier
and only true
philosopher.

THEAET.

Quite true.

STR.

And the art of dialectic would be attributed by you only to the philosopher pure and true?

THEAET.

Who but he can be worthy?

STR.

In this region we shall always discover the philosopher, if we look for him; like the Sophist, he is not easily discovered, but for a different reason.

THEAET.

For what reason?

STR.

Because the Sophist runs away into the darkness of not-being, in which he has learned by habit to feel about, and cannot be discovered because of the darkness of the place. Is not that true?

THEAET.

It seems to be so.

STR.

And the philosopher, always holding converse through reason with the idea of being, is also dark from excess of light; for the souls of the many have no eye which can endure the vision of the divine.

The philosopher is hidden from excess of light; the Sophist from the darkness of the place in which he lives.

THEAET.

Yes; that seems to be quite as true as the other.

STR.

Well, the philosopher may hereafter be more fully considered by us, if we are disposed; but the Sophist must clearly not be allowed to escape until we have had a good look at him.

THEAET.

Very good.

STR.

Since, then, we are agreed that some classes have a communion with one another, and others not, and some have communion with a few and others with many, and that there is no reason why some should not have universal communion with all, let us now pursue the enquiry, as the argument suggests, not in relation to all ideas, lest the multitude of them should confuse us, but let us select a few of those which are reckoned to be the principal ones, and consider their several natures and their capacity of communion with one another, in order that if we are not able to apprehend with perfect clearness the notions of being and not-being, we may at least not fall short in the consideration of them, so far as they come within the scope of the present enquiry, if peradventure we may be allowed to assert the reality of not-being, and yet escape unscathed.

Let us examine some of the principal kinds, with reference to their power of intercommunion.

THEAET.

We must do so.

STR.

The most important of all the genera are those which we were just now mentioning—being and rest and motion.

Most important of all are being, rest, and motion, of which the two latter hold communion with being, but not with one another.

THEAET.

Yes, by far.

STR.

And two of these are, as we affirm, incapable of communion with one another.

THEAET.

Quite incapable.

STR.

Whereas being surely has communion with both of them, for both of them are?

THEAET.

Of course.

STR.

That makes up three of them.

THEAET.

To be sure.

STR.

And each of them is other than the remaining two, but the same with itself.

THEAET.

True.

STR.

But then, what is the meaning of these two words, 'same' and 'other'? Are they two new kinds other than the three, and yet always of necessity intermingling with them, and are we to have five kinds instead of

They are other than one another, but the same with themselves. 'Same' and 'other' again are two new kinds.

three; or when we speak of the same and other, are we unconsciously speaking of one of the three first kinds? 255

THEAET.

Very likely we are.

STR.

But, surely, motion and rest are neither the other nor the same.

For they are not identical with motion and rest;

THEAET.

How is that?

STR.

Whatever we attribute to motion and rest in common, cannot be either of them.

THEAET.

Why not?

STR.

Because motion would be at rest and rest in motion, for either of them, being predicated of both, will compel the other to change into the opposite of its own nature, because partaking of its opposite.

THEAET.

Quite true.

STR.

Yet they surely both partake of the same and of the other?

THEAET.

Yes.

STR.

Then we must not assert that motion, any more than rest, is either the same or the other.

THEAET.

No; we must not.

STR.

But are we to conceive that being and the same are identical?

nor is being identical
with 'the same';

THEAET.

Possibly.

STR.

But if they are identical, then again in saying that motion and rest have being, we should also be saying that they are the same.

THEAET.

Which surely cannot be.

STR.

Then being and the same cannot be one.

THEAET.

Scarcely.

STR.

Then we may suppose the same to be a fourth class, which is now to be added to the three others.

THEAET.

Quite true.

STR.

And shall we call the other a fifth class? Or should we consider being and other to be two names of the same class?

nor yet with 'the
other,' which is
relative only, and
never absolute.

THEAET.

Very likely.

STR.

But you would agree, if I am not mistaken, that existences are relative as well as absolute?

THEAET.

Certainly.

STR.

And the other is always relative to other?

THEAET.

True.

STR.

But this would not be the case unless being and the other entirely differed; for, if the other, like being, were absolute as well as relative, then there would have been a kind of other which was not other than other. And now we find that what is other must of necessity be what it is in relation to some other.

THEAET.

That is the true state of the case.

STR.

Then we must admit the other as the fifth of our selected classes.

THEAET.

Yes.

STR.

And the fifth class pervades all classes, for they all differ from one another, not by reason of their own nature, but because they partake of the idea of the other.

This fifth class of 'the other' pervades all classes, and helps to distinguish them.

THEAET.

Quite true.

STR.

Then let us now put the case with reference to each of the five.

THEAET.

How?

STR.

First there is motion, which we affirm to be absolutely 'other' than rest: what else can we say?

Thus motion is other than rest,—i.e. is not rest; yet it *is*, since it partakes of being.

THEAET.

It is so.

STR.

And therefore is not rest.

THEAET.

Certainly not.

STR.

And yet is, because partaking of being.

THEAET.

256 True.

STR.

Again, motion is other than the same?

THEAET.

Just so.

STR.

And is therefore not the same.

It is other than the same and not the same, but in different senses.

THEAET.

It is not.

STR.

Yet, surely, motion is the same, because all things partake of the same.

THEAET.

Very true.

STR.

Then we must admit, and not object to say, that motion is the same and is not the same, for we do not apply the terms 'same' and 'not the same,' in the same sense; but we call it the 'same,' in relation to itself, because partaking of the same; and not the same, because having communion with the other, it is thereby severed from the same, and has become not that but other, and is therefore rightly spoken of as 'not the same.'

THEAET.

To be sure.

STR.

And if absolute motion in any point of view partook of rest, there would be no absurdity in calling motion stationary.

THEAET.

Quite right,—that is, on the supposition that some classes mingle with one another, and others not.

STR.

That such a communion of kinds is according to nature, we had already proved [1](#) before we arrived at this part of our discussion.

THEAET.

Certainly.

STR.

Let us proceed, then. May we not say that motion is other than the other, having been also proved by us to be other than the same and other than rest?

Again, motion is other than the other; and therefore other and not other.

THEAET.

That is certain.

STR.

Then, according to this view, motion is other and also not other?

THEAET.

True.

STR.

What is the next step? Shall we say that motion is other than the three and not other than the fourth,—for we agreed that there are five classes about and in the sphere of which we proposed to make enquiry?

THEAET.

Surely we cannot admit that the number is less than it appeared to be just now.

STR.

Then we may without fear contend that motion is other than being?

Once more, motion is other than being, yet partakes of being, and therefore is and is not.

THEAET.

Without the least fear.

STR.

The plain result is that motion, since it partakes of being, really is and also is not?

THEAET.

Nothing can be plainer.

STR.

Then not-being necessarily exists in the case of motion and of every class; for the nature of the other entering into them all, makes each of them other than being, and so non-existent; and therefore of all of them, in like manner, we may truly say that they are not; and again, inasmuch as they partake of being, that they are and are existent.

Thus there is found to be an existence of not-being in the case of motion, occasioned by the nature of the other, and in every other kind, being not excepted. For being is itself, but is not all other things.

THEAET.

So we may assume.

STR.

Every class, then, has plurality of being and infinity of not-being.

THEAET.

257So we must infer.

STR.

And being itself may be said to be other than the other kinds.

THEAET.

Certainly.

STR.

Then we may infer that being is not, in respect of as many other things as there are; for not being these it is itself one, and is not the other things, which are infinite in number.

THEAET.

That is not far from the truth.

STR.

And we must not quarrel with this result, since it is of the nature of classes to have communion with one another; and if any one denies our present statement [viz. that being is not, etc.], let him first argue with our former conclusion [i.e. respecting the communion of ideas], and then he may proceed to argue with what follows.

THEAET.

Nothing can be fairer.

STR.

Let me ask you to consider a further question.

THEAET.

What question?

STR.

When we speak of not-being, we speak, I suppose, not of something opposed to being, but only different.

THEAET.

What do you mean?

STR.

When we speak of something as not great, does the expression seem to you to imply what is little any more than what is equal?

THEAET.

Certainly not.

STR.

The negative particles, ο? and μ?, when prefixed to words, do not imply opposition, but only difference from the words, or more correctly from the things represented by the words, which follow them.

A negative particle does not imply opposition, but only difference.

THEAET.

Quite true.

STR.

There is another point to be considered, if you do not object.

THEAET.

What is it?

STR.

The nature of the other appears to me to be divided into fractions like knowledge.

The parts of otherness or difference and of knowledge correspond: the former are expressed by prefixing 'not' to the names of the corresponding parts of knowledge.

THEAET.

How so?

STR.

Knowledge, like the other, is one; and yet the various parts of knowledge have each of them their own particular name, and hence there are many arts and kinds of knowledge.

THEAET.

Quite true.

STR.

And is not the case the same with the parts of the other, which is also one?

THEAET.

Very likely; but will you tell me how?

STR.

There is some part of the other which is opposed to the beautiful?

THEAET.

There is.

STR.

Shall we say that this has or has not a name?

THEAET.

It has; for whatever we call not-beautiful is other than the beautiful, not than something else.

STR.

And now tell me another thing.

THEAET.

What?

STR.

Is the not-beautiful anything but this—an existence parted off from a certain kind of existence, and again from another point of view opposed to an existing something?

Thus the not-beautiful is the other of the beautiful, and is equally real with it.

THEAET.

True.

STR.

Then the not-beautiful turns out to be the opposition of being to being?

THEAET.

Very true.

STR.

But upon this view, is the beautiful a more real and the not-beautiful a less real existence?

THEAET.

Not at all.

STR.

And the not-great may be said to exist, equally with the great?

And so of other things.

THEAET.

Yes.

STR.

And, in the same way, the just must be placed in the same category with the not-just—the one cannot be said to have any more existence than the other.

THEAET.

True.

STR.

The same may be said of other things; seeing that the nature of the other has a real existence, the parts of this nature must equally be supposed to exist.

THEAET.

Of course.

STR.

Then, as would appear, the opposition of a part of the other, and of a part of being, to one another, is, if I may venture to say so, as truly essence as being itself, and implies not the opposite of being, but only what is other than being.

The opposition between the parts of being and other is also being.

THEAET.

Beyond question.

STR.

What then shall we call it?

THEAET.

Clearly, not-being; and this is the very nature for which the Sophist compelled us to search.

STR.

And has not this, as you were saying, as real an existence as any other class? May I not say with confidence that not-being has an assured existence, and a nature of its own? Just as the great was found to be great and the beautiful beautiful, and the not-great not-great, and the not-beautiful not-beautiful, in the same manner not-being has been found to be and is not-being, and is to be reckoned one among the many classes of being. Do you, Theaetetus, still feel any doubt of this?

Not-being is a kind of being.

THEAET.

None whatever.

STR.

Do you observe that our scepticism has carried us beyond the range of Parmenides' prohibition?

THEAET.

In what?

STR.

We have advanced to a further point, and shown him more than he forbade us to investigate.

THEAET.

How is that?

STR.

Why, because he says—

‘Not-being never is 1, and do thou keep thy thoughts from this way of enquiry.’

THEAET.

Yes, he says so.

STR.

Whereas, we have not only proved that things which are not are, but we have shown what form of being not-being is; for we have shown that the nature of the other is, and is distributed over all things in their relations to one another, and whatever part of the other is contrasted with being, this is precisely what we have ventured to call not-being.

which includes all things other than some given thing.

THEAET.

And surely, Stranger, we were quite right.

STR.

Let not any one say, then, that while affirming the opposition of not-being to being, we still assert the being of not-being; for as to whether there is an opposite of being, to that enquiry we have long said good-bye—it may or may not be, and may or may not be capable of definition. But as touching our present account of not-being, let a man either convince us of error, or, so long as he cannot, he too must say, as we are saying, that there is a communion of classes, and that being, and difference or other, traverse all things and mutually interpenetrate, so that the other partakes of being, and by reason of this participation is, and yet is not that of which it partakes, but other, and being other than being, it is clearly a necessity that not-being should be. And again, being, through partaking of the other, becomes a class other than the remaining classes, and being other than all of them, is not each one of them, and is not all the rest, so that undoubtedly there are thousands upon thousands of cases in which being is not, and all other things, whether regarded individually or collectively, in many respects are, and in many respects are not.

Our theory rests upon the communion of kinds.

THEAET.

True.

STR.

And he who is sceptical of this contradiction, must think how he can find something better to say; or if he sees a puzzle, and his pleasure is to drag words this way and that, the argument will prove to him, that he is not making a worthy use of his faculties; for there is no charm in such puzzles, and there is no difficulty in detecting them; but we can tell him of something else the pursuit of which is noble and also difficult.

We should let alone verbal puzzles.

THEAET.

What is it?

STR.

A thing of which I have already spoken;—letting alone these puzzles as involving no difficulty, he should be able to follow and criticize in detail every argument, and when a man says that the same is in a manner other, or that other is the same, to understand and refute him from his own point of view, and in the same respect in which he asserts either of these affections. But to show that somehow and in some sense the same is other, or the other same, or the great small, or the like unlike; and to delight in always bringing forward such contradictions, is no real refutation, but is clearly the new-born babe of some one who is only beginning to approach the problem of being.

THEAET.

To be sure.

STR.

For certainly, my friend, the attempt to separate all existences from one another is a barbarism and utterly unworthy of an educated or philosophical mind.

THEAET.

Why so?

STR.

The attempt at universal separation is the final annihilation of all reasoning; for only by the union of conceptions with one another do we attain to discourse of reason.

THEAET.

True.

STR.

And, observe that we were only just in time in making a resistance to such separatists, and compelling them to admit that one thing mingles with another.

THEAET.

Why so?

STR.

Why, that we might be able to assert discourse to be a kind of being; for if we could not, the worst of all consequences would follow; we should have no philosophy. Moreover, the necessity for determining the nature of discourse presses upon us at this moment; if utterly deprived of it, we could no more hold discourse; and deprived of it we should be if we admitted that there was no admixture of natures at all.

The utter separation of all existences would deprive us of discourse, and without discourse we could have no philosophy.

THEAET.

Very true. But I do not understand why at this moment we must determine the nature of discourse.

STR.

Perhaps you will see more clearly by the help of the following explanation.

THEAET.

What explanation?

STR.

Not-being has been acknowledged by us to be one among many classes diffused over all being.

THEAET.

True.

STR.

And thence arises the question, whether not-being mingles with opinion and language.

THEAET.

How so?

STR.

If not-being has no part in the proposition, then all things must be true; but if not-being has a part, then false opinion and false speech are possible, for to think or to say what is not—is falsehood, which thus arises in the region of thought and in speech.

THEAET.

That is quite true.

STR.

And where there is falsehood surely there must be deceit.

THEAET.

Yes.

STR.

And if there is deceit, then all things must be full of idols and images and fancies.

THEAET.

To be sure.

STR.

Into that region the Sophist, as we said, made his escape, and, when he had got there, denied the very possibility of falsehood; no one, he argued, either conceived or uttered falsehood, inasmuch as not-being did not in any way partake of being.

We left the Sophist, in the region of images, denying the possibility of falsehood. But now that not-being has been shown to partake of being, this line of defence can no longer be maintained. Yet he will still evade us by denying that opinion and language partake of not-being.

THEAET.

True.

STR.

And now, not-being has been shown to partake of being, and therefore he will not continue fighting in this direction, but he will probably say that some ideas partake of not-being, and some not, and that language and opinion are of the non-partaking class; and he will still fight to the death against the existence of the image-making and phantastic art, in which we have placed him, because, as he will say, opinion and language do not partake of not-being, and unless this participation exists, there can be no such thing as falsehood. And, with the view of meeting this evasion, we must begin by enquiring into the nature of language, opinion, and imagination, in order that when we find them we may find also that they have communion with not-being, and, having made out the connexion of them, may thus prove that falsehood exists; and therein we will imprison the Sophist, if he deserves it, or, if not, we will let him go again and look for him in another class.

THEAET.

Certainly, Stranger, there appears to be truth in what was said about the Sophist at first, that he was of a class not easily caught, for he seems to have abundance of defences, which he throws up, and which must every one of them be stormed before we can reach the man himself. And even now, we have with difficulty got through his first defence, which is the not-being of not-being, and lo! here is another; for we have still to show that falsehood exists in the sphere of language and opinion, and there will be another and another line of defence without end.

Stranger, Theaetetus.

STR.

Any one, Theaetetus, who is able to advance even a little ought to be of good cheer, for what would he who is dispirited at a little progress do, if he were making none at all, or even undergoing a repulse? Such a faint heart, as the proverb says, will never take a city: but now that we have succeeded thus far, the citadel is ours, and what remains is easier.

THEAET.

Very true.

STR.

Then, as I was saying, let us first of all obtain a conception of language and opinion, in order that we may have clearer grounds for determining, whether not-being has any concern with them, or whether they are both always true, and neither of them ever false.

We want to obtain a clear conception of language and opinion.

THEAET.

True.

STR.

Then, now, let us speak of names, as before we were speaking of ideas and letters; for that is the direction in which the answer may be expected.

THEAET.

And what is the question at issue about names?

As with letters, so with names: only some can be connected.

STR.

The question at issue is whether all names may be connected with one another, or none, or only some of them.

THEAET.

Clearly the last is true.

STR.

I understand you to say that words which have a meaning when in sequence may be connected, but that words which have no meaning when in sequence cannot be connected?

THEAET.

What are you saying?

STR.

What I thought that you intended when you gave your assent; for there are two sorts of intimation of being which are given by the voice.

THEAET.

What are they?

STR.

One of them is called nouns, and the other verbs.

THEAET.

Describe them.

STR.

262 That which denotes action we call a verb.

THEAET.

True.

STR.

And the other, which is an articulate mark set on those who do the actions, we call a noun.

THEAET.

Quite true.

STR.

A succession of nouns only is not a sentence, any more than of verbs without nouns.

Neither nouns alone
nor verbs alone make
a sentence.

THEAET.

I do not understand you.

STR.

I see that when you gave your assent you had something else in your mind. But what I intended to say was, that a mere succession of nouns or of verbs is not discourse.

THEAET.

What do you mean?

STR.

I mean that words like ‘walks,’ ‘runs,’ ‘sleeps,’ or any other words which denote action, however many of them you string together, do not make discourse.

THEAET.

How can they?

STR.

Or, again, when you say ‘lion,’ ‘stag,’ ‘horse,’ or any other words which denote agents—neither in this way of stringing words together do you attain to discourse; for there is no expression of action or inaction, or of the existence of existence or non-existence indicated by the sounds, until verbs are mingled with nouns; then the words fit, and the smallest combination of them forms language, and is the simplest and least form of discourse.

THEAET.

Again I ask, What do you mean?

STR.

When any one says ‘A man learns,’ should you not call this the simplest and least of sentences?

THEAET.

Yes.

STR.

Yes, for he now arrives at the point of giving an intimation about something which is, or is becoming, or has become, or will be. And he not only names, but he does something, by connecting verbs with nouns; and therefore we say that he discourses, and to this connexion of words we give the name of discourse.

THEAET.

True.

STR.

And as there are some things which fit one another, and other things which do not fit, so there are some vocal signs which do, and others which do not, combine and form discourse.

THEAET.

Quite true.

STR.

There is another small matter.

THEAET.

What is it?

STR.

A sentence must and cannot help having a subject.

THEAET.

True.

STR.

And must be of a certain quality.

THEAET.

Certainly.

STR.

And now let us mind what we are about.

THEAET.

We must do so.

A sentence must have a subject, and be of a certain quality,—i. e. true or false.

STR.

I will repeat a sentence to you in which a thing and an action are combined, by the help of a noun and a verb; and you shall tell me of whom the sentence speaks.

Examples.

THEAET.

I will, to the best of my power.

STR.

263 ‘Theaetetus sits’—not a very long sentence.

THEAET.

Not very.

STR.

Of whom does the sentence speak, and who is the subject? that is what you have to tell.

THEAET.

Of me; I am the subject.

STR.

Or this sentence, again—

THEAET.

What sentence?

STR.

‘Theaetetus, with whom I am now speaking, is flying.

THEAET.

That also is a sentence which will be admitted by every one to speak of me, and to apply to me.

STR.

We agreed that every sentence must necessarily have a certain quality.

THEAET.

Yes.

STR.

And what is the quality of each of these two sentences?

THEAET.

The one, as I imagine, is false, and the other true.

STR.

The true says what is true about you?

THEAET.

Yes.

STR.

And the false says what is other than true?

THEAET.

Yes.

STR.

And therefore speaks of things which are not as if they were?

THEAET.

True.

STR.

And says that things are real of you which are not; for, as we were saying, in regard to each thing or person, there is much that is and much that is not.

THEAET.

Quite true.

A true sentence says what is true of its subject, a false sentence what is false.

STR.

The second of the two sentences which related to you was first of all an example of the shortest form consistent with our definition.

THEAET.

Yes, this was implied in our recent admission.

STR.

And, in the second place, it related to a subject?

THEAET.

Yes.

STR.

Who must be you, and can be nobody else?

THEAET.

Unquestionably.

STR.

And it would be no sentence at all if there were no subject, for, as we proved, a sentence which has no subject is impossible.

THEAET.

Quite true.

STR.

When other, then, is asserted of you as the same, and not-being as being, such a combination of nouns and verbs is really and truly false discourse.

THEAET.

Most true.

Thus false discourse is possible, and therefore false thought, opinion, imagination, which are akin to it, are also possible.

STR.

And therefore thought, opinion, and imagination are now proved to exist in our minds both as true and false.

THEAET.

How so?

STR.

You will know better if you first gain a knowledge of what they are, and in what they severally differ from one another.

THEAET.

Give me the knowledge which you would wish me to gain.

STR.

Are not thought and speech the same, with this exception, that what is called thought is the unuttered conversation of the soul with herself?

Thought is the unuttered conversation of the soul, which, when uttered, becomes speech.

THEAET.

Quite true.

STR.

But the stream of thought which flows through the lips and is audible is called speech?

THEAET.

True.

STR.

And we know that there exists in speech . . .

Opinion is silent affirmation or denial.

THEAET.

What exists?

STR.

Affirmation.

THEAET.

Yes, we know it. 264

STR.

When the affirmation or denial takes place in silence and in the mind only, have you any other name by which to call it but opinion?

THEAET.

There can be no other name.

STR.

And when opinion is presented, not simply, but in some form of sense, would you not call it imagination?

Imagination is opinion expressed in a form of sense.

THEAET.

Certainly.

STR.

And seeing that language is true and false, and that thought is the conversation of the soul with herself, and opinion is the end of thinking, and imagination or phantasy is the union of sense and opinion, the inference is that some of them, since they are akin to language, should have an element of falsehood as well as of truth?

THEAET.

Certainly.

STR.

Do you perceive, then, that false opinion and speech have been discovered sooner than we expected?—For just now we seemed to be undertaking a task which would never be accomplished.

THEAET.

I perceive.

STR.

Then let us not be discouraged about the future; but now having made this discovery, let us go back to our previous classification.

Recapitulation from 235 ff. (*supra*).—We divided image-making into likeness-making and phantastic, and then the difficulty which we have just solved arose.

THEAET.

What classification?

STR.

We divided image-making into two sorts; the one likeness-making, the other imaginative or phantastic.

THEAET.

True.

STR.

And we said that we were uncertain in which we should place the Sophist.

THEAET.

We did say so.

STR.

And our heads began to go round more and more when it was asserted that there is no such thing as an image or idol or appearance, because in no manner or time or place can there ever be such a thing as falsehood.

THEAET.

True.

STR.

And now, since there has been shown to be false speech and false opinion, there may be imitations of real existences, and out of this condition of the mind an art of deception may arise.

THEAET.

Quite possible.

STR.

And we have already admitted, in what preceded, that the Sophist was lurking in one of the divisions of the likeness-making art?

THEAET.

Yes.

STR.

Let us, then, renew the attempt, and in dividing any class, always take the part to the right, holding fast to that which holds the Sophist, until we have stripped him of all his common properties, and reached his difference or 265peculiar. Then we may exhibit him in his true nature, first to ourselves and then to kindred dialectical spirits.

THEAET.

Very good.

STR.

You may remember that all art was originally divided by us into creative and acquisitive.

THEAET.

Yes.

STR.

And the Sophist was flitting before us in the acquisitive class, in the subdivisions of hunting, contests, merchandize, and the like.

THEAET.

Very true.

STR.

We have traced the Sophist's descent through the subdivisions of acquisitive: let us now look for him in the branches of creative, of which imitation is

But now that the imitative art has enclosed him, it is clear that we must begin by dividing the art of creation; for imitation is a kind of creation—of images, however, as we affirm, and not of real things.

one. Creative art is (1) human, (2) divine.

THEAET.

Quite true.

STR.

In the first place, there are two kinds of creation.

THEAET.

What are they?

STR.

One of them is human and the other divine.

THEAET.

I do not follow.

STR.

Every power, as you may remember our saying originally, which causes things to exist, not previously existing, was defined by us as creative.

THEAET.

I remember.

STR.

Looking, now, at the world and all the animals and plants, at things which grow upon the earth from seeds and roots, as well as at inanimate substances which are formed within the earth, fusile or non-fusile, shall we say that they come into existence—not having existed previously—by the creation of God, or shall we agree with vulgar opinion about them?

THEAET.

What is it?

STR.

The opinion that nature brings them into being from some spontaneous and unintelligent cause. Or shall we say that they are created by a divine reason and a knowledge which comes from God?

Nature is to be attributed to an intelligent cause, not to an unintelligent.

THEAET.

I dare say that, owing to my youth, I may often waver in my view, but now when I look at you and see that you incline to refer them to God, I defer to your authority.

STR.

Nobly said, Theaetetus, and if I thought that you were one of those who would hereafter change your mind, I would have gently argued with you, and forced you to assent; but as I perceive that you will come of yourself and without any argument of mine, to that belief which, as you say, attracts you, I will not forestall the work of time. Let me suppose, then, that things which are said to be made by nature are the work of divine art, and that things which are made by man out of these are works of human art. And so there are two kinds of making and production, the one human and the other divine.

THEAET.

True.

STR.

Then, now, subdivide each of the two sections which we have already.

THEAET.

How do you mean?

STR.

266I mean to say that you should make a vertical division of production or invention, as you have already made a lateral one.

THEAET.

I have done so.

STR.

Then, now, there are in all four parts or segments—two of them have reference to us and are human, and two of them have reference to the gods and are divine.

Both in divine and in human creation there is a division for realities and a division for images and likenesses.

THEAET.

True.

STR.

And, again, in the division which was supposed to be made in the other way, one part in each subdivision is the making of the things themselves, but the two remaining parts may be called the making of likenesses; and so the productive art is again divided into two parts.

THEAET.

Tell me the divisions once more.

STR.

I suppose that we, and the other animals, and the elements out of which things are made—fire, water, and the like—are known by us to be each and all the creation and work of God.

THEAET.

True.

STR.

And there are images of them, which are not them, but which correspond to them; and these are also the creation of a wonderful skill.

Divinely made images are such as dreams, shadows, transposed likenesses.

THEAET.

What are they?

STR.

The appearances which spring up of themselves in sleep or by day, such as a shadow when darkness arises in a fire, or the reflection which is produced when the light in bright and smooth objects meets on their surface with an external light, and creates a perception the opposite of our ordinary sight.

THEAET.

Yes; and the images as well as the creation are equally the work of a divine hand.

STR.

And what shall we say of human art? Do we not make one house by the art of building, and another by the art of drawing, which is a sort of dream created by man for those who are awake?

A human image is (e. g.) the drawing of a house.

THEAET.

Quite true.

STR.

And other products of human creation are also twofold and go in pairs; there is the thing, with which the art of making the thing is concerned, and the image, with which imitation is concerned.

THEAET.

Now I begin to understand, and am ready to acknowledge that there are two kinds of production, and each of them twofold; in the lateral division there is both a divine and a human production; in the vertical there are realities and a creation of a kind of similitudes.

STR.

And let us not forget that of the imitative class the one part was to have been likeness-making, and the other phantastic, if it could be shown that falsehood is a reality and belongs to the class of real being.

Such unrealities are produced by phantastic.

THEAET.

Yes.

STR.

And this appeared to be the case; and therefore now, without hesitation, we shall number the different kinds as two.

THEAET.

True.

STR.

Then, now, let us again divide the phantastic art. 267

THEAET.

Phantastic is further divided into mimicry or imitation and a nameless section.

Where shall we make the division?

STR.

There is one kind which is produced by an instrument, and another in which the creator of the appearance is himself the instrument.

THEAET.

What do you mean?

STR.

When any one makes himself appear like another in his figure or his voice, imitation is the name for this part of the phantastic art.

THEAET.

Yes.

STR.

Let this, then, be named the art of mimicry, and this the province assigned to it; as for the other division, we are weary and will give that up, leaving to some one else the duty of making the class and giving it a suitable name.

THEAET.

Let us do as you say—assign a sphere to the one and leave the other.

STR.

There is a further distinction, Theaetetus, which is worthy of our consideration, and for a reason which I will tell you.

THEAET.

Let me hear.

A further distinction is to be drawn between the mimic who knows, and the mimic who is ignorant.

STR.

There are some who imitate, knowing what they imitate, and some who do not know. And what line of distinction can there possibly be greater than that which divides ignorance from knowledge?

THEAET.

There can be no greater.

STR.

Was not the sort of imitation of which we spoke just now the imitation of those who know? For he who would imitate you would surely know you and your figure?

THEAET.

Naturally.

STR.

And what would you say of the figure or form of justice or of virtue in general? Are we not well aware that many, having no knowledge of either, but only a sort of opinion, do their best to show that this opinion is really entertained by them, by expressing it, as far as they can, in word and deed?

THEAET.

Yes, that is very common.

STR.

And do they always fail in their attempt to be thought just, when they are not? Or is not the very opposite true?

THEAET.

The very opposite.

STR.

Such a one, then, should be described as an imitator—to be distinguished from the other, as he who is ignorant is distinguished from him who knows?

THEAET.

True.

STR.

Can we find a suitable name for each of them? This is clearly not an easy task; for among the ancients there was some confusion of ideas, which prevented them from attempting to divide genera into species; wherefore there is no great abundance of names.

The latter is the mimic of appearance; the former, the learned mimic.

Yet, for the sake of distinctness, I will make bold to call the imitation which coexists with opinion, the imitation of appearance—that which coexists with science, a scientific or learned imitation.

THEAET.

Granted.

STR.

The former is our present concern, for the Sophist was classed with imitators indeed, but not among those who have knowledge.

THEAET.

Very true.

STR.

Let us, then, examine our imitator of appearance, and see whether he is sound, like a piece of iron, or whether there is still some crack in him.

THEAET.

Let us examine him.

STR.

Indeed there is a very considerable crack; for if you look, you find that one of the two classes of imitators is a simple creature, who thinks that he knows that which he only fancies; the other sort has knocked about among arguments, until he suspects and fears that he is ignorant of that which to the many he pretends to know.

The mimic of appearance may be unconscious of his ignorance or a dissembler.

THEAET.

There are certainly the two kinds which you describe.

STR.

Shall we regard one as the simple imitator—the other as the dissembling or ironical imitator?

THEAET.

Very good.

STR.

And shall we further speak of this latter class as having one or two divisions?

There is a dissembler in public and a dissembler in private. The latter is the Sophist.

THEAET.

Answer yourself.

STR.

Upon consideration, then, there appear to me to be two; there is the dissembler, who harangues a multitude in public in a long speech, and the dissembler, who in private and in short speeches compels the person who is conversing with him to contradict himself.

THEAET.

What you say is most true.

STR.

And who is the maker of the longer speeches? Is he the statesman or the popular orator?

THEAET.

The latter.

STR.

And what shall we call the other? Is he the philosopher or the Sophist?

THEAET.

The philosopher he cannot be, for upon our view he is ignorant; but since he is an imitator of the wise he will have a name which is formed by an adaptation of the word

σοφός. What shall we name him? I am pretty sure that I cannot be mistaken in terming him the true and very Sophist.

STR.

Shall we bind up his name as we did before, making a chain from one end of his genealogy to the other?

THEAET.

By all means.

STR.

He, then¹, who traces the pedigree of his art as follows—who, belonging to the conscious or dissembling section of the art of causing self-contradiction, is an imitator of appearance, and is separated from the class of phantastic which is a branch of image-making into that further division of creation, the juggling of words, a creation human, and not divine—any one who affirms the real Sophist to be of this blood and lineage will say the very truth.

His full genealogy.

THEAET.

Undoubtedly.

STATESMAN.

PERSONS OF THE DIALOGUE.

Theodorus.

Socrates.

The Eleatic Stranger.

The Younger Socrates.

SOCRATES.

257 I owe you many thanks, indeed, Theodorus, for the acquaintance both of Theaetetus and of the Stranger.

Statesman.

Socrates, Theodorus,
Stranger.

THEODORUS.

And in a little while, Socrates, you will owe me three times as many, when they have completed for you the delineation of the Statesman and of the Philosopher, as well as of the Sophist.

SOC.

Sophist, statesman, philosopher! O my dear Theodorus, do my ears truly witness that this is the estimate formed of them by the great calculator and geometrician?

THEOD.

What do you mean, Socrates?

SOC.

I mean that you rate them all at the same value, whereas they are really separated by an interval, which no geometrical ratio can express.

THEOD.

By Ammon, the god of Cyren?, Socrates, that is a very fair hit; and shows that you have not forgotten your geometry. I will retaliate on you at some other time, but I must now ask the Stranger, who will not, I hope, tire of his goodness to us, to proceed either with the Statesman or with the Philosopher, whichever he prefers.

STRANGER.

That is my duty, Theodorus; having begun I must go on, and not leave the work unfinished. But what shall be done with Theaetetus?

THEOD.

In what respect?

STR.

Shall we relieve him, and take his companion, the Young Socrates, instead of him? What do you advise?

THEOD.

Yes, give the other a turn, as you propose. The young always do better when they have intervals of rest.

Only a third of our task is done, or rather much less than a third; such a geometrician as Theodorus must know that the Statesman rises above the Sophist, and the Philosopher above the Statesman, in more than a geometrical ratio.

Socrates, Theodorus, Stranger, Young Socrates.

SOC.

I think, Stranger, that both of them may be said to be in some way related to me; for the one, as you affirm, has the cut of my ugly face¹, the other is called by my name. And we should always be on the look-out to recognize a kinsman by the style of his conversation. I myself was discoursing with Theaetetus yesterday, and I have just been listening to his answers; my namesake I have not yet examined, but I must. Another time will do for me; to-day let him answer you.

Socrates encourages his young namesake to discourse with the Stranger.

STR.

Very good. Young Socrates, do you hear what the elder Socrates is proposing?

YOUNG SOCRATES.

I do.

STR.

And do you agree to his proposal?

Y. SOC.

Certainly.

STR.

As you do not object, still less can I. After the Sophist, then, I think that the Statesman naturally follows next in the order of enquiry. And please to say, whether he, too, should be ranked among those who have science.

After the Sophist comes the Statesman.

Y. SOC.

Yes.

STR.

Then the sciences must be divided as before?

Y. SOC.

I dare say.

STR.

But yet the division will not be the same?

Y. SOC.

How then?

STR.

They will be divided at some other point.

Y. SOC.

Yes.

STR.

Where shall we discover the path of the Statesman? We must find and separate off, and set our seal upon this, and we will set the mark of another class upon all diverging paths. Thus the soul will conceive of all kinds of knowledge under two classes.

Where among the sciences shall we discover his path?

Y. SOC.

To find the path is your business, Stranger, and not mine.

STR.

Yes, Socrates, but the discovery, when once made, must be yours as well as mine.

Y. SOC.

Very good.

STR.

Well, and are not arithmetic and certain other kindred arts, merely abstract knowledge, wholly separated from action?

Stranger, Young Socrates.

Y. SOC.

True.

STR.

But in the art of carpentering and all other handicrafts, the knowledge of the workman is merged in his work; he not only knows, but he also makes things which previously did not exist.

Y. SOC.

Certainly.

STR.

Then let us divide sciences in general into those which are practical and those which are purely intellectual.

Sciences are practical or intellectual.

Y. SOC.

Let us assume these two divisions of science, which is one whole.

STR.

And are 'statesman,' 'king,' 'master,' or 'householder,' one and the same; or is there a science or art answering to each of these names? Or rather, allow me to put the matter in another way.

Y. SOC.

259Let me hear.

STR.

If any one who is in a private station has the skill to advise one of the public physicians, must not he also be called a physician?

Y. SOC.

Yes.

STR.

We note that royal science may be possessed by a private man as well as by a king, and that a large household is like a small state; whence we draw the inference

And if any one who is in a private station is able to advise the ruler of a country, may not he be said to have the knowledge which the ruler himself ought to have?

that king, statesman, master, householder are the same.

Y. SOC.

True.

STR.

But surely the science of a true king is royal science?

Y. SOC.

Yes.

STR.

And will not he who possesses this knowledge, whether he happens to be a ruler or a private man, when regarded only in reference to his art, be truly called ‘royal’?

Y. SOC.

He certainly ought to be.

STR.

And the householder and master are the same?

Y. SOC.

Of course.

STR.

Again, a large household may be compared to a small state:—will they differ at all, as far as government is concerned?

Y. SOC.

They will not.

STR.

Then, returning to the point which we were just now discussing, do we not clearly see that there is one science of all of them; and this science may be called either royal or political or economical; we will not quarrel with any one about the name.

Y. SOC.

Certainly not.

STR.

This, too, is evident, that the king cannot do much with his hands, or with his whole body, towards the maintenance of his empire, compared with what he does by the intelligence and strength of his mind.

Y. SOC.

Clearly not.

STR.

Then, shall we say that the king has a greater affinity to knowledge than to manual arts and to practical life in general?

The royal science has a greater affinity to knowledge than to the manual arts or to practical life.

Y. SOC.

Certainly he has.

STR.

Then we may put all together as one and the same—statesmanship and the statesman—the kingly science and the king.

Y. SOC.

Clearly.

STR.

And now we shall only be proceeding in due order if we go on to divide the sphere of knowledge?

Y. SOC.

Very good.

STR.

Think whether you can find any joint or parting in knowledge.

Y. SOC.

Tell me of what sort.

STR.

Such as this: You may remember that we made an art of calculation?

Arithmetic is the type of one kind of abstract science,—which judges; the art of building of another,—which commands.

Y. SOC.

Yes.

STR.

Which was, unmistakeably, one of the arts of knowledge?

Y. SOC.

Certainly.

STR.

And to this art of calculation which discerns the differences of numbers shall we assign any other function except to pass judgment on their differences?

Y. SOC.

How could we?

STR.

You know that the master-builder does not work himself, but is the ruler of workmen?

Y. SOC.

Yes.

STR.

He contributes knowledge, not manual labour?

Y. SOC.

True.

STR.

And may therefore be justly said to share in theoretical science?

Y. SOC.

Quite true.

STR.

But he ought not, like the calculator, to regard his functions as at an end when he has formed a judgment;—he must assign to the individual workmen their appropriate task until they have completed the work.

Y. SOC.

True.

STR.

Are not all such sciences, no less than arithmetic and the like, subjects of pure knowledge; and is not the difference between the two classes, that the one sort has the power of judging only, and the other of ruling as well?

Y. SOC.

That is evident.

STR.

May we not very properly say, that of all knowledge, there are two divisions—one which rules, and the other which judges?

Y. SOC.

I should think so.

STR.

And when men have anything to do in common, that they should be of one mind is surely a desirable thing?

Y. SOC.

Very true.

STR.

Then while we are at unity among ourselves, we need not mind about the fancies of others?

Y. SOC.

Certainly not.

STR.

And now, in which of these divisions shall we place the king?—Is he a judge and a kind of spectator? Or shall we assign to him the art of command—for he is a ruler?

The king's knowledge is of the commanding sort, and falls in that division of it which is supreme, not subordinate.

Y. SOC.

The latter, clearly.

STR.

Then we must see whether there is any mark of division in the art of command too. I am inclined to think that there is a distinction similar to that of manufacturer and retail dealer, which parts off the king from the herald.

Y. SOC.

How is this?

STR.

Why, does not the retailer receive and sell over again the productions of others, which have been sold before?

Y. SOC.

Certainly he does.

STR.

And is not the herald under command, and does he not receive orders, and in his turn give them to others?

Y. SOC.

Very true.

STR.

Then shall we mingle the kingly art in the same class with the art of the herald, the interpreter, the boatswain, the prophet, and the numerous kindred arts which exercise command; or, as in the preceding comparison we spoke of manufacturers, or sellers for themselves, and of retailers,—seeing, too, that the class of supreme rulers, or rulers for themselves, is almost nameless—shall we make a word following the same analogy, and refer kings to a supreme or ruling-for-self science, leaving the rest to receive a name from some one else? For we are seeking the ruler; and our enquiry is not concerned with him who is not a ruler.

Y. SOC.

Very good.

STR.

Thus a very fair distinction has been attained between ²⁶¹the man who gives his own commands, and him who gives another's. And now let us see if the supreme power allows of any further division.

Y. SOC.

By all means.

STR.

I think that it does; and please to assist me in making the division.

Y. SOC.

At what point?

STR.

May not all rulers be supposed to command for the sake of producing something?

Command is for the sake of production,

Y. SOC.

Certainly.

STR.

Nor is there any difficulty in dividing the things produced into two classes.

Y. SOC.

How would you divide them?

STR.

Of the whole class, some have life and some are without life.

Y. SOC.

True.

STR.

And by the help of this distinction we may make, if we please, a subdivision of the section of knowledge which commands.

Y. SOC.

At what point?

STR.

One part may be set over the production of lifeless, the other of living objects; and in this way the whole will be divided.

which is either (1) of lifeless, or (2) of living objects.—The latter is the function of the king;

Y. SOC.

Certainly.

STR.

That division, then, is complete; and now we may leave one half, and take up the other; which may also be divided into two.

Y. SOC.

Which of the two halves do you mean?

STR.

Of course that which exercises command about animals. For, surely, the royal science is not like that of a master-workman, a science presiding over lifeless objects;—the king has a nobler function, which is the management and control of living beings.

Y. SOC.

True.

STR.

And the breeding and tending of living beings may be observed to be sometimes a tending of the individual; in other cases, a common care of creatures in flocks?

and he is the manager, not merely of individuals, but of creatures united in flocks.

Y. SOC.

True.

STR.

But the statesman is not a tender of individuals—not like the driver or groom of a single ox or horse; he is rather to be compared with the keeper of a drove of horses or oxen.

Y. SOC.

Yes, I see, thanks to you.

STR.

Shall we call this art of tending many animals together, the art of managing a herd, or the art of collective management?

It matters not whether we call his art managing a herd or collective management. If a man is not too particular about words, he will be all the richer in wisdom when he grows old.

Y. SOC.

No matter;—whichever suggests itself to us in the course of conversation.

STR.

Very good, Socrates; and, if you continue to be not too particular about names, you will be all the richer in wisdom when you are an old man. And now, as you say, leaving the discussion of the name,—can you see a way in which a person, by showing the art of herding to be of two kinds, may cause that which is now sought amongst twice the number of things, to be then sought amongst half that number?

Y. SOC.

Management of herds is of two kinds,—of men, and of

I will try;—there appears to me to be one management of men and another of beasts.

beasts.—But not so fast.

STR.

You have certainly divided them in a most straightforward and manly style; but you have fallen into an error which hereafter I think that we had better avoid.

Y. SOC.

What is the error?

STR.

I think that we had better not cut off a single small portion which is not a species, from many larger portions; the part should be a species. To separate off at once the subject of investigation, is a most excellent plan, if only the separation be rightly made; and you were under the impression that you were right, because you saw that you would come to man; and this led you to hasten the steps. But you should not chip off too small a piece, my friend; the safer way is to cut through the middle; which is also the more likely way of finding classes. Attention to this principle makes all the difference in a process of enquiry.

We have omitted intermediate steps, having only cut off one class from all the rest.

Y. SOC.

What do you mean, Stranger?

STR.

I will endeavour to speak more plainly out of love to your good parts, Socrates; and, although I cannot at present entirely explain myself, I will try, as we proceed, to make my meaning a little clearer.

Y. SOC.

What was the error of which, as you say, we were guilty in our recent division?

STR.

The error was just as if some one who wanted to divide the human race, were to divide them after the fashion which prevails in this part of the world; here they cut off the Hellenes as one species, and all the other species of mankind, which are innumerable, and have no ties or common language, they include under the single name of ‘barbarians,’ and because they have one name they are supposed to be of one species also. Or suppose that in dividing numbers you were to

Hellenes and barbarians is a similar example of false division.

cut off ten thousand from all the rest, and make of it one species, comprehending the rest under another separate name, you might say that here too was a single class, because you had given it a single name. Whereas you would make a much better and more equal and logical classification of numbers, if you divided them into odd and even; or of the human species, if you divided them into male and female; and only separated off Lydians or Phrygians, or any other tribe, and arrayed them against the rest of the world, when you could no longer make a division into parts which were also classes. 263

Y. SOC.

Very true; but I wish that this distinction between a part and a class could still be made somewhat plainer.

Part and class.

STR.

O Socrates, best of men, you are imposing upon me a very difficult task. We have already digressed further from our original intention than we ought, and you would have us wander still further away. But we must now return to our subject; and hereafter, when there is a leisure hour, we will follow up the other track; at the same time, I wish you to guard against imagining that you ever heard me declare—

Y. SOC.

What?

STR.

That a class and a part are distinct.

Y. SOC.

What did I hear, then?

STR.

That a class is necessarily a part, but there is no similar necessity that a part should be a class; that is the view which I should always wish you to attribute to me, Socrates.

Y. SOC.

So be it.

STR.

There is another thing which I should like to know.

Y. SOC.

What is it?

STR.

The point at which we digressed; for, if I am not mistaken, the exact place was at the question, Where you would divide the management of herds. To this you appeared rather too ready to answer that there were two species of animals; man being one, and all brutes making up the other.

Y. SOC.

True.

STR.

I thought that in taking away a part, you imagined that the remainder formed a class, because you were able to call them by the common name of brutes.

Y. SOC.

That again is true.

STR.

Suppose now, O most courageous of dialecticians, that some wise and understanding creature, such as a crane is reputed to be, were, in imitation of you, to make a similar division, and set up cranes against all other animals to their own special glorification, at the same time jumbling together all the others, including man, under the appellation of brutes,—here would be the sort of error which we must try to avoid.

The crane would divide living creatures into ‘cranes and all other animals.’

Y. SOC.

How can we be safe?

STR.

If we do not divide the whole class of animals, we shall be less likely to fall into that error.

Y. SOC.

We had better not take the whole?

STR.

Yes, there lay the source of error in our former division.

Y. SOC.

How?

STR.

You remember how that part of the art of knowledge which was concerned with command, had to do with the rearing of living creatures,—I mean, with animals in herds?

Y. SOC.

Yes.

STR.

264In that case, there was already implied a division of all animals into tame and wild; those whose nature can be tamed are called tame, and those which cannot be tamed are called wild.

In our haste we omitted the division of animals into tame and wild.

Y. SOC.

True.

STR.

And the political science of which we are in search, is and ever was concerned with tame animals, and is also confined to gregarious animals.

Y. SOC.

Yes.

STR.

But then we ought not to divide, as we did, taking the whole class at once. Neither let us be in too great haste to arrive quickly at the political science; for this mistake has already brought upon us the misfortune of which the proverb speaks.

Y. SOC.

What misfortune?

STR.

The misfortune of too much haste, which is too little speed.

Y. SOC.

And all the better, Stranger; we got what we deserved.

STR.

Very well: Let us then begin again, and endeavour to divide the collective rearing of animals; for probably the completion of the argument will best show what you are so anxious to know. Tell me, then—

Y. SOC.

What?

STR.

Have you ever heard, as you very likely may—for I do not suppose that you ever actually visited them—of the preserves of fishes in the Nile, and in the ponds of the Great King; or you may have seen similar preserves in wells at home?

The collective rearing of animals includes the rearing of both land and water herds.

Y. SOC.

Yes, to be sure, I have seen them, and I have often heard the others described.

STR.

And you may have heard also, and may have been assured by report, although you have not travelled in those regions, of nurseries of geese and cranes in the plains of Thessaly?

Y. SOC.

Certainly.

STR.

I asked you, because here is a new division of the management of herds, into the management of land and of water herds.

Y. SOC.

There is.

STR.

And do you agree that we ought to divide the collective rearing of herds into two corresponding parts, the one the rearing of water, and the other the rearing of land herds?

Y. SOC.

Yes.

STR.

There is surely no need to ask which of these two contains the royal art, for it is evident to everybody.

Y. SOC.

Certainly.

STR.

Any one can divide the herds which feed on dry land?

Y. SOC.

Land herds are of flying or walking animals.

How would you divide them?

STR.

I should distinguish between those which fly and those which walk.

Y. SOC.

Most true.

STR.

And where shall we look for the political animal? Might not an idiot, so to speak, know that he is a pedestrian?

Y. SOC.

Certainly.

STR.

The art of managing the walking animal has to be further divided, just as you might halve an even number.

Y. SOC.

Clearly.

STR.

265Let me note that here appear in view two ways to that part or class which the argument aims at reaching,—the one a speedier way, which cuts off a small portion and leaves a large; the other agrees better with the principle which we were laying down, that as far as we can we should divide in the middle; but it is longer. We can take either of them, whichever we please.

At this point we may take either a shorter or a longer way.

Y. SOC.

Cannot we have both ways?

STR.

Together? What a thing to ask! but, if you take them in turn, you clearly may.

Y. SOC.

Then I should like to have them in turn.

STR.

There will be no difficulty, as we are near the end; if we had been at the beginning, or in the middle, I should have demurred to your request; but now, in accordance with your desire, let us begin with the longer way; while we are fresh, we shall get on better. And now attend to the division.

Let us begin with the longer one.

Y. SOC.

Let me hear.

STR.

The tame walking and herding animals fall into two classes, as

The tame walking herding animals are distributed by nature into two classes.

they are with or without horns;

Y. SOC.

Upon what principle?

STR.

The one grows horns; and the other is without horns.

Y. SOC.

Clearly.

STR.

Suppose that you divide the science which manages pedestrian animals into two corresponding parts, and define them; for if you try to invent names for them, you will find the intricacy too great.

Y. SOC.

How must I speak of them, then?

STR.

In this way: let the science of managing pedestrian animals be divided into two parts, and one part assigned to the horned herd, and the other to the herd that has no horns.

Y. SOC.

All that you say has been abundantly proved, and may therefore be assumed.

STR.

The king is clearly the shepherd of a polled herd, who have no horns.

Y. SOC.

That is evident.

STR.

Shall we break up this hornless herd into sections, and endeavour to assign to him what is his?

Y. SOC.

By all means.

STR.

Shall we distinguish them by their having or not having cloven feet, or by their mixing or not mixing the breed? You know what I mean.

and the latter into those who do and do not mix the breed.

Y. SOC.

What?

STR.

I mean that horses and asses naturally breed from one another.

Y. SOC.

Yes.

STR.

But the remainder of the hornless herd of tame animals will not mix the breed.

Y. SOC.

Very true.

STR.

And of which has the Statesman charge,—of the mixed or of the unmixed race?

The Statesman has to do with the unmixed.

Y. SOC.

Clearly of the unmixed.

STR.

I suppose that we must divide this again as before.

Y. SOC.

We must.

STR.

Every tame and herding animal has now been split up, with the exception of two species; for I hardly think that dogs should be reckoned among gregarious animals.

Dogs are not herding animals, and may therefore be excluded.

Y. SOC.

Certainly not; but how shall we divide the two remaining species?

STR.

There is a measure of difference which may be appropriately employed by you and Theaetetus, who are students of geometry.

Y. SOC.

What is that?

STR.

The diameter; and, again, the diameter of a diameter¹.

Y. SOC.

What do you mean?

Next follows the division into bipeds and quadrupeds, who may be described mathematically as having a power of two and four feet.

STR.

How does man walk, but as a diameter whose power is two feet?

Y. SOC.

Just so.

STR.

And the power of the remaining kind, being the power of twice two feet, may be said to be the diameter of our diameter.

Y. SOC.

Certainly; and now I think that I pretty nearly understand you.

STR.

In these divisions, Socrates, I descry what would make another famous jest.

Y. SOC.

What is it?

STR.

Human beings have come out in the same class with the freest and airiest of creation, and have been running a race with them.

What fun! Men and birds alone remain, and the bird-catcher is running a race with the king.

Y. SOC.

I remark that very singular coincidence.

STR.

And would you not expect the slowest to arrive last?

Y. SOC.

Indeed I should.

STR.

And there is a still more ridiculous consequence, that the king is found running about with the herd, and in close competition with the bird-catcher, who of all mankind is most of an adept at the airy life².

Y. SOC.

Certainly.

STR.

Then here, Socrates, is still clearer evidence of the truth of what was said in the enquiry about the Sophist³.

Y. SOC.

What?

STR.

That the dialectical method is no respecter of persons, and does not set the great above the small, but always arrives in her own way at the truest result.

Truly dialectic is no respecter of persons.

Y. SOC.

Clearly.

STR.

And now, I will not wait for you to ask me, but will of my own accord take you by the shorter road to the definition of a king.

The shorter road.—Land-animals are bipeds or quadrupeds, and bipeds feathered or without feathers: the latter = man.

Y. SOC.

By all means.

STR.

I say that we should have begun at first by dividing land animals into biped and quadruped; and since the winged herd, and that alone, comes out in the same class with man, we should divide bipeds into those which have feathers and those which have not, and when they have been divided, and the art of the management of mankind is brought to light, the time will have come to produce our Statesman and ruler, and set him like a charioteer in his place, and hand over to him the reins of state, for that too is a vocation which belongs to him.

Y. SOC.

Very good; you have paid me the debt,—I mean, ²⁶⁷that you have completed the argument, and I suppose that you added the digression by way of interest¹ .

STR.

Then now, let us go back to the beginning, and join the links, which together make the definition of the name of the Statesman's art.

Y. SOC.

By all means.

STR.

The science of pure knowledge had, as we said originally, a part which was the science of rule or command, and from this was derived another part, which was called command-for-self, on the analogy of selling-for-self; an important section of this was the management of living animals, and this again was further limited to the management of them in herds, and again in herds of pedestrian animals. The chief division of the latter was the art of managing pedestrian animals which are without horns; this again has a part which can only be comprehended under one term by joining together three names,—shepherding pure-

Recapitulation.

bred animals. The only further subdivision is the art of man-herding,—this has to do with bipeds, and is what we were seeking after, and have now found, being at once the royal and political.

Y. SOC.

To be sure.

STR.

And do you think, Socrates, that we really have done as you say?

Y. SOC.

What?

STR.

Do you think, I mean, that we have really fulfilled our intention?—There has been a sort of discussion, and yet the investigation seems to me not to be perfectly worked out: this is where the enquiry fails.

But the argument is not really at an end.

Y. SOC.

I do not understand.

STR.

I will try to make the thought, which is at this moment present in my mind, clearer to us both.

Y. SOC.

Let me hear.

STR.

There were many arts of shepherding, and one of them was the political, which had the charge of one particular herd?

Y. SOC.

Yes.

STR.

And this the argument defined to be the art of rearing, not horses or other brutes, but the art of rearing man collectively?

Y. SOC.

True.

STR.

Note, however, a difference which distinguishes the king from all other shepherds.

Y. SOC.

To what do you refer?

STR.

I want to ask, whether any one of the other herdsmen has a rival who professes and claims to share with him in the management of the herd¹ ?

Y. SOC.

What do you mean?

STR.

I mean to say that merchants, husbandmen, providers of food, and also training-masters and physicians, will all contend with the herdsmen of humanity, whom we call Statesmen, declaring that they themselves have the care of rearing or managing mankind, and that they rear not only the common herd, but also the rulers themselves.

The king, unlike other herdsmen, has many rivals, who dispute his claims to the management of the herd.

Y. SOC.

Are they not right in saying so?

STR.

Very likely they may be, and we will consider their claim. But we are certain of this,—that no one will raise a similar claim as against the herdsman, who is allowed on all hands to be the sole and only feeder and physician of his herd; he is also their match-maker and accoucheur; no one else knows that department of science. And he is their merry-maker and musician, as far as their nature is susceptible of such influences, and no one can console and soothe his own herd better than he can, either

with the natural tones of his voice or with instruments. And the same may be said of tenders of animals in general.

Y. SOC.

Very true.

STR.

But if this is as you say, can our argument about the king be true and unimpeachable? Were we right in selecting him out of ten thousand other claimants to be the shepherd and rearer of the human flock?

Y. SOC.

Surely not.

STR.

Had we not reason just now [1](#) to apprehend, that although we may have described a sort of royal form, we have not as yet accurately worked out the true image of the Statesman? and that we cannot reveal him as he truly is in his own nature, until we have disengaged and separated him from those who hang about him and claim to share in his prerogatives?

How then can we maintain his position?

Y. SOC.

Very true.

STR.

And that, Socrates, is what we must do, if we do not mean to bring disgrace upon the argument at its close.

Y. SOC.

We must certainly avoid that.

STR.

Then let us make a new beginning, and travel by a different road.

Y. SOC.

What road?

STR.

I think that we may have a little amusement; there is a famous tale, of which a good portion may with advantage be interwoven, and then we may resume our series of divisions, and proceed in the old path until we arrive at the desired summit. Shall we do as I say?

We reply by telling a famous tale, which is amusing as well as instructive.

Y. SOC.

By all means.

STR.

Listen, then, to a tale which a child would love to hear; and you are not too old for childish amusement.

Y. SOC.

Let me hear.

STR.

There did really happen, and will again happen, like many other events of which ancient tradition has preserved the record, the portent which is traditionally said to have occurred in the quarrel of Atreus and Thyestes. You have heard, no doubt, and remember what they say happened at that time?

Y. SOC.

I suppose you to mean the token of the birth of the golden lamb.

STR.

269No, not that; but another part of the story, which tells how the sun and the stars once rose in the west, and set in the east, and that the god reversed their motion, and gave them that which they now have as a testimony to the right of Atreus.

We have all heard fragments of it, such as the reversal of the motion of sun and stars, the reign of Cronus, and the story of the earth-born men.

Y. SOC.

Yes; there is that legend also.

STR.

Again, we have been often told of the reign of Cronos.

Y. SOC.

Yes, very often.

STR.

Did you ever hear that the men of former times were earth-born, and not begotten of one another?

Y. SOC.

Yes, that is another old tradition.

STR.

All these stories, and ten thousand others which are still more wonderful, have a common origin; many of them have been lost in the lapse of ages, or are repeated only in a disconnected form; but the origin of them is what no one has told, and may as well be told now; for the tale is suited to throw light on the nature of the king.

Y. SOC.

Very good; and I hope that you will give the whole story, and leave out nothing.

STR.

Listen, then. There is a time when God himself guides and helps to roll the world in its course; and there is a time, on the completion of a certain cycle, when he lets go, and the world being a living creature, and having originally received intelligence from its author and creator, turns about and by an inherent necessity revolves in the opposite direction.

Y. SOC.

Why is that?

STR.

The whole of the story.—There is a time when God moves and guides the world, and there is a time when he lets go, and the world moves itself but in an opposite direction. This change of motion, which is the slightest possible, is due to the material element in the world.

Why, because only the most divine things of all remain ever unchanged and the same, and body is not included in this class. Heaven and the universe, as we have termed them, although they have been endowed by the Creator with many glories, partake of a bodily nature, and therefore cannot be entirely free from perturbation. But their motion is, as far as possible, single and in the same place, and of the same kind; and is therefore only subject to a reversal, which is the least alteration possible. For the lord of all moving things is alone able to move of himself; and to think that he moves them at one time in one direction and at another time in another is blasphemy. Hence we

must not say that the world is either self-moved always, or all made to go round by God in two opposite courses; or that two Gods, having opposite purposes, make it move round. But as I have already said (and this is the only remaining alternative) the world is guided at one time by an external power which is divine and receives fresh life and immortality from the renewing hand of the Creator, and again, when let go, moves spontaneously, being set free at such a time as to have, during infinite cycles of years, a reverse movement: this is due to its perfect balance, to its vast size, and to the fact that it turns on the smallest pivot.

Y. SOC.

Your account of the world seems to be very reasonable indeed.

STR.

Let us now reflect and try to gather from what has been said the nature of the phenomenon which we affirmed to be the cause of all these wonders. It is this.

Y. SOC.

What?

STR.

The reversal which takes place from time to time of the motion of the universe.

Y. SOC.

How is that the cause?

STR.

Of all changes of the heavenly motions, we may consider this to be the greatest and most complete.

Y. SOC.

I should imagine so.

STR.

And it may be supposed to result in the greatest changes to the human beings who are the inhabitants of the world at the time.

Y. SOC.

Such changes would naturally occur.

STR.

And animals, as we know, survive with difficulty great and serious changes of many different kinds when they come upon them at once.

Y. SOC.

Very true.

STR.

Hence there necessarily occurs a great destruction of them, which extends also to the life of man; few survivors of the race are left, and those who remain become the subjects of several novel and remarkable phenomena, and of one in particular, which takes place at the time when the transition is made to the cycle opposite to that in which we are now living.

Y. SOC.

What is it?

STR.

The life of all animals first came to a standstill, and the mortal nature ceased to be or look older, and was then reversed and grew young and delicate; the white locks of the aged darkened again, and the cheeks of the bearded man became smooth, and recovered their former bloom; the bodies of youths in their prime grew softer and smaller, continually by day and night returning and becoming assimilated to the nature of a newly-born child in mind as well as body; in the succeeding stage they wasted away and wholly disappeared. And the bodies of those who died by violence at that time quickly passed through the like changes, and in a few days were no more seen.

At the time of transition from our cycle to the opposite, a retrogression takes place in the life of men and animals.

Y. SOC.

271 Then how, Stranger, were the animals created in those days; and in what way were they begotten of one another?

STR.

Men, in the age of Cronus, sprang, not from one another, but from the earth.

It is evident, Socrates, that there was no such thing in the then order of nature as the procreation of animals from one another; the earth-born race, of which we hear in story, was the one which existed in those days—they rose again from the ground; and of this tradition, which is now-a-days often unduly discredited, our ancestors, who were nearest in point of time to the end of the last period and came into being at the beginning of this, are to us the heralds. And mark how consistent the sequel of the tale is; after the return of age to youth, follows the return of the dead, who are lying in the earth, to life; simultaneously with the reversal of the world the wheel of their generation has been turned back, and they are put together and rise and live in the opposite order, unless God has carried any of them away to some other lot. According to this tradition they of necessity sprang from the earth and have the name of earth born, and so the above legend clings to them.

The tale is so consistent that it must be true.

Y. SOC.

Certainly that is quite consistent with what has preceded; but tell me, was the life which you said existed in the reign of Cronos in that cycle of the world, or in this? For the change in the course of the stars and the sun must have occurred in both.

STR.

I see that you enter into my meaning;—no, that blessed and spontaneous life does not belong to the present cycle of the world, but to the previous one, in which God superintended the whole revolution of the universe; and the several parts of the universe were distributed under the rule of certain inferior deities, as is the way in some places still. There were demigods, who were the shepherds of the various species and herds of animals, and each one was in all respects sufficient for those of whom he was the shepherd; neither was there any violence, or devouring of one another, or war or quarrel among them; and I might tell of ten thousand other blessings, which belonged to that dispensation. The reason why the life of man was, as tradition says, spontaneous, is as follows: In those days God himself was their shepherd, and ruled over them, just as man, who is by comparison a divine being, still rules over the lower animals. Under him there were no forms of government or separate possession of women and children; for all men rose again from the earth, having no memory of the past. And although they had nothing of this sort, the earth gave them fruits in abundance, which grew on trees and shrubs unbidden, and were not planted by the hand of man. And they dwelt naked, and mostly in the open air, for the temperature of their seasons was mild; and they had no beds, but lay on soft couches of grass, which grew plentifully out of the earth. Such was the life of man in the days of Cronos, Socrates; the character of our present life, which is said to be under Zeus, you know from your own experience. Can you, and will you, determine which of them you deem the happier?

Description of the life of innocence which prevailed in the days when God governed the world.

Which would you call happier, that life or our own?

Y. SOC.

Impossible.

STR.

Then shall I determine for you as well as I can?

Y. SOC.

By all means.

STR.

Suppose that the nurslings of Cronos, having this boundless leisure, and the power of holding intercourse, not only with men, but with the brute creation, had used all these advantages with a view to philosophy, conversing with the brutes as well as with one another, and learning of every nature which was gifted with any special power, and was able to contribute some special experience to the store of wisdom, there would be no difficulty in deciding that they would be a thousand times happier than the men of our own day. Or, again, if they had merely eaten and drunk until they were full, and told stories to one another and to the animals—such stories as are now attributed to them—in this case also, as I should imagine, the answer would be easy. But until some satisfactory witness can be found of the love of that age for knowledge and discussion, we had better let the matter drop, and give the reason why we have unearthed this tale, and then we shall be able to get on. In the fulness of time, when the change was to take place, and the earth-born race had all perished, and every soul had completed its proper cycle of births and been sown in the earth her appointed number of times, the pilot of the universe let the helm go, and retired to his place of view; and then Fate and innate desire reversed the motion of the world. Then also all the inferior deities who share the rule of the supreme power, being informed of what was happening, let go the parts of the world which were under their control. And the world turning round with a sudden shock, being impelled in an opposite direction from beginning to end, was shaken by a mighty earthquake, which wrought a new destruction of all manner of animals. Afterwards, when sufficient time had elapsed, the tumult and confusion and earthquake ceased, and the universal creature, once more at peace, attained to a calm, and settled down into his own orderly and accustomed course, having the charge and rule of himself and of all the creatures which are contained in him, and executing, as far as he remembered them, the instructions of his Father and Creator, more precisely at first, but afterwards with less exactness. The

We cannot say; for the life of innocence might be a life of philosophy, or of mere eating and drinking.

When God let the world go, at first there was a great earthquake, but things soon settled down.

The creature at first remembered his Creator, but afterwards forgot him. And so there arose great disorder, which continued until God once more took the helm and the old order was reinstated.

At the beginning of our cycle there was another change in the life of man, opposite to the former.

Man, being found unequal to the struggle for existence, is helped by Prometheus, Hephaestus, and Athene.

reason of the falling off was the admixture of matter in him; this was inherent in the primal nature, which was full of disorder, until attaining to the present order. From God, the constructor, the world received all that is good in him, but from a previous state came elements of evil and unrighteousness, which, thence derived, first of all passed into the world, and were then transmitted to the animals. While the world was aided by the pilot in nurturing the animals, the evil was small, and great the good which he produced, but after the separation, when the world was let go, at first all proceeded well enough; but, as time went on, there was more and more forgetting, and the old discord again held sway and burst forth in full glory; and at last small was the good, and great was the admixture of evil, and there was a danger of universal ruin to the world, and to the things contained in him. Wherefore God, the orderer of all, in his tender care, seeing that the world was in great straits, and fearing that all might be dissolved in the storm and disappear in infinite chaos, again seated himself at the helm; and bringing back the elements which had fallen into dissolution and disorder to the motion which had prevailed under his dispensation, he set them in order and restored them, and made the world imperishable and immortal. And this is the whole tale, of which the first part will suffice to illustrate the nature of the king. For when the world turned towards the present cycle of generation, the age of man again stood still, and a change opposite to the previous one was the result. The small creatures which had almost disappeared grew in stature, and the newly-born children of the earth became grey and died and sank into the earth again. All things changed, imitating²⁷⁴ and following the condition of the universe, and of necessity agreeing with that in their mode of conception and generation and nurture; for no animal was any longer allowed to come into being in the earth through the agency of other creative beings, but as the world was ordained to be the lord of his own progress, in like manner the parts were ordained to grow and generate and give nourishment, as far as they could, of themselves, impelled by a similar movement. And so we have arrived at the real end of this discourse; for although there might be much to tell of the lower animals, and of the condition out of which they changed and of the causes of the change, about men there is not much, and that little is more to the purpose. Deprived of the care of God, who had possessed and tended them, they were left helpless and defenceless, and were torn in pieces by the beasts, who were naturally fierce and had now grown wild. And in the first ages they were still without skill or resource; the food which once grew spontaneously had failed, and as yet they knew not how to procure it, because they had never felt the pressure of necessity. For all these reasons they were in a great strait; wherefore also the gifts spoken of in the old tradition were imparted to man by the gods, together with so much teaching and education as was indispensable; fire was given to them by Prometheus, the arts by Hephaestus and his fellow-worker, Athene, seeds and plants by others. From these is derived all that has helped to frame human life; since the care of the Gods, as I was saying, had now failed men, and they had to order their course of life for themselves, and were their own masters, just like the universal creature whom they imitate and follow, ever changing, as he changes, and ever living and growing, at one time in one manner, and at another time in another. Enough of the story, which may be of use in showing us how greatly we erred in the delineation of the king and the statesman in our previous discourse.

Y. SOC.

What was this great error of which you speak?

STR.

There were two; the first a lesser one, the other was an error on a much larger and grander scale.

Two mistakes made by us:—(1) we did not speak of a king or statesman of the present cycle; or (2) define the nature of his rule.

Y. SOC.

What do you mean?

STR.

275I mean to say that when we were asked about a king and statesman of the present cycle and generation, we told of a shepherd of a human flock who belonged to the other cycle, and of one who was a god when he ought to have been a man; and this was a great error. Again, we declared him to be the ruler of the entire State, without explaining how: this was not the whole truth, nor very intelligible; but still it was true, and therefore the second error was not so great as the first.

Y. SOC.

Very good.

STR.

Before we can expect to have a perfect description of the statesman we must define the nature of his office.

Y. SOC.

Certainly.

STR.

And the myth was introduced in order to show, not only that all others are rivals of the true shepherd who is the object of our search, but in order that we might have a clearer view of him who is alone worthy to receive this appellation, because he alone of shepherds and herdsmen, according to the image which we have employed, has the care of human beings.

Y. SOC.

Very true.

STR.

And I cannot help thinking, Socrates, that the form of the divine shepherd is even higher than that of a king; whereas the statesmen who are now on earth seem to be much more like their subjects in character, and much more nearly to partake of their breeding and education.

The true shepherd is greater even than a king: for now-a-days kings and their subjects are much upon a level.

Y. SOC.

Certainly.

STR.

Still they must be investigated all the same, to see whether, like the divine shepherd, they are above their subjects or on a level with them.

Y. SOC.

Of course.

STR.

To resume:—Do you remember that we spoke of a command-for-self exercised over animals, not singly but collectively, which we called the art of rearing a herd?

Command-for-self over herds should be called not 'rearing of herds,' but by some more general term, such as 'tending' or 'management' of herds, which will include the king.

Y. SOC.

Yes, I remember.

STR.

There, somewhere, lay our error; for we never included or mentioned the Statesman; and we did not observe that he had no place in our nomenclature.

Y. SOC.

How was that?

STR.

All other herdsmen 'rear' their herds, but this is not a suitable term to apply to the Statesman; we should use a name which is common to them all.

Y. SOC.

True, if there be such a name.

STR.

Why, is not 'care' of herds applicable to all? For this implies no feeding, or any special duty; if we say either 'tending' the herds, or 'managing' the herds, or 'having the care' of them, the same word will include all, and then we may wrap up the Statesman with the rest, as the argument seems to require.

Y. SOC.

Quite right; but how shall we take the next step 276 in the division?

STR.

As before we divided the art of 'rearing' herds accordingly as they were land or water herds, winged and wingless, mixing or not mixing the breed, horned and hornless, so we may divide by these same differences the 'tending' of herds, comprehending in our definition the kingship of to-day and the rule of Cronos.

We may then subdivide the 'tending' of herds as we subdivided the 'rearing' of herds.

Y. SOC.

That is clear; but I still ask, what is to follow.

STR.

If the word had been 'managing' herds, instead of feeding or rearing them, no one would have argued that there was no care of men in the case of the politician, although it was justly contended, that there was no human art of feeding them which was worthy of the name, or at least, if there were, many a man had a prior and greater right to share in such an art than any king.

Y. SOC.

True.

STR.

But no other art or science will have a prior or better right than the royal science to care for human society and to rule over men in general.

Y. SOC.

Quite true.

STR.

In the next place, Socrates, we must surely notice that a great error was committed at the end of our analysis.

Y. SOC.

What was it?

STR.

Why, supposing we were ever so sure that there is such an art as the art of rearing or feeding bipeds, there was no reason why we should call this the royal or political art, as though there were no more to be said.

But we should not, as before, hastily call the art of managing bipeds the royal art.

Y. SOC.

Certainly not.

STR.

Our first duty, as we were saying, was to remodel the name, so as to have the notion of care rather than of feeding, and then to divide, for there may be still considerable divisions.

Y. SOC.

How can they be made?

STR.

First, by separating the divine shepherd from the human guardian or manager.

It must first be subdivided into divine and human management; and the latter into voluntary and compulsory, that the king may be distinguished from the tyrant.

Y. SOC.

True.

STR.

And the art of management which is assigned to man would again have to be subdivided.

Y. SOC.

On what principle?

STR.

On the principle of voluntary and compulsory.

Y. SOC.

Why?

STR.

Because, if I am not mistaken, there has been an error here; for our simplicity led us to rank king and tyrant together, whereas they are utterly distinct, like their modes of government.

Y. SOC.

True.

STR.

Then, now, as I said, let us make the correction and divide human care into two parts, on the principle of voluntary and compulsory.

Y. SOC.

Certainly.

STR.

And if we call the management of violent rulers tyranny, and the voluntary management of herds of voluntary bipeds politics, may we not further assert that he who has this latter art of management is the true king and statesman?

Y. SOC.

I think, Stranger, that we have now completed the 277account of the Statesman.

STR.

Would that we had, Socrates, but I have to satisfy myself as well as you; and in my judgment the figure of the king is not yet perfected; like statuaries who, in their too great haste, having overdone the several parts of their work, lose time in cutting them down, so too we, partly out of haste, partly out of a magnanimous desire to expose our former error, and also because we imagined that a king required grand illustrations, have taken up a marvellous lump of fable, and have been obliged to use more than was necessary. This made us discourse at large, and,

Alas! the picture of the king is both overdone and defective.

nevertheless, the story never came to an end. And our discussion might be compared to a picture of some living being which had been fairly drawn in outline, but had not yet attained the life and clearness which is given by the blending of colours. Now to intelligent persons a living being had better be delineated by language and discourse than by any painting or work of art: to the duller sort by works of art.

Y. SOC.

Very true; but what is the imperfection which still remains? I wish that you would tell me.

STR.

The higher ideas, my dear friend, can hardly be set forth except through the medium of examples; every man seems to know all things in a dreamy sort of way, and then again to wake up and to know nothing.

We seem only to know the higher ideas through examples dimly.

Y. SOC.

What do you mean?

STR.

I fear that I have been unfortunate in raising a question about our experience of knowledge.

Y. SOC.

Why so?

STR.

Why, because my 'example' requires the assistance of another example.

Y. SOC.

Proceed; you need not fear that I shall tire.

STR.

I will proceed, finding, as I do, such a ready listener in you: when children are beginning to know their letters—

Y. SOC.

What are you going to say?

The use of examples illustrated by the way in which children learn to know letters in different combinations.

STR.

That they distinguish the several letters well enough ²⁷⁸in very short and easy syllables, and are able to tell them correctly.

Y. SOC.

Certainly.

STR.

Whereas in other syllables they do not recognize them, and think and speak falsely of them.

Y. SOC.

Very true.

STR.

Will not the best and easiest way of bringing them to a knowledge of what they do not as yet know be—

Y. SOC.

Be what?

STR.

To refer them first of all to cases in which they judge correctly about the letters in question, and then to compare these with the cases in which they do not as yet know, and to show them that the letters are the same, and have the same character in both combinations, until all cases in which they are right have been placed side by side with all cases in which they are wrong. In this way they have examples, and are made to learn that each letter in every combination is always the same and not another, and is always called by the same name.

Y. SOC.

Certainly.

STR.

Are not examples formed in this manner? We take a thing and compare it with another distinct instance of the same thing, of which we have a right conception, and out of the comparison there arises one true notion, which includes both of them.

Y. SOC.

Exactly.

STR.

Can we wonder, then, that the soul has the same uncertainty about the alphabet of things, and sometimes and in some cases is firmly fixed by the truth in each particular, and then, again, in other cases is altogether at sea; having somehow or other a correct notion of combinations; but when the elements are transferred into the long and difficult language (syllables) of facts, is again ignorant of them?

The method by which we learn 'the long and difficult language of facts' is similar.

Y. SOC.

There is nothing wonderful in that.

STR.

Could any one, my friend, who began with false opinion ever expect to arrive even at a small portion of truth and to attain wisdom?

Y. SOC.

Hardly.

STR.

Then you and I will not be far wrong in trying to see the nature of example in general in a small and particular instance; afterwards from lesser things we intend to pass to the royal class, which is the highest form of the same nature, and endeavour to discover by rules of art what the management of cities is; and then the dream will become a reality to us.

Y. SOC.

Very true.

STR.

Then, once more, let us resume the previous argument, 279and as there were innumerable rivals of the royal race who claim to have the care of states, let us part them all off, and leave him alone; and, as I was saying, a model or example of this process has first to be framed.

Y. SOC.

Exactly.

STR.

What model is there which is small, and yet has any analogy with the political occupation? Suppose, Socrates, that if we have no other example at hand, we choose weaving, or, more precisely, weaving of wool—this will be quite enough, without taking the whole of weaving, to illustrate our meaning?

Weaving may be made a model of the Statesman's art.

Y. SOC.

Certainly.

STR.

Why should we not apply to weaving the same processes of division and subdivision which we have already applied to other classes; going once more as rapidly as we can through all the steps until we come to that which is needed for our purpose?

Y. SOC.

How do you mean?

STR.

I shall reply by actually performing the process.

Y. SOC.

Very good.

STR.

All things which we make or acquire are either creative or preventive; of the preventive class are antidotes, divine and human, and also defences; and defences are either military weapons or protections; and protections are veils, and also shields against heat and cold, and shields against heat and cold are shelters and coverings; and coverings are blankets and garments; and garments are some of them in one piece, and others of them are made in several parts; and of these latter some are stitched, others are fastened and not stitched; and of the not stitched, some are made of the sinews of plants, and some of hair; and of these, again, some are cemented with water and earth, and others are

Partings-off of larger classes from which weaving is descended.

The art of weaving and the art of making clothes differ only in name, like the royal and the political sciences.

fastened together by themselves. And these last defences and coverings which are fastened together by themselves are called clothes, and the art which superintends them we may call, from the nature of the operation, the art of clothing, just as before the art of the Statesman was derived from the State; and may we not say that the art of weaving, at least that largest portion of it which was concerned with the making of clothes (cp. 279 B), differs only in name from this art of clothing, in the same way that, in the previous case, the royal science differed from the political?

Y. SOC.

Most true.

STR.

In the next place, let us make the reflection, that the art of weaving clothes, which an incompetent person might fancy to have been sufficiently described, has been separated off from several others which are of the same family, but not from the co-operative arts.

Y. SOC.

And which are the kindred arts?

STR.

I see that I have not taken you with me. So I think that we had better go backwards, starting from the end. We just now parted off from the weaving of clothes, the making of blankets, which differ from each other in that one is put under and the other is put around: and these are what I termed kindred arts.

Recapitulation of the arts which have been parted off from weaving.

Y. SOC.

I understand.

STR.

And we have substracted the manufacture of all articles made of flax and cords, and all that we just now metaphorically termed the sinews of plants, and we have also separated off the process of felting and the putting together of materials by stitching and sewing, of which the most important part is the cobbler's art.

Y. SOC.

Precisely.

STR.

Then we separated off the currier's art, which prepared coverings in entire pieces, and the art of sheltering, and subtracted the various arts of making water-tight which are employed in building, and in general in carpentering, and in other crafts, and all such arts as furnish impediments to thieving and acts of violence, and are concerned with making the lids of boxes and the fixing of doors, being divisions of the art of joining; and we also cut off the manufacture of arms, which is a section of the great and manifold art of making defences; and we originally began by parting off the whole of the magic art which is concerned with antidotes, and have left, as would appear, the very art of which we were in search, the art of protection against winter cold, which fabricates woollen defences, and has the name of weaving.

Weaving is an art of protection against cold, which fabricates woollen defences. But it must be further distinguished.

Y. SOC.

Very true.

STR.

Yes, my boy, but that is not all; for the first process to which the material is subjected is the opposite of weaving.

Y. SOC.

How so?

STR.

Weaving is a sort of uniting?

Y. SOC.

Yes.

STR.

But the first process is a separation of the clotted and matted fibres?

Y. SOC.

What do you mean?

STR.

I mean the work of the carder's art; for we cannot say that carding is weaving, or that the carder is a weaver.

Weaving is not carding;

Y. SOC.

Certainly not.

STR.

Again, if a person were to say that the art of making the warp and the woof was the art of weaving, he would say what was paradoxical and false.

nor making the warp or the woof;

Y. SOC.

To be sure.

STR.

Shall we say that the whole art of the fuller or of the mender has nothing to do with the care and treatment of clothes, or are we to regard all these as arts of weaving?

nor fulling, nor mending;

Y. SOC.

Certainly not.

STR.

And yet surely all these arts will maintain that they are concerned with the treatment and production of clothes; they will dispute the exclusive prerogative of weaving, and though assigning a larger sphere to that, will still reserve a considerable field for themselves.

Y. SOC.

Very true.

STR.

Besides these, there are the arts which make tools and instruments of weaving, and which will claim at least to be co-operative causes in every work of the weaver.

nor any art which makes tools for weaving.

Y. SOC.

Most true.

STR.

Well, then, suppose that we define weaving, or rather that part of it which has been selected by us, to be the greatest and noblest of arts which are concerned with woollen garments—shall we be right? Is not the definition, although true, wanting in clearness and completeness; for do not all those other arts require to be first cleared away?

Y. SOC.

True.

STR.

Then the next thing will be to separate them, in order that the argument may proceed in a regular manner?

Y. SOC.

By all means.

STR.

Let us consider, in the first place, that there are two kinds of arts entering into everything which we do.

Y. SOC.

What are they?

STR.

The one kind is the conditional or co-operative, the other the principal cause.

All arts are either causal or co-operative.

Y. SOC.

What do you mean?

STR.

Co-operative arts make tools, the causal

The arts which do not manufacture the actual thing, but which furnish the necessary tools for the manufacture, without which the several arts could not fulfil their appointed work, are co-operative; but those which make the things themselves are causal.

use them in production.

Y. SOC.

A very reasonable distinction.

STR.

Thus the arts which make spindles, combs, and other instruments of the production of clothes, may be called co-operative, and those which treat and fabricate the things themselves, causal.

Y. SOC.

Very true.

STR.

282The arts of washing and mending, and the other preparatory arts which belong to the causal class, and form a division of the great art of adornment, may be all comprehended under what we call the fuller's art.

In the case of working in wool, washing, mending, carding, spinning, etc. belong to the causal class.

Y. SOC.

Very good.

STR.

Carding and spinning threads and all the parts of the process which are concerned with the actual manufacture of a woollen garment form a single art, which is one of those universally acknowledged,—the art of working in wool.

Y. SOC.

To be sure.

STR.

Of wool-working there are two great sections, which fall respectively under the art of composition

Of working in wool, again, there are two divisions, and both these are parts of two arts at once.

and the art of division.

Y. SOC.

How is that?

STR.

Carding and one half of the use of the comb, and the other processes of wool-working which separate the composite, may be classed together as belonging both to the art of wool-working, and also to one of the two great arts which are of universal application—the art of composition and the art of division.

Y. SOC.

Yes.

STR.

To the latter belong carding and the other processes of which I was just now speaking; the art of discernment or division in wool and yarn, which is effected in one manner with the comb and in another with the hands, is variously described under all the names which I just now mentioned.

Y. SOC.

Very true.

STR.

Again, let us take some process of wool-working which is also a portion of the art of composition, and, dismissing the elements of division which we found there¹, make two halves, one on the principle of composition, and the other on the principle of division.

We are concerned with the former, of which there are two parts, one which twists, and another which combines.

Y. SOC.

Let that be done.

STR.

And once more, Socrates, we must divide the part which belongs at once both to wool-working and composition, if we are ever to discover satisfactorily the aforesaid art of weaving.

Y. SOC.

We must.

STR.

Yes, certainly, and let us call one part of the art the art of twisting threads, the other the art of combining them.

Y. SOC.

Do I understand you, in speaking of twisting, to be referring to manufacture of the warp?

Both warp and woof are made by twisting; but the thread of the warp is firm, whereas the thread of the woof is loose and soft.

STR.

Yes, and of the woof too; how, if not by twisting, is the woof made?

Y. SOC.

There is no other way.

STR.

Then suppose that you define the warp and the woof, for I think that the definition will be of use to you.

Y. SOC.

How shall I define them?

STR.

As thus: A piece of carded wool which is drawn out lengthwise and breadthwise is said to be pulled out.

Y. SOC.

Yes.

STR.

And the wool thus prepared, when twisted by the spindle, and made into a firm thread, is called the warp, and the art which regulates these operations the art of spinning the warp.

Y. SOC.

True.

STR.

And the threads which are more loosely spun, having a softness proportioned to the intertexture of the warp and to the degree of force used in dressing the cloth, — the threads which are thus spun are called the woof, and the art which is set over them may be called the art of spinning the woof.

Y. SOC.

Very true.

STR.

And, now, there can be no mistake about the nature of the part of weaving which we have undertaken to define. For when that part of the art of composition which is employed in the working of wool forms a web by the regular intertexture of warp and woof, the entire woven substance is called by us a woollen garment, and the art which presides over this is the art of weaving.

Weaving is that portion of the art of composition which forms a web by the intertexture of warp and woof.

Y. SOC.

Very true.

STR.

But why did we not say at once that weaving is the art of entwining warp and woof, instead of making a long and useless circuit?

Y. SOC.

I thought, Stranger, that there was nothing useless in what was said.

But could we not have defined it more speedily?—This question cannot be answered until we have considered the whole nature of excess and defect.

STR.

Very likely, but you may not always think so, my sweet friend; and in case any feeling of dissatisfaction should hereafter arise in your mind, as it very well may, let me lay down a principle which will apply to arguments in general.

Y. SOC.

Proceed.

STR.

Let us begin by considering the whole nature of excess and defect, and then we shall have a rational ground on which we may praise or blame too much length or too much shortness in discussions of this kind.

Y. SOC.

Let us do so.

STR.

The points on which I think that we ought to dwell are the following:—

Y. SOC.

What?

STR.

Length and shortness, excess and defect; with all of these the art of measurement is conversant.

Y. SOC.

Yes.

STR.

And the art of measurement has to be divided into two parts, with a view to our present purpose.

Y. SOC.

Where would you make the division?

STR.

As thus: I would make two parts, one having regard to the relativity of greatness and smallness to each other; and there is another, without which the existence of production would be impossible.

There are two divisions of the art of measurement: the first compares excess and defect with each other;

Y. SOC.

What do you mean?

STR.

Do you not think that it is only natural for the greater to be called greater with reference to the less alone, and the less less with reference to the greater alone?

Y. SOC.

Yes.

STR.

Well, but is there not also something exceeding and exceeded by the principle of the mean, both in speech and action, and is not this a reality, and the chief mark of difference between good and bad men?

the second, with the principle of the mean.

Y. SOC.

Plainly.

STR.

Then we must suppose that the great and small exist and are discerned in both these ways, and not, as we were saying before, only relatively to one another, but there must also be another comparison of them with the mean or ideal standard; would you like to hear the reason why?

Y. SOC.

Certainly.

STR.

If we assume the greater to exist only in relation to the less, there will never be any comparison of either with the mean.

Y. SOC.

True.

STR.

And would not this doctrine be the ruin of all the arts and their creations; would not the art of the Statesman and the aforesaid art of weaving disappear? For all these arts are on the watch against excess and defect, not as unrealities, but as real evils, which occasion a difficulty in action; and the excellence or beauty of every work of art is due to this observance of measure.

The excellence of the arts depends on their observance of the mean; the neglect of it is their ruin.

Y. SOC.

Certainly.

STR.

But if the science of the Statesman disappears, the search for the royal science will be impossible.

Y. SOC.

Very true.

STR.

Well, then, as in the case of the Sophist we extorted the inference that not-being had an existence, because here was the point at which the argument eluded our grasp, so in this we must endeavour to show that the greater and less are not only to be measured with one another, but also have to do with the production of the mean; for if this is not admitted, neither a statesman nor any other man of action can be an undisputed master of his science.

It is no easy matter to show the truth of the statement that excess and defect are relative to a mean, as well as to each other.

Y. SOC.

Yes, we must certainly do again what we did then.

STR.

But this, Socrates, is a greater work than the other, of which we only too well remember the length. I think, however, that we may fairly assume something of this sort:—

Y. SOC.

What?

STR.

That we shall some day require this notion of a mean with a view to the demonstration of absolute truth; meanwhile, the argument that the very existence of the arts must be held to depend on the possibility of measuring more or less, not only with one another, but also with a view to the attainment of the mean, seems to afford a grand support and satisfactory proof of the doctrine which we are maintaining; for if there are arts, there is a standard of measure, and if there is a standard of measure, there are arts; but if either is wanting, there is neither.

At present we will not attempt the task; it is enough that the existence of the arts depends on the possibility of a mean standard.

Y. SOC.

True; and what is the next step?

STR.

The next step clearly is to divide the art of measurement into two parts, as we have said already, and to place in the one part all the arts which measure number, length, depth, breadth, swiftness¹ with their opposites; and to have another part in which they are measured with the mean, and the fit, and the opportune, and the due, and with all those words, in short, which denote a mean or standard removed from the extremes.

Y. SOC.

Here are two vast divisions, embracing two very different spheres.

STR.

There are many accomplished men, Socrates, who say, believing themselves to speak wisely, that the art of measurement is universal, and has to do with all things. And this means what we are now saying; for all things which come within the province of art do certainly in some sense partake of measure. But these persons, because they are not accustomed to distinguish classes according to real forms, jumble together two widely different things, relation to one another, and to a standard, under the idea that they are the same, and also fall into the converse error of dividing other things not according to their real parts. Whereas the right way is, if a man has first seen the unity of things, to go on with the enquiry and not desist until he has found all the differences contained in it which form distinct classes; nor again should he be able to rest contented with the manifold diversities which are seen in a multitude of things until he has comprehended all of them that have any affinity within the bounds of one similarity and embraced them within the reality of a single kind. But we have said enough on this head, and also of excess and defect; we have only to bear in mind that two divisions of the art of measurement have been discovered which are concerned with them, and not forget what they are.

The art of measurement is said by many to be universal, and with a certain amount of truth; but they confuse the two divisions of the art and also make false distinctions.

Y. SOC.

We will not forget.

STR.

And now that this discussion is completed, let us go on to consider another question, which concerns not this argument only but the conduct of such arguments in general.

Y. SOC.

What is this new question?

STR.

Take the case of a child who is engaged in learning his letters: when he is asked what letters make up a word, should we say that the question is intended to improve his grammatical knowledge of that particular word, or of all words?

Y. SOC.

Clearly, in order that he may have a better knowledge of all words.

STR.

And is our enquiry about the Statesman intended only to improve our knowledge of politics, or our power of reasoning generally?

Y. SOC.

Clearly, as in the former example, the purpose is general.

STR.

Our enquiry about the Statesman is intended to make us better dialecticians; and the illustrations and analogies which we employ in order to throw light upon it have the same purpose.

Still less would any rational man seek to analyse the notion of weaving for its own sake. But people seem to forget that some things have sensible images, which are readily known, and can be easily pointed out when any one desires to answer an enquirer without any trouble or argument; whereas the greatest and highest truths have no outward image of themselves visible to man, which he who wishes to satisfy the soul of the enquirer can adapt to the eye of sense¹, and therefore we ought to train ourselves to give and accept a rational account of them; for immaterial things, which are the noblest and greatest, are shown only in thought and idea, and in no other way, and all that we are now saying is said for the sake of them. Moreover, there is always less difficulty in fixing the mind on small matters than on great.

Y. SOC.

Very good.

STR.

Let us call to mind the bearing of all this.

Y. SOC.

What is it?

STR.

I wanted to get rid of any impression of tediousness which we may have experienced in the discussion about weaving, and the reversal of the universe, and in the discussion concerning the Sophist and the being of not-being. I know that they were felt to be too long, and I reproached myself with this, fearing that they might be not only tedious but irrelevant; and all that I have now said is only designed to prevent the recurrence of any such disagreeables for the future.

Y. SOC.

Very good. Will you proceed?

STR.

Then I would like to observe that you and I, remembering what has been said, should praise or blame the length or shortness of discussions, not by comparing them with one another, but with what is fitting, having regard to the part of measurement, which, as we said, was to be borne in mind.

Y. SOC.

Very true.

STR.

And yet, not everything is to be judged even with a view to what is fitting; for we should only want such a length as is suited to give pleasure, if at all, as a secondary matter; and reason tells us, that we should be contented to make the ease or rapidity of an enquiry, not our first, but our second object; the first and highest of all being to assert the great method of division according to species—whether the discourse be shorter or longer is not to the point. No offence should be taken at length, but the longer and

The standard by which excess and defect should be determined is what is fitting, but not what is fitting to give pleasure; for the chief aim of an enquiry should be, not to give pleasure, but to assert the method of division according to species.

Would our discourse, if shorter, have made the listeners better dialecticians?

Let us now apply our example of weaving to the Statesman.

shorter are to be employed indifferently, according as either of them is better calculated to sharpen the wits of the auditors. Reason would also say to him who censures the length of discourses on such occasions and cannot away with their circumlocution, that he should not be in such a hurry to have done with them, when he can only complain that they are tedious, but 287he should prove that if they had been shorter they would have made those who took part in them better dialecticians, and more capable of expressing the truth of things; about any other praise and blame, he need not trouble himself—he should pretend not to hear them. But we have had enough of this, as you will probably agree with me in thinking. Let us return to our Statesman, and apply to his case the aforesaid example of weaving.

Y. SOC.

Very good;—let us do as you say.

STR.

The art of the king has been separated from the similar arts of shepherds, and, indeed, from all those which have to do with herds at all. There still remain, however, of the causal and co-operative arts those which are immediately concerned with States, and which must first be distinguished from one another.

From kingship the other arts of tending herds have been separated: certain causal and co-operative arts remain. These cannot be bisected, and must therefore be neatly carved.

Y. SOC.

Very good.

STR.

You know that these arts cannot easily be divided into two halves; the reason will be very evident as we proceed.

Y. SOC.

Then we had better do so.

STR.

We must carve them like a victim into members or limbs, since we cannot bisect them¹. For we certainly should divide everything into as few parts as possible.

Y. SOC.

What is to be done in this case?

STR.

What we did in the example of weaving—all those arts which furnished the tools were regarded by us as co-operative.

Y. SOC.

Yes.

STR.

So now, and with still more reason, all arts which make any implement in a State, whether great or small, may be regarded by us as co-operative, for without them neither State nor Statesmanship would be possible; and yet we are not inclined to say that any of them is a product of the kingly art.

Thus we set aside the arts which provide (1) instruments,—under this head we might place anything;

Y. SOC.

No, indeed.

STR.

The task of separating this class from others is not an easy one; for there is plausibility in saying that anything in the world is the instrument of doing something. But there is another class of possessions in a city, of which I have a word to say.

Y. SOC.

What class do you mean?

STR.

A class which may be described as not having this power¹; that is to say, not like an instrument, framed for production, but designed for the preservation of that which is produced.

(2) vessels;

Y. SOC.

To what do you refer?

STR.

To the class of vessels, as they are comprehensively termed, which are constructed for the preservation of things moist and dry, of things prepared in the fire or out of the fire; this is a very large class, and has, if I am not mistaken, literally nothing to do with the royal art of which we are in search.

Y. SOC.

Certainly not.

STR.

There is also a third class of possessions to be noted, different from these and very extensive, moving or resting on land or water, honourable and also dishonourable. The whole of this class has one name, because it is intended to be sat upon, being always a seat for something.

(3) seats or vehicles;

Y. SOC.

What is it?

STR.

A vehicle, which is certainly not the work of the Statesman, but of the carpenter, potter, and coppersmith.

Y. SOC.

I understand.

STR.

And is there not a fourth class which is again different, and in which most of the things formerly mentioned are contained,—every kind of dress, most sorts of arms, walls and enclosures, whether of earth or stone, and ten thousand other things? all of which being made for the sake of defence, may be truly called defences, and are for the most part to be regarded as the work of the builder or of the weaver, rather than of the Statesman.

(4) defences;

Y. SOC.

Certainly.

STR.

Shall we add a fifth class, of ornamentation and drawing, and of the imitations produced by drawing and music, which are designed for amusement only, and may be fairly comprehended under one name?

(5) playthings;

Y. SOC.

What is it?

STR.

Plaything is the name.

Y. SOC.

Certainly.

STR.

That one name may be fitly predicated of all of them, for none of these things have a serious purpose—amusement is their sole aim.

Y. SOC.

That again I understand.

STR.

Then there is a class which provides materials for all these, out of which and in which the arts already mentioned fabricate their works;—this manifold class, I say, which is the creation and offspring of many other arts, may I not rank sixth?

(6) materials (metal, wood, &c.);

Y. SOC.

What do you mean?

STR.

I am referring to gold, silver, and other metals, and all that wood-cutting and shearing of every sort provides for the art of carpentry and plaiting; and there is the process of barking and stripping the cuticle of plants, and the currier's art, which strips off the skins of animals, and other similar arts which manufacture corks and papyri and cords, and provide for the manufacture of composite species out of simple kinds—the whole class may be termed the primitive and simple possession of man, and with this the kingly science has no concern at all.

Y. SOC.

True.

STR.

The provision of food and of all other things which mingle their particles with the particles of the human body, and minister to the body, will form a seventh class, which may be called by the general term of

(7) food.

nourishment, unless you have any better name to offer. This, however, appertains rather to the husbandman, huntsman, trainer, doctor, cook, and is not to be assigned to the Statesman's art.

Y. SOC.

Certainly not.

STR.

These seven classes include nearly every description of property, with the exception of tame animals. Consider;—there was the original material, which ought to have been placed first; next come instruments, vessels, vehicles, defences, playthings, nourishment; small things, which may be included under one of these—as for example, coins, seals and stamps, are omitted, for they have not in them the character of any larger kind which includes them; but some of them may, with a little forcing, be placed among ornaments, and others may be made to harmonize with the class of implements. The art of herding, which has been already divided into parts, will include all property in tame animals, except slaves.

These seven classes include almost all possessions, except tame animals; and all tame animals, except slaves, have been included under herding.

Y. SOC.

Very true.

STR.

The class of slaves and ministers only remains, and I suspect that in this the real aspirants for the throne, who are the rivals of the king in the formation of the political web, will be discovered; just as spinners, carders, and the rest of them, were the rivals of the weaver. All the others, who were termed co-operators, have been got rid of among the occupations already mentioned, and separated from the royal and political science.

Thus slaves and ministers alone remain; and among them we must look for the rivals of the king.

Y. SOC.

I agree.

STR.

Let us go a little nearer, in order that we may be more certain of the complexion of this remaining class.

Y. SOC.

Let us do so.

STR.

We shall find from our present point of view that the greatest servants are in a case and condition which is the reverse of what we anticipated.

But slaves certainly do not claim royal science;

Y. SOC.

Who are they?

STR.

Those who have been purchased, and have so become possessions; these are unmistakeably slaves, and certainly do not claim royal science.

Y. SOC.

Certainly not.

STR.

Again, freemen who of their own accord become the servants of the other classes in a State, and who exchange and equalise the products of husbandry and the other arts, some sitting in the market-place, others going from city to city by land or sea, and giving money in exchange for money 290or for other productions—the money-changer, the merchant, the ship-owner, the retailer, will not put in any claim to statecraft or politics?

nor traders;

Y. SOC.

No; unless, indeed, to the politics of commerce.

STR.

But surely men whom we see acting as hirelings and serfs, and too happy to turn their hand to anything, will not profess to share in royal science?

nor hirelings;

Y. SOC.

Certainly not.

STR.

But what would you say of some other serviceable officials?

Y. SOC.

Who are they, and what services do they perform?

STR.

There are heralds, and scribes perfected by practice, and divers others who have great skill in various sorts of business connected with the government of states—what shall we call them?

nor state officials;

Y. SOC.

They are the officials, and servants of the rulers, as you just now called them, but not themselves rulers.

STR.

There may be something strange in any servant pretending to be a ruler, and yet I do not think that I could have been dreaming when I imagined that the principal claimants to political science would be found somewhere in this neighbourhood.

Y. SOC.

Very true.

STR.

Well, let us draw nearer, and try the claims of some who have not yet been tested: in the first place, there are diviners, who have a portion of servile or ministerial science, and are thought to be the interpreters of the gods to men.

nor diviners;

Y. SOC.

True.

STR.

There is also the priestly class, who, as the law declares, know how to give the gods gifts from men in the form of sacrifices which are acceptable to them, and to ask on our behalf blessings in return from them. Now both these are branches of the servile or ministerial art.

nor priests.

Y. SOC.

Yes, clearly.

STR.

And here I think that we seem to be getting on the right track; for the priest and the diviner are swollen with pride and prerogative, and they create an awful impression of themselves by the magnitude of their enterprises; in Egypt, the king himself is not allowed to reign, unless he have priestly powers, and if he should be of another class and has thrust himself in, he must get enrolled in the priesthood. In many parts of Hellas, the duty of offering the most solemn propitiatory sacrifices is assigned to the highest magistracies, and here, at Athens, the most solemn and national of the ancient sacrifices are supposed to be celebrated by him who has been chosen by lot to be the King Archon.

But here we are getting on the right track; for both priest and diviner are ambitious.

Y. SOC.

Precisely.

STR.

291But who are these other kings and priests elected by lot who now come into view followed by their retainers and a vast throng, as the former class disappears and the scene changes?

Y. SOC.

Whom can you mean?

STR.

They are a strange crew.

Y. SOC.

Why strange?

STR.

A minute ago I thought that they were animals of every tribe; for many of them are like lions and centaurs, and many more like satyrs and such weak and shiftily creatures;—Protean shapes quickly changing into one another's forms and natures; and now, Socrates, I begin to see who they are.

At last the false politician, the greatest of Sophists and wizards, appears in view, surrounded by his troop who take Protean shapes.

Y. SOC.

Who are they? You seem to be gazing on some strange vision.

STR.

Yes; every one looks strange when you do not know him; and just now I myself fell into this mistake—at first sight, coming suddenly upon him, I did not recognize the politician and his troop.

Y. SOC.

Who is he?

STR.

The chief of Sophists and most accomplished of wizards, who must at any cost be separated from the true king or Statesman, if we are ever to see daylight in the present enquiry.

He must be separated from the king at any cost.

Y. SOC.

That is a hope not lightly to be renounced.

STR.

Never, if I can help it; and, first, let me ask you a question.

Y. SOC.

What?

STR.

Is not monarchy a recognized form of government?

Y. SOC.

Yes.

STR.

And, after monarchy, next in order comes the government of the few?

There are three chief forms of government; monarchy, the rule of the few, and democracy; these expand into five by the division of monarchy into royalty and tyranny, and of the government of the few into aristocracy and oligarchy.

Y. SOC.

Of course.

STR.

Is not the third form of government the rule of the multitude, which is called by the name of democracy?

Y. SOC.

Certainly.

STR.

And do not these three expand in a manner into five, producing out of themselves two other names?

Y. SOC.

What are they?

STR.

There is a criterion of voluntary and involuntary, poverty and riches, law and the absence of law, which men now-a-days apply to them; the two first they subdivide accordingly, and ascribe to monarchy two forms and two corresponding names, royalty and tyranny.

Y. SOC.

Very true.

STR.

And the government of the few they distinguish by the names of aristocracy and oligarchy.

Y. SOC.

Certainly.

STR.

Democracy alone, whether rigidly observing the laws ²⁹²or not, and whether the multitude rule over the men of property with their consent or against their consent, always in ordinary language has the same name.

Y. SOC.

True.

STR.

But do you suppose that any form of government which is defined by these characteristics of the one, the few, or the many, of poverty or wealth, of voluntary or compulsory submission, of written law or the absence of law, can be a right one?

But these forms of government are based on false principles.

Y. SOC.

Why not?

STR.

Reflect; and follow me.

Y. SOC.

In what direction?

STR.

Shall we abide by what we said at first, or shall we retract our words?

Y. SOC.

To what do you refer?

STR.

If I am not mistaken, we said that royal power was a science?

Y. SOC.

Yes.

STR.

And a science of a peculiar kind, which was selected out of the rest as having a character which is at once judicial and authoritative?

Y. SOC.

Yes.

STR.

And there was one kind of authority over lifeless things and another over living animals; and so we proceeded in the division step by step up to this point, not losing the idea of science, but unable as yet to determine the nature of the particular science?

Y. SOC.

True.

STR.

Hence we are led to observe that the distinguishing principle of the State cannot be the few or many, the voluntary or involuntary, poverty or riches; but some notion of science must enter into it, if we are to be consistent with what has preceded.

The characteristic of a true government is not that it is of few or many, voluntary or involuntary, but that it is scientific.

Y. SOC.

And we must be consistent.

STR.

Well, then, in which of these various forms of States may the science of government, which is among the greatest of all sciences and most difficult to acquire, be supposed to reside? That we must discover, and then we shall see who are the false politicians who pretend to be politicians but are not, although they persuade many, and shall separate them from the wise king.

Y. SOC.

That, as the argument has already intimated, will be our duty.

STR.

Do you think that the multitude in a State can attain political science?

Y. SOC.

Impossible.

STR.

But, perhaps, in a city of a thousand men, there would be a hundred, or say fifty, who could?

Y. SOC.

In that case political science would certainly be the easiest of all sciences; there could not be found in a city of that number as many really first-rate draught-players, if judged by the standard of the rest of Hellas, and there would certainly not be as many kings. For kings we may truly call those who possess royal science, whether they rule or not, as was shown in the previous argument [1](#).

STR.

293 Thank you for reminding me; and the consequence is that any true form of government can only be supposed to be the government of one, two, or, at any rate, of a few.

The science of government can only be attained by a very few.

Y. SOC.

Certainly.

STR.

And these, whether they rule with the will, or against the will, of their subjects, with written laws or without written laws, and whether they are poor or rich, and whatever be the nature of their rule, must be supposed, according to our present view, to rule on some scientific principle; just as the physician, whether he cures us against our will or with our will, and whatever be his mode of treatment,—incision, burning, or the infliction of some other pain,—whether he practises out of a book or not out of a book, and whether he be rich or poor, whether he purges or reduces in some other way, or even fattens his patients, is a physician all the same, so long as he exercises authority over them according to rules of art, if he only does them good and heals and saves them. And this we lay down to be the only proper test of the art of medicine, or of any other art of command.

Y. SOC.

Quite true.

STR.

Then that can be the only true form of government in which the governors are really found to possess science, and are not mere pretenders, whether they rule according to law or without law, over willing or unwilling subjects, and are rich or poor themselves—none of these things can with any propriety be included in the notion of the ruler.

So long as the governors rule scientifically, it matters not whether they rule with or without law, over willing or unwilling subjects.

Y. SOC.

True.

STR.

And whether with a view to the public good they purge the State by killing some, or exiling some; whether they reduce the size of the body corporate by sending out from the hive swarms of citizens, or, by introducing persons from without, increase it; while they act according to the rules of wisdom and justice, and use their power with a view to the general security and improvement, the city over which they rule, and which has these characteristics, may be described as the only true State. All other governments are not genuine or real, but only imitations of this, and some of them are better and some of them are worse; the better are said to be well governed, but they are mere imitations like the others.

Y. SOC.

I agree, Stranger, in the greater part of what you say; but as to their ruling without laws—the expression has a harsh sound.

Young Socrates objects to government without laws.

STR.

You have been too quick for me, Socrates; I was just going to ask you whether you objected to any of my statements. And now I see that we shall have to consider this notion of there being good government without laws.

Y. SOC.

Certainly.

STR.

There can be no doubt that legislation is in a manner the business of a king, and yet the best thing of all is not that the law should rule, but that a man should rule supposing him to have wisdom and royal power. Do you see why this is?

He is answered that the rule of a wise man is better than the rule of law; for the complexity of human affairs cannot be met by legislation.

Y. SOC.

Why?

STR.

Because the law does not perfectly comprehend what is noblest and most just for all and therefore cannot enforce what is best. The differences of men and actions, and the

endless irregular movements of human things, do not admit of any universal and simple rule. And no art whatsoever can lay down a rule which will last for all time.

Y. SOC.

Of course not.

STR.

But the law is always striving to make one;—like an obstinate and ignorant tyrant, who will not allow anything to be done contrary to his appointment, or any question to be asked—not even in sudden changes of circumstances, when something happens to be better than what he commanded for some one.

Law is like an obstinate and ignorant tyrant.

Y. SOC.

Certainly; the law treats us all precisely in the manner which you describe.

STR.

A perfectly simple principle can never be applied to a state of things which is the reverse of simple.

Y. SOC.

True.

STR.

Then if the law is not the perfection of right, why are we compelled to make laws at all? The reason of this has next to be investigated.

Why then are laws made?

Y. SOC.

Certainly.

STR.

Let me ask, whether you have not meetings for gymnastic contests in your city, such as there are in other cities, at which men compete in running, wrestling, and the like?

As the training-master makes rules, not for each particular case—that would be impossible—but for the generality.

Y. SOC.

Yes; they are very common among us.

STR.

And what are the rules which are enforced on their pupils by professional trainers or by others having similar authority? Can you remember?

Y. SOC.

To what do you refer?

STR.

The training-masters do not issue minute rules for individuals, or give every individual what is exactly suited to his constitution; they think that they ought to go more roughly to work, and to prescribe generally the regimen which will benefit the majority.

Y. SOC.

Very true.

STR.

And therefore they assign equal amounts of exercise to them all; they send them forth together, and let them rest together from their running, wrestling, or whatever the form of bodily exercise may be.

Y. SOC.

True.

STR.

And now observe that the legislator who has to preside ²⁹⁵over the herd, and to enforce justice in their dealings with one another, will not be able, in enacting for the general good, to provide exactly what is suitable for each particular case.

so too the legislator enacts what is generally for the best; for he cannot sit by each man's side through life and direct him.

Y. SOC.

He cannot be expected to do so.

STR.

He will lay down laws in a general form for the majority, roughly meeting the cases of individuals; and some of them he will deliver in writing, and others will be unwritten; and these last will be traditional customs of the country.

Y. SOC.

He will be right.

STR.

Yes, quite right; for how can he sit at every man's side all through his life, prescribing for him the exact particulars of his duty? Who, Socrates, would be equal to such a task? No one who really had the royal science, if he had been able to do this, would have imposed upon himself the restriction of a written law.

Y. SOC.

So I should infer from what has now been said.

STR.

Or rather, my good friend, from what is going to be said.

Y. SOC.

And what is that?

STR.

Let us put to ourselves the case of a physician, or trainer, who is about to go into a far country, and is expecting to be a long time away from his patients—thinking that his instructions will not be remembered unless they are written down, he will leave notes of them for the use of his pupils or patients.

Again, a physician, who is going to a foreign country, will leave directions in writing for his patients. But if he should return sooner than he expected and find a change of treatment necessary, he will disregard his former prescription.

Y. SOC.

True.

STR.

But what would you say, if he came back sooner than he had intended, and, owing to an unexpected change of the winds or other celestial influences, something else happened to be better for them,—would he not venture to suggest this new remedy, although not contemplated in his former prescription? Would he persist in observing the original law, neither himself giving any new commandments, nor the patient daring to do otherwise than was prescribed, under the idea that this course only was healthy and medicinal, all others noxious and heterodox? Viewed in the light of science and true art, would not all such enactments be utterly ridiculous?

Y. SOC.

Utterly.

STR.

And if he who gave laws, written or unwritten, determining what was good or bad, honourable or dishonourable, just or unjust, to the tribes of men who flock together in their several cities, and are governed in accordance with them; if, 296I say, the wise legislator were suddenly to come again, or another like to him, is he to be prohibited from changing them?—would not this prohibition be in reality quite as ridiculous as the other?

The legislator, in like manner, would not hesitate to change his own laws, if he came to life again.

Y. SOC.

Certainly.

STR.

Do you know a plausible saying of the common people which is in point?

Y. SOC.

I do not recall what you mean at the moment.

STR.

They say that if any one knows how the ancient laws may be improved, he must first persuade his own State of the improvement, and then he may legislate, but not otherwise.

A reformer should carry mankind with him; but even if he use a little violence, what harm?

Y. SOC.

And are they not right?

STR.

I dare say. But supposing that he does use some gentle violence for their good, what is this violence to be called? Or rather, before you answer, let me ask the same question in reference to our previous instances.

Y. SOC.

What do you mean?

STR.

Suppose that a skilful physician has a patient, of whatever sex or age, whom he compels against his will to do something for his good which is contrary to the written rules; what is this compulsion to be called? Would you ever dream of calling it a violation of the art, or a breach of the laws of health? Nothing could be more unjust than for the patient to whom such violence is applied, to charge the physician who practises the violence with wanting skill or aggravating his disease.

A physician is not blamed for curing a patient against his will;

Y. SOC.

Most true.

STR.

In the political art error is not called disease, but evil, or disgrace, or injustice.

Y. SOC.

Quite true.

STR.

And when the citizen, contrary to law and custom, is compelled to do what is juster and better and nobler than he did before, the last and most absurd thing which he could say about such violence is that he has incurred disgrace or evil or injustice at the hands of those who compelled him.

and we should not condemn any one who compels men to net more justly.

Y. SOC.

Very true.

STR.

And shall we say that the violence, if exercised by a rich man, is just, and if by a poor man, unjust? May not any man, rich or poor, with or without laws, with the will of the citizens or against the will of the citizens, do what is for their interest? Is not this the true principle of government, according to which the wise and good man will order the affairs of his subjects? As the pilot, by watching continually over the interests of the ship and of the crew,—not by laying down rules, but by making his art a law,—preserves the lives of his fellow-sailors, even so, and in the self-same way, may there not be a true form of polity created by those who are able to govern in a similar spirit, and who show a strength of art which is superior to the law? Nor can wise rulers ever err while they observing the one great rule of distributing justice to

In government, as in seamanship, art is superior to law.

the citizens with intelligence and skill, are able to preserve them, and, as far as may be, to make them better from being worse.

Y. SOC.

No one can deny what has been now said.

STR.

Neither, if you consider, can any one deny the other statement.

Y. SOC.

What was it?

STR.

We said that no great number of persons, whoever they may be, can attain political knowledge, or order a State wisely, but that the true government is to be found in a small body, or in an individual, and that other States are but imitations of this, as we said a little while ago, some for the better and some for the worse.

The true form of government, as we said, is of few or of an individual: other forms are imitations of this.

Y. SOC.

What do you mean? I cannot have understood your previous remark about imitations.

STR.

And yet the mere suggestion which I hastily threw out is highly important, even if we leave the question where it is, and do not seek by the discussion of it to expose the error which prevails in this matter.

Y. SOC.

What do you mean?

STR.

The idea which has to be grasped by us is not easy or familiar; but we may attempt to express it thus:—Supposing the government of which I have been speaking to be the only true model, then the others must use the written laws of this—in no other way can they be saved; they will have to do what is now generally approved, although not the best thing in the world.

They copy its laws and punish very severely the infringement of them.—Yet this is not the best thing, but only the second best.

Y. SOC.

What is this?

STR.

No citizen should do anything contrary to the laws, and any infringement of them should be punished with death and the most extreme penalties; and this is very right and good when regarded as the second best thing, if you set aside the first, of which I was just now speaking. Shall I explain the nature of what I call the second best?

Y. SOC.

By all means.

STR.

I must again have recourse to my favourite images; through them, and them alone, can I describe kings and rulers.

The real nature of this second best may be shown with the help of our favourite images.

Y. SOC.

What images?

STR.

The noble pilot and the wise physician, who 'is worth many another man'—in the similitude of these let us endeavour to discover some image of the king.

Y. SOC.

What sort of an image?

STR.

298 Well, such as this:—Every man will reflect that he suffers strange things at the hands of both of them; the physician saves any whom he wishes to save, and any whom he wishes to maltreat he maltreats—cutting or burning them, and at the same time requiring them to bring him payments, which are a sort of tribute, of which little or nothing is spent upon the sick man, and the greater part is consumed by him and his domestics; and the finale is that he receives money from the relations of the sick man or from some enemy of his, and puts him out of the way. And the pilots of ships are guilty of numberless evil deeds of the same kind; they intentionally play false and leave you ashore when the hour of sailing arrives; or they cause mishaps at sea and

Suppose the crimes of physicians and pilots to be such that it is necessary to put some check upon them: an assembly of nonprofessional persons is called to make minute regulations which must be observed in the practice of medicine or seamanship.

cast away their freight; and are guilty of other rogueries. Now suppose that we, bearing all this in mind, were to determine, after consideration, that neither of these arts shall any longer be allowed to exercise absolute control either over freemen or over slaves, but that we will summon an assembly either of all the people, or of the rich only, and that anybody who likes, whatever may be his calling, or even if he have no calling, may offer an opinion either about seamanship or about diseases—whether as to the manner in which physic or surgical instruments are to be applied to the patient, or again about the vessels and the nautical implements which are required in navigation, and how to meet the dangers of winds and waves which are incidental to the voyage, how to behave when encountering pirates, and what is to be done with the old-fashioned galleys, if they have to fight with others of a similar build—and that, whatever shall be decreed by the multitude on these points, upon the advice of persons skilled or unskilled, shall be written down on triangular tablets and columns, or enacted although unwritten to be national customs; and that in all future time vessels shall be navigated and remedies administered to the patient after this fashion.

Y. SOC.

What a strange notion!

STR.

Suppose further, that the pilots and physicians are appointed annually, either out of the rich, or out of the whole people, and that they are elected by lot; and that after their election they navigate vessels and heal the sick according to the written rules.

Pilots and physicians are elected annually and called to account at the end of their year of office, and punished if they have violated any of the written rules.

Y. SOC.

Worse and worse.

STR.

But hear what follows:—When the year of office has expired, the pilot or physician has to come before a court of review, in which the judges are either selected from the 299 wealthy classes or chosen by lot out of the whole people; and anybody who pleases may be their accuser, and may lay to their charge, that during the past year they have not navigated their vessels or healed their patients according to the letter of the law and the ancient customs of their ancestors; and if either of them is condemned, some of the judges must fix what he is to suffer or pay.

Y. SOC.

He who is willing to take a command under such conditions, deserves to suffer any penalty.

STR.

Yet once more, we shall have to enact that if any one is detected enquiring into piloting and navigation, or into health and the true nature of medicine, or about the winds, or other conditions of the atmosphere, contrary to the written rules, and has any ingenious notions about such matters, he is not to be called a pilot or physician, but a cloudy prating sophist;—further, on the ground that he is a corrupter of the young, who would persuade them to follow the art of medicine or piloting in an unlawful manner, and to exercise an arbitrary rule over their patients or ships, any one who is qualified by law may inform against him, and indict him in some court, and then if he is found to be persuading any, whether young or old, to act contrary to the written law, he is to be punished with the utmost rigour; for no one should presume to be wiser than the laws; and as touching healing and health and piloting and navigation, the nature of them is known to all, for anybody may learn the written laws and the national customs. If such were the mode of procedure, Socrates, about these sciences and about generalship, and any branch of hunting, or about painting or imitation in general, or carpentry, or any sort of handicraft, or husbandry, or planting, or if we were to see an art of rearing horses, or tending herds, or divination, or any ministerial service, or draught-playing, or any science conversant with number, whether simple or square or cube, or comprising motion,—I say, if all these things were done in this way according to written regulations, and not according to art, what would be the result?

Speculation about medicine or seamanship is to be forbidden on pain of death.

What would be the consequence of such procedure to these or to other arts?

Y. SOC.

All the arts would utterly perish, and could never be recovered, because enquiry would be unlawful. And human life, which is bad enough already, would then become utterly unendurable.

They would utterly perish.

STR.

300But what, if while compelling all these operations to be regulated by written law, we were to appoint as the guardian of the laws some one elected by a show of hands, or by lot, and he caring nothing about the laws, were to act contrary to them from motives of interest or favour, and without knowledge,—would not this be a still worse evil than the former?

But the consequence if the guardians of the laws broke them in their own interest would be still worse. For laws are based on experience and are made by wise men.

Y. SOC.

Very true.

STR.

To go against the laws, which are based upon long experience, and the wisdom of counsellors who have graciously recommended them and persuaded the multitude to

pass them, would be a far greater and more ruinous error than any adherence to written law?

Y. SOC.

Certainly.

STR.

Therefore, as there is a danger of this, the next best thing in legislating is not to allow either the individual or the multitude to break the law in any respect whatever.

Y. SOC.

True.

STR.

The laws would be copies of the true particulars of action as far as they admit of being written down from the lips of those who have knowledge?

Y. SOC.

Certainly they would.

STR.

And, as we were saying, he who has knowledge and is a true Statesman, will do many things within his own sphere of action by his art without regard to the laws, when he is of opinion that something other than that which he has written down and enjoined to be observed during his absence would be better.

But in certain cases there may be something better than what the law prescribes, and this the scientific ruler will have in view.

Y. SOC.

Yes, we said so.

STR.

And any individual or any number of men, having fixed laws, in acting contrary to them with a view to something better, would only be acting, as far as they are able, like the true Statesman?

Y. SOC.

Certainly.

STR.

If they had no knowledge of what they were doing, they would imitate the truth, and they would always imitate ill; but if they had knowledge, the imitation would be the perfect truth, and an imitation no longer.

Y. SOC.

Quite true.

STR.

And the principle that no great number of men are able to acquire a knowledge of any art has been already admitted by us.

Y. SOC.

Yes, it has.

STR.

Then the royal or political art, if there be such an art, will never be attained either by the wealthy or by the other mob.

Y. SOC.

Impossible.

STR.

Then the nearest approach which these lower forms of government can ever make to the true government of the 301one scientific ruler, is to do nothing contrary to their own written laws and national customs.

The lower forms of government are better if they observe the law.

Y. SOC.

Very good.

STR.

When the rich imitate the true form, such a government is called aristocracy; and when they are regardless of the laws, oligarchy.

Y. SOC.

True.

STR.

Or again, when an individual rules according to law in imitation of him who knows, we call him a king; and if he rules according to law, we give him the same name, whether he rules with opinion or with knowledge.

Thus aristocracy is better than oligarchy, royalty than tyranny.

Y. SOC.

To be sure.

STR.

And when an individual truly possessing knowledge rules, his name will surely be the same—he will be called a king; and thus the five names of governments, as they are now reckoned, become one.

Y. SOC.

That is true.

STR.

And when an individual ruler governs neither by law nor by custom, but following in the steps of the true man of science pretends that he can only act for the best by violating the laws, while in reality appetite and ignorance are the motives of the imitation, may not such an one be called a tyrant?

Y. SOC.

Certainly.

STR.

And this we believe to be the origin of the tyrant and the king, of oligarchies, and aristocracies, and democracies,—because men are offended at the one monarch, and can never be made to believe that any one can be worthy of such authority, or is able and willing in the spirit of virtue and knowledge to act justly and holily to all; they fancy that he will be a despot who will wrong and harm and slay whom he pleases of us; for if there could be such a despot as we describe, they would acknowledge that we ought to be too glad to have him, and that he alone would be the happy ruler of a true and perfect State.

The lower forms of government arise because the rule of one man is regarded with suspicion.

Y. SOC.

To be sure.

STR.

But then, as the State is not like a beehive, and has no natural head who is at once recognized to be the superior both in body and in mind, mankind are obliged to meet and make laws, and endeavour to approach as nearly as they can to the true form of government.

In them law and custom are supreme.

Y. SOC.

True.

STR.

And when the foundation of politics is in the letter only and in custom, and knowledge is divorced from action, can we wonder, Socrates, at the miseries which there are, and always will be, in States? Any other art, built on such a foundation and thus conducted, would ruin all that it touched. Ought we not rather to wonder at the natural strength of the political bond? For States have endured all this, time out of mind, and yet some of them still remain and are not overthrown, though many of them, like ships at sea, founder from time to time, and perish and have perished and will hereafter perish, through the badness of their pilots and crews, who have the worst sort of ignorance of the highest truths—I mean to say, that they are wholly unacquainted with politics, of which, above all other sciences, they believe themselves to have acquired the most perfect knowledge.

What wonder if there is misery where custom rules? Yet, in spite of it, states survive.

Y. SOC.

Very true.

STR.

Then the question arises:—which of these untrue forms of government is the least oppressive to their subjects, though they are all oppressive; and which is the worst of them? Here is a consideration which is beside our present purpose, and yet having regard to the whole it seems to influence all our actions: we must examine it.

Which of the untrue forms of government is best, which worst?

Y. SOC.

Yes, we must.

STR.

You may say that of the three forms, the same is at once the hardest and the easiest.

One of the three chief forms is best and worst.

Y. SOC.

What do you mean?

STR.

I am speaking of the three forms of government, which I mentioned at the beginning of this discussion—monarchy, the rule of the few, and the rule of the many.

Y. SOC.

True.

STR.

If we divide each of these we shall have six, from which the true one may be distinguished as a seventh.

If we divide these three forms and add the perfect state, there will be, altogether, seven forms.

Y. SOC.

How would you make the division?

STR.

Monarchy divides into royalty and tyranny; the rule of the few into aristocracy, which has an auspicious name, and oligarchy; and democracy or the rule of the many, which before was one, must now be divided.

Y. SOC.

On what principle of division?

STR.

On the same principle as before, although the name is now discovered to have a twofold meaning. For the distinction of ruling with law or without law, applies to this as well as to the rest.

Y. SOC.

Yes.

STR.

The division made no difference when we were looking for the perfect State, as we showed before. But now that this has been separated off, and, as we said, the others alone are left for us, the principle of law and the absence of law will bisect them all.

Y. SOC.

That would seem to follow, from what has been said.

STR.

Then monarchy, when bound by good prescriptions or laws, is the best of all the six, and when lawless is the most bitter and oppressive to the subject.

Monarchy, in the form of royalty, is the best; and in the form of tyranny the worst.

Y. SOC.

True.

STR.

303The government of the few, which is intermediate between that of the one and many, is also intermediate in good and evil; but the government of the many is in every respect weak and unable to do either any great good or any great evil, when compared with the others, because the offices are too minutely subdivided and too many hold them. And this therefore is the worst of all lawful governments, and the best of all lawless ones. If they are all without the restraints of law, democracy is the form in which to live is best; if they are well ordered, then this is the last which you should choose, as royalty, the first form, is the best, with the exception of the seventh, for that excels them all, and is among States what God is among men.

The government of the few is intermediate in good and evil. Democracy is the best of lawless and the worst of lawful governments. The seventh form is among states what God is among men.

Y. SOC.

You are quite right, and we should choose that above all.

STR.

The members of all these States, with the exception of the one which has knowledge, may be set aside as being not Statesmen but partisans,—upholders of the most monstrous idols, and themselves idols; and, being the greatest imitators and magicians, they are also the greatest of Sophists.

The upholders of the untrue forms of government are mere partisans and the greatest of Sophists.

Y. SOC.

The name of Sophist after many windings in the argument appears to have been most justly fixed upon the politicians, as they are termed.

STR.

And so our satyric drama has been played out; and the troop of Centaurs and Satyrs, however unwilling to leave the stage, have at last been separated from the political science.

The impostors depart.

Y. SOC.

So I perceive.

STR.

There remain, however, natures still more troublesome, because they are more nearly akin to the king, and more difficult to discern; the examination of them may be compared to the process of refining gold.

Like refiners of gold, we have now got rid of the earth and dross: there remain the arts of the general, judge, orator, which are nearly akin to Statesmanship, and for that reason difficult to separate from it.

Y. SOC.

What is your meaning?

STR.

The workmen begin by sifting away the earth and stones and the like; there remain in a confused mass the valuable elements akin to gold, which can only be separated by fire,—copper, silver, and other precious metal; these are at last refined away by the use of tests, until the gold is left quite pure.

Y. SOC.

Yes, that is the way in which these things are said to be done.

STR.

In like manner, all alien and uncongenial matter has been separated from political science, and what is precious and of a kindred nature has been left; there remain the nobler arts of the general and the judge, and the higher sort of oratory which is an ally of the royal art, and persuades men to do justice, and assists in guiding the helm of States:—How can we best clear away all these, leaving him whom we seek alone and unalloyed?

Y. SOC.

That is obviously what has in some way to be attempted.

STR.

If the attempt is all that is wanting, he shall certainly be brought to light; and I think that the illustration of music may assist in exhibiting him. Please to answer me a question.

The case of music may help us.

Y. SOC.

What question?

STR.

There is such a thing as learning music or handicraft arts in general?

Y. SOC.

There is.

STR.

And is there any higher art or science, having power to decide which of these arts are and are not to be learned;—what do you say?

There is an art above it, which decides whether it shall be learnt or not.

Y. SOC.

I should answer that there is.

STR.

And do we acknowledge this science to be different from the others?

Y. SOC.

Yes.

STR.

And ought the other sciences to be superior to this, or no single science to any other? Or ought this science to be the overseer and governor of all the others?

Y. SOC.

The latter.

STR.

You mean to say that the science which judges whether we ought to learn or not, must be superior to the science which is learned or which teaches?

Y. SOC.

Far superior.

STR.

And the science which determines whether we ought to persuade or not, must be superior to the science which is able to persuade?

Y. SOC.

Of course.

STR.

Very good; and to what science do we assign the power of persuading a multitude by a pleasing tale and not by teaching?

Y. SOC.

That power, I think, must clearly be assigned to rhetoric.

STR.

And to what science do we give the power of determining whether we are to employ persuasion or force towards any one, or to refrain altogether?

Y. SOC.

To that science which governs the arts of speech and persuasion.

STR.

Which, if I am not mistaken, will be politics?

Y. SOC.

Very good.

This art is the art of politics, which is also superior to rhetoric,

STR.

Rhetoric seems to be quickly distinguished from politics, being a different species, yet ministering to it.

Y. SOC.

Yes.

STR.

But what would you think of another sort of power or science?

Y. SOC.

What science?

STR.

The science which has to do with military operations against our enemies—is that to be regarded as a science or not? and to generalship.

Y. SOC.

How can generalship and military tactics be regarded as other than a science?

STR.

And is the art which is able and knows how to advise when we are to go to war, or to make peace, the same as this or different?

Y. SOC.

If we are to be consistent, we must say different.

STR.

And we must also suppose that this rules the other, if 305we are not to give up our former notion?

Y. SOC.

True.

STR.

And, considering how great and terrible the whole art of war is, can we imagine any which is superior to it but the truly royal?

Y. SOC.

No other.

STR.

The art of the general is only ministerial, and therefore not political?

Y. SOC.

Exactly.

STR.

Once more let us consider the nature of the righteous judge.

and to the
administration of
justice.

Y. SOC.

Very good.

STR.

Does he do anything but decide the dealings of men with one another to be just or unjust in accordance with the standard which he receives from the king and legislator,—showing his own peculiar virtue only in this, that he is not perverted by gifts, or fears, or pity, or by any sort of favour or enmity, into deciding the suits of men with one another contrary to the appointment of the legislator?

Y. SOC.

No; his office is such as you describe.

STR.

Then the inference is that the power of the judge is not royal, but only the power of a guardian of the law which ministers to the royal power?

Y. SOC.

True.

STR.

The review of all these sciences shows that none of them is political or royal. For the truly royal ought not itself to act, but to rule over those who are able to act; the king ought to know what is and what is not a fitting opportunity for taking the initiative in matters of the greatest importance, whilst others should execute his orders.

The political or royal art commands all the others;

Y. SOC.

True.

STR.

And, therefore, the arts which we have described, as they have no authority over themselves or one another, but are each of them concerned with some special action of their own, have, as they ought to have, special names corresponding to their several actions.

Y. SOC.

I agree.

STR.

And the science which is over them all, and has charge of the laws, and of all matters affecting the State, and truly weaves them all into one, if we would describe under a name characteristic of their common nature, most truly we may call politics.

Y. SOC.

Exactly so.

and weaves them together in the political web.

STR.

Then, now that we have discovered the various classes in a State¹, shall I analyse politics after the pattern which weaving supplied?

Y. SOC.

306I greatly wish that you would.

STR.

Then I must describe the nature of the royal web, and show how the various threads are woven into one piece.

The nature of this web must now be considered.

Y. SOC.

Clearly.

STR.

A task has to be accomplished, which, although difficult, appears to be necessary.

Y. SOC.

Certainly the attempt must be made.

STR.

To assume that one part of virtue differs in kind from another, is a position easily assailable by contentious disputants, who appeal to popular opinion.

Certain parts of virtue, such as courage and temperance, are antagonistic.

Y. SOC.

I do not understand.

STR.

Let me put the matter in another way: I suppose that you would consider courage to be a part of virtue?

Y. SOC.

Certainly I should.

STR.

And you would think temperance to be different from courage; and likewise to be a part of virtue?

Y. SOC.

True.

STR.

I shall venture to put forward a strange theory about them.

Y. SOC.

What is it?

STR.

That they are two principles which thoroughly hate one another and are antagonistic throughout a great part of nature.

Y. SOC.

How singular!

STR.

Yes, very—for all the parts of virtue are commonly said to be friendly to one another.

Common opinion
however does not
allow this.

Y. SOC.

Yes.

STR.

Then let us carefully investigate whether this is universally true, or whether there are not parts of virtue which are at war with their kindred in some respect.

Let us investigate the
matter.

Y. SOC.

Tell me how we shall consider that question.

STR.

We must extend our enquiry to all those things which we consider beautiful and at the same time place in two opposite classes.

Y. SOC.

Explain; what are they?

STR.

Acuteness and quickness, whether in body or soul or in the movement of sound, and the imitations of them which painting and music supply, you must have praised yourself before now, or been present when others praised them.

Y. SOC.

Certainly.

STR.

And do you remember the terms in which they are praised?

Y. SOC.

I do not.

STR.

I wonder whether I can explain to you in words the thought which is passing in my mind.

Y. SOC.

Why not?

STR.

You fancy that this is all so easy: Well, let us consider these notions with reference to the opposite classes of action under which they fall. When we praise quickness and energy and acuteness, whether of mind or body or sound, we express our praise of the quality which we admire by one word, and that one word is manliness or courage.

We express our admiration for quick and energetic action by applying the epithet 'brave' to it,

Y. SOC.

How?

STR.

We speak of an action as energetic and brave, quick and manly, and vigorous too; and when we apply the name of which I speak as the common attribute of all these natures, we certainly praise them.

Y. SOC.

True. 307

STR.

And do we not often praise the quiet strain of action also?

Y. SOC.

and for gentle and quiet action by calling it 'calm' or 'temperate.'

To be sure.

STR.

And do we not then say the opposite of what we said of the other?

Y. SOC.

How do you mean?

STR.

We exclaim How calm! How temperate! in admiration of the slow and quiet working of the intellect, and of steadiness and gentleness in action, of smoothness and depth of voice, and of all rhythmical movement and of music in general, when these have a proper solemnity. Of all such actions we predicate not courage, but a name indicative of order.

Y. SOC.

Very true.

STR.

But when, on the other hand, either of these is out of place, the names of either are changed into terms of censure.

Y. SOC.

How so?

STR.

Too great sharpness or quickness or hardness is termed violence or madness; too great slowness or gentleness is called cowardice or sluggishness; and we may observe, that for the most part these qualities, and the temperance and manliness of the opposite characters, are arrayed as enemies on opposite sides, and do not mingle with one another in their respective actions; and if we pursue the enquiry, we shall find that men who have these different qualities of mind differ from one another.

But when these qualities are in excess, we call them violence or madness, cowardice or sluggishness.—These extremes do not meet in the same persons.

Y. SOC.

In what respect?

STR.

In respect of all the qualities which I mentioned, and very likely of many others. According to their respective affinities to either class of actions they distribute praise and blame,—praise to the actions which are akin to their own, blame to those of the opposite party—and out of this many quarrels and occasions of quarrel arise among them.

Y. SOC.

True.

STR.

The difference between the two classes is often a trivial concern; but in a state, and when affecting really important matters, becomes of all disorders the most hateful.

Y. SOC.

To what do you refer?

STR.

To nothing short of the whole regulation of human life. For the orderly class are always ready to lead a peaceful life, quietly doing their own business; this is their manner of behaving with all men at home, and they are equally ready to find some way of keeping the peace with foreign States. And on account of this fondness of theirs for peace, which is often out of season where their influence prevails, they become by degrees unwarlike, and bring up their young men to be like themselves; they are at the mercy of their enemies; whence in a few years they and their children and the whole city often pass imperceptibly from the condition of freemen into that of slaves.

The gentle are willing to pay any price for peace;

Y. SOC.

What a cruel fate! 308

STR.

And now think of what happens with the more courageous natures. Are they not always inciting their country to go to war, owing to their excessive love of the military life? they raise up enemies against themselves many and mighty, and either utterly ruin their native-land or enslave and subject it to its foes?

the courageous are always anxious for war.

Y. SOC.

That, again, is true.

STR.

Must we not admit, then, that where these two classes exist, they always feel the greatest antipathy and antagonism towards one another?

These two classes are always antagonistic. And so we have found what we sought.

Y. SOC.

We cannot deny it.

STR.

And returning to the enquiry with which we began, have we not found that considerable portions of virtue are at variance with one another, and give rise to a similar opposition in the characters who are endowed with them?

Y. SOC.

True.

STR.

Let us consider a further point.

Y. SOC.

A further point. No constructive art will use bad material, if this can be avoided.

What is it?

STR.

I want to know, whether any constructive art will make any, even the most trivial thing, out of bad and good materials indifferently, if this can be helped? does not all art rather reject the bad as far as possible, and accept the good and fit materials, and from these elements, whether like or unlike, gathering them all into one, work out some nature or idea?

Y. SOC.

To be sure.

STR.

Then the true and natural art of statesmanship will never allow any State to be formed by a combination of good and bad men, if this can be avoided; but will begin by testing human natures in play, and after testing them, will entrust them to proper teachers who are the ministers of her purposes—she will herself give orders, and maintain authority; just as the art of weaving continually gives orders and maintains authority over the carders and all the others who prepare the material for the work, commanding the subsidiary arts to execute the works which she deems necessary for making the web.

And statesmanship will not weave bad men into the political web. She will select and train suitable natures,

Y. SOC.

Quite true.

STR.

In like manner, the royal science appears to me to be the mistress of all lawful educators and instructors, and having this queenly power, will not permit them to train men in what will produce characters unsuited to the political constitution which she desires to create, but only in what will produce such as are suitable. Those which have no share of manliness and temperance, or any other virtuous inclination, and, from the necessity of an evil nature, are violently carried away to godlessness and insolence and injustice, she gets rid of by death and exile, and punishes them with the greatest of disgraces.

but will exterminate the evil,

Y. SOC.

That is commonly said.

STR.

309But those who are wallowing in ignorance and baseness she bows under the yoke of slavery.

and enslave the ignorant.

Y. SOC.

Quite right.

STR.

The rest of the citizens she will weave into one, combining courage, which is the warp,

The rest of the citizens, out of whom, if they have education, something noble may be made, and who are capable of being united by the statesman, the kingly art blends and weaves together; taking on the one hand those whose natures tend rather to courage, which is the stronger element and may be regarded as the warp, and on the other hand those which incline to order and gentleness, and which are represented in the figure as spun thick and soft, after the manner of the woof—these, which are naturally opposed, she seeks to bind and weave together in the following manner:

with gentleness and order, which form the woof.

Y. SOC.

In what manner?

STR.

First of all, she takes the eternal element of the soul and binds it with a divine cord, to which it is akin, and then the animal nature, and binds that with human cords.

She binds the divine element with a divine, the human with a human cord. True opinion about the just and good, when confirmed by reason, is a divine principle, and the statesman alone can implant it in the citizen.

Y. SOC.

I do not understand what you mean.

STR.

The meaning is, that the opinion about the honourable and the just and good and their opposites, which is true and confirmed by reason, is a divine principle, and when implanted in the soul, is implanted, as I maintain, in a nature of heavenly birth.

Y. SOC.

Yes; what else should it be?

STR.

Only the Statesman and the good legislator, having the inspiration of the royal muse, can implant this opinion, and he, only in the rightly educated, whom we were just now describing.

Y. SOC.

Likely enough.

STR.

But him who cannot, we will not designate by any of the names which are the subject of the present enquiry.

Y. SOC.

Very right.

STR.

The courageous soul when attaining this truth becomes civilized, and rendered more capable of partaking of justice; but when not partaking, is inclined to brutality. Is not that true?

The courageous soul is civilized by it,

Y. SOC.

Certainly.

STR.

And again, the peaceful and orderly nature, if sharing in these opinions, becomes temperate and wise, as far as this may be in a State, but if not, deservedly obtains the ignominious name of silliness.

the peaceful is rendered temperate and wise.

Y. SOC.

Quite true.

STR.

Can we say that such a connexion as this will lastingly unite the evil with one another or with the good, or that any science would seriously think of using a bond of this kind to join such materials?

Y. SOC.

Impossible.

STR.

But in those who were originally of a noble nature, 310and who have been nurtured in noble ways, and in those only, may we not say that union is implanted by law, and that this is the medicine which art prescribes for them, and of all the bonds which unite the dissimilar and contrary parts of virtue is not this, as I was saying, the divinest?

Y. SOC.

Very true.

STR.

Where this divine bond exists there is no difficulty in imagining, or when you have imagined, in creating the other bonds, which are human only.

Y. SOC.

How is that, and what bonds do you mean?

STR.

Where the divine bond exists it is easy to create the human bonds, i.e. ties of intermarriage.—The true object of marriage is the procreation of children, not wealth or power or rank.

Rights of intermarriage, and ties which are formed between States by giving and taking children in marriage, or between individuals by private betrothals and espousals. For most persons form marriage connexions without due regard to what is best for the procreation of children.

Y. SOC.

In what way?

STR.

They seek after wealth and power, which in matrimony are objects not worthy even of a serious censure.

Y. SOC.

There is no need to consider them at all.

STR.

More reason is there to consider the practice of those who make family their chief aim, and to indicate their error.

Y. SOC.

Quite true.

STR.

They act on no true principle at all; they seek their ease and receive with open arms those who are like themselves, and hate those who are unlike them, being too much influenced by feelings of dislike.

Y. SOC.

How so?

STR.

The quiet orderly class seek for natures like their own, and as far as they can they marry and give in marriage exclusively in this class, and the courageous do the same; they seek natures like their own, whereas they should both do precisely the opposite.

Like should not consort with like, or courage will degenerate into madness and modesty into helplessness.

Y. SOC.

How and why is that?

STR.

Because courage, when untempered by the gentler nature during many generations, may at first bloom and strengthen, but at last bursts forth into downright madness.

Y. SOC.

Like enough.

STR.

And then, again, the soul which is over-full of modesty and has no element of courage in many successive generations, is apt to grow too indolent, and at last to become utterly paralyzed and useless.

Y. SOC.

That, again, is quite likely.

STR.

It was of these bonds I said that there would be no difficulty in creating them, if only both classes originally held the same opinion about the honourable and good;—indeed, in this single work, the whole process of royal weaving is comprised—never to allow temperate natures to be separated from the brave, but to weave them together, like the warp and the woof, by common sentiments and honours and reputation, and by the giving of pledges to one another; and out of them forming one smooth and even web, to entrust to them the offices of State.

Royal science prevents this by weaving together the temperate and courageous.

Y. SOC.

How do you mean?

STR.

Where one officer only is needed, you must choose a ruler who has both these qualities—when many, you must mingle some of each, for the temperate ruler is very careful and just and safe, but is wanting in thoroughness and go.

Y. SOC.

Certainly, that is very true.

STR.

The character of the courageous, on the other hand, falls short of the former in justice and caution, but has the power of action in a remarkable degree, and where either of these two qualities is wanting, there cities cannot altogether prosper either in their public or private life.

Y. SOC.

Certainly they cannot.

STR.

This then we declare to be the completion of the web of political action, which is created by a direct intertexture of the brave and temperate natures, whenever the royal science has drawn the two minds into communion with one another by unanimity and friendship, and having perfected the noblest and best of all the webs which political life admits, and enfolding therein all other inhabitants of cities, whether slaves or freemen, binds them in one fabric and governs and presides over them, and, in so far as to be happy is vouchsafed to a city, in no particular fails to secure their happiness.

And thus the political web is completed.

Y. SOC.

Your picture, Stranger, of the king and statesman, no less than of the Sophist, is quite perfect.

PHILEBUS.

PERSONS OF THE DIALOGUE.

Socrates.

Protarchus.

Philebus.

SOCRATES.

11 Observe, Protarchus, the nature of the position which you are now going to take from Philebus, and what the other position is which I maintain, and which, if you do not approve of it, is to be controverted by you. Shall you and I sum up the two sides?

Philebus.

Socrates, Protarchus, Philebus.

PROTARCHUS.

By all means.

Philebus, who is now to be succeeded by Protarchus, maintains that pleasure is the good; Socrates prefers wisdom.

SOC.

Philebus was saying that enjoyment and pleasure and delight, and the class of feelings akin to them, are a good to every living being, whereas I contend, that not these, but wisdom and intelligence and memory, and their kindred, right opinion and true reasoning, are better and more desirable than pleasure for all who are able to partake of them, and that to all such who are or ever will be they are the most advantageous of all things. Have I not given, Philebus, a fair statement of the two sides of the argument?

PHILEBUS.

Nothing could be fairer, Socrates.

SOC.

And do you, Protarchus, accept the position which is assigned to you?

PRO.

I cannot do otherwise, since our excellent Philebus has left the field.

SOC.

Surely the truth about these matters ought, by all means, to be ascertained.

Which of these two positions is the truer?

PRO.

Certainly.

SOC.

Shall we further agree—

PRO.

To what?

SOC.

That you and I must now try to indicate some state and disposition of the soul which has the property of making all men happy.

PRO.

Yes, by all means.

SOC.

And you say that pleasure, and I say that wisdom, is such a state?

PRO.

True.

SOC.

In the course of our enquiry something superior both to

And what if there be a third state, which is better than either? Then both of us are vanquished—are we not? But if this life, which really has the power of making men happy, turn out to be more akin to pleasure than to wisdom, the life of pleasure may still have the advantage over the life of wisdom. 12

pleasure and to wisdom may appear. In that case, if pleasure be more akin to this superior nature, pleasure must be adjudged conqueror: but if wisdom, wisdom.

PRO.

True.

SOC.

Or suppose that the better life is more nearly allied to wisdom, then wisdom conquers, and pleasure is defeated;—do you agree?

PRO.

Certainly.

SOC.

And what do you say, Philebus?

PHI.

I say, and shall always say, that pleasure is easily the conqueror; but you must decide for yourself, Protarchus.

PRO.

You, Philebus, have handed over the argument to me, and have no longer a voice in the matter?

PHI.

True enough. Nevertheless I would clear myself and deliver my soul of you; and I call the goddess herself to witness that I now do so.

PRO.

You may appeal to us; we too will be the witnesses of your words. And now, Socrates, whether Philebus is pleased or displeased, we will proceed with the argument.

SOC.

Then let us begin with the goddess herself, of whom Philebus says that she is called Aphrodite, but that her real name is Pleasure.

We will begin with pleasure, which is one, but also has many varieties, some of them being mutually opposed.

PRO.

Very good.

SOC.

The awe which I always feel, Protarchus, about the names of the gods is more than human—it exceeds all other fears. And now I would not sin against Aphrodite by naming her amiss; let her be called what she pleases. But Pleasure I know to be manifold, and with her, as I was just now saying, we must begin, and consider what her nature is. She has one name, and therefore you would imagine that she is one; and yet surely she takes the most varied and even unlike forms. For do we not say that the intemperate has pleasure, and that the temperate has pleasure in his very temperance,—that the fool is pleased when he is full of foolish fancies and hopes, and that the wise man has pleasure in his wisdom? and how foolish would any one be who affirmed that all these opposite pleasures are severally alike!

Socrates, Protarchus.

PRO.

Why, Socrates, they are opposed in so far as they spring from opposite sources, but they are not in themselves opposite. For must not pleasure be of all things most absolutely like pleasure,—that is, like itself?

Pleasures are opposed when springing from opposite sources: in themselves they are all alike.

SOC.

Yes, my good friend, just as colour is like colour;—in so far as colours are colours, there is no difference between them; and yet we all know that black is not only unlike, but even absolutely opposed to white: or again, as figure is like figure, for all figures are comprehended under one class; and yet particular figures may be absolutely opposed to one another, and there is an infinite diversity of them. And we might find similar examples in many other things; therefore do not rely upon this argument, which would go to prove the unity of the most extreme opposites. And I suspect that we shall find a similar opposition among pleasures.

PRO.

But this proves only that all pleasures are

Very likely; but how will this invalidate the argument?

pleasures, and not that
all pleasures are good.

SOC.

Why, I shall reply, that dissimilar as they are, you apply to them a new predicate, for you say that all pleasant things are good; now although no one can argue that pleasure is not pleasure, he may argue, as we are doing, that pleasures are oftener bad than good; but you call them all good, and at the same time are compelled, if you are pressed, to acknowledge that they are unlike. And so you must tell us what is the identical quality existing alike in good and bad pleasures, which makes you designate all of them as good.

PRO.

What do you mean, Socrates? Do you think that any one who asserts pleasure to be the good, will tolerate the notion that some pleasures are good and others bad?

SOC.

And yet you will acknowledge that they are different from one another, and sometimes opposed?

PRO.

Not in so far as they are pleasures.

SOC.

That is a return to the old position, Protarchus, and so we are to say (are we?) that there is no difference in pleasures, but that they are all alike; and the examples which have just been cited do not pierce our dull minds, but we go on arguing all the same, like the weakest and most inexperienced reasoners?^{[1](#)}

We shall not be able
to proceed, if obvious
facts are ignored.

PRO.

What do you mean?

SOC.

Why, I mean to say, that in self-defence I may, if I like, follow your example, and assert boldly that the two things most unlike are most absolutely alike; and the result will be that you and I will prove ourselves to be very tyros in the art of disputing; and the argument will be blown away and lost. Suppose that we put back, and return to the old position; then perhaps we may come to an understanding with one another.

PRO.

How do you mean?

SOC.

Shall I, Protarchus, have my own question asked of me by you?

PRO.

What question?

SOC.

Ask me whether wisdom and science and mind, and those other qualities which I, when asked by you at first what is the nature of the good, affirmed to be good, are not in the same case with the pleasures of which you spoke.

To say that there are no differences between pleasures, is as absurd as to say that there are no differences between sciences.

PRO.

What do you mean?

SOC.

The sciences are a numerous class, and will be found to present great differences. But even admitting that, like the pleasures, they are opposite as well as different, should I be worthy of the name of dialectician if, in order to avoid this difficulty, I were to say (as you are saying of pleasure) that there is no difference between one science and another;—would not the argument founder and disappear like an idle tale, although we might ourselves escape drowning by clinging to a fallacy?

PRO.

May none of this befall us, except the deliverance! Yet I like the even-handed justice which is applied to both our arguments. Let us assume, then, that there are many and diverse pleasures, and many and different sciences.

SOC.

And let us have no concealment, Protarchus, of the differences between my good and yours; but let us bring them to the light in the hope that, in the process of testing them, they may show whether pleasure is to be called the good, or wisdom, or some third quality; for surely we are not now simply contending in order that my view or that yours may prevail, but I presume that we ought both of us to be fighting for the truth.

PRO.

Certainly we ought.

SOC.

Then let us have a more definite understanding and establish the principle on which the argument rests.

We have lighted upon the old problem of the One and Many.

PRO.

What principle?

SOC.

A principle about which all men are always in a difficulty, and some men sometimes against their will.

PRO.

Speak plainer.

SOC.

The principle which has just turned up, which is a marvel of nature; for that one should be many or many one, are wonderful propositions; and he who affirms either is very open to attack.

PRO.

Do you mean, when a person says that I, Protarchus, am by nature one and also many, dividing the single 'me' into many 'me's,' and even opposing them as great and small, light and heavy, and in ten thousand other ways?

SOC.

Those, Protarchus, are the common and acknowledged paradoxes about the one and many, which I may say that everybody has by this time agreed to dismiss as childish and obvious and detrimental to the true course of thought; and no more favour is shown to that other puzzle, in which a person proves the members and parts of anything to be divided, and then confessing that they are all one, says laughingly in disproof of his own words: Why, here is a miracle, the one is many and infinite, and the many are only one.

The co-existence of the One and Many in concrete objects presents no difficulty.

PRO.

But what, Socrates, are those other marvels connected with this subject which, as you imply, have not yet become common and acknowledged?

SOC.

When, my boy, the one does not belong to the class of things that are born and perish, as in the instances which we were giving, for in those cases, and when unity is of this concrete nature, there is, as I was saying, a universal consent that no refutation is needed; but when the assertion is made that man is one, or ox is one, or beauty one, or the good one, then the interest which attaches to these and similar unities and the attempt which is made to divide them gives birth to a controversy.

Our troubles begin with abstract unities.

PRO.

Of what nature?

SOC.

In the first place, as to whether these unities have a real existence; and then how each individual unity, being always the same, and incapable either of generation or of destruction, but retaining a permanent individuality, can be conceived either as dispersed and multiplied in the infinity of the world of generation, or as still entire and yet divided from itself, which latter would seem to be the greatest impossibility of all, for how can one and the same thing be at the same time in one and in many things? These, Protarchus, are the real difficulties, and this is the one and many to which they relate; they are the source of great perplexity if ill decided, and the right determination of them is very helpful.

What is the relation of ideas and phenomena?

PRO.

Then, Socrates, let us begin by clearing up these questions.

SOC.

That is what I should wish.

PRO.

And I am sure that all my other friends will be glad to hear them discussed; Philebus, fortunately for us, is not disposed to move, and we had better not stir him up with questions.

SOC.

Good; and where shall we begin this great and multifarious battle, in which such various points are at issue? Shall we begin thus?

PRO.

How?

SOC.

We say that the one and many become identified by thought, and that now, as in time past, they run about together, in and out of every word which is uttered, and that this union of them will never cease, and is not now beginning, but is, as I believe, an everlasting quality of thought itself, which never grows old. Any young man, when he first tastes these subtleties, is delighted, and fancies that he has found a treasure of wisdom; in the first enthusiasm of his joy he leaves no stone, or rather no thought unturned, now rolling up the many into the one, and kneading them together, now unfolding and dividing them; he puzzles himself first and above all, and then he proceeds to puzzle his neighbours, whether they are older or younger, or of his own age—that makes no difference; neither father nor mother does he spare; no human being who has ears is safe from him, hardly even his dog, and a barbarian would have no chance of escaping him, if an interpreter could only be found.

The co-existence of one and many is a consequence of thought.—The enthusiasm of young men when they first discover the puzzle.

PRO.

Considering, Socrates, how many we are, and that all of us are young men, is there not a danger that we and Philebus may all set upon you, if you abuse us? We understand what you mean; but is there no charm by which we may dispel all this confusion, no more excellent way of arriving at the truth? If there is, we hope that you will guide us into that way, and we will do our best to follow, for the enquiry in which we are engaged, Socrates, is not unimportant.

What we want is to find a path to the truth.

SOC.

The reverse of unimportant, my boys, as Philebus calls you, and there neither is nor ever will be a better than my own favourite way, which has nevertheless already often deserted me and left me helpless in the hour of need.

Socrates' favourite method is to proceed from unity to infinity, from the one to the many, by regular steps, omitting none of the intermediate species.

PRO.

Tell us what that is.

SOC.

One which may be easily pointed out, but is by no means easy of application; it is the parent of all the discoveries in the arts.

PRO.

Tell us what it is.

SOC.

A gift of heaven, which, as I conceive, the gods tossed among men by the hands of a new Prometheus, and therewith a blaze of light; and the ancients, who were our betters and nearer the gods than we are, handed down the tradition, that whatever things are said to be are composed of one and many, and have the finite and infinite implanted in them: seeing, then, that such is the order of the world, we too ought in every enquiry to begin by laying down one idea of that which is the subject of enquiry; this unity we shall find in everything. Having found it, we may next proceed to look for two, if there be two, or, if not, then for three or some other number, subdividing each of these units, until at last the unity with which we began is seen not only to be one and many and infinite, but also a definite number; the infinite must not be suffered to approach the many until the entire number of the species intermediate between unity and infinity has been discovered,—then, and not till then, we may rest from division, and without further troubling ourselves about the endless individuals may allow them to drop into infinity. This, as I was saying, is the way of considering and learning and teaching one another, which the gods have handed down to us. But the wise men ¹⁷of our time are either too quick or too slow in conceiving plurality in unity. Having no method, they make their one and many anyhow, and from unity pass at once to infinity; the intermediate steps never occur to them. And this, I repeat, is what makes the difference between the mere art of disputation and true dialectic.

We must go on defining while anything remains to be defined.

PRO.

I think that I partly understand you, Socrates, but I should like to have a clearer notion of what you are saying.

SOC.

I may illustrate my meaning by the letters of the alphabet, Protarchus, which you were made to learn as a child.

The true method applied to grammar,

PRO.

How do they afford an illustration?

SOC.

The sound which passes through the lips whether of an individual or of all men is one and yet infinite.

PRO.

Very true.

SOC.

And yet not by knowing either that sound is one or that sound is infinite are we perfect in the art of speech, but the knowledge of the number and nature of sounds is what makes a man a grammarian.

PRO.

Very true.

SOC.

And the knowledge which makes a man a musician is of the same kind.

and to music.

PRO.

How so?

SOC.

Sound is one in music as well as in grammar?

PRO.

Certainly.

SOC.

And there is a higher note and a lower note, and a note of equal pitch:—may we affirm so much?

PRO.

Yes.

SOC.

But you would not be a real musician if this was all that you knew; though if you did not know this you would know almost nothing of music.

PRO.

Nothing.

SOC.

But when you have learned what sounds are high and what low, and the number and nature of the intervals and their limits or proportions, and the systems compounded out of them, which our fathers discovered, and have handed down to us who are their descendants under the name of harmonies; and the affections corresponding to them in the movements of the human body, which when measured by numbers ought, as they say, to be called rhythms and measures; and they tell us that the same principle should be applied to every one and many;—when, I say, you have learned all this, then, my dear friend, you are perfect; and you may be said to understand any other subject, when you have a similar grasp of it. But the infinity of kinds and the infinity of individuals which there is in each of them, when not classified, creates in every one of us a state of infinite ignorance; and he who never looks for number in anything, will not himself be looked for in the number of famous men.

Socrates, Protarchus,
Philebus.

PRO.

18I think that what Socrates is now saying is excellent, Philebus.

PHI.

I think so too, but how do his words bear upon us and upon the argument?

SOC.

Philebus is right in asking that question of us, Protarchus.

PRO.

Indeed he is, and you must answer him.

SOC.

If a man has to start
with infinity, he
should not jump at
once to unity, but

I will; but you must let me make one little remark first about these matters; I was saying, that he who begins with any individual unity, should proceed from that, not to infinity, but to a definite number, and now I say conversely, that he who has to begin with infinity should not jump to unity, but he should look about for some number representing a certain quantity, and thus out of all end in one. And now let us return for an illustration of our principle to the case of letters.

should proceed first to some definite quantity.—An illustration of this process taken from grammar.

PRO.

What do you mean?

SOC.

Some god or divine man, who in the Egyptian legend is said to have been Theuth, observing that the human voice was infinite, first distinguished in this infinity a certain number of vowels, and then other letters which had sound, but were not pure vowels (i. e. the semivowels); these too exist in a definite number; and lastly, he distinguished a third class of letters which we now call mutes, without voice and without sound, and divided these, and likewise the two other classes of vowels and semivowels, into the individual sounds, and told the number of them, and gave to each and all of them the name of letters; and observing that none of us could learn any one of them and not learn them all, and in consideration of this common bond which in a manner united them, he assigned to them all a single art, and this he called the art of grammar or letters.

PHI.

The illustration, Protarchus, has assisted me in understanding the original statement, but I still feel the defect of which I just now complained.

SOC.

Are you going to ask, Philebus, what this has to do with the argument?

PHI.

Yes, that is a question which Protarchus and I have been long asking.

SOC.

Assuredly you have already arrived at the answer to the question which, as you say, you have been so long asking?

PHI.

How So?

SOC.

Did we not begin by enquiring into the comparative eligibility of pleasure and wisdom?

We wish to compare pleasure and wisdom. If then we would follow the true method of investigation, we must seek to discover the number and nature of their kinds.

PHI.

Certainly.

SOC.

And we maintain that they are each of them one?

PHI.

True.

SOC.

And the precise question to which the previous discussion desires an answer is, how they are one and also many [i. e. how they have one genus and many species], and are not at once infinite, and what number of species is to be assigned to either of them before they pass into infinity¹.

PRO.

That is a very serious question, Philebus, to which Socrates has ingeniously brought us round, and please to consider which of us shall answer him; there may be something ridiculous in my being unable to answer, and therefore imposing the task upon you, when I have undertaken the whole charge of the argument, but if neither of us were able to answer, the result methinks would be still more ridiculous. Let us consider, then, what we are to do:—Socrates, if I understood him rightly, is asking whether there are not kinds of pleasure, and what is the number and nature of them, and the same of wisdom.

SOC.

Most true, O son of Callias; and the previous argument showed that if we are not able to tell the kinds of everything that has unity, likeness, sameness, or their opposites, none of us will be of the smallest use in any enquiry.

PRO.

That seems to be very near the truth, Socrates. Happy would the wise man be if he knew all things, and the next best thing for him is that he should know himself. Why do I say so at this moment? I will tell you. You, Socrates, have granted us this opportunity of conversing with you, and are ready to assist us in determining what is the best of human goods. For when Philebus said that pleasure and delight and enjoyment and the like were the chief good, you answered—No, not those, but another class of goods; and we are constantly reminding ourselves of what you said, and very properly, in order that we may not forget to examine and compare the two. And these goods, which in your opinion are to be designated as superior to pleasure, and are the true objects of pursuit, are mind and knowledge and understanding and art, and the like. There was a dispute about which were the best, and we playfully threatened that you should not be allowed to go home until the question was settled; and you agreed, and placed yourself at our disposal. And now, as children say, what has been fairly given cannot be taken back; cease then to fight against us in this way.

SOC.

In what way?

PHI.

20Do not perplex us, and keep asking questions of us to which we have not as yet any sufficient answer to give; let us not imagine that a general puzzling of us all is to be the end of our discussion, but if we are unable to answer, do you answer, as you have promised. Consider, then, whether you will divide pleasure and knowledge according to their kinds; or you may let the matter drop, if you are able and willing to find some other mode of clearing up our controversy.

Philebus and Protarchus confess themselves incapable of doing this. They therefore ask help of Socrates.

SOC.

If you say that, I have nothing to apprehend, for the words ‘if you are willing’ dispel all my fear; and, moreover, a god seems to have recalled something to my mind.

PHI.

What is that?

SOC.

Socrates, Protarchus.

Socrates has heard some one say that

I remember to have heard long ago certain discussions about pleasure and wisdom, whether awake or in a dream I cannot tell; they were to the effect that neither the one nor the other of them was the good, but some third thing, which was different from them, and better than either. If this be clearly established, then pleasure will lose the victory, for the good will cease to be identified with her:—Am I not right?

neither pleasure nor wisdom is the good, but some third thing. If this be brought to light, there will be no need to distinguish the kinds of pleasure and wisdom.

PRO.

Yes.

SOC.

And there will cease to be any need of distinguishing the kinds of pleasures, as I am inclined to think, but this will appear more clearly as we proceed.

PRO.

Capital, Socrates; pray go on as you propose.

SOC.

But, let us first agree on some little points.

PRO.

What are they?

SOC.

Is the good perfect or imperfect?

PRO.

The most perfect, Socrates, of all things.

SOC.

And is the good sufficient?

PRO.

Yes, certainly, and in a degree surpassing all other things.

Let us first admit that the good is perfect, and sufficient, and above all things to be desired.

SOC.

And no one can deny that all percipient beings desire and hunt after good, and are eager to catch and have the good about them, and care not for the attainment of anything which is not accompanied by good.

PRO.

That is undeniable.

SOC.

Now let us part off the life of pleasure from the life of wisdom, and pass them in review.

Next let us separate the life of pleasure from the life of wisdom, and examine each apart.

PRO.

How do you mean?

SOC.

Let there be no wisdom in the life of pleasure, nor any pleasure in the life of wisdom, for if either of them is the chief good, it cannot be supposed to want anything, but if either is shown to want anything, then it cannot really be the chief good.

PRO.

Impossible. 21

SOC.

And will you help us to test these two lives?

PRO.

Certainly.

SOC.

Then answer.

PRO.

Ask.

SOC.

Would you choose, Protarchus, to live all your life long in the enjoyment of the greatest pleasures?

PRO.

Certainly I should.

SOC.

Would you consider that there was still anything wanting to you if you had perfect pleasure?

PRO.

Certainly not.

SOC.

Reflect; would you not want wisdom and intelligence and forethought, and similar qualities? would you not at any rate want sight?

PRO.

Why should I? Having pleasure I should have all things.

SOC.

Living thus, you would always throughout your life enjoy the greatest pleasures?

PRO.

I should.

SOC.

But if you had neither mind, nor memory, nor knowledge, nor true opinion, you would in the first place be utterly ignorant of whether you were pleased or not, because you would be entirely devoid of intelligence.

Pleasure without knowledge is pleasure of which we are unconscious,—the life of an oyster.

PRO.

Certainly.

SOC.

And similarly, if you had no memory you would not recollect that you had ever been pleased, nor would the slightest recollection of the pleasure which you feel at any moment remain with you; and if you had no true opinion you would not think that you were pleased when you were; and if you had no power of calculation you would not be able to calculate on future pleasure, and your life would be the life, not of a man, but of an oyster or 'pulmo marinus.' Could this be otherwise?

PRO.

No.

SOC.

But is such a life eligible?

PRO.

I cannot answer you, Socrates; the argument has taken away from me the power of speech.

SOC.

We must keep up our spirits;—let us now take the life of mind and examine it in turn.

PRO.

And what is this life of mind?

SOC.

I want to know whether any one of us would consent to live, having wisdom and mind and knowledge and memory of all things, but having no sense of pleasure or pain, and wholly unaffected by these and the like feelings?

And knowledge, without pleasure, is equally undesirable.

PRO.

Neither life, Socrates, appears eligible to me, nor is likely, as I should imagine, to be chosen by any one else.

SOC.

22What would you say, Protarchus, to both of these in one, or to one that was made out of the union of the two?

Socrates, Protarchus, Philebus.

PRO.

Out of the union, that is, of pleasure with mind and wisdom?

SOC.

Yes, that is the life which I mean.

PRO.

There can be no difference of opinion; not some but all would surely choose this third rather than either of the other two, and in addition to them.

The mixed life of pleasure and wisdom is to be preferred.

SOC.

But do you see the consequence?

PRO.

To be sure I do. The consequence is, that two out of the three lives which have been proposed are neither sufficient nor eligible for man or for animal.

SOC.

Then now there can be no doubt that neither of them has the good, for the one which had would certainly have been sufficient and perfect and eligible for every living creature or thing that was able to live such a life; and if any of us had chosen any other, he would have chosen contrary to the nature of the truly eligible, and not of his own free will, but either through ignorance or from some unhappy necessity.

PRO.

Certainly that seems to be true.

SOC.

‘And so pleasure,’ says Socrates, ‘is not the same with the good.’—‘Nor your mind,’ rejoins Philebus.—‘Not my mind, certainly, but the divine, Yes. And I might add that the excellence of the mixed life is due

And now have I not sufficiently shown that Philebus' goddess is not to be regarded as identical with the good?

rather to wisdom than to pleasure.'

PHI.

Neither is your 'mind' the good, Socrates, for that will be open to the same objections.

SOC.

Perhaps, Philebus, you may be right in saying so of my 'mind'; but of the true, which is also the divine mind, far otherwise. However, I will not at present claim the first place for mind as against the mixed life; but we must come to some understanding about the second place. For you might affirm pleasure and I mind to be the cause of the mixed life; and in that case although neither of them would be the good, one of them might be imagined to be the cause of the good. And I might proceed further to argue in opposition to Philebus, that the element which makes this mixed life eligible and good, is more akin and more similar to mind than to pleasure. And if this is true, pleasure cannot be truly said to share either in the first or second place, and does not, if I may trust my own mind, attain even to the third.

PRO.

Truly, Socrates, pleasure appears to me to have had 23a fall; in fighting for the palm, she has been smitten by the argument, and is laid low. I must say that mind would have fallen too, and may therefore be thought to show discretion in not putting forward a similar claim. And if pleasure were deprived not only of the first but of the second place, she would be terribly damaged in the eyes of her admirers, for not even to them would she still appear as fair as before.

Socrates, Protarchus.

SOC.

Well, but had we not better leave her now, and not pain her by applying the crucial test, and finally detecting her?

PRO.

Nonsense, Socrates.

SOC.

Why? because I said that we had better not pain pleasure, which is an impossibility?

PRO.

Yes, and more than that, because you do not seem to be aware that none of us will let you go home until you have finished the argument.

SOC.

Heavens! Protarchus, that will be a tedious business, and just at present not at all an easy one. For in going to war in the cause of mind, who is aspiring to the second prize, I ought to have weapons of another make from those which I used before; some, however, of the old ones may do again. And must I then finish the argument?

In supporting the claims of mind to the second place, some new weapons will be required.

PRO.

Of course you must.

SOC.

Let us be very careful in laying the foundation.

PRO.

What do you mean?

SOC.

Let us divide all existing things into two, or rather, if you do not object, into three classes.

All things may be divided into three or four classes: (1) the finite, (2) the infinite, (3) the union of the two, and (4) the cause of the union.

PRO.

Upon what principle would you make the division?

SOC.

Let us take some of our newly-found notions.

PRO.

Which of them?

SOC.

Were we not saying that God revealed a finite element of existence, and also an infinite?

PRO.

Certainly.

SOC.

Let us assume these two principles, and also a third, which is compounded out of them; but I fear that I am ridiculously clumsy at these processes of division and enumeration.

PRO.

What do you mean, my good friend?

SOC.

I say that a fourth class is still wanted.

PRO.

What will that be?

SOC.

Find the cause of the third or compound, and add this as a fourth class to the three others.

PRO.

And would you like to have a fifth class or cause of resolution as well as a cause of composition?

SOC.

Not, I think, at present; but if I want a fifth at some future time you shall allow me to have it.

PRO.

Certainly.

SOC.

Let us begin with the first three; and as we find two out of the three greatly divided and dispersed, let us endeavour to reunite them, and see how in each of them there is a one and many.

PRO.

If you would explain to me a little more about them, perhaps I might be able to follow you.

SOC.

Well, the two classes are the same which I mentioned before, one the finite, and the other the infinite; I will first show that the infinite is in a certain sense many, and the finite may be hereafter discussed.

PRO.

I agree.

SOC.

And now consider well; for the question to which I invite your attention is difficult and controverted. When you speak of hotter and colder, can you conceive any limit in those qualities? Does not the more and less, which dwells in their very nature, prevent their having any end? for if they had an end, the more and less would themselves have an end.

The class of the infinite contains all things into which the more and the less enter; for the more and the less are without limit and measure.

PRO.

That is most true.

SOC.

Ever, as we say, into the hotter and the colder there enters a more and a less.

PRO.

Yes.

SOC.

Then, says the argument, there is never any end of them, and being endless they must also be infinite.

PRO.

Yes, Socrates, that is exceedingly true.

SOC.

Yes, my dear Protarchus, and your answer reminds me that such an expression as 'exceedingly,' which you have just uttered, and also the term 'gently,' have the same significance as more or less; for whenever they occur they do not allow of the existence of quantity—they are always introducing degrees into actions, instituting a comparison of a more or a less excessive or a more or a less gentle, and at each

creation of more or less, quantity disappears. For, as I was just now saying, if quantity and measure did not disappear, but were allowed to intrude in the sphere of more and less and the other comparatives, these last would be driven out of their own domain. When definite quantity is once admitted, there can be no longer a 'hotter' or a 'colder' (for these are always progressing, and are never in one stay); but definite quantity is at rest, and has ceased to progress. Which proves that comparatives, such as the hotter and the colder, are to be ranked in the class of the infinite.

PRO.

Your remark certainly has the look of truth, Socrates; but these subjects, as you were saying, are difficult to follow at first. I think, however, that if I could hear the argument repeated by you once or twice, there would be a substantial agreement between us.

SOC.

Yes, and I will try to meet your wish; but, as I would rather not waste time in the enumeration of endless particulars, let me know whether I may not assume as a note of the infinite—

PRO.

25What?

SOC.

I want to know whether such things as appear to us to admit of more or less, or are denoted by the words 'exceedingly,' 'gently,' 'extremely,' and the like, may not be referred to the class of the infinite, which is their unity, for, as was asserted in the previous argument, all things that were divided and dispersed should be brought together, and have the mark or seal of some one nature, if possible, set upon them—do you remember?

PRO.

Yes.

SOC.

And all things which do not admit of more or less, but admit their opposites, that is to say, first of all, equality, and the equal, or again, the double, or any other ratio of number and measure—all these may, I think, be rightly reckoned by us in the class of the limited or finite; what do you say?

But all things which admit of equality, number and measure, fall under the class of the finite.

PRO.

Excellent, Socrates.

SOC.

And now what nature shall we ascribe to the third or compound kind?

PRO.

You, I think, will have to tell me that.

SOC.

Rather God will tell you, if there be any God who will listen to my prayers.

PRO.

Offer up a prayer, then, and think.

SOC.

I am thinking, Protarchus, and I believe that some God has befriended us.

PRO.

What do you mean, and what proof have you to offer of what you are saying?

SOC.

I will tell you, and do you listen to my words.

PRO.

Proceed.

SOC.

Were we not speaking just now of hotter and colder?

PRO.

True.

SOC.

Add to them drier, wetter, more, less, swifter, slower, greater, smaller, and all that in the preceding argument we placed under the unity of more and less.

PRO.

In the class of the infinite, you mean?

SOC.

Yes; and now mingle this with the other.

PRO.

What is the other?

SOC.

The class of the finite which we ought to have brought together as we did the infinite; but, perhaps, it will come to the same thing if we do so now;—when the two are combined, a third will appear.

The union of finite and infinite gives rise to the third class,

PRO.

What do you mean by the class of the finite?

SOC.

The class of the equal and the double, and any class which puts an end to difference and opposition, and by introducing number creates harmony and proportion among the different elements.

PRO.

I understand; you seem to me to mean that the various opposites, when you mingle with them the class of the finite, take certain forms.

SOC.

Yes, that is my meaning.

PRO.

Proceed.

SOC.

Does not the right participation in the finite give health—in disease, for instance?

under which are included health and harmony and beauty and the seasons and every sort of good.

PRO.

Certainly.

SOC.

And whereas the high and low, the swift and the slow are infinite or unlimited, does not the addition of the principles aforesaid introduce a limit, and perfect the whole frame of music?

PRO.

Yes, certainly.

SOC.

Or, again, when cold and heat prevail, does not the introduction of them take away excess and indefiniteness, and infuse moderation and harmony?

PRO.

Certainly.

SOC.

And from a like admixture of the finite and infinite come the seasons, and all the delights of life?

PRO.

Most true.

SOC.

I omit ten thousand other things, such as beauty and health and strength, and the many beauties and high perfections of the soul: O my beautiful Philebus, the goddess, methinks, seeing the universal wantonness and wickedness of all things, and that there was in them no limit to pleasures and self-indulgence, devised the limit of law and order, whereby, as you say, Philebus, she torments, or as I maintain, delivers the soul.—What think you, Protarchus?

PRO.

Her ways are much to my mind, Socrates.

SOC.

You will observe that I have spoken of three classes?

PRO.

Yes, I think that I understand you: you mean to say that the infinite is one class, and that the finite is a second class of existences; but what you would make the third I am not so certain.

SOC.

That is because the amazing variety of the third class is too much for you, my dear friend; but there was not this difficulty with the infinite, which also comprehended many classes, for all of them were sealed with the note of more and less, and therefore appeared one.

The third class takes an amazing variety of forms, and is therefore more difficult to conceive than the two first classes.

PRO.

True.

SOC.

And the finite or limit had not many divisions, and we readily acknowledged it to be by nature one?

PRO.

Yes.

SOC.

Yes, indeed; and when I speak of the third class, understand me to mean any offspring of these, being a birth into true being, effected by the measure which the limit introduces.

PRO.

I understand.

SOC.

Still there was, as we said, a fourth class to be investigated, and you must assist in the investigation; for does not everything which comes into being, of necessity come into being through a cause?

The fourth class is the cause of the union of finite and infinite.

PRO.

Yes, certainly; for how can there be anything which has no cause?

SOC.

And is not the agent the same as the cause in all except name; the agent and the cause may be rightly called one?

PRO.

Very true. 27

SOC.

And the same may be said of the patient, or effect; we shall find that they too differ, as I was saying, only in name—shall we not?

PRO.

We shall.

SOC.

The agent or cause always naturally leads, and the patient or effect naturally follows it?

PRO.

Certainly.

SOC.

Then the cause and what is subordinate to it in generation are not the same, but different?

PRO.

True.

SOC.

Did not the things which were generated, and the things out of which they were generated, furnish all the three classes?

PRO.

Yes.

SOC.

And the creator or cause of them has been satisfactorily proven to be distinct from them,—and may therefore be called a fourth principle?

PRO.

So let us call it.

SOC.

Quite right; but now, having distinguished the four, I think that we had better refresh our memories by recapitulating each of them in order.

PRO.

By all means.

SOC.

Then the first I will call the infinite or unlimited, and the second the finite or limited; then follows the third, an essence compound and generated; and I do not think that I shall be far wrong in speaking of the cause of mixture and generation as the fourth.

Order of the classes:
(1) the infinite; (2) the finite; (3) the union of these; (4) the cause of the union.

PRO.

Certainly not.

SOC.

And now what is the next question, and how came we hither? Were we not enquiring whether the second place belonged to pleasure or wisdom?

PRO.

We were.

SOC.

And now, having determined these points, shall we not be better able to decide about the first and second place, which was the original subject of dispute?

PRO.

I dare say.

SOC.

We said, if you remember, that the mixed life of pleasure and wisdom was the conqueror—did we not?

Socrates, Protarchus,
Philebus.

PRO.

True.

To the third belongs
the mixed life of
pleasure and wisdom.

SOC.

And we see what is the place and nature of this life and to what class it is to be assigned?

PRO.

Beyond a doubt.

SOC.

This is evidently comprehended in the third or mixed class; which is not composed of any two particular ingredients, but of all the elements of infinity, bound down by the finite, and may therefore be truly said to comprehend the conqueror life.

PRO.

Most true.

SOC.

And what shall we say, Philebus, of your life which is all sweetness; and in which of the aforesaid classes is that to be placed? Perhaps you will allow me to ask you a question before you answer?

Pleasure and also pain
belong to the first
class.

PHI.

Let me hear.

SOC.

Have pleasure and pain a limit, or do they belong to the class which admits of more and less?

PHI.

They belong to the class which admits of more, Socrates; for pleasure would not be perfectly good if she were not infinite in quantity and degree.

SOC.

28Nor would pain, Philebus, be perfectly evil. And therefore the infinite cannot be that element which imparts to pleasure some degree of good. But now—admitting, if you like, that pleasure is of the nature of the infinite—in which of the aforesaid classes, O Protarchus and Philebus, can we without irreverence place wisdom and knowledge and mind? And let us be careful, for I think that the danger will be very serious if we err on this point.

To which does mind belong?

PHI.

You magnify, Socrates, the importance of your favourite god.

SOC.

And you, my friend, are also magnifying your favourite goddess; but still I must beg you to answer the question.

PRO.

Socrates is quite right, Philebus, and we must submit to him.

PHI.

And did not you, Protarchus, propose to answer in my place?

PRO.

Certainly I did; but I am now in a great strait, and I must entreat you, Socrates, to be our spokesman, and then we shall not say anything wrong or disrespectful of your favourite.

SOC.

I must obey you, Protarchus; nor is the task which you impose a difficult one; but did I really, as Philebus implies, disconcert you with my playful solemnity, when I asked the question to what class mind and knowledge belong?

PRO.

You did, indeed, Socrates.

SOC.

Yet the answer is easy, since all philosophers assert with one voice that mind is the king of heaven and earth—in reality they are magnifying themselves. And perhaps they are right. But still I should like to consider the class of mind, if you do not object, a little more fully.

To the highest, as philosophers declare. But they are interested witnesses, and therefore further proof is needed.

PHI.

Take your own course, Socrates, and never mind length; we shall not tire of you.

SOC.

Very good; let us begin then, Protarchus, by asking a question.

PRO.

What question?

SOC.

Whether all this which they call the universe is left to the guidance of unreason and chance medley, or, on the contrary, as our fathers have declared, ordered and governed by a marvellous intelligence and wisdom.

First, we agree that the world is governed by mind, and not by chance.

PRO.

Wide asunder are the two assertions, illustrious Socrates, for that which you were just now saying to me appears to be blasphemy; but the other assertion, that mind orders all things, is worthy of the aspect of the world, and of the sun, and of the moon, and of the stars and of the whole circle of the heavens; and never will I say or think otherwise.

SOC.

Shall we then 1 agree with them of old time in maintaining 1 this doctrine,—not merely reasserting the notions of others, without risk to ourselves,—but shall we share in the danger, and take our part of the reproach which will await us, when an ingenious individual declares that all is disorder?

PRO.

That would certainly be my wish.

SOC.

Then now please to consider the next stage of the argument.

Socrates, Protarchus.

PRO.

Let me hear.

SOC.

We see that the elements which enter into the nature of the bodies of all animals, fire, water, air, and, as the stormtossed sailor cries, 'land' [i. e. earth], reappear in the constitution of the world.

Next, our bodies are dependent on the body of the universe, whence the elements, which compose them, are derived.

PRO.

The proverb may be applied to us; for truly the storm gathers over us, and we are at our wit's end.

SOC.

There is something to be remarked about each of these elements.

PRO.

What is it?

SOC.

Only a small fraction of any one of them exists in us, and that of a mean sort, and not in any way pure, or having any power worthy of its nature. One instance will prove this of all of them; there is fire within us, and in the universe.

PRO.

True.

SOC.

And is not our fire small and weak and mean? But the fire in the universe is wonderful in quantity and beauty, and in every power that fire has.

PRO.

Most true.

SOC.

And is the fire in the universe nourished and generated and ruled by the fire in us, or is the fire in you and me, and in other animals, dependent on the universal fire?

PRO.

That is a question which does not deserve an answer.

SOC.

Right; and you would say the same, if I am not mistaken, of the earth which is in animals and the earth which is in the universe, and you would give a similar reply about all the other elements?

PRO.

Why, how could any man who gave any other be deemed in his senses?

SOC.

I do not think that he could—but now go on to the next step. When we saw those elements of which we have been speaking gathered up in one, did we not call them a body?

PRO.

We did.

SOC.

And the same may be said of the cosmos, which for the same reason may be considered to be a body, because made up of the same elements.

PRO.

Very true.

SOC.

But is our body nourished wholly by this body, or is this body nourished by our body, thence deriving and having the qualities of which we were just now speaking?

PRO.

That again, Socrates, is a question which does not deserve to be asked.

SOC.

Well, tell me, is this question worth asking? 30

PRO.

What question?

SOC.

May our body be said to have a soul?

PRO.

Clearly.

SOC.

And whence comes that soul, my dear Protarchus, unless the body of the universe, which contains elements like those in our bodies but in every way fairer, had also a soul? Can there be another source?

PRO.

Clearly, Socrates, that is the only source.

SOC.

Why, yes, Protarchus; for surely we cannot imagine that of the four classes, the finite, the infinite, the composition of the two, and the cause, the fourth, which enters into all things, giving to our bodies souls, and the art of self-management, and of healing disease, and operating in other ways to heal and organize, having too all the attributes of wisdom;—we cannot, I say, imagine that whereas the self-same elements exist, both in the entire heaven and in great provinces of the heaven, only fairer and purer, this last should not also in that higher sphere have designed the noblest and fairest things?

PRO.

Such a supposition is quite unreasonable.

And, following out the analogy, we must conclude that our souls and minds come from the soul or mind of the Universe,

SOC.

Then if this be denied, should we not be wise in adopting the other view and maintaining that there is in the universe a mighty infinite and an adequate limit, of which we have often spoken, as well as a presiding cause of no mean power, which orders and arranges years and seasons and months, and may be justly called wisdom and mind?

which is the supreme cause.

PRO.

Most justly.

SOC.

And wisdom and mind cannot exist without soul?

PRO.

Certainly not.

SOC.

And in the divine nature of Zeus would you not say that there is the soul and mind of a king, because there is in him the power of the cause? And other gods have other attributes, by which they are pleased to be called.

PRO.

Very true.

SOC.

Do not then suppose that these words are rashly spoken by us, O Protarchus, for they are in harmony with the testimony of those who said of old time that mind rules the universe.

PRO.

True.

SOC.

And they furnish an answer to my enquiry (cp. 28 A); for they imply that mind is the parent of that class of the four which we called the cause of all; and I think that you now have my answer.

Thus mind is shown to belong to the fourth or causal class.

PRO.

I have indeed, and yet I did not observe that you had answered.

SOC.

A jest is sometimes refreshing, Protarchus, when it interrupts earnest.

PRO.

31 Very true.

SOC.

I think, friend, that we have now pretty clearly set forth the class to which mind belongs and what is the power of mind.

PRO.

True.

SOC.

And the class to which pleasure belongs has also been long ago discovered?

PRO.

Yes.

SOC.

And let us remember, too, of both of them, (1) that mind was akin to the cause and of this family; and (2) that pleasure is infinite and belongs to the class which neither has, nor ever will have in itself, a beginning, middle, or end of its own.

PRO.

I shall be sure to remember.

SOC.

We must next examine what is their place and under what conditions they are generated. And we will begin with pleasure, since her class was first examined; and yet pleasure cannot be rightly tested apart from pain.

How do pleasures and pains originate?

PRO.

If this is the road, let us take it.

SOC.

I wonder whether you would agree with me about the origin of pleasure and pain.

PRO.

What do you mean?

SOC.

I mean to say that their natural seat is in the mixed class.

PRO.

And would you tell me again, sweet Socrates, which of the aforesaid classes is the mixed one?

SOC.

I will, my fine fellow, to the best of my ability.

PRO.

Very good.

SOC.

Let us then understand the mixed class to be that which we placed third in the list of four.

PRO.

That which followed the infinite and the finite; and in which you ranked health, and, if I am not mistaken, harmony.

SOC.

Capital; and now will you please to give me your best attention?

PRO.

Proceed; I am attending.

SOC.

I say that when the harmony in animals is dissolved, there is also a dissolution of nature and a generation of pain.

In the body they arise through the restoration and dissolution of the harmony of finite and infinite.

PRO.

That is very probable.

SOC.

And the restoration of harmony and return to nature is the source of pleasure, if I may be allowed to speak in the fewest and shortest words about matters of the greatest moment.

PRO.

I believe that you are right, Socrates; but will you try to be a little plainer?

SOC.

Do not obvious and every-day phenomena furnish the simplest illustration?

PRO.

What phenomena do you mean?

SOC.

Hunger, for example, is a dissolution and a pain.

PRO.

True.

SOC.

Whereas eating is a replenishment and a pleasure?

PRO.

Yes. 32

SOC.

Thirst again is a destruction and a pain, but the effect of moisture replenishing the dry place is a pleasure: once more, the unnatural separation and dissolution caused by heat is painful, and the natural restoration and refrigeration is pleasant.

PRO.

Very true.

SOC.

And the unnatural freezing of the moisture in an animal is pain, and the natural process of resolution and return of the elements to their original state is pleasure. And would not the general proposition seem to you to hold, that the destroying of the natural union of the finite and infinite, which, as I was observing before, make up the class of living beings, is pain, and that the process of return of all things to their own nature is pleasure?

PRO.

Granted; what you say has a general truth.

SOC.

Here then is one kind of pleasures and pains originating severally in the two processes which we have described?

PRO.

Good.

SOC.

Let us next assume that in the soul herself there is an antecedent hope of pleasure which is sweet and refreshing, and an expectation of pain, fearful and anxious.

In the soul there are pleasures and pains of expectation corresponding to these.

PRO.

Yes; this is another class of pleasures and pains, which is of the soul only, apart from the body, and is produced by expectation.

SOC.

Right; for in the analysis of these, pure, as I suppose them to be, the pleasures being unalloyed with pain and the pains with pleasure, methinks that we shall see clearly

whether the whole class of pleasure is to be desired, or whether this quality of entire desirableness is not rather to be attributed to another of the classes which have been mentioned; and whether pleasure and pain, like heat and cold, and other things of the same kind, are not sometimes to be desired and sometimes not to be desired, as being not in themselves good, but only sometimes and in some instances admitting of the nature of good.

PRO.

You say most truly that this is the track which the investigation should pursue.

SOC.

Well, then, assuming that pain ensues on the dissolution, and pleasure on the restoration of the harmony, let us now ask what will be the condition of animated beings who are neither in process of restoration nor of dissolution. And mind what you say: I ask whether any animal who is in that condition can possibly have any feeling of pleasure or pain, great or small?

But besides dissolution and restoration, there is a neutral state of the body,

PRO.

Certainly not.

SOC.

33 Then here we have a third state, over and above that of pleasure and of pain?

PRO.

Very true.

SOC.

And do not forget that there is such a state; it will make a great difference in our judgment of pleasure, whether we remember this or not. And I should like to say a few words about it.

PRO.

What have you to say?

SOC.

in which, if he pleases, the man who chooses the life of

Why, you know that if a man chooses the life of wisdom, there is no reason why he should not live in this neutral state.

wisdom may live, like the Gods, having neither joy nor sorrow.

PRO.

You mean that he may live neither rejoicing nor sorrowing?

SOC.

Yes; and if I remember rightly, when the lives were compared, no degree of pleasure, whether great or small, was thought to be necessary to him who chose the life of thought and wisdom.

PRO.

Yes, certainly, we said so.

SOC.

Then he will live without pleasure; and who knows whether this may not be the most divine of all lives?

PRO.

If so, the gods, at any rate, cannot be supposed to have either joy or sorrow.

SOC.

Certainly not—there would be a great impropriety in the assumption of either alternative. But whether the gods are or are not indifferent to pleasure is a point which may be considered hereafter if in any way relevant to the argument, and whatever is the conclusion we will place it to the account of mind in her contest for the second place, should she have to resign the first.

PRO.

Just so.

SOC.

The other class of pleasures, which as we were saying is purely mental, is entirely derived from memory.

Let us consider the pleasures of memory.

PRO.

What do you mean?

SOC.

I must first of all analyze memory, or rather perception which is prior to memory, if the subject of our discussion is ever to be properly cleared up.

PRO.

How will you proceed?

SOC.

Let us imagine affections of the body which are extinguished before they reach the soul, and leave her unaffected; and again, other affections which vibrate through both soul and body, and impart a shock to both and to each of them.

Some affections of the body do not reach the soul; those which do are conscious affections.

PRO.

Granted.

SOC.

And the soul may be truly said to be oblivious of the first but not of the second?

PRO.

Quite true.

SOC.

When I say oblivious, do not suppose that I mean forgetfulness in a literal sense; for forgetfulness is the exit of memory, which in this case has not yet entered; and to speak of the loss of that which is not yet in existence, and never has been, is a contradiction; do you see?

PRO.

Yes.

SOC.

Then just be so good as to change the terms.

PRO.

How shall I change them?

SOC.

34 Instead of the oblivion of the soul, when you are describing the state in which she is unaffected by the shocks of the body, say unconsciousness.

PRO.

I see.

SOC.

And the union or communion of soul and body in one feeling and motion would be properly called consciousness?

PRO.

Most true.

SOC.

Then now we know the meaning of the word?

PRO.

Yes.

SOC.

And memory may, I think, be rightly described as the preservation of consciousness?

PRO.

Right.

SOC.

But do we not distinguish memory from recollection?

PRO.

I think so.

Memory is the preservation of conscious affections; recollection is the recovery of them.

SOC.

And do we not mean by recollection the power which the soul has of recovering, when by herself, some feeling which she experienced when in company with the body?

PRO.

Certainly.

SOC.

And when she recovers of herself the lost recollection of some consciousness or knowledge, the recovery is termed recollection and reminiscence?

PRO.

Very true.

SOC.

There is a reason why I say all this.

PRO.

What is it?

SOC.

I want to attain the plainest possible notion of pleasure and desire, as they exist in the mind only, apart from the body; and the previous analysis helps to show the nature of both.

These preliminary remarks will help us to understand the nature of pleasure and desire.

PRO.

Then now, Socrates, let us proceed to the next point.

SOC.

There are certainly many things to be considered in discussing the generation and whole complexion of pleasure. At the outset we must determine the nature and seat of desire.

PRO.

Ay; let us enquire into that, for we shall lose nothing.

SOC.

Nay, Protarchus, we shall surely lose the puzzle if we find the answer.

PRO.

A fair retort; but let us proceed.

SOC.

Did we not place hunger, thirst, and the like, in the class of desires?

What is desire?—The wish for replenishment.

PRO.

Certainly.

SOC.

And yet they are very different; what common nature have we in view when we call them by a single name?

PRO.

By heavens, Socrates, that is a question which is not easily answered; but it must be answered.

SOC.

Then let us go back to our examples.

PRO.

Where shall we begin?

SOC.

Do we mean anything when we say ‘a man thirsts’?

PRO.

Yes.

SOC.

We mean to say that he ‘is empty’?

PRO.

Of course.

SOC.

And is not thirst desire?

PRO.

Yes, of drink.

SOC.

Would you say of drink, or of replenishment with drink?

PRO.

I should say, of replenishment with drink.

SOC.

Then he who is empty desires, as would appear, the opposite of what he experiences; for he is empty and desires to be full?

PRO.

Clearly so.

SOC.

But how can a man who is empty for the first time, attain either by perception or memory to any apprehension of replenishment, of which he has no present or past experience?

But how can a man, when first empty, desire replenishment of which he has no experience?

PRO.

Impossible.

SOC.

And yet he who desires, surely desires something?

PRO.

Of course.

SOC.

He does not desire that which he experiences, for he experiences thirst, and thirst is emptiness; but he desires replenishment?

Yet he does desire it,

PRO.

True.

SOC.

Then there must be something in the thirsty man which in some way apprehends replenishment?

PRO.

There must.

SOC.

And that cannot be the body, for the body is supposed to be emptied?

PRO.

Yes.

SOC.

The only remaining alternative is that the soul apprehends the replenishment by the help of memory; as is obvious, for what other way can there be?

not however with his body, but with his mind by the help of memory.

PRO.

I cannot imagine any other.

SOC.

But do you see the consequence?

PRO.

What is it?

SOC.

That there is no such thing as desire of the body.

PRO.

Why so?

SOC.

Why, because the argument shows that the endeavour of every animal is to the reverse of his bodily state.

PRO.

Yes.

SOC.

And the impulse which leads him to the opposite of what he is experiencing proves that he has a memory of the opposite state.

PRO.

True.

SOC.

And the argument, having proved that memory attracts us towards the objects of desire, proves also that the impulses and the desires and the moving principle in every living being have their origin in the soul.

The mind, then, is the seat of desire.

PRO.

Most true.

SOC.

The argument will not allow that our body either hungers or thirsts or has any similar experience.

PRO.

Quite right.

SOC.

Let me make a further observation; the argument appears to me to imply that there is a kind of life which consists in these affections.

PRO.

Of what affections, and of what kind of life, are you speaking?

SOC.

I am speaking of being emptied and replenished, and of all that relates to the preservation and destruction of living beings, as well as of the pain which is felt in one of these states and of the pleasure which succeeds to it.

PRO.

True.

SOC.

And what would you say of the intermediate state?

PRO.

What do you mean by 'intermediate'?

SOC.

I mean when a person is in actual suffering and yet remembers past pleasures which, if they would only return, would relieve him; but as yet he has them not. May we not say of him, that he is in an intermediate state? 36

PRO.

Certainly.

SOC.

Would you say that he was wholly pained or wholly pleased?

PRO.

Nay, I should say that he has two pains; in his body there is the actual experience of pain, and in his soul longing and expectation.

SOC.

What do you mean, Protarchus, by the two pains? May not a man who is empty have at one time a sure hope of being filled, and at other times be quite in despair?

There is an intermediate life, which combines a bodily pain with the mental pleasure of hope.

PRO.

Very true.

SOC.

And has he not the pleasure of memory when he is hoping to be filled, and yet in that he is empty is he not at the same time in pain?

PRO.

Certainly.

SOC.

Then man and the other animals have at the same time both pleasure and pain?

PRO.

I suppose so.

SOC.

But when a man is empty and has no hope of being filled, there will be the double experience of pain. You observed this and inferred that the double experience was the single case possible.

But when the hope is turned into despair, there is a double pain.

PRO.

Quite true, Socrates.

SOC.

Shall the enquiry into these states of feeling be made the occasion of raising a question?

PRO.

What question?

SOC.

A question.—Can there be false pleasures, as there are false opinions? ‘No,’ rejoins Protarchus;

Whether we ought to say that the pleasures and pains of which we are speaking are true or false? or some true and some false?

‘opinions may be false, but not pleasures.’

PRO.

But how, Socrates, can there be false pleasures and pains?

SOC.

And how, Protarchus, can there be true and false fears, or true and false expectations, or true and false opinions?

PRO.

I grant that opinions may be true or false, but not pleasures.

SOC.

What do you mean? I am afraid that we are raising a very serious enquiry.

PRO.

There I agree.

SOC.

And yet, my boy, for you are one of Philebus’ boys (cp. 16 A), the point to be considered, is, whether the enquiry is relevant to the argument.

PRO.

Surely.

SOC.

No tedious and irrelevant discussion can be allowed; what is said should be pertinent.

PRO.

Right.

SOC.

I am always wondering at the question which has now been raised.

PRO.

How so?

SOC.

Do you deny that some pleasures are false, and others true?

PRO.

To be sure I do.

SOC.

Would you say that no one ever seemed to rejoice and yet did not rejoice, or seemed to feel pain and yet did not feel pain, sleeping or waking, mad or lunatic?

PRO.

So we have always held, Socrates.

SOC.

37But were you right? Shall we enquire into the truth of your opinion?

Socrates proceeds to discuss the question.

PRO.

I think that we should.

SOC.

Let us then put into more precise terms the question which has arisen about pleasure and opinion. Is there such a thing as opinion?

PRO.

Yes.

SOC.

And such a thing as pleasure?

PRO.

Yes.

SOC.

And an opinion must be of something?

PRO.

True.

SOC.

And a man must be pleased by something?

PRO.

Quite correct.

SOC.

And whether the opinion be right or wrong, makes no difference; it will still be an opinion?

PRO.

Certainly.

SOC.

And he who is pleased, whether he is rightly pleased or not, will always have a real feeling of pleasure?

PRO.

Yes; that is also quite true.

SOC.

Then, how can opinion be both true and false, and pleasure true only, although pleasure and opinion are both equally real?

PRO.

Yes; that is the question.

All pleasures and opinions, whether right or wrong, are real.

SOC.

You mean that opinion admits of truth and falsehood, and hence becomes not merely opinion, but opinion of a certain quality; and this is what you think should be examined?

PRO.

Yes.

SOC.

And further, even if we admit the existence of qualities in other objects, may not pleasure and pain be simple and devoid of quality?

But do pleasures, like opinions, admit of quality? Certainly they do.

PRO.

Clearly.

SOC.

But there is no difficulty in seeing that pleasure and pain as well as opinion have qualities, for they are great or small, and have various degrees of intensity; as was indeed said long ago by us.

PRO.

Quite true.

SOC.

And if badness attaches to any of them, Protarchus, then we should speak of a bad opinion or of a bad pleasure?

PRO.

Quite true, Socrates.

SOC.

And if rightness attaches to any of them, should we not speak of a right opinion or right pleasure; and in like manner of the reverse of rightness?

PRO.

Certainly.

SOC.

And if the thing opined be erroneous, might we not say that the opinion, being erroneous, is not right or rightly opined?

PRO.

Certainly.

SOC.

And if we see a pleasure or pain which errs in respect of its object, shall we call that right or good, or by any honourable name?

False pleasures are pleasures based on false opinion.

PRO.

Not if the pleasure is mistaken; how could we?

SOC.

And surely pleasure often appears to accompany an opinion which is not true, but false?

PRO.

Certainly it does; and in that case, Socrates, as we were saying, the opinion is false, but no one could call the actual pleasure false.

SOC.

How eagerly, Protarchus, do you rush to the defence of pleasure!

PRO.

Nay, Socrates, I only repeat what I hear.

How do these differ from pleasures based on true opinion?

SOC.

And is there no difference, my friend, between that pleasure which is associated with right opinion and knowledge, and that which is often found in all of us associated with falsehood and ignorance?

PRO.

There must be a very great difference between them.

SOC.

Then, now let us proceed to contemplate this difference.

PRO.

Lead, and I will follow.

SOC.

Well, then, my view is—

PRO.

What is it?

SOC.

We agree—do we not?—that there is such a thing as false, and also such a thing as true opinion?

PRO.

Yes.

SOC.

And pleasure and pain, as I was just now saying, are often consequent upon these—upon true and false opinion, I mean.

PRO.

Very true.

SOC.

And do not opinion and the endeavour to form an opinion, always spring from memory and perception?

Opinions spring from memory and perception.

PRO.

Certainly.

SOC.

Might we imagine the process to be something of this nature?

PRO.

Of what nature?

SOC.

An object may be often seen at a distance not very clearly, and the seer may want to determine what it is which he sees.

PRO.

Very likely.

SOC.

Soon he begins to interrogate himself.

PRO.

In what manner?

SOC.

He asks himself—‘What is that which appears to be standing by the rock under the tree?’ This is the question which he may be supposed to put to himself when he sees such an appearance.

PRO.

True.

SOC.

To which he may guess the right answer, saying as if in a whisper to himself—‘It is a man.’

PRO.

Very good.

SOC.

Or again, he may be misled, and then he will say—‘No, it is a figure made by the shepherds.’

PRO.

Yes.

SOC.

And if he has a companion, he repeats his thought to him in articulate sounds, and what was before an opinion, has now become a proposition.

PRO.

Certainly.

SOC.

But if he be walking alone when these thoughts occur to him, he may not unfrequently keep them in his mind for a considerable time.

PRO.

Very true.

SOC.

Well, now, I wonder whether you would agree in my explanation of this phenomenon.

PRO.

What is your explanation?

SOC.

I think that the soul at such times is like a book.

PRO.

How so?

SOC.

which write down in the soul propositions relating to objects perceived. Imagination at the same time draws pictures of them.

Memory and perception meet, and they and their attendant feelings seem to me almost to write down words in the soul, and when the inscribing feeling writes truly, then true opinion and true propositions which are the expressions of opinion, come into our souls—but when the scribe within us writes falsely, the result is false.

These propositions and pictures may be true or false.

PRO.

I quite assent and agree to your statement.

SOC.

I must bespeak your favour also for another artist, who is busy at the same time in the chambers of the soul.

PRO.

Who is he?

SOC.

The painter, who, after the scribe has done his work, draws images in the soul of the things which he has described.

PRO.

But when and how does he do this?

SOC.

When a man, besides receiving from sight or some other sense certain opinions or statements, sees in his mind the images of the subjects of them;—is not this a very common mental phenomenon?

PRO.

Certainly.

SOC.

And the images answering to true opinions and words are true, and to false opinions and words false; are they not?

PRO.

They are.

SOC.

If we are right so far, there arises a further question.

PRO.

What is it?

SOC.

Whether we experience the feeling of which I am speaking only in relation to the present and the past, or in relation to the future also?

Do the propositions and pictures refer to the future, as well as to the past and present?

PRO.

I should say in relation to all times alike.

SOC.

Have not purely mental pleasures and pains been described already as in some cases anticipations of the bodily ones; from which we may infer that anticipatory pleasures and pains have to do with the future?

PRO.

Most true.

SOC.

And do all those writings and paintings which, as we were saying a little while ago, are produced in us, relate to the past and present only, and not to the future?

PRO.

To the future, very much.

Certainly they do; and then they are hopes.

SOC.

When you say 'Very much,' you mean to imply that all these representations are hopes about the future, and that mankind are filled with hopes in every stage of existence?

PRO.

Exactly.

SOC.

Answer me another question.

PRO.

What question?

SOC.

A just and pious and good man is the friend of the gods; is he not?

PRO.

Certainly he is.

SOC.

And the unjust and utterly bad man is the reverse?

PRO.

40 True.

SOC.

And all men, as we were saying just now, are always filled with hopes?

PRO.

Certainly.

SOC.

And these hopes, as they are termed, are propositions which exist in the minds of each of us?

PRO.

Yes.

SOC.

And the fancies of hope are also pictured in us; a man may often have a vision of a heap of gold, and pleasures ensuing, and in the picture there may be a likeness of himself mightily rejoicing over his good fortune.

PRO.

True.

SOC.

And may we not say that the good, being friends of the gods, have generally true pictures presented to them, and the bad false pictures?

And the good have true hopes presented to their minds by the gods, the bad have false pleasures painted in their fancies.

PRO.

Certainly.

SOC.

The bad, too, have pleasures painted in their fancy as well as the good; but I presume that they are false pleasures.

PRO.

They are.

SOC.

The bad then commonly delight in false pleasures, and the good in true pleasures?

PRO.

Doubtless.

SOC.

Then upon this view there are false pleasures in the souls of men which are a ludicrous imitation of the true, and there are pains of a similar character?

PRO.

There are.

SOC.

And did we not allow that a man who had an opinion at all had a real opinion, but often about things which had no existence either in the past, present, or future?

PRO.

Quite true.

SOC.

And this was the source of false opinion and opining; am I not right?

PRO.

Yes.

SOC.

And must we not attribute to pleasure and pain a similar real but illusory character?

But these false pleasures have a real existence.

PRO.

How do you mean?

SOC.

I mean to say that a man must be admitted to have real pleasure who is pleased with anything or anyhow; and he may be pleased about things which neither have nor have ever had any real existence, and, more often than not, are never likely to exist.

PRO.

Yes, Socrates, that again is undeniable.

SOC.

And may not the same be said about fear and anger and the like; are they not often false?

PRO.

Quite so.

SOC.

Opinions are only bad if they are false: Is this the case with pleasures?—Protarchus

And can opinions be good or bad except in as far as they are true or false?

reclaims against the notion.

PRO.

In no other way.

SOC.

Nor can pleasures be conceived to be bad except in as far as they are false.

PRO.

Nay, Socrates, that is the very opposite of the truth; for no one would call pleasures and pains bad because they are false, but by reason of some other great corruption to which they are liable.

SOC.

Well, of pleasures which are corrupt and caused by corruption we will hereafter speak, if we care to continue the enquiry; for the present I would rather show by another argument that there are many false pleasures existing or coming into existence in us, because this may assist our final decision.

PRO.

Very true; that is to say, if there are such pleasures.

SOC.

I think that there are, Protarchus; but this is an opinion which should be well assured, and not rest upon a mere assertion.

PRO.

Very good.

SOC.

Then now, like wrestlers, let us approach and grasp this new argument.

PRO.

Proceed.

SOC.

We were maintaining a little while since, that when desires, as they are termed, exist in us, then the body has separate feelings apart from the soul—do you remember?

Recapitulation.

PRO.

Yes, I remember that you said so.

SOC.

And the soul was supposed to desire the opposite of the bodily state, while the body was the source of any pleasure or pain which was experienced.

PRO.

True.

SOC.

Then now you may infer what happens in such cases.

PRO.

What am I to infer?

SOC.

That in such cases pleasures and pains come simultaneously; and there is a juxtaposition of the opposite sensations which correspond to them, as has been already shown.

PRO.

Clearly.

SOC.

And there is another point to which we have agreed.

PRO.

What is it?

SOC.

That pleasure and pain both admit of more and less, and that they are of the class of infinites.

PRO.

Certainly, we said so.

SOC.

But how can we rightly judge of them?

PRO.

How can we?

SOC.

Is it our intention to judge of their comparative importance and intensity, measuring pleasure against pain, and pain against pain, and pleasure against pleasure?

PRO.

Yes, such is our intention, and we shall judge of them accordingly.

SOC.

42Well, take the case of sight. Does not the nearness or distance of magnitudes obscure their true proportions, and make us opine falsely; and do we not find the same illusion happening in the case of pleasures and pains?

PRO.

Yes, Socrates, and in a degree far greater.

SOC.

Then what we are now saying is the opposite of what we were saying before.

PRO.

What was that?

SOC.

Then the opinions were true and false, and infected the pleasures and pains with their own falsity.

PRO.

Very true.

SOC.

But now it is the pleasures which are said to be true and false because they are seen at various distances, and subjected to comparison; the pleasures appear to be greater and more vehement when placed side by side with the pains, and the pains when placed side by side with the pleasures.

Pleasures and pains are often false, because they are seen at various distances and in various relations.

PRO.

Certainly, and for the reason which you mention.

SOC.

And suppose you part off from pleasures and pains the element which makes them appear to be greater or less than they really are: you will acknowledge that this element is illusory, and you will never say that the corresponding excess or defect of pleasure or pain is real or true.

PRO.

Certainly not.

SOC.

Next let us see whether in another direction we may not find pleasures and pains existing and appearing in living beings, which are still more false than these.

These are not the only instances of false pleasures and pains. Pleasure and pain may arise from certain changes in the bodily constitution.

PRO.

What are they, and how shall we find them?

SOC.

If I am not mistaken, I have often repeated that pains and aches and suffering and uneasiness of all sorts arise out of a corruption of nature caused by concretions, and dissolutions, and repletions, and evacuations, and also by growth and decay?

PRO.

Yes, that has been often said.

SOC.

And we have also agreed that the restoration of the natural state is pleasure?

PRO.

Right.

SOC.

But now let us suppose an interval of time at which the body experiences none of these changes.

PRO.

When can that be, Socrates?

SOC.

Your question, Protarchus, does not help the argument.

PRO.

Why not, Socrates?

SOC.

Because it does not prevent me from repeating mine.

PRO.

And what was that?

SOC.

Why, Protarchus, admitting that there is no such interval, I may ask what would be the necessary consequence if there were?

PRO.

You mean, what would happen if the body were not changed either for good or bad?

SOC.

Yes.

PRO.

Why then, Socrates, I should suppose that there would be neither pleasure nor pain.

SOC.

43Very good; but still, if I am not mistaken, you do assert that we must always be experiencing one of them; that is what the wise tell us; for, say they, all things are ever flowing up and down.

Such changes are always going on, though they are not always perceptible; only the greatest are accompanied by pleasure and pain.

PRO.

Yes, and their words are of no mean authority.

SOC.

Of course, for they are no mean authorities themselves; and I should like to avoid the brunt of their argument. Shall I tell you how I mean to escape from them? And you shall be the partner of my flight.

PRO.

How?

SOC.

To them we will say: ‘Good; but are we, or living things in general, always conscious of what happens to us—for example, of our growth, or the like? Are we not, on the contrary, almost wholly unconscious of this and similar phenomena?’ You must answer for them.

PRO.

The latter alternative is the true one.

SOC.

Then we were not right in saying, just now, that motions going up and down cause pleasures and pains?

PRO.

True.

SOC.

A better and more unexceptionable way of speaking will be—

PRO.

What?

SOC.

If we say that the great changes produce pleasures and pains, but that the moderate and lesser ones do neither.

PRO.

That, Socrates, is the more correct mode of speaking.

SOC.

But if this be true, the life to which I was just now referring again appears.

Thus the neutral life reappears.

PRO.

What life?

SOC.

The life which we affirmed to be devoid either of pain or of joy.

PRO.

Very true.

SOC.

We may assume then that there are three lives, one pleasant, one painful, and the third which is neither; what say you?

PRO.

I should say as you do that there are three of them.

SOC.

But if so, the negation of pain will not be the same with pleasure.

PRO.

Certainly not.

SOC.

Then when you hear a person saying, that always to live without pain is the pleasantest of all things, what would you understand him to mean by that statement?

This neutral life, though painless, is not pleasant.

PRO.

I think that by pleasure he must mean the negative of pain.

SOC.

Let us take any three things; or suppose that we embellish a little and call the first gold, the second silver, and there shall be a third which is neither.

PRO.

Very good.

SOC.

Now, can that which is neither be either gold or silver?

PRO.

Impossible.

SOC.

No more can that neutral or middle life be rightly or reasonably spoken or thought of as pleasant or painful.

PRO.

Certainly not.

SOC.

And yet, my friend, there are, as we know, persons ⁴⁴who say and think so.

Yet some people think that it is.

PRO.

Certainly.

SOC.

And do they think that they have pleasure when they are free from pain?

PRO.

They say so.

SOC.

And they must think or they would not say that they have pleasure.

PRO.

I suppose not.

SOC.

And yet if pleasure and the negation of pain are of distinct natures, they are wrong.

PRO.

But they are undoubtedly of distinct natures.

SOC.

Then shall we take the view that they are three, as we were just now saying, or that they are two only—the one being a state of pain, which is an evil, and the other a cessation of pain, which is of itself a good, and is called pleasant?

PRO.

But why, Socrates, do we ask the question at all? I do not see the reason.

SOC.

You, Protarchus, have clearly never heard of certain enemies of our friend Philebus.

PRO.

And who may they be?

SOC.

Certain persons who are reputed to be masters in natural philosophy, who deny the very existence of pleasure.

PRO.

Indeed!

SOC.

They say that what the school of Philebus calls pleasures are all of them only avoidances of pain.

They are certain physical philosophers who affirm pleasure to be only the absence of pain.

PRO.

And would you, Socrates, have us agree with them?

SOC.

Why, no, I would rather use them as a sort of diviners, who divine the truth, not by rules of art, but by an instinctive repugnance and extreme detestation which a noble nature has of the power of pleasure, in which they think that there is nothing sound, and her seductive influence is declared by them to be witchcraft, and not pleasure. This is the use which you may make of them. And when you have considered the various grounds of their dislike, you shall hear from me what I deem to be true pleasures. Having thus examined the nature of pleasure from both points of view, we will bring her up for judgment.

The grounds of their dislike to pleasure may throw light on our present enquiry.

PRO.

Well said.

SOC.

Then let us enter into an alliance with these philosophers and follow in the track of their dislike. I imagine that they would say something of this sort; they would begin at the beginning, and ask whether, if we wanted to know the nature of any quality, such as hardness, we should be more likely to discover it by looking at the hardest things, rather than at the least hard? You, Protarchus, shall answer these severe gentlemen as you answer me.

The nature of things is best seen in their greatest instances.

PRO.

By all means, and I reply to them, that you should look at the greatest instances.

SOC.

Then if we want to see the true nature of pleasures 45as a class, we should not look at the most diluted pleasures, but at the most extreme and most vehement?

PRO.

In that every one will agree.

SOC.

And the obvious instances of the greatest pleasures, as we have often said, are the pleasures of the body?

The greatest pleasures are of the body, not in a healthy,

PRO.

Certainly.

SOC.

And are they felt by us to be or become greater, when we are sick or when we are in health? And here we must be careful in our answer, or we shall come to grief.

PRO.

How will that be?

SOC.

Why, because we might be tempted to answer, 'When we are in health.'

PRO.

Yes, that is the natural answer.

SOC.

Well, but are not those pleasures the greatest of which mankind have the greatest desires?

PRO.

True.

SOC.

And do not people who are in a fever, or any similar illness, feel cold or thirst or other bodily affections more intensely? Am I not right in saying that they have a deeper want and greater pleasure in the satisfaction of their want? but in a morbid state.

PRO.

That is obvious as soon as it is said.

SOC.

Well, then, shall we not be right in saying, that if a person would wish to see the greatest pleasures he ought to go and look, not at health, but at disease? And here you must distinguish:—do not imagine that I mean to ask whether those who are very ill have more pleasures than those who are well, but understand that I am speaking of the magnitude of pleasure; I want to know where pleasures are found to be most intense. For, as I say, we have to discover what is pleasure, and what they mean by pleasure who deny her very existence.

PRO.

I think I follow you.

The pleasures of wantonness are more intense than those of temperance.

SOC.

You will soon have a better opportunity of showing whether you do or not, Protarchus. Answer now, and tell me whether you see, I will not say more, but more intense and excessive pleasures in wantonness than in temperance? Reflect before you speak.

PRO.

I understand you, and see that there is a great difference between them; the temperate are restrained by the wise man's aphorism of 'Never too much,' which is their rule, but excess of pleasure possessing the minds of fools and wantons becomes madness and makes them shout with delight.

SOC.

Very good, and if this be true, then the greatest pleasures and pains will clearly be found in some vicious state of soul and body, and not in a virtuous state.

PRO.

Certainly. 46

SOC.

And ought we not to select some of these for examination, and see what makes them the greatest?

PRO.

To be sure we ought.

SOC.

Take the case of the pleasures which arise out of certain disorders.

PRO.

What disorders?

SOC.

The pleasures of unseemly disorders, which our severe friends utterly detest.

PRO.

What pleasures?

SOC.

Such, for example, as the relief of itching and other ailments by scratching, which is the only remedy required. For what in Heaven's name is the feeling to be called which is thus produced in us?—Pleasure or pain?

Morbid pleasures are such as those of scratching, which are of a mixed character.

PRO.

A villainous mixture of some kind, Socrates, I should say.

SOC.

I did not introduce the argument, O Protarchus, with any personal reference to Philebus, but because, without the consideration of these and similar pleasures, we shall not be able to determine the point at issue.

PRO.

Then we had better proceed to analyze this family of pleasures.

SOC.

You mean the pleasures which are mingled with pain?

PRO.

Exactly.

SOC.

There are some mixtures which are of the body, and only in the body, and others which are of the soul, and only in the soul; while there are other mixtures of pleasures with pains, common both to soul and body, which in their composite state are called sometimes pleasures and sometimes pains.

Mixed pleasures may be of the body, of the soul, or common to both.

PRO.

How is that?

SOC.

Whenever, in the restoration or in the derangement of nature, a man experiences two opposite feelings; for example, when he is cold and is growing warm, or again, when he is hot and is becoming cool, and he wants to have the one and be rid of the other;—the sweet has a bitter, as the common saying is, and both together fasten upon him and create irritation and in time drive him to distraction.

PRO.

That description is very true to nature.

SOC.

And in these sorts of mixtures the pleasures and pains are sometimes equal, and sometimes one or other of them predominates?

Either element may predominate in the mixture.

PRO.

True.

SOC.

Instances of mixed pleasures: (1) of the body only—the relief

Of cases in which the pain exceeds the pleasure, an example is afforded by itching, of which we were just now speaking, and by the tingling which we feel when the boiling and fiery element is within, and the rubbing and motion¹ only relieves the surface, and does not reach the parts affected; then if you put them to the fire, and as a last resort apply cold to them, you may often produce the most intense pleasure or pain in the inner parts, which contrasts and mingles with the pain or pleasure, as the case may be, of the outer parts; and this is due to the forcible separation of ⁴⁷what is united, or to the union of what is separated, and to the juxtaposition of pleasure and pain.

of itching by
scratching;

PRO.

Quite so.

SOC.

Sometimes the element of pleasure prevails in a man, and the slight undercurrent of pain makes him tingle, and causes a gentle irritation; or again, the excessive infusion of pleasure creates an excitement in him,—he even leaps for joy, he assumes all sorts of attitudes, he changes all manner of colours, he gasps for breath, and is quite amazed, and utters the most irrational exclamations.

PRO.

Yes, indeed.

SOC.

He will say of himself, and others will say of him, that he is dying with these delights; and the more dissipated and good-for-nothing he is, the more vehemently he pursues them in every way; of all pleasures he declares them to be the greatest; and he reckons him who lives in the most constant enjoyment of them to be the happiest of mankind.

PRO.

That, Socrates, is a very true description of the opinions of the majority about pleasures.

SOC.

Yes, Protarchus, quite true of the mixed pleasures, which arise out of the communion of external and internal sensations in the body; there are also cases in which the mind contributes an opposite element to the body², whether of pleasure or pain, and the two unite and form one mixture. Concerning these I have already remarked, that when a man is empty he desires to be full, and has pleasure in hope and pain in vacuity. But now I must further add what I omitted before, that in all these and similar

(2) common to body
and mind—vacuity
accompanied by hope;

emotions in which body and mind are opposed (and they are innumerable), pleasure and pain coalesce in one.

PRO.

I believe that to be quite true.

SOC.

There still remains one other sort of admixture of pleasures and pains.

PRO.

What is that?

(3) of the mind
only—

SOC.

The union which, as we were saying, the mind often experiences of purely mental feelings.

PRO.

What do you mean?

SOC.

Why, do we not speak of anger, fear, desire, sorrow, love, emulation, envy, and the like, as pains which belong to the soul only?

PRO.

Yes.

SOC.

And shall we not find them also full of the most wonderful pleasures? need I remind you of the anger

a. anger;

‘Which stirs even a wise man to violence,
And is sweeter than honey and the honeycomb?’

48And you remember how pleasures mingle with pains in lamentation and bereavement?

b. sorrow;

PRO.

Yes, there is a natural connexion between them.

SOC.

And you remember also how at the sight of tragedies the spectators smile through their tears?

c. the mixed feelings with which spectators regard tragedy and comedy;

PRO.

Certainly I do.

SOC.

And are you aware that even at a comedy the soul experiences a mixed feeling of pain and pleasure?

PRO.

I do not quite understand you.

SOC.

I admit, Protarchus, that there is some difficulty in recognizing this mixture of feelings at a comedy.

PRO.

There is, I think.

SOC.

And the greater the obscurity of the case the more desirable is the examination of it, because the difficulty in detecting other cases of mixed pleasures and pains will be less.

PRO.

Proceed.

SOC.

I have just mentioned envy; would you not call that a pain of the soul?

d. envy.

PRO.

Yes.

SOC.

And yet the envious man finds something in the misfortunes of his neighbours at which he is pleased?

PRO.

Certainly.

SOC.

And ignorance, and what is termed clownishness, are surely an evil?

PRO.

To be sure.

SOC.

From these considerations learn to know the nature of the ridiculous.

PRO.

Explain.

SOC.

From envy we proceed to the consideration of the ridiculous.

The ridiculous is in short the specific name which is used to describe the vicious form of a certain habit; and of vice in general it is that kind which is most at variance with the inscription at Delphi.

PRO.

You mean, Socrates, 'Know thyself.'

SOC.

The sense of the ridiculous is excited by self-deception,

I do; and the opposite would be, 'Know not thyself.'

PRO.

Certainly.

SOC.

And now, O Protarchus, try to divide this into three.

PRO.

Indeed I am afraid that I cannot.

SOC.

Do you mean to say that I must make the division for you?

PRO.

Yes, and what is more, I beg that you will.

SOC.

Are there not three ways in which ignorance of self may be shown?

PRO.

What are they?

SOC.

In the first place, about money; the ignorant may fancy himself richer than he is.

which may be shown
(1) about money,

PRO.

Yes, that is a very common error.

SOC.

And still more often he will fancy that he is taller or fairer than he is, or that he has some other advantage of person which he really has not.

(2) about beauty,

PRO.

Of course.

SOC.

And yet surely by far the greatest number err about the goods of the mind; they imagine themselves to be much better men than they are. 49

and (3) about wisdom
and virtue.

PRO.

Yes, that is by far the commonest delusion.

SOC.

And of all the virtues, is not wisdom the one which the mass of mankind are always claiming, and which most arouses in them a spirit of contention and lying conceit of wisdom?

PRO.

Certainly.

SOC.

And may not all this be truly called an evil condition?

PRO.

Very evil.

SOC.

But we must pursue the division a step further, Protarchus, if we would see in envy of the childish sort a singular mixture of pleasure and pain.

PRO.

How can we make the further division which you suggest?

SOC.

All who are silly enough to entertain this lying conceit of themselves may of course be divided, like the rest of mankind, into two classes—one having power and might; and the other the reverse.

Those who deceive themselves may be powerful or powerless: in the latter case they are ridiculous.

PRO.

Certainly.

SOC.

Let this, then, be the principle of division; those of them who are weak and unable to revenge themselves, when they are laughed at, may be truly called ridiculous, but those who can defend themselves may be more truly described as strong and

formidable; for ignorance in the powerful is hateful and horrible, because hurtful to others both in reality and in fiction, but powerless ignorance may be reckoned, and in truth is, ridiculous.

PRO.

That is very true, but I do not as yet see where is the admixture of pleasures and pains.

But how is there a combination of pleasure and pain in the ridiculous?

SOC.

Well, then, let us examine the nature of envy.

PRO.

Proceed.

SOC.

Is not envy an unrighteous pleasure, and also an unrighteous pain?

PRO.

Most true.

SOC.

There is nothing envious or wrong in rejoicing at the misfortunes of enemies?

PRO.

Certainly not.

SOC.

But to feel joy instead of sorrow at the sight of our friends' misfortunes—is not that wrong?

We laugh at a friend's misfortunes through envy. Laughter is pleasant, envy is painful.

PRO.

Undoubtedly.

SOC.

Did we not say that ignorance was always an evil?

PRO.

True.

SOC.

And the three kinds of vain conceit in our friends which we enumerated—the vain conceit of beauty, of wisdom, and of wealth, are ridiculous if they are weak, and detestable when they are powerful: May we not say, as I was saying before, that our friends who are in this state of mind, when harmless to others, are simply ridiculous?

PRO.

They are ridiculous.

SOC.

And do we not acknowledge this ignorance of theirs to be a misfortune?

PRO.

Certainly.

SOC.

And do we feel pain or pleasure in laughing at it?

PRO.

Clearly we feel pleasure.

SOC.

And was not envy the source of this pleasure which we feel at the misfortunes of friends?

PRO.

Certainly.

SOC.

Then the argument shows that when we laugh at the folly of our friends, pleasure, in mingling with envy, mingles with pain, for envy has been acknowledged by us to be mental pain, and laughter is pleasant; and so we envy and laugh at the same instant.

PRO.

True.

SOC.

And the argument implies that there are combinations of pleasure and pain in lamentations, and in tragedy and comedy, not only on the stage, but on the greater stage of human life; and so in endless other cases.

Combinations of pleasure and pain take place, not only on the stage, but in human life, and arise out of many other causes besides sorrow, envy, and anger.

PRO.

I do not see how any one can deny what you say, Socrates, however eager he may be to assert the opposite opinion.

SOC.

I mentioned anger, desire, sorrow, fear, love, emulation, envy, and similar emotions, as examples in which we should find a mixture of the two elements so often named; did I not?

PRO.

Yes.

SOC.

We may observe that our conclusions hitherto have had reference only to sorrow and envy and anger.

PRO.

I see.

SOC.

Then many other cases still remain?

PRO.

Certainly.

SOC.

And why do you suppose me to have pointed out to you the admixture which takes place in comedy? Why but to convince you that there was no difficulty in showing the mixed nature of fear and love and similar affections; and I thought that when I had given you the illustration, you would have let me off, and have acknowledged as a general truth that the body without the soul, and the soul without the body, as well as the two united, are susceptible of all sorts of admixtures of pleasures and pains; and so further discussion would have been unnecessary. And now I want to know whether I may depart; or will you keep me here until midnight? I fancy that I may obtain my release without many words;—if I promise that to-morrow I will give you an account of all these cases. But at present I would rather sail in another direction, and go to other matters which remain to be settled, before the judgment can be given which Philebus demands.

But these instances will suffice.

PRO.

Very good, Socrates; in what remains take your own course.

SOC.

Then after the mixed pleasures the unmixed should have their turn; this is the natural and necessary order.

After the mixed pleasures we must consider the unmixed or true.

PRO.

51Excellent.

SOC.

These, in turn, then, I will now endeavour to indicate; for with the maintainers of the opinion that all pleasures are a cessation of pain, I do not agree, but, as I was saying, I use them as witnesses, that there are pleasures which seem only and are not, and there are others again which have great power and appear in many forms, yet are intermingled with pains, and are partly alleviations of agony and distress, both of body and mind.

PRO.

Then what pleasures, Socrates, should we be right in conceiving to be true?

SOC.

True pleasures are those which are given by beauty of colour and form, and most of those which arise from smells; those of sound, again, and in general those of which the want is painless and

True pleasures are given (1) by beauty of form,

unconscious, and of which the fruition is palpable to sense and pleasant and unalloyed with pain.

PRO.

Once more, Socrates, I must ask what you mean.

SOC.

My meaning is certainly not obvious, and I will endeavour to be plainer. I do not mean by beauty of form such beauty as that of animals or pictures, which the many would suppose to be my meaning; but, says the argument, understand me to mean straight lines and circles, and the plane or solid figures which are formed out of them by turning-lathes and rulers and measurers of angles; for these I affirm to be not only relatively beautiful, like other things, but they are eternally and absolutely beautiful, and they have peculiar pleasures, quite unlike the pleasures of scratching. And there are colours which are of the same character, and have similar pleasures; now do you understand my meaning?

PRO.

I am trying to understand, Socrates, and I hope that you will try to make your meaning clearer.

(2) colour,

SOC.

When sounds are smooth and clear, and have a single pure tone, then I mean to say that they are not relatively but absolutely beautiful, and have natural pleasures associated with them.

(3) sound;

PRO.

Yes, there are such pleasures.

SOC.

The pleasures of smell are of a less ethereal sort, but they have no necessary admixture of pain; and all pleasures, however and wherever experienced, which are unattended by pains, I assign to an analogous class. Here then are two kinds of pleasures.

(4) by sweet smells.

PRO.

I understand.

SOC.

To these may be added the pleasures of knowledge, if 52no and (5) by knowledge.
hunger of knowledge and no pain caused by such hunger precede them.

PRO.

And this is the case.

SOC.

Well, but if a man who is full of knowledge loses his knowledge, are there not pains of forgetting?

PRO.

Not necessarily, but there may be times of reflection, when he feels grief at the loss of his knowledge.

SOC.

Yes, my friend, but at present we are enumerating only the natural perceptions, and have nothing to do with reflection.

PRO.

In that case you are right in saying that the loss of knowledge is not attended with pain.

SOC.

These pleasures of knowledge, then, are unmixed with pain; and they are not the pleasures of the many but of a very few.

PRO.

Quite true.

SOC.

And now, having fairly separated the pure pleasures and those which may be rightly termed impure, let us further add to our description of them, that the pleasures which are in excess have no measure, but that those which are not in excess have measure; the great, the excessive, whether more or less frequent, we shall be right in referring to the class of the infinite, and of the more and less, which pours
Excessive pleasures are infinite; moderate pleasures have measure or limit.

through body and soul alike; and the others we shall refer to the class which has measure.

PRO.

Quite right, Socrates.

SOC.

Still there is something more to be considered about pleasures.

PRO.

What is it?

SOC.

When you speak of purity and clearness, or of excess, abundance, greatness and sufficiency, in what relation do these terms stand to truth?

PRO.

Why do you ask, Socrates?

SOC.

Because, Protarchus, I should wish to test pleasure and knowledge in every possible way, in order that if there be a pure and impure element in either of them, I may present the pure element for judgment, and then they will be more easily judged of by you and by me and by all of us.

We must select the pure and not the impure kinds of pleasure and knowledge for comparison.

PRO.

Most true.

SOC.

Let us investigate all the pure kinds; first selecting for consideration a single instance.

PRO.

What instance shall we select?

SOC.

53 Suppose that we first of all take whiteness.

PRO.

Very good.

SOC.

How can there be purity in whiteness, and what purity? Is that purest which is greatest or most in quantity, or that which is most unadulterated and freest from any admixture of other colours?

Purity is given, not by quantity, but by quality.

PRO.

Clearly that which is most unadulterated.

SOC.

True, Protarchus; and so the purest white, and not the greatest or largest in quantity, is to be deemed truest and most beautiful?

PRO.

Right.

SOC.

And we shall be quite right in saying that a little pure white is whiter and fairer and truer than a great deal that is mixed.

PRO.

Perfectly right.

SOC.

There is no need of adducing many similar examples in illustration of the argument about pleasure; one such is sufficient to prove to us that a small pleasure or a small amount of pleasure, if pure or unalloyed with pain, is always pleasanter and truer and fairer than a great pleasure or a great amount of pleasure of another kind.

PRO.

Assuredly; and the instance you have given is quite sufficient.

SOC.

But what do you say of another question:—have we not heard that pleasure is always a generation, and has no true being? Do not certain ingenious philosophers teach this doctrine, and ought not we to be grateful to them?

Wise men say that pleasure is a generation. What does this mean?

PRO.

What do they mean?

SOC.

I will explain to you, my dear Protarchus, what they mean, by putting a question.

PRO.

Ask, and I will answer.

SOC.

I assume that there are two natures, one self-existent, and the other ever in want of something.

There are two natures, the absolute and the relative: the latter is for the sake of the former.

PRO.

What manner of natures are they?

SOC.

The one majestic ever, the other inferior.

PRO.

You speak riddles.

SOC.

You have seen loves good and fair, and also brave lovers of them.

PRO.

I should think so.

SOC.

Search the universe for two terms which are like these two and are present everywhere.

PRO.

Yet a third time I must say [1](#) , Be a little plainer, Socrates.

SOC.

There is no difficulty, Protarchus; the argument is only in play, and insinuates that some things are for the sake of something else (relatives), and that other things are the ends to which the former class subserve (absolutes).

PRO.

Your many repetitions make me slow to understand.

SOC.

As the argument proceeds, my boy, I dare say that ⁵⁴the meaning will become clearer.

PRO.

Very likely.

SOC.

Here are two new principles.

PRO.

What are they?

SOC.

One is the generation of all things, and the other is essence.

PRO.

I readily accept from you both generation and essence.

SOC.

Very right; and would you say that generation is for the sake of essence, or essence for the sake of generation?

Generation is relative to essence, which is an absolute.

PRO.

You want to know whether that which is called essence is, properly speaking, for the sake of generation?

SOC.

Yes.

PRO.

By the gods, I wish that you would repeat your question.

SOC.

I mean, O my Protarchus, to ask whether you would tell me that ship-building is for the sake of ships, or ships for the sake of ship-building? and in all similar cases I should ask the same question.

PRO.

Why do you not answer yourself, Socrates?

SOC.

I have no objection, but you must take your part.

PRO.

Certainly.

SOC.

My answer is, that all things instrumental, remedial, material, are given to us with a view to generation, and that each generation is relative to, or for the sake of, some being or essence, and that the whole of generation is relative to the whole of essence.

PRO.

Assuredly.

SOC.

Then pleasure, being a generation, must surely be for the sake of some essence?

PRO.

True.

SOC.

And that for the sake of which something else is done must be placed in the class of good, and that which is done for the sake of something else, in some other class, my good friend.

Absolutes are to be placed in the class of good, relatives in some other class. Thus pleasure, which is a generation and relative, is not a good. (Many thanks to him who first pointed this out.)

PRO.

Most certainly.

SOC.

Then pleasure, being a generation, will be rightly placed in some other class than that of good?

PRO.

Quite right.

SOC.

Then, as I said at first, we ought to be very grateful to him who first pointed out that pleasure was a generation only, and had no true being at all; for he is clearly one who laughs at the notion of pleasure being a good.

PRO.

Assuredly.

SOC.

And he would surely laugh also at those who make generation their highest end.

PRO.

Of whom are you speaking, and what do they mean?

SOC.

I am speaking of those who when they are cured of hunger or thirst or any other defect by some process of generation are delighted at the process as if it were pleasure; and they say that they would not wish to live without these and other feelings of a like kind which might be mentioned.

It is absurd to make pleasure consist in generation and destruction:

PRO.

That is certainly what they appear to think. 55

SOC.

And is not destruction universally admitted to be the opposite of generation?

PRO.

Certainly.

SOC.

Then he who chooses thus, would choose generation and destruction rather than that third sort of life, in which, as we were saying, was neither pleasure nor pain, but only the purest possible thought.

PRO.

He who would make us believe pleasure to be a good is involved in great absurdities, Socrates.

SOC.

Great, indeed; and there is yet another of them.

PRO.

What is it?

SOC.

and absurd, to say (1) that in the body there is nothing good; (2) that the only good of the soul is pleasure; (3) that a man is

Is there not an absurdity in arguing that there is nothing good or noble in the body, or in anything else, but that good is in the soul only, and that the only good of the soul is pleasure; and that courage or temperance or understanding, or any other good of the soul, is not really a good?—and is there not yet a further absurdity in our being compelled to say that he who has a feeling of pain and not of pleasure is bad at the time when he is suffering pain, even though he be the best of men; and again, that he who has a feeling of pleasure, in so far as he is pleased at the time when he is pleased, in that degree excels in virtue?

vicious when in pain and virtuous when he is pleased. And now for knowledge: Are some kinds purer than others?

PRO.

Nothing, Socrates, can be more irrational than all this.

SOC.

And now, having subjected pleasure to every sort of test, let us not appear to be too sparing of mind and knowledge: let us ring their metal bravely, and see if there be unsoundness in any part, until we have found out what in them is of the purest nature; and then the truest elements both of pleasure and knowledge may be brought up for judgment.

PRO.

Right.

SOC.

Knowledge has two parts,—the one productive, and the other educational?

Knowledge is (1) productive and (2) educational; of the former there is a pure and impure sort.

PRO.

True.

SOC.

And in the productive or handicraft arts, is not one part more akin to knowledge, and the other less; and may not the one part be regarded as the pure, and the other as the impure?

PRO.

Certainly.

SOC.

Let us separate the superior or dominant elements in each of them.

PRO.

What are they, and how do you separate them?

SOC.

I mean to say, that if arithmetic, mensuration, and weighing be taken away from any art, that which remains will not be much.

The pure elements in the productive arts are arithmetic, mensuration, and weighing; the rest is guesswork and experience.

PRO.

Not much, certainly.

SOC.

The rest will be only conjecture, and the better use of the senses which is given by experience and practice, in addition to a certain power of guessing, which is commonly called art, and is perfected by attention and pains.

PRO.

Nothing more, assuredly.

SOC.

Music, for instance, is full of this empiricism; for sounds are harmonized, not by measure, but by skilful conjecture; the music of the flute is always trying to guess the pitch of each vibrating note, and is therefore mixed up with much that is doubtful and has little which is certain.

Music, medicine, etc. are less accurate than the art of building.

PRO.

Most true.

SOC.

And the same will be found to hold good of medicine and husbandry and piloting and generalship.

PRO.

Very true.

SOC.

The art of the builder, on the other hand, which uses a number of measures and instruments, attains by their help to a greater degree of accuracy than the other arts.

PRO.

How is that?

SOC.

In ship-building and house-building, and in other branches of the art of carpentering, the builder has his rule, lathe, compass, line, and a most ingenious machine for straightening wood.

PRO.

Very true, Socrates.

SOC.

Then now let us divide the arts of which we were speaking into two kinds,—the arts which, like music, are less exact in their results, and those which, like carpentering, are more exact.

Arts may be divided into more and less exact.

PRO.

Let us make that division.

SOC.

Of the latter class, the most exact of all are those which we just now spoke of as primary.

PRO.

I see that you mean arithmetic, and the kindred arts of weighing and measuring.

SOC.

Certainly, Protarchus; but are not these also distinguishable into two kinds?

PRO.

What are the two kinds?

Of arithmetic and mensuration, which belong to the former class, there are two kinds,—one pure, the other impure.

SOC.

In the first place, arithmetic is of two kinds, one of which is popular, and the other philosophical.

PRO.

How would you distinguish them?

SOC.

There is a wide difference between them, Protarchus; some arithmeticians reckon unequal units; as for example, two armies, two oxen, two very large things or two very small things. The party who are opposed to them insist that every unit in ten thousand must be the same as every other unit.

PRO.

Undoubtedly there is, as you say, a great difference among the votaries of the science; and there may be reasonably supposed to be two sorts of arithmetic.

SOC.

And when we compare the art of mensuration which is used in building with philosophical geometry, or the art of computation which is used in trading with exact calculation, shall we say of either of the pairs that it is one or two?

PRO.

On the analogy of what has preceded, I should be of opinion that they were severally two.

SOC.

Right; but do you understand why I have discussed the subject

PRO.

I think so, but I should like to be told by you.

SOC.

The argument has all along been seeking a parallel to pleasure, and true to that original design, has gone on to ask whether one sort of knowledge is purer than another, as one pleasure is purer than another.

Thus we see that as of pleasure, so of knowledge, there are two sorts, and one is purer than the other.

PRO.

Clearly; that was the intention.

SOC.

And has not the argument in what has preceded, already shown that the arts have different provinces, and vary in their degrees of certainty?

PRO.

Very true.

SOC.

And just now did not the argument first designate a particular art by a common term, thus making us believe in the unity of that art; and then again, as if speaking of two different things, proceed to enquire whether the art as pursued by philosophers, or as pursued by non-philosophers, has more of certainty and purity?

PRO.

That is the very question which the argument is asking.

SOC.

And how, Protarchus, shall we answer the enquiry?

PRO.

O Socrates, we have reached a point at which the difference of clearness in different kinds of knowledge is enormous.

SOC.

Then the answer will be the easier.

PRO.

Certainly; and let us say in reply, that those arts into which arithmetic and mensuration enter, far surpass all others; and that of these the arts or sciences which are animated by the pure philosophic impulse are infinitely superior in accuracy and truth.

The purer sort consists of those arts into which mathematics enter; and of mathematics themselves there is a purer and an impurer kind.

SOC.

Then this is your judgment; and this is the answer which, upon your authority, we will give to all masters of the art of misinterpretation?

PRO.

What answer?

SOC.

That there are two arts of arithmetic, and two of mensuration; and also several other arts which in like manner have this double nature, and yet only one name.

PRO.

Let us boldly return this answer to the masters of whom you speak, Socrates, and hope for good luck.

SOC.

We have explained what we term the most exact arts or sciences.

PRO.

Very good.

SOC.

And yet, Protarchus, dialectic will refuse to acknowledge us, if we do not award to her the first place.

Where shall we place dialectic, the truest of sciences?

PRO.

58And pray, what is dialectic?

SOC.

Clearly the science which has to do with all that knowledge of which we are now speaking; for I am sure that all men who have a grain of intelligence will admit that the knowledge which has to do with being and reality, and sameness and unchangeableness, is by far the truest of all. But how would you decide this question, Protarchus?

PRO.

I have often heard Gorgias maintain, Socrates, that the art of persuasion far surpassed every other; this, as he says, is by far the best of them all, for to it all things submit, not by compulsion, but of their own free will. Now, I should not like to quarrel either with you or with him.

Protarchus is afraid that he will offend Gorgias, if he assigns the first place to dialectic, and Socrates, if to rhetoric.

SOC.

You mean to say that you would like to desert, if you were not ashamed?

PRO.

As you please.

SOC.

May I not have led you into a misapprehension?

PRO.

How?

SOC.

Dear Protarchus, I never asked which was the greatest or best or usefulest of arts or sciences, but which had clearness and accuracy, and the greatest amount of truth, however humble and little useful an art. And as for Gorgias, if you do not deny that his art has the advantage in usefulness to mankind, he will not quarrel with you for saying that the study of which I am speaking is superior in this particular of essential truth; as in the comparison of white colours, a little whiteness, if that little be only pure, was said to be superior in truth to a great mass which is impure. And now let us give our best attention and consider well, not the comparative use or reputation of the sciences, but the power or faculty, if there be such, which the soul has of loving the truth, and of doing all things for the sake of it; let us search into the pure element of mind and intelligence, and then we shall be able to say whether the science of which I have been speaking is most likely to possess the faculty, or whether there be some other which has higher claims.

Socrates assures him that if he does not deny that rhetoric is the most useful of arts and sciences, Gorgias will not quarrel with him for saying that dialectic is the truest.

PRO.

Well, I have been considering, and I can hardly think that any other science or art has a firmer grasp of the truth than this.

SOC.

Do you say so because you observe that the arts in general and those engaged in them make use of opinion, and are resolutely engaged in the investigation of matters of opinion? Even he who supposes himself to be occupied with nature is really occupied with the things of this world, how created, how acting or acted upon. Is not this the sort of enquiry in which his life is spent?

Dialectic differs from the generality of arts which have to do with the changeable and therefore never attain certainty.

PRO.

True.

SOC.

He is labouring, not after eternal being, but about things which are becoming, or which will or have become.

PRO.

Very true.

SOC.

And can we say that any of these things which neither are nor have been nor will be unchangeable, when judged by the strict rule of truth ever become certain?

PRO.

Impossible.

SOC.

How can anything fixed be concerned with that which has no fixedness?

PRO.

How indeed?

SOC.

Then mind and science when employed about such changing things do not attain the highest truth?

PRO.

I should imagine not.

SOC.

And now let us bid farewell, a long farewell, to you or me or Philebus or Gorgias, and urge on behalf of the argument a single point.

PRO.

What point?

SOC.

Let us say that the stable and pure and true and unalloyed has to do with the things which are eternal and unchangeable and unmixed, or if not, at any rate what is most akin to them has; and that all other things are to be placed in a second or inferior class.

Being concerned with the eternal and unchangeable, it ranks first.

PRO.

Very true.

SOC.

And of the names expressing cognition, ought not the fairest to be given to the fairest things?

The fairest names should be given to the fairest things—therefore mind and wisdom are to be assigned to the contemplation of true being.

PRO.

That is natural.

SOC.

And are not mind and wisdom the names which are to be honoured most?

PRO.

Yes.

SOC.

And these names may be said to have their truest and most exact application when the mind is engaged in the contemplation of true being?

PRO.

Certainly.

SOC.

And these were the names which I adduced of the rivals of pleasure?

PRO.

Very true, Socrates.

SOC.

In the next place, as to the mixture, here are the ingredients, pleasure and wisdom, and we may be compared to artists who have their materials ready to their hands.

PRO.

Yes.

SOC.

And now we must begin to mix them?

PRO.

By all means.

SOC.

But had we not better have a preliminary word and refresh our memories?

PRO.

Of what?

SOC.

Of that which I have already mentioned. Well says the proverb, that we ought to repeat twice and even thrice that which is good.

Before mixing let us sum up.

PRO.

Certainly.

SOC.

Well then, by Zeus, let us proceed, and I will make what I believe to be a fair summary of the argument.

PRO.

Let me hear.

SOC.

Philebus says that pleasure is the true end of all living beings, at which all ought to aim, and moreover that it is the chief good of all, and that the two names 'good' and 'pleasant' are correctly given to one thing and one nature; Socrates, on the other hand, begins by denying this, and further says, that in nature as in name they are two, and that wisdom partakes more than pleasure of the good. Is not and was not this what we were saying, Protarchus?

By Philebus pleasure was affirmed to be the good: Socrates preferred wisdom.

PRO.

Certainly.

SOC.

And is there not and was there not a further point which was conceded between us?

We agreed that the good must be characterised by self-sufficiency;

PRO.

What was it?

SOC.

That the good differs from all other things.

PRO.

In what respect?

SOC.

In that the being who possesses good always everywhere and in all things has the most perfect sufficiency, and is never in need of anything else.

PRO.

Exactly.

SOC.

And did we not endeavour to make an imaginary separation of wisdom and pleasure, assigning to each a distinct life, so that pleasure was wholly excluded from wisdom, and wisdom in like manner had no part whatever in pleasure?

but we found that both pleasure and wisdom by themselves are devoid of this quality.

PRO.

We did.

SOC.

And did we think that either of them alone would be sufficient?

PRO.

Certainly not.

SOC.

And if we erred in any point, then let any one who will, take up the enquiry again and set us right; and assuming memory and wisdom and knowledge and true opinion to belong to the same class, let him consider whether he would desire to possess or acquire,—I will not say pleasure, however abundant or intense, if he has no real perception that he is pleased, nor any consciousness of what he feels, nor any recollection, however momentary, of the feeling,—but would he desire to have anything at all, if these faculties were wanting to him? And about wisdom I ask the same question; can you conceive that any one would choose to have all wisdom absolutely devoid of pleasure, rather than with a certain degree of pleasure, or all pleasure devoid of wisdom, rather than with a certain degree of wisdom?

PRO.

Certainly not, Socrates; but why repeat such questions any more?

SOC.

61 Then the perfect and universally eligible and entirely good cannot possibly be either of them?

Neither therefore ranks first. And before the second place can be assigned, we must discover the nature of the good.

PRO.

Impossible.

SOC.

Then now we must ascertain the nature of the good more or less accurately, in order, as we were saying, that the second place may be duly assigned?

PRO.

Right.

SOC.

Have we not found a road which leads towards the good?

PRO.

What road?

SOC.

Supposing that a man had to be found, and you could discover in what house he lived, would not that be a great step towards the discovery of the man himself?

PRO.

Certainly.

SOC.

And now reason intimates to us, as at our first beginning, that we should seek the good, not in the unmixed life but in the mixed.

Reason tells us that we should look for it in the mixed class.

PRO.

True.

SOC.

There is greater hope of finding that which we are seeking in the life which is well mixed than in that which is not?

PRO.

Far greater.

SOC.

Then now let us mingle, Protarchus, at the same time offering up a prayer to Dionysus or Hephaestus, or whoever is the god who presides over the ceremony of mingling.

PRO.

By all means.

SOC.

Are not we the cup-bearers? and here are two fountains which are flowing at our side: one, which is pleasure, may be likened to a fountain of honey; the other, wisdom, a sober draught in which no wine mingles, is of water unpleasant but healthful; out of these we must seek to make the fairest of all possible mixtures.

Let us then mingle pleasure and wisdom.

PRO.

Certainly.

SOC.

Tell me first;—should we be most likely to succeed if we mingled every sort of pleasure with every sort of wisdom?

Shall we mingle all kinds of them, or the pure only?

PRO.

Perhaps we might.

SOC.

But I should be afraid of the risk, and I think that I can show a safer plan.

PRO.

What is it?

SOC.

One pleasure was supposed by us to be truer than another, and one art to be more exact than another.

PRO.

Certainly.

SOC.

There was also supposed to be a difference in sciences; some of them regarding only the transient and perishing, and others the permanent and imperishable and everlasting and immutable; and when judged by the standard of truth, the latter, as we thought, were truer than the former.

PRO.

Very good and right.

SOC.

If, then, we were to begin by mingling the sections of each class which have the most of truth, will not the union suffice to give us the loveliest of lives, or shall we still want some elements of another kind?

PRO.

I think that we ought to do what you suggest. 62

SOC.

Let us suppose a man who understands justice, and has reason as well as understanding about the true nature of this and of all other things.

PRO.

We will suppose such a man.

SOC.

Will he have enough of knowledge if he is acquainted only with the divine circle and sphere, and knows nothing of our human spheres and circles, but uses only divine circles and measures in the building of a house?

We cannot exclude the impure kinds of knowledge, for they are required by the needs of everyday life.

PRO.

The knowledge which is only superhuman, Socrates, is ridiculous in man.

SOC.

What do you mean? Do you mean that you are to throw into the cup and mingle the impure and uncertain art which uses the false measure and the false circle?

PRO.

Yes, we must, if any of us is ever to find his way home.

SOC.

And am I to include music, which, as I was saying just now, is full of guesswork and imitation, and is wanting in purity?

PRO.

Yes, I think that you must, if human life is to be a life at all.

SOC.

Well, then, suppose that I give way, and, like a doorkeeper who is pushed and overborne by the mob, I open the door wide, and let knowledge of every sort stream in, and the pure mingle with the impure?

PRO.

I do not know, Socrates, that any great harm would come of having them all, if only you have the first sort.

All the sciences may be admitted, but the pleasures require more consideration.

SOC.

Well, then, shall I let them all flow into what Homer poetically terms ‘a meeting of the waters’?

PRO.

By all means.

SOC.

There—I have let them in, and now I must return to the fountain of pleasure. For we were not permitted to begin by mingling in a single stream the true portions of both according to our original intention; but the love of all knowledge constrained us to let all the sciences flow in together before the pleasures.

PRO.

Quite true.

SOC.

And now the time has come for us to consider about the pleasures also, whether we shall in like manner let them go all at once, or at first only the true ones.

PRO.

It will be by far the safer course to let flow the true ones first.

First, let us have the true ones; secondly, we must have the necessary.

SOC.

Let them flow, then; and now, if there are any necessary pleasures, as there were arts and sciences necessary, must we not mingle them?

PRO.

Yes; the necessary pleasures should certainly be allowed to mingle.

SOC.

63The knowledge of the arts has been admitted to be innocent and useful always; and if we say of pleasures in like manner that all of them are good and innocent for all of us at all times, we must let them all mingle?

PRO.

What shall we say about them, and what course shall we take?

SOC.

Do not ask me, Protarchus; but ask the daughters of pleasure and wisdom to answer for themselves.

Let us consult the pleasures and wisdom.

PRO.

How?

SOC.

Tell us, O beloved—shall we call you pleasures or by some other name?—would you rather live with or without wisdom? I am of opinion that they would certainly answer as follows:

PRO.

How?

SOC.

They would answer, as we said before, that for any single class to be left by itself pure and isolated is not good, nor altogether possible; and that if we are to make comparisons of one class with another and choose, there is no better companion than knowledge of things in general, and likewise the perfect knowledge, if that may be, of ourselves in every respect¹.

The pleasures say that they cannot live alone or without knowledge;

PRO.

And our answer will be:—In that ye have spoken well.

SOC.

Very true. And now let us go back and interrogate wisdom and mind: Would you like to have any pleasures in the mixture? And they will reply:—‘What pleasures do you mean?’

PRO.

Likely enough.

SOC.

And we shall take up our parable and say: Do you wish to have the greatest and most vehement pleasures for your companions in addition to the true ones? ‘Why, Socrates,’ they will say, ‘how can we? seeing that they are the source of ten thousand hindrances to us; they trouble the souls of men, which are our habitation, with their madness; they prevent us from coming to the birth, and are commonly the ruin of the children which are born to us, causing them to be forgotten and unheeded; but the true and pure pleasures, of which you spoke, know to be of our family, and also those pleasures which accompany health and temperance, and which every Virtue, like a goddess, has in her train to follow her about wherever she goes,—mingle these and not the others; there would be great want of sense in any one who desires to see a fair and perfect mixture, and to find in it what is the highest good in man and in the universe, and to divine what is the true form of good—there would be great want of sense in his allowing the pleasures, which are always in the company of folly and vice, to mingle with mind in the cup.’—Is not this a very rational and suitable reply, which mind has made, both on her own behalf, as well as on the behalf of memory and true opinion?

and wisdom, that she desires only true and virtuous pleasures, not all of them.

PRO.

Most certainly.

SOC.

And still there must be something more added, which is a necessary ingredient in every mixture.

Truth is an indispensable element in the mixture.

PRO.

What is that?

SOC.

Unless truth enter into the composition, nothing can truly be created or subsist.

PRO.

Impossible.

SOC.

Quite impossible; and now you and Philebus must tell me whether anything is still wanting in the mixture, for to my way of thinking the argument is now completed, and may be compared to an incorporeal law, which is going to hold fair rule over a living body.

PRO.

I agree with you, Socrates.

SOC.

And may we not say with reason that we are now at the vestibule of the habitation of the good?

We are now at the vestibule of the good.

PRO.

I think that we are.

SOC.

What, then, is there in the mixture which is most precious, and which is the principal cause why such a state is universally beloved by all? When we have discovered it, we will proceed to ask whether this omnipresent nature is more akin to pleasure or to mind.

What is the most precious element in the mixture?

PRO.

Quite right; in that way we shall be better able to judge.

SOC.

And there is no difficulty in seeing the cause which renders any mixture either of the highest value or of none at all.

PRO.

What do you mean?

SOC.

Every man knows it.

PRO.

What?

SOC.

He knows that any want of measure and symmetry in any mixture whatever must always of necessity be fatal, both to the elements and to the mixture, which is then not a mixture, but only a confused medley which brings confusion on the possessor of it.

PRO.

Most true.

Measure, which is the essence of beauty and virtue.

SOC.

And now the power of the good has retired into the region of the beautiful; for measure and symmetry are beauty and virtue all the world over.

PRO.

True.

SOC.

Also we said that truth was to form an element in the mixture.

PRO.

Certainly. 65

SOC.

Then, if we are not able to hunt the good with one idea only, with three we may catch our prey; Beauty, Symmetry, Truth are the three, and these taken together we may regard as the single cause of the mixture, and the mixture as being good by reason of the infusion of them.

Symmetry, beauty, and truth are the cause of the mixture and of the good in it.

PRO.

Quite right.

SOC.

And now, Protarchus, any man could decide well enough whether pleasure or wisdom is more akin to the highest good, and more honourable among gods and men.

PRO.

Clearly, and yet perhaps the argument had better be pursued to the end.

SOC.

We must take each of them separately in their relation to pleasure and mind, and pronounce upon them; for we ought to see to which of the two they are severally most akin.

Of each of these three elements wisdom has a larger share than pleasure.

PRO.

You are speaking of beauty, truth, and measure?

SOC.

Yes, Protarchus, take truth first, and, after passing in review mind, truth, pleasure, pause awhile and make answer to yourself,—as to whether pleasure or mind is more akin to truth.

PRO.

There is no need to pause, for the difference between them is palpable; pleasure is the veriest imposter in the world; and it is said that in the pleasures of love, which appear to be the greatest, perjury is excused by the gods; for pleasures, like children, have not the least particle of reason in them; whereas mind is either the same as truth, or the most like truth, and the truest.

SOC.

Shall we next consider measure, in like manner, and ask whether pleasure has more of this than wisdom, or wisdom than pleasure?

PRO.

Here is another question which may be easily answered; for I imagine that nothing can ever be more immoderate than the transports of pleasure, or more in conformity with measure than mind and knowledge.

SOC.

Very good; but there still remains the third test: Has mind a greater share of beauty than pleasure, and is mind or pleasure the fairer of the two?

PRO.

No one, Socrates, either awake or dreaming, ever saw or imagined mind or wisdom to be in aught unseemly, at any time, past, present, or future.

SOC.

Right.

PRO.

But when we see some one indulging in pleasures, perhaps in the greatest of pleasures, the ridiculous or disgraceful nature of the action makes us ashamed; and so we put them out of sight, and consign them to darkness, under the idea that they ought not to meet the eye of day.

SOC.

Then, Protarchus, you will proclaim everywhere, by word of mouth to this company, and by messengers bearing the tidings far and wide, that pleasure is not the first of possessions, nor yet the second, but that in measure, and the mean, and the suitable, and the like, the eternal nature has been found.

The order of goods:—(1) measure, the eternal nature;

PRO.

Yes, that seems to be the result of what has been now said.

SOC.

In the second class is contained the symmetrical and beautiful and perfect or sufficient, and all which are of that family.

(2) the symmetrical and perfect;

PRO.

True.

SOC.

And if you reckon in the third class mind and wisdom, you will not be far wrong, if I divine aright.

(3) mind and wisdom;

PRO.

I dare say.

SOC.

And would you not put in the fourth class the goods which we were affirming to appertain specially to the soul—sciences and arts and true opinions as we called them? These come after the third class, and form the fourth, as they are certainly more akin to good than pleasure is.

(4) sciences, arts, and true opinions;

PRO.

Surely.

SOC.

The fifth class are the pleasures which were defined by us as painless, being the pure pleasures of the soul herself, as we termed them, which accompany, some the sciences, and some the senses¹.

(5) pure pleasures.

PRO.

Perhaps.

SOC.

And now, as Orpheus says,

‘With the sixth generation cease the glory of my song.’

Here, at the sixth award, let us make an end; all that remains is to set the crown on our discourse.

PRO.

True.

SOC.

Then let us sum up and reassert what has been said, thus offering the third libation to the saviour Zeus.

Final recapitulation.

PRO.

How?

SOC.

Philebus affirmed that pleasure was always and absolutely the good.

PRO.

I understand; this third libation, Socrates, of which you spoke, meant a recapitulation.

SOC.

Yes, but listen to the sequel; convinced of what I have just been saying, and feeling indignant at the doctrine, which is maintained, not by Philebus only, but by thousands of others, I affirmed that mind was far better and far more excellent, as an element of human life, than pleasure.

PRO.

True.

SOC.

But, suspecting that there were other things which were also better, I went on to say that if there was anything better than either, then I would claim the second place for mind over pleasure, and pleasure would lose the second place as well as the first.

PRO.

You did.

SOC.

Nothing could be more satisfactorily shown than the 67unsatisfactory nature of both of them.

PRO.

Very true.

SOC.

The claims both of pleasure and mind to be the absolute good have been entirely disproven in this argument, because they are both wanting in self-sufficiency and also in adequacy and perfection.

PRO.

Most true.

SOC.

But, though they must both resign in favour of another, mind is ten thousand times nearer and more akin to the nature of the conqueror than pleasure.

PRO.

Certainly.

SOC.

And, according to the judgment which has now been given, pleasure will rank fifth.

PRO.

True.

SOC.

But not first; no, not even if all the oxen and horses and animals in the world by their pursuit of enjoyment proclaim her to be so;—although the many trusting in them, as diviners trust in birds, determine that pleasures make up the good of life, and deem the lusts of animals to be better witnesses than the inspirations of divine philosophy.

Pleasure is the last and lowest of goods, and not first, even if asserted to be so by all the animals in the world.

PRO.

And now, Socrates, we tell you that the truth of what you have been saying is approved by the judgment of all of us.

SOC.

And will you let me go?

PRO.

There is a little which yet remains, and I will remind you of it, for I am sure that you will not be the first to go away from an argument.

[1] Omitting ?ν.

[1] Or, 'to remit something of existence in relation to not-being.'

[1] Reading with the Bodleian MS. [Editor: illegible character] α?το? ?π' ?λλων πεισθέντες.

[1] Or perhaps, reading ?παρ, 'in our waking state.'

[1] Lys. 216 A; Phaedo 90 B, 101 E; Rep. V, 453 E ff.

[1] Reading ?ληθε??ς, but! Cp. supra 167 A: ταν?τα δε? ?ε? ?ληθη?.

[1] Reading προσήκεσα.

[1] Reading α?τον? τω?ν λόγων.

[1] Reading δή.

[1] Reading ?οράγ: Lib. περι?οράν.

[1] Both words in Greek are called [Editor: illegible character]τερον: cp. Parmen. 147 C; Euthyd. 301 A.

[1] Reading κατ' δικαστήρια: an emendation suggested by Professor Campbell.

[1] Reading οὐδ' [Editor: illegible character]ν.

[1] Twelfth Night, Act iv. Sc. 2; '*Clown*. For as the old hermit of Prague, that never saw pen and ink, very wittily said to a niece of King Gorboduc, "That that is is" . . . for what is "that" but "that," and "is" but "is"?"

[1] Cp. Parm., 137 ff.

[1] Omitting χειρωτικ[Editor: illegible character]ς and πεζοθηρίας.

[1] Reading δὲνεν, a conjecture of Professor Campbell's.

[1] Or, 'although there is no other vice in the soul but this.'

[1] Omitting δίκη, or reading δίκ'.

[1] Reading τοντο ἄν[Editor: illegible character].

[1] Reading with the MSS. κατ' τοντ' νόματος ατ' [Editor: illegible character]ν ν.

[1] Reading with the MSS. κατ' τοντ' νόματος ατ' [Editor: illegible character]ν ν.

[1] Reading τ' ν.

[1] Reading with Professor Campbell δικαιοσύνης [Editor: illegible character]ξει κατ' ῥονήσεως.

[1] Reading δραν [Editor: illegible character]κανωτ' ατ'ά ([Editor: illegible character] ατ'τό).

[1] Cp. *supra*, 252.

[1] Reading τοντο ἄνη??.

[1] Reading τ'ν δή.

[1] Cp. Theaet. 143 E.

[1] Cp. Meno 82 ff.

[2] Plato is here introducing a new subdivision, i. e. that of bipeds into men and birds. Others however refer the passage to the division into quadrupeds and bipeds, making pigs compete with human beings and the pig-driver with the king. According to this

explanation we must translate the words above, ‘freest and airiest of creation,’
‘worthiest and laziest of creation.’

[3]Cp. Soph. 227 B.

[1]Cp. Rep. VI. 507 A.

[1]Reading ε? τις τ?ν ?λλων τ?.

[1]Cp. *supra*, 267 C, D.

[1]Reading ?σα δε? τη?ς διακριτικη?ς [Editor: illegible character]ν α?τόθι, μεθιω?μεν
ξύμπαντα.

[1]Reading ταχύτητας.

[1]Cp. Phaedr. 250 D, E.

[1]Cp. Phaedr. 265 E.

[1]Or, taking the words in a different context, ‘As not having political power—I say
another class, because not like an instrument,’ &c.

[1]Cp. *supra*, 259 A.

[1]Cp. *supra*, 287–90, 303–5.

[1]There appears to be some confusion in this passage. There is no difficulty in
seeing that in comedy, as in tragedy, the spectator may view the performance with
mixed feelings of pain as well as of pleasure; nor is there any difficulty in
understanding that envy is a mixed feeling, which rejoices not without pain at the
misfortunes of others, and laughs at their ignorance of themselves. But Plato seems to
think further that he has explained the feeling of the spectator in comedy sufficiently
by a theory which only applies to comedy in so far as in comedy we laugh at the
conceit or weakness of others. He has certainly given a very partial explanation of the
ridiculous.

[1]Mill’s Utilitarianism.

[1]Probably corrupt.

[1]i. e. into the infinite number of individuals.

LAWS.

BOOK I.

PERSONS OF THE DIALOGUE.

An Athenian Stranger.

Cleinias, a Cretan.

Megillus, a Lacedaemonian.

ATHENIAN STRANGER.

624 Tell me, Strangers, is a God or some man supposed to be the author of your laws?

Laws I.

CLEINIAS.

Athenian, Cleinias,
Megillus.

A God, Stranger; in very truth a God: among us Cretans he is said to have been Zeus, but in Lacedaemon, whence our friend here comes, I believe they would say that Apollo is their lawgiver: would they not, Megillus?

Crete and
Lacedaemon both
received their laws
from a God, Crete
from Zeus,
Lacedaemon from
Apollo.

MEGILLUS.

Certainly.

ATH.

And do you, Cleinias, believe, as Homer tells, that every ninth year Minos went to converse with his Olympian sire, and was inspired by him to make laws for your cities?

CLE.

Yes, that is our tradition; and there was Rhadamanthus, a brother of his, with whose name you are familiar; 625 he is reputed to have been the justest of men, and we Cretans are of opinion that he earned this reputation from his righteous administration of justice when he was alive.

ATH.

Yes, and a noble reputation it was, worthy of a son of Zeus. As you and Megillus have been trained in these institutions, I dare

Athenian, Cleinias.

say that you will not be unwilling to give an account of your government and laws; on our way we can pass the time pleasantly in talking about them, for I am told that the distance from Cnosus to the cave and temple of Zeus is considerable; and doubtless there are shady places under the lofty trees, which will protect us from this scorching sun. Being no longer young, we may often stop to rest beneath them, and get over the whole journey without difficulty, beguiling the time by conversation.

CLE.

Yes, Stranger, and if we proceed onward we shall come to groves of cypresses, which are of rare height and beauty, and there are green meadows, in which we may repose and converse.

ATH.

Very good.

CLE.

Very good, indeed; and still better when we see them; let us move on cheerily.

ATH.

I am willing.—And first, I want to know why the law has ordained that you shall have common meals and gymnastic exercises, and wear arms.

CLE.

I think, Stranger, that the aim of our institutions is easily intelligible to any one. Look at the character of our country: Crete is not like Thessaly, a large plain; and for this reason they have horsemen in Thessaly, and we have runners—the inequality of the ground in our country is more adapted to locomotion on foot; but then, if you have runners you must have light arms,—no one can carry a heavy weight when running, and bows and arrows are convenient because they are light. Now all these regulations have been made with a view to war, and the legislator appears to me to have looked to this in all his

The Cretan institutions are designed with a view to war, which the lawgiver thought to be the natural state of man.

Athenian, Cleinias, Megillus.

arrangements:—the common meals, if I am not mistaken, were instituted by him for a similar reason, because he saw that while they are in the field the citizens are by the nature of the case compelled to take their meals together for the sake of mutual protection. He seems to me to have thought the world foolish in not understanding that all men are always at war with one another; and if in war there ought to be common meals and certain persons regularly appointed under others to protect an army, they should be continued in peace. For what men in general term peace would be said by him to be only a name; in reality every city is in a natural state of war with every other, not indeed proclaimed by heralds, but everlasting. And if you look

closely, you will find that this was the intention of the Cretan legislator; all institutions, private as well as public, were arranged by him with a view to war; in giving them he was under the impression that no possessions or institutions are of any value to him who is defeated in battle; for all the good things of the conquered pass into the hands of the conquerors.

ATH.

You appear to me, Stranger, to have been thoroughly trained in the Cretan institutions, and to be well informed about them; will you tell me a little more explicitly what is the principle of government which you would lay down? You seem to imagine that a well-governed state ought to be so ordered as to conquer all other states in war: am I right in supposing this to be your meaning?

There is war, not only
between cities,

CLE.

Certainly; and our Lacedaemonian friend, if I am not mistaken, will agree with me.

MEG.

Why, my good friend, how could any Lacedaemonian say anything else?

ATH.

And is what you say applicable only to states, or also to villages?

but between villages,

CLE.

To both alike.

ATH.

The case is the same?

CLE.

Yes.

ATH.

And in the village will there be the same war of family against family, and of individual against individual?

between families,
between individuals
and individuals.

CLE.

The same.

ATH.

And should each man conceive himself to be his own enemy:—what shall we say?

CLE.

O Athenian Stranger,—inhabitant of Attica I will not call you, for you seem to deserve rather to be named after the goddess herself, because you go back to first principles,—you have thrown a light upon the argument, and will now be better able to understand what I was just saying,—that all men are publicly one another's enemies, and each man privately his own.

(ATH.

My good sir, what do you mean?)—

CLE.

. . . . Moreover, there is a victory and defeat,—the first and best of victories, the lowest and worst of defeats,—which each man gains or sustains at the hands, not of another, but of himself; this shows that there is a war against ourselves going on within every one of us.

The best victory and the worst defeat.

ATH.

627Let us now reverse the order of the argument: Seeing that every individual is either his own superior or his own inferior, may we say that there is the same principle in the house, the village, and the state?

CLE.

You mean that in each of them there is a principle of superiority or inferiority to self?

ATH.

Yes.

CLE.

You are quite right in asking the question, for there certainly is such a principle, and above all in states; and the state in which the better citizens win a victory over the mob and over the inferior classes may be truly said to be better than itself, and may be justly praised, where such a victory is gained, or censured in the opposite case.

The state superior to itself when the better citizens win a victory over the mob; inferior when the mob wins a victory over them.

ATH.

Whether the better is ever really conquered by the worse, is a question which requires more discussion, and may be therefore left for the present. But I now quite understand your meaning when you say that citizens who are of the same race and live in the same cities may unjustly conspire, and having the superiority in numbers may overcome and enslave the few just; and when they prevail, the state may be truly called its own inferior and therefore bad; and when they are defeated, its own superior and therefore good.

CLE.

Your remark, Stranger, is a paradox, and yet we cannot possibly deny it.

ATH.

Here is another case for consideration;—in a family there may be several brothers, who are the offspring of a single pair; very possibly the majority of them may be unjust, and the just may be in a minority.

The parallel of the family

CLE.

Very possibly.

ATH.

And you and I ought not to raise a question of words as to whether this family and household are rightly said to be superior when they conquer, and inferior when they are conquered; for we are not now considering what may or may not be the proper or customary way of speaking, but we are considering the natural principles of right and wrong in laws.

CLE.

What you say, Stranger, is most true.

MEG.

Quite excellent, in my opinion, as far as we have gone.

ATH.

Again; might there not be a judge over these brethren, of whom we were speaking?

CLE.

Certainly.

ATH.

Now, which would be the better judge,—one who destroyed the bad and appointed the good to govern themselves; or one who, while allowing the good to govern, let the bad live, and made them voluntarily submit? Or third, I suppose, in the scale of excellence might be placed a judge, 628who, finding the family distracted, not only did not destroy any one, but reconciled them to one another for ever after, and gave them laws which they mutually observed, and was able to keep them friends.

Athenian, Cleinias.

CLE.

The last would be by far the best sort of judge and legislator.

ATH.

And yet the aim of all the laws which he gave would be the reverse of war.

CLE.

Very true.

ATH.

And will he who constitutes the state and orders the life of man have in view external war, or that kind of intestine war called civil, which no one, if he could prevent, would like to have occurring in his own state; and when occurring, every one would wish to be quit of as soon as possible?

transferred to the state.

CLE.

He would have the latter chiefly in view.

ATH.

And would he prefer that this civil war should be terminated by the destruction of one of the parties, and by the victory of the other, or that peace and friendship should be re-established, and that, being reconciled, they should give their attention to foreign enemies?

Is it better in civil war for one party to conquer the other, or for both to unite and conquer their enemies?

CLE.

Every one would desire the latter in the case of his own state.

ATH.

And would not that also be the desire of the legislator?

CLE.

Certainly.

ATH.

And would not every one always make laws for the sake of the best?

CLE.

To be sure.

ATH.

But war, whether external or civil, is not the best, and the need of either is to be deprecated; but peace with one another, and good will, are best. Nor is the victory of the state over itself to be regarded as a really good thing, but as a necessity; a man might as well say that the body was in the best state when sick and purged by medicine, forgetting that there is also a state of the body which needs no purge. And in like manner no one can be a true statesman, whether he aims at the happiness of the individual or state, who looks only, or first of all, to external warfare; nor will he ever be a sound legislator who orders peace for the sake of war, and not war for the sake of peace.

Peace better than victory in war, just as health is better than the cure of disease.

Athenian, Cleinias, Megillus.

CLE.

I suppose that there is truth, Stranger, in that remark of yours; and yet I am greatly mistaken if war is not the entire aim and object of our own institutions, and also of the Lacedaemonian.

ATH.

I dare say; but there is no reason why we should rudely quarrel with one another about your legislators, instead of gently questioning them, seeing that both we and they are equally in earnest. Please follow me and the argument closely:—And first I will put forward Tyrtaeus, an Athenian by birth, but also a Spartan citizen, who of all men was most eager about war: Well, he says,

The praise of Tyrtaeus is bestowed on those who excel in war,

‘I sing not, I care not, about any man,

even if he were the richest of men, and possessed every good (and then he gives a whole list of them), if he be not at all times a brave warrior.’ I imagine that you, too, must have heard his poems; our Lacedaemonian friend has probably heard more than enough of them.

MEG.

Very true.

CLE.

And they have found their way from Lacedaemon to Crete.

ATH.

Come now and let us all join in asking this question of Tyrtaeus: O most divine poet, we will say to him, the excellent praise which you have bestowed on those who excel in war sufficiently proves that you are wise and good, and I and Megillus and Cleinias of Cnosus do, as I believe, entirely agree with you. But we should like to be quite sure that we are speaking of the same men; tell us, then, do you agree with us in thinking that there are two kinds of war; or what would you say? A far inferior man to Tyrtaeus would have no difficulty in replying quite truly, that war is of two kinds,—one which is universally called civil war, and is, as we were just now saying, of all wars the worst; the other, as we should all admit, in which we fall out with other nations who are of a different race, is a far milder form of warfare.

CLE.

Certainly, far milder.

ATH.

Well, now, when you praise and blame war in this high-flown strain, whom are you praising or blaming, and to which kind of war are you referring? I suppose that you must mean foreign war, if I am to judge from expressions of yours in which you say that you abominate those

Athenian, Cleinias.

and by war he means foreign war.

‘Who refuse to look upon fields of blood, and will not draw near and strike at their enemies.’

And we shall naturally go on to say to him,—You, Tyrtaeus, as it seems, praise those who distinguish themselves in external and foreign war; and he must admit this.

CLE.

Evidently.

ATH.

They are good; but we say that there are still better 630men whose virtue is displayed in the greatest of all battles. And we too have a poet whom we summon as a witness, Theognis, citizen of Megara in Sicily:—

‘Cyrnus,’ he says, ‘he who is faithful in a civil broil is worth his weight in gold and silver.’

But the civil strife of which Theognis speaks is a far higher test of a man’s character, because it demands the other virtues as well as courage.

And such an one is far better, as we affirm, than the other in a more difficult kind of war, much in the same degree as justice and temperance and wisdom, when united with courage, are better than courage only; for a man cannot be faithful and good in civil strife without having all virtue. But in the war of which Tyrtaeus speaks, many a mercenary soldier will take his stand and be ready to die at his post, and yet they are generally and almost without exception insolent, unjust, violent men, and the most senseless of human beings. You will ask what the conclusion is, and what I am seeking to prove: I maintain that the divine legislator of Crete, like any other who is worthy of consideration, will always and above all things in making laws have regard to the greatest virtue; which, according to Theognis, is loyalty in the hour of danger, and may be truly called perfect justice. Whereas, that virtue which Tyrtaeus highly praises is well enough, and was praised by the poet at the right time, yet in place and dignity may be said to be only fourth-rate¹.

And the legislator must aim, not at one virtue only, but at virtue whole and complete.

CLE.

Stranger, we are degrading our inspired lawgiver to a rank which is far beneath him.

ATH.

Nay, I think that we degrade not him but ourselves, if we imagine that Lycurgus and Minos laid down laws both in Lacedaemon and Crete mainly with a view to war.

CLE.

What ought we to say then?

ATH.

What truth and what justice require of us, if I am not mistaken, when speaking in behalf of ¹divine excellence¹;—that the legislator when making his laws had in view not a part only, and

Virtue the foundation of law.

this the lowest part of virtue, but all virtue, and that he devised classes of laws answering to the kinds of virtue; not in the way in which modern inventors of laws make the classes, for they only investigate and offer laws whenever a want is felt, and one man has a class of laws about allotments and heiresses, another about assaults; others about ten thousand other such matters. But we maintain 631 that the right way of examining into laws is to proceed as we have now done, and I admired the spirit of your exposition; for you were quite right in beginning with virtue, and saying that this was the aim of the giver of the law, but I thought that you went wrong when you added that all his legislation had a view only to a part, and the least part of virtue, and this called forth my subsequent remarks. Will you allow me then to explain how I should have liked to have heard you expound the matter?

CLE.

By all means.

ATH.

You ought to have said, Stranger,—The Cretan laws are with reason famous among the Hellenes; for they fulfil the object of laws, which is to make those who use them happy; and they confer every sort of good. Now goods are of two kinds: there are human and there are divine goods, and the human hang upon the divine; and the state which attains the greater, at the same time acquires the less, or, not having the greater, has neither. Of the lesser goods the first is health, the second beauty, the third strength, including swiftness in running and bodily agility generally, and the fourth is wealth, not the blind god [Pluto], but one who is keen of sight, if only he has wisdom for his companion. For wisdom is chief and leader of the divine class of goods, and next follows temperance; and from the union of these two with courage springs justice, and fourth in the scale of virtue is courage. All these naturally take precedence of the other goods, and this is the order in which the legislator must place them, and after them he will enjoin the rest of his ordinances on the citizens with a view to these, the human looking to the divine, and the divine looking to their leader mind. Some of his ordinances will relate to contracts of marriage which they make one with another, and then to the procreation and education of children, both male and female; the duty of the lawgiver will be to take charge of his citizens, in youth and age, and at every time of life, and to give them punishments and rewards; and in reference to all their intercourse with one another, he ought to consider their pains and pleasures and desires, and the vehemence of all their passions; he should keep a watch over them, and blame and 632 praise them rightly by the mouth of the laws themselves. Also with regard to anger and terror, and the other perturbations of the soul, which arise out of misfortune, and the deliverances from them which prosperity brings, and the experiences which come to men in diseases, or in war, or poverty, or the opposite of these; in all these states he should determine and teach what is the

Two kinds of goods, (1) the lesser or human: (2) the greater or divine goods.

Athenian.

The legislator will base the first on the second.

He will regulate all the relations and circumstances of life;

and will appoint guardians to take care that his regulations are observed.

Athenian, Cleinias, Megillus.

good and evil of the condition of each. In the next place, the legislator has to be careful how the citizens make their money and in what way they spend it, and to have an eye to their mutual contracts and dissolutions of contracts, whether voluntary or involuntary: he should see how they order all this, and consider where justice as well as injustice is found or is wanting in their several dealings with one another; and honour those who obey the law, and impose fixed penalties on those who disobey, until the round of civil life is ended, and the time has come for the consideration of the proper funeral rites and honours of the dead. And the lawgiver reviewing his work, will appoint guardians to preside over these things,—some who walk by intelligence, others by true opinion only, and then mind will bind together all his ordinances and show them to be in harmony with temperance and justice, and not with wealth or ambition. This is the spirit, Stranger, in which I was and am desirous that you should pursue the subject. And I want to know the nature of all these things, and how they are arranged in the laws of Zeus, as they are termed, and in those of the Pythian Apollo, which Minos and Lycurgus gave; and how the order of them is discovered to his eyes, who has experience in laws gained either by study or habit, although they are far from being self-evident to the rest of mankind like ourselves.

CLE.

How shall we proceed, Stranger?

ATH.

I think that we must begin again as before, and first consider the habit of courage; and then we will go on and discuss another and then another form of virtue, if you please. In this way we shall have a model of the whole; and with these and similar discourses we will beguile the way. And when we have gone through all the virtues, we will show, by the grace of God, that the institutions of which I was speaking look to virtue.

MEG.

Very good; and suppose that you first criticize this 633praiser of Zeus and the laws of Crete.

ATH.

I will try to criticize you and myself, as well as him, for the argument is a common concern. Tell me,—were not first the syssitia, and secondly the gymnasia, invented by your legislator with a view to war?

MEG.

Yes.

At Sparta the (1) common meals, (2) gymnastic, (3) hunting, (4) Crypteia and other trials of endurance, are all designed with a view to war, and to inure men against pain.

ATH.

And what comes third, and what fourth? For that, I think, is the sort of enumeration which ought to be made of the remaining parts of virtue, no matter whether you call them parts or what their name is, provided the meaning is clear.

MEG.

Then I, or any other Lacedaemonian, would reply that hunting is third in order.

ATH.

Let us see if we can discover what comes fourth and fifth.

MEG.

I think that I can get as far as the fourth head, which is the frequent endurance of pain, exhibited among us Spartans in certain hand-to-hand fights; also in stealing with the prospect of getting a good beating; there is, too, the so-called Crypteia, or secret service, in which wonderful endurance is shown,—our people wander over the whole country by day and by night, and even in winter have not a shoe to their foot, and are without beds to lie upon, and have to attend upon themselves. Marvellous, too, is the endurance which our citizens show in their naked exercises, contending against the violent summer heat; and there are many similar practices, to speak of which in detail would be endless.

ATH.

Excellent, O Lacedaemonian stranger. But how ought we to define courage? Is it to be regarded only as a combat against fears and pains, or also against desires and pleasures, and against flatteries; which exercise such a tremendous power, that they make the hearts even of respectable citizens to melt like wax?

But courage is not merely endurance of pain;

MEG.

I should say the latter.

ATH.

In what preceded, as you will remember, our Cnosian friend was speaking of a man or a city being inferior to themselves:—Were you not, Cleinias?

CLE.

I was.

ATH.

Now, which is in the truest sense inferior, the man who is overcome by pleasure or by pain?

CLE.

I should say the man who is overcome by pleasure; for all men deem him to be inferior in a more disgraceful sense, than the other who is overcome by pain.

it is also shown in resistance to pleasure.

ATH.

But surely the lawgivers of Crete and Lacedaemon ⁶³⁴have not legislated for a courage which is lame of one leg, able only to meet attacks which come from the left, but impotent against the insidious flatteries which come from the right?

CLE.

Able to meet both, I should say.

ATH.

Then let me once more ask, what institutions have you in either of your states which give a taste of pleasures, and do not avoid them any more than they avoid pains; but which set a person in the midst of them, and compel or induce him by the prospect of reward to get the better of them? Where is an ordinance about pleasure similar to that about pain to be found in your laws? Tell me what there is of this nature among you:—What is there which makes your citizen equally brave against pleasure and pain, conquering what they ought to conquer, and superior to the enemies who are most dangerous and nearest home?

There should be laws directed against the love of pleasure, as well as against the fear of pain.

MEG.

I was able to tell you, Stranger, many laws which were directed against pain; but I do not know that I can point out any great or obvious examples of similar institutions which are concerned with pleasure; there are some lesser provisions, however, which I might mention.

Yet neither in Crete nor at Sparta are any of the former sort to be found.

CLE.

Neither can I show anything of that sort which is at all equally prominent in the Cretan laws.

Athenian, Cleinias.

ATH.

No wonder, my dear friends; and if, as is very likely, in our search after the true and good, one of us may have to censure the laws of the others, we must not be offended, but take kindly what another says.

CLE.

You are quite right, Athenian Stranger, and we will do as you say.

ATH.

At our time of life, Cleinias, there should be no feeling of irritation.

CLE.

Certainly not.

ATH.

I will not at present determine whether he who censures the Cretan or Lacedaemonian polities is right or wrong. But I believe that I can tell better than either of you what the many say about them. For assuming that you have reasonably good laws, one of the best of them will be the law forbidding any young men to enquire which of them are right or wrong; but with one mouth and one voice they must all agree that the laws are all good, for they came from God; and any one who says the contrary is not to be listened to. But an old man who remarks any defect in your laws may communicate his observation to a ruler or to an equal in years when no young man is present.

A well-governed state requires of young men an unhesitating belief in the goodness of her laws. But old men may be allowed to discuss them.

CLE.

Exactly so, Stranger; and like a diviner, although not ⁶³⁵there at the time, you seem to me quite to have hit the meaning of the legislator, and to say what is most true.

ATH.

As there are no young men present, and the legislator has given old men free licence, there will be no impropriety in our discussing these very matters now that we are alone.

CLE.

True. And therefore you may be as free as you like in your censure of our laws, for there is no discredit in knowing what is wrong; he who receives what is said in a generous and friendly spirit will be all the better for it.

ATH.

Very good; however, I am not going to say anything against your laws until to the best of my ability I have examined them, but I am going to raise doubts about them. For you are the only people known to us, whether Greek or barbarian, whom the legislator commanded to eschew all great pleasures and amusements and never to touch them; whereas in the matter of pains or fears which we have just been discussing, he thought that they who from infancy had always avoided pains and fears and sorrows, when they were compelled to face them would run away from those who were hardened in them, and would become their subjects. Now the legislator ought to have considered that this was equally true of pleasure; he should have said to himself, that if our citizens are from their youth upward unacquainted with the greatest pleasures, and unused to endure amid the temptations of pleasure, and are not disciplined to refrain from all things evil, the sweet feeling of pleasure will overcome them just as fear would overcome the former class; and in another, and even a worse manner, they will be the slaves of those who are able to endure amid pleasures, and have had the opportunity of enjoying them, they being often the worst of mankind. One half of their souls will be a slave, the other half free; and they will not be worthy to be called in the true sense men and freemen. Tell me whether you assent to my words?

Athenian, Cleinias.
Megillus.

The legislators of Sparta and Crete never reflected that he who cannot resist pleasure will be the slave of any bad man who has this power of endurance.

CLE.

On first hearing, what you say appears to be the truth; but to be hasty in coming to a conclusion about such important matters would be very childish and simple.

ATH.

Suppose, Cleinias and Megillus, that we consider the virtue which follows next of those which we intended to discuss (for after courage comes temperance), what institutions shall we find relating to temperance, either in Crete or Lacedaemon, which, like your military institutions, differ from those of any ordinary state.

Enough of courage.

Next let us consider temperance.

MEG.

636 That is not an easy question to answer; still I should say that the common meals and gymnastic exercises have been excellently devised for the promotion both of temperance and courage.

ATH.

The syssitia and gymnasia were

There seems to be a difficulty, Stranger, with regard to states, in making words and facts coincide so that there can be no dispute about them. As in the human body, the regimen which does good in one way does harm in another; and we can hardly say that any one course of treatment is adapted to a particular constitution.

intended to promote this virtue, but they have the effect of encouraging unnatural love.

Now the gymnasia and common meals do a great deal of good, and yet they are a source of evil in civil troubles; as is shown in the case of the Milesian, and Boeotian, and Thurian youth, among whom these institutions seem always to have had a tendency to degrade the ancient and natural custom of love below the level, not only of man, but of the beasts. The charge

Athenian, Megillus.

The story of Zeus and Ganymede invented in Crete.

may be fairly brought against your cities above all others, and is true also of most other states which especially cultivate gymnastics. Whether such matters are to be regarded jestingly or seriously, I think that the pleasure is to be deemed natural which arises out of the intercourse between men and women; but that the intercourse of men with men, or of women with women, is contrary to nature, and that the bold attempt was originally due to unbridled lust. The Cretans are always accused of having invented the story of Ganymede and Zeus because they wanted to justify themselves in the enjoyment of unnatural pleasures by the practice of the god whom they believe to have been their lawgiver. Leaving the story, we may observe that any speculation about laws turns almost entirely on pleasure and pain, both in states and in individuals: these are two fountains which nature lets flow, and he who draws from them where and when, and as much as he ought, is happy; and this holds of men and animals—of individuals as well as states; and he who indulges in them ignorantly and at the wrong time, is the reverse of happy.

MEG.

I admit, Stranger, that your words are well spoken, and I hardly know what to say in answer to you; but still I think that the Spartan lawgiver was quite right in forbidding pleasure. Of the Cretan laws, I shall leave the defence to my Cnosian friend. But the laws of Sparta, in as far as they relate to pleasure, appear to me to be the best in the world; for that which leads mankind in general into the wildest pleasure and licence, and every other

Yet surely the Spartan lawgiver was right. For Sparta is a most orderly city: there is no drunkenness such as is found at Athens or at Tarentum.

folly, the law has clean driven out; and neither in the country nor in towns which are under the control of Sparta, will you find revelries and the many incitements of every kind of pleasure which accompany them; and any one who meets a drunken and disorderly person, will immediately have him most severely punished, and will not let him off on any pretence, not even at the time of a Dionysiac festival; although I have remarked that this may happen at your performances 'on the cart,' as they are called; and among our Tarentine colonists I have seen the whole city drunk at a Dionysiac festival; but nothing of the sort happens among us.

ATH.

O Lacedaemonian Stranger, these festivities are praiseworthy where there is a spirit of endurance, but are very senseless when they are under no regulations. In order to retaliate, an Athenian has only to point out the licence which exists among your women. To all such accusations, whether they are brought against the Tarentines, or us, or you, there is one answer which exonerates the practice in question from impropriety. When a stranger expresses wonder at the singularity of what he sees, any inhabitant will naturally answer him:—Wonder not, O stranger; this is our custom, and you may very likely have some other custom about the same things. Now we are speaking, my friends, not about men in general, but about the merits and defects of the lawgivers themselves. Let us then discourse a little more at length about intoxication, which is a very important subject, and will seriously task the discrimination of the legislator. I am not speaking of drinking, or not drinking, wine at all, but of intoxication. Are we to follow the custom of the Scythians, and Persians, and Carthaginians, and Celts, and Iberians, and Thracians, who are all warlike nations, or that of your countrymen, for they, as you say, altogether abstain? But the Scythians and Thracians, both men and women, drink unmixed wine, which they pour on their garments, and this they think a happy and glorious institution. The Persians, again, are much given to other practices of luxury which you reject, but they have more moderation in them than the Thracians and Scythians.

Those are matters of custom.

But customs vary: for instance, intoxication is encouraged among many warlike nations, and disallowed at Sparta.

The question is, which custom is the better?

MEG.

638O best of men, we have only to take arms into our hands, and we send all these nations flying before us.

‘Give us arms, and we can conquer all other men.’

ATH.

Nay, my good friend, do not say that; there have been, as there always will be, flights and pursuits of which no account can be given, and therefore we cannot say that victory or defeat in battle affords more than a doubtful proof of the goodness or badness of institutions. For when the greater states conquer and enslave the lesser, as the Syracusans have done the Locrians, who appear to be the best-governed people in their part of the world, or as the Athenians have done the Ceans (and there are ten thousand other instances of the same sort of thing), all this is not to the point; let us endeavour rather to form a conclusion about each institution in itself and say nothing, at present, of victories and defeats. Let us only say that such and such a custom is honourable, and another not. And first permit me to tell you how good and bad are to be estimated in reference to these very matters.

Victory may be a matter of chance.

MEG.

How do you mean?

ATH.

All those who are ready at a moment's notice to praise or censure any practice which is matter of discussion, seem to me to proceed in a wrong way. Let me give you an illustration of what I mean:—You may suppose a person to be praising wheat as a good kind of food, whereupon another person instantly blames wheat, without ever enquiring into its effect or use, or in what way, or to whom, or with what, or in what state and how, wheat is to be given. And that is just what we are doing in this discussion. At the very mention of the word intoxication, one side is ready with their praises and the other with their censures; which is absurd. For either side adduce their witnesses and approvers, and some of us think that we speak with authority because we have many witnesses; and others because they see those who abstain conquering in battle, and this again is disputed by us. Now I cannot say that I shall be satisfied, if we go on discussing each of the remaining laws in the same way. And about this very point of intoxication I should like to speak in another way, which I hold to be the right one; for if number is to be the criterion, are there not myriads upon myriads of nations ready to dispute the point with you, who are only two cities?

No question can be determined by numbers.

MEG.

I shall gladly welcome any method of enquiry which is right.

ATH.

Let me put the matter thus:—Suppose a person to praise the keeping of goats, and the creatures themselves as capital things to have, and then some one who had seen goats feeding without a goatherd in cultivated spots, and doing mischief, were to censure a goat or any other animal who has no keeper, or a bad keeper, would there be any sense or justice in such censure?

Fallacy of a *dicto secundum quem ad dictum simpliciter*.

MEG.

Certainly not.

ATH.

Does a captain require only to have nautical knowledge in order to be a good captain, whether he is sea-sick or not? What do you say?

Athenian, Cleinias, Megillus.

MEG.

I say that he is not a good captain if, although he have nautical skill, he is liable to sea-sickness.

ATH.

And what would you say of the commander of an army? Will he be able to command merely because he has military skill if he be a coward, who, when danger comes, is sick and drunk with fear?

MEG.

Impossible.

ATH.

And what if besides being a coward he has no skill?

MEG.

He is a miserable fellow, not fit to be a commander of men, but only of old women.

ATH.

And what would you say of some one who blames or praises any sort of meeting which is intended by nature to have a ruler, and is well enough when under his presidency? The critic, however, has never seen the society meeting together at an orderly feast under the control of a president, but always without a ruler or with a bad one:—when observers of this class praise or blame such meetings, are we to suppose that what they say is of any value?

A feast should have a president to maintain order.

MEG.

Certainly not, if they have never seen or been present at such a meeting when rightly ordered.

ATH.

Reflect; may not banqueters and banquets be said to constitute a kind of meeting?

MEG.

Of course.

ATH.

And did any one ever see this sort of convivial meeting rightly ordered? Of course you two will answer that you have never seen them at all, because they are not customary or lawful in your country; but I have come across many of them in many different places, and moreover

Feasts are almost always disorderly.

I have made enquiries about them wherever I went, as I may say, and never did I see or hear of anything of the kind which was carried on altogether rightly; in some few particulars they might be right, but in general they were utterly wrong.

CLE.

What do you mean, Stranger, by this remark? Explain. For we, as you say, from our inexperience in such matters, might very likely not know, even if they came in our way, what was right or wrong in such societies.

ATH.

640Likely enough; then let me try to be your instructor: You would acknowledge, would you not, that in all gatherings of mankind, of whatever sort, there ought to be a leader?

Athenian, Cleinias.

CLE.

Certainly I should.

ATH.

And we were saying just now, that when men are at war the leader ought to be a brave man?

As the leader of an army should be brave,

CLE.

We were.

ATH.

The brave man is less likely than the coward to be disturbed by fears?

CLE.

That again is true.

ATH.

And if there were a possibility of having a general of an army who was absolutely fearless and imperturbable, should we not by all means appoint him?

CLE.

Assuredly.

ATH.

Now, however, we are speaking not of a general who is to command an army, when foe meets foe in time of war, but of one who is to regulate meetings of another sort, when friend meets friend in time of peace.

so the ruler of a feast
should be sober,

CLE.

True.

ATH.

And that sort of meeting, if attended with drunkenness, is apt to be unquiet.

CLE.

Certainly; the reverse of quiet.

ATH.

In the first place, then, the revellers as well as the soldiers will require a ruler?

CLE.

To be sure; no men more so.

ATH.

And we ought, if possible, to provide them with a quiet ruler?

CLE.

Of course.

ATH.

And he should be a man who understands society; for his duty is to preserve the friendly feelings which exist among the company at the time, and to increase them for the future by his use of the occasion.

genial,

sociable,

CLE.

Very true.

ATH.

Must we not appoint a sober man and a wise to be our master of the revels? For if the ruler of drinkers be himself young and drunken, and not over-wise, only by some special good fortune will he be saved from doing some great evil.

sensible.

CLE.

It will be by a singular good fortune that he is saved.

ATH.

Now suppose such associations to be framed in the best way possible in states, and that some one blames the very fact of their existence—he may very likely be right. But if he blames a practice which he only sees very much mismanaged, he shows in the first place that he is not aware of the mismanagement, and also not aware that everything done in this way will turn out to be wrong, because done without the superintendence of a sober ruler. Do you not see that a drunken pilot or a drunken ruler of any sort will ruin ship, chariot, army—anything, in short, of which he has the direction?

He who has only seen feasts which have a bad ruler should not condemn those which have a good one.

CLE.

The last remark is very true, Stranger; and I see quite clearly the advantage of an army having a good leader—he will give victory in war to his followers, which is a very great advantage; and so of other things. But I do not see any similar advantage which either individuals or states gain from the good management of a feast; and I want you to tell me what great good will be effected, supposing that this drinking ordinance is duly established.

ATH.

If you mean to ask what great good accrues to the state from the right training of a single youth, or of a single chorus,—when the question is put in that form, we cannot deny that the good is not very great in any particular instance. But if you ask what is the good of education in general, the answer is easy—that education makes good men, and that good men act nobly, and conquer their enemies in battle, because they are good. Education certainly gives victory, although victory sometimes produces forgetfulness of education; for many have grown insolent from victory in war, and this insolence has engendered in them innumerable evils; and many a victory has been and will be suicidal to the victors; but education is never suicidal.

The good of a well-ordered feast is great; for social meetings are an important part of education.

CLE.

You seem to imply, my friend, that convivial meetings, when rightly ordered, are an important element of education.

ATH.

Certainly I do.

CLE.

And can you show that what you have been saying is true?

ATH.

To be absolutely sure of the truth of matters concerning which there are many opinions, is an attribute of the Gods not given to man, Stranger; but I shall be very happy to tell you what I think, especially as we are now proposing to enter on a discussion concerning laws and constitutions.

Athenian, Cleinias, Megillus.

CLE.

Your opinion, Stranger, about the questions which are now being raised, is precisely what we want to hear.

ATH.

Very good; I will try to find a way of explaining my meaning, and you shall try to have the gift of understanding me. But first let me make an apology. The Athenian citizen is reputed among all the Hellenes to be a great talker, whereas Sparta is renowned for brevity, and the Cretans have more wit than words. Now I am afraid of appearing to elicit a very long discourse out of very small materials. For drinking indeed may appear to be a slight matter, and yet is one which cannot be rightly ordered according to nature, without correct principles of music; these are necessary to any clear or satisfactory treatment of the subject, and music again runs up into education generally, and there is much to be said about all this. What would you say then to leaving these matters for the present, and passing on to some other question of law?

I am afraid of bestowing upon you my Athenian tediousness; but the subject runs up into music and education generally.

MEG.

O Athenian Stranger, let me tell you what perhaps you do not know, that our family is the proxenus of your state. I imagine that from their earliest youth all boys, when they are told that they are the proxeni of a particular state, feel kindly towards their

The Lacedaemonian is the Proxenus of Athens.

second country; and this has certainly been my own feeling. I can well remember from the days of my boyhood, how, when any Lacedaemonians praised or blamed the Athenians, they used to say to me,—‘See, Megillus, how ill or how well,’ as the case might be, ‘has your state treated us;’ and having always had to fight your battles against detractors when I heard you assailed, I became warmly attached to you. And I always like to hear the Athenian tongue spoken; the common saying is quite true, that a good Athenian is more than ordinarily good, for he is the only man who is freely and genuinely good by the divine inspiration of his own nature, and is not manufactured. Therefore be assured that I shall like to hear you say whatever you have to say.

CLE.

Yes, Stranger; and when you have heard me speak, say boldly what is in your thoughts. Let me remind you of a tie which unites you to Crete. You must have heard here the story of the prophet Epimenides, who was of my family, and came to Athens ten years before the Persian war, in accordance with the response of the Oracle, and offered certain sacrifices which the God commanded. The Athenians were at that time in dread of the Persian invasion; and he said that for ten years they would not come, and that when they came, they would go away again without accomplishing any of their objects, and would suffer more evil than they inflicted. At that time my forefathers formed ties of hospitality with you; thus ancient is the friendship which I and my parents have had for you.

Athenian, Cleinias.

The Cretan, too, is connected with Athens through Epimenides.

ATH.

643 You seem to be quite ready to listen; and I am also ready to perform as much as I can of an almost impossible task, which I will nevertheless attempt. At the outset of the discussion, let me define the nature and power of education; for this is the way by which our argument must travel onwards to the God Dionysus.

CLE.

Let us proceed, if you please.

ATH.

Well, then, if I tell you what are my notions of education, will you consider whether they satisfy you?

What is education?

CLE.

Let us hear.

ATH.

According to my view, any one who would be good at anything must practise that thing from his youth upwards, both in sport and earnest, in its several branches: for example, he who is to be a good builder, should play at building children's houses; he who is to be a good husbandman, at tilling the ground; and those who have the care of their education should provide them when young with mimic tools. They should learn beforehand the knowledge which they will afterwards require for their art. For example, the future carpenter should learn to measure or apply the line in play; and the future warrior should learn riding, or some other exercise, for amusement, and the teacher should endeavour to direct the children's inclinations and pleasures, by the help of amusements, to their final aim in life. The most important part of education is right training in the nursery. The soul of the child in his play should be guided to the love of that sort of excellence in which when he grows up to manhood he will have to be perfected. Do you agree with me thus far?

Education is training for the work of after-life.

It should begin with the right direction of children's sports.

CLE.

Certainly.

ATH.

Then let us not leave the meaning of education ambiguous or ill-defined. At present, when we speak in terms of praise or blame about the bringing-up of each person, we call one man educated and another uneducated, although the uneducated man may be sometimes very well educated for the calling of a retail trader, or of a captain of a ship, and the like. For we are not speaking of education in this narrower sense, but of that other education in virtue from youth upwards, which makes a man eagerly pursue the ideal perfection of citizenship, and teaches him how rightly to rule and how to obey. This is the only education which, upon our view, deserves the name; that other sort of training, which aims at the acquisition of wealth or bodily strength, or mere cleverness apart from intelligence and justice, is mean and illiberal, and is not worthy to be called education at all. But let us not quarrel with one another about a word, provided that the proposition which has just been granted hold good: to wit, that those who are rightly educated generally become good men. Neither must we cast a slight upon education, which is the first and fairest thing that the best of men can ever have, and which, though liable to take a wrong direction, is capable of reformation. And this work of reformation is the great business of every man while he lives.

The true education fits men, not for mere success in life, but to be perfect citizens.

It is the first and fairest thing which the best of men can have.

CLE.

Very true; and we entirely agree with you.

ATH.

And we agreed before that they are good men who are able to rule themselves, and bad men who are not.

CLE.

You are quite right.

ATH.

Let me now proceed, if I can, to clear up the subject a little further by an illustration which I will offer you.

CLE.

Proceed.

ATH.

Do we not consider each of ourselves to be one?

CLE.

We do.

ATH.

And each one of us has in his bosom two counsellors, both foolish and also antagonistic; of which we call the one pleasure, and the other pain.

CLE.

Exactly.

ATH.

Also there are opinions about the future, which have the general name of expectations; and the specific name of fear, when the expectation is of pain; and of hope, when of pleasure; and further, there is reflection about the good or evil of them, and this, when embodied in a decree by the State, is called Law.

Athenian, Cleinias,
Megillus.

CLE.

I am hardly able to follow you; proceed, however, as if I were.

MEG.

I am in the like case.

ATH.

Let us look at the matter thus: May we not conceive each of us living beings to be a puppet of the Gods, either their plaything only, or created with a purpose—which of the two we cannot certainly know? But we do know, that these affections in us are like cords and strings, which pull us different and opposite ways, and to opposite actions; and herein lies the difference between virtue and vice. According to the argument there is one among these cords which every man ought to grasp and never let go, but to pull with ⁶⁴⁵it against all the rest; and this is the sacred and golden cord of reason, called by us the common law of the State; there are others which are hard and of iron, but this one is soft because golden; and there are several other kinds. Now we ought always to co-operate with the lead of the best, which is law. For inasmuch as reason is beautiful and gentle, and not violent, her rule must needs have ministers in order to help the golden principle in vanquishing the other principles. And thus the moral of the tale about our being puppets will not have been lost, and the meaning of the expression ‘superior or inferior to a man’s self’ will become clearer; and the individual, attaining to right reason in this matter of pulling the strings of the puppet, should live according to its rule; while the city, receiving the same from some god or from one who has knowledge of these things, should embody it in a law, to be her guide in her dealings with herself and with other states. In this way virtue and vice will be more clearly distinguished by us. And when they have become clearer, education and other institutions will in like manner become clearer; and in particular that question of convivial entertainment, which may seem, perhaps, to have been a very trifling matter, and to have taken a great many more words than were necessary.

Man the puppet of the Gods.

He is pulled opposite ways by the strings of his affections, but must himself pull against them with the golden cord of reason.

CLE.

Perhaps, however, the theme may turn out not to be unworthy of the length of discourse.

ATH.

Very good; let us proceed with any enquiry which really bears on our present object.

Athenian, Cleinias.

CLE.

Proceed.

ATH.

Suppose that we give this puppet of ours drink,—what will be the effect on him?

CLE.

Having what in view do you ask that question?

ATH.

Nothing as yet; but I ask generally, when the puppet is brought to the drink, what sort of result is likely to follow. I will endeavour to explain my meaning more clearly: what I am now asking is this—Does the drinking of wine heighten and increase pleasures and pains, and passions and loves?

When the puppet drinks, his desires increase in strength and his rational faculties diminish.

CLE.

Very greatly.

ATH.

And are perception and memory, and opinion and prudence, heightened and increased? Do not these qualities entirely desert a man if he becomes saturated with drink?

CLE.

Yes, they entirely desert him.

ATH.

Does he not return to the state of soul in which he was when a young child?

CLE.

He does.

ATH.

Then at that time he will have the least control over himself?

CLE.

The least.

ATH.

And will he not be in a most wretched plight? 646

CLE.

Most wretched.

ATH.

Then not only an old man but also a drunkard becomes a second time a child?

He becomes a child again.

CLE.

Well said, Stranger.

ATH.

Is there any argument which will prove to us that we ought to encourage the taste for drinking instead of doing all we can to avoid it?

CLE.

I suppose that there is; you, at any rate, were just now saying that you were ready to maintain such a doctrine.

ATH.

True, I was; and I am ready still, seeing that you have both declared that you are anxious to hear me.

But, although drinking degrades both soul and body, it may be of use in some other way.

CLE.

To be sure we are, if only for the strangeness of the paradox, which asserts that a man ought of his own accord to plunge into utter degradation.

ATH.

Are you speaking of the soul?

CLE.

Yes.

ATH.

And what would you say about the body, my friend? Are you not surprised at any one of his own accord bringing upon himself deformity, leanness, ugliness, decrepitude?

CLE.

Certainly.

ATH.

Yet when a man goes of his own accord to a doctor's shop, and takes medicine, is he not quite aware that soon, and for many days afterwards, he will be in a state of body which he would die rather than accept as the permanent condition of his life? Are not those who train in gymnasia, at first beginning reduced to a state of weakness?

CLE.

Yes, all that is well known.

ATH.

Also that they go of their own accord for the sake of the subsequent benefit?

CLE.

Very good.

ATH.

And we may conceive this to be true in the same way of other practices?

CLE.

Certainly.

ATH.

And the same view may be taken of the pastime of drinking wine, if we are right in supposing that the same good effect follows?

CLE.

To be sure.

ATH.

If such convivialities should turn out to have any advantage equal in importance to that of gymnastic, they are in their very nature to be preferred to mere bodily exercise, inasmuch as they have no accompaniment of pain.

CLE.

True; but I hardly think that we shall be able to discover any such benefits to be derived from them.

ATH.

That is just what we must endeavour to show. And let me ask you a question:— Do we not distinguish two kinds of fear, which are very different?

Two kinds of fear: one, the expectation of pain and evil; the other, the dread of disgrace.

CLE.

What are they?

ATH.

There is the fear of expected evil.

CLE.

Yes.

ATH.

And there is the fear of an evil reputation; we are ⁶⁴⁷afraid of being thought evil, because we do or say some dishonourable thing, which fear we and all men term shame.

CLE.

Certainly.

ATH.

These are the two fears, as I called them; one of which is the opposite of pain and other fears, and the opposite also of the greatest and most numerous sort of pleasures.

CLE.

Very true.

ATH.

And does not the legislator and every one who is good for anything, hold this fear in the greatest honour? This is what he terms reverence, and the confidence which is the reverse of this he terms insolence; and the latter he always deems to be a very great evil both to individuals and to states.

The latter is termed reverence.

CLE.

True.

ATH.

Does not this kind of fear preserve us in many important ways? What is there which so surely gives victory and safety in war? For there are two things which give victory—confidence before enemies, and fear of disgrace before friends.

CLE.

There are.

ATH.

Then each of us should be fearless and also fearful; and why we should be either has now been determined.

CLE.

Certainly.

ATH.

And when we want to make any one fearless, we and the law bring him face to face with many fears.

CLE.

Clearly.

ATH.

And when we want to make him rightly fearful, must we not introduce him to shameless pleasures, and train him to take up arms against them, and to overcome them? Or does this principle apply to courage only, and must he who would be perfect in valour fight against and overcome his own natural

Reverence is trained amid conflicts with shamelessness, as courage is amid conflicts with danger.

character,—since if he be unpractised and inexperienced in such conflicts, he will not be half the man which he might have been,—and are we to suppose, that with temperance it is otherwise, and that he who has never fought with the shameless and unrighteous temptations of his pleasures and lusts, and conquered them, in earnest and in play, by word, deed, and act, will still be perfectly temperate?

CLE.

A most unlikely supposition.

ATH.

Suppose that some God had given a fear-potion to men, and that the more a man drank of this the more he regarded himself at every draught as a child of misfortune, and that he feared everything happening or about to happen to him; and that at last the most courageous of men utterly lost his presence of mind for a time, and only came to himself again when he had slept off the influence of the draught. 648

Suppose there were a potion which tested courage: should we not employ it?

CLE.

But has such a draught, Stranger, ever really been known among men?

ATH.

No; but, if there had been, might not such a draught have been of use to the legislator as a test of courage? Might we not go and say to him, ‘O legislator, whether you are legislating for the Cretan, or for any other state, would you not like to have a touchstone of the courage and cowardice of your citizens?’

CLE.

‘I should,’ will be the answer of every one.

ATH.

‘And you would rather have a touchstone in which there is no risk and no great danger than the reverse?’

CLE.

In that proposition every one may safely agree.

ATH.

‘And in order to make use of the draught, you would lead them amid these imaginary terrors, and prove them, when the affection of fear was working upon them, and compel them to be fearless, exhorting and admonishing them; and also honouring them, but dishonouring any one who will not be persuaded by you to be in all respects such as you command him; and if he underwent the trial well and manfully, you would let him go unscathed; but if ill, you would inflict a punishment upon him? Or would you abstain from using the potion altogether, although you have no reason for abstaining?’

CLE.

He would be certain, Stranger, to use the potion.

ATH.

This would be a mode of testing and training which would be wonderfully easy in comparison with those now in use, and might be applied to a single person, or to a few, or indeed to any number; and he would do well who provided himself with the potion only, rather than with any number of other things, whether he preferred to be by himself in solitude, and there contend with his fears, because he was ashamed to be seen by the eye of man until he was perfect; or trusting to the force of his own nature and habits, and believing that he had been already disciplined sufficiently, he did not hesitate to train himself in company with any number of others, and display his power in conquering the irresistible change effected by the draught—his virtue being such, that he never in any instance fell into any great unseemliness, but was always himself, and left off before he arrived at the last cup, fearing that he, like all other men, might be overcome by the potion.

The drinker of the fear-potion might test his own quality, either alone or among other men.

CLE.

Yes, Stranger, in that last case, too, he might equally show his self-control.

Athenian, Cleinias, Megillus.

ATH.

Let us return to the lawgiver, and say to him:— 649 ‘Well, lawgiver, there is certainly no such fear-potion which man has either received from the Gods or himself discovered; for witchcraft has no place at our board. But is there any potion which might serve as a test of overboldness and excessive and indiscreet boasting?’

There is no such potion, but there is a potion which will test a man’s self-control.

CLE.

I suppose that he will say, Yes,—meaning that wine is such a potion.

ATH.

Is not the effect of this quite the opposite of the effect of the other? When a man drinks wine he begins to be better pleased with himself, and the more he drinks the more he is filled full of brave hopes, and conceit of his power, and at last the string of his tongue is loosened, and fancying himself wise, he is brimming over with lawlessness, and has no more fear or respect, and is ready to do or say anything.

CLE.

I think that every one will admit the truth of your description.

MEG.

Certainly.

ATH.

Now, let us remember, as we were saying, that there are two things which should be cultivated in the soul: first, the greatest courage; secondly, the greatest fear—

CLE.

Which you said to be characteristic of reverence, if I am not mistaken.

ATH.

Thank you for reminding me. But now, as the habit of courage and fearlessness is to be trained amid fears, let us consider whether the opposite quality is not also to be trained among opposites.

CLE.

That is probably the case.

ATH.

There are times and seasons at which we are by nature more than commonly valiant and bold; now we ought to train ourselves on these occasions to be as free from impudence and shamelessness as possible, and to be afraid to say or suffer or do anything that is base.

CLE.

True.

ATH.

Are not the moments in which we are apt to be bold and shameless such as these?—when we are under the influence of anger, love, pride, ignorance, avarice, cowardice? or when wealth, beauty, strength, and all the intoxicating workings of pleasure madden us? What is better adapted than the festive use of wine, in the first place to test, and in the second place to train the character of a man, if care be taken in the use of it? What is there cheaper, or more innocent? For do but consider which is the greater risk:—Would you rather test a man of a morose and savage nature, which is the source of ten thousand acts of injustice, by making bargains with him at a risk to yourself, or by having him as 650a companion at the festival of Dionysus? Or would you, if you wanted to apply a touchstone to a man who is prone to love, entrust your wife, or your sons, or daughters to him, perilling your dearest interests in order to have a view of the condition of his soul? I might mention numberless cases, in which the advantage would be manifest of getting to know a character in sport, and without paying dearly for experience. And I do not believe that either a Cretan, or any other man, will doubt that such a test is a fair test, and safer, cheaper, and speedier than any other.

A man's nature should be proved, not in the business of life, but in festive intercourse.

Athenian, Cleinias.

CLE.

That is certainly true.

ATH.

And this knowledge of the natures and habits of men's souls will be of the greatest use in that art which has the management of them; and that art, if I am not mistaken, is politics.

The knowledge of man essential to the statesman.

CLE.

Exactly so.

[\[Back to Table of Contents\]](#)

BOOK II.

ATHENIAN STRANGER.

And now we have to consider whether ⁶⁵²the insight into human nature is the only benefit derived from well-ordered potations, or whether there are not other advantages great and much to be desired. The argument seems to imply that there are. But how and in what way these are to be attained, will have to be considered attentively, or we may be entangled in error.

Laws II.

Athenian, Cleinias.

CLEINIAS.

Proceed.

ATH.

Let me once more recall our doctrine of right education; which, if I am not mistaken, depends on the due ⁶⁵³regulation of convivial intercourse.

CLE.

You talk rather grandly.

ATH.

Pleasure and pain I maintain to be the first perceptions of children, and I say that they are the forms under which virtue and vice are originally present to them. As to wisdom and true and fixed opinions, happy is the man who acquires them, even when declining in years; and we may say that he who possesses them, and the blessings which are contained in them, is a perfect man. Now I mean by education that training which is given by suitable habits to the first instincts of virtue in children;—when pleasure, and friendship, and pain, and hatred, are rightly implanted in souls not yet capable of understanding the nature of them, and who find them, after they have attained reason, to be in harmony with her. This harmony of the soul, taken as a whole, is virtue; but the particular training in respect of pleasure and pain, which leads you always to hate what you ought to hate, and love what you ought to love from the beginning of life to the end, may be separated off; and, in my view, will be rightly called education.

Our first impressions are of pleasure and pain: wisdom comes later.

Education is the right training of these impressions.

CLE.

I think, Stranger, that you are quite right in all that you have said and are saying about education.

ATH.

I am glad to hear that you agree with me; for, indeed, the discipline of pleasure and pain which, when rightly ordered, is a principle of education, has been often relaxed and corrupted in human life. And the Gods, pitying the toils which our race is born to undergo, have appointed holy festivals, wherein men alternate rest with labour; and have given them the Muses and Apollo, the leader of the Muses, and Dionysus, to be companions in their revels, that they may improve their education by taking part in the festivals of the Gods, and with their help. I should like to know whether a common saying is in our opinion true to nature or not. For men say that the young of all creatures cannot be quiet in their bodies or in their voices; they are always wanting to move and cry out; some leaping and skipping, and overflowing with sportiveness and delight at something, others uttering all sorts of cries. But, whereas the animals have no perception of order or disorder in their movements, that is, of rhythm or harmony, as they are called, to us, the Gods, who, as we say, have been appointed to be our companions in the dance, have given the pleasurable sense of harmony and rhythm; and so they stir us into life, and we follow them, joining hands together in dances and songs; and these they call choruses, which is a term naturally expressive of cheerfulness¹. Shall we begin, then, with the acknowledgment that education is first given through Apollo and the Muses? What do you say?

The Gods have appointed festivals for our improvement. They are our partners in the dance, and have given us the sense of harmony and rhythm.

CLE.

I assent.

ATH.

And the uneducated is he who has not been trained in the chorus, and the educated is he who has been well trained?

CLE.

Certainly.

ATH.

And the chorus is made up of two parts, dance and song?

CLE.

True.

The educated is he who can sing and dance well; and who can sing and dance what is good.

ATH.

Then he who is well educated will be able to sing and dance well?

CLE.

I suppose that he will.

ATH.

Let us see; what are we saying?

CLE.

What?

ATH.

He sings well and dances well; now must we add that he sings what is good and dances what is good?

CLE.

Let us make the addition.

ATH.

We will suppose that he knows the good to be good, and the bad to be bad, and makes use of them accordingly: which now is the better trained in dancing and music—he who is able to move his body and to use his voice in what is understood to be the right manner, but has no delight in good or hatred of evil; or he who is incorrect in gesture and voice, but is right in his sense of pleasure and pain, and welcomes what is good, and is offended at what is evil?

CLE.

There is a great difference, Stranger, in the two kinds of education.

ATH.

If we three know what is good in song and dance, then we truly know also who is educated and who is uneducated; but if not, then we certainly shall not know wherein lies the safeguard of education, and whether there is any or not.

CLE.

True.

ATH.

Let us follow the scent like hounds, and go in pursuit of beauty of figure, and melody, and song, and dance; if these escape us, there will be no use in talking about true education, whether Hellenic or barbarian.

What makes the beauty of figure, melody, song, dance?

CLE.

Yes.

ATH.

And what is beauty of figure, or beautiful melody? When a manly soul is in trouble, and when a cowardly soul ⁶⁵⁵is in similar case, are they likely to use the same figures and gestures, or to give utterance to the same sounds?

CLE.

How can they, when the very colours of their faces differ?

ATH.

Good, my friend; I may observe, however, in passing, that in music there certainly are figures and there are melodies: and music is concerned with harmony and rhythm, so that you may speak of a melody or figure having good rhythm or good harmony—the term is correct enough; but to speak metaphorically of a melody or figure having a ‘good colour,’ as the masters of choruses do, is not allowable, although you can speak of the melodies or figures of the brave and the coward, praising the one and censuring the other. And not to be tedious, let us say that the figures and melodies which are expressive of virtue of soul or body, or of images of virtue, are without exception good, and those which are expressive of vice are the reverse of good.

(Note that you cannot speak of the ‘colour’ of a melody.)

Melodies which express virtue are good; those which express vice are the reverse.

CLE.

Your suggestion is excellent; and let us answer that these things are so.

ATH.

Once more, are all of us equally delighted with every sort of dance?

CLE.

Far otherwise.

ATH.

What, then, leads us astray? Are beautiful things not the same to us all, or are they the same in themselves, but not in our opinion of them? For no one will admit that forms of vice in the dance are more beautiful than forms of virtue, or that he himself delights in the forms of vice, and others in a muse of another character. And yet most persons say, that the excellence of music is to give pleasure to our souls. But this is intolerable and blasphemous; there is, however, a much more plausible account of the delusion.

But some blasphemously say that the excellence of music is to give pleasure; and so it becomes a matter of likes and dislikes.

CLE.

What?

ATH.

The adaptation of art to the characters of men. Choric movements are imitations of manners occurring in various actions, fortunes, dispositions,—each particular is imitated, and those to whom the words, or songs, or dances are suited, either by nature or habit or both, cannot help feeling pleasure in them and applauding them, and calling them beautiful. But those whose natures, or ways, or habits are unsuited to them, cannot delight in them or applaud them, and they call them base. There are others, again, whose natures are right and their habits wrong, or whose habits are right and their natures wrong, and they praise one thing, but are pleased at another. For they say that all these imitations ⁶⁵⁶are pleasant, but not good. And in the presence of those whom they think wise, they are ashamed of dancing and singing in the baser manner, or of deliberately lending any countenance to such proceedings; and yet, they have a secret pleasure in them.

CLE.

Very true.

ATH.

And is any harm done to the lover of vicious dances or songs, or any good done to the approver of the opposite sort of pleasure?

CLE.

I think that there is.

ATH.

The effect of good and bad music like

‘I think’ is not the word, but I would say, rather, ‘I am certain.’
For must they not have the same effect as when a man associates with bad characters, whom he likes and approves rather than dislikes, and only censures playfully because he has a suspicion of his own badness? In that case, he who takes pleasure in them will surely become like those in whom he takes pleasure, even though he be ashamed to praise them. And what greater good or evil can any destiny ever make us undergo?

that of good and bad company.

CLE.

I know of none.

ATH.

Then in a city which has good laws, or in future ages is to have them, bearing in mind the instruction and amusement which are given by music, can we suppose that the poets are to be allowed to teach in the dance anything which they themselves like, in the way of rhythm, or melody, or words, to the young children of any well-conditioned parents? Is the poet to train his choruses as he pleases, without reference to virtue or vice?

CLE.

That is surely quite unreasonable, and is not to be thought of.

ATH.

And yet he may do this in almost any state with the exception of Egypt.

CLE.

And what are the laws about music and dancing in Egypt?

ATH.

You will wonder when I tell you: Long ago they appear to have recognized the very principle of which we are now speaking—that their young citizens must be habituated to forms and strains of virtue. These they fixed, and exhibited the patterns of them in their temples; and no painter or artist is allowed to innovate upon them, or to leave the traditional forms and invent new ones. To this day, no alteration is allowed either in these arts, or in music at all. And you will find that their works of art are painted or moulded in the same forms which they had ten thousand years ago;—this is literally true and no exaggeration,—their ancient paintings and sculptures are not a whit better or worse than the work of to-day, but are made with just the same skill.

Egypt has fixed forms of art which have existed for ten thousand years.

CLE.

How extraordinary!

ATH.

I should rather say, How statesmanlike, how worthy of a legislator! I know that other things in Egypt are not so well. But what I am telling you about music is true and deserving of consideration, because showing that a lawgiver may institute melodies which have a natural truth and correctness without any fear of failure. To do this, however, must be the work of God, or of a divine person; in Egypt they have a tradition that their ancient chants which have been preserved for so many ages are the composition of the Goddess Isis. And therefore, as I was saying, if a person can only find in any way the natural melodies, he may confidently embody them in a fixed and legal form. For the love of novelty which arises out of pleasure in the new and weariness of the old, has not strength enough to corrupt the consecrated song and dance, under the plea that they have become antiquated. At any rate, they are far from being corrupted in Egypt.

The Egyptian chants were originally composed by the Goddess Isis, and their sacred character preserves them.

CLE.

Your arguments seem to prove your point.

ATH.

May we not confidently say that the true use of music and of choral festivities is as follows: We rejoice when we think that we prosper, and again we think that we prosper when we rejoice?

CLE.

Exactly.

ATH.

And when rejoicing in our good fortune, we are unable to be still?

CLE.

True.

Music begins in rejoicing; our young men sing and dance, and the elders look on and remember their own youth.

ATH.

Our young men break forth into dancing and singing, and we who are their elders deem that we are fulfilling our part in life when we look on at them. Having lost our

agility, we delight in their sports and merry-making, because we love to think of our former selves; and gladly institute contests for those who are able to awaken in us the memory of our youth.

CLE.

Very true.

ATH.

Is it altogether unmeaning to say, as the common people do about festivals, that he should be adjudged the wisest of men, and the winner of the palm, who gives us the greatest amount of pleasure and mirth? For on such occasions, and when mirth is the order of the day, ought not he to be honoured most, and, as I was saying, bear the palm, who gives most mirth to the greatest number? Now is this 658a true way of speaking or of acting?

Who will be first in the contest?

He who gives the greatest pleasure to the greatest number?—

CLE.

Possibly.

ATH.

But, my dear friend, let us distinguish between different cases, and not be hasty in forming a judgment: One way of considering the question will be to imagine a festival at which there are entertainments of all sorts, including gymnastic, musical, and equestrian contests: the citizens are assembled; prizes are offered, and proclamation is made that any one who likes may enter the lists, and that he is to bear the palm who gives the most pleasure to the spectators—there is to be no regulation about the manner how; but he who is most successful in giving pleasure is to be crowned victor, and deemed to be the pleasantest of the candidates: What is likely to be the result of such a proclamation?

Suppose that there are divers exhibitions:

CLE.

In what respect?

ATH.

There would be various exhibitions: one man, like Homer, will exhibit a rhapsody, another a performance on the lute; one will have a tragedy, and another a comedy. Nor would there be anything astonishing in some one imagining that he could gain the prize by exhibiting a puppet-show. Suppose these competitors to meet, and not these only, but innumerable others as well—can you tell me who ought to be the victor?

an Homeric rhapsody, a performance on the lute, a tragedy, a comedy, a puppet-show.

CLE.

I do not see how any one can answer you, or pretend to know, unless he has heard with his own ears the several competitors; the question is absurd.

ATH.

Well, then, if neither of you can answer, shall I answer this question which you deem so absurd?

CLE.

By all means.

ATH.

If very small children are to determine the question, they will decide for the puppet-show.

CLE.

Of course.

ATH.

The older children will be advocates of comedy; educated women, and young men, and people in general, will favour tragedy.

CLE.

Very likely.

ATH.

And I believe that we old men would have the greatest pleasure in hearing a rhapsodist recite well the Iliad and Odyssey, or one of the Hesiodic poems, and would award the victory to him. But, who would really be the victor?—that is the question.

CLE.

Yes.

ATH.

Clearly you and I will have to declare that those whom we old men adjudge victors ought to win; for our ways are far and away better than any which at present exist anywhere in the world.

Small children will decide for the puppet-show: older children for comedy: educated women and young men and people in general for tragedy: older men will say, 'Give us Homer and Hesiod.'

CLE.

Certainly.

ATH.

Thus far I too should agree with the many, that the excellence of music is to be measured by pleasure. But the pleasure must not be that of chance persons; the fairest music is that which delights the best and best educated, and 659especially that which delights the one man who is pre-eminent in virtue and education. And therefore the judges must be men of character, for they will require both wisdom and courage; the true judge must not draw his inspiration from the theatre, nor ought he to be unnerved by the clamour of the many and his own incapacity; nor again, knowing the truth, ought he through cowardice and unmanliness carelessly to deliver a lying judgment, with the very same lips which have just appealed to the Gods before he judged. He is sitting not as the disciple of the theatre, but, in his proper place, as their instructor, and he ought to be the enemy of all pandering to the pleasure of the spectators. The ancient and common custom of Hellas, which still prevails in Italy and Sicily, did certainly leave the judgment to the body of spectators, who determined the victor by show of hands. But this custom has been the destruction of the poets; for they are now in the habit of composing with a view to please the bad taste of their judges, and the result is that the spectators instruct themselves;—and also it has been the ruin of the theatre; they ought to be having characters put before them better than their own, and so receiving a higher pleasure, but now by their own act the opposite result follows. What inference is to be drawn from all this? Shall I tell you?

The criterion of excellence should be pleasure, but not the pleasure of chance persons.

The judge should be the instructor, not the disciple, of the theatre.

CLE.

What?

ATH.

The inference at which we arrive for the third or fourth time is, that education is the constraining and directing of youth towards that right reason, which the law affirms, and which the experience of the eldest and best has agreed to be truly right. In order, then, that the soul of the child may not be habituated to feel joy and sorrow in a manner at variance with the law, and those who obey the law, but may rather follow the law and rejoice and sorrow at the same things as the aged—in order, I say, to produce this effect, chants appear to have been invented, which really enchant, and are designed to implant that harmony of which we speak. And, because the mind of the child is incapable of enduring serious training, they are called plays and songs, and are performed in play; just as when men are sick and ailing in their bodies, their attendants give them wholesome diet in pleasant meats and drinks, but unwholesome diet in disagreeable 660things, in order that they may learn,

The souls of the young should be charmed by song into harmony with the law.

as they ought, to like the one, and to dislike the other. And similarly the true legislator will persuade, and, if he cannot persuade, will compel the poet to express, as he ought, by fair and noble words, in his rhythms, the figures, and in his melodies, the music of temperate and brave and in every way good men.

CLE.

But do you really imagine, Stranger, that this is the way in which poets generally compose in States at the present day? As far as I can observe, except among us and among the Lacedaemonians, there are no regulations like those of which you speak; in other places novelties are always being introduced in dancing and in music, generally not under the authority of any law, but at the instigation of lawless pleasures; and these pleasures are so far from being the same, as you describe the Egyptian to be, or having the same principles, that they are never the same.

But all this is an ideal. No fixed principles of music except among Cretans and Lacedaemonians.

ATH.

Most true, Cleinias; and I daresay that I may have expressed myself obscurely, and so led you to imagine that I was speaking of some really existing state of things, whereas I was only saying what regulations I would like to have about music; and hence there occurred a misapprehension on your part. For when evils are far gone and irremediable, the task of censuring them is never pleasant, although at times necessary. But as we do not really differ, will you let me ask you whether you consider such institutions to be more prevalent among the Cretans and Lacedaemonians than among the other Hellenes?

CLE.

Certainly they are.

ATH.

And if they were extended to the other Hellenes, would it be an improvement on the present state of things?

CLE.

A very great improvement, if the customs which prevail among them were such as prevail among us and the Lacedaemonians, and such as you were just now saying ought to prevail.

ATH.

Tyrtaeus will not have a man a brave warrior

Let us see whether we understand one another:—Are not the principles of education and music which prevail among you as follows: you compel your poets to say that the good man, if he be temperate and just, is fortunate and happy; and this whether he be great and strong or small and weak, and whether he be rich or poor; and, on the other hand, if he have a wealth passing that of Cinyras or Midas, and be unjust, he is wretched and lives in misery? As the poet says, and with truth: I sing not, I care not about him who accomplishes all noble things, not having justice; let him who ‘draws near and stretches out his hand against his 661enemies be a just man.’ But if he be unjust, I would not have him ‘look calmly upon bloody death,’ nor ‘surpass in swiftness the Thracian Boreas;’ and let no other thing that is called good ever be his. For the goods of which the many speak are not really good: first in the catalogue is placed health, beauty next, wealth third; and then innumerable others, as for example to have a keen eye or a quick ear, and in general to have all the senses perfect; or, again, to be a tyrant and do as you like; and the final consummation of happiness is to have acquired all these things, and when you have acquired them to become at once immortal. But you and I say, that while to the just and holy all these things are the best of possessions, to the unjust they are all, including even health, the greatest of evils. For in truth, to have sight, and hearing, and the use of the senses, or to live at all without justice and virtue, even though a man be rich in all the so-called goods of fortune, is the greatest of evils, if life be immortal; but not so great, if the bad man lives only a very short time. These are the truths which, if I am not mistaken, you will persuade or compel your poets to utter with suitable accompaniments of harmony and rhythm, and in these they must train up your youth. Am I not right? For I plainly declare that evils as they are termed are goods to the unjust, and only evils to the just, and that goods are truly good to the good, but evil to the evil. Let me ask again, Are you and I agreed about this?

unless he be a just man.

CLE.

I think that we partly agree and partly do not.

ATH.

When a man has health and wealth and a tyranny which lasts, and when he is pre-eminent in strength and courage, and has the gift of immortality, and none of the so-called evils which counter-balance these goods, but only the injustice and insolence of his own nature—of such an one you are, I suspect, unwilling to believe that he is miserable rather than happy.

He who has external goods only is miserable.

CLE.

That is quite true.

ATH.

Once more: Suppose that he be valiant and strong, and handsome and rich, and does throughout his whole life whatever he likes, still, if he be unrighteous and insolent, would not both of you agree that he will of necessity live basely? You will surely grant so much?

Injustice naturally base, and also evil and painful.

CLE.

Certainly.

ATH.

And an evil life too?

CLE.

I am not equally disposed to grant that.

ATH.

Will he not live painfully and to his own disadvantage?

CLE.

How can I possibly say so?

ATH.

How! Then may Heaven make us to be of one mind, for now we are of two. To me, dear Cleinias, the truth of what I am saying is as plain as the fact that Crete is an island. And, if I were a lawgiver, I would try to make the poets and all the citizens speak in this strain; and I would inflict the heaviest penalties on any one in all the land who should dare to say that there are bad men who lead pleasant lives, or that the profitable and gainful is one thing, and the just another; and there are many other matters about which I should make my citizens speak in a manner different from the Cretans and Lacedaemonians of this age, and I may say, indeed, from the world in general. For tell me, my good friends, by Zeus and Apollo tell me, if I were to ask these same Gods who were your legislators,—Is not the most just life also the pleasantest? or are there two lives, one of which is the justest and the other the pleasantest?—and they were to reply that there are two; and thereupon I proceeded to ask, (that would be the right way of pursuing the enquiry), Which are the happier—those who lead the justest, or those who lead the pleasantest life? and they replied, Those who lead the pleasantest—that would be a very strange answer, which I should not like to put into

Men are not always agreed in their opinions; but the Gods and the legislator will never cease to affirm that the just is also the pleasant.

the mouth of the Gods. The words will come with more propriety from the lips of fathers and legislators, and therefore I will repeat my former questions to one of them, and suppose him to say again that he who leads the pleasantest life is the happiest. And to that I rejoin:—O my father, did you not wish me to live as happily as possible? And yet you also never ceased telling me that I should live as justly as possible. Now, here the giver of the rule, whether he be legislator or father, will be in a dilemma, and will in vain endeavour to be consistent with himself. But if he were to declare that the justest life is also the happiest, every one hearing him would enquire, if I am 663not mistaken, what is that good and noble principle in life which the law approves, and which is superior to pleasure. For what good can the just man have which is separated from pleasure? Shall we say that glory and fame, coming from Gods and men, though good and noble, are nevertheless unpleasant, and infamy pleasant? Certainly not, sweet legislator. Or shall we say that the not-doing of wrong and there being no wrong done is good and honourable, although there is no pleasure in it, and that the doing wrong is pleasant, but evil and base?

CLE.

Impossible.

ATH.

The view which identifies the pleasant and the just and the good and the noble has an excellent moral and religious tendency. And the opposite view is most at variance with the designs of the legislator, and is, in his opinion, infamous; for no one, if he can help, will be persuaded to do that which gives him more pain than pleasure. But as distant prospects are apt to make us dizzy, especially in childhood, the legislator will try to purge away the darkness and exhibit the truth; he will persuade the citizens, in some way or other, by customs and praises and words, that just and unjust are shadows only, and that injustice, which seems opposed to justice, when contemplated by the unjust and evil man appears pleasant and the just most unpleasant; but that from the just man's point of view, the very opposite is the appearance of both of them.

The different points of view taken by the lower and the higher soul.

CLE.

True.

ATH.

And which may be supposed to be the truer judgment—that of the inferior or of the better soul?

CLE.

Surely, that of the better soul.

ATH.

Then the unjust life must not only be more base and depraved, but also more unpleasant than the just and holy life?

CLE.

That seems to be implied in the present argument.

ATH.

And even supposing this were otherwise, and not as the argument has proven, still the lawgiver, who is worth anything, if he ever ventures to tell a lie to the young for their good, could not invent a more useful lie than this, or one which will have a better effect in making them do what is right, not on compulsion but voluntarily.

Even if the higher soul did not speak the truth about the unpleasantness of injustice, it would be a useful lie, and much more credible than the tale of Cadmus.

CLE.

Truth, Stranger, is a noble thing and a lasting, but a thing of which men are hard to be persuaded.

ATH.

And yet the story of the Sidonian Cadmus, which is so improbable, has been readily believed, and also innumerable other tales.

CLE.

What is that story?

ATH.

The story of armed men springing up after the sowing of teeth, which the legislator may take as a proof that he can persuade the minds of the young of anything; so that he has only to reflect and find out what belief will be of the greatest public advantage, and then use all his efforts to make the whole community utter one and the same word in their songs and tales and discourses all their life long. But if you do not agree with me, there is no reason why you should not argue on the other side.

CLE.

I do not see that any argument can fairly be raised by either of us against what you are now saying.

ATH.

The next suggestion which I have to offer is, that all our three choruses shall sing to the young and tender souls of children, reciting in their strains all the noble thoughts of which we have already spoken, or are about to speak; and the sum of them shall be, that the life which is by the Gods deemed to be the happiest is also the best;—we shall affirm this to be a most certain truth; and the minds of our young disciples will be more likely to receive these words of ours than any others which we might address to them.

That the holiest life is the happiest,—this is the strain to be sung by all the three choruses of children, young men, old men.

CLE.

I assent to what you say.

ATH.

First will enter in their natural order the sacred choir composed of children, which is to sing lustily the heaven-taught lay to the whole city. Next will follow the choir of young men under the age of thirty, who will call upon the God Paeon to testify to the truth of their words, and will pray him to be gracious to the youth and to turn their hearts. Thirdly, the choir of elder men, who are from thirty to sixty years of age, will also sing. There remain those who are too old to sing, and they will tell stories, illustrating the same virtues, as with the voice of an oracle.

CLE.

Who are those who compose the third choir, Stranger? for I do not clearly understand what you mean to say about them.

ATH.

And yet almost all that I have been saying has been said with a view to them.

CLE.

Will you try to be a little plainer?

ATH.

I was speaking at the commencement of our discourse, as you will remember, of the fiery nature of young creatures: I said that they were unable to keep quiet either in limb or voice, and that they called out and jumped about in a disorderly manner; and that no other animal attained to any perception of order, but man only. Now the order of motion is called rhythm, and the order of the voice, in which high and low are duly mingled, is

Recapitulation. Apollo and the Muses our playfellows; also Dionysus. The cries and movements of children are converted into harmony and rhythm.

called harmony; and both together are termed choric song. And I said that the Gods had pity on us, and gave us Apollo and the Muses to be our playfellows and leaders in the dance; and Dionysus, as I dare say that you will remember, was the third.

CLE.

I quite remember.

ATH.

Thus far I have spoken of the chorus of Apollo and the Muses, and I have still to speak of the remaining chorus, which is that of Dionysus.

CLE.

How is that arranged? There is something strange, at any rate on first hearing, in a Dionysiac chorus of old men, if you really mean that those who are above thirty, and may be fifty, or from fifty to sixty years of age, are to dance in his honour.

The Dionysiac chorus of old men.

ATH.

Very true; and therefore it must be shown that there is good reason for the proposal.

CLE.

Certainly.

ATH.

Are we agreed thus far?

CLE.

About what?

ATH.

That every man and boy, slave and free, both sexes, and the whole city, should never cease charming themselves with the strains of which we have spoken; and that there should be every sort of change and variation of them in order to take away the effect of sameness, so that the singers may always receive pleasure from their hymns, and may never weary of them?

The whole city will break out into singing, and the songs will be varied to avoid sameness.

CLE.

Every one will agree.

ATH.

Where, then, will that best part of our city which, by reason of age and intelligence, has the greatest influence, sing these fairest of strains, which are to do so much good? Shall we be so foolish as to let them off who would give us the most beautiful and also the most useful of songs?

Least of all can the chorus of old men be excused; for they will give us the best and fairest strains.

CLE.

But, says the argument, we cannot let them off.

ATH.

Then how can we carry out our purpose with decorum? Will this be the way?

CLE.

What?

ATH.

When a man is advancing in years, he is afraid and reluctant to sing;—he has no pleasure in his own performances; and if compulsion is used, he will be more and more ashamed, the older and more discreet he grows;—is not this true?

CLE.

Certainly.

ATH.

Well, and will he not be yet more ashamed if he has to stand up and sing in the theatre to a mixed audience?—and if moreover when he is required to do so, like the other choirs who contend for prizes, and have been trained under a singing master, he is pinched and hungry, he will certainly have a feeling of shame and discomfort which will make him 666very unwilling to exhibit.

CLE.

No doubt.

ATH.

How, then, shall we reassure him, and get him to sing? Shall we begin by enacting that boys shall not taste wine at all until they are eighteen years of age; we will tell them that fire must not be poured upon fire, whether in the body or in the soul, until they begin to go to work—this is a precaution which has to be taken against the excitableness of youth;—afterwards they may taste wine in moderation up to the age of thirty, but while a man is young he should abstain altogether from intoxication and from excess of wine; when, at length, he has reached forty years, after dinner at a public mess, he may invite not only the other Gods, but Dionysus above all, to the mystery and festivity of the elder men, making use of the wine which he has given men to lighten the sourness of old age; that in age we may renew our youth, and forget our sorrows; and also in order that the nature of the soul, like iron melted in the fire, may become softer and so more impressible. In the first place, will not any one who is thus mellowed be more ready and less ashamed to sing,—I do not say before a large audience, but before a moderate company; nor yet among strangers, but among his familiars, and, as we have often said, to chant, and to enchant?

But they must be encouraged by the use of wine.

CLE.

He will be far more ready.

ATH.

There will be no impropriety in our using such a method of persuading them to join with us in song.

CLE.

None at all.

ATH.

And what strain will they sing, and what muse will they hymn? The strain should clearly be one suitable to them.

What will they sing?

CLE.

Certainly.

ATH.

And what strain is suitable for heroes? Shall they sing a choric strain?

CLE.

Truly, Stranger, we of Crete and Lacedaemon know no strain other than that which we have learnt and been accustomed to sing in our chorus.

At Sparta and Crete only martial strains are heard.

ATH.

I dare say; for you have never acquired the knowledge of the most beautiful kind of song, in your military way of life, which is modelled after the camp, and is not like that of dwellers in cities; and you have your young men herding and feeding together like young colts. No one takes his own individual colt and drags him away from his fellows against his will, raging and foaming, and gives him a groom to attend to him alone, and trains and rubs him down privately, and gives him the qualities in education which will make him not only a good soldier, but also a governor of a state and of cities. Such an one, as we said at first, would be a greater warrior than he of whom Tyrtaeus sings; and he would honour courage everywhere, but always as the fourth, and not as the first part of virtue, either in individuals or states.

CLE.

Once more, Stranger, I must complain that you depreciate our lawgivers.

ATH.

Not intentionally, if at all, my good friend; but whither the argument leads, thither let us follow; for if there be indeed some strain of song more beautiful than that of the choruses or the public theatres, I should like to impart it to those who, as we say, are ashamed of these, and want to have the best.

The common forms of song are not the highest.

CLE.

Certainly.

ATH.

When things have an accompanying charm, either the best thing in them is this very charm, or there is some rightness or utility possessed by them;—for example, I should say that eating and drinking, and the use of food in general, have an accompanying charm which we call pleasure; but that this rightness and utility is just the healthfulness of the things served up to us, which is their true rightness.

CLE.

Just so.

ATH.

Thus, too, I should say that learning has a certain accompanying charm which is the pleasure; but that the right and the profitable, the good and the noble, are qualities which the truth gives to it.

Many things have an accompanying charm, but this is no criterion of their excellence, if there be any higher one.

CLE.

Exactly.

ATH.

And so in the imitative arts,—if they succeed in making likenesses, and are accompanied by pleasure, may not their works be said to have a charm?

CLE.

Yes.

ATH.

But equal proportions, whether of quality or quantity, and not pleasure, speaking generally, would give them truth or rightness.

CLE.

Yes.

ATH.

Then that only can be rightly judged by the standard of pleasure, which makes or furnishes no utility or truth or likeness, nor on the other hand is productive of any hurtful quality, but exists solely for the sake of the accompanying charm; and the term 'pleasure' is most appropriately applied to it when these other qualities are absent.

CLE.

You are speaking of harmless pleasure, are you not?

ATH.

Yes; and this I term amusement, when doing neither harm nor good in any degree worth speaking of.

CLE.

Very true.

ATH.

Then, if such be our principles, we must assert that imitation is not to be judged of by pleasure and false opinion; and this is true of all equality, for the equal is not equal or the symmetrical symmetrical, because somebody thinks or likes something, but they are to be judged of by the standard of truth, and by no other whatever.

The goodness of an imitation is to be determined by its truth,

CLE.

Quite true.

ATH.

Do we not regard all music as representative and imitative?

CLE.

Certainly.

ATH.

Then, when any one says that music is to be judged of by pleasure, his doctrine cannot be admitted; and if there be any music of which pleasure is the criterion, such music is not to be sought out or deemed to have any real excellence, but only that other kind of music which is an imitation of the good.

not by the pleasure which it gives.

CLE.

Very true.

ATH.

And those who seek for the best kind of song and music ought not to seek for that which is pleasant, but for that which is true; and the truth of imitation consists, as we were saying, in rendering the thing imitated according to quantity and quality.

CLE.

Certainly.

ATH.

And every one will admit that musical compositions are all imitative and representative. Will not poets and spectators and actors all agree in this?

CLE.

They will.

ATH.

Surely then he who would judge correctly must know what each composition is; for if he does not know what is the character and meaning of the piece, and what it represents, he will never discern whether the intention is true or false.

CLE.

Certainly not.

ATH.

And will he who does not know what is true be able to distinguish what is good and bad? My statement is not very clear; but perhaps you will understand me better if I put the matter in another way.

CLE.

How?

ATH.

There are ten thousand likenesses of objects of sight?

CLE.

Yes.

ATH.

And can he who does not know what the exact object is which is imitated, ever know whether the resemblance is truthfully executed? I mean, for example, whether a statue has the proportions of a body, and the true situation of the parts; what those proportions are, and how the parts fit into one another in due order; also their colours and conformations, or whether this is all confused in the execution: do you think that any one can know about this, who does not know what the animal is which has been imitated?

But to know whether an imitation is faithful, we must know, (1) of what it is the imitation; (2) whether it is true;

CLE.

Impossible.

ATH.

But even if we know that the thing pictured or sculptured is a man, who has received at the hand of the artist all his proper parts and colours and shapes, must we 669not also know whether the work is beautiful or in any respect deficient in beauty?

(3) whether it is beautiful or well executed.

CLE.

If this were not required, Stranger, we should all of us be judges of beauty.

ATH.

Very true; and may we not say that in everything imitated, whether in drawing, music, or any other art, he who is to be a competent judge must possess three things;—he must know, in the first place, of what the imitation is; secondly, he must know that it is true; and thirdly, that it has been well executed in words and melodies and rhythms?

CLE.

Certainly.

ATH.

Then let us not faint in discussing the peculiar difficulty of music. Music is more celebrated than any other kind of imitation, and therefore requires the greatest care of them all. For if a man makes a mistake here, he may do himself the greatest injury by welcoming evil dispositions, and the mistake may be very difficult to discern, because the poets are artists very inferior in character to the Muses themselves, who would never fall into the monstrous error of assigning to the words of men the gestures and songs of women; nor after combining the melodies with the gestures of freemen would they add on the rhythms of slaves and men of the baser sort; nor, beginning with the rhythms and gestures of freemen, would they assign to them a melody or words which are of an opposite character; nor would they mix up the voices and sounds of animals and of men and instruments, and every other sort of noise, as if they were all one. But human poets are fond of introducing this sort of inconsistent mixture, and so make themselves ridiculous in the eyes of those who, as Orpheus says, ‘are ripe for true pleasure.’ The experienced see all this confusion, and yet the poets go on and make still further havoc by separating the rhythm and the figure of the dance from the melody, setting bare words to metre, and also separating the melody and the rhythm from the words, using the lyre or the flute alone. For when there are no words, it is very difficult to recognize the meaning of the harmony and rhythm, or to see that any worthy object is imitated by them. And we must acknowledge that all this sort of thing, which aims

Injurious influence of some kinds of music.

Incongruous unions of gestures, styles, melodies, rhythms, sounds.

Absurdity of song without rhythm and figure, and of instrumental music and rhythm without words.

Only learned and experienced judges, like our fifty years’ old choristers, can see their way through all this.

only at swiftness and smoothness and a brutish noise, and uses the flute and the lyre not as the mere accompaniments 670of the dance and song, is exceedingly coarse and tasteless. The use of either instrument, when unaccompanied, leads to every sort of irregularity and trickery. This is all rational enough. But we are considering not how our choristers, who are from thirty to fifty years of age, and may be over fifty, are not to use the Muses, but how they are to use them. And the considerations which we have urged seem to show in what way these fifty years' old choristers who are to sing, may be expected to be better trained. For they need to have a quick perception and knowledge of harmonies and rhythms; otherwise, how can they ever know whether a melody would be rightly sung to the Dorian mode, or to the rhythm which the poet has assigned to it?

CLE.

Clearly they cannot.

ATH.

The many are ridiculous in imagining that they know what is in proper harmony and rhythm, and what is not, when they can only be made to sing and step in rhythm by force; it never occurs to them that they are ignorant of what they are doing. Now every melody is right when it has suitable harmony and rhythm, and wrong when unsuitable.

CLE.

That is most certain.

ATH.

But can a man who does not know a thing, as we were saying, know that the thing is right?

CLE.

Impossible.

ATH.

They will have a far more complete knowledge of the art of music than the people and even than the poets themselves.

The drinking assembly is apt to be

Then now, as would appear, we are making the discovery that our newly-appointed choristers, whom we hereby invite and, although they are their own masters, compel to sing, must be educated to such an extent as to be able to follow the steps of the rhythm and the notes of the song, that they may know the harmonies and rhythms, and be able to select what are suitable for men of their age and character to sing; and may sing them, and have innocent pleasure from their own performance, and also lead younger men to welcome with dutiful delight good dispositions. Having such training, they will attain a more accurate knowledge than falls to the lot of the common people, or even of the poets themselves. For the poet need not know the third point, viz. whether the imitation is good or not, though he can hardly help knowing the laws of melody and rhythm. But the aged chorus must know all the three, that they may choose the best, and that which is nearest to the best; for otherwise they will never be able to charm the souls of young men in the way of virtue. And now the original design of the argument which was intended to bring eloquent aid to the Chorus of Dionysus, has been accomplished to the best of our ability, and let us see whether we were right:—I should imagine that a drinking assembly is likely to become more and more tumultuous as the drinking goes on: this, as we were saying at first, will certainly be the case.

tumultuous. Every man grows light-headed.

CLE.

Certainly.

ATH.

Every man has a more than natural elevation; his heart is glad within him, and he will say anything and will be restrained by nobody at such a time; he fancies that he is able to rule over himself and all mankind.

CLE.

Quite true.

ATH.

Were we not saying that on such occasions the souls of the drinkers become like iron heated in the fire, and grow softer and younger, and are easily moulded by him who knows how to educate and fashion them, just as when they were young, and that this fashioner of them is the same who prescribed for them in the days of their youth, viz. the good legislator; and that he ought to enact laws of the banquet, which, when a man is confident, bold, and impudent, and unwilling to wait his turn and have his share of silence and speech, and drinking and music, will change his character into the opposite—such laws as will infuse into him a just and noble fear, which will take up arms at the approach of insolence, being that divine fear which we have called reverence and shame?

At such times the soul may be easily fashioned by the legislator who should prescribe rules of behaviour.

CLE.

True.

ATH.

And the guardians of these laws and fellow-workers with them are the calm and sober generals of the drinkers; and without their help there is greater difficulty in fighting against drink than in fighting against enemies when the commander of an army is not himself calm; and he who is unwilling to obey them and the commanders of Dionysiac feasts who are more than sixty years of age, shall suffer a disgrace as great as he who disobeys military leaders, or even greater.

But there must be sober generals of the feast under whose command men will fight against drink.

CLE.

Right.

ATH.

If, then, drinking and amusement were regulated in this way, would not the companions of our revels be improved? 672they would part better friends than they were, and not, as now, enemies. Their whole intercourse would be regulated by law and observant of it, and the sober would be the leaders of the drunken.

CLE.

I think so too, if drinking were regulated as you propose.

ATH.

Let us not then simply censure the gift of Dionysus as bad and unfit to be received into the State. For wine has many excellences, and one pre-eminent one, about which there is a difficulty in speaking to the many, from a fear of their misconceiving and misunderstanding what is said.

CLE.

To what do you refer?

ATH.

There is a good as well as a bad tradition about Dionysus. He is not only said to have

There is a tradition or story, which has somehow crept about the world, that Dionysus was robbed of his wits by his stepmother Here, and that out of revenge he inspires Bacchic furies and dancing madnenses in others; for which reason he gave men wine. Such traditions concerning the Gods I leave to those who think that they may be safely uttered¹ ; I only know that no animal at birth is mature or perfect in intelligence; and in the intermediate period, in which he has not yet acquired his own proper sense, he rages and roars without rhyme or reason; and when he has once got on his legs he jumps about without rhyme or reason; and this, as you will remember, has been already said by us to be the origin of music and gymnastic² .

given men wine to make them mad, but also as a balm.

CLE.

To be sure, I remember.

ATH.

And did we not say that the sense of harmony and rhythm sprang from this beginning among men, and that Apollo and the Muses and Dionysus were the Gods whom we had to thank for them?

CLE.

Certainly.

ATH.

The other story implied that wine was given man out of revenge, and in order to make him mad; but our present doctrine, on the contrary, is, that wine was given him as a balm, and in order to implant modesty in the soul, and health and strength in the body.

CLE.

That, Stranger, is precisely what was said.

ATH.

Then half the subject may now be considered to have been discussed; shall we proceed to the consideration of the other half?

CLE.

What is the other half, and how do you divide the subject?

ATH.

The whole choral art is also in our view the whole of education; and of this art, rhythms and harmonies form the part which has to do with the voice.

CLE.

Yes.

ATH.

The movement of the body has rhythm in common with the movement of the voice, but gesture is peculiar to it, whereas song is simply the movement of the voice.

Harmony and rhythm, which form one part of the choral art, have been already discussed.

CLE.

Most true.

ATH.

And the sound of the voice which reaches and educates ⁶⁷³the soul, we have ventured to term music.

CLE.

We were right.

ATH.

And the movement of the body, when regarded as an amusement, we termed dancing; but when extended and pursued with a view to the excellence of the body, this scientific training may be called gymnastic.

CLE.

Exactly.

ATH.

Music, which was one half of the choral art, may be said to have been completely discussed. Shall we proceed to the other half or not? What would you like?

Gymnastic, the other, still remains.

CLE.

My good friend, when you are talking with a Cretan and Lacedaemonian, and we have discussed music and not gymnastic, what answer are either of us likely to make to such an enquiry?

ATH.

An answer is contained in your question; and I understand and accept what you say not only as an answer, but also as a command to proceed with gymnastic.

CLE.

You quite understand me; do as you say.

ATH.

I will; and there will not be any difficulty in speaking intelligibly to you about a subject with which both of you are far more familiar than with music.

CLE.

There will not.

ATH.

Is not the origin of gymnastics, too, to be sought in the tendency to rapid motion which exists in all animals; man, as we were saying, having attained the sense of rhythm, created and invented dancing; and melody arousing and awakening rhythm, both united formed the choral art?

CLE.

Very true.

ATH.

And one part of this subject has been already discussed by us, and there still remains another to be discussed [1](#) ?

CLE.

Exactly.

ATH.

I have first a final word to add to my discourse about drink, if you will allow me to do so.

CLE.

What more have you to say?

ATH.

I should say that if a city seriously means to adopt the practice of drinking under due regulation and with a view to the enforcement of temperance, and in like manner, and on the same principle, will allow of other pleasures, designing to gain the victory over them—in this way all of them may be used. But if the State makes drinking an amusement only, and whoever likes may drink whenever he likes, and 674with whom he likes, and add to this any other indulgences, I shall never agree or allow that this city or this man should practise drinking. I would go farther than the Cretans and Lacedaemonians, and am disposed rather to the law of the Carthaginians, that no one while he is on a campaign should be allowed to taste wine at all, but that he should drink water during all that time, and that in the city no slave, male or female, should ever drink wine; and that no magistrates should drink during their year of office, nor should pilots of vessels or judges while on duty taste wine at all, nor any one who is going to hold a consultation about any matter of importance; nor in the day-time at all, unless in consequence of exercise or as medicine; nor again at night, when any one, either man or woman, is minded to get children. There are numberless other cases also in which those who have good sense and good laws ought not to drink wine, so that if what I say is true, no city will need many vineyards. Their husbandry and their way of life in general will follow an appointed order, and their cultivation of the vine will be the most limited and the least common of their employments. And this, Stranger, shall be the crown of my discourse about wine, if you agree.

The final word.
Drinking should only be allowed with a view to the promotion of temperance.

The law of the Carthaginians about drinking.

CLE.

Excellent: we agree.

[\[Back to Table of Contents\]](#)

BOOK III.

ATHENIAN STRANGER.

676 Enough of this. And what, then, is to be regarded as the origin of government? Will not a man be able to judge of it best from a point of view in which he may behold the progress of states and their transitions to good or evil?

Laws III.

Athenian, Cleinias.

The point of view of time.

CLEINIAS.

What do you mean?

ATH.

I mean that he might watch them from the point of view of time, and observe the changes which take place in them during infinite ages.

CLE.

How so?

ATH.

Why, do you think that you can reckon the time which has elapsed since cities first existed and men were citizens of them?

Innumerable forms of government have arisen in the course of ages:

CLE.

Hardly.

ATH.

But you are sure that it must be vast and incalculable?

CLE.

Certainly.

ATH.

And have not thousands and thousands of cities come into being during this period and as many perished? And has not each of them had every form of government many times over, now growing larger, now smaller, and again improving or declining?

CLE.

To be sure.

ATH.

Let us endeavour to ascertain the cause of these changes; for that will probably explain the first origin and development of forms of government.

CLE.

Very good. You shall endeavour to impart your thoughts to us, and we will make an effort to understand you.

ATH.

Do you believe that there is any truth in ancient traditions?

CLE.

What traditions?

ATH.

The traditions about the many destructions of mankind which have been occasioned by deluges and pestilences, and in many other ways, and of the survival of a remnant?

and many destructions of mankind have taken place through deluges and plagues.

CLE.

Every one is disposed to believe them.

ATH.

Let us consider one of them, that which was caused by the famous deluge.

CLE.

What are we to observe about it?

ATH.

I mean to say that those who then escaped would only be hill shepherds,—small sparks of the human race preserved on the tops of mountains.

A few survivors.

CLE.

Clearly.

ATH.

Such survivors would necessarily be unacquainted with the arts and the various devices which are suggested to the dwellers in cities by interest or ambition, and with all the wrongs which they contrive against one another.

CLE.

Very true.

ATH.

Let us suppose, then, that the cities in the plain and on the sea-coast were utterly destroyed at that time.

CLE.

Very good.

ATH.

Would not all implements have then perished and every other excellent invention of political or any other sort of wisdom have utterly disappeared?

The arts perished.

CLE.

Why, yes, my friend; and if things had always continued as they are at present ordered, how could any discovery have ever been made even in the least particular? For it is evident that the arts were unknown during ten thousand times ten thousand years. And no more than a thousand or two thousand years have elapsed since the discoveries of Daedalus, Orpheus and Palamedes,—since Marsyas and Olympus invented music, and Amphion the lyre,—not to speak of numberless other inventions which are but of yesterday.

The last recovery of civilization quite recent. Famous discoveries; Daedalus, &c.

ATH.

Have you forgotten, Cleinias, the name of a friend who is really of yesterday?

CLE.

I suppose that you mean Epimenides¹.

ATH.

The same, my friend; he does indeed far overleap the heads of all mankind by his invention; for he carried out in practice, as you declare, what of old Hesiod² only preached.

Hesiod and Epimenides.

CLE.

Yes, according to our tradition.

ATH.

After the great destruction, may we not suppose that the state of man was something of this sort:—In the beginning of things there was a fearful illimitable desert and a vast expanse of land; a herd or two of oxen would be the only survivors of the animal world; and there might be a few 678goats, these too hardly enough to maintain the shepherds who tended them?

Growth of society. A few poor shepherds left with their scanty flocks

CLE.

True.

ATH.

And of cities or governments or legislation, about which we are now talking, do you suppose that they could have any recollection at all?

CLE.

None whatever.

ATH.

And out of this state of things has there not sprung all that we now are and have: cities and governments, and arts and laws, and a great deal of vice and a great deal of virtue?

have developed into governments and cities.

CLE.

What do you mean?

ATH.

Why, my good friend, how can we possibly suppose that those who knew nothing of all the good and evil of cities could have attained their full development, whether of virtue or of vice?

CLE.

I understand your meaning, and you are quite right.

ATH.

But, as time advanced and the race multiplied, the world came to be what the world is.

CLE.

Very true.

ATH.

Doubtless the change was not made all in a moment, but little by little, during a very long period of time.

CLE.

A highly probable supposition.

ATH.

At first, they would have a natural fear ringing in their ears which would prevent their descending from the heights into the plain.

CLE.

Of course.

ATH.

The fewness of the survivors at that time would have made them all the more desirous of seeing one another; but then the means of travelling either by land or sea had been almost entirely lost, as I may say, with the loss of the arts, and there was great difficulty in getting at one another; for iron and brass and all metals were jumbled together and had disappeared in the chaos; nor was there any possibility of extracting ore from them; and they had scarcely any means of felling timber. Even if you suppose that some implements might have been preserved in the mountains, they must quickly have worn out and vanished, and there would be no more of them until the art of metallurgy had again revived.

After the deluge no arts or metals or implements or means of transit.

CLE.

There could not have been.

ATH.

In how many generations would this be attained?

CLE.

Clearly, not for many generations.

ATH.

During this period, and for some time afterwards, all the arts which require iron and brass and the like would disappear.

CLE.

Certainly.

ATH.

Faction and war would also have died out in those days, and for many reasons.

CLE.

How would that be?

ATH.

In the first place, the desolation of these primitive men would create in them a feeling of affection and goodwill towards one another; and, secondly, they would have no occasion to quarrel about their subsistence, for they would have pasture in abundance, except just at first, and in some particular cases; and from their pasture-land they would obtain the greater part of their food in a primitive age, having plenty of milk and flesh; moreover they would procure other food by the chase, not to be despised either in quantity or quality. They would also have abundance of clothing, and bedding, and dwellings, and utensils either capable of standing on the fire or not; for the plastic and weaving arts do not require any use of iron: and God has given these two arts to man in order to provide him with all such things, that, when reduced to the last extremity, the human race may still grow and increase. Hence in those days mankind were not very poor; nor was poverty a cause of difference among them; and rich they could not have been, having neither gold nor silver:—such at that time was their condition. And the community which has neither poverty nor riches will always have the noblest principles; in it there is no insolence or injustice, nor, again, are there any contentions or envyings. And therefore they were good, and also because they were what is called simple-minded; and when they were told about good and evil, they in their simplicity believed what they heard to be

Isolation; friendliness:

no wants; no wars:

plastic and weaving arts:

simplicity of life and character.

very truth and practised it. No one had the wit to suspect another of a falsehood, as men do now; but what they heard about Gods and men they believed to be true, and lived accordingly; and therefore they were in all respects such as we have described them.

CLE.

That quite accords with my views, and with those of my friend here.

ATH.

Would not many generations living on in a simple manner, although ruder, perhaps, and more ignorant of the arts generally, and in particular of those of land or naval warfare, and likewise of other arts, termed in cities legal practices and party conflicts, and including all conceivable ways of hurting one another in word and deed;—although inferior to those who lived before the deluge, or to the men of our day in these respects, would they not, I say, be simpler and more manly, and also more temperate and altogether more just? The reason has been already explained.

Men were ruder, but also better, than a later generation.

CLE.

Very true.

ATH.

I should wish you to understand that what has preceded and what is about to follow, has been, and will be said, with the intention of explaining what need the men of that time had of laws, and who was their lawgiver.

No laws.

CLE.

And thus far what you have said has been very well said.

ATH.

They could hardly have wanted lawgivers as yet; nothing of that sort was likely to have existed in their days, for they had no letters at this early period; they lived by habit and the customs of their ancestors, as they are called.

No letters.

CLE.

Probably.

ATH.

But there was already existing a form of government which, if I am not mistaken, is generally termed a lordship, and this still remains in many places, both among Hellenes and barbarians¹, and is the government which is declared by Homer to have prevailed among the Cyclopes:—

‘They have neither councils nor judgments, but they dwell in hollow caves on the tops of high mountains, and every one gives law to his wife and children, and they do not busy themselves about one another².’

The oldest form of government a lordship: men lived by custom, like the Cyclopes. (Homer unknown in Crete, but well known at Sparta.) The Homeric way of life Ionian rather than Spartan.

Athenian, Cleinias, Megillus.

CLE.

That seems to be a charming poet of yours; I have read some other verses of his, which are very clever; but I do not know much of him, for foreign poets are very little read among the Cretans.

MEG.

But they are in Lacedaemon, and he appears to be the prince of them all; the manner of life, however, which he describes is not Spartan, but rather Ionian, and he seems quite to confirm what you are saying, when he traces up the ancient state of mankind by the help of tradition to barbarism.

ATH.

Yes, he does confirm it; and we may accept his witness to the fact that such forms of government sometimes arise.

CLE.

We may.

ATH.

And were not such states composed of men who had been dispersed in single habitations and families by the poverty which attended the devastations; and did not the eldest then rule among them, because with them government originated in the authority of a father and a mother, whom, like a flock of birds, they followed, forming one troop under the patriarchal rule and sovereignty of their parents, which of all sovereignties is the most just?

The origin of society patriarchal.

CLE.

Very true.

ATH.

After this they came together in greater numbers, and increased the size of their cities, and betook themselves to husbandry, first of all at the foot of the mountains, and made enclosures of loose walls and works of defence, in order to keep off wild beasts; thus creating a single large and common habitation.

The second stage:—larger settlements at the foot of the mountain; beginning of agriculture.

CLE.

Yes; at least we may suppose so.

ATH.

There is another thing which would probably happen.

CLE.

What?

ATH.

When these larger habitations grew up out of the lesser original ones, each of the lesser ones would survive in the larger; every family would be under the rule of the eldest, and, owing to their separation from one another, would have peculiar customs in things divine and human, which they would have received from their several parents who had educated them; and these customs would incline them to order, when the parents had the element of order in their nature, and to courage, when they had the element of courage. And they would naturally stamp upon their children, and upon their children's children, their own likings¹; and, as we are saying, they would find their way into the larger society, having already their own peculiar laws.

The lesser settlements bring with them into the larger society family customs peculiar to themselves.

Athenian, Cleinias.

CLE.

Certainly.

ATH.

And every man surely likes his own laws best, and the laws of others not so well.

CLE.

True.

ATH.

Then now we seem to have stumbled upon the beginnings of legislation.

CLE.

Exactly.

ATH.

The next step will be that these persons who have met together, will select some arbiters, who will review the laws of all of them, and will publicly present such as they approve to the chiefs who lead the tribes, and who are in a manner their kings, allowing them to choose those which they think best. These persons will themselves be called legislators, and will appoint the magistrates, framing some sort of aristocracy, or perhaps monarchy, out of the dynasties or lordships, and in this altered state of the government they will live.

Then arises the need of the legislator.

CLE.

Yes, that would be the natural order of things.

ATH.

Then, now let us speak of a third form of government, in which all other forms and conditions of polities and cities concur.

The third stage: the city finally settled in the plain.

CLE.

What is that?

ATH.

The form which in fact Homer indicates as following the second. This third form arose when, as he says, Dardanus founded Dardania:—

‘For not as yet had the holy Ilium been built on the plain to be a city of speaking men; but they were still dwelling at the foot of many-fountained Ida².’

For indeed, in these verses, and in what he said of the 682 Cyclopes, he speaks the words of God and nature; for poets are a divine race¹, and often in their strains, by the aid of the Muses and the Graces, they attain truth.

CLE.

Yes.

ATH.

Then now let us proceed with the rest of our tale, which will probably be found to illustrate in some degree our proposed design:—Shall we do so?

CLE.

By all means.

ATH.

Ilium was built, when they had descended from the mountain, in a large and fair plain, on a sort of low hill, watered by many rivers descending from Ida.

CLE.

Such is the tradition.

ATH.

And we must suppose this event to have taken place many ages after the deluge?

CLE.

Yes; many ages must have elapsed.

ATH.

A marvellous forgetfulness of the former destruction would appear to have come over them, when they placed their town right under numerous streams flowing from the heights, trusting for their security to not very high hills, either.

The deluge is now forgotten.

CLE.

There must have been a long interval, clearly.

ATH.

And, as population increased, many other cities would begin to be inhabited.

CLE.

Doubtless.

ATH.

Those cities made war against Troy—by sea as well as land—for at that time men were ceasing to be afraid of the sea.

CLE.

Clearly.

ATH.

The Achaeans remained ten years, and overthrew Troy.

CLE.

True.

ATH.

And during the ten years in which the Achaeans were besieging Ilium, the homes of the besiegers were falling into an evil plight. Their youth revolted; and when the soldiers returned to their own cities and families, they did not receive them properly, and as they ought to have done, and numerous deaths, murders, exiles, were the consequence. The exiles came again, under a new name, no longer Achaeans, but Dorians,—a name which they derived from Dorieus; for it was he who gathered them together. The rest of the story is told by you Lacedaemonians as part of the history of Sparta.

The return of the Achaeans under the new name of Dorians.

MEG.

To be sure.

ATH.

Thus, after digressing from the original subject of laws into music and drinking-bouts, the argument has, providentially, come back to the same point, and presents to us another handle. For we have reached the settlement of 683Lacedaemon; which, as you truly say, is in laws and in institutions the sister of Crete. And we are all the better for the digression, because we have gone through various governments and settlements, and have been present at the foundation of a first, second, and third state, succeeding one

Settlement of Lacedaemon, the sister settlement of Crete.

The fourth stage: a nation or federation.

another in infinite time. And now there appears on the horizon a fourth state or nation which was once in process of settlement and has continued settled to this day. If, out of all this, we are able to discern what is well or ill settled, and what laws are the salvation and what are the destruction of cities, and what changes would make a state happy, O Megillus and Cleinias, we may now begin again, unless we have some fault to find with the previous discussion.

MEG.

If some God, Stranger, would promise us that our new enquiry about legislation would be as good and full as the present, I would go a great way to hear such another, and would think that a day as long as this—and we are now approaching the longest day of the year—was too short for the discussion.

ATH.

Then I suppose that we must consider this subject?

MEG.

Certainly.

ATH.

Let us place ourselves in thought at the moment when Lacedaemon and Argos and Messene and the rest of the Peloponnesus were all in complete subjection, Megillus, to your ancestors; for afterwards, as the legend informs us, they divided their army into three portions, and settled three cities, Argos, Messene, Lacedaemon.

The time of the conquest.

MEG.

True.

ATH.

Temenus was the king of Argos, Cresphontes of Messene, Procles and Eurysthenes of Lacedaemon.

MEG.

Certainly.

ATH.

To these kings all the men of that day made oath that they would assist them, if any one subverted their kingdom.

MEG.

True.

ATH.

But can a kingship be destroyed, or was any other form of government ever destroyed, by any but the rulers themselves? No indeed, by Zeus. Have we already forgotten what was said a little while ago¹?

MEG.

No.

ATH.

And may we not now further confirm what was then mentioned? For we have come upon facts which have brought us back again to the same principle; so that, in resuming the discussion, we shall not be enquiring about an empty theory, but about events which actually happened. The case was as follows:—Three royal heroes made oath to three cities which were under a kingly government, and the cities to the kings, that both rulers and subjects should govern and be governed according to the laws which were common to all of them: the rulers promised that as time and the race went forward they would not make their rule more arbitrary; and the subjects said that, if the rulers observed these conditions, they would never subvert or permit others to subvert those kingdoms; the kings were to assist kings and peoples when injured, and the peoples were to assist peoples and kings in like manner. Is not this the fact?

The three Dorian kingdoms were to be governed by common laws, and to help one another in case of need.

MEG.

Yes.

ATH.

And the three states to whom these laws were given, whether their kings or any others were the authors of them, had therefore the greatest security for the maintenance of their constitutions?

MEG.

What security?

ATH.

That the other two states were always to come to the rescue against a rebellious third.

MEG.

True.

ATH.

Many persons say that legislators ought to impose such laws as the mass of the people will be ready to receive; but this is just as if one were to command gymnastic masters or physicians to treat or cure their pupils or patients in an agreeable manner.

MEG.

Exactly.

ATH.

Whereas the physician may often be too happy if he can restore health, and make the body whole, without any very great infliction of pain.

MEG.

Certainly.

ATH.

There was also another advantage possessed by the men of that day, which greatly lightened the task of passing laws¹.

And besides this close alliance there was another advantage. The early legislators had a clear stage.

MEG.

What advantage?

ATH.

The legislators of that day, when they equalized property, escaped the great accusation which generally arises in legislation, if a person attempts to disturb the possession of land, or to abolish debts, because he sees that without this reform there can never be any real equality. Now, in general, when the legislator attempts to make a new settlement of such matters, every one meets him with the cry, that 'he is not to disturb vested interests,'—declaring with imprecations that he is introducing agrarian laws and cancelling of debts, until a man is at his wits' end; whereas no one could quarrel with the Dorians for distributing the land,—there was nothing to hinder them; and as for debts, they had none which were considerable or of old standing.

No debts or vested interests.

MEG.

Very true.

ATH.

But then, my good friends, why did the settlement and legislation of their country turn out so badly?

Yet the Dorian settlement turned out badly, and the laws originally given to the three kingdoms were only retained by Sparta.

MEG.

685How do you mean; and why do you blame them?

ATH.

There were three kingdoms, and of these, two quickly corrupted their original constitution and laws, and the only one which remained was the Spartan.

MEG.

The question which you ask is not easily answered.

ATH.

And yet must be answered when we are enquiring about laws, this being our old man's sober game of play, whereby we beguile the way, as I was saying when we first set out on our journey².

MEG.

Certainly; and we must find out why this was.

ATH.

What laws are more worthy of our attention than those which have regulated such cities? or what settlements of states are greater or more famous?

MEG.

I know of none.

ATH.

The Dorian confederacy was designed to protect

Can we doubt that your ancestors intended these institutions not only for the protection of Peloponnesus, but of all the Hellenes, in case they were attacked by the barbarian? For the inhabitants of the region about Ilium, when they provoked by their insolence the Trojan war, relied upon the power of the Assyrians and the Empire of Ninus, which still existed and had a great prestige; the people of those days fearing the united Assyrian Empire just as we now fear the Great King. And the second capture of Troy was a serious offence against them, because Troy was a portion of the Assyrian Empire. To meet the danger the single army was distributed between three cities by the royal brothers, sons of Heracles,—a fair device, as it seemed, and a far better arrangement than the expedition against Troy. For, firstly, the people of that day had, as they thought, in the Heraclidae better leaders than the Pelopidae; in the next place, they considered that their army was superior in valour to that which went against Troy; for, although the latter conquered the Trojans, they were themselves conquered by the Heraclidae—Achaean by Dorians. May we not suppose that this was the intention with which the men of those days framed the constitutions of their states?

the Hellenes against
the Assyrian Empire.

MEG.

Quite true.

ATH.

And would not men who had shared with one another many dangers, and were governed by a single race of royal brothers, and had taken the advice of oracles, and in particular of the Delphian Apollo, be likely to think that such states would be firmly and lastingly established?

Why, with its great
prestige and many
advantages, did it fall
to pieces?

MEG.

Of course they would.

ATH.

Yet these institutions, of which such great expectations were entertained, seem to have all rapidly vanished away; with the exception, as I was saying, of that small part of them which existed in your land. And this third part has never to this day ceased warring against the two others; whereas, if the original idea had been carried out, and they had agreed to be one, their power would have been invincible in war.

MEG.

No doubt.

ATH.

But what was the ruin of this glorious confederacy? Here is a subject well worthy of consideration.

MEG.

Certainly, no one will ever find more striking instances of laws or governments being the salvation or destruction of great and noble interests, than are here presented to his view.

ATH.

Then now we seem to have happily arrived at a real and important question.

MEG.

Very true.

ATH.

Did you never remark, sage friend, that all men, and we ourselves at this moment, often fancy that they see some beautiful thing which might have effected wonders if any one had only known how to make a right use of it in some way; and yet this mode of looking at things may turn out after all to be a mistake, and not according to nature, either in our own case or in any other?

MEG.

To what are you referring, and what do you mean?

ATH.

I was thinking of my own admiration of the aforesaid Heracleid expedition, which was so noble, and might have had such wonderful results for the Hellenes, if only rightly used; and I was just laughing at myself.

The confederates did not understand how to keep together. Had they only been united, they might have done anything.

MEG.

But were you not right and wise in speaking as you did, and we in assenting to you?

ATH.

Perhaps; and yet I cannot help observing that any one who sees anything great or powerful, immediately has the feeling that—‘If the owner only knew how to use his

great and noble possession, how happy would he be, and what great results would he achieve!’

MEG.

687 And would he not be justified?

ATH.

Reflect; in what point of view does this sort of praise appear just: First, in reference to the question in hand:—If the then commanders had known how to arrange their army properly, how would they have attained success? Would not this have been the way? They would have bound them all firmly together and preserved them for ever, giving them freedom and dominion at pleasure, combined with the power of doing in the whole world, Hellenic and barbarian, whatever they and their descendants desired. What other aim would they have had?

MEG.

Very good.

ATH.

Suppose any one were in the same way to express his admiration at the sight of great wealth or family honour, or the like, he would praise them under the idea that through them he would attain either all or the greater and chief part of what he desires.

MEG.

He would.

ATH.

Well, now, and does not the argument show that there is one common desire of all mankind?

MEG.

What is it?

ATH.

The desire which a man has, that all things, if possible,—at any rate, things human,—may come to pass in accordance with his soul’s desire.

MEG.

Certainly.

ATH.

And having this desire always, and at every time of life, in youth, in manhood, in age, he cannot help always praying for the fulfilment of it.

Men desire things which are not for their good.

MEG.

No doubt.

ATH.

And we join in the prayers of our friends, and ask for them what they ask for themselves.

MEG.

We do.

ATH.

Dear is the son to the father—the younger to the elder.

MEG.

Of course.

ATH.

And yet the son often prays to obtain things which the father prays that he may not obtain.

MEG.

When the son is young and foolish, you mean?

ATH.

Yes; or when the father, in the dotage of age or the heat of youth, having no sense of right and justice, prays with fervour, under the influence of feelings akin to those of Theseus when he cursed the unfortunate Hippolytus, do you imagine that the son, having a sense of right and justice, will join in his father's prayers?

MEG.

I understand you to mean that a man should not desire or be in a hurry to have all things according to his wish, for his wish may be at variance with his reason. But every state and every individual ought to pray and strive for wisdom.

ATH.

Yes; and I remember, and you will remember, what I said at first, that a statesman and legislator ought to ordain laws with a view to wisdom; while you were arguing that the good lawgiver ought to order all with a view to war. And to this I replied that there were four virtues, but that upon your view one of them only was the aim of legislation; whereas you ought to regard all virtue, and especially that which comes first, and is the leader of all the rest—I mean wisdom and mind and opinion, having affection and desire in their train. And now the argument returns to the same point, and I say once more, in jest if you like, or in earnest if you like, that the prayer of a fool is full of danger, being likely to end in the opposite of what he desires. And if you would rather receive my words in earnest, I am willing that you should; and you will find, I suspect, as I have said already, that not cowardice was the cause of the ruin of the Dorian kings and of their whole design, nor ignorance of military matters, either on the part of the rulers or of their subjects; but their misfortunes were due to their general degeneracy, and especially to their ignorance of the most important human affairs. That was then, and is still, and always will be the case, as I will endeavour, if you will allow me, to make out and demonstrate as well as I am able to you who are my friends, in the course of the argument.

The statesman in making laws should have in view all the four virtues, and not one only.

Athenian, Cleinias, Megillus.

Ignorance of the highest things the ruin of the Dorian power.

CLE.

Pray go on, Stranger;—compliments are troublesome, but we will show, not in word but in deed, how greatly we prize your words, for we will give them our best attention; and that is the way in which a freeman best shows his approval or disapproval.

MEG.

Excellent, Cleinias; let us do as you say.

CLE.

By all means, if Heaven wills. Go on.

ATH.

Well, then, proceeding in the same train of thought, I say that the greatest ignorance was the ruin of the Dorian power, and that now, as then, ignorance is ruin. And if this be true, the legislator must endeavour to implant wisdom in states, and banish ignorance to the utmost of his power.

CLE.

That is evident.

ATH.

689Then now consider what is really the greatest ignorance. I should like to know whether you and Megillus would agree with me in what I am about to say; for my opinion is—

CLE.

What?

ATH.

That the greatest ignorance is when a man hates that which he nevertheless thinks to be good and noble, and loves and embraces that which he knows to be unrighteous and evil. This disagreement between the sense of pleasure and the judgment of reason in the soul is, in my opinion, the worst ignorance; and also the greatest, because affecting the great mass of the human soul; for the principle which feels pleasure and pain in the individual is like the mass or populace in a state. And when the soul is opposed to knowledge, or opinion, or reason, which are her natural lords, that I call folly, just as in the state, when the multitude refuses to obey their rulers and the laws; or, again, in the individual, when fair reasonings have their habitation in the soul and yet do no good, but rather the reverse of good. All these cases I term the worst ignorance, whether in individuals or in states. You will understand, Stranger, that I am speaking of something which is very different from the ignorance of handicraftsmen.

Athenian, Cleinias.

The greatest ignorance is to know and not to do the good and noble.

CLE.

Yes, my friend, we understand and agree.

ATH.

Let us, then, in the first place declare and affirm that the citizen who does not know these things ought never to have any kind of authority entrusted to him: he must be stigmatized as ignorant,

No wisdom where there is no harmony.

even though he be versed in calculation and skilled in all sorts of accomplishments, and feats of mental dexterity; and the opposite are to be called wise, even although, in the words of the proverb, they know neither how to read nor how to swim; and to them, as to men of sense, authority is to be committed. For, O my friends, how can there be the least shadow of wisdom when there is no harmony? There is none; but the noblest and greatest of harmonies may be truly said to be the greatest wisdom; and of this he is a partaker who lives according to reason; whereas he who is devoid of reason is the destroyer of his house and the very opposite of a saviour of the state: he is utterly ignorant of political wisdom. Let this, then, as I was saying, be laid down by us.

CLE.

Let it be so laid down.

ATH.

I suppose that there must be rulers and subjects in states?

CLE.

Certainly.

ATH.

690And what are the principles on which men rule and obey in cities, whether great or small; and similarly in families? What are they, and how many in number? Is there not one claim of authority which is always just,—that of fathers and mothers and in general of progenitors to rule over their offspring?

The various kinds of authority:—(1) of parents over children; (2) of noble over ignoble; (3) of elder over younger; (4) of master over slave; (5) of stronger over weaker;

CLE.

There is.

ATH.

Next follows the principle that the noble should rule over the ignoble; and, thirdly, that the elder should rule and the younger obey?

CLE.

To be sure.

ATH.

And, fourthly, that slaves should be ruled, and their masters rule?

CLE.

Of course.

ATH.

Fifthly, if I am not mistaken, comes the principle that the stronger shall rule, and the weaker be ruled?

CLE.

That is a rule not to be disobeyed.

ATH.

Yes, and a rule which prevails very widely among all creatures, and is according to nature, as the Theban poet Pindar once said; and the sixth principle, and the greatest of all, is, that the wise should lead and command, and the ignorant follow and obey; and yet, O thou most wise Pindar, as I should reply to him, this surely is not contrary to nature, but according to nature, being the rule of law over willing subjects, and not a rule of compulsion.

(6) of wise over ignorant;

CLE.

Most true.

ATH.

There is a seventh kind of rule which is awarded by lot, and is dear to the Gods and a token of good fortune: he on whom the lot falls is a ruler, and he who fails in obtaining the lot goes away and is the subject; and this we affirm to be quite just.

(7) of the winner of the lot over the loser.

CLE.

Certainly.

ATH.

‘Then now,’ as we say playfully to any of those who lightly undertake the making of laws, ‘you see, legislator, the principles of government, how many they are, and that they are naturally opposed to each other. There we have discovered a fountain-head of seditions, to which you must attend. And, first, we will ask you to consider with us, how and in what respect the kings of Argos and Messene violated these our maxims, and ruined

The kings of Argos and Messene did not know that ‘the half is often more than the whole.’

Athenian, Cleinias, Megillus.

themselves and the great and famous Hellenic power of the olden time. Was it because they did not know how wisely Hesiod spoke when he said that the half is often more than the whole? His meaning was, that when to take the whole would be dangerous, and to take the half would be the safe and moderate course, then the moderate or better was more than the immoderate or worse.'

CLE.

Very true.

ATH.

And may we suppose this immoderate spirit to be more fatal when found among kings than when among peoples?

CLE.

The probability is that ignorance will be a disorder ⁶⁹¹especially prevalent among kings, because they lead a proud and luxurious life.

ATH.

Is it not palpable that the chief aim of the kings of that time was to get the better of the established laws, and that they were not in harmony with the principles which they had agreed to observe by word and oath? This want of harmony may have had the appearance of wisdom, but was really, as we assert, the greatest ignorance, and utterly overthrew the whole empire by dissonance and harsh discord.

CLE.

Very likely.

ATH.

Good; and what measures ought the legislator to have then taken in order to avert this calamity? Truly there is no great wisdom in knowing, and no great difficulty in telling, after the evil has happened; but to have foreseen the remedy at the time would have taken a much wiser head than ours.

MEG.

What do you mean?

ATH.

Any one who looks at what has occurred with you Lacedaemonians, Megillus, may easily know and may easily say what ought to have been done at that time.

MEG.

Speak a little more clearly.

ATH.

Nothing can be clearer than the observation which I am about to make.

MEG.

What is it?

ATH.

That if any one gives too great a power to anything, too large a sail to a vessel, too much food to the body, too much authority to the mind, and does not observe the mean, everything is overthrown, and, in the wantonness of excess runs in the one case to disorders, and in the other to injustice, which is the child of excess. I mean to say, my dear friends, that there is no soul of man, young and irresponsible, who will be able to sustain the temptation of arbitrary power—no one who will not, under such circumstances, become filled with folly, that worst of diseases, and be hated by his nearest and dearest friends: when this happens his kingdom is undermined, and all his power vanishes from him. And great legislators who know the mean should take heed of the danger. As far as we can guess at this distance of time, what happened was as follows:—

Too much of anything is fatal to any man, especially too much power to a despot.

Athenian, Megillus.

MEG.

What?

ATH.

A God, who watched over Sparta, seeing into the future, gave you two families of kings instead of one; and thus brought you more within the limits of moderation. In the next place, some human wisdom mingled with divine power, observing that the constitution of your government was still feverish and excited, tempered your inborn strength and pride of birth with the moderation which comes of age, 692making the power of your twenty-eight elders equal with that of the kings in the most important matters. But your third saviour, perceiving that your government was still swelling and foaming, and desirous to impose a curb upon it, instituted the Ephors, whose power he made to resemble that of magistrates elected by lot; and by this arrangement the kingly office, being compounded of the right elements and duly moderated, was preserved, and was the means of preserving all the rest. Since, if there had been only the original legislators, Temenus, Cresphontes, and their contemporaries, as far as they were concerned not even the portion of Aristodemus

Sparta was saved by the dual monarchy and the institution of Elders and Ephors.

would have been preserved; for they had no proper experience in legislation, or they would surely not have imagined that oaths would moderate a youthful spirit invested with a power which might be converted into a tyranny. Now that God has instructed us what sort of government would have been or will be lasting, there is no wisdom, as I have already said, in judging after the event; there is no difficulty in learning from an example which has already occurred. But if any one could have foreseen all this at the time, and had been able to moderate the government of the three kingdoms and unite them into one, he might have saved all the excellent institutions which were then conceived; and no Persian or any other armament would have dared to attack us, or would have regarded Hellas as a power to be despised.

CLE.

True.

ATH.

There was small credit to us, Cleinias, in defeating them; and the discredit was, not that the conquerors did not win glorious victories both by land and sea, but what, in my opinion, brought discredit was, first of all, the circumstance that of the three cities one only fought on behalf of Hellas, and the two others were so utterly good for nothing that the one was waging a mighty war against Lacedaemon, and was thus preventing her from rendering assistance, while the city of Argos, which had the precedence at the time of the distribution, when asked to aid in repelling the barbarian, would not answer to the call, or give aid. Many things might be told about Hellas in connexion with that war which are far from honourable; nor, indeed, can we rightly say that Hellas repelled the invader; for the truth is, that unless the Athenians and Lacedaemonians, acting in concert, had warded off the impending yoke, all the tribes of Hellas would have been fused in a chaos of Hellenes mingling with one another, of barbarians mingling with Hellenes, and Hellenes with barbarians; just as nations who are now subject to the Persian power, owing to unnatural separations and combinations of them, are dispersed and scattered, and live miserably. These, Cleinias and Megillus, are the reproaches which we have to make against statesmen and legislators, as they are called, past and present, if we would analyze the causes of their failure, and find out what else might have been done. We said, for instance, just now, that there ought to be no great and unmixed powers; and this was under the idea that a state ought to be free and wise and harmonious, and that a legislator ought to legislate with a view to this end. Nor is there any reason to be surprised at our continually proposing aims for the legislator which appear not to be always the same; but we should consider when we say that temperance is to be the aim, or wisdom is to be the aim, or friendship is to be the aim, that all these aims are really the same; and if so a variety in the modes of expression ought not to disturb us.

The Athenians were assisted against the Persians by the Spartans alone. Disgraceful conduct of Messene and Argos.

CLE.

Let us resume the argument in that spirit. And now, speaking of friendship and wisdom and freedom, I wish that you would tell me at what, in your opinion, the legislator should aim.

ATH.

Hear me, then: there are two mother forms of states from which the rest may be truly said to be derived; and one of them may be called monarchy and the other democracy: the Persians have the highest form of the one, and we of the other; almost all the rest, as I was saying, are variations of these. Now, if you are to have liberty and the combination of friendship with wisdom, you must have both these forms of government in a measure; the argument emphatically declares that no city can be well governed which is not made up of both [1](#) .

Two original types of states:—monarchy, like that of the Persians; democracy, as at Athens.

CLE.

Impossible.

ATH.

Neither the one, if it be exclusively and excessively attached to monarchy, nor the other, if it be similarly attached to freedom, observes moderation; but your states, the Laconian and Cretan, have more of it; and the same was the case with the Athenians and Persians of old time, but now they have less. Shall I tell you why?

CLE.

694By all means, if it will tend to elucidate our subject.

ATH.

Hear, then:—There was a time when the Persians had more of the state which is a mean between slavery and freedom. In the reign of Cyrus they were freemen and also lords of many others: the rulers gave a share of freedom to the subjects, and being treated as equals, the soldiers were on better terms with their generals, and showed themselves more ready in the hour of danger. And if there was any wise man among them, who was able to give good counsel, he imparted his wisdom to the public; for the king was not jealous, but allowed him full liberty of speech, and gave honour to those who could advise him in any matter. And the nation waxed in all respects, because there was freedom and friendship and communion of mind among them.

The Persians under Cyrus had a good deal of freedom which they lost under Cambyses.

CLE.

That certainly appears to have been the case.

ATH.

How, then, was this advantage lost under Cambyses, and again recovered under Darius? Shall I try to divine?

CLE.

The enquiry, no doubt, has a bearing upon our subject.

ATH.

I imagine that Cyrus, though a great and patriotic general, had never given his mind to education, and never attended to the order of his household.

CLE.

What makes you say so?

ATH.

I think that from his youth upwards he was a soldier, and entrusted the education of his children to the women; and they brought them up from their childhood as the favourites of fortune, who were blessed already, and needed no more blessings. They thought that they were happy enough, and that no one should be allowed to oppose them in any way, and they compelled every one to praise all that they said or did. This was how they brought them up.

Cyrus himself had been brought up well, but he neglected the education of his children.

CLE.

A splendid education truly!

ATH.

Such an one as women were likely to give them, and especially princesses who had recently grown rich, and in the absence of the men, too, who were occupied in wars and dangers, and had no time to look after them.

CLE.

What would you expect?

ATH.

Their father had possessions of cattle and sheep, and many herds of men and other animals; but he did not consider that those to whom he was about to make them over were not trained in his own calling, which was Persian; for the Persians are shepherds—sons of a rugged land, which is a stern mother, and well fitted to produce a sturdy race able to live in the open air and go without sleep, and also to fight, if fighting is required¹. He did not observe that his sons were trained differently; through the so-called blessing of being royal they were educated in the Median fashion by women and eunuchs, which led to their becoming such as people do become when they are brought up unreproved. And so, after the death of Cyrus, his sons, in the fulness of luxury and licence, took the kingdom, and first one slew the other because he could not endure a rival; and, afterwards, the slayer himself, mad with wine and brutality, lost his kingdom through the Medes and the Eunuch, as they called him, who despised the folly of Cambyses.

CLE.

So runs the tale, and such probably were the facts.

ATH.

Yes; and the tradition says, that the empire came back to the Persians, through Darius and the seven chiefs.

CLE.

True.

ATH.

Let us note the rest of the story. Observe, that Darius was not the son of a king, and had not received a luxurious education. When he came to the throne, being one of the seven, he divided the country into seven portions, and of this arrangement there are some shadowy traces still remaining; he made laws upon the principle of introducing universal equality in the order of the state, and he embodied in his laws the settlement of the tribute which Cyrus promised,—thus creating a feeling of friendship and community among all the Persians, and attaching the people to him with money and gifts. Hence his armies cheerfully acquired for him countries as large as those which Cyrus had left behind him. Darius was succeeded by his son Xerxes; and he again was brought up in the royal and luxurious fashion. Might we not most justly say: ‘O Darius, how came you to bring up Xerxes in the same way in which Cyrus brought up Cambyses, and not to see his fatal mistake?’ For Xerxes, being the creation of the same education, met with much the same fortune as Cambyses; and from that time until now there has never been a really great king among the Persians, although they are all called Great. And their degeneracy is not to be attributed to chance, as I maintain; the reason is rather

Darius, too, was an excellent prince:

but, like Cyrus, he took no care about his children’s education.

the evil life which is generally led by the sons of very rich and royal persons; for never will boy or man, young or old, excel in virtue, who has been thus educated. And this, I say, is what the legislator has to consider, and what at the present moment has to be considered by us. Justly may you, O Lacedaemonians, be praised, in that you do not give special honour or a special education to wealth rather than to poverty, or to a royal rather than to a private station, where the divine and inspired lawgiver has not originally commanded them to be given. For no man ought to have pre-eminent honour in a state because he surpasses others in wealth, any more than because he is swift of foot or fair or strong, unless he have some virtue in him; nor even if he have virtue, unless he have this particular virtue of temperance.

MEG.

What do you mean, Stranger?

ATH.

I suppose that courage is a part of virtue?

MEG.

To be sure.

ATH.

Then, now hear and judge for yourself:—Would you like to have for a fellow-lodger or neighbour a very courageous man, who had no control over himself?

MEG.

Heaven forbid!

ATH.

Or an artist, who was clever in his profession, but a rogue?

MEG.

Certainly not.

ATH.

And surely justice does not grow apart from temperance?

MEG.

Impossible.

ATH.

Any more than our pattern wise man, whom we exhibited as having his pleasures and pains in accordance with and corresponding to true reason, can be intemperate¹ ?

MEG.

No.

ATH.

There is a further consideration relating to the due and undue award of honours in states.

MEG.

What is it?

ATH.

I should like to know whether temperance without the other virtues, existing alone in the soul of man, is rightly to be praised or blamed?

Temperance not a virtue, but rather an appendage or condition of the virtues. Not much to be said about it.

MEG.

I cannot tell.

ATH.

And that is the best answer; for whichever alternative you had chosen, I think that you would have gone wrong.

MEG.

I am fortunate.

ATH.

Very good; a quality, which is a mere appendage of things which can be praised or blamed, does not deserve an expression of opinion, but is best passed over in silence.

MEG.

You are speaking of temperance?

ATH.

Yes; but of the other virtues, that which having this appendage is also most beneficial, will be most deserving of honour, and next that which is beneficial in the next degree; and so each of them will be rightly honoured according to a regular order.

MEG.

True.

ATH.

697 And ought not the legislator to determine these classes?

MEG.

Certainly he should.

ATH.

Suppose that we leave to him the arrangement of details. But the general division of laws according to their importance into a first and second and third class, we who are lovers of law may make ourselves.

MEG.

Very good.

ATH.

We maintain, then, that a State which would be safe and happy, as far as the nature of man allows, must and ought to distribute honour and dishonour in the right way. And the right way is to place the goods of the soul first and highest in the scale, always assuming temperance to be the condition of them; and to assign the second place to the goods of the body; and the third place to money and property. And if any legislator or state departs from this rule by giving money the place of honour, or in any way preferring that which is really last, may we not say, that he or the state is doing an unholy and unpatriotic thing?

The order in which the law should arrange goods:—(1) goods of the soul; (2) goods of the body; (3) money and property.

MEG.

Yes; let that be plainly declared.

ATH.

The consideration of the Persian governments led us thus far to enlarge. We remarked that the Persians grew worse and worse. And we affirm the reason of this to have been, that they too much diminished the freedom of the people, and introduced too much of despotism, and so destroyed friendship and community of feeling. And when there is an end of these, no longer do the governors govern on behalf of their subjects or of the people, but on behalf of themselves; and if they think that they can gain ever so small an advantage for themselves, they devastate cities, and send fire and desolation among friendly races. And as they hate ruthlessly and horribly, so are they hated; and when they want the people to fight for them, they find no community of feeling or willingness to risk their lives on their behalf; their untold myriads are useless to them on the field of battle, and they think that their salvation depends on the employment of mercenaries and strangers whom they hire, as if they were in want of more men. And they cannot help being stupid, since they proclaim by their actions 698that the ordinary distinctions of right and wrong which are made in a state are a trifle, when compared with gold and silver.

The growth of despotism among the Persians was the ruin of their nationality.

MEG.

Quite true.

ATH.

And now enough of the Persians, and their present mal-administration of their government, which is owing to the excess of slavery and despotism among them.

MEG.

Good.

ATH.

The Athenian constitution was excellent at the time of the Persian invasion.

Renewal of the attack by Xerxes.

The Athenians, though unsupported, conquered, because they were a united people, and trusted to themselves and God.

Next, we must pass in review the government of Attica in like manner, and from this show that entire freedom and the absence of all superior authority is not by any means so good as government by others when properly limited, which was our ancient Athenian constitution at the time when the Persians made their attack on Hellas, or, speakingly more correctly, on the whole continent of Europe. There were four classes, arranged according to a property census, and reverence was our queen and mistress, and made us willing to live in obedience to the laws which then prevailed. Also the vastness of the Persian armament, both by sea and on land, caused a helpless terror, which made us more and more the servants of our rulers and of the laws; and for all these reasons an exceeding harmony prevailed among us. About ten years before the naval engagement at Salamis, Datis came, leading a Persian host by command of Darius, which was expressly directed against the Athenians and Eretrians, having orders to carry them away captive; and these orders he was to execute under pain of death. Now Datis and his myriads soon became complete masters of Eretria, and he sent a fearful report to Athens that no Eretrian had escaped him; for the soldiers of Datis had joined hands and netted the whole of Eretria. And this report, whether well or ill founded, was terrible to all the Hellenes, and above all to the Athenians, and they dispatched embassies in all directions, but no one was willing to come to their relief, with the exception of the Lacedaemonians; and they, either because they were detained by the Messenian war, which was then going on, or for some other reason of which we are not told, came a day too late for the battle of Marathon. After a while, the news arrived of mighty preparations being made, and innumerable threats came from the king. Then, as time went on, a rumour reached us that Darius had died, and that his son, who was 699 young and hot-headed, had come to the throne and was persisting in his design. The Athenians were under the impression that the whole expedition was directed against them, in consequence of the battle of Marathon; and hearing of the bridge over the Hellespont, and the canal of Athos, and the host of ships, considering that there was no salvation for them either by land or by sea, for there was no one to help them, and remembering that in the first expedition, when the Persians destroyed Eretria, no one came to their help, or would risk the danger of an alliance with them, they thought that this would happen again, at least on land; nor, when they looked to the sea, could they descry any hope of salvation; for they were attacked by a thousand vessels and more. One chance of safety remained, slight indeed and desperate, but their only one. They saw that on the former occasion they had gained a seemingly impossible victory, and borne up by this hope, they found that their only refuge was in themselves and in the Gods. All these things created in them the spirit of friendship; there was the fear of the moment, and there was that higher fear, which they had acquired by obedience to their ancient laws, and which I have several times in the preceding discourse called reverence, of which the good man ought to be a willing servant, and of which the coward is independent and fearless. If this fear had not possessed them, they would never have met the enemy, or defended their temples and sepulchres and their country, and everything that was near and dear to them, as they did; but little by little they would have been all scattered and dispersed.

Their habit of obedience to law inspired in them the fear of disgrace.

MEG.

Your words, Athenian, are quite true, and worthy of yourself and of your country.

ATH.

They are true, Megillus; and to you, who have inherited the virtues of your ancestors, I may properly speak of the actions of that day. And I would wish you and Cleinias to consider whether my words have not also a bearing on legislation; for I am not discoursing only for the pleasure of talking, but for the argument's sake. Please to remark that the experience both of ourselves and the Persians was, in a certain sense, the same; for as they led their people into utter servitude, so we too led ours into all freedom. And now, how shall we proceed? for I would like you to observe that our previous arguments have a good deal to say for themselves.

Too much rule the ruin of the Persians, too much liberty of the Athenians.

MEG.

True; but I wish that you would give us a fuller explanation.

ATH.

I will. Under the ancient laws, my friends, the people was not as now the master, but rather the willing servant of the laws.

MEG.

What laws do you mean?

ATH.

In the first place, let us speak of the laws about music,—that is to say, such music as then existed,—in order that we may trace the growth of the excess of freedom from the beginning. Now music was early divided among us into certain kinds and manners. One sort consisted of prayers to the Gods, which were called hymns; and there was another and opposite sort called lamentations, and another termed paeans, and another, celebrating the birth of Dionysus, called, I believe, ‘dithyrambs.’ And they used the actual word ‘laws,’ or νόμοι, for another kind of song; and to this they added the term ‘citharoedic.’ All these and others were duly distinguished, nor were the performers allowed to confuse one style of music with another. And the authority which determined and gave judgment, and punished the disobedient, was not expressed in a hiss, nor in the most unmusical shouts of the multitude, as in our days, nor in applause and clapping of hands. But the directors of public instruction insisted that the spectators should listen in silence to the

Ancient simplicity and good order of music.

The reign of misrule introduced by the poets.

The conceit of omniscience led to lawlessness.

end; and boys and their tutors, and the multitude in general, were kept quiet by a hint from a stick. Such was the good order which the multitude were willing to observe; they would never have dared to give judgment by noisy cries. And then, as time went on, the poets themselves introduced the reign of vulgar and lawless innovation. They were men of genius, but they had no perception of what is just and lawful in music; raging like Bacchanals and possessed with inordinate delights—mingling lamentations with hymns, and paeans with dithyrambs; imitating the sounds of the flute on the lyre, and making one general confusion; ignorantly affirming that music has no truth, and, whether good or bad, can only be judged of rightly by the pleasure of the hearer¹. And by composing such licentious works, and adding to them words as licentious, they have inspired the multitude with lawlessness and boldness, and made them fancy that they can judge for themselves about melody and song. And in this way the theatres from being mute have become vocal, as though they had understanding of good and bad in music and poetry; and instead of an aristocracy, an evil sort of theatrocracy has grown up². For if the democracy which judged had only consisted of educated persons, no fatal harm would have been done; but in music there first arose the universal conceit of omniscience and general lawlessness;—freedom came following afterwards, and men, fancying that they knew what they did not know, had no longer any fear, and the absence of fear begets shamelessness. For what is this shamelessness, which is so evil a thing, but the insolent refusal to regard the opinion of the better by reason of an over-daring sort of liberty?

MEG.

Very true.

ATH.

Consequent upon this freedom comes the other freedom, of disobedience to rulers³; and then the attempt to escape the control and exhortation of father, mother, elders, and when near the end, the control of the laws also; and at the very end there is the contempt of oaths and pledges, and no regard at all for the Gods,—herein they exhibit and imitate the old so-called Titanic nature, and come to the same point as the Titans when they rebelled against God, leading a life of endless evils. But why have I said all this? I ask, because the argument ought to be pulled up from time to time, and not be allowed to run away, but held with bit and bridle, and then we shall not, as the proverb says, fall off our ass. Let us then once more ask the question, To what end has all this been said?

MEG.

Very good.

ATH.

This, then, has been said for the sake—

MEG.

Of what?

ATH.

We were maintaining that the lawgiver ought to have three things in view: first, that the city for which he legislates should be free; and secondly, be at unity with herself; and thirdly, should have understanding;—these were our principles, were they not?

Athenian, Cleinias, Megillus.

MEG.

Certainly.

Three chief objects of legislation:—freedom, harmony, good sense.

ATH.

With a view to this we selected two kinds of government, the one the most despotic, and the other the most free; and now we are considering which of them is the right form: we took a mean in both cases, of despotism in the one, and of liberty in the other, and we saw that in a mean they attained their perfection; but that when they were carried to the extreme of either, slavery or licence, neither party were the gainers.

MEG.

Very true. 702

ATH.

And that was our reason for considering the settlement of the Dorian army, and of the city built by Dardanus at the foot of the mountains, and the removal of cities to the seashore, and of our mention of the first men, who were the survivors of the deluge. And all that was previously said about music and drinking, and what preceded, was said with the view of seeing how a state might be best administered, and how an individual might best order his own life. And now, Megillus and Cleinias, how can we put to the proof the value of our words?

CLE.

A lucky omen.

Cleinias and nine other Cnosians have been empowered by the Cretan states to superintend the

Stranger, I think that I see how a proof of their value may be obtained. This discussion of ours appears to me to have been singularly fortunate, and just what I at this moment want; most auspiciously have you and my friend Megillus come in my way. For I will tell you what has happened to me; and I regard the coincidence as a sort of omen. The greater part of Crete is going to send out a colony, and they have entrusted the management of the affair to the Cnosians; and the Cnosian government to me and nine others. And they desire us to give them any laws which we please, whether taken from the Cretan model or from any other; and they do not mind about their being foreign if they are better. Grant me then this favour, which will also be a gain to yourselves:—Let us make a selection from what has been said, and then let us imagine a State of which we will suppose ourselves to be the original founders. Thus we shall proceed with our enquiry, and, at the same time, I may have the use of the framework which you are constructing, for the city which is in contemplation.

arrangements of a colony.

ATH.

Good news, Cleinias; if Megillus has no objection, you may be sure that I will do all in my power to please you.

The three proceed to make laws for it.

CLE.

Thank you.

MEG.

And so will I.

CLE.

Excellent; and now let us begin to frame the State.

[\[Back to Table of Contents\]](#)

BOOK IV.

ATHENIAN STRANGER.

And now, what will this city be? I do not mean to ask what is or will hereafter be the name of the place; that may be determined by the accident of locality or of the original settlement,—a river or fountain, or some local deity may give the sanction of a name to the newly-founded city; but I do want to know what the situation is, whether maritime or inland.

Laws IV.

Athenian, Cleinias.

The situation of the new colony:

CLEINIAS.

I should imagine, Stranger, that the city of which we are speaking is about eighty stadia distant from the sea.

ATH.

And are there harbours on the seaboard?

CLE.

Excellent harbours, Stranger; there could not be better.

ATH.

Alas! what a prospect! And is the surrounding country productive, or in need of importations?

CLE.

Hardly in need of anything.

ATH.

And is there any neighbouring State?

CLE.

None whatever, and that is the reason for selecting the place; in days of old, there was a migration of the inhabitants, and the region has been deserted from time immemorial.

ATH.

And has the place a fair proportion of hill, and plain, and wood?

CLE.

Like the rest of Crete in that.

ATH.

You mean to say that there is more rock than plain?

CLE.

Exactly.

near the sea, and
therefore favourable
to virtue:

ATH.

Then there is some hope that your citizens may be virtuous: had you been on the sea, and well provided with harbours, and an importing rather than a producing country, some mighty saviour would have been needed, and lawgivers more than mortal, if you were ever to have a chance of preserving your state from degeneracy and discordance of manners¹. But there is comfort in the eighty stadia; although the sea is too near, especially if, as you say, the harbours are so good. Still we may be content. The sea is pleasant enough as a daily companion, but has indeed also a bitter and brackish quality; filling the streets with merchants and shopkeepers, and begetting in the souls of men uncertain and unfaithful ways—making the state unfriendly and unfaithful both to her own citizens, and also to other nations. There is a consolation, therefore, in the country producing all things at home; and yet, owing to the ruggedness of the soil, not providing anything in great abundance. Had there been abundance, there might have been a great export trade, and a great return of gold and silver; which, as we may safely affirm, has the most fatal results on a State whose aim is the attainment of just and noble sentiments: this was said by us, if you remember, in the previous discussion².

self-supporting:

CLE.

I remember, and am of opinion that we both were and are in the right.

ATH.

Well, but let me ask, how is the country supplied with timber for ship-building?

CLE.

deficient in timber;

There is no fir of any consequence, nor pine, and not much cypress; and you will find very little stone-pine or plane-wood, which shipwrights always require for the interior of ships.

ATH.

These are also natural advantages.

CLE.

Why so?

ATH.

Because no city ought to be easily able to imitate its enemies in what is mischievous.

CLE.

How does that bear upon any of the matters of which we have been speaking?

ATH.

Remember, my good friend, what I said at first³ about the Cretan laws, that they looked to one thing only, and this, as you both agreed, was war; and I replied that such laws, in so far as they tended to promote virtue, were good; but in that they regarded a part only, and not the whole of virtue, I disapproved of them.

And now I hope that you in your turn will follow and watch me if I legislate with a view to anything but virtue, or with a view to a part of virtue only. For I consider that the true lawgiver, like an archer, aims only at that on which some eternal beauty is always attending, 706and dismisses everything else, whether wealth or any other benefit, when separated from virtue. I was saying that the imitation of enemies was a bad thing; and I was thinking of a

case in which a maritime people are harassed by enemies, as the Athenians were by Minos (I do not speak from any desire to recall past grievances); but he, as we know, was a great naval potentate, who compelled the inhabitants of Attica to pay him a cruel tribute; and in those days they had no ships of war as they now have, nor was the country filled with ship-timber, and therefore they could not readily build them. Hence they could not learn how to imitate their enemy at sea, and in this way, becoming sailors themselves, directly repel their enemies. Better for them to have lost many times over the seven youths, than that heavy-armed and stationary troops should have been turned into sailors, and accustomed to be often leaping on shore, and again to come running back to their ships; or should have fancied that there was no disgrace in not awaiting the attack of an enemy and dying boldly; and that there were good reasons, and plenty of them, for a man throwing away his arms, and betaking himself to flight,—which is not dishonourable, as people say, at certain times. This is the

and therefore not adapted for maritime warfare, which is an advantage.

Athenian.

For maritime warfare often teaches men to be cowards.

Illustration of this from Homer.

language of naval warfare, and is anything but worthy of extraordinary praise. For we should not teach bad habits, least of all to the best part of the citizens. You may learn the evil of such a practice from Homer, by whom Odysseus is introduced, rebuking Agamemnon, because he desires to draw down the ships to the sea at a time when the Achaeans are hard pressed by the Trojans,—he gets angry with him, and says:—

‘Who, at a time when the battle is in full cry, biddest to drag the well-benched ships into the sea, that the prayers of the Trojans may be accomplished yet more, and high ruin fall upon us. For the Achaeans will not maintain the battle, when the ships are drawn into the sea, but they will look behind and will cease from strife; in that the counsel which you give will prove injurious.’ 707

You see that he quite knew triremes on the sea, in the neighbourhood of fighting men, to be an evil; — lions might be trained in that way to fly from a herd of deer. Moreover, naval powers which owe their safety to ships, do not give honour to that sort of warlike excellence which is most deserving of it. For he who owes his safety to the pilot and the captain, and the oarsman, and all sorts of rather inferior persons, cannot rightly give honour to whom honour is due. But how can a state be in a right condition which cannot justly award honour?

Athenian, Cleinias.

CLE.

It is hardly possible, I admit; and yet, Stranger, we Cretans are in the habit of saying that the battle of Salamis was the salvation of Hellas.

The victories of Marathon and Plataea, not those of Salamis and Artemisium, the salvation of Hellas.

ATH.

Why, yes; and that is an opinion which is widely spread both among Hellenes and barbarians. But Megillus and I say rather, that the battle of Marathon was the beginning, and the battle of Plataea the completion, of the great deliverance, and that these battles by land made the Hellenes better; whereas the sea-fights of Salamis and Artemisium—for I may as well put them both together—made them no better, if I may say so without offence about the battles which helped to save us. And in estimating the goodness of a state, we regard both the situation of the country and the order of the laws, considering that the mere preservation and continuance of life is not the most honourable thing for men, as the vulgar think, but the continuance of the best life, while we live; and that again, if I am not mistaken, is a remark which has been made already¹.

Not the mere preservation of life, but the continuance of the best life, the true end of the state.

CLE.

Yes.

ATH.

Then we have only to ask, whether we are taking the course which we acknowledge to be the best for the settlement and legislation of states.

CLE.

The best by far.

ATH.

And now let me proceed to another question: Who are to be the colonists? May any one come out of all Crete; and is the idea that the population in the several states is too numerous for the means of subsistence? For I suppose that you are not going to send out a general invitation to any Hellene who likes to come. And yet I observe 708 that to your country settlers have come from Argos and Aegina and other parts of Hellas. Tell me, then, whence do you draw your recruits in the present enterprise?

Who are to be the colonists?

CLE.

They will come from all Crete; and of other Hellenes, Peloponnesians will be most acceptable. For, as you truly observe, there are Cretans of Argive descent; and the race of Cretans which has the highest character at the present day is the Gortynian, and this has come from Gortys in the Peloponnesus.

They are to be drawn from all Crete. Of other Hellenes Peloponnesians will be specially acceptable.

ATH.

Cities find colonization in some respects easier if the colonists are one race, which like a swarm of bees is sent out from a single country, either when friends leave friends, owing to some pressure of population or other similar necessity, or when a portion of a state is driven by factions to emigrate. And there have been whole cities which have taken flight when utterly conquered by a superior power in war. This, however, which is in one way an advantage to the colonist or legislator, in another point of view creates a difficulty. There is an element of friendship in the community of race, and language, and laws, and in common temples and rites of worship; but colonies which are of this homogeneous sort are apt to kick against any laws or any form of constitution differing from that which they had at home; and although the badness of their own laws may have been the cause of the factions which prevailed among them, yet from the force of habit they would fain preserve the very customs which were their ruin, and the leader of the colony, who is their legislator, finds them troublesome and rebellious. On the other hand, the conflux of several populations might be more disposed to listen to new laws; but then, to make them combine and pull together, as they say of horses, is a most difficult task, and the work of years. And yet there is nothing which tends more to the improvement of mankind than legislation and colonization.

Should colonists be of one or of many races?

CLE.

No doubt; but I should like to know why you say so.

ATH.

My good friend, I am afraid that the course of my speculations is leading me to say something depreciatory of legislators; but if the word be to the purpose, there can be no harm. And yet, why am I disquieted, for I believe that the same principle applies equally to all human things?

CLE.

709To what are you referring?

ATH.

I was going to say that man never legislates, but accidents of all sorts, which legislate for us in all sorts of ways. The violence of war and the hard necessity of poverty are constantly overturning governments and changing laws. And the power of disease has often caused innovations in the state, when there have been pestilences, or when there has been a succession of bad seasons continuing during many years. Any one who sees all this, naturally rushes to the conclusion of which I was speaking, that no mortal legislates in anything, but that in human affairs chance is almost everything. And this may be said of the arts of the sailor, and the pilot, and the physician, and the general, and may seem to be well said; and yet there is another thing which may be said with equal truth of all of them.

It sometimes appears as if man never legislated, but that everything were left to chance.

CLE.

What is it?

ATH.

That God governs all things, and that chance and opportunity cooperate with Him in the government of human affairs. There is, however, a third and less extreme view, that art should be there also; for I should say that in a storm there must surely be a great advantage in having the aid of the pilot's art. You would agree?

The truth is that God directs all, chance working with Him. Art too is a cause.

CLE.

Yes.

ATH.

And does not a like principle apply to legislation as well as to other things: even supposing all the conditions to be favourable which are needed for the happiness of the state, yet the true legislator must from time to time appear on the scene?

CLE.

Most true.

ATH.

In each case the artist would be able to pray rightly for certain conditions, and if these were granted by fortune, he would then only require to exercise his art?

CLE.

Certainly.

ATH.

And all the other artists just now mentioned, if they were bidden to offer up each their special prayer, would do so?

All artists must desire favourable conditions; and so the legislator.

CLE.

Of course.

ATH.

And the legislator would do likewise?

CLE.

I believe that he would.

ATH.

‘Come, legislator,’ we will say to him; ‘what are the conditions which you require in a state before you can organize it?’ How ought he to answer this question? Shall I give his answer?

CLE.

Yes.

ATH.

He will say—‘Give me a state which is governed by a tyrant, and let the tyrant be young and have a good memory; let him be quick at learning, and of a courageous and noble nature; let him have that quality which, as I said before, is the inseparable companion of all the other parts of virtue, if ⁷¹⁰there is to be any good in them.’

He would say:—‘Let there be a tyrant who has every virtue,

CLE.

I suppose, Megillus, that this companion virtue of which the Stranger speaks, must be temperance?

ATH.

Yes, Cleinias, temperance in the vulgar sense; not that which in the forced and exaggerated language of some philosophers is called prudence, but that which is the natural gift of children and animals, of whom some live continently and others incontinently, but when isolated, was, as we said, hardly worth reckoning in the catalogue of goods ¹. I think that you must understand my meaning.

and temperance as the condition of all the rest.’

CLE.

Certainly.

ATH.

Then our tyrant must have this as well as the other qualities, if the state is to acquire in the best manner and in the shortest time the form of government which is most conducive to happiness; for there neither is nor ever will be a better or speedier way of establishing a polity than by a tyranny.

CLE.

By what possible arguments, Stranger, can any man persuade himself of such a monstrous doctrine?

ATH.

There is surely no difficulty in seeing, Cleinias, what is in accordance with the order of nature?

CLE.

You would assume, as you say, a tyrant who was young, temperate, quick at learning, having a good memory, courageous, of a noble nature?

ATH.

Yes; and you must add fortunate; and his good fortune must be that he is the contemporary of a great legislator, and that some happy chance brings them together. When this has been accomplished, God has done all that He ever does for a state which He desires to be eminently prosperous; He has done second best for a state in which there are two such rulers, and third best for a state in which there are three. The difficulty increases with the increase, and diminishes with the diminution of the number.

The tyrant must be the contemporary of a great legislator.

CLE.

You mean to say, I suppose, that the best government is produced from a tyranny, and originates in a good lawgiver and an orderly tyrant, and that the change from such a tyranny into a perfect form of government takes place most easily; less easily when from an oligarchy; and, in the third degree, from a democracy: is not that your meaning?

ATH.

Not so; I mean rather to say that the change is best made out of a tyranny; and secondly, out of a monarchy; and thirdly, out of some sort of democracy: fourth, in the capacity for improvement, comes oligarchy, which has the greatest difficulty in admitting of such a change, because the government is in the hands of a number of potentates. I am supposing that the legislator is by nature of the true sort, and that his strength is united with that of the chief men of the state; and when the ruling element is numerically small, 711 and at the same time very strong, as in a tyranny, there the change is likely to be easiest and most rapid.

The perfect state may be formed, (1) most easily from a tyranny: (2) less so from a monarchy: (3) still less from a democracy: (4) least easily from an oligarchy.

CLE.

How? I do not understand.

ATH.

And yet I have repeated what I am saying a good many times; but I suppose that you have never seen a city which is under a tyranny?

CLE.

No, and I cannot say that I have any great desire to see one.

ATH.

And yet, where there is a tyranny, you might certainly see that of which I am now speaking.

CLE.

What do you mean?

ATH.

I mean that you might see how, without trouble and in no very long period of time, the tyrant, if he wishes, can change the manners of a state: he has only to go in the direction of virtue or of vice, whichever he prefers, he himself indicating by his example the lines of conduct, praising and rewarding some actions and reproving others, and degrading those who disobey.

The change is speedily effected by the example and by the power of a tyrant.

CLE.

But how can we imagine that the citizens in general will at once follow the example set to them; and how can he have this power both of persuading and of compelling them?

ATH.

Let no one, my friends, persuade us that there is any quicker and easier way in which states change their laws than when the rulers lead: such changes never have, nor ever will, come to pass in any other way. The real impossibility or difficulty is of another sort, and is rarely surmounted in the course of ages; but when once it is surmounted, ten thousand or rather all blessings follow.

CLE.

Of what are you speaking?

ATH.

The difficulty is to find the divine love of temperate and just institutions existing in any powerful forms of government, whether in a monarchy or oligarchy of wealth or of birth. You might as well hope to reproduce the character of Nestor, who is said to have excelled all men in the power of speech, and yet more in his temperance. This, however, according to the tradition, was in the times of Troy; in our own days there is nothing of the sort; but if such an one either has or ever shall come into being, or is now among us, blessed is he and blessed are they who hear the wise words that flow from his lips. And this may be said of power in general: When the supreme

Rare is the combination of power and wisdom.

power in man coincides with the greatest wisdom and temperance, then the best laws and the best constitution come into being; but in no other way. And let what I have been saying be regarded as a kind of sacred legend or oracle, and let this be our proof that, in one point of view, there may be a difficulty for a city to have good laws, but that there is another point of view in which nothing can be easier or sooner effected, granting our supposition.

CLE.

How do you mean?

ATH.

Let us try to amuse ourselves, old boys as we are, by moulding in words the laws which are suitable to your state¹.

CLE.

Let us proceed without delay.

ATH.

Then let us invoke God at the settlement of our state; may He hear and be propitious to us, and come and set in order the State and the laws!

CLE.

May He come!

ATH.

But what form of polity are we going to give the city?

CLE.

Tell us what you mean a little more clearly. Do you mean some form of democracy, or oligarchy, or aristocracy, or monarchy? For we cannot suppose that you would include tyranny.

What is to be the government of the colony?

ATH.

Which of you will first tell me to which of these classes his own government is to be referred?

Athenian, Cleinias, Megillus.

MEG.

Ought I to answer first, since I am the elder?

CLE.

Perhaps you should.

MEG.

And yet, Stranger, I perceive that I cannot say, without more thought, what I should call the government of Lacedaemon, for it seems to me to be like a tyranny,—the power of our Ephors is marvellously tyrannical; and sometimes it appears to me to be of all cities the most democratical; and who can reasonably deny that it is an aristocracy¹? We have also a monarchy which is held for life, and is said by all mankind, and not by ourselves only, to be the most ancient of all monarchies; and, therefore, when asked on a sudden, I cannot precisely say which form of government the Spartan is.

What are your own governments? Sparta seems to be a mixture of tyranny, monarchy, aristocracy, democracy.

CLE.

I am in the same difficulty, Megillus; for I do not feel confident that the polity of Cnosus is any of these.

So too Cnosus.

ATH.

The reason is, my excellent friends, that you really have polities, but the states of which we were just now speaking are merely aggregations of men dwelling in cities⁷¹³ who are the subjects and servants of a part of their own state, and each of them is named after the dominant power; they are not polities at all. But if states are to be named after their rulers, the true state ought to be called by the name of the God who rules over wise men.

Most states named after the ruling power.

The perfect state should be called the City of God.

CLE.

And who is this God?

ATH.

May I still make use of fable to some extent, in the hope that I may be better able to answer your question: shall I?

CLE.

By all means.

ATH.

In the primeval world, and a long while before the cities came into being whose settlements we have described, there is said to have been in the time of Cronos a blessed rule and life, of which the best-ordered of existing states is a copy².

CLE.

It will be very necessary to hear about that.

ATH.

I quite agree with you; and therefore I have introduced the subject.

CLE.

Most appropriately; and since the tale is to the point, you will do well in giving us the whole story.

ATH.

I will do as you suggest. There is a tradition of the happy life of mankind in days when all things were spontaneous and abundant. And of this the reason is said to have been as follows:—Cronos knew what we ourselves were declaring¹, that no human nature invested with supreme power is able to order human affairs and not overflow with insolence and wrong. Which reflection led him to appoint not men but demigods, who are of a higher and more divine race, to be the kings and rulers of our cities; he did as we do with flocks of sheep and other tame animals. For we do not appoint oxen to be the lords of oxen, or goats of goats; but we ourselves are a superior race, and rule over them. In like manner God, in His love of mankind, placed over us the demons, who are a superior race, and they with great ease and pleasure to themselves, and no less to us, taking care of us and giving us peace and reverence and order and justice never failing, made the tribes of men happy and united. And this tradition, which is true, declares that cities of which some mortal man and not God is the ruler, have no escape from evils and toils. Still we must do all that we can to imitate the life which is said to have existed in the days of Cronos, and, as far as the principle of immortality dwells in us, to that we must hearken, both in private and public life, and regulate our cities and houses according to law, meaning by the very term ‘law,’ the distribution of mind². But if either a single person or an oligarchy or a democracy has a soul eager after pleasures and desires—wanting to be filled with them, yet retaining none of them, and perpetually afflicted with an endless and insatiable disorder; and this evil spirit, having first trampled the laws under foot, becomes the master either of a state or of an individual,—then, as I was saying, salvation is hopeless. And now, Cleinias, we have to consider whether you will or will not accept this tale of mine.

Athenian, Cleinias.

In the days of Cronos men were governed by demigods,

who were to mankind what shepherds are to animals.

To the divine rule we must return, as far as we can.

CLE.

Certainly we will.

ATH.

You are aware,—are you not?—that there are often said to be as many forms of laws as there are of governments, and of the latter we have already mentioned³ all those which are commonly recognized. Now you must regard this as a matter of first-rate importance. For what is to be the standard of just and unjust, is once more the point at issue. Men say that the law ought not to regard either military virtue, or virtue in general, but only the interests and power and preservation of the established form of government; this is thought by them to be the best way of expressing the natural definition of justice.

Men commonly define justice to be the interest of the stronger,

CLE.

How?

ATH.

Justice is said by them to be the interest of the stronger¹.

CLE.

Speak plainer.

ATH.

I will:—‘Surely,’ they say, ‘the governing power makes whatever laws have authority in any state’?

meaning by this the security and continuance of the ruling class.

CLE.

True.

ATH.

‘Well,’ they would add, ‘and do you suppose that tyranny or democracy, or any other conquering power, does not make the continuance of the power which is possessed by them the first or principal object of their laws’?

CLE.

How can they have any other?

ATH.

‘And whoever transgresses these laws is punished as an evil-doer by the legislator, who calls the laws just’?

CLE.

Naturally.

ATH.

‘This, then, is always the mode and fashion in which justice exists.’

CLE.

Certainly, if they are correct in their view.

ATH.

Why, yes, this is one of those false principles of government to which we were referring².

CLE.

Which do you mean?

ATH.

Those which we were examining when we spoke of who ought to govern whom. Did we not arrive at the conclusion that parents ought to govern their children, and the elder the younger, and the noble the ignoble? And there were many other principles, if you remember, and they were not always consistent. One principle was this very principle of might, and we said that Pindar considered violence natural and justified it.

CLE.

715Yes; I remember.

ATH.

Consider, then, to whom our state is to be entrusted. For there is a thing which has occurred times without number in states—

But the forms of government which are

CLE.

What thing?

ATH.

That when there has been a contest for power, those who gain the upper hand so entirely monopolize the government, as to refuse all share to the defeated party and their descendants—they live watching one another, the ruling class being in perpetual fear that some one who has a recollection of former wrongs will come into power and rise up against them. Now, according to our view, such governments are not polities at all, nor are laws right which are passed for the good of particular classes and not for the good of the whole state. States which have such laws are not polities but parties, and their notions of justice are simply unmeaning. I say this, because I am going to assert that we must not entrust the government in your state to any one because he is rich, or because he possesses any other advantage, such as strength, or stature, or again birth: but he who is most obedient to the laws of the state, he shall win the palm; and to him who is victorious in the first degree shall be given the highest office and chief ministry of the gods; and the second to him who bears the second palm; and on a similar principle shall all the other offices be assigned to those who come next in order. And when I call the rulers servants or ministers of the law, I give them this name not for the sake of novelty, but because I certainly believe that upon such service or ministry depends the well- or ill-being of the state. For that state in which the law is subject and has no authority, I perceive to be on the highway to ruin; but I see that the state in which the law is above the rulers, and the rulers are the inferiors of the law, has salvation, and every blessing which the Gods can confer.

based on this principle are not governments at all.

Rule should be given, not to the richest or the strongest, but to him who is most obedient to the law.

CLE.

Truly, Stranger, you see with the keen vision of age¹.

The keen sight of the aged.

ATH.

Why, yes; every man when he is young has that sort of vision dullest, and when he is old keenest.

CLE.

Very true.

ATH.

And now, what is to be the next step? May we not suppose the colonists to have arrived, and proceed to make our speech to them?

Address to the colonists.

CLE.

Certainly.

ATH.

‘Friends,’ we say to them,—‘God, as the old tradition declares, holding in His hand the beginning, middle, and end of all that is, travels according to His nature in a straight line towards the accomplishment of His end. Justice always accompanies Him, and is the punisher of those who fall short of the divine law. To justice, he who would be happy holds fast, and follows in her company with all humility and order; but he who is lifted up with pride, or elated by wealth or rank, or beauty, who is young and foolish, and has a soul hot with insolence, and thinks that he has no need of any guide or ruler, but is able himself to be the guide of others, he, I say, is left deserted of God; and being thus deserted, he takes to him others who are like himself, and dances about, throwing all things into confusion, and many think that he is a great man, but in a short time he pays a penalty which justice cannot but approve, and is utterly destroyed, and his family and city with him. Wherefore, seeing that human things are thus ordered, what should a wise man do or think, or not do or think?’

God moves in a straight path according to a divine law, and those who would be happy should hold fast to that law.

Seeing these things, what should we do or be?

CLE.

Every man ought to make up his mind that he will be one of the followers of God; there can be no doubt of that.

ATH.

God is the measure of all things; and they who are like Him conform to His measure. They are His friends and He accepts their offerings.

Athenian.

The first honour is to be given to the Gods of Olympus and of the state; the second to the Gods below; the third honour to demons, heroes, ancestral Gods; next comes the honour of parents, living or dead.

Athenian, Cleinias.

Then what life is agreeable to God, and becoming in His followers? One only, expressed once for all in the old saying that 'like agrees with like, with measure measure,' but things which have no measure agree neither with themselves nor with the things which have. Now God ought to be to us the measure of all things, and not man¹, as men commonly say (Protagoras): the words are far more true of Him. And he who would be dear to God must, as far as is possible, be like Him and such as He is. Wherefore the temperate man is the friend of God, for he is like Him; and the intemperate man is unlike Him, and different from Him, and unjust. And the same applies to other things; and this is the conclusion, which is also the noblest and truest of all sayings,—that for the good man to offer sacrifice to the Gods, and hold converse with them by means of prayers and offerings and every kind of service, is the noblest and best of all things, and also the most conducive to a happy life, and very fit and meet. But with the bad man, the opposite of this is true: for the bad man has an impure soul, whereas the good is pure; and from one who is polluted, neither a good man nor God can without impropriety receive gifts. Wherefore the unholy do only waste their much service upon the Gods, but when offered by any holy man, such service is most acceptable to them. This is the mark at which we ought to aim. But what weapons shall we use, and how shall we direct them? In the first place, we affirm that next after the Olympian Gods and the Gods of the State, honour should be given to the Gods below; they should receive everything in even numbers, and of the second choice, and ill omen, while the odd numbers, and the first choice, and the things of lucky omen, are given to the Gods above, by him who would rightly hit the mark of piety. Next to these Gods, a wise man will do service to the demons or spirits, and then to the heroes, and after them will follow the private and ancestral Gods, who are worshipped as the law prescribes in the places which are sacred to them. Next comes the honour of living parents, to whom, as is meet, we have to pay the first and greatest and oldest of all debts, considering that all which a man has belongs to those who gave him birth and brought him up, and that he must do all that he can to minister to them, first, in his property, secondly, in his person, and thirdly, in his soul, in return for the endless care and travail which they bestowed upon him of old, in the days of his infancy, and which he is now to pay back to them when they are old and in the extremity of their need. And all his life long he ought never to utter, or to have uttered, an unbecoming word to them; for of light and fleeting words the penalty is most severe; Nemesis, the messenger of justice, is appointed to watch over all such matters. When they are angry and want to satisfy their feelings in word or deed, he should give way to them; for a father who thinks that he has been wronged by his son may be reasonably expected to be very angry. At their death, the most moderate funeral is best, neither exceeding the customary expense, nor yet falling short of the honour which has been usually shown by the former generation to their parents. And let a man not forget to pay the yearly tribute of respect to the dead, honouring them chiefly by omitting nothing that conduces to a perpetual remembrance of them, and giving a reasonable portion of his fortune to the dead. Doing this, and living after this manner, we shall receive our reward from the Gods and those who are above us [i.e. the demons]; and we shall spend our days for the most part in good hope. And how a man ought to order what relates to his descendants and his kindred and friends and fellow-citizens, and the rites

Hospitality and the other duties of social life will also be regulated by law.

And the laws will have prefaces, which may be summed up in a general preface, or preparation for virtue;

of hospitality taught by Heaven, and the intercourse which arises out of all these duties, with a view to the embellishment and orderly regulation of his own life—these things, I say, the laws, as we proceed with them, will accomplish, partly persuading, and partly when natures do not yield to the persuasion of custom, chastising them by might and right, and will thus render our state, if the Gods co-operate with us, prosperous and happy. But of what has to be said, and must be said by the legislator who is of my way of thinking, and yet, if said in the form of law, would be out of place—of this I think that he may give a sample for the instruction of himself and of those for whom he is legislating; and then when, as far as he is able, he has gone through all the preliminaries, he may proceed to the work of legislation. Now, what will be the form of such prefaces? There may be a difficulty in including or describing them all under a single form, but I think that we may get some notion of them if we can guarantee one thing.

CLE.

What is that?

ATH.

I should wish the citizens to be as readily persuaded to virtue as possible; this will surely be the aim of the legislator in all his laws.

CLE.

Certainly.

ATH.

The proposal appears to me to be of some value; and I think that a person will listen with more gentleness and good-will to the precepts addressed to him by the legislator, when his soul is not altogether unprepared to receive them. Even a little done in the way of conciliation gains his ear, and is always worth having. For there is no great inclination or readiness on the part of mankind to be made as good, or as quickly good, as possible. The case of the many proves the wisdom of Hesiod, who says that the road to wickedness is smooth and can be travelled without perspiring, because it is so very short:—

‘But before virtue the immortal Gods have placed the sweat of labour, and long and steep is the way thither, and rugged at first; but when you have reached the top, although difficult before, it is then easy [1](#).’

for the way is difficult, as Hesiod says.

CLE.

Yes; and he certainly speaks well.

ATH.

Very true: and now let me tell you the effect which the preceding discourse has had upon me.

CLE.

Proceed.

ATH.

Suppose that we have a little conversation with the legislator, and say to him—‘O, legislator, speak; if you know what we ought to say and do, you can surely tell.’

CLE.

Of course he can.

ATH.

‘Did we not hear you just now saying², that the legislator ought not to allow the poets to do what they liked? For that they would not know in which of their words they went against the laws, to the hurt of the state.’

CLE.

That is true.

ATH.

May we not fairly make answer to him on behalf of the poets?

CLE.

What answer shall we make to him?

ATH.

That the poet, according to the tradition which has ever prevailed among us, and is accepted of all men, when he sits down on the tripod of the muse, is not in his right mind; like a fountain, he allows to flow out freely whatever comes in, and his art being imitative, he is often compelled to represent men of opposite dispositions, and thus to contradict himself; neither can he tell whether there is more truth in one thing that he has said than in another. But this is not the case in a law; the legislator must give not two rules about the same thing, but one only. Take an

The poet may contradict himself as often as he pleases, but the legislator must be definite and consistent.

Ambiguous terms, such as ‘moderate,’ should be defined.

example from what you have just been saying³. Of three kinds of funerals, there is one which is too extravagant, another is too niggardly, the third in a mean; and you choose and approve and order the last without qualification. But if I had an extremely rich wife, and she bade me bury her and describe her burial in a poem, I should praise the extravagant sort; and a poor miserly man, who had not much money to spend, would approve of the niggardly; and the man of moderate means, who was himself moderate, would praise a moderate funeral. Now you in the capacity of legislator must not barely say 'a moderate funeral,' but you must define what moderation is, and how much; unless you are definite, you must not suppose that you are speaking a language that can become law.

CLE.

Certainly not.

ATH.

And is our legislator to have no preface to his laws, but to say at once Do this, avoid that—and then holding the penalty in terrorem, to go on to another law; offering never a word of advice or exhortation to those for whom he is legislating, after the manner of some doctors? For of doctors, as I may remind you, some have a gentler, others a ruder method of cure; and as children ask the doctor to be gentle with them, so we will ask the legislator to cure our disorders with the gentlest remedies. What I mean to say is, that besides doctors there are doctors' servants, who are also styled doctors.

Illustration taken from doctors and their assistants.

CLE.

Very true.

ATH.

And whether they are slaves or freemen makes no difference; they acquire their knowledge of medicine by obeying and observing their masters; empirically and not according to the natural way of learning, as the manner of freemen is, who have learned scientifically themselves the art which they impart scientifically to their pupils. You are aware that there are these two classes of doctors?

CLE.

To be sure.

ATH.

The slave-doctor a very peremptory and

And did you ever observe that there are two classes of patients in states, slaves and freemen; and the slave doctors run about and cure the slaves, or wait for them in the dispensaries—practitioners of this sort never talk to their patients individually, or let them talk about their own individual

tyrannical person; the doctor who attends freemen is courteous and persuasive.

complaints? The slave-doctor prescribes what mere experience suggests, as if he had exact knowledge; and when he has given his orders, like a tyrant, he rushes off with equal assurance to some other servant who is ill; and so he relieves the master of the house of the care of his invalid slaves. But the other doctor, who is a freeman, attends and practices upon freemen; and he carries his enquiries far back, and goes into the nature of the disorder; he enters into discourse with the patient and with his friends, and is at once getting information from the sick man, and also instructing him as far as he is able, and he will not prescribe for him until he has first convinced him; at last, when he has brought the patient more and more under his persuasive influences and set him on the road to health, he attempts to effect a cure. Now which is the better way of proceeding in a physician and in a trainer? Is he the better who accomplishes his ends in a double way, or he who works in one way, and that the ruder and inferior?

CLE.

I should say, Stranger, that the double way is far better.

ATH.

Should you like to see an example of the double and single method in legislation?

The double method, which includes both persuasion and command, is the better both in medicine and in legislation.

CLE.

Certainly I should.

ATH.

What will be our first law? Will not the legislator, observing the order of nature, begin by making regulations for states about births?

CLE.

He will.

ATH.

In all states the birth of children goes back to the connexion of marriage?

CLE.

Very true.

ATH.

And, according to the true order, the laws relating to marriage should be those which are first determined in every state?

CLE.

Quite so.

ATH.

Then let me first give the law of marriage in a simple form; it may run as follows:—A man shall marry between the ages of thirty and thirty-five, or, if he does not, he shall pay such and such a fine, or shall suffer the loss of such and such privileges. This would be the simple law about marriage. The double law would run thus:—A man shall marry between the ages of thirty and thirty-five, considering that in a manner the human race naturally partakes of immortality, which every man is by nature inclined to desire to the utmost; for the desire of every man that he may become famous, and not lie in the grave without a name, is only the love of continuance. Now mankind are coeval with all time, and are ever following, and will ever follow, the course of time; and so they are immortal, because they leave children's children behind them, and partake of immortality in the unity of generation. And for a man voluntarily to deprive himself of this gift, as he deliberately does who will not have a wife or children, is impiety. He who obeys the law shall be free, and shall pay no fine; but he who is disobedient, and does not marry, when he has arrived at the age of thirty-five, shall pay a yearly fine of a certain amount, in order that he may not imagine his celibacy to bring ease and profit to him; and he shall not share in the honours which the young men in the state give to the aged. Comparing now the two forms of the law, you will be able to arrive at a judgment about any other laws—whether they should be double in length even when shortest, because they have to persuade as well as threaten, or whether they shall only threaten and be of half the length.

Simple

and double law of marriage.

Athenian, Cleinias, Megillus.

MEG.

The shorter form, Stranger, would be more in accordance with Lacedaemonian custom; although, for my own part, if any one were to ask me which I myself prefer in the state, I should certainly determine in favour of the longer; 722and I would have every law made after the same pattern, if I had to choose. But I think that Cleinias is the person to be consulted, for his is the state which is going to use these laws.

The shorter form would be preferred by the Lacedaemonians.

CLE.

Thank you, Megillus.

ATH.

Whether, in the abstract, words are to be many or few, is a very foolish question; the best form, and not the shortest, is to be approved; nor is length at all to be regarded. Of the two forms of law which have been recited, the one is not only twice as good in practical usefulness as the other, but the case is like that of the two kinds of doctors, which I was just now mentioning. And yet legislators never appear to have considered that they have two instruments which they might use in legislation—persuasion and force; for in dealing with the rude and uneducated multitude, they use the one only as far as they can; they do not mingle persuasion with coercion, but employ force pure and simple. Moreover, there is a third point, sweet friends, which ought to be, and never is, regarded in our existing laws.

Legislators should use persuasion as well as force:

CLE.

What is it?

ATH.

A point arising out of our previous discussion, which comes into my mind in some mysterious way. All this time, from early dawn until noon, have we been talking about laws in this charming retreat: now we are going to promulgate our laws, and what has preceded was only the prelude of them. Why do I mention this? For this reason:—Because all discourses and vocal exercises have preludes and overtures, which are a sort of artistic beginnings intended to help the strain which is to be performed; lyric measures and music of every other kind have preludes framed with wonderful care. But of the truer and higher strain of law and politics, no one has ever yet uttered any prelude, or composed or published any, as though there was no such thing in nature. Whereas our present discussion seems to me to imply that there is;—these double laws, of which we were speaking, are not exactly double, but they are in two parts, the law and the prelude of the law. The arbitrary command, which was compared to the commands of doctors, whom we described as of the meaner sort, was the law pure and simple; and that which preceded, and was described by our friend here as being hortatory only, was, although in fact, an exhortation, likewise analogous to the preamble of a discourse¹. For I imagine that all this language of conciliation, which the legislator has been uttering in the preface of the law, was intended to create good-will in the person whom he addressed, in order that, by reason of this good-will, he might more intelligently receive his command, that is to say, the law. And therefore, in my way of speaking, this is more rightly described as the preamble than as the matter of the law. And I must further proceed to observe, that to all his laws, and to each separately, the legislator should prefix a preamble; he should remember how great will be the difference between them, according as they have, or have not, such preambles, as in the case already given.

Athenian, Cleinias.

and the law should contain a preamble or exhortation as well as a command.

The preamble is intended to create good-will towards the law, and to make it more acceptable.

CLE.

The lawgiver, if he asks my opinion, will certainly legislate in the form which you advise.

ATH.

I think that you are quite right, Cleinias, in affirming that all laws have preambles, and that throughout the whole of this work of legislation every single law should have a suitable preamble at the beginning; for that which is to follow is most important, and it makes all the difference whether we clearly remember the preambles or not. Yet we should be wrong in requiring that all laws, small and great alike, should have preambles of the same kind, any more than all songs or speeches; although they may be natural to all, they are not always necessary, and whether they are to be employed or not has in each case to be left to the judgment of the speaker or the musician, or, in the present instance, of the lawgiver.

Preambles are natural, but not always necessary.

CLE.

That I think is most true. And now, Stranger, without delay, let us return to the argument, and, as people say in play, make a second and better beginning, if you please, with the principles which we have been laying down, which we never thought of regarding as a preamble before, but of which we may now make a preamble, and not merely consider them to be chance topics of discourse. Let us acknowledge, then, that we have a preamble. About the honour of the Gods and the respect of parents, enough has been already said; and we may proceed to the topics which follow next in order, until the preamble is deemed by you to be complete; and after that you shall go through the laws themselves.

The principles already laid down about the honour of the Gods and the respect of parents are a part of our preamble.

ATH.

724I understand you to mean that we have made a sufficient preamble about Gods and demigods, and about parents living or dead; and now you would have us bring the rest of the subject into the light of day?

CLE.

Exactly.

ATH.

After this, as is meet and for the interest of us all, I the speaker, and you the listeners, will try to estimate all that relates to the souls and bodies and properties of the citizens, as regards both their occupations and amusements, and thus arrive, as far as

in us lies, at the nature of education. These then are the topics which follow next in order.

CLE.

Very good.

[\[Back to Table of Contents\]](#)

BOOK V.

ATHENIAN STRANGER.

Listen, all ye who have just now heard the laws about Gods, and about our dear forefathers:—Of all the things which a man has, next to the Gods, his soul is the most divine and most truly his own. Now in every man there are two parts: the better and superior, which rules, and the worse and inferior, which serves; and the ruling part of him is always to be preferred to the subject. Wherefore I am right in bidding every one next to the Gods, who are our masters, and those who in order follow them [i. e. the demons], to honour his own soul, which every one seems to honour, but no one honours as he ought; for honour is a divine good, and no evil thing is honourable; and he who thinks that he can honour the soul by word or gift, or any sort of compliance, without making her in any way better, seems to honour her, but honours her not at all. For example, every man, from his very boyhood, fancies that he is able to know everything, and thinks that he honours his soul by praising her, and he is very ready to let her do whatever she may like. But I mean to say that in acting thus he injures his soul, and is far from honouring her; whereas, in our opinion, he ought to honour her as second only to the Gods. Again, when a man thinks that others are to be blamed, and not himself, for the errors which he has committed from time to time, and the many and great evils which befell him in consequence, and is always fancying himself to be exempt and innocent, he is under the idea that he is honouring his soul; whereas the very reverse is the fact, for he is really injuring her. And when, disregarding the word and approval of the legislator, he indulges in pleasure, then again he is far from honouring her; he only dishonours her, and fills her full of evil and remorse; or when he does not endure to the end the labours and fears and sorrows and pains which the legislator approves, but gives way before them, then, by yielding, he does not honour the soul, but by all such conduct he makes her to be dishonourable; nor when he thinks that life at any price is a good, does he honour her, but yet once more he dishonours her; for the soul having a notion that the world below is all evil, he yields to her, and does not resist and teach or convince her that, for aught she knows, the world of the Gods below, instead of being evil, may be the greatest of all goods. Again, when any one prefers beauty to virtue, what is this but the real and utter dishonour of the soul? For such a preference implies that the body is more honourable than the soul; and this is false, for there is nothing of earthly birth which is more honourable than the heavenly, and he who thinks otherwise of the soul has no idea how greatly he undervalues this wonderful possession; nor, again, when a person is willing, or not unwilling, to acquire dishonest gains, does he then honour his soul with gifts—far otherwise; he sells her glory and honour for a small

Laws V.

Athenian.

Next to the Gods, a man should honour his own soul.

False ways of honouring the soul:—

(1) by praise;

(2) by excuse;

(3) by self-indulgence;

(4) by want of endurance;

(5) by excessive love of life;

(6) by preferring beauty to virtue;

(7) by making dishonest gains.

The penalty of yielding to evil is to grow into its likeness.

piece of gold; but all the gold which is under or upon the earth is not enough to give in exchange for virtue. In a word, I may say that he who does not estimate the base and evil, the good and noble, according to the standard of the legislator, and abstain in every possible way from the one and practise the other to the utmost of his power, does not know that in all these respects he is most foully and disgracefully abusing his soul, which is the divinest part of man; for no one, as I may say, ever considers that which is declared to be the greatest penalty of evil-doing—namely, to grow into the likeness of bad men, and growing like them to fly from the conversation of the good, and be cut off from them, and cleave to and follow after the company of the bad. And he who is joined to them must do and suffer what such men by nature do and say to one another,—a suffering which is not justice but retribution; for justice and the just are noble, whereas retribution is the suffering which waits upon injustice; and whether a man escape or endure this, he is miserable,—in the former case, because he is not cured; while in the latter, he perishes in order that the rest of mankind may be saved.

Speaking generally, our glory is to follow the better and improve the inferior, which is susceptible of improvement, as far as this is possible. And of all human possessions, the soul is by nature most inclined to avoid the evil, and track out and find the chief good; which when a man has found, he should take up his abode with it during the remainder of his life. Wherefore the soul also is second [or next to God] in honour; and third, as every one will perceive, comes the honour of the body in natural order. Having determined this, we have next to consider that there is a natural honour of the body, and that of honours some are true and some are counterfeit. To decide which are which is the business of the legislator; and he, I suspect, would intimate that they are as follows:—Honour is not to be given to the fair body, or to the strong or the swift or the tall, or to the healthy body (although many may think otherwise), any more than to their opposites; but the mean states of all these habits are by far the safest and most moderate; for the one extreme makes the soul braggart and insolent, and the other, illiberal and base; and money, and property, and distinction all go to the same tune. The excess of any of these things is apt to be a source of hatreds and divisions among states and individuals; and the defect of them is commonly a cause of slavery. And, therefore, I would not have any one fond of heaping up riches for the sake of his children, in order that he may leave them as rich as possible. For the possession of great wealth is of no use, either to them or to the state. The condition of youth which is free from flattery, and at the same time not in need of the necessities of life, is the best and most harmonious of all, being in accord and agreement with our nature, and making life to be most entirely free from sorrow. Let parents, then, bequeath to their children not a heap of riches, but the spirit of reverence. We, indeed, fancy that they will inherit reverence from us, if we rebuke them when they show a want of reverence. But this quality is not really imparted to them by the present style of admonition, which only tells them that the young ought always to be reverential. A sensible legislator will rather exhort

The honour of the body comes next after the honour of the soul; the mean, not the excess, of bodily excellence is best.

Parents should bequeath to their children, not money, but the spirit of reverence.

The younger should reverence the elder; the elder the younger. The best way of training the young is to train yourself. Honour kindred, that you may have offspring. Esteem others more than yourself.

Obey the laws.

Respect strangers and suppliants.

the elders to reverence the younger, and above all to take heed that no young man sees or hears one of themselves doing or saying anything disgraceful; for where old men have no shame, there young men will most certainly be devoid of reverence. The best way of training the young is to train yourself at the same time; not to admonish them, but to be always carrying out your own admonitions in practice. He who honours his kindred, and reveres those who share in the same Gods and are of the same blood and family, may fairly expect that the Gods who preside over generation will be propitious to him, and will quicken his seed. And he who deems the services which his friends and acquaintances do for him, greater and more important than they themselves deem them, and his own favours to them less than theirs to him, will have their good-will in the intercourse of life. And surely in his relations to the state and his fellow-citizens, he is by far the best, who rather than the Olympic or any other victory of peace or war, desires to win the palm of obedience to the laws of his country, and who, of all mankind, is the person reputed to have obeyed them best through life. In his relations to strangers, a man should consider that a contract is a most holy thing, and that all concerns and wrongs of strangers are more directly dependent on the protection of God, than wrongs done to citizens; for the stranger, having no kindred and friends, is more to be pitied by Gods and men. Wherefore, also, he who is most able to avenge him is most zealous in his cause; and he who is most able is the genius and the god of the stranger, who follow in the train of Zeus, the god of strangers. And for this reason, he who has a spark of caution in him, will do his best to pass through life without sinning against the stranger. And of offences committed, whether against strangers or fellow-countrymen, that against suppliants is the greatest. For the God who witnessed to the agreement made with the suppliant, becomes in a special manner the guardian of the sufferer; and he will certainly not suffer unavenged.

Thus we have fairly described the manner in which a man is to act about his parents, and himself, and his own affairs; and in relation to the state, and his friends, and kindred, both in what concerns his own countrymen, and in what concerns the stranger. We will now consider what manner of man he must be who would best pass through life in respect of those other things which are not matters of law, but of praise and blame only; in which praise and blame educate a man, and make him more tractable and amenable to the laws which are about to be imposed.

Truth the beginning
of every good.

The misery of being
ignorant and
untrustworthy.

Justice is to be
honoured and
vindicated.

To impart the good
more than only to
possess it.

Truth is the beginning of every good thing, both to Gods and men; and he who would be blessed and happy, should be from the first a partaker of the truth, that he may live a true man as long as possible, for then he can be trusted; but he is not to be trusted who loves voluntary falsehood, and he who loves involuntary falsehood is a fool. Neither condition is enviable, for the untrustworthy and ignorant has no friend, and as time advances he becomes known, and lays up in store for himself isolation in crabbed age when life is on the wane: so that, whether his children or friends are alive or not, he is equally solitary.—Worthy of honour is he who does no injustice, and of more than twofold honour, if he not only does no injustice himself, but hinders others from doing any; the first may count as one man, the second is worth many men, because he informs the rulers of the injustice of others. And yet more highly to be esteemed is he who co-operates with the rulers in correcting the citizens as far as he can—he shall be proclaimed the great and perfect citizen, and bear away the palm of virtue. The same praise may be given about temperance and wisdom, and all other goods which may be imparted to others, as well as acquired by a man for himself; he who imparts them shall be honoured as the man of men, and he who is willing, yet is not able, may be allowed the second place; but he who is jealous and will not, if he can help, allow others to partake in a friendly way of any good, is deserving of blame: the good, however, which he has, is not to be undervalued by us because it is possessed by him, but must be acquired by us also to the utmost of our power. Let every man, then, freely strive for the prize of virtue, and let there be no envy. For the unenvious nature increases the greatness of states—he himself contends in the race, blasting the fair fame of no man; but the envious, who thinks that he ought to get the better by defaming others, is less energetic himself in the pursuit of true virtue, and reduces his rivals to despair by his unjust slanders of them. And so he makes the whole city to enter the arena untrained in the practice of virtue, and diminishes her glory as far as in him lies. Now every man should be valiant, but he should also be gentle. From the cruel, or hardly curable, or altogether incurable acts of injustice done to him by others, a man can only escape by fighting and defending himself and conquering, and by never ceasing to punish them; and no man who is not of a noble spirit is able to accomplish this. As to the actions of those who do evil, but whose evil is curable, in the first place, let us remember that the unjust man is not unjust of his own free will. For no man of his own free will would choose to possess the greatest of evils, and least of all in the most honourable part of himself. And the soul, as we said, is of a truth deemed by all men the most honourable. In the soul, then, which is the most honourable part of him, no one, if he could help, would admit, or allow to continue the greatest of evils¹. The unrighteous and vicious are always to be pitied in any case; and one can afford to forgive as well as pity him who is curable, and refrain and calm one's anger, not getting into a passion, like a woman, and nursing ill-feeling. But upon him who is incapable of reformation and wholly evil, the vials of our wrath should be poured out; wherefore I say that good men ought, when occasion demands, to be both gentle and passionate.

The contrast of the envious and unenvious natures.

The incurable must be punished.

But the unjust are always to be pitied, and when curable may be forgiven.

Of all evils the greatest is one which in the souls of most men is innate, and which a man is always excusing in himself and never correcting; I mean, what is expressed in the saying that 'Every man by nature is and ought to be his own friend.' Whereas the excessive love of self is in reality the source to each man of all offences; for the lover is blinded about the beloved, so that he judges wrongly of the just, the ⁷³²good, and the honourable, and thinks that he ought always to prefer himself to the truth. But he who would be a great man ought to regard, not himself or his interests, but what is just, whether the just act be his own or that of another. Through a similar error men are induced to fancy that their own ignorance is wisdom, and thus we who may be truly said to know nothing, think that we know all things; and because we will not let others act for us in what we do not know, we are compelled to act amiss ourselves. Wherefore let every man avoid excess of self-love, and condescend to follow a better man than himself, not allowing any false shame to stand in the way. There are also minor precepts which are often repeated, and are quite as useful; a man should recollect them and remind himself of them. For when a stream is flowing out, there should be water flowing in too; and recollection flows in while wisdom is departing. Therefore I say that a man should refrain from excess either of laughter or tears, and should exhort his neighbour to do the same; he should veil his immoderate sorrow or joy, and seek to behave with propriety, whether the genius of his good fortune remains with him, or whether at the crisis of his fate, when he seems to be mounting high and steep places, the Gods oppose him in some of his enterprises. Still he may ever hope, in the case of good men, that whatever afflictions are to befall them in the future God will lessen, and that present evils He will change for the better; and as to the goods which are the opposite of these evils, he will not doubt that they will be added to them, and that they will be fortunate. Such should be men's hopes, and such should be the exhortations with which they admonish one another, never losing an opportunity, but on every occasion distinctly reminding themselves and others of all these things, both in jest and earnest.

Selfishness the greatest of evils.

A great man should be above his own interests.

Every man should be willing to follow another who is wiser or better than himself.

The necessity of self-control.

The consolation of hope.

Enough has now been said of divine matters, both as touching the practices which men ought to follow, and as to the sort of persons who they ought severally to be. But of human things we have not as yet spoken, and we must; for to men we are discoursing and not to Gods. Pleasures and pains and desires are a part of human nature, and on them every mortal being must of necessity hang and depend with the most eager interest. And therefore we must praise the noblest life, not only as the fairest in appearance, but as being one which, if a man will only taste, and not, while still in his youth, desert for another, he will find to ⁷³³surpass also in the very thing which we all of us desire,—I mean in having a greater amount of pleasure and less of pain during the whole of life. And this will be plain, if a man has a true taste of them, as will be quickly and clearly seen. But what is a true taste? That we have to learn from the argument,—the point being what is according to nature, and what is not according to nature. One life must be compared

There must be a true sense or taste of pleasure and pain.

Men choose the life which has great pleasures and pains, and in which the pleasure exceeds the pain.

with another, the more pleasurable with the more painful, after this manner:—We desire to have pleasure, but we neither desire nor choose pain; and the neutral state we are ready to take in exchange, not for pleasure but for pain; and we also wish for less pain and greater pleasure, but less pleasure and greater pain we do not wish for; and an equal balance of either we cannot venture to assert that we should desire. And all these differ or do not differ severally in number and magnitude and intensity and equality, and in the opposites of these when regarded as objects of choice, in relation to desire. And such being the necessary order of things, we wish for that life in which there are many great and intense elements of pleasure and pain, and in which the pleasures are in excess, and do not wish for that in which the opposites exceed; nor, again, do we wish for that in which the elements of either are small and few and feeble, and the pains exceed. And when, as I said before, there is a balance of pleasure and pain in life, this is to be regarded by us as the balanced life; while other lives are preferred by us because they exceed in what we like, or are rejected by us because they exceed in what we dislike. All the lives of men may be regarded by us as bound up in these, and we must also consider what sort of lives we by nature desire. And if we wish for any others, I say that we desire them only through some ignorance and inexperience of the lives which actually exist.

Now, what lives are they, and how many in which, having searched out and beheld the objects of will and desire and their opposites, and making of them a law, choosing, I say, the dear and the pleasant and the best and noblest, a man may live in the happiest way possible? Let us say that the temperate life is one kind of life, and the rational another, and the courageous another, and the healthful another; and to these four let us oppose four other lives,—the foolish, the cowardly, the intemperate, the diseased. He who knows the temperate life will describe it as in all things gentle, having gentle pains and gentle pleasures, and placid desires and loves not insane; whereas the intemperate life is impetuous in all things, and has violent pains and pleasures, and vehement and stinging desires, and loves utterly insane; and in the temperate life the pleasures exceed the pains, but in the intemperate life the pains exceed the pleasures in greatness and number and frequency. Hence one of the two lives is naturally and necessarily more pleasant and the other more painful, and he who would live pleasantly cannot possibly choose to live intemperately. And if this is true, the inference clearly is that no man is voluntarily intemperate; but that the whole multitude of men lack temperance in their lives, either from ignorance, or from want of self-control, or both. And the same holds of the diseased and healthy life; they both have pleasures and pains, but in health the pleasure exceeds the pain, and in sickness the pain exceeds the pleasure. Now our intention in choosing the lives is not that the painful should exceed, but the life in which pain is exceeded by pleasure we have determined to be the more pleasant life. And we should say that the temperate life has the elements both of pleasure and pain fewer and smaller and less frequent than the intemperate, and the wise life than the foolish life, and the life of courage than the life of cowardice; one of each pair exceeding in pleasure and the other in pain, the courageous surpassing the cowardly, and the wise exceeding the foolish. And so the

The most pleasant and the noblest lives are (1) the temperate; (2) the rational; (3) the courageous; (4) the healthful.

The pleasures of the temperate, wise, courageous and healthy life are greater than those of the intemperate, foolish, cowardly and diseased life. How then can a man voluntarily choose the latter?

one class of lives exceeds the other class in pleasure; the temperate and courageous and wise and healthy exceed the cowardly and foolish and intemperate and diseased lives; and generally speaking, that which has any virtue, whether of body or soul, is pleasanter than the vicious life, and far superior in beauty and rectitude and excellence and reputation, and causes him who lives accordingly to be infinitely happier than the opposite.

Enough of the preamble; and now the laws should follow; or, to speak more correctly, an outline of them. As, then, in the case of a web or any other tissue, the warp and the woof cannot be made of the same materials¹, but the warp is necessarily superior as being stronger, and having a certain character of firmness, whereas the woof is softer and has a proper degree of elasticity;—in a similar manner those who are to hold great offices in states, should be distinguished truly in each case from those who have been but slenderly proven by education. Let us suppose that there are two parts in the constitution of a state—one the creation of offices, the other the laws which are assigned to them to administer.

As in a web the warp is firmer than the woof, so in the state the magistrates should be stronger than the people.

But, before all this, comes the following consideration:—The shepherd or herdsman, or breeder of horses or the like, when he has received his animals will not begin to train them until he has first purified them in a manner which befits a community of animals; he will divide the healthy and unhealthy, and the good breed and the bad breed, and will send away the unhealthy and badly bred to other herds, and tend the rest, reflecting that his labours will be vain and have no effect, either on the souls or bodies of those whom nature and ill nurture have corrupted, and that they will involve in destruction the pure and healthy nature and being of every other animal, if he should neglect to purify them. Now the case of other animals is not so important—they are only worth introducing for the sake of illustration; but what relates to man is of the highest importance; and the legislator should make enquiries, and indicate what is proper for each one in the way of purification and of any other procedure. Take, for example, the purification of a city—there are many kinds of purification, some easier and others more difficult; and some of them, and the best and most difficult of them, the legislator, if he be also a despot, may be able to effect; but the legislator, who, not being a despot, sets up a new government and laws, even if he attempt the mildest of purgations, may think himself happy if he can complete his work. The best kind of purification is painful, like similar cures in medicine, involving righteous punishment and inflicting death or exile in the last resort. For in this way we commonly dispose of great sinners who are incurable, and are the greatest injury of the whole state. But the milder form of purification is as follows:—when men who have nothing, and are in want of food, show a disposition to follow their leaders in an attack on the property of the rich—these, who are the natural plague of the state, are sent away by the legislator in a friendly spirit as far as he is able; and this dismissal of them is euphemistically termed a colony. And every legislator should contrive to do this at once. Our present case, however, is peculiar. For there is no need to devise any colony or purifying separation under the

There are incurable and curable diseases in a state.

The first are purged away by exile or death; the second by colonization.

But in our state, no purgation will be needed; for we shall only admit good citizens;

circumstances in which we are placed. But as, when many streams flow together from many sources, whether springs or mountain torrents, into a single lake, we ought to attend and take care that the confluent waters should be perfectly clear, and in order to effect this, should pump and draw off and divert impurities, so in every political arrangement there may be trouble and danger. But, seeing that we are now only discoursing and not acting, let our selection be supposed to be completed, and the desired purity attained. Touching evil men, who want to join and be citizens of our state, after we have tested them by every sort of persuasion and for a sufficient time, we will prevent them from coming; but the good we will to the utmost of our ability receive as friends with open arms.

Another piece of good fortune must not be forgotten, which, as we were saying¹, the Heraclid colony had, and which is also ours,—that we have escaped division of land and the abolition of debts; for these are always a source of dangerous contention, and a city which is driven by necessity to legislate upon such matters can neither allow the old ways to continue, nor yet venture to alter them. We must have recourse to prayers, so to speak, and hope that a slight change may be cautiously effected in a length of time. And such a change can be accomplished² by those who have abundance of land, and having also many debtors, are willing, in a kindly spirit, to share with those who are in want, sometimes remitting and sometimes giving, holding fast in a path of moderation, and deeming poverty to be the increase of a man's desires and not the diminution of his property. For this is the great beginning of salvation to a state, and upon this lasting basis may be erected afterwards whatever political order is suitable under the circumstances; but if the change be based upon an unsound principle, the future administration of the country will be full of difficulties. That is a danger which, as I am saying, is escaped by us, and yet we had better say how, if we had not escaped, we might have escaped; and we may venture now to assert that no other way of escape, whether narrow or broad, can be devised but freedom from avarice and a sense of justice—upon this rock our city shall be built; for there ought to be no disputes among citizens about property. If there are quarrels of long standing among them, no legislator of any degree of sense will proceed a step in the arrangement of the state until they are settled. But that they to whom God has given, as He has to us, to be the founders of a new state as yet free from enmity—that they should create themselves enmities by their mode of distributing lands and houses, would be superhuman folly and wickedness.

nor shall we require a division of lands or the abolition of debts.

That is a danger which our colony has escaped; and which in another can only be escaped by inspiring contentment among the citizens.

The citizens must be sufficiently numerous to protect themselves, and to assist their neighbours in the hour of need.

5040 is a very good number because it has so many divisions.

How then can we rightly order the distribution of the land? In the first place, the number of the citizens has to be determined, and also the number and size of the divisions into which they will have to be formed; and the land and the houses will then have to be apportioned by us as fairly as we can. The number of citizens can only be estimated satisfactorily in relation to the territory and the neighbouring states. The territory must be sufficient to maintain a certain number of inhabitants in a moderate way of life—more than this is not required; and the number of citizens should be sufficient to defend themselves against the injustice of their neighbours, and also to give them the power of rendering efficient aid to their neighbours when they are wronged. After having taken a survey of their's and their neighbours' territory, we will determine the limits of them in fact as well as in theory. And now, let us proceed to legislate with a view to perfecting the form and outline of our state. The number of our citizens shall be 5040—this will be a convenient number; and these shall be owners of the land and protectors of the allotment. The houses and the land will be divided in the same way, so that every man may correspond to a lot. Let the whole number be first divided into two parts, and then into three; and the number is further capable of being divided into four or five parts, or any number of parts up to ten. Every legislator ought to know so much arithmetic as to be able to tell what number is most likely to be useful to all cities; and we are going to take that 738 number which contains the greatest and most regular and unbroken series of divisions. The whole of number has every possible division, and the number 5040 can be divided by exactly fifty-nine divisors, and ten of these proceed without interval from one to ten: this will furnish numbers for war and peace, and for all contracts and dealings, including taxes and divisions of the land. These properties of number should be ascertained at leisure by those who are bound by law to know them; for they are true, and should be proclaimed at the foundation of the city, with a view to use. Whether the legislator is establishing a new state or restoring an old and decayed one, in respect of Gods and temples,—the temples which are to be built in each city, and the Gods or demi-gods after whom they are to be called,—if he be a man of sense, he will make no change in anything which the oracle of Delphi, or Dodona, or the God Ammon, or any ancient tradition has sanctioned in whatever manner, whether by apparitions or reputed inspiration of Heaven, in obedience to which mankind have established sacrifices in connexion with mystic rites, either originating on the spot, or derived from Tyrrhenia or Cyprus or some other place, and on the strength of which traditions they have consecrated oracles and images, and altars and temples, and portioned out a sacred domain for each of them. The least part of all these ought not to be disturbed by the legislator; but he should assign to the several districts some God, or demi-god, or hero, and, in the distribution of the soil, should give to these first their chosen domain and all things fitting, that the inhabitants of the several districts may meet at fixed times, and that they may readily supply their various wants, and entertain one another with sacrifices, and become friends and acquaintances; for there is no greater good in a state than that the citizens should be known to one another. When not light but darkness and ignorance of each other's characters prevails among them, no one will receive the honour of which he is deserving, or the power or the justice to which he is fairly entitled: wherefore, in every state, above all things, every man should take heed that he have no deceit in

Ancient religious traditions and customs should be retained.

The country to be divided into districts, and to each of these is to be assigned a God or hero.

The citizens should know and trust one another.

him, but that he be always true and simple; and that no deceitful person take any advantage of him.

739The next move in our pastime of legislation, like the withdrawal of the stone from the holy line in the game of draughts, being an unusual one, will probably excite wonder when mentioned for the first time. And yet, if a man will only reflect and weigh the matter with care, he will see that our city is ordered in a manner which, if not the best, is the second best. Perhaps also some one may not approve this form, because he thinks that such a constitution is ill adapted to a legislator who has not despotic power. The truth is, that there are three forms of government, the best, the second and the third best, which we may just mention, and then leave the selection to the ruler of the settlement. Following this method in the present instance, let us speak of the states which are respectively first, second, and third in excellence, and then we will leave the choice to Cleinias now, or to any one else who may hereafter have to make a similar choice among constitutions, and may desire to give to his state some feature which is congenial to him and which he approves in his own country.

The form of constitution not the best, but the second best.

The first and highest form of the state and of the government and of the law is that in which there prevails most widely the ancient saying, that 'Friends have all things in common.' Whether there is anywhere now, or will ever be, this communion of women and children and of property, in which the private and individual is altogether banished from life, and things which are by nature private, such as eyes and ears and hands, have become common, and in some way see and hear and act in common, and all men express praise and blame and feel joy and sorrow on the same occasions, and whatever laws there are unite the city to the utmost¹,—whether all this is possible or not, I say that no man, acting upon any other principle, will ever constitute a state which will be truer or better or more exalted in virtue. Whether such a state is governed by Gods or sons of Gods, one, or more than one, happy are the men who, living after this manner, dwell there; and therefore to this we are to look for the pattern of the state, and to cling to this, and to seek with all our might for one which is like this. The state which we have now in hand, when created, will be nearest to immortality and the only one which takes the second place; and after that, by the grace of God, we will complete the third one. And we will begin by speaking of the nature and origin of the second.

The best is that in which there is absolute community.

This is our pattern.

The establishment of the second-best state. Distribution of land and houses.

The heir of the lot.

What is to be done with the other children?

Let the citizens at once distribute their land and houses, and not till the land in common, since a community of goods ⁷⁴⁰ goes beyond their proposed origin, and nurture, and education. But in making the distribution, let the several possessors feel that their particular lots also belong to the whole city; and seeing that the earth is their parent, let them tend her more carefully than children do their mother. For she is a goddess and their queen, and they are her mortal subjects. Such also are the feelings which they ought to entertain to the Gods and demi-gods of the country. And in order that the distribution may always remain, they ought to consider further that the present number of families should be always retained, and neither increased nor diminished. This may be secured for the whole city in the following manner:—Let the possessor of a lot leave the one of his children who is his best beloved, and one only, to be the heir of his dwelling, and his successor in the duty of ministering to the Gods, the state and the family, as well the living members of it as those who are departed when he comes into the inheritance; but of his other children, if he have more than one, he shall give the females in marriage according to the law to be hereafter enacted ¹, and the males he shall distribute as sons to those citizens who have no children, and are disposed to receive them; or if there should be none such, and particular individuals have too many children, male or female, or too few, as in the case of barrenness—in all these cases let the highest and most honourable magistracy created by us judge and determine what is to be done with the redundant or deficient, and devise a means that the number of ⁵⁰⁴⁰ houses shall always remain the same. There are many ways of regulating numbers; for they in whom generation is affluent may be made to refrain ¹, and, on the other hand, special care may be taken to increase the number of births by rewards and stigmas, or we may meet the evil by the elder men giving advice and administering rebuke to the younger—in this way the object may be attained. And if after all there be very great difficulty about the equal preservation of the ⁵⁰⁴⁰ houses, and there be an excess of citizens, owing to the too great love of those who live together, and we are at our wits' end, there is still the old device often mentioned by us of sending out a colony, which will part friends with us, and be composed of suitable persons. ⁷⁴¹ If, on the other hand, there come a wave bearing a deluge of disease, or a plague of war, and the inhabitants become much fewer than the appointed number by reason of bereavement, we ought not to introduce citizens of spurious birth and education, if this can be avoided; but even God is said not to be able to fight against necessity.

Regulation of
redundant or deficient
population.

Wherefore let us suppose this 'high argument' of ours to address us in the following terms:—Best of men, cease not to honour according to nature similarity and equality and sameness and agreement, as regards number and every good and noble quality.

Honour equality and
observe the number
⁵⁰⁴⁰.

And, above all, observe the aforesaid number ⁵⁰⁴⁰ throughout life; in the second place, do not disparage the small and modest proportions of the inheritances which you received in the distribution, by buying and selling them to one another. For then neither will the God who gave you the lot be your friend, nor will the legislator; and indeed the law declares to the disobedient that these are the terms upon which he may or may not take the lot. In the first place, the earth as he is informed is sacred to the Gods; and in the next place, priests and priestesses will offer up prayers over a first, and second, and even a third sacrifice, that he who buys or sells the houses or lands

which he has received, may suffer the punishment which he deserves; and these their prayers they shall write down in the temples, on tablets of cypress-wood, for the instruction of posterity. Moreover they will set a watch over all these things, that they may be observed;—the magistracy which has the sharpest eyes shall keep watch that any infringement of these commands may be discovered and punished as offences both against the law and the God. How great is the benefit of such an ordinance to all those cities, which obey and are administered accordingly, no bad man can ever know, as the old proverb says; but only a man of experience and good habits. For in such an order of things there will not be much opportunity for making money; no man either ought, or indeed will be allowed, to exercise any ignoble occupation, of which the vulgarity is a matter of reproach to a freeman, and should never want to acquire riches by any such means.

Further, the law enjoins that no private man shall be ⁷⁴²allowed to possess gold and silver, but only coin for daily use, which is almost necessary in dealing with artisans, and for payment of hirelings, whether slaves or immigrants, by all those persons who require the use of them. Wherefore our citizens, as we say, should have a coin passing current among themselves, but not accepted among the rest of mankind; with a view, however, to expeditions and journeys to other lands,—for embassies, or for any other occasion which may arise of sending out a herald, the state must also possess a common Hellenic currency. If a private person is ever obliged to go abroad, let him have the consent of the magistrates and go; and if when he returns he has any foreign money remaining, let him give the surplus back to the treasury, and receive a corresponding sum in the local currency. And if he is discovered to appropriate it, let it be confiscated, and let him who knows and does not inform be subject to curse and dishonour equally with him who brought the money, and also to a fine not less in amount than the foreign money which has been brought back. In marrying and giving in marriage, no one shall give or receive any dowry at all; and no one shall deposit money with another whom he does not trust as a friend, nor shall he lend money upon interest; and the borrower should be under no obligation to repay either capital or interest. That these principles are best, any one may see who compares them with the first principle and intention of a state. The intention, as we affirm, of a reasonable statesman, is not what the many declare to be the object of a good legislator, namely, that the state for the true interests of which he is advising should be as great and as rich as possible, and should possess gold and silver, and have the greatest empire by sea and land;—this they imagine to be the real object of legislation, at the same time adding, inconsistently, that the true legislator desires to have the city the best and happiest possible. But they do not see that some of these things are possible, and some of them are impossible; and he who orders the state will desire what is possible, and will not indulge in vain wishes or attempts to accomplish that which is impossible. The citizen must indeed be happy and good, and the legislator will seek to make him so; but very rich and very good at the same time he

No man should possess gold and silver except in money.

Foreign and domestic currency.

No dowries,

or lending money upon interest.

The state to be good rather than rich; since neither state nor individual can be both.

The good man gains half as much as the bad and spends twice as much; so that he cannot easily be rich.

The making of money not to be allowed to interfere with education.

cannot be, not, at least, in the sense in which the 743 many speak of riches. For they mean by ‘the rich’ the few who have the most valuable possessions, although the owner of them may quite well be a rogue. And if this is true, I can never assent to the doctrine that the rich man will be happy—he must be good as well as rich. And good in a high degree, and rich in a high degree at the same time, he cannot be. Some one will ask, why not? And we shall answer,—Because acquisitions which come from sources which are just and unjust indifferently, are more than double those which come from just sources only; and the sums which are expended neither honourably nor disgracefully, are only half as great as those which are expended honourably and on honourable purposes. Thus, if the one acquires double and spends half, the other who is in the opposite case and is a good man cannot possibly be wealthier than he. The first—I am speaking of the saver and not of the spender—is not always bad; he may indeed in some cases be utterly bad, but, as I was saying, a good man he never is. For he who receives money unjustly as well as justly, and spends neither justly nor unjustly, will be a rich man if he be also thrifty. On the other hand, the utterly bad is in general profligate, and therefore very poor; while he who spends on noble objects, and acquires wealth by just means only, can hardly be remarkable for riches, any more than he can be very poor. Our statement, then, is true, that the very rich are not good, and, if they are not good, they are not happy. But the intention of our laws was, that the citizens should be as happy as may be, and as friendly as possible to one another. And men who are always at law with one another, and amongst whom there are many wrongs done, can never be friends to one another, but only those among whom crimes and lawsuits are few and slight. Therefore we say that gold and silver ought not to be allowed in the city, nor much of the vulgar sort of trade which is carried on by lending money, or rearing the meaner kinds of live stock; but only the produce of agriculture, and only so much of this as will not compel us in pursuing it to neglect that for the sake of which riches exist,—I mean, soul and body, which without gymnastics, and without education, will never be worth anything; and therefore, as we have said not once but many times, the care of riches should have the last place in our thoughts. For there are in all three things about which every man has an interest; and the interest about money, when rightly regarded, is the third and lowest of them: midway comes the interest of the body; and, first of all, that of the soul; and the state which we are describing will have been rightly constituted if it ordains honours according to this scale. But if, in any of the laws which have been 744 ordained, health has been preferred to temperance, or wealth to health and temperate habits, that law must clearly be wrong. Wherefore, also, the legislator ought often to impress upon himself the question—‘What do I want?’ and ‘Do I attain my aim, or do I miss the mark?’ In this way, and in this way only, he may acquit himself and free others from the work of legislation.

Let the allottee then hold his lot upon the conditions which we have mentioned [1](#) .

The citizens to be arranged in classes according to their census.

It would be well that every man should come to the colony having all things equal; but seeing that this is not possible, and one man will have greater possessions than another, for many reasons and in particular in order to preserve equality in special crises of the state, qualifications of property must be unequal, in order that offices and contributions and distributions may be proportioned to the value of each person's wealth, and not solely to the virtue of his ancestors or himself, nor yet to the strength and beauty of his person, but also to the measure of his wealth or poverty; and so by a law of inequality, which will be in proportion to his wealth, he will receive honours and offices as equally as possible, and there will be no quarrels and disputes. To which end there should be four different standards appointed according to the amount of property: there should be a first and a second and a third and a fourth class, in which the citizens will be placed, and they will be called by these or similar names: they may continue in the same rank, or pass into another in any individual case, on becoming richer from being poorer, or poorer from being richer. The form of law which I should propose as the natural sequel would be as follows:—In a state which is desirous of being saved from the greatest of all plagues—not faction, but rather distraction—there should exist among the citizens neither extreme poverty, nor, again, excess of wealth, for both are productive of both these evils. Now the legislator should determine what is to be the limit of poverty or wealth. Let the limit of poverty be the value of the lot; this ought to be preserved, and no ruler, nor any one else who aspires after a reputation for virtue, will allow the lot to be impaired in any case. This the legislator gives as a measure, and he will permit a man to acquire double or triple, or as much as four times the amount of this ¹. But if a person have yet greater riches, whether he has found them, or they have been given to him, or he has made them in business, or has acquired by any stroke of fortune that which is in excess of the measure, if he ⁷⁴⁵give back the surplus to the state, and to the Gods who are the patrons of the state, he shall suffer no penalty or loss of reputation; but if he disobeys this our law, any one who likes may inform against him and receive half the value of the excess, and the delinquent shall pay a sum equal to the excess out of his own property, and the other half of the excess shall belong to the Gods. And let every possession of every man, with the exception of the lot, be publicly registered before the magistrates whom the law appoints, so that all suits about money may be easy and quite simple.

There are to be four such classes, the lowest not falling below the lot, and the highest not exceeding five times the lot.

Twelve-fold division of city and country.

The land to be distributed into 5040 lots. Each lot to be divided,—half to be near the city, half more distant.

Less of good land to be given, more of inferior.

The next thing to be noted is, that the city should be placed as nearly as possible in the centre of the country; we should choose a place which possesses what is suitable for a city, and this may easily be imagined and described. Then we will divide the city into twelve portions, first founding temples to Hestia, to Zeus and to Athene, in a spot which we will call the Acropolis, and surround with a circular wall, making the division of the entire city and country radiate from this point. The twelve portions shall be equalized by the provision that those which are of good land shall be smaller, while those of inferior quality shall be larger. The number of the lots shall be 5040, and each of them shall be divided into two, and every allotment shall be composed of two such sections; one of land near the city, the other of land which is at a distance¹. This arrangement shall be carried out in the following manner: The section which is near the city shall be added to that which is on the borders, and form one lot, and the portion which is next nearest shall be added to the portion which is next farthest; and so of the rest. Moreover, in the two sections of the lots the same principle of equalization of the soil ought to be maintained; the badness and goodness shall be compensated by more and less. And the legislator shall divide the citizens into twelve parts, and arrange the rest of their property, as far as possible, so as to form twelve equal parts; and there shall be a registration of all. After this they shall assign twelve lots to twelve Gods, and call them by their names, and dedicate to each God their several portions, and call the tribes after them. And they shall distribute the twelve divisions of the city in the same way in which they divided the country; and every man shall have two habitations², one in the centre of the country, and the other at the extremity. Enough of the manner of settlement.

Twelve tribes, named after twelve Gods.

Every citizen to have a town and a country house.

Now we ought by all means to consider that there can never be such a happy concurrence of circumstances as we have described; neither can all things coincide as they are wanted. Men who will not take offence at such a mode of living together, and will endure all their life long to have their property fixed at a moderate limit, and to beget children in accordance with our ordinances, and will allow themselves to be deprived of gold and other things which the legislator, as is evident from these enactments, will certainly forbid them; and will endure, further, the situation of the land with the city in the middle and dwellings round about;—all this is as if the legislator were telling his dreams, or making a city and citizens of wax. There is truth in these objections, and therefore every one should take to heart what I am going to say. Once more, then, the legislator shall appear and address us:—‘O my friends,’ he will say to us, ‘do not suppose me ignorant that there is a certain degree of truth in your words; but I am of opinion that, in matters which are not present but future, he who exhibits a pattern of that at which he aims, should in nothing fall short of the fairest and truest; and that if he finds any part of this work impossible of execution he should avoid and not execute it, but he should contrive to carry out that which is nearest and most akin to it; you must allow the legislator to perfect his design, and when it is perfected, you should join with him in considering what part of his legislation is expedient and what will arouse opposition; for surely the

But this is only a dream.

The legislator should first be allowed to perfect his design, and then we may consider how far it can be executed.

artist who is to be deemed worthy of any regard at all, ought always to make his work self-consistent.’

Having determined that there is to be a distribution into twelve parts, let us now see in what way this may be accomplished.

There is no difficulty in perceiving that the twelve parts admit of the greatest number of divisions of that which they include, or in seeing the other numbers which are consequent upon them, and are produced out of them up to 5040; wherefore the law ought to order phratries and demes and villages, and also military ranks and movements, as well as coins and measures, dry and liquid, and weights, so as to be commensurable and agreeable to one another. Nor should we fear the appearance of minuteness, if the law commands that all the vessels which a man possesses should

The study of arithmetic the most powerful instrument of education. But it may also encourage meanness, as among the Egyptians and Phoenicians.

Effects of soil and climate on national character.

have a common measure, when we consider generally that 747the divisions and variations of numbers have a use in respect of all the variations of which they are susceptible, both in themselves and as measures of height and depth, and in all sounds, and in motions, as well those which proceed in a straight direction, upwards or downwards, as in those which go round and round. The legislator is to consider all these things and to bid the citizens, as far as possible, not to lose sight of numerical order; for no single instrument of youthful education has such mighty power, both as regards domestic economy and politics, and in the arts, as the study of arithmetic. Above all, arithmetic stirs up him who is by nature sleepy and dull, and makes him quick to learn, retentive, shrewd, and aided by art divine he makes progress quite beyond his natural powers¹. All such things, if only the legislator, by other laws and institutions, can banish meanness and covetousness from the souls of men, so that they can use them properly and to their own good, will be excellent and suitable instruments of education. But if he cannot, he will unintentionally create in them, instead of wisdom, the habit of craft, which evil tendency may be observed in the Egyptians and Phoenicians, and many other races, through the general vulgarity of their pursuits and acquisitions, whether some unworthy legislator of theirs has been the cause, or some impediment of chance or nature. For we must not fail to observe, O Megillus and Cleinias, that there is a difference in places, and that some beget better men and others worse; and we must legislate accordingly. Some places are subject to strange and fatal influences by reason of diverse winds and violent heats, some by reason of waters; or, again, from the character of the food given by the earth, which not only affects the bodies of men for good or evil, but produces similar results in their souls. And in all such qualities those spots excel in which there is a divine inspiration, and in which the demigods have their appointed lots, and are propitious, not adverse, to the settlers in them. To all these matters the legislator, if he have any sense in him, will attend as far as man can, and frame his laws accordingly. And this is what you, Cleinias, must do, and to matters of this kind you must turn your mind since you are going to colonize a new country.

CLEINIAS.

Your words, Athenian Stranger, are excellent, and I will do as you say.

[\[Back to Table of Contents\]](#)

BOOK VI.

ATHENIAN STRANGER.

751 And now having made an end of the preliminaries we will proceed to the appointment of magistracies.

Laws VI.

Athenian, Cleinias.

CLEINIAS.

Very good.

ATH.

In the ordering of a state there are two parts: first, the number of the magistracies, and the mode of establishing them; and, secondly, when they have been established, laws again will have to be provided for each of them, suitable in nature and number. But before electing the magistrates let us stop a little and say a word in season about the election of them.

CLE.

What have you got to say?

ATH.

This is what I have to say;—every one can see, that although the work of legislation is a most important matter, yet if a well-ordered city superadd to good laws unsuitable offices, not only will there be no use in having the good laws,—not only will they be ridiculous and useless, but the greatest political injury and evil will accrue from them.

The appointment of officials a matter too important to be left to chance uneducated persons who are brought together for the first time.

CLE.

Of course.

ATH.

Then now, my friend, let us observe what will happen in the constitution of our intended state. In the first place, you will acknowledge that those who are duly appointed to magisterial power, and their families, should severally have given satisfactory proof of what they are, from youth upward until the time of election; in the next place, those who are to elect should have been trained in habits of law, and be well educated, that they may have a right judgment, and may be able to select or reject men whom they approve or disapprove, as they are worthy of either. But how can we

imagine that those who are brought together for the first time, and are strangers to one another, and also uneducated, will avoid making mistakes in the choice of magistrates?

CLE.

Impossible.

ATH.

The matter is serious, and excuses will not serve the turn. I will tell you, then, what you and I will have to do, since you, as you tell me, with nine others, have offered to settle the new state on behalf of the people of Crete, and I am to help you by the invention of the present romance. 752I certainly should not like to leave the tale wandering all over the world without a head;—a headless monster is such a hideous thing.

CLE.

Excellent, Stranger.

ATH.

Yes; and I will be as good as my word.

CLE.

Let us by all means do as you propose.

ATH.

That we will, by the grace of God, if old age will only permit us.

CLE.

But God will be gracious.

ATH.

Yes; and under His guidance let us consider a further point.

CLE.

What is it?

ATH.

Let us remember what a courageously mad and daring creation this our city is.

CLE.

What had you in your mind when you said that?

ATH.

I had in my mind the free and easy manner in which we are ordaining that the inexperienced colonists shall receive our laws. Now a man need not be very wise, Cleinias, in order to see that no one can easily receive laws at their first imposition. But if we could anyhow wait until those who have been imbued with them from childhood, and have been nurtured in them, and become habituated to them, take their part in the public elections of the state; I say, if this could be accomplished, and rightly accomplished by any way or contrivance,—then, I think that there would be very little danger, at the end of the time, of a state thus trained not being permanent.

The first magistrates must be elected by some already existing authority.

CLE.

A reasonable supposition.

ATH.

Then let us consider if we can find any way out of the difficulty; for I maintain, Cleinias, that the Cnosians, above all the other Cretans, should not be satisfied with barely discharging their duty to the colony, but they ought to take the utmost pains to establish the offices which are first created by them in the best and surest manner. Above all, this applies to the selection of the guardians of the law, who must be chosen first of all, and with the greatest care; the others are of less importance.

CLE.

What method can we devise of electing them?

ATH.

This will be the method:—Sons of the Cretans, I shall say to them, inasmuch as the Cnosians have precedence over the other states, they should, in common with those who join this settlement, choose a body of thirty-seven in all, nineteen of them being taken from the settlers, and the 753 remainder from the citizens of Cnosus. Of these latter the Cnosians shall make a present to your colony, and you yourself shall be one of the eighteen, and shall

The Cnosians, acting in concert with the new colonists, should appoint a body of 37 guardians of the law.

become a citizen of the new state; and if you and they cannot be persuaded to go, the Cnosians may fairly use a little violence in order to make you.

CLE.

But why, Stranger, do not you and Megillus take a part in our new city?

ATH.

O, Cleinias, Athens is proud, and Sparta too; and they are both a long way off. But you and likewise the other colonists are conveniently situated as you describe. I have been speaking of the way in which the new citizens may be best managed under present circumstances; but in after-ages, if the city continues to exist, let the election be on this wise. All who are horse or foot soldiers, or have seen military service at the proper ages when they were severally fitted for it¹, shall share in the election of magistrates; and the election shall be held in whatever temple the state deems most venerable, and every one shall carry his vote to the altar of the God, writing down on a tablet the name of the person for whom he votes, and his father's name, and his tribe, and ward; and at the side he shall write his own name in like manner. Any one who pleases may take away any tablet which he does not think properly filled up, and exhibit it in the Agora for a period of not less than thirty days. The tablets which are judged to be first, to the number of 300, shall be shown by the magistrates to the whole city, and the citizens shall in like manner select from these the candidates whom they prefer; and this second selection, to the number of 100, shall be again exhibited to the citizens; in the third, let any one who pleases select whom he pleases out of the 100, walking through the parts of victims, and let them choose for magistrates and proclaim the seven-and-thirty who have the greatest number of votes. But who, Cleinias and Megillus, will order for us in the colony all this matter of the magistrates, and the scrutinies of them? If we reflect, we shall see that cities which are in process of construction like ours must have some such persons, who cannot possibly be elected before there are any magistrates¹; and yet they must be elected in some way, and they are not to be inferior men, but the best possible. For as the proverb says, 'a good beginning is half the business;' and 'to have begun well' is praised by all, and in my opinion is a great deal more than half the business, and has never been praised by any one⁷⁵⁴enough.

In after-ages they shall be elected by the military class.

Manner of election.

CLE.

That is very true.

ATH.

Then let us recognize the difficulty, and make clear to our own minds how the beginning is to be accomplished. There is only one proposal which I have to offer, and that is one which, under our circumstances, is both necessary and expedient.

CLE.

What is it?

ATH.

I maintain that this colony of ours has a father and mother, who are no other than the colonizing state. Well I know that many colonies have been, and will be, at enmity with their parents. But in early days the child, as in a family, loves and is beloved; even if there come a time later when the tie is broken, still, while he is in want of education, he naturally loves his parents and is beloved by them, and flies to his relatives for protection, and finds in them his only natural allies in time of need; and this parental feeling already exists in the Cnosians, as is shown by their care of the new city; and there is a similar feeling on the part of the young city towards Cnosus. And I repeat what I was saying—for there is no harm in repeating a good thing—that the Cnosians should take a common interest in all these matters, and choose, as far as they can, the eldest and best of the colonists, to the number of not less than a hundred; and let there be another hundred of the Cnosians themselves. These, I say, on their arrival, should have a joint care that the magistrates should be appointed according to law, and that when they are appointed they should undergo a scrutiny. When this has been effected, the Cnosians shall return home, and the new city do the best she can for her own preservation and happiness. I would have the seven-and-thirty now, and in all future time, chosen to fulfil the following duties:—Let them, in the first place, be the guardians of the law; and, secondly, of the registers in which each one registers before the magistrate the amount of his property, excepting four minae which are allowed to citizens of the first class, three allowed to the second, two to the third, and a single mina to the fourth. And if any one, despising the laws for the sake of gain, be found to possess anything more which has not been registered, let all that he has in excess be confiscated, and let him be liable to a suit which shall be the reverse of honourable or fortunate. And let any one who will, indict him on the charge of loving base gains, and proceed against him before the guardians of the law. And if he be cast, let him lose his share of the public possessions, and when there is any public distribution, let him have nothing but his original lot; and let him be written down a condemned man as long as he lives, in some place in which any one who pleases can read about his offences. The guardian of the law shall not hold office longer than twenty years, and shall not be less than fifty years of age when he is elected; or if he is elected when he is sixty years of age, he shall hold office for ten years only; and upon the same principle, he must not imagine that he will be permitted to hold such an important office as that of guardian of the laws after he is seventy years of age, if he live so long.

Cnosus, the parent state, should take an interest in her offspring.

She should appoint a constituent body of 200 which will see to the first elections.

The 37 to be the guardians of the law and of the registers of property.

They should be between the ages of 50 and 70.

Generals to be taken from a list formed by them, three in

These are the three first ordinances about the guardians of the law; as the work of legislation progresses, each law in turn will assign to them their further duties. And now we may proceed in order to speak of the election of other officers; for generals have to be elected, and these again must have their ministers, commanders, and colonels of horse, and commanders of brigades of foot, who would be more rightly called by their popular name of brigadiers. The guardians of the law shall propose as generals men who are natives of the city, and a selection from the candidates proposed shall be made by those who are or have been of the age for military service. And if one who is not proposed is thought by somebody to be better than one who is, let him name whom he prefers in the place of whom, and make oath that he is better, and propose him; and whichever of them is approved by vote shall be admitted to the final selection; and the three who have the greatest number of votes shall be appointed generals, and superintendents of military affairs, after previously undergoing a scrutiny, like the guardians of the law. And let the generals thus elected propose twelve brigadiers, one for each tribe; and there shall be a right of counter-proposal as in the case of the generals, and the voting and decision shall take place in the same way. Until the prytanes and council are elected, the guardians of the law shall convene the assembly in some holy spot which is suitable to the purpose, placing the hoplites by themselves, and the cavalry by themselves, and in a third division all the rest of the army. All are to vote for the generals [and for the colonels of horse], but the brigadiers are to be voted for only by those who carry shields [i. e. the hoplites]. Let the body of cavalry choose phylarchs for the generals; but captains of light troops, or archers, or any other division of the army, shall be appointed by the generals for themselves. There only remains the appointment of officers of cavalry: these shall be proposed by the same persons who proposed the generals, and the election and the counter-proposal of other candidates shall be arranged in the same way as in the case of the generals, and let the cavalry vote and the infantry look on at the election; the two who have the greatest number of votes shall be the leaders of all the horse. Disputes about the voting may be raised once or twice; but if the dispute be raised a third time, the officers who preside at the several elections shall decide.

number, by those who are or have been soldiers.

The generals shall appoint 12 brigadiers.

The election of cavalry officers.

The council shall consist of 30×12 members,—360 will be a convenient number for sub-division. If we divide the whole number into four parts of ninety each, we get ninety counsellors for each class. First, all the citizens shall select candidates from the first class; they shall be compelled to vote, and, if they do not, shall be duly fined. When the candidates have been selected, some one shall mark them down; this shall be the business of the first day. And on the following day, candidates shall be selected from the second class in the same manner and under the same conditions as on the previous day; and on the third day a selection shall be made from the third class, at which every one may if he likes vote, and the three first classes shall be compelled to vote; but the fourth and lowest class shall be under no compulsion, and any member of this class who does not vote shall not be punished. On the fourth day candidates shall be selected from the fourth and smallest class; they shall be selected by all, but he who is of the fourth class shall suffer no penalty, nor he who is

The council to consist of 360 persons. The penalty for not voting at elections to the council shall vary with the class.

Details of the mode of election.

of the third, if he be not willing to vote; but he who is of the first or second class, if he does not vote shall be punished;—he who is of the second class shall pay a fine of triple the amount which was exacted at first, and he who is of the first class quadruple. On the fifth day the rulers shall bring out the names noted down, for all the citizens to see, and every man shall choose out of them, under pain, if he do not, of suffering the first penalty; and when they have chosen 180 out of each of the classes, they shall choose one-half of them by lot, who shall undergo a scrutiny:—These are to form the council for the year.

The mode of election which has been described is in a mean between monarchy and democracy, and such a mean 757 the state ought always to observe; for servants and masters never can be friends, nor good and bad, merely because they are declared to have equal privileges. For to unequals equals become unequal, if they are not harmonised by measure; and both by reason of equality, and by reason of inequality, cities are filled with seditions. The old saying, that ‘equality makes friendship,’ is happy and also true; but there is obscurity and confusion as to what sort of equality is meant. For there are two equalities which are called by the same name, but are in reality in many ways almost the opposite of one another; one of them may be introduced without difficulty, by any state or any legislator in the distribution of honours; this is the rule of measure, weight, and number, which regulates and apportions them. But there is another equality, of a better and higher kind, which is not so easily recognized. This is the judgment of Zeus; among men it avails but little; that little, however, is the source of the greatest good to individuals and states. For it gives to the greater more, and to the inferior less and in proportion to the nature of each; and, above all, greater honour always to the greater virtue, and to the less less; and to either in proportion to their respective measure of virtue and education. And this is justice, and is ever the true principle of states, at which we ought to aim, and according to this rule order the new city which is now being founded, and any other city which may be hereafter founded. To this the legislator should look,—not to the interests of tyrants one or more, or to the power of the people, but to justice always; which, as I was saying, is the distribution of natural equality among unequals in each case. But there are times at which every state is compelled to use the words, ‘just,’ ‘equal,’ in a secondary sense, in the hope of escaping in some degree from factions. For equity and indulgence are infractions of the perfect and strict rule of justice. And this is the reason why we are obliged to use the equality of the lot, in order to avoid the discontent of the people; and so we invoke God and fortune in our prayers, and beg that they themselves will direct the lot with a view to supreme justice. And therefore, although we are compelled to use both equalities, we should use that into which the element of chance enters as seldom as possible. 758

The state to be in a mean between monarchy and democracy.

Two kinds of equality, simple, and proportionate—

that is, the distribution of more to the superior, and of less to the inferior.

Equality, like justice, is often used in a lax sense, as when applied to the lot: the less there is of chance the better.

The council to be divided into twelve parts, each of which

Thus, O my friends, and for the reasons given, should a state act which would endure and be saved. But as a ship sailing on the sea has to be watched night and day, in like manner a city also is sailing on a sea of politics, and is liable to all sorts of insidious assaults; and therefore from morning to night, and from night to morning, rulers must join hands with rulers, and watchers with watchers, receiving and giving up their trust in a perpetual succession. Now a multitude can never fulfil a duty of this sort with anything like energy. Moreover, the greater number of the senators will have to be left during the greater part of the year to order their concerns at their own homes. They will therefore have to be arranged in twelve portions, answering to the twelve months, and furnish guardians of the state, each portion for a single month. Their business is to be at hand and receive any foreigner or citizen who comes to them, whether to give information, or to put one of those questions, to which, when asked by other cities, a city should give an answer, and to which, if she ask them herself, she should receive an answer; or again, when there is a likelihood of internal commotions, which are always liable to happen in some form or other, they will, if they can, prevent their occurring; or if they have already occurred, will lose no time in making them known to the city, and healing the evil. Wherefore, also, this which is the presiding body of the state ought always to have the control of their assemblies, and of the dissolutions of them, ordinary as well as extraordinary. All this is to be ordered by the twelfth part of the council, which is always to keep watch together with the other officers of the state during one portion of the year, and to rest during the remaining eleven portions.

will serve for a month.

Their duties.

Thus will the city be fairly-ordered. And now, who is to have the superintendence of the country, and what shall be the arrangement? Seeing that the whole city and the entire country have been both of them divided into twelve portions, ought there not to be appointed superintendents of the streets of the city, and of the houses, and buildings, and harbours, and the agora, and fountains, and sacred domains, and temples, and the like?

CLE.

To be sure there ought.

ATH.

Three kinds of officers necessary for the city:—(1) Priests, Interpreters, and Temple-Treasurers: (2) Wardens of the city: (3) Wardens of the Agora.

Athenian.

759 Let us assume, then, that there ought to be servants of the temples, and priests and priestesses. There must also be superintendents of roads and buildings, who will have a care of men, that they may do no harm, and also of beasts, both within the enclosure and in the suburbs. Three kinds of officers will thus have to be appointed, in order that the city may be suitably provided according to her needs. Those who have the care of the city shall be called wardens of the city; and those who have the care of the agora shall be called wardens of the agora; and those who have the care of the temples shall be called priests. Those who hold hereditary offices as priests or priestesses, shall not be disturbed; but if there be few or none such, as is probable at the foundation of a new city, priests and priestesses shall be appointed to be servants of the Gods who have no servants. Some of our officers shall be elected, and others appointed by lot, those who are of the people and those who are not of the people mingling in a friendly manner in every place and city, that the state may be as far as possible of one mind. The officers of the temples shall be appointed by lot; in this way their election will be committed to God, that He may do what is agreeable to Him. And he who obtains a lot shall undergo a scrutiny, first, as to whether he is sound of body and of legitimate birth; and in the second place, in order to show that he is of a perfectly pure family, not stained with homicide or any similar impiety in his own person, and also that his father and mother have led a similar unstained life. Now the laws about all divine things should be brought from Delphi, and interpreters appointed, under whose direction they should be used. The tenure of the priesthood should always be for a year and no longer; and he who will duly execute the sacred office, according to the laws of religion, must be not less than sixty years of age,—the laws shall be the same about priestesses. As for the interpreters, they shall be appointed thus:—let the twelve tribes be distributed into groups of four, and let each group select four, one out of each tribe within the group, three times; and let the three who have the greatest number of votes [out of the twelve appointed by each group], after undergoing a scrutiny, nine in all, be sent to Delphi, in order that the God may return one out of each triad; their age shall be the same as that of the priests, and the scrutiny of them shall be conducted in the same manner; let them be interpreters for life, and when any one dies let the four tribes select another from the tribe of the deceased. Moreover, besides priests and interpreters, there must be treasurers, who will take charge of the property of the several temples, and of the sacred domains, and shall have authority over the produce and the letting of 760 them; and three of them shall be chosen from the highest classes for the greater temples, and two for the lesser, and one for the least of all; the manner of their election and the scrutiny of them shall be the same as that of the generals [1](#). This shall be the order of the temples.

Mixture of classes in election to offices.

Election of priests and priestesses,

of interpreters,

and of temple-treasurers.

The wardens of the country.

Five to keep watch in each division with twelve young men appointed by them.

Let everything have a guard as far as possible. Let the defence of the city be committed to the generals, and taxiarchs, and hipparchs, and phylarchs, and prytanes, and the wardens of the city, and of the agora, when the election of them has been completed. The defence of the country shall be provided for as follows:—The entire land has been already distributed into twelve as nearly as possible equal parts, and let the tribe allotted to a division provide annually for it five wardens of the country and commanders of the watch; and let each body of five have the power of selecting twelve others out of the youth of their own tribe,—these shall be not less than twenty-five years of age, and not more than thirty. And let there be allotted to them severally every month the various districts, in order that they may all acquire knowledge and experience of the whole country. The term of service for commanders and for watchers shall continue during two years. After having had their stations allotted to them, they will go from place to place in regular order, making their round from left to right as their commanders direct them; (when I speak of going to the right, I mean that they are to go to the east). And at the commencement of the second year, in order that as many as possible of the guards may not only get a knowledge of the country at any one season of the year, but may also have experience of the manner in which different places are affected at different seasons of the year, their then commanders shall lead them again towards the left, from place to place in succession, until they have completed the second year. In the third year other wardens of the country shall be chosen and commanders of the watch, five for each division, who are to be the superintendents of the bands of twelve. While on service at each station, their attention shall be directed to the following points:—In the first place, they shall see that the country is well protected against enemies; they shall trench and dig wherever this is required, and, as far as they can, they shall by fortifications keep off the evil-disposed, in order to prevent them from doing any harm to the country or the property; they shall use the beasts of burden and the labourers whom they find on the spot: these will be their instruments whom they will superintend, taking them, as far as possible, at the times when they are not engaged in their regular business. They shall make every part of the country inaccessible to enemies, and as accessible as possible to friends¹; there shall be ways for man and beasts of burden and for cattle, and they shall take care to have them always as smooth as they can; and shall provide against the rains doing harm instead of good to the land, when they come down from the mountains into the hollow dells; and shall keep in the overflow by the help of works and ditches, in order that the valleys, receiving and drinking up the rain from heaven, and providing fountains and streams in the fields and regions which lie underneath, may furnish even to the dry places plenty of good water. The fountains of water, whether of rivers or of springs, shall be ornamented with plantations and buildings for beauty; and let them bring together the streams in subterraneous channels, and make all things plenteous; and if there be a sacred grove or dedicated precinct in the neighbourhood, they shall conduct the water to the actual temples of the Gods, and so beautify them at all seasons of the year. Everywhere in such places the youth shall make gymnasia for themselves, and warm baths for the aged, placing

A different division to be taken every month, and the circuit of the land twice made in their two years' service.

Their duties:—Protection of the country;

road-making;

the care of fountains and streams;

and of irrigation.

Gymnasia for youth.

Warm baths for the aged rustic, better than a doctor.

by them abundance of dry wood, for the benefit of those labouring under disease—there the weary frame of the rustic, worn with toil, will receive a kindly welcome², far better than he would at the hands of a not over-wise doctor.

The building of these and the like works will be useful and ornamental; they will provide a pleasing amusement, but they will be a serious employment too; for the sixty wardens will have to guard their several divisions, not only with a view to enemies, but also with an eye to professing friends. When a quarrel arises among neighbours or citizens, and any one whether slave or freeman wrongs another, let the five wardens decide small matters on their own authority; but where the charge against another relates to greater matters, the seventeen composed of the fives and twelves, shall determine any charges which one man brings against another, not involving more than three minae¹. Every judge and magistrate shall be liable to give an account of his conduct in office, except those who, like kings, have the final decision. Moreover, as regards the aforesaid wardens of the country, if they do any wrong to those of whom they have the care, whether by imposing upon them unequal tasks, or 762by taking the produce of the soil or implements of husbandry without their consent; also if they receive anything in the way of a bribe, or decide suits unjustly, or if they yield to the influences of flattery, let them be publicly dishonoured; and in regard to any other wrong which they do to the inhabitants of the country, if the question be of a mina, let them submit to the decision of the villagers in the neighbourhood; but in suits of greater amount, or in the case of lesser if they refuse to submit, trusting that their monthly removal into another part of the country will enable them to escape—in such cases the injured party may bring his suit in the common court, and if he obtain a verdict he may exact from the defendant, who refused to submit, a double penalty.

The wardens of the country shall decide minor cases.

They should be careful of oppressing the inhabitants.

The wardens and the overseers of the country, while on their two years' service, shall have common meals at their several stations, and shall all live together; and he who is absent from the common meal, or sleeps out, if only for one day or night, unless by order of his commanders, or by reason of absolute necessity, if the five denounce him and inscribe his name in the agora as not having kept his guard, let him be deemed to have betrayed the city, as far as lay in his power, and let him be disgraced and beaten with impunity by any one who meets him and is willing to punish him. If any of the commanders is guilty of such an irregularity, the whole company of sixty shall see to it, and he who is cognisant of the offence, and does not bring the offender to trial, shall be amenable to the same laws as the younger offender himself, and shall pay a heavier fine, and be incapable of ever commanding the young. The guardians of the law are to be careful inspectors of these matters, and shall either prevent or punish offenders. Every man should remember the universal rule, that he who is not a good servant will not be a good master; a man should pride himself more upon serving well than upon commanding well: first upon serving the laws, which is also the service of the Gods; in the second place, upon having served ancient and honourable men in the days of his youth.

Common meals.

No sleeping out.

The service of the laws is the service of the Gods.

The wardens of the country are to wait on themselves.

A man should acquire an exact knowledge of his own country.

Furthermore, during the two years in which any one is a warden of the country, his daily food ought to be of a simple and humble kind. When the twelve have been chosen, let them and the five meet together, and determine that they will be their own servants, and, like servants, will not have other slaves and servants for their own use, neither will they use those of the villagers and husbandmen for their private advantage, but for the public service only; and in general they should make up their minds to live independently by themselves, servants of each other and of themselves. Further, at all seasons of the year, summer and winter alike, let them be under arms and survey minutely the whole country; thus they will at once keep guard, and at the same time acquire a perfect knowledge of every locality. There can be no more important kind of information than the exact knowledge of a man's own country; and for this as well as for more general reasons of pleasure and advantage, hunting with dogs and other kinds of sports should be pursued by the young. The service to whom this is committed may be called the secret police¹ or wardens of the country; the name does not much signify, but every one who has the safety of the state at heart will use his utmost diligence in this service.

After the wardens of the country, we have to speak of the election of wardens of the agora and of the city. The wardens of the country were sixty in number, and the wardens of the city will be three, and will divide the twelve parts of the city into three; like the former, they shall have care of the ways, and of the different high roads which lead out of the country into the city, and of the buildings, that they may be all made according to law;—also of the waters, which the guardians of the supply preserve and convey to them, care being taken that they may reach the fountains pure and abundant, and be both an ornament and a benefit to the city. These also should be men of influence, and at leisure to take care of the public interest. Let every man propose as warden of the city any one whom he likes out of the highest class, and when the vote has been given on them, and the number is reduced to the six who have the greatest number of votes, let the electing officers choose by lot three out of the six, and when they have undergone a scrutiny let them hold office according to the laws laid down for them. Next, let the wardens of the agora be elected in like manner, out of the first and second class, five in number: ten are to be first elected, and out of the ten five are to be chosen by lot, as in the election of the wardens of the city:—these when they have undergone a scrutiny are to be declared magistrates. Every one shall vote for every one, and he² who will not vote, if he be informed against before the magistrates, shall be fined fifty drachmae, and shall also be deemed a bad citizen. Let any one who likes go to the assembly and to the general council; it shall be compulsory to go on citizens of the first and second class, and they shall pay a fine of ten drachmae if they be found not answering to their names at the assembly. But the third and fourth class shall be under no compulsion, and shall be let off without a fine, unless the magistrates have commanded all to be present, in consequence of some urgent necessity. The wardens of the agora shall observe the order appointed by law for the agora, and shall have the charge of the temples and fountains which are in the agora; and they shall see that no one injures anything, and punish him who does, with stripes

The wardens of the city are to be three, the wardens of the agora to be five in number.

The manner of electing them.

Powers of the wardens of the city and agora.

and bonds, if he be a slave or stranger; but if he be a citizen who misbehaves in this way, they shall have the power themselves of inflicting a fine upon him to the amount of a hundred drachmae, or with the consent of the wardens of the city up to double that amount. And let the wardens of the city have a similar power of imposing punishments and fines in their own department; and let them impose fines by their own authority, up to a mina, or up to two minae with the consent of the wardens of the agora.

In the next place, it will be proper to appoint directors of music and gymnastic, two kinds of each—of the one kind the business will be education, of the other, the superintendence of contests. In speaking of education, the law means to speak of those who have the care of order and instruction in gymnasia and schools, and of the going to school, and of school buildings for boys and girls; and in speaking of contests, the law refers to the judges of gymnastics and of music; these again are divided into two classes, the one having to do with music, the other with gymnastics; and the same who judge of the gymnastic contests of men, shall judge of horses; but in music there shall be one set of judges of solo singing, and of imitation—I mean of rhapsodists, players on the harp, the flute and the like, and another who shall judge of choral song. First of all, we must choose directors for the choruses of boys, and men, and maidens, whom they shall follow in the amusement of the dance, and for our other musical arrangements;—one director will be enough for the choruses, and he should be not less than forty years of age. One director will also be enough to introduce the solo singers, and to give judgment on the competitors, and he ought not to be less than thirty years of age. The director and manager of the choruses shall be elected after the following manner:—Let any persons who commonly take an interest in such matters go to the meeting, and be fined if they do not go (the guardians of the law shall judge of their fault), but those who have no interest shall not be compelled. The elector shall propose as director some one who understands music, and he in the scrutiny may be challenged on the one part by those who say he has no skill, and defended on the other hand by those who say that he has. Ten are to be elected by vote, and he of the ten who is chosen by lot shall undergo a scrutiny, and lead the choruses for a year according to law. And in like manner the competitor who wins the lot shall be leader of the solo and concert music for that year; and he who is thus elected shall deliver the award to the judges. In the next place, we have to choose judges in the contests of horses and of men; these shall be selected from the third and also from the second class of citizens, and the three first classes shall be compelled to go to the election, but the lowest may stay away with impunity; and let there be three elected by lot out of the twenty who have been chosen previously, and they must also have the vote and approval of the examiners. But if any one is rejected in the scrutiny at any ballot or decision, others shall be chosen in the same manner, and undergo a similar scrutiny.

Two kinds of directors of music and of gymnastic:—(1) instructors; (2) judges.

The three judges of gymnastic shall judge of horses also. In music there shall be one judge of the solo singers, and one of the choruses.

The manner of electing the judges.

The minister of the education of youth the

There remains the minister of the education of youth, male and female; he too will rule according to law; one such minister will be sufficient, and he must be fifty years old, and have children lawfully begotten, both boys and girls by preference, at any rate, one or the other. He who is elected, and he who is the elector, should consider that of all the great offices of state this is the greatest; for the first shoot of any plant, if it makes a good start towards the attainment of its natural excellence, has the greatest effect on its maturity; and this is not only true of plants, but of animals ⁷⁶⁶wild and tame, and also of men. Man, as we say, is a tame or civilized animal; nevertheless, he requires proper instruction and a fortunate nature, and then of all animals he becomes the most divine and most civilized ¹; but if he be insufficiently or ill educated he is the most savage of earthly creatures. Wherefore the legislator ought not to allow the education of children to become a secondary or accidental matter. In the first place, he who would be rightly provident about them, should begin by taking care that he is elected, who of all the citizens is in every way best; him the legislator shall do his utmost to appoint guardian and superintendent. To this end all the magistrates, with the exception of the council and prytanes, shall go to the temple of Apollo, and elect by ballot him of the guardians of the law whom they severally think will be the best superintendent of education. And he who has the greatest number of votes, after he has undergone a scrutiny at the hands of all the magistrates who have been his electors, with the exception of the guardians of the law,—shall hold office for five years; and in the sixth year let another be chosen in like manner to fill his office.

greatest of the officers of state.

He is to be elected by the magistrates, and to hold office for five years.

If any one dies while he is holding a public office, and more than thirty days before his term of office expires, let those whose business it is elect another to the office in the same manner as before. And if any one who is entrusted with orphans dies, let the relations both on the father's and mother's side, who are residing at home, including cousins, appoint another guardian within ten days, or be fined a drachma a day for neglect to do so.

A city which has no regular courts of law ceases to be a city; and again, if a judge is silent and says no more in preliminary proceedings than the litigants, as is the case in arbitrations, he will never be able to decide justly; wherefore a multitude of judges will not easily judge well, nor a few if they are bad. The point in dispute between the parties should be made clear; and time, and deliberation, and repeated examination, greatly tend to clear up doubts. For this reason, he who goes to law with another, should go first of all to his neighbours and friends who know best the questions at issue. And if he be unable to obtain from them a ⁷⁶⁷satisfactory decision, let him have recourse to another court; and if the two courts cannot settle the matter, let a third put an end to the suit.

Disputes to be referred (1) to a council of friends and neighbours: (2) to an ordinary court: (3) to a court of appeal.

Litigants may appoint their own tribunal.

Now the establishment of courts of justice may be regarded as a choice of magistrates, for every magistrate must also be a judge of some things; and the judge, though he be not a magistrate, yet in certain respects is a very important magistrate on the day on which he is determining a suit. Regarding then the judges also as magistrates, let us say who are fit to be judges, and of what they are to be judges, and how many of them are to judge in each suit. Let that be the supreme tribunal which the litigants appoint in common for themselves, choosing certain persons by agreement. And let there be two other tribunals: one for private causes, when a citizen accuses another of wronging him and wishes to get a decision; the other for public causes, in which some citizen is of opinion that the public has been wronged by an individual, and is willing to vindicate the common interests. And we must not forget to mention how the judges are to be qualified, and who they are to be. In the first place, let there be a tribunal open to all private persons who are trying causes one against another for the third time, and let this be composed as follows:—All the officers of state, as well annual as those holding office for a longer period, when the new year is about to commence, in the month following after the summer solstice, on the last day but one of the year, shall meet in some temple, and calling God to witness, shall dedicate one judge from every magistracy to be their first-fruits, choosing in each office him who seems to them to be the best, and whom they deem likely to decide the causes of his fellow-citizens during the ensuing year in the best and holiest manner. And when the election is completed, a scrutiny shall be held in the presence of the electors themselves, and if any one be rejected another shall be chosen in the same manner. Those who have undergone the scrutiny shall judge the causes of those who have declined the inferior courts, and shall give their vote openly. The councillors and other magistrates who have elected them shall be required to be hearers and spectators of the causes; and any one else may be present who pleases. If one man charges another with having intentionally decided wrong, let him go to the guardians of the law and lay his accusation before them, and he who is found guilty in such a case shall pay damages to the injured party equal to half the injury; but if he shall appear to deserve a greater penalty, the judges shall determine what additional punishment he shall suffer, and how much more he ought to pay to the public treasury, and to the party who brought the suit.

There will be courts (1) for private, and (2) for public causes.

The court of appeal: the judges to be selected from each magistracy.

768 In the judgment of offences against the state, the people ought to participate, for when any one wrongs the state all are wronged, and may reasonably complain if they are not allowed to share in the decision. Such causes ought to originate with the people, and they ought also to have the final decision of them, but the trial of them shall take place before three of the highest magistrates, upon whom the plaintiff and the defendant shall agree; and if they are not able to come to an agreement themselves, the council shall choose one of the two proposed. And in private suits, too, as far as is possible, all should have a share; for he who has no share in the administration of justice, is apt to imagine that he has no share in the state at all. And for this reason there shall be a court of law in every tribe, and the judges shall be chosen by lot;—they shall give

Public suits should originate with the people, and should be decided by them. In private suits, too, all should share.

The courts of the tribes.

Athenian, Cleinias.

their decisions at once, and shall be inaccessible to entreaties. The final judgment shall rest with that court which, as we maintain, has been established in the most incorruptible form of which human things admit: this shall be the court established for those who are unable to get rid of their suits either in the courts of neighbours or of the tribes.

Thus much of the courts of law, which, as I was saying, cannot be precisely defined either as being or not being offices; a superficial sketch has been given of them, in which some things have been told and others omitted. For the right place of an exact statement of the laws respecting suits, under their several heads, will be at the end of the body of legislation;—let us then expect them at the end¹. Hitherto our legislation has been chiefly occupied with the appointment of offices. Perfect unity and exactness, extending to the whole and every particular of political administration, cannot be attained to the full, until the discussion shall have a beginning, middle, and end, and is complete in every part. At present we have reached the election of magistrates, and this may be regarded as a sufficient termination of what has preceded. And now there need no longer be any delay or hesitation in beginning the work of legislation.

From magistrates we proceed to laws.

CLE.

I like what you have said, Stranger; and I particularly like your manner of tacking on the beginning of your new discourse to the end of the former one.

ATH.

Thus far, then, the old men's rational pastime has gone off well.

CLE.

You mean, I suppose, their serious and noble pursuit?

ATH.

Perhaps; but I should like to know whether you and I are agreed about a certain thing.

CLE.

About what thing?

ATH.

You know the endless labour which painters expend upon their pictures—they are always putting in or taking out colours, or whatever be the term which artists employ; they seem as if they would never cease touching up their works, which are always being made brighter and more beautiful.

Laws, like pictures, require renewal in the course of ages.

CLE.

I know something of these matters from report, although I have never had any great acquaintance with the art.

ATH.

No matter; we may make use of the illustration notwithstanding:—Suppose that some one had a mind to paint a figure in the most beautiful manner, in the hope that his work instead of losing would always improve as time went on—do you not see that being a mortal, unless he leaves some one to succeed him who will correct the flaws which time may introduce, and be able to add what is left imperfect through the defect of the artist, and who will further brighten up and improve the picture, all his great labour will last but a short time?

CLE.

True.

ATH.

And is not the aim of the legislator similar? First, he desires that his laws should be written down with all possible exactness; in the second place, as time goes on and he has made an actual trial of his decrees, will he not find omissions? Do you imagine that there ever was a legislator so foolish as not to know that many things are necessarily omitted, which some one coming after him must correct, if the constitution and the order of government is not to deteriorate, but to improve in the state which he has established?

CLE.

Assuredly, that is the sort of thing which every one would desire.

ATH.

And if any one possesses any means of accomplishing this by word or deed, or has any way great or small by which he can teach a person to understand how he can maintain and amend the laws, he should finish what he has to say, and not leave the work incomplete.

The guardians of the law should be also legislators.

CLE.

By all means.

ATH.

770And is not this what you and I have to do at the present moment?

CLE.

What have we to do?

ATH.

As we are about to legislate and have chosen our guardians of the law, and are ourselves in the evening of life, and they as compared with us are young men, we ought not only to legislate for them, but to endeavour to make them not only guardians of the law but legislators themselves, as far as this is possible.

CLE.

Certainly; if we can.

ATH.

At any rate, we must do our best.

CLE.

Of course.

ATH.

We will say to them,—O friends and saviours of our laws, in laying down any law, there are many particulars which we shall omit, and this cannot be helped; at the same time, we will do our utmost to describe what is important, and will give an outline which you shall fill up. And I will explain on what principle you are to act. Megillus and Cleinias and I have often spoken to one another touching these matters, and we are of opinion that we have spoken well. And we hope that you will be of the same mind with us, and become our disciples, and keep in view the things which in our united opinion the legislator and guardian of the law ought to keep in view. There was one main point about which we were agreed—that a man's whole energies throughout life should be devoted to the acquisition of the virtue proper to a man, whether this was to be gained by study, or habit, or some mode of acquisition, or desire, or opinion, or knowledge—and this applies equally to men and women, old and young—the aim of all should always be such as I have described; anything which may be an impediment, the good man ought to show that he utterly disregards. And if at last necessity plainly compels him to be an outlaw from his native land, rather than bow his neck to the yoke of slavery and be ruled by inferiors, and he has to fly, an

A man's whole energies to be devoted to virtue.

If the government of his country grows corrupt, he must go into exile.

exile he must be and endure all such trials, rather than accept another form of government, which is likely to make men worse. These are our original principles; and do you now, fixing your eyes upon the standard of what a man and a citizen ought or ought not to be, praise and blame the laws—blame those which have not this power of making the citizen better, but embrace those which have; and with 771 gladness receive and live in them; bidding a long farewell to other institutions which aim at goods, as they are termed, of a different kind.

Let us proceed to another class of laws, beginning with their foundation in religion. And we must first return to the number 5040—the entire number had, and has, a great many convenient divisions, and the number of the tribes which was a twelfth part of the whole, being correctly formed by 21×20 [$5040 \div (21 \times 20)$, i.e. $5040 \div 420 = 12$], also has them. And not only is the whole number divisible by twelve, but also the number of each tribe is divisible by twelve. Now every portion should be regarded by us as a sacred gift of Heaven, corresponding to the months and to the revolution of the universe¹. Every city has a guiding and sacred principle given by nature, but in some the division or distribution has been more right than in others, and has been more sacred and fortunate. In our opinion, nothing can be more right than the selection of the number 5040, which may be divided by all numbers from one to twelve with the single exception of eleven, and that admits of a very easy correction; for if, turning to the dividend (5040), we deduct two families, the defect in the division is cured. And the truth of this may be easily proved when we have leisure. But for the present, trusting to the mere assertion of this principle, let us divide the state; and assigning to each portion some God or son of a God, let us give them altars and sacred rites, and at the altars let us hold assemblies for sacrifice twice in the month—twelve assemblies for the tribes, and twelve for the city, according to their divisions; the first in honour of the Gods and divine things, and the second to promote friendship and ‘better acquaintance,’ as the phrase is, and every sort of good fellowship with one another. For people must be acquainted with those into whose families and whom they marry and with those to whom they give in marriage; in such matters, as far as possible, a man should deem it all important to avoid a mistake, and with this serious purpose let games be 772 instituted² in which youths and maidens shall dance together, seeing one another and being seen naked, at a proper age, and on a suitable occasion, not transgressing the rules of modesty.

The number 5040 and its numerous divisors.

Games to be instituted, at which youths and maidens will dance together in modest nakedness, as a preliminary to marriage.

The directors of choruses will be the superintendents and regulators of these games, and they, together with the guardians of the law, will legislate in any matters which we have omitted; for, as we said³, where there are numerous and minute details, the legislator must leave out something. And the annual officers who have experience, and know what is wanted, must make arrangements and improvements year by year, until such enactments and provisions are sufficiently determined. A ten years’ experience of sacrifices and dances, if extending to all particulars, will be quite sufficient; and if the legislator be alive they shall communicate with him, but if he be dead then the several officers shall refer the omissions which come under their notice to the guardians of the law, and correct

When experience has determined what customs are desirable, there shall rarely, if ever, be any further change.

them, until all is perfect; and from that time there shall be no more change, and they shall establish and use the new laws with the others which the legislator originally gave them, and of which they are never, if they can help, to change aught; or, if some necessity overtakes them, the magistrates must be called into counsel, and the whole people, and they must go to all the oracles of the Gods; and if they are all agreed, in that case they may make the change, but if they are not agreed, by no manner of means, and any one who dissents shall prevail, as the law ordains.

Whenever any one over twenty-five years of age, having seen and been seen by others, believes himself to have found a marriage connexion which is to his mind, and suitable for the procreation of children, let him marry if he be still under the age of five-and-thirty years; but let him first hear how he ought to seek after what is suitable and appropriate¹. For, as Cleinias says², every law should have a suitable prelude.

CLE.

You recollect at the right moment, Stranger, and do not miss the opportunity which the argument affords of saying a word in season.

ATH.

I thank you. We will say to him who is born of good parents,—O my son, you ought to make such a marriage as wise men would approve. Now they would advise you neither to avoid a poor marriage, nor specially to desire a rich one; but if other things are equal, always to honour inferiors, and with them to form connexions;—this will be for the benefit of the city and of the families which are united; for the equable and symmetrical tends infinitely more to virtue than the unmixed. And he who is conscious of being too headstrong, and carried away more than is fitting in all his actions, ought to desire to become the relation of orderly parents; and he who is of the opposite temper ought to seek the opposite alliance. Let there be one word concerning all marriages:—Every man shall follow, not after the marriage which is most pleasing to himself, but after that which is most beneficial to the state. For somehow every one is by nature prone to that which is likest to himself, and in this way the whole city becomes unequal in property and in disposition; and hence there arise in most states the very results which we least desire to happen. Now, to add to the law an express provision, not only that the rich man shall not marry into the rich family, nor the powerful into the family of the powerful, but that the slower natures shall be compelled to enter into marriage with the quicker, and the quicker with the slower, may awaken anger as well as laughter in the minds of many; for there is a difficulty in perceiving that the city ought to be well mingled like a cup, in which the maddening wine is hot and fiery, but when chastened by a soberer God, receives a fair associate and becomes an excellent and temperate drink¹. Yet in marriage no one is able to see that the same result occurs. Wherefore also the law must let alone such matters, but we should try to charm the spirits of men into believing the equability of their

In marriage there should be a union of opposite qualities.

In marriage every man should seek, not what is pleasantest to himself, but what is best for the state: the rich should marry the poor, the quicker natures the slower.

These principles can only be suggested; they cannot be enforced by law.

children's disposition to be of more importance than equality in excessive fortune when they marry; and him who is too desirous of making a rich marriage we should endeavour to turn aside by reproaches, not, however, by any compulsion of written law.

Let this then be our exhortation concerning marriage, and let us remember what was said before²—that a man should cling to immortality, and leave behind him children's children to be the servants of God in his place for ever. All this and much more may be truly said by way of prelude about the duty of marriage. But if a man will not listen, and remains unsocial and alien among his fellow-citizens, and is still unmarried at thirty-five years of age, let him pay a yearly fine;—he who is of the highest class shall pay a fine of a hundred drachmae, and he who is of the second class a fine of seventy drachmae; the third class shall pay sixty drachmae, and the fourth thirty drachmae, and let the money be sacred to Herè; he who does not pay the fine annually shall owe ten times the sum, which the treasurer of the goddess shall exact; and if he fails in doing so, let him be answerable and give an account of the money at his audit. He who refuses to marry shall be thus punished in money, and also be deprived of all honour which the younger show to the elder; let no young man voluntarily obey him, and, if he attempt to punish any one, let every one come to the rescue and defend the injured person, and he who is present and does not come to the rescue, shall be pronounced by the law to be a coward and a bad citizen. Of the marriage portion I have already spoken¹; and again I say for the instruction² of poor men that he who neither gives nor receives a dowry on account of poverty, has a compensation; for the citizens of our state are provided with the necessities of life, and wives will be less likely to be insolent, and husbands to be mean and subservient to them on account of property. And he who obeys this law will do a noble action; but he who will not obey, and gives or receives more than fifty drachmae as the price of the marriage garments if he be of the lowest, or more than a mina, or a mina-and-a-half, if he be of the third or second classes, or two minae if he be of the highest class, shall owe to the public treasury a similar sum, and that which is given or received shall be sacred to Herè and Zeus; and let the treasurers of these Gods exact the money, as was said before about the unmarried—that the treasurers of Herè were to exact the money, or pay the fine themselves.

The unmarried shall be fined and dishonoured.

No one need marry for money.

Marriage garments to be inexpensive.

Betrothals.

Marriage festivals to be moderate.

A man should be sober when he is engaged in the business of marriage; for children receive the impress of their parents, both in body and soul.

The betrothal by a father shall be valid in the first degree, that by a grandfather in the second degree, and in the third degree, betrothal by brothers who have the same father; but if there are none of these alive, the betrothal by a mother shall be valid in like manner; in cases of unexampled fatality, the next of kin and the guardians shall have authority. What are to be the rites before marriages, or any other sacred acts, relating either to future, present, or past marriages, shall be referred to the interpreters; and he who follows their advice may be satisfied. Touching the marriage festival, they shall assemble not more than five male and five female friends of both families, and a like number of members of the family of either sex, and no man shall spend more than his means will allow; he who is of the richest class may spend a mina,—he who is of the second, half a mina, and in the same proportion as the census of each decreases: all men shall praise him who is obedient to the law; but he who is disobedient shall be punished by the guardians of the law as a man wanting in true taste, and uninstructed in the laws of bridal song. Drunkenness is always improper, except at the festivals of the God who gave wine; and peculiarly dangerous, when a man is engaged in the business of marriage; at such a crisis of their lives a bride and bridegroom ought to have all their wits about them—they ought to take care that their offspring may be born of reasonable beings; for on what day or night Heaven will give them increase, who can say? Moreover, they ought not to be begetting children when their bodies are dissipated by intoxication, but their offspring should be compact and solid, quiet and compounded properly; whereas the drunkard is all abroad in all his actions, and is beside himself both in body and soul. Wherefore, also, the drunken man is bad and unsteady in sowing the seed of increase, and is likely to beget offspring who will be unstable and untrustworthy, and cannot be expected to walk straight either in body or mind. Hence during the whole year and all his life long, and especially while he is begetting children, he ought to take care and not intentionally do what is injurious to health, or what involves insolence and wrong; for he cannot help leaving the impression of himself on the souls and bodies of his offspring, and he begets children in every way inferior. And especially on the day and night of marriage should a man abstain from such things. For the beginning, which is also a God dwelling in man, preserves all things, if it meet with proper respect from each individual. He who marries is further to consider, that one of the two houses in the lot is the nest and nursery of his young, and there he is to marry and make a home for himself and bring up his children, going away from his father and mother. For in friendships there must be some degree of desire, in order to cement and bind together diversities of character; but excessive intercourse not having the desire which is created by time, insensibly dissolves friendships from a feeling of satiety; wherefore a man and his wife shall leave to his and her father and mother their own dwelling-places, and themselves go as to a colony and dwell there, and visit and be visited by their parents; and they shall beget and bring up children, handing on the torch of life from one generation to another, and worshipping the Gods according to law for ever.

‘A man shall leave his father and mother, and cleave unto his wife.’

Athenian, Megillus.

‘Handing on the torch of life.’

In the next place, we have to consider what sort of property will be most convenient. There is no difficulty either in understanding or acquiring most kinds of property, but there is great difficulty

Slaves the most troublesome kind of property.

in what relates to slaves. And the reason is, that we speak about them in a way which is right and which is not right; for what we say about our slaves is consistent and also inconsistent with our practice about them.

MEG.

I do not understand, Stranger, what you mean.

ATH.

I am not surprised, Megillus, for the state of the Helots among the Lacedaemonians is of all Hellenic forms of slavery the most controverted and disputed about, some approving and some condemning it; there is less dispute about the slavery which exists among the Heracleots, who have subjugated the Mariandynians, and about the Thessalian Penestae. Looking at these and the like examples, what ought we to do concerning property in slaves? I made a remark, in passing, which naturally elicited a question about my meaning from you. It was this:—We know that all would agree that we should have the best and most attached slaves whom we can get. For many a man has found his slaves better in every way than brethren or sons, and many times they have saved the lives and property of their masters and their whole house—such tales are well known.

Two kinds of slaves. There are good slaves, 'better than brethren or sons.'

MEG.

To be sure.

ATH.

But may we not also say that the soul of the slave is utterly corrupt, and that no man of sense ought to trust them? And the wisest of our poets, speaking of Zeus, says:

Another class are like brute animals, or are made so by the treatment of their masters.

'Far-seeing Zeus takes away half the understanding of men whom the day of slavery subdues.' 777

Different persons have got these two different notions of slaves in their minds—some of them utterly distrust their servants, and, as if they were wild beasts, chastise them with goads and whips, and make their souls three times, or rather many times, as slavish as they were before;—and others do just the opposite.

MEG.

True.

CLE.

Then what are we to do in our own country, Stranger, seeing that there are such differences in the treatment of slaves by their owners?

Athenian, Cleinias, Megillus.

ATH.

Well, Cleinias, there can be no doubt that man is a troublesome animal, and therefore he is not very manageable, nor likely to become so, when you attempt to introduce the necessary division of slave, and freeman, and master.

CLE.

That is obvious.

ATH.

He is a troublesome piece of goods, as has been often shown by the frequent revolts of the Messenians, and the great mischiefs which happen in states having many slaves who speak the same language, and the numerous robberies and lawless life of the Italian banditti, as they are called. A man who considers all this is fairly at a loss. Two remedies alone remain to us,—not to have the slaves of the same country, nor if possible, speaking the same language¹; in this way they will more easily be held in subjection: secondly, we should tend them carefully, not only out of regard to them, but yet more out of respect to ourselves. And the right treatment of slaves is to behave properly to them, and to do to them, if possible, even more justice than to those who are our equals; for he who naturally and genuinely reverences justice, and hates injustice, is discovered in his dealings with any class of men to whom he can easily be unjust. And he who in regard to the natures and actions of his slaves is undefiled by impiety and injustice, will best sow the seeds of virtue in them; and this may be truly said of every master, and tyrant, and of every other having authority in relation to his inferiors. Slaves ought to be punished as they deserve, and not admonished as if they were freemen, which will only make them conceited. The language used to a servant ought always to be that of a command², and we ought not to jest with them, whether they are males or females—this is a foolish way which many people have of setting up their slaves, and making the life of servitude more disagreeable both for them and for their masters.

Slaves should not be of the same country; they should be tended carefully and treated justly.

CLE.

True.

ATH.

Athenian, Cleinias.

Now that each of the citizens is provided, as far as possible, with a sufficient number of suitable slaves who can help him in what he has to do, we may next proceed to describe their dwellings.

CLE.

Very good.

ATH.

The city being new and hitherto uninhabited, care ought to be taken of all the buildings, and the manner of building each of them, and also of the temples and walls. These, Cleinias, were matters which properly came before the marriages;—but, as we are only talking, there is no objection to changing the order. If, however, our plan of legislation is ever to take effect, then the house shall precede the marriage if God so will, and afterwards we will come to the regulations about marriage; but at present we are only describing these matters in a general outline.

The houses should have come before marriages; but no matter.

CLE.

Quite true.

ATH.

The temples are to be placed all round the agora, and the whole city built on the heights in a circle¹, for the sake of defence and for the sake of purity. Near the temples are to be placed buildings for the magistrates and the courts of law; in these plaintiff and defendant will receive their due, and the places will be regarded as most holy, partly because they have to do with holy things, and partly because they are the dwelling-places of holy Gods: and in them will be held the courts in which cases of homicide and other trials of capital offences may fitly take place. As to the walls, Megillus, I agree with Sparta in thinking that they should be allowed to sleep in the earth, and that we should not attempt to disinter them²; there is a poetical saying, which is finely expressed, that ‘walls ought to be of steel and iron, and not of earth;’ besides, how ridiculous of us to be sending out our young men annually into the country to dig and to trench, and to keep off the enemy by fortifications, under the idea that they are not to be allowed to set foot in our territory, and then, that we should surround ourselves with a wall, which, in the first place, is by no means conducive to the health of cities, and is also apt to produce a certain effeminacy in the minds of the inhabitants, inviting men to run thither instead of repelling their enemies, and leading them to imagine that their safety is due not to their keeping guard day and night, but that when they are protected by walls and gates, then they may sleep in safety; as if they were not meant to labour, and did not know that true repose comes from

The city to be placed on the heights, and the temples, near which are the law-courts, to be built round the Agora.

The walls should slumber in the earth.

If cities are to have walls, the private houses should form them.

The rain should be made to flow off easily.

labour, and that disgraceful indolence and a careless temper of mind is only the renewal of trouble. But if men must have walls, the private houses ought to be so arranged from the first that the whole city may be one wall, having all the houses capable of defence by reason of their uniformity and equality towards the streets¹. The form of the city being that of a single dwelling will have an agreeable aspect, and being easily guarded will be infinitely better for security. Until the original building is completed, these should be the principal objects of the inhabitants; and the wardens of the city should superintend the work, and should impose a fine on him who is negligent; and in all that relates to the city they should have a care of cleanliness, and not allow a private person to encroach upon any public property either by buildings or excavations. Further, they ought to take care that the rains from heaven flow off easily, and of any other matters which may have to be administered either within or without the city. The guardians of the law shall pass any further enactments which their experience may show to be necessary, and supply any other points in which the law may be deficient. And now that these matters, and the buildings about the agora, and the gymnasia, and places of instruction, and theatres, are all ready and waiting for scholars and spectators, let us proceed to the subjects which follow marriage in the order of legislation.

CLE.

By all means.

ATH.

Assuming that marriages exist already, Cleinias, the mode of life during the year after marriage, before children are born, will follow next in order. In what way bride and bridegroom ought to live in a city which is to be superior to other cities, is a matter not at all easy for us to determine. There have been many difficulties already, but this will be the greatest of them, and the most disagreeable to the many. Still I cannot but say what appears to me to be right and true, Cleinias.

Life after marriage.

CLE.

780Certainly.

ATH.

He who imagines that he can give laws for the public conduct of states, while he leaves the private life of citizens wholly to take care of itself; who thinks that individuals may pass the day as they please, and that there is no necessity of order in all things; he, I say, who gives up the control of their private lives, and supposes that they will conform to law in their common and public life, is making a great mistake. Why have I made this remark? Why, because I am going to enact that the bridegrooms should live at the common tables, just as they did before marriage. This was a singularity when first enacted by the legislator in your

As at Sparta and Crete, the bridegroom should continue to live at the common tables.

parts of the world, Megillus and Cleinias, as I should suppose, on the occasion of some war or other similar danger¹, which caused the passing of the law, and which would be likely to occur in thinly-peopled places, and in times of pressure. But when men had once tried and been accustomed to a common table, experience showed that the institution greatly conducted to security; and in some such manner the custom of having common tables arose among you.

CLE.

Likely enough.

ATH.

I said that there may have been singularity and danger in imposing such a custom at first, but that now there is not the same difficulty. There is, however, another institution which is the natural sequel to this, and would be excellent, if it existed anywhere, but at present it does not. The institution of which I am about to speak is not easily described or executed; and would be like the legislator 'combing wool into the fire,' as people say, or performing any other impossible and useless feat.

CLE.

What is the cause, Stranger, of this extreme hesitation?

ATH.

You shall hear without any fruitless loss of time. That which has law and order in a state is the cause of every good, but that which is disordered or ill-ordered is often the ruin of that which is well-ordered; and at this point the argument is now waiting. For with you, Cleinias and Megillus, the common tables of men are, as I said, a heaven-born and admirable institution, but you are mistaken in leaving the women unregulated by law. They have no similar institution of public tables in the light of day, and just that part of the human race which is by nature prone to secrecy and stealth on account of their weakness—I mean the female sex—has been left without regulation by the legislator, which is a great mistake. And, in consequence of this neglect, many things have grown lax among you, which might have been far better, if they had been only regulated by law; for the neglect of regulations about women may not only be regarded as a neglect of half the entire matter¹, but in proportion as woman's nature is inferior to that of men in capacity for virtue, in that degree the consequence of such neglect is more than twice as important. The careful consideration of this matter, and the arranging and ordering on a common principle of all our institutions relating both to men and women, greatly conduces to the happiness of the state. But at present, such is the unfortunate condition of mankind, that no man of sense will even venture to speak of common tables in places and cities in which they have never been established at all; and how can any one avoid being utterly ridiculous, who attempts to compel women

Women should be drawn into the light of day, and not be left to themselves.

No one ventures to introduce common tables where they do not exist already; and women certainly will not submit to them.

to show in public how much they eat and drink? There is nothing at which the sex is more likely to take offence. For women are accustomed to creep into dark places, and when dragged out into the light they will exert their utmost powers of resistance, and be far too much for the legislator. And therefore, as I said before, in most places they will not endure to have the truth spoken without raising a tremendous outcry, but in this state perhaps they may. And if we may assume that our whole discussion about the state has not been mere idle talk, I should like to prove to you, if you will consent to listen, that this institution is good and proper; but if you had rather not, I will refrain.

CLE.

There is nothing which we should both of us like better, Stranger, than to hear what you have to say.

ATH.

Very good; and you must not be surprised if I go back a little, for we have plenty of leisure, and there is nothing to prevent us from considering in every point of view the subject of law.

CLE.

True.

ATH.

Then let us return once more to what we were saying at first. Every man should understand that the human race either had no beginning at all, and will never have an end, but always will be and has been; or that it began an immense while ago¹. 782

Antiquity of mankind.

CLE.

Certainly.

ATH.

Well, and have there not been constitutions and destructions of states, and all sorts of pursuits both orderly and disorderly, and diverse desires of meats and drinks always, and in all the world, and all sorts of changes of the seasons in which animals may be expected to have undergone innumerable transformations of themselves?

All sorts of changes have occurred in the course of ages.

CLE.

No doubt.

ATH.

And may we not suppose that vines appeared, which had previously no existence, and also olives, and the gifts of Demeter and her daughter, of which one Triptolemus was the minister, and that, before these existed, animals took to devouring each other as they do still?

The growth of vines, olives, corn.

CLE.

True.

ATH.

Again, the practice of men sacrificing one another still exists among many nations; while, on the other hand, we hear of other human beings who did not even venture to taste² the flesh of a cow and had no animal sacrifices, but only cakes and fruits dipped in honey, and similar pure offerings, but no flesh of animals; from these they abstained under the idea that they ought not to eat them, and might not stain the altars of the Gods with blood. For in those days men are said to have lived a sort of Orphic life, having the use of all lifeless things, but abstaining from all living things.

Some nations still sacrifice human beings; others are said to have abstained from animal food.

CLE.

Such has been the constant tradition, and is very likely true.

ATH.

Some one might say to us, What is the drift of all this?

CLE.

A very pertinent question, Stranger.

ATH.

And therefore I will endeavour, Cleinias, if I can, to draw the natural inference.

CLE.

Proceed.

Three great desires:—(1) of eating; (2) of drinking; (3) of sexual intercourse.

ATH.

I see that among men all things depend upon three wants and desires, of which the end is virtue, if they are rightly led by them, or the opposite if wrongly. Now these are eating and drinking, which begin at birth—every animal has a natural desire for them, and is violently excited, and rebels against him who says that he must not satisfy all his pleasures and appetites, and get rid of all the corresponding pains—and the third and greatest and sharpest want and desire breaks out last, and is the fire of sexual lust, which kindles in men every species of wantonness and madness. And these three disorders we must endeavour to master by the three great principles of fear and law and right reason; turning them away from that which is called pleasantest to the best, using the Muses and the Gods who preside over contests to extinguish their increase and influx.

Three counteracting principles:—fear, law, and right reason.

But to return:—After marriage let us speak of the birth of children, and after their birth of their nurture and education. In the course of discussion the several laws will be perfected, and we shall at last arrive at the common tables. Whether such associations are to be confined to men, or extended to women also, we shall see better when we approach and take a nearer view of them; and we may then determine what previous institutions are required and will have to precede them. As I said before, we shall see them more in detail, and shall be better able to lay down the laws which are proper or suited to them.

CLE.

Very true.

ATH.

Let us keep in mind the words which have now been spoken; for hereafter there may be need of them.

CLE.

What do you bid us keep in mind?

ATH.

That which we comprehended under the three words—first, eating, secondly, drinking, thirdly, the excitement of love.

CLE.

We shall be sure to remember, Stranger.

ATH.

Very good. Then let us now proceed to marriage, and teach persons in what way they shall beget children, threatening them, if they disobey, with the terrors of the law.

CLE.

What do you mean?

ATH.

The bride and bridegroom should consider that they are to produce for the state the best and fairest specimens of children which they can. Now all men who are associated in any action always succeed when they attend and give their mind to what they are doing, but when they do not give their mind or have no mind, they fail; wherefore let the bridegroom give his mind to the bride and to the begetting of children, and the bride in like manner give her mind to the bridegroom, and particularly at the time when their children are not yet born. And let the women whom we 784 have chosen be the overseers of such matters, and let them in whatever number, large or small, and at whatever time the magistrates may command, assemble every day in the temple of Eileithyia during a third part of the day, and being there assembled, let them inform one another of any one whom they see, whether man or woman, of those who are begetting children, disregarding the ordinances given at the time when the nuptial sacrifices and ceremonies were performed. Let the begetting of children and the supervision of those who are begetting them continue ten years and no longer, during the time when marriage is fruitful. But if any continue without children up to this time, let them take counsel with their kindred and with the women holding the office of overseer and be divorced for their mutual benefit. If, however, any dispute arises about what is proper and for the interest of either party, they shall choose ten of the guardians of the law and abide by their permission and appointment. The women who preside over these matters shall enter into the houses of the young, and partly by admonitions and partly by threats make them give over their folly and error: if they persist, let the women go and tell the guardians of the law, and the guardians shall prevent them. But if they too cannot prevent them, they shall bring the matter before the people; and let them write up their names and make oath that they cannot reform such and such an one; and let him who is thus written up, if he cannot in a court of law convict those who have inscribed his name, be deprived of the privileges of a citizen in the following respects:—let him not go to weddings nor to the thanksgivings after the birth of children; and if he go, let any one who pleases strike him with impunity; and let the same regulations hold about women: let not a woman be allowed to appear abroad, or receive honour, or go to nuptial and birthday festivals, if she in like manner be written up as acting disorderly and cannot obtain a verdict. And if, when they themselves have done begetting children according to the law, a

The bride and bridegroom should attend to their business.

Athenian.

The women who are the overseers of marriage shall see that the provisions of the law are observed.

Every phratry to have inscribed upon a wall the names of its living members.

The ages for marriage, for office, and for war.

man or woman have connexion with another man or woman who are still begetting children, let the same penalties be inflicted upon them as upon those who are still having a family; and when the time for procreation has passed let the man or woman who refrains in such matters be held in esteem, and let those who do not refrain be held in the contrary of esteem—that is to say, disesteem. Now, if the greater part of mankind behave modestly, the enactments of law may be left to slumber; but, if they are disorderly, the enactments having been passed, let them be carried into execution. To every man the first year is the beginning of life, and the time of birth ought to be written down in the temples of their fathers as the beginning of existence to every child, whether boy or girl. Let every phratia have inscribed on a whited wall the names of the successive archons by whom the years are reckoned. And near to them let the living members of the phratia be inscribed, and when they depart life let them be erased. The limit of marriageable ages for a woman shall be from sixteen to twenty years at the longest,—for a man, from thirty to thirty-five years; and let a woman hold office at forty, and a man at thirty years. Let a man go out to war from twenty to sixty years, and for a woman, if there appear any need to make use of her in military service, let the time of service be after she shall have brought forth children up to fifty years of age; and let regard be had to what is possible and suitable to each.

[\[Back to Table of Contents\]](#)

BOOK VII.

And now, assuming children of both sexes to have been born, it will be proper for us to consider, in the next place, their nurture and education; this cannot be left altogether unnoticed, and yet may be thought a subject fitted rather for precept and admonition than for law. In private life there are many little things, not always apparent, arising out of the pleasures and pains and desires of individuals, which run counter to the intention of the legislator, and make the characters of the citizens various and dissimilar:—this is an evil in states; for by reason of their smallness and frequent occurrence, there would be an unseemliness and want of propriety in making them penal by law; and if made penal, they are the destruction of the written law because mankind get the habit of frequently transgressing the law in small matters. The result is that you cannot legislate about them, and still less can you be silent. I speak somewhat darkly, but I shall endeavour also to bring my wares into the light of day, for I acknowledge that at present there is a want of clearness in what I am saying.

Laws VII.

Athenian, Cleinias.

Education comes next.

There are many small matters which cannot be legislated about, but need some other kind of regulation.

CLE.

Very true.

ATH.

Am I not right in maintaining that a good education is that which tends most to the improvement of mind and body?

CLE.

Undoubtedly.

ATH.

And nothing can be plainer than that the fairest bodies are those which grow up from infancy in the best and straightest manner?

CLE.

Certainly.

ATH.

And do we not further observe that the first shoot of every living thing is by far the greatest and fullest? Many will even contend that a man at twenty-five does not reach twice the height which he attained at five.

CLE.

True.

ATH.

Well, and is not rapid growth without proper and abundant exercise the source of endless evils in the body?

During the first years of life the body grows most rapidly, and therefore needs most exercise.

CLE.

Yes.

ATH.

789And the body should have the most exercise when it receives most nourishment?

CLE.

But, Stranger, are we to impose this great amount of exercise upon newly-born infants?

ATH.

Nay, rather on the bodies of infants still unborn.

CLE.

What do you mean, my good sir? In the process of gestation?

ATH.

Exactly. I am not at all surprised that you have never heard of this very peculiar sort of gymnastic applied to such little creatures, which, although strange, I will endeavour to explain to you.

CLE.

By all means.

ATH.

The practice is more easy for us to understand than for you, by reason of certain amusements which are carried to excess by us at Athens. Not only boys, but often older persons, are in the habit of keeping quails and cocks¹, which they train to fight one another. And they are far from thinking that the contests in which they stir them up to fight with one another are sufficient exercise; for, in addition to this, they carry them about tucked beneath their armpits, holding the smaller birds in their hands, the larger under their arms, and go for a walk of a great many miles for the sake of health, that is to say, not their own health, but the health of the birds; whereby they prove to any intelligent person, that all bodies are benefited by shakings and movements, when they are moved without weariness, whether the motion proceeds from themselves, or is caused by a swing, or at sea, or on horseback, or by other bodies in whatever way moving, and that thus gaining the mastery over food and drink, they are able to impart beauty and health and strength. But admitting all this, what follows? Shall we make a ridiculous law that the pregnant woman shall walk about and fashion the embryo within as we fashion wax before it hardens, and after birth swathe the infant for two years? Suppose that we compel nurses, under penalty of a legal fine, to be always carrying the children somewhere or other, either to the temples, or into the country, or to their relations' houses, until they are well able to stand, and to take care that their limbs are not distorted by leaning on them when they are too young¹,—they should continue to carry them until the infant has completed its third year; the nurses should be strong, and there should be more than one of them. Shall these be our rules, and shall we impose a penalty for the neglect of them? No, no; the penalty of which we were speaking⁷⁹⁰ will fall upon our own heads more than enough.

The Athenians and their quails and cocks.

The benefit of motion to health and digestion.

Pregnant women should walk about, and infants should be carried in the arms of strong nurses, until they are three years old.

CLE.

What penalty?

ATH.

Ridicule, and the difficulty of getting the feminine and servant-like dispositions of the nurses to comply.

CLE.

Then why was there any need to speak of the matter at all?

ATH.

The reason is, that masters and freemen in states, when they hear of it, are very likely to arrive at a true conviction that without due regulation of private life in cities, stability in the laying down of laws is hardly to be expected²; and he who makes this reflection

Public law is based upon the customs of private life.

may himself adopt the laws just now mentioned, and, adopting them, may order his house and state well and be happy.

CLE.

Likely enough.

ATH.

And therefore let us proceed with our legislation until we have determined the exercises which are suited to the souls of young children, in the same manner in which we have begun to go through the rules relating to their bodies.

CLE.

By all means.

ATH.

Let us assume, then, as a first principle in relation both to the body and soul of very young creatures, that nursing and moving about by day and night is good for them all, and that the younger they are, the more they will need it¹; infants should live, if that were possible, as if they were always rocking at sea. This is the lesson which we may gather from the experience of nurses, and likewise from the use of the remedy of motion in the rites of the Corybantes; for when mothers want their restless children to go to sleep they do not employ rest, but, on the contrary, motion—rocking them in their arms; nor do they give them silence, but they sing to them and lap them in sweet strains; and the Bacchic women are cured of their frenzy in the same manner by the use of the dance and of music.

Motion is good for the soul as well as for the body.

CLE.

Well, Stranger, and what is the reason of this?

ATH.

The reason is obvious.

CLE.

What?

ATH.

The affection both of the Bacchantes and of the children is an emotion of fear, which springs out of an evil habit of the soul.

It quiets fear.

And when some one applies 791 external agitation to affections of this sort, the motion coming from without gets the better of the terrible and violent internal one, and produces a peace and calm in the soul, and quiets the restless palpitation of the heart, which is a thing much to be desired, sending the children to sleep, and making the Bacchantes, although they remain awake, to dance to the pipe with the help of the Gods to whom they offer acceptable sacrifices, and producing in them a sound mind, which takes the place of their frenzy. And, to express what I mean in a word, there is a good deal to be said in favour of this treatment.

CLE.

Certainly.

ATH.

But if fear has such a power we ought to infer from these facts, that every soul which from youth upward has been familiar with fears, will be made more liable to fear 1 , and every one will allow that this is the way to form a habit of cowardice and not of courage.

Familiarity with fear in childhood breeds cowardice;

CLE.

No doubt.

ATH.

And, on the other hand, the habit of overcoming, from our youth upwards, the fears and terrors which beset us, may be said to be an exercise of courage.

the habit of overcoming it, courage.

CLE.

True.

ATH.

And we may say that the use of exercise and motion in the earliest years of life greatly contributes to create a part of virtue in the soul.

CLE.

Quite true.

ATH.

Further, a cheerful temper, or the reverse, may be regarded as having much to do with high spirit on the one hand, or with cowardice on the other.

CLE.

To be sure.

ATH.

Then now we must endeavour to show how and to what extent we may, if we please, without difficulty implant either character in the young.

CLE.

Certainly.

ATH.

There is a common opinion, that luxury makes the disposition of youth discontented and irascible and vehemently excited by trifles; that on the other hand excessive and savage servitude makes men mean and abject, and haters of their kind, and therefore makes them undesirable associates.

Luxury creates discontent in the young; constraint makes them sullen.

CLE.

But how must the state educate those who do not as yet understand the language of the country, and are therefore incapable of appreciating any sort of instruction?

ATH.

I will tell you how:—Every animal that is born is wont to utter some cry, and this is especially the case with man, and he is also affected with the inclination to weep more than any other animal.

CLE.

Quite true.

ATH.

Do not nurses, when they want to know what an infant desires, judge by these signs?—when anything is brought to the infant and he is silent, then he is supposed to be pleased, but, when he weeps and cries out, then he is not pleased. For tears

The infant manifests his dislikes by tears and cries; his likes by silence.

and cries are the inauspicious signs by which children show what they love and hate. Now the time which is thus spent is no less than three years, and is a very considerable portion of life to be passed ill or well.

CLE.

True.

ATH.

Does not the discontented and ungracious nature appear to you to be full of lamentations and sorrows more than a good man ought to be?

CLE.

Certainly.

ATH.

Well, but if during these three years every possible care were taken that our nursling should have as little of sorrow and fear, and in general of pain as was possible, might we not expect in early childhood to make his soul more gentle and cheerful¹?

Very young children should be made happy.

CLE.

To be sure, Stranger,—more especially if we could procure him a variety of pleasures.

ATH.

There I can no longer agree, Cleinias: you amaze me. To bring him up in such a way would be his utter ruin; for the beginning is always the most critical part of education. Let us see whether I am right.

CLE.

Proceed.

ATH.

Seek not for pleasures, nor avoid pains; but embrace the middle state, which is divine.

The point about which you and I differ is of great importance, and I hope that you, Megillus, will help to decide between us. For I maintain that the true life should neither seek for pleasures, nor, on the other hand, entirely avoid pains, but should embrace the middle state¹, which I just spoke of as gentle and benign, and is a state which we by some divine presage and inspiration rightly ascribe to God. Now, I say, he among men, too, who would be divine ought to pursue after this mean habit—he should not rush headlong into pleasures, for he will not be free from pains; nor should we allow any one, young or old, male or female, to be thus given any more than ourselves, and least of all the newlyborn infant, for in infancy more than at any other time the character is engrained by habit. Nay, more, if I were not afraid of appearing to be ridiculous, I would say that a woman during her year of pregnancy should of all women be most carefully tended, and kept from violent or excessive pleasures and pains, and should at that time cultivate gentleness and benevolence and kindness.

Application of this precept to infants and to pregnant women.

CLE.

793 You need not ask Megillus, Stranger, which of us has most truly spoken; for I myself agree that all men ought to avoid the life of unmingled pain or pleasure, and pursue always a middle course. And having spoken well, may I add that you have been well answered?

ATH.

Very good, Cleinias; and now let us all three consider a further point.

CLE.

What is it?

ATH.

That all the matters which we are now describing are commonly called by the general name of unwritten customs, and what are termed the laws of our ancestors are all of similar nature. And the reflection which lately arose in our minds², that we can neither call these things laws, nor yet leave them unmentioned, is justified; for they are the bonds of the whole state, and come in between the written laws which are or are hereafter to be laid down; they are just ancestral customs of great antiquity, which, if they are rightly ordered and made habitual, shield and preserve the previously existing written law; but if they depart from right and fall into disorder, then they are like the props of builders which slip away out of their place and cause a universal ruin—one part drags another down, and the fair superstructure falls because the old foundations are undermined. Reflecting upon this, Cleinias, you ought to bind together the new state in every possible way, omitting nothing, whether great or small, of what are called laws or manners or pursuits, for by these means a city is bound together, and all these things are only lasting when they depend upon

Custom fills up the interstices of laws, and is the supplement and prop of them.

one another; and, therefore, we must not wonder if we find that many apparently trifling customs or usages come pouring in and lengthening out our laws.

CLE.

Very true: we are disposed to agree with you.

ATH.

Up to the age of three years, whether of boy or girl, if a person strictly carries out our previous regulations and makes them a principal aim, he will do much for the advantage of the young creatures. But at three, four, five, and even six years the childish nature will require sports; now is the time to get rid of self-will in him, punishing him, but not so as to disgrace him. We were saying about slaves¹, that we ought neither to add insult to punishment so as to anger them, nor yet to leave them unpunished lest they become self-willed; and a like rule is to be observed in the case of the free-born. Children at that age have certain natural modes of amusement which they find out for themselves when they meet. And all the children who are between the ages of three and six ought to meet at the temples of the villages, the several families of a village uniting on one spot. The nurses are to see that the children behave properly and orderly,—they themselves and all their companies are to be under the control of twelve matrons, one for each company, who are annually selected to inspect them from the women previously mentioned², [i. e. the women who have authority over marriage], whom the guardians of the law appoint. These matrons shall be chosen by the women who have authority over marriage, one out of each tribe; all are to be of the same age; and let each of them, as soon as she is appointed, hold office and go to the temples every day, punishing all offenders, male or female, who are slaves or strangers, by the help of some of the public slaves; but if any citizen disputes the punishment, let her bring him before the wardens of the city; or, if there be no dispute, let her punish him herself. After the age of six years the time has arrived for the separation of the sexes,—let boys live with boys, and girls in like manner with girls. Now they must begin to learn—the boys going to teachers of horsemanship and the use of the bow, the javelin, and sling, and the girls too, if they do not object, at any rate until they know how to manage these weapons, and especially how to handle heavy arms; for I may note, that the practice which now prevails is almost universally misunderstood.

The age for amusement between 3 and 6.

Between these ages, children should meet daily at the village temples under the superintendence of matrons and nurses.

At six, boys and girls should be separated; and the boys, and the girls too, should learn the use of weapons.

CLE.

In what respect?

ATH.

In that the right and left hand are supposed to be by nature differently suited for our various uses of them; whereas no difference is found in the use of the feet and the lower limbs; but in the use of the hands we are, as it were, maimed by the folly of nurses and mothers; for although our several limbs are by nature balanced, we create a difference in them by bad habit. In some cases this is of no consequence, as, for example, when we hold the lyre in the left hand, and the plectrum in the right, but it is downright folly 795to make the same distinction in other cases. The custom of the Scythians proves our error; for they not only hold the bow from them with the left hand and draw the arrow to them with their right, but use either hand for both purposes. And there are many similar examples in charioteering and other things, from which we may learn that those who make the left side weaker than the right act contrary to nature. In the case of the plectrum, which is of horn only, and similar instruments, as I was saying, it is of no consequence, but makes a great difference, and may be of very great importance to the warrior who has to use iron weapons, bows and javelins, and the like; above all, when in heavy armour, he has to fight against heavy armour. And there is a very great difference between one who has learnt and one who has not, and between one who has been trained in gymnastic exercises and one who has not been. For as he who is perfectly skilled in the Pancratium or boxing or wrestling, is not unable to fight from his left side, and does not limp and draggle in confusion when his opponent makes him change his position, so in heavy-armed fighting, and in all other things, if I am not mistaken, the like holds—he who has these double powers of attack and defence ought not in any case to leave them either unused or untrained, if he can help; and if a person had the nature of Geryon or Briareus he ought to be able with his hundred hands to throw a hundred darts. Now, the magistrates, male and female, should see to all these things, the women superintending the nursing and amusements of the children, and the men superintending their education, that all of them, boys and girls alike, may be sound hand and foot, and may not, if they can help, spoil the gifts of nature by bad habits.

They should be taught to use the left hand as well as the right.

This is very important for the warrior.

Athenian.

Education has two branches,—one of gymnastic, which is concerned with the body, and the other of music, which is designed for the improvement of the soul¹. And gymnastic has also two branches—dancing and wrestling; and one sort of dancing imitates musical recitation, and aims at preserving dignity and freedom, the other aims at producing health, agility, and beauty in the limbs and parts of the body, giving the proper flexion and extension to each of them, a harmonious motion being diffused everywhere, and forming a suitable accompaniment to the dance. As regards wrestling, 796the tricks which Antaeus and Cercyon devised in their systems out of a vain spirit of competition, or the tricks of boxing which Epeius or Amycus invented, are useless and unsuitable for war, and do not deserve to have much said about them; but the art of wrestling erect and keeping free the neck and hands and sides,

Two branches of education, gymnastic and music; and two parts of gymnastic, dancing and wrestling.

Only those forms of wrestling which are useful in war to be practised.

Athenian, Cleinias.

Imitations of war to be given also by dances in armour, &c.

working with energy and constancy, with a composed strength, and for the sake of health—these are always useful, and are not to be neglected, but to be enjoined alike on masters and scholars, when we reach that part of legislation; and we will desire the one to give their instructions freely, and the others to receive them thankfully¹. Nor, again, must we omit suitable imitations of war in our choruses; here in Crete you have the armed dances of the Curetes, and the Lacedaemonians have those of the Dioscuri. And our virgin lady, delighting in the amusement of the dance, thought it not fit to amuse herself with empty hands; she must be clothed in a complete suit of armour, and in this attire go through the dance²; and youths and maidens should in every respect imitate her, esteeming highly the favour of the Goddess, both with a view to the necessities of war, and to festive occasions: it will be right also for the boys, until such time as they go out to war, to make processions and supplications to all the Gods in goodly array, armed and on horseback, in dances and marches, fast or slow, offering up prayers to the Gods and to the sons of Gods; and also engaging in contests and preludes of contests, if at all, with these objects. For these sorts of exercises, and no others, are useful both in peace and war, and are beneficial alike to states and to private houses. But other labours and sports and exercises of the body are unworthy of freemen, O Megillus and Cleinias.

I have now completely described the kind of gymnastic which I said at first ought to be described; if you know of any better, will you communicate your thoughts?

CLE.

It is not easy, Stranger, to put aside these principles of gymnastic and wrestling and to enunciate better ones.

ATH.

Now we must say what has yet to be said about the gifts of the Muses and of Apollo: before, we fancied that we had said all, and that gymnastic alone remained³; but now we see clearly what points have been omitted, and should be first proclaimed; of these, then, let us proceed to speak.

Music again,

CLE.

797By all means.

ATH.

Let me tell you once more—although you have heard me say the same before—that caution must be always exercised, both by the speaker and by the hearer, about anything that is very singular and unusual. For my tale is one which many a man would be afraid to tell, and yet I have a confidence which makes me go on.

CLE.

What have you to say, Stranger?

ATH.

I say that in states generally no one has observed that the plays of childhood have a great deal to do with the permanence or want of permanence in legislation. For when plays are ordered with a view to children having the same plays, and amusing themselves after the same manner, and finding delight in the same playthings, the more solemn institutions of the state are allowed to remain undisturbed. Whereas if sports are disturbed, and innovations are made in them, and they constantly change, and the young never speak of their having the same likings, or the same established notions of good and bad taste, either in the bearing of their bodies or in their dress, but he who devises something new and out of the way in figures and colours and the like is held in special honour, we may truly say that no greater evil can happen in a state [1](#) ; for he who changes the sports is secretly changing the manners of the young, and making the old to be dishonoured among them and the new to be honoured. And I affirm that there is nothing which is a greater injury to all states than saying or thinking thus. Will you hear me tell how great I deem the evil to be?

The plays of children should be fixed that their characters may become fixed.

CLE.

You mean the evil of blaming antiquity in states?

ATH.

Exactly.

CLE.

If you are speaking of that, you will find in us hearers who are disposed to receive what you say not unfavourably but most favourably.

ATH.

I should expect so.

CLE.

Proceed.

ATH.

Changes are generally dangerous,

for the mind as well as for the body.

Children who make innovation in their games will develop into revolutionists.

Well, then, let us give all the greater heed to one another's words. The argument affirms that any change whatever except from evil is the most dangerous of all things; this is true in the case of the seasons and of the winds, in the management of our bodies and the habits of our minds—true of all things except, as I said before, of the bad. He who looks at the constitution of individuals accustomed to eat any sort of meat, or drink any drink, or to do any work which they can get, may see that they are at first disordered by them, but afterwards, as time goes on, their bodies grow adapted to them, and they learn to know and like variety, and have good health and enjoyment of life; and if ever afterwards they are confined again to a superior diet, at first they are troubled with disorders, and with difficulty become habituated to their new food. A similar principle we may imagine to hold good about the minds of men and the natures of their souls. For when they have been brought up in certain laws, which by some Divine Providence have remained unchanged during long ages, so that no one has any memory or tradition of their ever having been otherwise than they are, then every one is afraid and ashamed to change that which is established. The legislator must somehow find a way of implanting this reverence for antiquity, and I would propose the following way:—People are apt to fancy, as I was saying before, that when the plays of children are altered they are merely plays, not seeing that the most serious and detrimental consequences arise out of the change; and they readily comply with the child's wishes instead of deterring him, not considering that these children who make innovations in their games, when they grow up to be men, will be different from the last generation of children, and, being different, will desire a different sort of life, and under the influence of this desire will want other institutions and laws; and no one of them reflects that there will follow what I just now called the greatest of evils to states. Changes in bodily fashions are no such serious evils, but frequent changes in the praise and censure of manners are the greatest of evils, and require the utmost prevision.

CLE.

To be sure.

ATH.

And now do we still hold to our former assertion, that rhythms and music in general are imitations of good and evil characters in men¹? What say you?

CLE.

That is the only doctrine which we can admit.

ATH.

Must we not, then, try in every possible way to prevent our youth from even desiring to imitate new modes either in dance or song²? nor must any one be allowed to offer them varieties of pleasures.

CLE.

Most true.

ATH.

799 Can any of us imagine a better mode of effecting this object than that of the Egyptians?

CLE.

What is their method?

ATH.

To consecrate every sort of dance or melody. First we should ordain festivals,—calculating for the year what they ought to be, and at what time, and in honour of what Gods, sons of Gods, and heroes they ought to be celebrated; and, in the next place, what hymns ought to be sung at the several sacrifices, and with what dances the particular festival is to be honoured. This has to be arranged at first by certain persons, and, when arranged, the whole assembly of the citizens are to offer sacrifices and libations to the Fates and all the other Gods, and to consecrate the several odes to Gods and heroes: and if any one offers any other hymns or dances to any one of the Gods, the priests and priestesses, acting in concert with the guardians of the law, shall, with the sanction of religion and the law, exclude him, and he who is excluded, if he do not submit, shall be liable all his life long to have a suit of impiety brought against him by any one who likes.

We, like the Egyptians, should consecrate the forms of song and dance.

CLE.

Very good.

ATH.

In the consideration of this subject, let us remember what is due to ourselves.

CLE.

To what are you referring?

ATH.

I mean that any young man, and much more any old one, when he sees or hears anything strange or unaccustomed, does not at once run to embrace the paradox, but he stands considering, like a person who is at a place where three paths meet, and does not

Before stating our paradoxical law about music, we should ponder and reflect.

very well know his way—he may be alone or he may be walking with others, and he will say to himself and them, ‘Which is the way?’ and will not move forward until he is satisfied that he is going right. And this is what we must do in the present instance:—A strange discussion on the subject of law has arisen, which requires the utmost consideration, and we should not at our age be too ready to speak about such great matters, or be confident that we can say anything certain all in a moment.

CLE.

Most true.

ATH.

Then we will allow time for reflection, and decide when we have given the subject sufficient consideration. But that we may not be hindered from completing the natural arrangement of our laws, let us proceed to the conclusion of them in due order; for very possibly, if God will, the exposition of them, when completed, may throw light on our present perplexity.

CLE.

Excellent, Stranger; let us do as you propose.

ATH.

Let us then affirm the paradox that strains of music are our laws (νόμοι), and this latter being the name which the 800ancients gave to lyric songs¹, they probably would not have very much objected to our proposed application of the word. Some one, either asleep or awake, must have had a dreamy suspicion of their nature. And let our decree be as follows:—No one in singing or dancing shall offend against public and consecrated models, and the general fashion among the youth, any more than he would offend against any other law. And he who observes this law shall be blameless; but he who is disobedient, as I was saying, shall be punished by the guardians of the laws, and by the priests and priestesses. Suppose that we imagine this to be our law.

The law.

CLE.

Very good.

ATH.

Rules according to which songs are to be composed:—

Can any one who makes such laws escape ridicule? Let us see. I think that our only safety will be in first framing certain models for composers. One of these models shall be as follows:—If

(1) Words of evil omen to be avoided.

when a sacrifice is going on, and the victims are being burnt according to law,—if, I say, any one who may be a son or brother, standing by another at the altar and over the victims, horribly blasphemes, will not his words inspire despondency and evil omens and forebodings in the mind of his father and of his other kinsmen?

CLE.

Of course.

ATH.

And this is just what takes place in almost all our cities. A magistrate offers a public sacrifice, and there come in not one but many choruses, who take up a position a little way from the altar, and from time to time pour forth all sorts of horrible blasphemies on the sacred rites, exciting the souls of the audience with words and rhythms and melodies most sorrowful to hear; and he who at the moment when the city is offering sacrifice makes the citizens weep most, carries away the palm of victory. Now, ought we not to forbid such strains as these? And if ever our citizens must hear such lamentations, then on some unblest and inauspicious day let there be choruses of foreign and hired minstrels, like those hirelings who accompany the departed at funerals with barbarous Carian chants. That is the sort of thing which will be appropriate if we have such strains at all; and let the apparel of the singers be, not circlets and ornaments of gold, but the reverse. Enough of all this. I will simply ask once more whether we shall lay down as one of our principles of song—

CLE.

What?

ATH.

That we should avoid every word of evil omen; let that kind of song which is of good omen be heard everywhere and always in our state. I need hardly ask again, but shall assume that you agree with me.

CLE.

By all means; that law is approved by the suffrages of us all.

ATH.

But what shall be our next musical law or type? Ought not prayers to be offered up to the Gods when we sacrifice?

(2) Prayers to be offered at sacrifices.

CLE.

Certainly.

ATH.

And our third law, if I am not mistaken, will be to the effect that our poets, understanding prayers to be requests which we make to the Gods, will take especial heed that they do not by mistake ask for evil instead of good. To make such a prayer would surely be too ridiculous.

(3) Good, and not evil, to be asked.

CLE.

Very true.

ATH.

Were we not a little while ago quite convinced that no silver or golden Plutus should dwell in our state¹ ?

CLE.

To be sure.

ATH.

And what has it been the object of our argument to show? Did we not imply that the poets are not always quite capable of knowing what is good or evil? And if one of them utters a mistaken prayer in song or words, he will make our citizens pray for the opposite of what is good in matters of the highest import; than which, as I was saying, there can be few greater mistakes. Shall we then propose as one of our laws and models relating to the Muses—

CLE.

What?—will you explain the law more precisely?

ATH.

Shall we make a law that the poet shall compose nothing contrary to the ideas of the lawful, or just, or beautiful, or good, which are allowed in the state? nor shall he be permitted to communicate his compositions to any private individuals, until he shall have shown them to the appointed judges and the guardians of the law, and they are satisfied with them. As to the persons whom we appoint to be our legislators about music¹ and as to the director of

The poets to express the ideas of the just, the beautiful, the good, which the state approves.

education², these have been already indicated. Once more then, as I have asked more than once, shall this be our third law, and type, and model—What do you say?

CLE.

Let it be so, by all means.

ATH.

Then it will be proper to have hymns and praises of the Gods³, intermingled with prayers; and after the Gods prayers and praises should be offered in like manner to demigods and heroes, suitable to their several characters.

(4) There shall be suitable hymns for Gods, demigods, and heroes.

CLE.

Certainly.

ATH.

In the next place there will be no objection to a law, that citizens who are departed and have done good and energetic deeds, either with their souls or with their bodies, and have been obedient to the laws, should receive eulogies; this will be very fitting.

(5) The good to be honoured after death.

CLE.

802Quite true.

ATH.

But to honour with hymns and panegyrics those who are still alive is not safe; a man should run his course, and make a fair ending, and then we will praise him; and let praise be given equally to women as well as men who have been distinguished in virtue. The order of songs and dances shall be as follows:—There are many ancient musical compositions and dances which are excellent, and from these the newly-founded city may freely select what is proper and suitable; and they shall choose judges of not less than fifty years of age, who shall make the selection, and any of the old poems which they deem sufficient they shall include; any that are deficient or altogether unsuitable, they shall either utterly throw aside, or examine and amend, taking into their counsel poets and musicians, and making use of their poetical genius; but explaining to them the wishes of the legislator in order that they may regulate dancing, music, and all choral strains, according to the mind of the judges; and not allowing them to indulge, except in some few matters, their individual pleasures and fancies. Now the irregular strain of music is always made ten thousand times better by attaining to law and order, and rejecting the honeyed Muse—not however that we

The law respecting the order of songs and dances.

mean wholly to exclude pleasure, which is the characteristic of all music. And if a man be brought up from childhood to the age of discretion and maturity in the use of the orderly and severe music, when he hears the opposite he detests it, and calls it illiberal; but if trained in the sweet and vulgar music, he deems the severer kind cold and displeasing¹. So that, as I was saying before, while he who hears them gains no more pleasure from the one than from the other, the one has the advantage of making those who are trained in it better men, whereas the other makes them worse.

CLE.

Very true.

ATH.

Again, we must distinguish and determine on some general principle what songs are suitable to women, and what to men, and must assign to them their proper melodies and rhythms. It is shocking for a whole harmony to be inharmonical, or for a rhythm to be unrhythmical, and this will happen when the melody is inappropriate to them. And therefore the legislator must assign to these also their forms. Now both sexes have melodies and rhythms which of necessity belong to them; and those of women are clearly enough indicated by their natural difference. The grand, and that which tends to courage, may be fairly called manly; but that which inclines to moderation and temperance, may be declared both in law and in ordinary speech to be the more womanly quality. This, then, will be the general order of them.

To men should be assigned a grand rhythm, which is expressive of courage;

to women a moderate and temperate rhythm.

Let us now speak of the manner of teaching and imparting them, and the persons to whom, and the time when, they are severally to be imparted. As the shipwright first lays down the lines of the keel, and thus, as it were, draws the ship in outline, so do I seek to distinguish the patterns of life, and lay down their keels

Human affairs are hardly serious, and yet we must be in earnest about them.

according to the nature of different men's souls; seeking truly to consider by what means, and in what ways, we may go through the voyage of life best. Now human affairs are hardly worth considering in earnest, and yet we must be in earnest about them,—a sad necessity constrains us. And having got thus far, there will be a fitness in our completing the matter, if we can only find some suitable method of doing so. But what do I mean? Some one may ask this very question, and quite rightly, too.

CLE.

Certainly.

ATH.

I say that about serious matters a man should be serious, and about a matter which is not serious he should not be serious; and that God is the natural and worthy object of our most serious and blessed endeavours, for man, as I said before¹, is made to be the plaything of God, and this, truly considered, is the best of him; wherefore also every man and woman should walk seriously, and pass life in the noblest of pastimes, and be of another mind from what they are at present.

The best of man is that he is the plaything of the Gods.

CLE.

In what respect?

ATH.

At present they think that their serious pursuits should be for the sake of their sports, for they deem war a serious pursuit, which must be managed well for the sake of peace; but the truth is, that there neither is, nor has been, nor ever will be, either amusement or instruction in any degree worth speaking of in war, which is nevertheless deemed by us to be the most serious of our pursuits. And therefore, as we say, every one of us should live the life of peace as long and as well as he can². And what is the right way of living? Are we to live in sports always? If so, in what kind of sports? We ought to live sacrificing, and singing, and dancing, and then a man will be able to propitiate the Gods, and to defend himself against his enemies and conquer them in battle. The type of song or dance by which he will propitiate them has been described, and the paths along which he is to proceed have been cut for him. He will go forward in the spirit of the poet³:—

The life of peace better than the life of war. But what is the life of peace?—The life of dance and song.

‘Telemachus, some things thou wilt thyself find in thy heart, but other things God will suggest; for I deem that thou wast not born or brought up without the will of the Gods.’

And this ought to be the view of our alumni; they ought to think that what has been said is enough for them, and that any other things their Genius and God will suggest to them—he will tell them to whom, and when, and to what Gods severally they are to sacrifice and perform dances, and how they may propitiate the deities, and live according to the appointment of nature; being for the most part puppets, but having some little share of reality.

MEG.

You have a low opinion of mankind, Stranger.

ATH.

Nay, Megillus, be not amazed, but forgive me:—I was comparing them with the Gods; and under that feeling I spoke. Let us grant, if you wish, that the human race is not to be despised, but is worthy of some consideration.

Next follow the buildings for gymnasia and schools open to all; these are to be in three places in the midst of the city; and outside the city and in the surrounding country, also in three places, there shall be schools for horse exercise, and large grounds arranged with a view to archery and the throwing of missiles, at which young men may learn and practise. Of these mention has already been made¹; and if the mention be not sufficiently explicit, let us speak further of them and embody them in laws. In these several schools let there be dwellings for teachers, who shall be brought from foreign parts by pay, and let them teach those who attend the schools the art of war and the art of music, and the children shall come not only if their parents please, but if they do not please; there shall be compulsory education, as the saying is, of all and sundry, as far as this is possible; and the pupils shall be regarded as belonging to the state rather than to their parents².

A new subject:—Gymnasia; schools; places for horse exercise; open spaces for archery.

The teachers to be foreigners and paid.

Education to be compulsory on both sexes.

The state is reduced to a half, if the training of women be neglected.

My law would apply to females as well as males; they shall both go through the same exercises. I assert without fear of contradiction that gymnastic and horsemanship are as suitable to women as to men³. Of the truth of this I am persuaded from ancient tradition, and at the present day there are said to be countless myriads of women in the neighbourhood of the Black Sea, called Sauromatides, who not only ride on horseback like men, but have enjoined upon them the use of bows and other weapons equally with the men. And I further affirm, that if these things are possible, nothing can be more absurd than the practice which prevails in our own country, of men and women not following the same pursuits with all their strength and with one mind, for thus the state, instead of being a whole, is reduced to a half¹, but has the same imposts to pay and the same toils to undergo; and what can be a greater mistake for any legislator to make than this?

CLE.

Very true; yet much of what has been asserted by us, Stranger, is contrary to the custom of states; still, in saying that the discourse should be allowed to proceed, and that when the discussion is completed, we should choose what seems best, you spoke very properly², and I now feel compunction for what I have said. Tell me, then, what you would next wish to say.

ATH.

It is a wellknown fact that women are able to share men's pursuits. If they do

I should wish to say, Cleinias, as I said before, that if the possibility of these things were not sufficiently proven in fact, then there might be an objection to the argument, but the fact being as I have said, he who rejects the law must find some other ground of objection; and, failing this, our exhortation will still hold good, nor will any one deny that women ought to share as far as possible in education and in other ways with men. For consider;—if women do not share in their whole life with men, then they must have some other order of life.

not they must have an inferior life.

CLE.

Certainly.

ATH.

And what arrangement of life to be found anywhere is preferable to this community which we are now assigning to them? Shall we prefer that which is adopted by the Thracians and many other races who use their women to till the ground and to be shepherds of their herds and flocks, and to minister to them like slaves?—Or shall we do as we and people in our part of the world do—getting together, as the phrase is, all our goods and chattels into one dwelling, we entrust them to our women, who are the stewards of them, and who also preside over the shuttles and the whole art of spinning? Or shall we take a middle course, as in 806Lacedaemon, Megillus—letting the girls share in gymnastic and music, while the grown-up women, no longer employed in spinning wool, are hard at work weaving the web of life, which will be no cheap or mean employment, and in the duty of serving and taking care of the household and bringing up children, in which they will observe a sort of mean, not participating in the toils of war; and if there were any necessity that they should fight for their city and families, unlike the Amazons, they would be unable to take part in archery or any other skilled use of missiles, nor could they, after the example of the Goddess, carry shield or spear, or stand up nobly for their country when it was being destroyed, and strike terror into their enemies, if only because they were seen in regular order? Living as they do, they would never dare at all to imitate the Sauromatides, who, when compared with ordinary women, would appear to be like men. Let him who will, praise your legislators, but I must say what I think. The legislator ought to be whole and perfect, and not half a man only; he ought not to let the female sex live softly and waste money and have no order of life, while he takes the utmost care of the male sex, and leaves half of life only blest with happiness, when he might have made the whole state happy.

Lives of women in different countries.

Athenian, Cleinias, Megillus.

The Spartan type falls short of the Sauromatid.

MEG.

What shall we do, Cleinias? Shall we allow a stranger to run down Sparta in this fashion?

CLE.

Yes; for as we have given him liberty of speech we must let him go on until we have perfected the work of legislation.

MEG.

Very true.

ATH.

Then now I may proceed?

CLE.

By all means.

ATH.

What will be the manner of life among men who may be supposed to have their food and clothing provided for them in moderation, and who have entrusted the practice of the arts to others, and whose husbandry committed to slaves paying a part of the produce, brings them a return sufficient for men living temperately; who, moreover, have common tables in which the men are placed apart, and near them are the common tables of their families, of their daughters and mothers, which day by day, the officers, male and female, are to inspect—they shall see to the behaviour of the company, and so dismiss them; after which the presiding magistrate and his attendants shall honour with libations those Gods to whom that day and night are dedicated, and then go home? To men whose lives are thus ordered, is there no work remaining to be done which is necessary and fitting, but shall each one of them live fattening like a beast? Such a life is neither just nor honourable, nor can he who lives it fail of meeting his due; and the due reward of the idle fatted beast is that he should be torn in pieces by some other valiant beast whose fatness is worn down by brave deeds and toil. These regulations, if we duly consider them, will never be exactly carried into execution under present circumstances, nor as long as women and children and houses and all other things are the private property of individuals; but if we can attain the second-best form of polity, we shall be very well off. And to men living under this second polity there remains a work to be accomplished which is far from being small or insignificant, but is the greatest of all works, and ordained by the appointment of righteous law. For the life which may be truly said to be concerned with the virtue of body and soul is twice, or more than twice, as full of toil and trouble as the pursuit after Pythian and Olympic victories¹, which debars a man from every employment of life. For there ought to be no byework

Our citizens are not to live like cattle; they have a work to do.

Athenian.

The perfect life can only be led by men who have all things in common. Yet even when there is private property, the due ordering of home life is a more arduous task than the pursuit of Olympic victories.

The duty of wakefulness.

The citizens and their wives should rise early.

interfering with the greater work of providing the necessary exercise and nourishment for the body, and instruction and education for the soul. Night and day are not long enough for the accomplishment of their perfection and consummation; and therefore to this end all freemen ought to arrange the way in which they will spend their time during the whole course of the day, from morning till evening and from evening till the morning of the next sunrise. There may seem to be some impropriety in the legislator determining minutely the numberless details of the management of the house, including such particulars as the duty of wakefulness in those who are to be perpetual watchmen of the whole city; for that any citizen should continue during the whole of any 808night in sleep, instead of being seen by all his servants, always the first to awake and get up—this, whether the regulation is to be called a law or only a practice, should be deemed base and unworthy of a freeman; also that the mistress of the house should be awakened by her handmaidens instead of herself first awakening them, is what the slaves, male and female, and the serving-boys, and, if that were possible, everybody and everything in the house should regard as base. If they rise early, they may all of them do much of their public and of their household business, as magistrates in the city, and masters and mistresses in their private houses, before the sun is up. Much sleep is not required by nature, either for our souls or bodies, or for the actions which they perform. For no one who is asleep is good for anything, any more than if he were dead; but he of us who has the most regard for life and reason keeps awake as long as he can, reserving only so much time for sleep as is expedient for health; and much sleep is not required, if the habit of moderation be once rightly formed. Magistrates in states who keep awake at night are terrible to the bad, whether enemies or citizens, and are honoured and revered by the just and temperate, and are useful to themselves and to the whole state.

A night which is passed in such a manner, in addition to all the above-mentioned advantages, infuses a sort of courage into the minds of the citizens. When the day breaks, the time has arrived for youth to go to their schoolmasters. Now neither sheep nor any other animals can live without a shepherd, nor can children be left without tutors, or slaves without masters. And of all

At day-break the boy is to be taken to school.

The nature of that animal.

animals the boy is the most unmanageable, inasmuch as he has the fountain of reason in him not yet regulated¹; he is the most insidious, sharp-witted, and insubordinate of animals. Wherefore he must be bound with many bridles; in the first place, when he gets away from mothers and nurses, he must be under the management of tutors on account of his childishness and foolishness; then, again, being a freeman, he must be controlled by teachers, no matter what they teach, and by studies; but he is also a slave, and in that regard any freeman who comes in his way may punish him and his tutor and his instructor, if any of them does anything wrong; and he who comes across him and does not inflict upon him the punishment which he deserves, 809shall incur the greatest disgrace; and let the guardian of the law, who is the director of education, see to him who coming in the way of the offences which we have mentioned, does not chastise them when he ought, or chastises them in a way which he ought not; let him keep a sharp look-out, and take especial care of the training of our children, directing their natures, and always turning them to good according to the law.

But how can our law sufficiently train the director of education himself; for as yet all has been imperfect, and nothing has been said either clear or satisfactory? Now, as far as possible, the law ought to leave nothing to him, but to explain everything, that he may be an interpreter and tutor to others. About dances and music and choral strains, I have already spoken both as to the character of the selection of them, and the manner in which they are to be amended and consecrated. But we have not as yet spoken, O illustrious guardian of education, of the manner in which your pupils are to use those strains which are written in prose, although you have been informed what martial strains they are to learn and practise; what relates in the first place to the learning of letters, and secondly, to the lyre, and also to calculation, which, as we were saying¹, is needful for them all to learn, and any other things which are required with a view to war and the management of house and city, and, looking to the same object, what is useful in the revolutions of the heavenly bodies—the stars and sun and moon, and the various regulations about these matters which are necessary for the whole state—I am speaking of the arrangements of days in periods of months, and of months in years, which are to be observed, in order that seasons and sacrifices and festivals may have their regular and natural order, and keep the city alive and awake, the Gods receiving the honours due to them, and men having a better understanding about them²: all these things, O my friend, have not yet been sufficiently declared to you by the legislator. Attend, then, to what I am now going to say:—We were telling you, in the first place, that you were not sufficiently informed about letters, and the objection was to this effect,—that you were never told whether he who was meant to be a respectable citizen should apply himself in detail to that sort of learning, or not apply himself at all; and the same remark holds good of the study of the lyre. But now we say that he ought to attend to them. A fair time for a boy of ten years old to spend in letters is three³ years; the age of thirteen is the proper time for him to begin to handle the lyre, and he may continue at this for another three years, neither more nor less, and whether his father or himself like or dislike the study, he is not to be allowed to spend more or less time in learning music than the law allows. And let him who disobeys the law be deprived of those youthful honours of which we shall hereafter speak⁴. Hear, however, first of all, what the young ought to learn in the early years of life, and what their instructors ought to teach them. They ought to be occupied with their letters until they are able to read and write; but the acquisition of perfect beauty or quickness in writing, if nature has not stimulated them to acquire these accomplishments in the given number of years, they should let alone. And as to the learning of compositions committed to writing which are not set to the lyre, whether metrical or without rhythmical divisions, compositions in prose, as they are termed, having no rhythm or harmony—seeing how dangerous are the writings handed down to us by many writers of this class—what will you do with them, O most excellent guardians of the law? or how can the lawgiver rightly direct you about them? I believe that he will be in great difficulty.

The Director of Education is to proceed according to fixed rules.

Athenian, Cleinias.

Three years (10–13) to be spent in learning to read and write: another three years in learning music.

Dangerous tendency of many prose writings.

CLE.

What troubles you, Stranger? and why are you so perplexed in your mind?

ATH.

You naturally ask, Cleinias, and to you and Megillus, who are my partners in the work of legislation, I must state the more difficult as well as the easier parts of the task.

CLE.

To what do you refer in this instance?

ATH.

I will tell you. There is a difficulty in opposing many myriads of mouths.

CLE.

Well, and have we not already opposed the popular voice in many important enactments?

ATH.

That is quite true; and you mean to imply that the road which we are taking may be disagreeable to some but is agreeable to as many others, or if not to as many, at any rate to persons not inferior to the others, and in company with them you bid me, at whatever risk, to proceed along the path of legislation which has opened out of our present discourse, and to be of good cheer, and not to faint.

CLE.

Certainly.

ATH.

And I do not faint; I say, indeed, that we have a great many poets writing in hexameter, trimeter, and all sorts of measures—some who are serious, others who aim only at raising a laugh—and all mankind declare that the youth who are rightly educated should be brought up in them and saturated with them; some insist that they should be constantly hearing them read aloud, and always learning them, so as to get by heart entire poets; while others select choice passages and long speeches, and make compendiums of them, saying that these ought to be committed to memory, if a man is to be made good and wise by experience and learning of many things. And you want me now to tell them plainly in what they are right and in what they are wrong.

Practice of learning poets by heart.

CLE.

Yes, I do.

ATH.

But how can I in one word rightly comprehend all of them? I am of opinion, and, if I am not mistaken, there is a general agreement, that every one of these poets has said many things well and many things the reverse of well; and if this be true, then I do affirm that much learning is dangerous to youth.

We should discriminate; a selection should be made.

CLE.

How would you advise the guardian of the law to act?

ATH.

In what respect?

CLE.

I mean to what pattern should he look as his guide in permitting the young to learn some things and forbidding them to learn others. Do not shrink from answering.

ATH.

My good Cleinias, I rather think that I am fortunate.

CLE.

How so?

ATH.

I think that I am not wholly in want of a pattern, for when I consider the words which we have spoken from early dawn until now, and which, as I believe, have been inspired by Heaven, they appear to me to be quite like a poem. When I reflected upon all these words of ours, I naturally felt pleasure, for of all the discourses which I have ever learnt or heard, either in poetry or prose, this seemed to me to be the justest, and most suitable for young men to hear; I cannot imagine any better pattern than this which the guardian of the law who is also the director of education can have. He cannot do better than advise the teachers to teach the young these words and any which are of a like nature, if he should happen to find them, either in poetry or prose, or if he come across unwritten discourses akin to ours, he should certainly preserve them, and commit

The Director of Education shall authorize the teachers to instruct their pupils in our laws and in works of a similar character.

them to writing. And, first of all, he shall constrain the teachers themselves to learn and approve them, and any of them who will not, shall not be employed by him, but those whom he finds agreeing in his judgment, he shall make use of and shall commit to them the instruction and education of youth. And here and on this 812wise let my fanciful tale about letters and teachers of letters come to an end.

CLE.

I do not think, Stranger, that we have wandered out of the proposed limits of the argument; but whether we are right or not in our whole conception, I cannot be very certain.

ATH.

The truth, Cleinias, may be expected to become clearer when, as we have often said, we arrive at the end of the whole discussion about laws.

CLE.

Yes.

ATH.

And now that we have done with the teacher of letters, the teacher of the lyre has to receive orders from us.

The teaching of the lyre.

CLE.

Certainly.

ATH.

I think that we have only to recollect our previous discussions, and we shall be able to give suitable regulations touching all this part of instruction and education to the teachers of the lyre.

CLE.

To what do you refer?

ATH.

We were saying, if I remember rightly, that the sixty years old choristers of Dionysus were to be specially quick in their perceptions of rhythm and musical composition, that they might be able to distinguish good and bad imitation, that is to say, the imitation of the good or bad soul when under the influence of passion, rejecting the

one and displaying the other in hymns and songs, charming the souls of youth, and inviting them to follow and attain virtue by the way of imitation¹ .

CLE.

Very true.

ATH.

And with this view the teacher and the learner ought to use the sounds of the lyre, because its notes are pure, the player who teaches and his pupil rendering note for note in unison; but complexity, and variation of notes, when the strings give one sound and the poet or composer of the melody gives another,—also when they make concords and harmonies in which lesser and greater intervals, slow and quick, or high and low notes, are combined,—or, again, when they make complex variations of rhythms, which they adapt to the notes of the lyre¹ ,—all that sort of thing is not suited to those who have to acquire a speedy and useful knowledge of music in three years; for opposite principles are confusing, and create a difficulty in learning, and our young men should learn quickly, and their mere necessary acquirements are not few or trifling, as will be shown in due course. Let the director of education attend to the principles concerning music which we are laying down. As to the songs and words themselves which the masters of choruses are to teach and the character of them, they have been already⁸¹³ described by us, and are the same which, when consecrated and adapted to the different festivals, we said were to benefit cities by affording them an innocent amusement² .

Variety and complexity of notes and rhythms to be avoided.

CLE.

That, again, is true.

ATH.

Then let him who has been elected a director of music³ receive these rules from us as containing the very truth; and may he prosper in his office! Let us now proceed to lay down other rules in addition to the preceding about dancing and gymnastic exercise in general. Having said what remained to be said about the teaching of music, let us speak in like manner about gymnastic. For boys and girls ought to learn to dance and practise gymnastic exercises—ought they not?

The teaching of gymnastic.

CLE.

Yes.

ATH.

Then the boys ought to have dancing masters, and the girls dancing mistresses to exercise them.

CLE.

Very good.

ATH.

Then once more let us summon him who has the chief concern in the business, the superintendent of youth [i. e. the director of education]; he will have plenty to do, if he is to have the charge of music and gymnastic.

CLE.

But how will an old man be able to attend to such great charges?

ATH.

O my friend, there will be no difficulty, for the law has already given and will give him permission to select as his assistants in this charge any citizens, male or female, whom he desires; and he will know whom he ought to choose, and will be anxious not to make a mistake, from a due sense of responsibility, and from a consciousness of the importance of his office, and also because he will consider that if young men have been and are well brought up, then all things go swimmingly, but if not, it is not meet to say, nor do we say, what will follow, lest the regards of omens should take alarm about our infant state. Many things have been said by us about dancing and about gymnastic

movements in general; for we include under gymnastics all military exercises, such as archery, and all hurling of weapons, and the use of the light shield, and all fighting with heavy arms, and military evolutions, and movements of armies, and encampings, and all that relates to horsemanship. Of all these things there ought to be public teachers, receiving pay from the state, and their pupils should be the men and boys in the state, and also the girls and women, who are to know all these things. While they are yet girls they should have practised dancing in arms and the whole art of fighting—when grown-up women, they should apply themselves to evolutions and tactics, and the mode of grounding and taking up arms; if for no other reason, yet in case the whole military force should have to leave the city and carry on operations of war outside, that those who will have to guard the young and the rest of the city may be equal to the task; and, on the other hand, when enemies, whether barbarian or Hellenic, come from without with mighty force and make a violent assault upon them, and thus compel them to fight for the possession of the city, which is far from being an impossibility, great would be the disgrace to the state, if the women had been so miserably trained that they could not fight for their young, as birds will, against any

Gymnastics (under which, besides dancing, all military exercises are included) are to be learned by women as well as by men.

Women, like birds, should be willing to fight for their young.

creature however strong, and die or undergo any danger, but must instantly rush to the temples and crowd at the altars and shrines, and bring upon human nature the reproach, that of all animals man is the most cowardly!

CLE.

Such a want of education, Stranger, is certainly an unseemly thing to happen in a state, as well as a great misfortune.

ATH.

Suppose that we carry our law to the extent of saying that women ought not to neglect military matters, but that all citizens, male and female alike, shall attend to them?

CLE.

I quite agree.

ATH.

Of wrestling we have spoken in part, but of what I should call the most important part we have not spoken, and cannot easily speak without showing at the same time by gesture as well as in word what we mean; when word and action combine, and not till then, we shall explain clearly what has been said, pointing out that of all movements wrestling is most akin to the military art, and is to be pursued for the sake of this, and not this for the sake of wrestling.

Wrestling most akin to the military art.

CLE.

Excellent.

ATH.

Two forms of the dance, a noble and an ignoble. Of the former there are again two kinds:—

(1) the Pyrrhic dance, imitating the postures of attack and defence;

Athenian.

(2) the dance of peace, Emmeleia, easy and graceful.

Enough of wrestling; we will now proceed to speak of other movements of the body. Such motion may be in general called dancing, and is of two kinds: one of nobler figures, imitating the honourable, the other of the more ignoble figures, imitating the mean; and of both these there are two further subdivisions. Of the serious, one kind is of those engaged in war and vehement action, and is the exercise of a noble person and a manly heart; the other exhibits a temperate soul in the enjoyment of prosperity and modest pleasures, and may be truly called and 815is the dance of peace. The warrior dance is different from the peaceful one, and may be rightly termed Pyrrhic; this imitates the modes of avoiding blows and missiles by dropping or giving way, or springing aside, or rising up or falling down; also the opposite postures which are those of action, as, for example, the imitation of archery and the hurling of javelins, and of all sorts of blows. And when the imitation is of brave bodies and souls, and the action is direct and muscular, giving for the most part a straight movement to the limbs of the body—that, I say, is the true sort; but the opposite is not right. In the dance of peace what we have to consider is whether a man bears himself naturally and gracefully, and after the manner of men who duly conform to the law. But before proceeding I must distinguish the dancing about which there is any doubt, from that about which there is no doubt. Which is the doubtful kind, and how are the two to be distinguished? There are dances of the Bacchic sort, both those in which, as they say, they imitate drunken men, and which are named after the Nymphs, and Pan, and Silenuses, and Satyrs; and also those in which purifications are made or mysteries celebrated,—all this sort of dancing cannot be rightly defined as having either a peaceful or a warlike character, or indeed as having any meaning whatever, and may, I think, be most truly described as distinct from the warlike dance, and distinct from the peaceful, and not suited for a city at all. There let it lie; and so leaving it to lie, we will proceed to the dances of war and peace, for with these we are undoubtedly concerned. Now the unwarlike muse, which honours in dance the Gods and the sons of the Gods, is entirely associated with the consciousness of prosperity; this class may be subdivided into two lesser classes, of which one is expressive of an escape from some labour or danger into good, and has greater pleasures, the other expressive of preservation and increase of former good, in which the pleasure is less exciting;—in all these cases, every man when the pleasure is greater, moves his body more, and less when the pleasure is less; and, again, if he be more orderly and has learned courage from discipline he moves less, but if he be a coward, and has no training or self-control, 816he makes greater and more violent movements, and in general when he is speaking or singing he is not altogether able to keep his body still; and so out of the imitation of words in gestures the whole art of dancing has arisen. And in these various kinds of imitation one man moves in an orderly, another in a disorderly manner; and as the ancients may be observed to have given many names which are according to nature and deserving of praise, so there is an excellent one which they have given to the dances of men who in their times of prosperity are moderate in their pleasures—the giver of names, whoever he was, assigned to them a very true, and poetical, and rational name, when he called them Emmeleiai, or dances of order, thus establishing two kinds of dances of the nobler sort, the dance of war which he called the Pyrrhic, and the dance of peace which he called Emmeleia, or the dance of order; giving to each their appropriate and

The Bacchic dance condemned.

The peaceful dance may express increase of good or escape from evil:

and has more or less of motion, as the pleasure is greater or less.

becoming name¹. These things the legislator should indicate in general outline, and the guardian of the law should enquire into them and search them out, combining dancing with music, and assigning to the several sacrificial feasts that which is suitable to them; and when he has consecrated all of them in due order, he shall for the future change nothing, whether of dance or song. Thenceforward the city and the citizens shall continue to have the same pleasures, themselves being as far as possible alike, and shall live well and happily.

I have described the dances which are appropriate to noble bodies and generous souls. But it is necessary also to consider and know uncomely persons and thoughts, and those which are intended to produce laughter in comedy, and have a comic character in respect of style, song, and dance, and of the imitations which these afford. For serious things cannot be understood without laughable things, nor opposites at all without opposites, if a man is really to have intelligence of either; but he cannot carry out both in action, if he is to have any degree of virtue. And for this very reason he should learn them both, in order that he may not in ignorance do or say anything which is ridiculous and out of place—he should command slaves and hired strangers to imitate such things, but he should never take any serious interest in them himself, nor should any freeman or freewoman be discovered taking pains to learn them; and there should always be some element of novelty in the imitation. Let these then be laid down, both in law and in our discourse, as the regulations of laughable amusements which are generally called comedy. And, if any of the serious poets, as they are termed, who write tragedy, come to us and say—‘O strangers, may we go to your city and country or may we not, and shall we bring with us our poetry—what is your will about these matters?’—how shall we answer the divine men? I think that our answer should be as follows¹:—Best of strangers, we will say to them, we also according to our ability are tragic poets, and our tragedy is the best and noblest; for our whole state is an imitation of the best and noblest life, which we affirm to be indeed the very truth of tragedy. You are poets and we are poets, both makers of the same strains, rivals and antagonists in the noblest of dramas, which true law can alone perfect, as our hope is. Do not then suppose that we shall all in a moment allow you to erect your stage in the agora, or introduce the fair voices of your actors, speaking above our own, and permit you to harangue our women and children, and the common people, about our institutions, in language other than our own, and very often the opposite of our own. For a state would be mad which gave you this licence, until the magistrates had determined whether your poetry might be recited, and was fit for publication or not. Wherefore, O ye sons and scions of the softer Muses, first of all show your songs to the magistrates, and let them compare them with our own, and if they are the same or better we will give you a chorus; but if not, then, my friends, we cannot. Let these, then, be the customs ordained by law about all dances and the teaching of them, and let matters relating to slaves be separated from those relating to masters, if you do not object.

Laughable things to be understood by our citizens as well as serious, but not to be imitated by them

Comedies to be performed only by slaves and hirelings.

Athenian, Cleinias.

The serious poet too is required to conform to our models.

CLE.

We can have no hesitation in assenting when you put the matter thus.

ATH.

There still remain three studies suitable for freemen. Arithmetic is one of them; the measurement of length, surface, and depth is the second; and the third has to do with the revolutions of the stars in relation to one another. Not every one has need to toil through all these things in a strictly scientific manner, but only a few, and who they are to be we will hereafter indicate at the end, which will be the proper place²; not to know what is necessary for mankind in general, and what is the truth, is disgraceful to every one: and yet to enter into these matters minutely is neither easy, nor at all possible for every one; but there is something in them which is necessary and cannot be set aside, and probably he who made the proverb about God originally had this in view when he said, that ‘not even God himself can fight against necessity;’—he meant, if I am not mistaken, divine necessity; for as to the human necessities of which the many speak, when they talk in this manner, nothing can be more ridiculous than such an application of the words.

Three subjects of education remain: (1) Arithmetic; (2) Geometry; (3) Astronomy. Of all three there is a scientific knowledge for the few; a popular knowledge for the many.

CLE.

And what necessities of knowledge are there, Stranger, which are divine and not human?

ATH.

I conceive them to be those of which he who has no use nor any knowledge at all cannot be a God, or demi-god, or hero to mankind, or able to take any serious thought or charge of them. And very unlike a divine man would he be, who is unable to count one, two, three, or to distinguish odd and even numbers¹, or is unable to count at all, or reckon night and day, and who is totally unacquainted with the revolution of the sun and moon, and the other stars. There would be great folly in supposing that all these are not necessary parts of knowledge to him who intends to know anything about the highest kinds of knowledge²; but which these are, and how many there are of them, and when they are to be learned, and what is to be learned together and what apart, and the whole correlation of them, must be rightly apprehended first; and these leading the way we may proceed to the other parts of knowledge. For so necessity grounded in nature constrains us, against which we say that no God contends, or ever will contend.

(1) In arithmetic there is a divine necessity;

and it is a necessary preliminary to the higher kinds of knowledge.

CLE.

I think, Stranger, that what you have now said is very true and agreeable to nature.

ATH.

Yes, Cleinias, that is so. But it is difficult for the legislator to begin with these studies; at a more convenient time we will make regulations for them.

CLE.

You seem, Stranger, to be afraid of our habitual ignorance of the subject: there is no reason why that should prevent you from speaking out.

ATH.

I certainly am afraid of the difficulties to which you allude, but I am still more afraid of those who apply themselves to this sort of knowledge, and apply themselves badly. For entire ignorance is not so terrible or extreme an evil, and is far from being the greatest of all; too much cleverness and too much learning, accompanied with an ill bringing up, are far more fatal¹.

Cleverness ill-directed often more fatal than ignorance.

CLE.

True.

ATH.

All freemen I conceive, should learn as much of these branches of knowledge as every child in Egypt is taught when he learns the alphabet. In that country arithmetical games have been invented for the use of mere children, which they learn as a pleasure and amusement. They have to distribute apples and garlands, using the same number sometimes for a larger and sometimes for a lesser number of persons; and they arrange pugilists and wrestlers as they pair together by lot or remain over, and show how their turns come in natural order. Another mode of amusing them is to distribute vessels, sometimes of gold, brass, silver, and the like, intermixed with one another, sometimes of one metal only; as I was saying they adapt to their amusement the numbers in common use, and in this way make more intelligible to their pupils the arrangements and movements of armies and expeditions, and in the management of a household they make people more useful to themselves, and more wide awake; and again in measurements of things which have length, and breadth, and depth, they free us from that natural ignorance of all these things which is so ludicrous and disgraceful².

Arithmetical games practised by the Egyptians and their uses.

(2) Geometry.

CLE.

What kind of ignorance do you mean?

ATH.

O my dear Cleinias, I, like yourself, have late in life heard with amazement of our ignorance in these matters; to me we appear to be more like pigs than men, and I am quite ashamed, not only of myself, but of all Hellenes.

CLE.

About what? Say, Stranger, what you mean.

ATH.

I will; or rather I will show you my meaning by a question, and do you please to answer me: You know, I suppose, what length is?

Illustrations of the ignorance of the Hellenes: (a) Their mistaken notion that various dimensions are commensurable.

CLE.

Certainly.

ATH.

And what breadth is?

CLE.

To be sure.

ATH.

And you know that these are two distinct things, and that there is a third thing called depth?

CLE.

Of course.

ATH.

And do not all these seem to you to be commensurable with themselves?

CLE.

Yes.

ATH.

That is to say, length is naturally commensurable with length, and breadth with breadth, and depth in like manner with depth?

CLE.

Undoubtedly.

ATH.

But if some things are commensurable and others wholly incommensurable, and you think that all things are commensurable, what is your position in regard to them?

CLE.

Clearly, far from good.

ATH.

Concerning length and breadth when compared with depth, or breadth and length when compared with one another, are not all the Hellenes agreed that these are commensurable with one another in some way?

CLE.

Quite true.

ATH.

But if they are absolutely incommensurable, and yet all of us regard them as commensurable, have we not reason to be ashamed of our compatriots; and might we not say to them:—O ye best of Hellenes, is not this one of the things of which we were saying that not to know them is disgraceful, and of which to have a bare knowledge only is no great distinction?

CLE.

Certainly.

ATH.

And there are other things akin to these, in which there spring up other errors of the same family.

CLE.

What are they?

ATH.

The natures of commensurable and incommensurable quantities in their relation to one another. A man who is good for anything ought to be able, when he thinks, to distinguish them; and different persons should compete with one another in asking questions, which will be a far better and more graceful way of passing their time than the old man's game of draughts.

(b) Their inability to distinguish between the commensurable and the incommensurable.

CLE.

I dare say; and these pastimes are not so very unlike a game of draughts.

ATH.

And these, as I maintain, Cleinias, are the studies which our youth ought to learn, for they are innocent and not difficult; the learning of them will be an amusement, and they will benefit the state. If any one is of another mind, let him say what he has to say.

CLE.

Certainly.

ATH.

Then if these studies are such as we maintain, we will include them; if not, they shall be excluded.

CLE.

Assuredly: but may we not now, Stranger, prescribe these studies as necessary, and so fill up the lacunae of our laws?

ATH.

They shall be regarded as pledges which may be hereafter redeemed and removed from our state, if they do not please either us who give them, or you who accept them.

CLE.

A fair condition.

ATH.

Next let us see whether we are or are not willing that the study of astronomy shall be proposed for our youth¹.

(3) Astronomy.

CLE.

Proceed.

ATH.

Here occurs a strange phenomenon, which certainly cannot in any point of view be tolerated.

CLE.

To what are you referring? 821

ATH.

Men say that we ought not to enquire into the supreme God and the nature of the universe, nor busy ourselves in searching out the causes of things, and that such enquiries are impious; whereas the very opposite is the truth.

Enquiries respecting the nature of God and the universe, the reverse of impious.

CLE.

What do you mean?

ATH.

Perhaps what I am saying may seem paradoxical, and at variance with the usual language of age. But when any one has any good and true notion which is for the advantage of the state and in every way acceptable to God, he cannot abstain from expressing it.

CLE.

Your words are reasonable enough; but shall we find any good or true notion about the stars?

ATH.

My good friends, at this hour all of us Hellenes tell lies, if I may use such an expression, about those great Gods, the Sun and the Moon.

At present the sun, moon, and other stars are blasphemously said to be wanderers.

CLE.

Lies of what nature?

ATH.

We say that they and divers other stars do not keep the same path, and we call them planets or wanderers.

CLE.

Very true, Stranger; and in the course of my life I have often myself seen the morning star and the evening star and divers others not moving in their accustomed course, but wandering out of their path in all manner of ways, and I have seen the sun and moon doing what we all know that they do.

ATH.

Just so, Megillus and Cleinias; and I maintain that our citizens and our youth ought to learn about the nature of the Gods in heaven, so far as to be able to offer sacrifices and pray to them in pious language, and not to blaspheme about them.

CLE.

There you are right, if such a knowledge be only attainable; and if we are wrong in our mode of speaking now, and can be better instructed and learn to use better language, then I quite agree with you that such a degree of knowledge as will enable us to speak rightly should be acquired by us. And now do you try to explain to us your whole meaning, and we, on our part, will endeavour to understand you.

ATH.

There is some difficulty in understanding my meaning, but not a very great one, nor will any great length of time be required. And of this I am myself a proof; for I did not know these things long ago, nor in the days of my youth, and yet I can explain them to you in a brief space of time; whereas if they had been difficult I could certainly never have explained them all, old as I am, to old men like yourselves.

CLE.

True; but what is this study which you describe as wonderful and fitting for youth to learn, but of which we are ignorant? Try and explain the nature of it to us as clearly as you can.

ATH.

I will. For, O my good friends, that other doctrine about the wandering of the sun and the moon and the other stars is not the truth, but the very reverse of the truth. Each of them moves in the same path—not in many paths, but in one only, which is circular, and the varieties are only apparent. Nor are we right in supposing that the swiftest of them is the slowest, nor conversely, that the slowest is the quickest. And if what I say is true, only just imagine that we had a similar notion about horses running at Olympia, or about men who ran in the long course, and that we addressed the swiftest as the slowest and the slowest as the swiftest, and sang the praises of the vanquished as though he were the victor,—in that case our praises would not be true, nor very agreeable to the runners, though they be but men; and now, to commit the same error about the Gods which would have been ludicrous and erroneous in the case of men,—is not that ludicrous and erroneous?

All the stars move in a circle; their wanderings are only apparent.

CLE.

Worse than ludicrous, I should say.

ATH.

At all events, the Gods cannot like us to be spreading a false report of them.

CLE.

Most true, if such is the fact.

ATH.

And if we can show that such is really the fact, then all these matters ought to be learned so far as is necessary for the avoidance of impiety; but if we cannot, they may be let alone, and let this be our decision.

CLE.

Very good.

ATH.

Hunting.

The highest honour to be given to him who not only obeys the laws, but earns the praise of the legislator.

Enough of laws relating to education and learning. But hunting and similar pursuits in like manner claim our attention. For the legislator appears to have a duty imposed upon him which goes beyond mere legislation. There is something over and above law which lies in a region between admonition and law, and has several times occurred to us in the course of discussion; for example, in the education of very young children there were things, as we maintain, which are not to be defined, and to regard them as matters of positive law is a great absurdity. Now, our laws and the whole constitution of our state having been thus delineated, the praise of the virtuous citizen is not complete when he is described as the person who serves the laws best and obeys them most, but the higher form of praise is that which describes him as the good citizen who passes through life undefiled and is obedient to the words of the legislator, both when he is giving laws and when he assigns praise and blame. This is the truest word that can be spoken in praise of a citizen; and the true legislator ought not only to write his laws, but also to interweave with them all such things as seem to him honourable and dishonourable. And the perfect citizen ought to seek to strengthen these no less than the principles of law which are sanctioned by punishments. I will adduce an example which will clear up my meaning, and will be a sort of witness to my words. Hunting is of wide extent, and has a name under which many things are included, for there is a hunting of creatures in the water, and of creatures in the air, and there is a great deal of hunting of land animals of all kinds, and not of wild beasts only. The hunting after man is also worthy of consideration; there is the hunting after him in war, and there is often a hunting after him in the way of friendship, which is praised and also blamed; and there is thieving, and the hunting which is practised by robbers, and that of armies against armies. Now the legislator, in laying down laws about hunting, can neither abstain from noting these things, nor can he make threatening ordinances which will assign rules and penalties about all of them. What is he to do? He will have to praise and blame hunting with a view to the exercise and pursuits of youth. And, on the other hand, the young man must listen obediently; neither pleasure nor pain should hinder him, and he should regard as his standard of action the praises and injunctions of the legislator rather than the punishments which he imposes by law. This being premised, there will follow next in order moderate praise and censure of hunting; the praise being assigned to that kind which will make the souls of young men better, and the censure to that which has the opposite effect. And now let us address young men in the form of a prayer for their welfare: O friends, we will say to them, may no desire or love of hunting in the sea, or of angling or of catching the creatures in the waters, ever take possession of you, either when you are awake or when you are asleep, by hook or with weels, which latter is a very lazy contrivance; and let not any desire of catching men and of piracy by sea enter into your souls and make you cruel and lawless hunters. And as to the desire of thieving in town or country, may it never enter into your most passing thoughts; nor let the insidious fancy of catching birds, which is hardly worthy of freemen, come into the head of any youth. There remains therefore for our athletes only the hunting and catching of land animals, of which the one sort is called hunting by night, in which the hunters sleep in turn and are lazy; this is not to be commended any more than that which has intervals of rest, in which the wild strength of beasts is subdued by nets and snares, and not by the victory of a laborious spirit. Thus, only the best kind of hunting

Athenian.

Forms of hunting which are approved, disapproved, and forbidden.

Athenian, Cleinias.

is allowed at all—that of quadrupeds, which is carried on with horses and dogs and men's own persons, and they get the victory over the animals by running them down and striking them and hurling at them, those who have a care of godlike manhood taking them with their own hands. The praise and blame which is assigned to all these things has now been declared; and let the law be as follows:—Let no one hinder these who verily are sacred hunters from following the chase wherever and whithersoever they will; but the hunter by night, who trusts to his nets and gins, shall not be allowed to hunt anywhere. The fowler in the mountains and waste places shall be permitted, but on cultivated ground and on consecrated wilds he shall not be permitted; and any one who meets him may stop him. As to the hunter in waters, he may hunt anywhere except in harbours or sacred streams or marshes or pools, provided only that he do not pollute the water with poisonous juices. And now we may say that all our enactments about education are complete.

CLE.

Very good.

[\[Back to Table of Contents\]](#)

BOOK VIII.

ATHENIAN STRANGER.

828Next, with the help of the Delphian oracle, we have to institute festivals and make laws about them, and to determine what sacrifices will be for the good of the city, and to what Gods they shall be offered; but when they shall be offered, and how often, may be partly regulated by us.

Laws VIII.

Athenian, Cleinias.

Festivals and sacrifices.

CLEINIAS.

The number—yes.

ATH.

There shall be daily sacrifices:

also a monthly feast to each of the twelve Gods of the tribes; and festivals set apart for women.

The rites of the Gods above and of the Gods below should be kept distinct.

Athenian.

The God of Death the best friend of man.

Neither individual nor city can live happily if not perfectly good.

With a view to war there should be military festivals.

The victors in these are to be celebrated by poets who have themselves done noble actions.

Athenian, Cleinias.

All songs to be approved by the guardians of the law.

Then we will first determine the number; and let the whole number be 365—one for every day,—so that one magistrate at least will sacrifice daily to some God or demigod on behalf of the city, and the their possessions. And the interpreters, and priests, and priestesses, and prophets shall meet, and, in company with the guardians of the law, ordain those things which the legislator of necessity omits; and I may remark that they are the very persons who ought to take note of what is omitted¹. The law will say that there are twelve feasts dedicated to the twelve Gods, after whom the several tribes are named; and that to each of them they shall sacrifice every month, and appoint choruses, and musical and gymnastic contests, assigning them so as to suit the Gods and seasons of the year. And they shall have festivals for women, distinguishing those which ought to be separated from the men's festivals, and those which ought not. Further, they shall not confuse the infernal deities and their rites with the Gods who are termed heavenly and their rites, but shall separate them, giving to Pluto his own in the twelfth month, which is sacred to him, according to the law. To such a deity warlike men should entertain no aversion, but they should honour him as being always the best friend of man¹. For the connexion of soul and body is no way better than the dissolution of them, as I am ready to maintain quite seriously. Moreover, those who would regulate these matters rightly should consider, that our city among existing cities has no fellow, either in respect of leisure or command of the necessities of life, and that like an individual she ought to live happily. And those who would live happily should 829in the first place do no wrong to one another, and ought not themselves to be wronged by others; to attain the first is not difficult, but there is great difficulty in acquiring the power of not being wronged. No man can be perfectly secure against wrong, unless he has become perfectly good; and cities are like individuals in this, for a city if good has a life of peace, but if evil, a life of war within and without. Wherefore the citizens ought to practise war—not in time of war, but rather while they are at peace. And every city which has any sense, should take the field at least for one day in every month, and for more if the magistrates think fit, having no regard to winter cold or summer heat; and they should go out *en masse*, including their wives and their children, when the magistrates determine to lead forth the whole people, or in separate portions when summoned by them; and they should always provide that there should be games and sacrificial feasts, and they should have tournaments, imitating in as lively a manner as they can real battles. And they should distribute prizes of victory and valour to the competitors, passing censures and encomiums on one another according to the characters which they bear in the contests and in their whole life, honouring him who seems to be the best, and blaming him who is the opposite. And let poets celebrate the victors,—not however every poet, but only one who in the first place is not less than fifty years of age; nor should he be one who, although he may have musical and poetical gifts, has never in his life done any noble or illustrious action; but those who are themselves good and also honourable in the state, creators of noble actions—let their poems be sung, even though they be not very musical. And let the judgment of them rest with the instructor of youth¹ and the other guardians of the laws, who shall give them this privilege, and they alone shall be free to sing; but the rest of the world shall not have this liberty. Nor shall any one dare to sing a song which has not been approved by the judgment of the guardians of the laws, not even if his strain be sweeter than the songs of Thamyra and Orpheus; but only such poems as have been judged sacred and dedicated to the Gods, and such as

are the works of good men, in which praise or blame has been awarded and which have been deemed to fulfil their design fairly.

The regulations about war, and about liberty of speech in poetry, ought to apply equally to men and women. The legislator may be supposed to argue the question in his own mind:—Who are my citizens for whom I have set in order the city? Are they not competitors in the greatest of all contests², and have they not innumerable rivals? To be sure, will be the natural reply. Well, but if we were training boxers, or pancratiasts, or any other sort of athletes, would they never meet until the hour of contest arrived; and should we do nothing to prepare ourselves previously by daily practice? Surely, if we were boxers, we should have been learning to fight for many days before, and exercising ourselves in imitating all those blows and wards which we were intending to use in the hour of conflict; and in order that we might come as near to reality as possible, instead of cestuses we should put on boxing-gloves, that the blows and the wards might be practised by us to the utmost of our power. And if there were a lack of competitors, the ridicule of fools would not deter us from hanging up a lifeless image and practising at that. Or if we had no adversary at all, animate or inanimate, should we not venture in the dearth of antagonists to spar by ourselves? In what other manner could we ever study the art of self-defence?

Our citizens are competitors in the greatest of contests, and must enter it well-prepared.

CLE.

The way which you mention, Stranger, would be the only way.

ATH.

And shall the warriors of our city, who are destined when occasion calls to enter the greatest of all contests, and to fight for their lives, and their children, and their property, and the whole city, be worse prepared than boxers? And will the legislator, because he is afraid that their practising with one another may appear to some ridiculous, abstain from commanding them to go out and fight; will he not ordain that soldiers shall perform lesser exercises without arms every day, making dancing and all gymnastic tend to this end; and also will he not require that they shall practise some gymnastic exercises, greater as well as lesser, as often as every month; and that they shall have contests one with another in every part of the country, seizing upon posts and lying in ambush, and imitating in every respect the reality of war; fighting with boxing-gloves and hurling javelins, and using weapons somewhat dangerous, and as nearly as possible like the true ones, in order that the sport may not be altogether without fear, but may have terrors and to a certain degree show the man who has and who has not courage; and³ that the honour and dishonour which are assigned to them respectively, may prepare the whole city for the true conflict of life? If any one dies in these mimic contests, the homicide is involuntary, and we will make the slayer, when he has been purified according to law, to be pure of blood, considering that if a few men should die, others as good as they will be born; but that

Gymnastics and military drill to be practised continually.

if fear is dead, then the citizens will never find a test of superior and inferior natures, which is a far greater evil to the state than the loss of a few.

CLE.

We are quite agreed, Stranger, that we should legislate about such things, and that the whole state should practise them.

ATH.

And what is the reason that dances and contests of this sort hardly ever exist in states, at least not to any extent worth speaking of? Is this due to the ignorance of mankind and their legislators?

CLE.

Perhaps.

ATH.

Certainly not, sweet Cleinias; there are two causes, which are quite enough to account for the deficiency.

One of the reasons (1) why martial dances and contests are neglected is the love of money.

CLE.

What are they?

ATH.

One cause is the love of wealth, which wholly absorbs men, and never for a moment allows them to think of anything but their own private possessions; on this the soul of every citizen hangs suspended, and can attend to nothing but his daily gain; mankind are ready to learn any branch of knowledge, and to follow any pursuit which tends to this end, and they laugh at every other:—that is one reason why a city will not be in earnest about such contests or any other good and honourable pursuit. But from an insatiable love of gold and silver, every man will stoop to any art or contrivance, seemly or unseemly, in the hope of becoming rich; and will make no objection to performing any action, holy, or unholy and utterly base, if only like a beast he have the power of eating and drinking all kinds of things, and procuring for himself in every sort of way the gratification of his lusts.

CLE.

True.

ATH.

Let this, then, be deemed one of the causes which prevent states from pursuing in an efficient manner the art of war, or any other noble aim, but makes the orderly and temperate part of mankind into merchants, and captains of ships, and servants, and converts the valiant sort into thieves and burglars, and robbers of temples, and violent, tyrannical persons; many of whom are not without ability, but they are unfortunate¹ .

The orderly become traders, the valiant robbers.

The latter have often considerable natural gifts.

CLE.

What do you mean?

ATH.

Must not they be truly unfortunate whose souls are compelled to pass through life always hungering?

CLE.

Then that is one cause, Stranger; but you spoke of another.

ATH.

Thank you for reminding me.

CLE.

The insatiable lifelong love of wealth, as you were saying, is one cause which absorbs mankind, and prevents them from rightly practising the arts of war:—Granted; and now tell me, what is the other?

ATH.

Do you imagine that I delay because I am in a perplexity?

CLE.

No; but we think that you are too severe upon the money-loving temper, of which you seem in the present discussion to have a peculiar dislike.

ATH.

That is a very fair rebuke, Cleinias; and I will now proceed to the second cause.

CLE.

Proceed.

ATH.

I say that governments are a cause—democracy, oligarchy, tyranny, concerning which I have often spoken in the previous discourse¹; or rather governments they are not, for none of them exercises a voluntary rule over voluntary subjects; but they may be truly called states of discord, in which while the government is voluntary, the subjects always obey against their will, and have to be coerced; and the ruler fears the subject, and will not, if he can help, allow him to become either noble, or rich, or strong, or valiant, or warlike at all². These two are the chief causes of almost all evils, and of the evils of which I have been speaking they are notably the causes. But our state has escaped both of them; for her citizens have the greatest leisure, and they are not subject to one another, and will, I think, be made by these laws the reverse of lovers of money. Such a constitution may be reasonably supposed to be the only one existing which will accept the education which we have described, and the martial pastimes which have been perfected according to our idea.

(2) Bad governments are a second cause.

Our state is free from both these evils.

CLE.

True.

ATH.

Then next we must remember, about all gymnastic contests, that only the warlike sort of them are to be practised and to have prizes of victory; and those which are not military are to be given up. The military sort had better be completely described and established by law; and first, let us speak of running and swiftness.

Military gymnastics to be alone encouraged.

CLE.

Very good.

ATH.

Certainly the most military of all qualities is general activity of body, whether of foot or hand. For escaping or for capturing an enemy, quickness of foot is required; but hand-to-hand conflict and combat need vigour and strength. 833

CLE.

Very true.

ATH.

Neither of them can attain their greatest efficiency without arms.

CLE.

How can they?

ATH.

Then our herald, in accordance with the prevailing practice, will first summon the runner;—he will appear armed, for to an unarmed competitor we will not give a prize. And he shall enter first who is to run the single course bearing arms; next, he who is to run the double course; third, he who is to run the horse-course; and fourthly, he who is to run the long course; the fifth whom we start, shall be the first sent forth in heavy armour, and shall run a course of sixty stadia to some temple of Ares—and we will send forth another, whom we will style the more heavily armed, to run over smoother ground. There remains the archer; and he shall run in the full equipments of an archer a distance of 100 stadia over mountains, and across every sort of country, to a temple of Apollo and Artemis; this shall be the order of the contest, and we will wait for them until they return, and will give a prize to the conqueror in each.

Contests of swiftmess.

The seven courses of running in light or heavy armour.

CLE.

Very good.

ATH.

Let us suppose that there are three kinds of contests,—one of boys, another of beardless youths, and a third of men. For the youths we will fix the length of the contest at two-thirds, and for the boys at half of the entire course, whether they contend as archers or as heavy-armed. Touching the women, let the girls who are not grown up compete naked in the stadium and the double course, and the horse-course and the long course, and let them run on the race-ground itself; those who are thirteen years of age and upwards until their marriage shall continue to share in contests if they are not more than twenty, and shall be compelled to run up to eighteen; and they shall descend into the arena in suitable dresses. Let these be the regulations about contests in running both for men and women.

Different courses for boys, for youths, and for men.

Women and girls to share in the contests.

Contests of strength.
Men and women to contend in armour.

Athenian.

Respecting contests of strength, instead of wrestling and similar contests of the heavier sort, we will institute conflicts in armour of one against one, and two against two, and so on up to ten against ten. As to what a man ought not to suffer or do, and to what extent, in order to gain the victory—as in wrestling, the masters of the art have laid down what is fair and what is not fair, so in fighting in armour—we ought to call in skilful persons, who shall judge for us and be our assessors in the work of legislation; they shall say who deserves to be victor in combats of this sort, and what he is not to do or have done to him, and in like manner what rule determines who is defeated; and let these ordinances apply ⁸³⁴to women until they are married as well as to men. The pancration shall have a counterpart in a combat of the light-armed; they shall contend with bows and with light shields and with javelins and in the throwing of stones by slings and by hand: and laws shall be made about it, and rewards and prizes given to him who best fulfils the ordinances of the law.

The military
pancratation.

Next in order we shall have to legislate about the horse contests. Now we do not need many horses, for they cannot be of much use in a country like Crete¹, and hence we naturally do not take great pains about the rearing of them or about horse races. There is no one who keeps a chariot among us, and any rivalry in such matters would be altogether out of place; there would be no sense nor any shadow of sense in instituting contests which are not after the manner of our country. And therefore we give our prizes for single horses,—for colts who have not yet cast their teeth, and for those who are intermediate, and for the full-grown horses themselves; and thus our equestrian games will accord with the nature of the country. Let them have conflict and rivalry in these matters in accordance with the law, and let the colonels and generals of horse decide together about all courses and about the armed competitors in them. But we have nothing to say to the unarmed either in gymnastic exercises or in these contests. On the other hand, the Cretan bowman or javelin-man who fights in armour on horseback is useful, and therefore we may as well place a competition of this sort among our amusements. Women are not to be forced to compete by laws and ordinances; but if from previous training they have acquired the habit and are strong enough and like to take part, let them do so, girls as well as boys, and no blame to them.

No prizes for
chariotraces, but only
for single horses,

and for mounted
archers and spearmen.

Thus the competition in gymnastic and the mode of learning it have been described; and we have spoken also of the toils of the contest, and of daily exercises under the superintendence of masters². Likewise, what relates to music has been, for the most part, completed. But as to rhapsodes and the like, and the contests of choruses which are to perform at feasts, all this shall be arranged when the months and days and years have been appointed for Gods and demi-gods, whether every third year, or again every fifth year, or in whatever way ⁸³⁵or manner the Gods may put into men's minds the distribution and order of them. At the same time, we may expect that the musical contests will be celebrated in their turn by the command of the judges and the director of education and the guardians of the law meeting together for this purpose, and themselves becoming legislators of the times and nature and conditions of the choral contests and of dancing in general. What

Athenian, Cleinias.

The arrangements for
recitations and
choruses.

they ought severally to be in language and song, and in the admixture of harmony with rhythm and the dance, has been often declared by the original legislator; and his successors ought to follow him, making the games and sacrifices duly to correspond at fitting times, and appointing public festivals. It is not difficult to determine how these and the like matters may have a regular order; nor, again, will the alteration of them do any great good or harm to the state. There is, however, another matter of great importance and difficulty, concerning which God should legislate, if there were any possibility of obtaining from Him an ordinance about it. But seeing that divine aid is not to be had, there appears to be a need of some bold man who specially honours plainness of speech, and will say outright what he thinks best for the city and citizens,—ordaining what is good and convenient for the whole state amid the corruptions of human souls, opposing the mightiest lusts, and having no man his helper but himself standing alone and following reason only.

CLE.

What is this, Stranger, that you are saying? For we do not as yet understand your meaning.

ATH.

Very likely; I will endeavour to explain myself more clearly. When I came to the subject of education, I beheld young men and maidens holding friendly intercourse with one another. And there naturally arose in my mind a sort of apprehension—I could not help thinking how one is to deal with a city in which youths and maidens are well nurtured, and have nothing to do, and are not undergoing the excessive and servile toils which extinguish wantonness, and whose only cares during their whole life are sacrifices and festivals and dances. How, in such a state as this, will they abstain from desires which thrust many a man and woman into perdition; and from which reason, assuming the functions of law, commands them to abstain? The ordinances already made may possibly get the better of most of these desires; the prohibition of excessive wealth is a very considerable gain in the direction of temperance, and the whole education of our youth imposes a law of moderation on them; moreover, the eye of the rulers is required always to watch over the young, and never to lose sight of them; and these provisions do, as far as human means can effect anything, exercise a regulating influence upon the desires in general. But how can we take precautions against the unnatural loves of either sex, from which innumerable evils have come upon individuals and cities? How shall we devise a remedy and way of escape out of so great a danger? Truly, Cleinias, here is a difficulty. In many ways Crete and Lacedaemon furnish a great help to those who make peculiar laws; but in the matter of love, as we are alone, I must confess that they are quite against us. For if any one following nature should lay down the law which existed before the days of Laius, and denounce these lusts as contrary to nature, adducing the animals as a proof that such unions were monstrous, he might prove his point, but he would be wholly at variance

How can men and women living at ease be saved from their lusts?

Athenian.

The evil of unnatural loves.

Bad example set by Crete and Lacedaemon.

Athenian, Cleinias.

with the custom of your states. Further, they are repugnant to a principle which we say that a legislator should always observe; for we are always enquiring which of our enactments tends to virtue and which not¹. And suppose we grant that these loves are accounted by law to be honourable, or at least not disgraceful, in what degree will they contribute to virtue? Will such passions implant in the soul of him who is seduced the habit of courage, or in the soul of the seducer the principle of temperance? Who will ever believe this?—or rather, who will not blame the effeminacy of him who yields to pleasures and is unable to hold out against them? Will not all men censure as womanly him who imitates the woman? And who would ever think of establishing such a practice by law? Certainly no one who had in his mind the image of true law. 837How can we prove that what I am saying is true? He who would rightly consider these matters must see the nature of friendship and desire, and of these so-called loves, for they are of two kinds, and out of the two arises a third kind, having the same name; and this similarity of name causes all the difficulty and obscurity.

CLE.

How is that?

ATH.

Dear is the like in virtue to the like, and the equal to the equal; dear also, though unlike, is he who has abundance to him who is in want. And when either of these friendships becomes excessive, we term the excess love.

CLE.

Very true.

ATH.

The friendship which arises from contraries is horrible and coarse, and has often no tie of communion; but that which arises from likeness is gentle, and has a tie of communion which lasts through life. As to the mixed sort which is made up of them both, there is, first of all, a difficulty in determining what he who is possessed by this third love desires; moreover, he is drawn different ways, and is in doubt between the two principles; the one exhorting him to enjoy the beauty of youth, and the other forbidding him. For the one is a lover of the body, and hungers after beauty, like ripe fruit, and would fain satisfy himself without any regard to the character of the beloved; the other holds the desire of the body to be a secondary matter, and looking rather than loving and with his soul desiring the soul of the other in a becoming manner, regards the satisfaction of the bodily love as wantonness¹; he reverences and respects temperance and courage and magnanimity and wisdom, and wishes to live chastely with the chaste object of his affection. Now the sort of love which is made up of the other two is that which we have described as the third. Seeing then that there

There is (1) a love of the body: (2) a love of the soul: (3) a mixed sort which is made up of both.

We approve only of the second.

are these three sorts of love, ought the law to prohibit and forbid them all to exist among us? Is it not rather clear that we should wish to have in the state the love which is of virtue and which desires the beloved youth to be the best possible; and the other two, if possible, we should hinder? What do you say, friend Megillus?

MEG.

I think, Stranger, that you are perfectly right in what you have been now saying.

Athenian, Megillus.

ATH.

I knew well, my friend, that I should obtain your assent, which I accept, and therefore have no need to analyze your custom any further. Cleinias shall be prevailed upon to give me his assent at some other time. Enough of this; and now let us proceed to the laws.

MEG.

Very good. 838

ATH.

Upon reflection I see a way of imposing the law, which, in one respect, is easy, but, in another, is of the utmost difficulty.

MEG.

What do you mean?

ATH.

We are all aware that most men, in spite of their lawless natures, are very strictly and precisely restrained from intercourse with the fair, and this is not at all against their will, but entirely with their will.

An encouraging circumstance that the purity of the family is perfectly preserved.

MEG.

When do you mean?

ATH.

When any one has a brother or sister who is fair; and about a son or daughter the same unwritten law holds, and is a most perfect safeguard, so that no open or secret connexion ever takes place between them. Nor does the thought of such a thing ever enter at all into the minds of most of them.

MEG.

Very true.

ATH.

Does not a little word extinguish all pleasures of that sort?

MEG.

What word?

The reason of this is that incestuous connexions have ever been deemed infamous.

ATH.

The declaration that they are unholy, hated of God, and most infamous; and is not the reason of this that no one has ever said the opposite, but every one from his earliest childhood has heard men speaking in the same manner about them always and everywhere, whether in comedy or in the graver language of tragedy? When the poet introduces on the stage a Thyestes or an Oedipus, or a Macareus having secret intercourse with his sister, he represents him, when found out, ready to kill himself as the penalty of his sin.

MEG.

You are very right in saying that tradition, if no breath of opposition ever assails it, has a marvellous power.

ATH.

Am I not also right in saying that the legislator who wants to master any of the passions which master man may easily know how to subdue them? He will consecrate the tradition of their evil character among all, slaves and freemen, women and children, throughout the city:—that will be the surest foundation of the law which he can make.

MEG.

Yes; but will he ever succeed in making all mankind use the same language about them?

ATH.

Other vile unions should be prevented in a similar manner.

A good objection; but was I not just now saying that I had a way to make men use natural love and abstain from 839unnatural, not intentionally destroying the seeds of human increase, or sowing them in stony places, in which they will take no root; and that I would command them to abstain too from any female field of increase in which that which is sown is not likely to grow? Now if a law to this effect could only be made perpetual, and gain an authority such as already prevents intercourse of parents and children—such a law, extending to other sensual desires, and conquering them, would be the source of ten thousand blessings. For, in the first place, moderation is the appointment of nature, and deters men from all frenzy and madness of love, and from all adulteries and immoderate use of meats and drinks, and makes them good friends to their own wives. And innumerable other benefits would result if such a law could only be enforced. I can imagine some lusty youth who is standing by, and who, on hearing this enactment, declares in scurrilous terms that we are making foolish and impossible laws, and fills the world with his outcry. And therefore I said that I knew a way of enacting and perpetuating such a law, which was very easy in one respect, but in another most difficult. There is no difficulty in seeing that such a law is possible, and in what way; for, as I was saying, the ordinance once consecrated would master the soul of every man, and terrify him into obedience. But matters have now come to such a pass that even then the desired result seems as if it could not be attained, just as the continuance of an entire state in the practice of common meals is also deemed impossible. And although this latter is partly disproven by the fact of their existence among you, still even in your cities the common meals of women would be regarded as unnatural and impossible. I was thinking of the rebelliousness of the human heart when I said that the permanent establishment of these things is very difficult.

Moderation in sexual delights the appointment of nature.

A law once enacted would master the evil, but such a law can no longer be passed.

Athenian, Megillus, Cleinias.

MEG.

Very true.

ATH.

Shall I try and find some sort of persuasive argument which will prove to you that such enactments are possible, and not beyond human nature?

CLE.

By all means.

ATH.

Is a man more likely to abstain from the pleasures of love and to do what he is bidden about them, when his body is in a good condition, or when he is in an ill condition, and out of training?

CLE.

He will be far more temperate when he is in training.

ATH.

And have we not heard of Iccus of Tarentum, who, with a view to the Olympic and other contests, in his zeal for his art, and also because he was of a manly and temperate disposition, never had any connexion with a woman or a youth during the whole time of his training? And the same is said of Crison and Astylus and Diopompus and many others; and yet, Cleinias, they were far worse educated in their minds than your and my citizens, and in their bodies far more lusty.

Iccus of Tarentum and other athletes have practised entire continence to gain a prize at Olympia.

CLE.

No doubt this fact has been often affirmed positively by the ancients of these athletes.

ATH.

And had they the courage to abstain from what is ordinarily deemed a pleasure for the sake of a victory in wrestling, running, and the like; and shall our young men be incapable of a similar endurance for the sake of a much nobler victory, which is the noblest of all, as from their youth upwards we will tell them, charming them, as we hope, into the belief of this by tales and sayings and songs?

And shall not our citizens endure that they may win the prize of a far nobler victory?

CLE.

Of what victory are you speaking?

ATH.

Of the victory over pleasure, which if they win, they will live happily; or if they are conquered, the reverse of happily. And, further, may we not suppose that the fear of impiety will enable them to master that which other inferior people have mastered?

CLE.

I dare say.

ATH.

The first law:—

And since we have reached this point in our legislation, and have fallen into a difficulty by reason of the vices of mankind, I affirm that our ordinance should simply run in the following terms: Our citizens ought not to fall below the nature of birds and beasts in general, who are born in great multitudes, and yet remain until the age for procreation virgin and unmarried, but when they have reached the proper time of life are coupled, male and female, and lovingly pair together, and live the rest of their lives in holiness and innocence, abiding firmly in their original compact:—surely, we will say to them, you should be better than the animals. But if they are corrupted by the other Hellenes and the common practice of barbarians, and they see with their eyes and hear with their ears of the so-called free love everywhere prevailing among them, and they themselves are not able to get the better of the temptation, the guardians of the law, exercising the functions of lawgivers, shall devise a second law against them.

Athenian, Cleinias.

Our citizens should not be less innocent than the animals.

CLE.

841 And what law would you advise them to pass if this one failed?

ATH.

Clearly, Cleinias, the one which would naturally follow.

The second law:—

CLE.

What is that?

ATH.

Our citizens should not allow pleasures to strengthen with indulgence, but should by toil divert the aliment and exuberance of them into other parts of the body; and this will happen if no immodesty be allowed in the practice of love. Then they will be ashamed of frequent intercourse, and they will find pleasure, if seldom enjoyed, to be a less imperious mistress. They should not be found out doing anything of the sort. Concealment shall be honourable, and sanctioned by custom and made law by unwritten prescription; on the other hand, to be detected shall be esteemed dishonourable, but not, to abstain wholly. In this way there will be a second legal standard of honourable and dishonourable, involving a second notion of right. Three principles will comprehend all those corrupt natures whom we call inferior to themselves, and who form but one class, and will compel them not to transgress.

Labour should divert the aliment of passion into other parts of the body.

Concealment better than open vice.

Three corrective principles.

CLE.

What are they?

ATH.

The principle of piety, the love of honour, and the desire of beauty, not in the body but in the soul. These are, perhaps, romantic aspirations; but they are the noblest of aspirations, if they could only be realized in all states, and, God willing, in the matter of love we may be able to enforce one of two things—either that no one shall venture to touch any person of the freeborn or noble class except his wedded wife, or sow the unconsecrated and bastard seed among harlots, or in barren and unnatural lusts; or at least we may abolish altogether the connexion of men with men; and as to women, if any man has to do with any but those who come into his house duly married by sacred rites, whether they be bought or acquired in any other way, and he offends publicly in the face of all mankind, we shall be right in enacting that he be deprived of civic honours and privileges, and be deemed to be, as he truly is, a stranger. Let this law, then, whether it is one, or ought rather to be called two, be laid down respecting love in general, and the intercourse of the sexes which arises out of the desires, whether rightly or wrongly indulged.

Athenian, Megillus, Cleinias.

No man shall touch a woman except his wedded wife.

Prohibition of loves between man and man.

MEG.

I, for my part, Stranger, would gladly receive this law. Cleinias shall speak for himself, and tell you what is his opinion.

CLE.

I will, Megillus, when an opportunity offers; at present, I think that we had better allow the Stranger to proceed with his laws.

MEG.

Very good.

ATH.

We had got about as far as the establishment of the common tables, which in most places would be difficult, but in Crete no one would think of introducing any other custom. There might arise a question about the manner of them—whether they shall be such as they are here in Crete, or such as they are in Lacedaemon,—or is there a third kind which may be better than either of them¹? The answer to this question might be easily discovered, but the discovery would do no great good, for at present they are very well ordered.

The way of providing food being more simple than in other

Leaving the common tables, we may therefore proceed to the means of providing food. Now, in cities the means of life are gained in many ways and from divers sources, and in general from two sources, whereas our city has only one. For most of the Hellenes obtain their food from sea and land, but our citizens from land only. And this makes the task of the legislator less difficult—half as many laws will be enough, and much less than half; and they will be of a kind better suited to free men. For he has nothing to do with laws about shipowners and merchants and retailers and inn-keepers and tax collectors and mines and moneylending and compound interest and innumerable other things—bidding good-bye to these, he gives laws to husbandmen and shepherds and bee-keepers, and to the guardians and superintendents of their implements; and he has already legislated for greater matters, as for example, respecting marriage and the procreation and nurture of children, and for education, and the establishment of offices—and now he must direct his laws to those who provide food and labour in preparing it.

states, the laws relating to this subject will also be more simple.

Athenian.

Let us first of all, then, have a class of laws which shall be called the laws of husbandmen. And let the first of them be the law of Zeus, the god of boundaries. Let no one shift the boundary line either of a fellow-citizen who is a neighbour, or, if he dwells at the extremity of the land, of any stranger who 843 is conterminous with him, considering that this is truly ‘to move the immovable,’ and every one should be more willing to move the largest rock which is not a landmark, than the least stone which is the sworn mark of friendship and hatred between neighbours; for Zeus, the god of kindred, is the witness of the citizen, and Zeus, the god of strangers, of the stranger, and when aroused, terrible are the wars which they stir up. He who obeys the law will never know the fatal consequences of disobedience, but he who despises the law shall be liable to a double penalty, the first coming from the Gods, and the second from the law. For let no one wilfully remove the boundaries of his neighbour’s land, and if any one does, let him who will inform the landowners, and let them bring him into court, and if he be convicted of redividing the land by stealth or by force, let the court determine what he ought to suffer or pay. In the next place, many small injuries done by neighbours to one another, through their multiplication, may cause a weight of enmity, and make neighbourhood a very disagreeable and bitter thing. Wherefore a man ought to be very careful of committing any offence against his neighbour, and especially of encroaching on his neighbour’s land; for any man may easily do harm, but not every man can do good to another. He who encroaches on his neighbour’s land, and transgresses his boundaries, shall make good the damage, and, to cure him of his impudence and also of his meanness, he shall pay a double penalty to the injured party. Of these and the like matters the wardens of the country shall take cognizance, and be the judges of them and assessors of the damage; in the more important cases, as has been already said [1](#), the whole number of them belonging to any one of the twelve divisions shall decide, and in the lesser cases the commanders: or, again, if any one pastures his cattle on his neighbour’s land, they shall see the injury, and adjudge the penalty. And if any one, by decoying the bees, gets possession of another’s swarms, and draws them to himself by making noises, he shall pay the

Laws concerning husbandmen:—

Let boundaries not be disturbed.

Let no man encroach in any way.

The ancient laws about water quite sufficient.

damage; or if any one sets fire to his own wood and takes no care of his neighbour's property, he shall be fined at the discretion of the magistrates. And if in planting he does not leave a fair distance between his own and his neighbour's land, he shall be punished, in accordance with the enactments of many lawgivers, which we may use, not deeming it necessary that the great legislator of 844our state should determine all the trifles which might be decided by any body; for example, husbandmen have had of old excellent laws about waters, and there is no reason why we should propose to divert their course: He who likes may draw water from the fountain-head of the common stream on to his own land, if he do not cut off the spring which clearly belongs to some other owner; and he may take the water in any direction which he pleases, except through a house or temple or sepulchre, but he must be careful to do no harm beyond the channel. And if there be in any place a natural dryness of the earth, which keeps in the rain from heaven, and causes a deficiency in the supply of water, let him dig down on his own land as far as the clay, and if at this depth he finds no water, let him obtain water from his neighbours, as much as is required for his servants' drinking, and if his neighbours, too, are limited in their supply, let him have a fixed measure, which shall be determined by the wardens of the country. This he shall receive each day, and on these terms have a share of his neighbours' water. If there be heavy rain, and one of those on the lower ground injures some tiller of the upper ground, or some one who has a common wall, by refusing to give them an outlet for water; or, again, if some one living on the higher ground recklessly lets off the water on his lower neighbour, and they cannot come to terms with one another, let him who will call in a warden of the city, if he be in the city, or if he be in the country, a warden of the country, and let him obtain a decision determining what each of them is to do. And he who will not abide by the decision shall suffer for his malignant and morose temper, and pay a fine to the injured party, equivalent to double the value of the injury, because he was unwilling to submit to the magistrates.

Now the participation of fruits shall be ordered on this wise. The goddess of Autumn has two gracious gifts: one, the joy¹ of Dionysus which is not treasured up; the other, which nature intends to be stored. Let this be the law, then, concerning the fruits of autumn: He who tastes the common or storing fruits of autumn, whether grapes or figs, before the season of vintage which coincides with Arcturus, either on his own land or on that of others,—let him pay fifty drachmae, which shall be sacred to Dionysus, if he pluck them from his own land; and if from his neighbour's land, a mina, and if from any others', two-thirds of a mina. And he who would gather the 'choice' grapes or the 'choice' figs, as they are now termed, if he take them off his own land, let him pluck them how and when he likes; but if he take them from the ground of others without their leave, let him in that case be always punished in accordance with the law which ordains that he should not move what he has not laid down². And if a slave 845touches any fruit of this sort, without the consent of the owner of the land, he shall be beaten with as many blows as there are grapes on the bunch, or figs on the fig-tree. Let a metic purchase the 'choice' autumnal fruit, and then, if he pleases, he may gather it; but if a stranger is passing along the road, and desires to eat, let him take of

The citizen may not pluck the storing fruit anywhere, but he may pluck the choice grapes or figs on his own land.

A stranger may take of the choice grape, but not of the storing.

Pears and apples may be taken secretly; but any one under thirty who is caught may be beaten off.

the 'choice' grape for himself and a single follower without payment, as a tribute of hospitality. The law however forbids strangers from sharing in the sort which is not used for eating; and if any one, whether he be master or slave, takes of them in ignorance, let the slave be beaten, and the freeman dismissed with admonitions, and instructed to take of the other autumnal fruits which are unfit for making raisins and wine, or for laying by as dried figs. As to pears, and apples, and pomegranates, and similar fruits, there shall be no disgrace in taking them secretly; but he who is caught, if he be of less than thirty years of age, shall be struck and beaten off, but not wounded; and no freeman shall have any right of satisfaction for such blows. Of these fruits the stranger may partake, just as he may of the fruits of autumn. And if an elder, who is more than thirty years of age, eat of them on the spot, let him, like the stranger, be allowed to partake of all such fruits, but he must carry away nothing. If, however, he will not obey the law, let him run the risk of failing in the competition of virtue, in case any one takes notice of his actions before the judges at the time.

Water is the greatest element of nutrition in gardens, but is easily polluted. You cannot poison the soil, or the sun, or the air, which are the other elements of nutrition in plants, or divert them, or steal them; but all these things may very likely happen in regard to water, which must therefore be protected by law. And let this be the law:—If any one intentionally pollutes the water of another, whether the water of a spring, or collected in reservoirs, either by poisonous substances, or by digging, or by theft, let the injured party bring the cause before the wardens of the city, and claim in writing the value of the loss; if the accused be found guilty of injuring the water by deleterious substances, let him not only pay damages, but purify the stream or the cistern which contains the water, in such manner as the laws of the interpreters¹ order the purification to be made by the offender in each case.

The penalty for polluting water.

With respect to the gathering in of the fruits of the soil, let a man, if he pleases, carry his own fruits through any place in which he either does no harm to any one, or himself gains three times as much as his neighbour loses. Now of these things the magistrates should be cognisant, as of all other things in which a man intentionally does injury to another or to the property of another, by fraud or force, in the use which he makes of his own property. All these matters a man should lay before the magistrates, and receive damages, supposing the injury to be not more than three minae; or if he have a charge against another which involves a larger amount, let him bring his suit into the public courts and have the evil-doer punished. But if any of the magistrates appear to adjudge the penalties which he imposes in an unjust spirit, let him be liable to pay double to the injured party. Any one may bring the offences of magistrates, in any particular case, before the public courts. There are innumerable little matters relating to the modes of punishment, and applications for suits, and summonses and the witnesses to summonses—for example, whether two witnesses should be required for a summons, or how many—and all such details, which cannot be omitted in legislation, but are beneath the wisdom of an aged legislator. These lesser matters, as they indeed are in comparison with the greater ones, let a younger generation regulate by law, after the patterns which have preceded, and according to their own experience

Regulations about harvesting.

of the usefulness and necessity of such laws; and when they are duly regulated let there be no alteration, but let the citizens live in the observance of them.

Now of artisans, let the regulations be as follows:—In the first place, let no citizen or servant of a citizen be occupied in handicraft arts; for he who is to secure and preserve the public order of the state, has an art which requires much study and many kinds of knowledge, and does not admit of being made a secondary occupation; and hardly any human being is capable of pursuing two professions or two arts rightly, or of practising one art himself, and superintending some one else who is practising another. Let this, then, be our first principle in the state:—No one who is a smith shall also be a carpenter, and if he be a carpenter, he shall not superintend the smith's art rather than his own, under the pretext that in superintending many servants who are working for him, he is likely to superintend them better, because more revenue will accrue to him from 847them than from his own art; but let every man in the state have one art, and get his living by that. Let the wardens of the city labour to maintain this law, and if any citizen incline to any other art rather than the study of virtue, let them punish him with disgrace and infamy, until they bring him back into his own right course; and if any stranger profess two arts, let them chastise him with bonds and money penalties, and expulsion from the state, until they compel him to be one only and not many¹.

No citizen to be an artisan.

No man should have more than one craft.

But as touching payments for hire, and contracts of work, or in case any one does wrong to any of the citizens, or they do wrong to any other, up to fifty drachmae, let the wardens of the city decide the case; but if a greater amount be involved, then let the public courts decide according to law. Let no one pay any duty either on the importation or exportation of goods; and as to frankincense and similar perfumes, used in the service of the Gods, which come from abroad, and purple and other dyes which are not produced in the country, or the materials of any art which have to be imported, and which are not necessary—no one should import them; nor, again, should any one export anything which is wanted in the country. Of all these things let there be inspectors and superintendents, taken from the guardians of the law; and they shall be the twelve next in order to the five seniors. Concerning arms, and all implements which are required for military purposes, if there be need of introducing any art, or plant, or metal, or chains of any kind, or animals for use in war, let the commanders of the horse and the generals have authority over their importation and exportation; the city shall send them out and also receive them, and the guardians of the law shall make fit and proper laws about them. But let there be no retail trade² for the sake of moneymaking, either in these or any other articles, in the city or country at all.

Free trade.

The produce of the land shall be divided into twelve portions, and each portion into three parts,—one for freemen; another for slaves; another for strangers.

With respect to food and the distribution of the produce of the country, the right and proper way seems to be nearly that which is the custom of Crete³; for all should be required to distribute the fruits of the soil into twelve parts, and in this way consume them. Let the twelfth portion of each as for instance of wheat and barley, to which the rest of the 848fruits of the earth shall be added, as well as the animals which are for sale in each of the twelve divisions) be divided in due proportion into three parts; one part for freemen, another for their servants, and a third for craftsmen and in general for strangers, whether sojourners who may be dwelling in the city, and like other men must live, or those who come on some business which they have with the state, or with some individual. Let only this third part of all necessities be required to be sold; out of the other two-thirds no one shall be compelled to sell. And how will they be best distributed? In the first place, we see clearly that the distribution will be of equals in one point of view, and in another point of view of unequals.

Athenian, Cleinias.

CLE.

What do you mean?

ATH.

I mean that the earth of necessity produces and nourishes the various articles of food, sometimes better and sometimes worse.

CLE.

Of course.

ATH.

Such being the case, let no one of the three portions be greater than either of the other two;—neither that which is assigned to masters or to slaves, nor again that of the stranger; but let the distribution to all be equal and alike, and let every citizen take his two portions and distribute them among slaves and freemen, he having power to determine the quantity and quality. And what remains he shall distribute by measure and number among the animals who have to be sustained from the earth, taking the whole number of them.

Twelve hamlets, one in the middle of each of the twelve divisions, and temples in each.

Athenian.

Of the thirteen divisions of the

In the second place, our citizens should have separate houses duly ordered; and this will be the order proper for men like them. There shall be twelve hamlets, one in the middle of each twelfth portion, and in each hamlet they shall first set apart a market-place, and the temples of the Gods, and of their attendant demi-gods; and if there be any local deities of the Magnetes, or holy seats of other ancient deities, whose memory has been preserved, to these let them pay their ancient honours¹. But Hestia, and Zeus, and Athene will have temples everywhere together with the God who presides in each of the twelve districts². And the first erection of houses shall be around these temples, where the ground is highest, in order to provide the safest and most defensible place of retreat for the guards. All the rest of the country they shall settle in the following manner:—They shall make thirteen divisions of the craftsmen; one of them they shall establish in the city, and this, again, they shall subdivide into twelve lesser divisions, among the twelve districts of the city, and the remainder shall be distributed in the country round about; and in each village they shall settle various classes of craftsmen, with a view to the convenience of the husbandmen. And the chief officers of the wardens of the country shall superintend all these matters, and see how many of them, and which class of them, each place requires; and fix them where they are likely to be least troublesome, and most useful to the husbandman. And the wardens of the city shall see to similar matters in the city.

craftsmen, one to be settled in the city, the rest in the country.

Now the wardens of the agora ought to see to the details of the agora. Their first care, after the temples which are in the agora have been seen to, should be to prevent any one from doing any wrong in dealings between man and man; in the second place, as being inspectors of temperance and violence, they should chastise him who requires chastisement. Touching articles of sale, they should first see whether the articles which the citizens are under regulations to sell to strangers are sold to them, as the law ordains. And let the law be as follows:—On the first day of the month, the persons in charge, whoever they are, whether strangers or slaves, who have the charge on behalf of the citizens, shall produce to the strangers the portion which falls to them, in the first place, a twelfth portion of the corn;—the stranger shall purchase corn for the whole month, and other cereals, on the first market day; and on the tenth day of the month the one party shall sell, and the other buy, liquids sufficient to last during the whole month; and on the twenty-third day there shall be a sale of animals by those who are willing to sell to the people who want to buy, and of implements and other things which husbandmen sell, (such as skins and all kinds of clothing, either woven or made of felt and other goods of the same sort,) and which strangers are compelled to buy and purchase of others. As to the retail trade in these things, whether of barley or wheat set apart for meal and flour, or any other kind of food, no one shall sell them to citizens or their slaves, nor shall any one buy of a citizen; but let the stranger sell them in the market of strangers, to artisans and their slaves, making an exchange of wine and food, which is commonly called retail trade. And butchers shall offer for sale parts of dismembered animals to

Duties of the wardens of the agora.

The market days.

Prohibition of retail trade except among strangers.

Credit not to be recognized by law.

Metics may dwell in the land for twenty years;

(or longer, with special permission;)

and their children for the same term, reckoning from the age of fifteen.

the strangers, and artisans, and their servants. Let any stranger who likes buy fuel from day to day wholesale, from those who have the care of it in the country, and let him sell to the strangers as much as he pleases and when he pleases. As to other goods and implements which are likely to be wanted, they shall sell them in the common market, at any place which the guardians of the law and the wardens of the market and city, choosing according to their judgment, shall determine; at such places they shall exchange money for goods, and goods for money, neither party giving credit to the other¹; and he who gives credit must be satisfied, whether he obtain his money or not, for in such exchanges he will not be protected by law. But whenever property has been bought or sold, greater in quantity or value than is allowed by the law, which has determined within what limits a man may increase and diminish his possessions, let the excess be registered in the books of the guardians of the law; or in case of diminution, let there be an erasure made. And let the same rule be observed about the registration of the property of the metics. Any one who likes may come and be a metic on certain conditions; a foreigner, if he likes, and is able to settle, may dwell in the land, but he must practise an art, and not abide more than twenty years from the time at which he has registered himself; and he shall pay no sojourner's tax, however small, except good conduct, nor any other tax for buying and selling. But when the twenty years have expired, he shall take his property with him and depart. And if in the course of these years he should chance to distinguish himself by any considerable benefit which he confers on the state, and he thinks that he can persuade the council and assembly, either to grant him delay in leaving the country, or to allow him to remain for the whole of his life, let him go and persuade the city, and whatever they assent to at his instance shall take effect. For the children of the metics, being artisans, and of fifteen years of age, let the time of their sojourn commence after their fifteenth year; and let them remain for twenty years, and then go where they like; but any of them who wishes to remain, may do so, if he can persuade the council and assembly. And if he depart, let him erase all the entries which have been made by him in the register kept by the magistrates.

BOOK IX.

853Next to all the matters which have preceded in the natural order of legislation will come suits of law. Of suits those which relate to agriculture have been already described, but the more important have not been described. Having mentioned them severally under their usual names, we will proceed to say what punishments are to be inflicted for each offence, and who are to be the judges of them.

Laws IX.

Athenian, Cleinias.

CLE.

Very good.

ATH.

There is a sense of disgrace in legislating, as we are about to do, for all the details of crime in a state which, as we say, is to be well regulated and will be perfectly adapted to the practice of virtue. To assume that in such a state there will arise some one who will be guilty of crimes as heinous as any which are ever perpetrated in other states, and that we must legislate for him by anticipation, and threaten and make laws against him if he should arise, in order to deter him, and punish his acts, under the idea that he will arise—this, as I was saying, is in a manner disgraceful. Yet seeing that we are not like the ancient legislators, who gave laws to heroes and sons of gods, being, according to the popular belief, themselves the offspring of the gods, and legislating for others, who were also the children of divine parents, but that we are only men who are legislating for the sons of men, there is no uncharitableness in apprehending that some one of our citizens may be like a seed which has touched the ox's horn, having a heart so hard that it cannot be softened any more than those seeds can be softened by fire. Among our citizens there may be those who cannot be subdued by all the strength of the laws; and for their sake, though an ungracious task, I will proclaim my first law about the robbing of temples, in case any one should dare to commit such a crime. I do not expect or imagine that any well-brought-up citizen will ever take the infection, but their servants, and strangers, and strangers' servants may be guilty of many impieties. And with a view to them 854especially, and yet not without a provident eye to the weakness of human nature generally, I will proclaim the law about robbers of temples and similar incurable, or almost incurable, criminals. Having already agreed that such enactments ought always to have a short prelude, we may speak to the criminal, whom some tormenting desire by night and by day tempts to go and rob a temple, the fewest possible words of admonition and exhortation:—O sir, we will say to him, the impulse which moves you to rob temples is not an ordinary human malady, nor yet a visitation of heaven, but a madness which is begotten in a

'It must be that offences come,' since we are legislating for men and not for heroes or demi-gods.

Athenian.

The prelude to the law about sacrilege:—

Sacrilege is an inherited malady, begotten of crime, which men should do their utmost to cure.

man from ancient and unexpiated crimes of his race, an ever-recurring curse;—against this you must guard with all your might, and how you are to guard we will explain to you. When any such thought comes into your mind, go and perform expiations, go as a suppliant to the temples of the Gods who avert evils, go to the society of those who are called good men among you; hear them tell and yourself try to repeat after them, that every man should honour the noble and the just. Fly from the company of the wicked—fly and turn not back; and if your disorder is lightened by these remedies, well and good, but if not, then acknowledge death to be nobler than life, and depart hence.

Such are the preludes which we sing to all who have thoughts of unholy and treasonable actions, and to him who hearkens to them the law has nothing to say. But to him who is disobedient when the prelude is over, cry with a loud voice—He who is taken in the act of robbing temples, if he be a slave or stranger, shall have his evil deed engraven on his face and hands, and shall be beaten with as many stripes as may seem good to the judges, and be cast naked beyond the borders of the land. And if he suffers this punishment he will probably return to his right mind and be improved; for no penalty which the law inflicts is designed for evil, but always makes him who suffers either better or not so much worse as he would have been¹. But if any citizen be found guilty of any great or unmentionable wrong, either in relation to the gods, or his parents, or the state, let the judge deem him to be incurable, remembering that after receiving such an excellent education and training from youth upward, he has not abstained from the greatest of crimes². His punishment shall be death, which to him will be the least of evils; and his example will benefit others, if he perish ingloriously, and be cast beyond the borders of the land. But let his children and family, if they avoid the ways of their father, have glory, and let honourable mention be made of them, as having nobly and manfully escaped out of evil into good. None of them should have their goods confiscated to the state, for the lots of the citizens ought always to continue the same and equal.

The law:—The slave or stranger who robs a temple shall be branded, beaten, and cast out of the land;—the citizen shall be put to death; for he is incurable.

‘The father and the children.’

Touching the exaction of penalties, when a man appears to have done anything which deserves a fine, he shall pay the fine, if he have anything in excess of the lot which is assigned to him; but more than that he shall not pay. And to secure exactness, let the guardians of the law refer to the registers, and inform the judges of the precise truth, in order that none of the lots may go uncultivated for want of money. But if any one seems to deserve a greater penalty, let him undergo a long and public imprisonment and be dishonoured, unless some of his friends are willing to be surety for him, and liberate him by assisting him to pay the fine. No criminal shall go unpunished, not even for a single offence, nor if he have fled the country; but let the penalty be according to his deserts,—death, or bonds, or blows, or degrading places of sitting or standing, or removal to some temple on the borders of the land; or let him pay fines, as we said before. In cases of death, let the judges be the guardians of the law, and a court selected by merit from the last year’s magistrates. But how the causes are to be brought into court, how the summonses are

No criminal to escape.

to be served, and the like, these things may be left to the younger generation of legislators to determine; the manner of voting we must determine ourselves.

Let the vote be given openly; but before they come to the vote let the judges sit in order of seniority over against plaintiff and defendant, and let all the citizens who can spare time hear and take a serious interest in listening to such causes. First of all the plaintiff shall make one speech, and then the defendant shall make another; and after the speeches have been made the eldest judge shall begin to examine the parties, and proceed to make an adequate enquiry into what has been said; and after the oldest has spoken, the rest shall proceed in order to examine either party as to what he finds defective in the evidence, whether of statement or mission; and he who has nothing to ask shall hand over the examination to another. And on so much of what has been said as is to the purpose all the judges shall set their seals, and place the writings on the altar of Hestia. On the next day they shall meet again, and in like manner put their questions and go through the cause, and again set their seals upon the evidence; and when they have three times done this, and have had witnesses and evidence enough, they shall each of them give a holy vote, after promising by Hestia that they will decide justly and truly to the utmost of their power; and so they shall put an end to the suit.

Manner of procedure.

Next, after what relates to the Gods, follows what relates to the dissolution of the state:—Whoever by promoting a man to power enslaves the laws, and subjects the city to factions, using violence and stirring up sedition contrary to law, him we will deem the greatest enemy of the whole state. But he who takes no part in such proceedings, and, being one of the chief magistrates of the state, has no knowledge of the treason, or, having knowledge of it, by reason of cowardice does not interfere on behalf of his country, such an one we must consider nearly as bad. Every man who is worth anything will inform the magistrates, and bring the conspirator to trial for making a violent and illegal attempt to change the government. The judges of such cases shall be the same as of the robbers of temples; and let the whole proceeding be carried on in the same way, and the vote of the majority condemn to death. But let there be a general rule, that the disgrace and punishment of the father is not to be visited on the children, except in the case of some one whose father, grandfather, and great-grandfather have successively undergone the penalty of death. Such persons the city shall send away with all their possessions to the city and country of their ancestors, retaining only and wholly their appointed lot. And out of the citizens who have more than one son of not less than ten years of age, they shall select ten whom their father or grandfather by the mother's or father's side shall appoint, and let them send to Delphi the names of those who are selected, and him whom the God chooses they shall establish as heir of the house which has failed; and may he have better fortune than his predecessors!

The factious person is the greatest enemy of the state; and the magistrate who does not suppress him is nearly as bad.

He shall be punished with death.

Athenian, Cleinias.

CLE.

Very good.

ATH.

Once more let there be a third general law respecting the judges who are to give judgment, and the manner of conducting suits against those who are tried on an accusation ⁸⁵⁷of treason; and as concerning the remaining or departure of their descendants,—there shall be one law for all three, for the traitor, and the robber of temples, and the subverter by violence of the laws of the state. For a thief, whether he steal much or little, let there be one law, and one punishment for all alike: in the first place, let him pay double the amount of the theft if he be convicted, and if he have so much over and above the allotment;—if he have not, he shall be bound until he pay the penalty, or persuade him who has obtained the sentence against him to forgive him. But if a person be convicted of a theft against the state, then if he can persuade the city, or if he will pay back twice the amount of the theft, he shall be set free from his bonds ¹.

The law about traitors.

One law for thefts of all kinds; restitution of double the amount stolen.

CLE.

What makes you say, Stranger, that a theft is all one, whether the thief may have taken much or little, and either from sacred or secular places—and these are not the only differences in thefts:—seeing, then, that they are of many kinds, ought not the legislator to adapt himself to them, and impose upon them entirely different penalties?

ATH.

Excellent. I was running on too fast, Cleinias, and you impinged upon me, and brought me to my senses, reminding me of what, indeed, had occurred to my mind already, that legislation was never yet rightly worked out, as I may say in passing.—Do you remember the image in which I likened the men for whom laws are now made to slaves who are doctored by slaves ¹? For of this you may be very sure, that if one of those empirical physicians, who practise medicine without science, were to come upon the gentleman physician talking to his gentleman patient, and using the language almost of philosophy, beginning at the beginning of the disease and discoursing about the whole nature of the body, he would burst into a hearty laugh—he would say what most of those who are called doctors always have at their tongue's end:—Foolish fellow, he would say, you are not healing the sick man, but you are educating him; and he does not want to be made a doctor, but to get well.

The Athenian compares his own case to that of the scientific doctor, who talks to his patient so much that he seems to be educating rather than curing him.

CLE.

And would he not be right?

ATH.

Perhaps he would; and he might remark upon us, that he who discourses about laws, as we are now doing, is giving the citizens education and not laws; that would be rather a telling observation.

CLE.

Very true.

ATH.

But we are fortunate.

CLE.

In what way? 858

ATH.

Inasmuch as we are not compelled to give laws, but we may take into consideration every form of government, and ascertain what is best and what is most needful, and how they may both be carried into execution; and we may also, if we please, at this very moment choose what is best, or, if we prefer, what is most necessary—which shall we do?

CLE.

There is something ridiculous, Stranger, in our proposing such an alternative, as if we were legislators, simply bound under some great necessity which cannot be deferred to the morrow. But we, as I may by the grace of Heaven affirm, like gatherers of stones or beginners of some composite work, may gather a heap of materials, and out of this, at our leisure, select what is suitable for our projected construction. Let us then suppose ourselves to be at leisure, not of necessity building, but rather like men who are partly providing materials, and partly putting them together. And we may truly say that some of our laws, like stones, are already fixed in their places, and others lie at hand.

The truth is that we are collecting materials.

ATH.

Certainly, in that case, Cleinias, our view of law will be more in accordance with nature. For there is another matter affecting legislators, which I must earnestly entreat you to consider.

CLE.

What is it?

ATH.

There are many writings to be found in cities, and among them there are discourses composed by legislators as well as by other persons.

CLE.

To be sure.

ATH.

Shall we give heed rather to the writings of those others,—poets and the like, who either in metre or out of metre have recorded their advice about the conduct of life, and not to the writings of legislators? or shall we give heed to them above all?

Poets and others have laid down rules of life, but the precepts of legislators should be far superior.

CLE.

Yes; to them far above all others.

ATH.

And ought the legislator alone among writers to withhold his opinion about the beautiful, the good, and the just, and not to teach what they are, and how they are to be pursued by those who intend to be happy?

CLE.

Certainly not.

ATH.

And is it disgraceful for Homer and Tyrtæus and other poets to lay down evil precepts in their writings respecting life and the pursuits of men, but not so disgraceful for Lycurgus and Solon and others who were legislators as well as writers? Is it not true that of all the writings to be found in cities, those which relate to laws, when you unfold and read them, ought to be by far the noblest and the best? 859and should not other writings either agree with them, or if they disagree, be deemed ridiculous? We should consider whether the laws of states ought not to have the character of loving and wise parents, rather than of tyrants and masters, who command and threaten, and, after writing their decrees on walls, go their ways; and whether, in discoursing of laws, we should not take the gentler view of them which may or may not be attainable,—at any rate, we will show our readiness to entertain

such a view, and be prepared to undergo whatever may be the result. And may the result be good, and if God be gracious, it will be good!

CLE.

Excellent; let us do as you say.

ATH.

Then we will now consider accurately, as we proposed, what relates to robbers of temples, and all kinds of thefts, and offences in general; and we must not be annoyed if, in the course of legislation, we have enacted some things, and have not made up our minds about some others; for as yet we are not legislators, but we may soon be. Let us, if you please, consider these matters.

CLE.

By all means.

ATH.

Concerning all things honourable and just, let us then endeavour to ascertain how far we are consistent with ourselves, and how far we are inconsistent, and how far the many, from whom at any rate we should profess a desire to differ, agree and disagree among themselves.

CLE.

What are the inconsistencies which you observe in us?

ATH.

I will endeavour to explain. If I am not mistaken, we are all agreed that justice, and just men and things and actions, are all fair, and, if a person were to maintain that just men, even when they are deformed in body, are still perfectly beautiful in respect of the excellent justice of their minds, no one would say that there was any inconsistency in this.

CLE.

They would be quite right.

ATH.

We say—‘the just is the honourable’: this is true of just actions,

Perhaps; but let us consider further, that if all things which are just are fair and honourable, in the term 'all' we must include just sufferings which are the correlatives of just actions.

but not of just sufferings or punishments.

CLE.

And what is the inference?

ATH.

The inference is, that a just action in partaking of the just partakes also in the same degree of the fair and honourable.

CLE.

Certainly.

ATH.

And must not a suffering which partakes of the just principle be admitted to be in the same degree fair and honourable, if the argument is consistently carried out?

CLE.

True.

ATH.

But then if we admit suffering to be just and yet dishonourable, and the term 'dishonourable' is applied to justice, will not the just and the honourable disagree?

CLE.

What do you mean?

ATH.

A thing not difficult to understand; the laws which have been already enacted would seem to announce principles directly opposed to what we are saying.

CLE.

To what?

ATH.

We had enacted, if I am not mistaken, that the robber of temples, and he who was the enemy of law and order, might justly be put to death, and we were proceeding to make divers other enactments of a similar nature. But we stopped short, because we saw that these sufferings are infinite in number and degree, and that they are, at once, the most just and also the most dishonourable of all sufferings. And if this be true, are not the just and the honourable at one time all the same, and at another time in the most diametrical opposition?

CLE.

Such appears to be the case.

ATH.

In this discordant and inconsistent fashion does the language of the many rend asunder the honourable and just.

CLE.

Very true, Stranger.

ATH.

Then now, Cleinias, let us see how far we ourselves are consistent about these matters.

CLE.

Consistent in what?

ATH.

I think that I have clearly stated in the former part of the discussion, but if I did not, let me now state—

CLE.

What?

ATH.

That all bad men are always involuntarily bad; and from this I must proceed to draw a further inference.

CLE.

What is it?

ATH.

That the unjust man may be bad, but that he is bad against his will. Now that an action which is voluntary should be done involuntarily is a contradiction; wherefore he who maintains that injustice is involuntary will deem that the unjust does injustice involuntarily. I too admit that all men do injustice involuntarily, and if any contentious or disputatious person says that men are unjust against their will, and yet that many do injustice willingly, I do not agree with him. But, then, how can I avoid being inconsistent with myself, if you, Cleinias, and you, Megillus, say to me,—Well, Stranger, if all this be as you say, how about legislating for the city of the Magnetes—shall we legislate or not—what do you advise? Certainly we will, I should reply. Then will you determine for them what are voluntary and what are involuntary crimes, and shall we make the punishments greater of voluntary errors and crimes and less for the involuntary? or shall we make the punishment of all to be alike, under the idea that there is no such thing as

861 voluntary crime?

All unjust acts are not voluntary, but involuntary: but how then can we punish them?

CLE.

Very good, Stranger; and what shall we say in answer to these objections?

ATH.

That is a very fair question. In the first place, let us—

CLE.

Do what?

ATH.

Let us remember what has been well said by us already, that our ideas of justice are in the highest degree confused and contradictory. Bearing this in mind, let us proceed to ask ourselves once more whether we have discovered a way out of the difficulty. Have we ever determined in what respect these two classes of actions differ from one another? For in all states and by all legislators whatsoever, two kinds of actions have been distinguished—the one, voluntary, the other, involuntary; and they have legislated about them accordingly. But shall this new word of ours, like an oracle of God, be only spoken, and get away without giving any explanation or verification of itself? How can a word not understood be the basis of legislation? Impossible. Before proceeding to legislate, then, we must prove that

All legislators have distinguished the voluntary from the involuntary.

they are two, and what is the difference between them, that when we impose the penalty upon either, every one may understand our proposal, and be able in some way to judge whether the penalty is fitly or unfitly inflicted.

CLE.

I agree with you, Stranger; for one of two things is certain: either we must not say that all unjust acts are involuntary, or we must show the meaning and truth of this statement.

ATH.

Of these two alternatives, the one is quite intolerable—not to speak what I believe to be the truth would be to me unlawful and unholy. But if acts of injustice cannot be divided into voluntary and involuntary, I must endeavour to find some other distinction between them.

If we discard this distinction, we must find another.

CLE.

Very true, Stranger; there cannot be two opinions among us upon that point.

ATH.

Reflect, then; there are hurts of various kinds done by the citizens to one another in the intercourse of life, affording plentiful examples both of the voluntary and involuntary.

CLE.

Certainly.

ATH.

I would not have any one suppose that all these hurts are injuries, and that these injuries are of two kinds,—one, voluntary, and the other, involuntary; for the involuntary hurts of all men are quite as many and as great ⁸⁶²as the voluntary¹. And please to consider whether I am right or quite wrong in what I am going to say; for I deny, Cleinias and Megillus, that he who harms another involuntarily does him an injury involuntarily, nor should I legislate about such an act under the idea that I am legislating for an involuntary injury. But I should rather say that such a hurt, whether great or small, is not an injury at all; and, on the other hand, if I am right, when a benefit is wrongly conferred, the author of the benefit may often be said to injure. For I maintain, O my friends, that the mere giving or taking away of anything is not to be described either as just or unjust; but the legislator has to consider whether mankind do good or harm

For voluntary and involuntary injustice we must substitute injustice and hurt.

In judging of acts we should look to the intention.

to one another out of a just principle and intention. On the distinction between injustice and hurt he must fix his eye; and when there is hurt, he must, as far as he can, make the hurt good by law, and save that which is ruined, and raise up that which is fallen, and make that which is dead or wounded whole. And when compensation has been given for injustice, the law must always seek to win over the doers and sufferers of the several hurts from feelings of enmity to those of friendship.

CLE.

Very good.

ATH.

Then as to unjust hurts (and gains also, supposing the injustice to bring gain), of these we may heal as many as are capable of being healed, regarding them as diseases of the soul; and the cure of injustice will take the following direction.

CLE.

What direction?

ATH.

When any one commits any injustice, small or great, the law will admonish and compel him either never at all to do the like again, or never voluntarily, or at any rate in a far less degree; and he must in addition pay for the hurt. Whether the end is to be attained by word or action, with pleasure or pain, by giving or taking away privileges, by means of fines or gifts, or in whatsoever way the law shall proceed to make a man hate injustice, and love or not hate the nature of the just,—this is quite the noblest work of law. But if the legislator sees any one who is incurable, for him he will appoint a law and a penalty. He knows quite well that to such men themselves there is no profit in the continuance of their lives, and that they would do a double good to the rest of mankind if they would take their departure, inasmuch as they would be an example to other men not to offend, and they would relieve the city of bad citizens. In such cases, and in such cases only, the legislator ought to inflict death as the punishment of offences.

The true aim of punishment is the reformation of the offender.

Death only for the incurable.

CLE.

What you have said appears to me to be very reasonable, but will you favour me by stating a little more clearly the difference between hurt and injustice, and the various complications of the voluntary and involuntary which enter into them?

Three causes of crime:—(1) Passion working by violence;

ATH.

I will endeavour to do as you wish:—Concerning the soul, thus much would be generally said and allowed, that one element in her nature is passion, which may be described either as a state or a part of her, and is hard to be striven against and contended with, and by irrational force overturns many things.

CLE.

Very true.

ATH.

And pleasure is not the same with passion, but has an opposite power, working her will by persuasion and by the force of deceit in all things.

(2) pleasure, by persuasion and deceit;

CLE.

Quite true.

ATH.

A man may truly say that ignorance is a third cause of crimes. Ignorance, however, may be conveniently divided by the legislator into two sorts: there is simple ignorance, which is the source of lighter offences, and double ignorance, which is accompanied by a conceit of wisdom; and he who is under the influence of the latter fancies that he knows all about matters of which he knows nothing. This second kind of ignorance, when possessed of power and strength, will be held by the legislator to be the source of great and monstrous crimes, but when attended with weakness, will only result in the errors of children and old men; and these he will treat as errors, and will make laws accordingly for those who commit them, which will be the mildest and most merciful of all laws.

(3) ignorance, of which there are two kinds, simple ignorance and conceit of wisdom; and the latter may be either powerful or weak.

CLE.

You are perfectly right.

ATH.

We all of us remark of one man that he is superior to pleasure and passion, and of another that he is inferior to them; and this is true¹.

Passions and pleasures may be controlled, but not ignorance.

CLE.

Certainly.

ATH.

But no one was ever yet heard to say that one of us is superior and another inferior to ignorance.

CLE.

Very true.

ATH.

We are speaking of motives which incite men to the fulfilment of their will; although an individual may be often drawn by them in opposite directions at the same time.

CLE.

Yes, often.

ATH.

And now I can define to you clearly, and without ambiguity, what I mean by the just and unjust, according to my notion of them:—When anger and fear, and pleasure and pain, and jealousies and desires, tyrannize over the soul, 864whether they do any harm or not,—I call all this injustice. But when the opinion of the best, in whatever part of human nature states or individuals may suppose that to dwell, has dominion in the soul and orders the life of every man, even if it be sometimes mistaken, yet what is done in accordance therewith, and the principle in individuals which obeys this rule, and is best for the whole life of man, is to be called just; although the hurt done by mistake is thought by many to be involuntary injustice. Leaving the question of names, about which we are not going to quarrel, and having already delineated three sources of error, we may begin by recalling them somewhat more vividly to our memory:—One of them was of the painful sort, which we denominate anger and fear.

The unjust soul is mastered by passion and desire; the just soul follows the opinion of the best.

Recapitulation.

CLE.

Quite right.

ATH.

There was a second consisting of pleasures and desires, and a third of hopes, which aimed at true opinion about the best. The latter being subdivided into three, we now get five sources of actions, and for these five we will make laws of two kinds.

CLE.

What are the two kinds?

ATH.

There is one kind of actions done by violence and in the light of day, and another kind of actions which are done in darkness and with secret deceit, or sometimes both with violence and deceit; the laws concerning these last ought to have a character of severity.

Two kinds of actions,
and two kinds of
laws.

CLE.

Naturally.

ATH.

And now let us return from this digression and complete the work of legislation. Laws have been already enacted by us concerning the robbers of the Gods, and concerning traitors, and also concerning those who corrupt the laws for the purpose of subverting the government. A man may very likely commit some of these crimes, either in a state of madness or when affected by disease, or under the influence of extreme old age, or in a fit of childish wantonness, himself no better than a child. And if this be made evident to the judges elected to try the cause, on the appeal of the criminal or his advocate, and he be judged to have been in this state when he committed the offence, he shall simply pay for the hurt which he may have done to another; but he shall be exempt from other penalties, unless he have slain some one, and have on his hands the stain of blood. And in that case he shall go to another land and country, and there dwell for a year; and if he return before the expiration of the time which the law appoints, or even set his foot at all on his native land, he shall be bound by the guardians of the law in the public prison for two years, and then go free. 865

Cases of involuntary homicide:—(1) He who kills another at the games must be purified, but is guiltless;

Having begun to speak of homicide, let us endeavour to lay down laws concerning every different kind of homicide; and, first of all, concerning violent and involuntary homicides. If any one in an athletic contest, and at the public games, involuntarily kills a friend, and he dies either at the time or afterwards of the blows which he has received; or if the like misfortune happens to any one in war, or military exercises, or mimic contests of which the magistrates enjoin the practice, whether with or without arms, when he has been purified according to the law brought from Delphi relating to these matters, he shall be innocent. And so in the case of physicians: if their patient dies against their will, they shall be held guiltless by the law. And if one slay another with his own hand, but unintentionally, whether he be unarmed or have some instrument or dart in his hand; or if he kill him by administering food or drink, or by the application of fire or cold, or by suffocating him, whether he do the deed by his own hand, or by the agency of others, he shall be deemed the agent, and shall suffer one of the following penalties:—If he kill the slave of another in the belief that he is his own, he shall bear the master of the dead man harmless from loss, or shall pay a penalty of twice the value of the dead man, which the judges shall assess; but purifications must be used greater and more numerous than for those who committed homicide at the games;—what they are to be, the interpreters whom the God appoints¹ shall be authorized to declare. And if a man kills his own slave, when he has been purified according to law, he shall be quit of the homicide. And if a man kills a freeman unintentionally, he shall undergo the same purification as he did who killed the slave. But let him not forget also a tale of olden time, which is to this effect:—He who has suffered a violent end, when newly dead, if he has had the soul of a freeman in life, is angry with the author of his death; and being himself full of fear and panic by reason of his violent end, when he sees his murderer walking about in his own accustomed haunts, he is stricken with terror and becomes disordered, and this disorder of his, aided by the guilty recollection of the other, is communicated by him with overwhelming force to the murderer and his deeds. Wherefore also the murderer must go out of the way of his victim for the entire period of a year, and not himself be found in any spot which was familiar to him throughout the country. And if the dead man be a stranger, the homicide shall be kept from the country of the stranger during a like period. If any one voluntarily obeys this law, the next of kin to the deceased, seeing all that has happened, shall take pity on him, and make peace with him, and show him all gentleness. But if any one is disobedient, and either ventures to go to any of the temples and sacrifice unpurified, or will not continue in exile during the appointed time, the next of kin to the deceased shall proceed against him for murder; and if he be convicted, every part of his punishment shall be doubled. And if the next of kin do not proceed against the perpetrator of the crime, then the pollution shall be deemed to fall upon his own head;—the murdered man will fix the guilt upon his kinsman, and he who has a mind to proceed against him may compel him to be

so also is (2) the doctor whose patient dies.

Athenian.

(3) If a man kill another's slave, he must make restitution to the owner; and undergo purification, like him (4) who kills his own slave.

(5) The slayer of a freeman, whether citizen or stranger, must be purified and avoid the ghost of the sufferer for a year.

If he obeys the law he shall be forgiven by the next of kin, or if he disobey the law the next of kin shall prosecute him for murder or be himself prosecuted for neglect.

(6) A metic who kills a stranger must be purified and go into exile for a year; but (7) a stranger who kills any one shall be banished for life.

absent from his country during five years, according to law. If a stranger unintentionally kill a stranger who is dwelling in the city, he who likes shall prosecute the cause according to the same rules. If he be a metic, let him be absent for a year, or if he be an entire stranger, in addition to the purification, whether he have slain a stranger, or a metic, or a citizen, he shall be banished for life from the country which is in possession of our laws. And if he return contrary to law, let the guardians of the law punish him with death; and let them hand over his property, if he have any, to him who is next of kin to the sufferer. And if he be wrecked, and driven on the coast against his will, he shall take up his abode on the seashore, wetting his feet in the sea, and watching for an opportunity of sailing; but if he be brought by land, and is not his own master, let the magistrate whom he first comes across in the city, release him and send him unharmed over the border.

If any one slays a freeman with his own hand, and the deed be done in passion, in the case of such actions we must begin by making a distinction. For a deed is done from passion either when men suddenly, and without intention to kill, cause the death of another by blows and the like on a momentary impulse, and are sorry for the deed immediately afterwards; or again, when after having been insulted in deed or word, men pursue revenge, and kill a person intentionally, and are not sorry for the act. And, therefore, we must assume that these homicides are of two kinds, both of them arising from passion, which may be justly said to be in a mean between the voluntary and involuntary; at the same time, they are neither of them anything more than a likeness or shadow of either. He who treasures up his anger, and avenges himself, not immediately and at the moment, but with insidious design, and after an interval, is like the voluntary; but he who does not treasure up his anger, and takes vengeance on the instant, and without malice prepense, approaches to the involuntary; and yet even he is not altogether involuntary, but is only the image or shadow of the involuntary; wherefore about homicides committed in hot blood, there is a difficulty in determining whether in legislating we shall reckon them as voluntary or as partly involuntary. The best and truest view is to regard them respectively as likenesses only of the voluntary and involuntary, and to distinguish them accordingly as they are done with or without premeditation. And we should make the penalties heavier for those who commit homicide with angry premeditation, and lighter for those who do not premeditate, but smite upon the instant; for that which is like a greater evil should be punished more severely, and that which is like a less evil should be punished less severely: this shall be the rule of our laws.

Homicide arising from passion, if premeditated, is the shadow of the voluntary; if unpremeditated, of the involuntary.

Athenian, Cleinias.

The former kind deserves a heavier punishment

CLE.

Certainly.

ATH.

Cases of homicide done in passion:—(1) If a man kills a freeman without premeditation, he shall be exiled for two years; (2) if with premeditation, for three years.

The return of the exiles.

The second offence.

Athenian.

(3) If a man kills his own slave, he shall be purified; (4) if another's, pay to the owner double his value.

(5) The slave who kills a freeman to be punished with death.

(6) The parent who kills a child shall be exiled for three years and debarred from sharing in the family rites:

so too (7) the husband who kills his wife or the wife who kills her husband;

and (8) the brother or sister who kills a brother or sister.

(9) The child who kills a parent to be punished with death, if not forgiven.

Homicide in civil war or in self-defence (except when a slave kills a freeman) is free from guilt.

Let us proceed:—If any one slays a freeman with his own hand, and the deed be done in a moment of anger, and without premeditation, let the offender suffer in other respects as the involuntary homicide would have suffered, and also undergo an exile of two years, that he may learn to school his passions. But he who slays another from passion, yet with premeditation, shall in other respects suffer as the former; and to this shall be added an exile of three instead of two years,—his punishment is to be longer because his passion is greater. The manner of their return shall be on this wise: (and here the law has difficulty in determining exactly; for in some cases the murderer who is judged by the law to be the worse may really be the less cruel, and he who is judged the less cruel may be really the worse, and may have executed the murder in a more savage manner, whereas the other may have been gentler. But in general the degrees of guilt will be such as we have described them. Of all these things the guardians of the law must take cognizance):—When a homicide of either kind has completed his term of exile, the guardians shall send twelve judges to the borders of the land; these during the interval shall have informed themselves of the actions of the criminals, and they shall judge respecting their pardon and reception; 868and the homicides shall abide by their judgment. But if after they have returned home, any one of them in a moment of anger repeats the deed, let him be an exile, and return no more; or if he returns, let him suffer as the stranger was to suffer in a similar case. He who kills his own slave shall undergo a purification, but if he kills the slave of another in anger, he shall pay twice the amount of the loss to his owner. And if any homicide is disobedient to the law, and without purification pollutes the agora, or the games, or the temples, he who pleases may bring to trial the next of kin to the dead man for permitting him, and the murderer with him, and may compel the one to exact and the other to suffer a double amount of fines and purifications; and the accuser shall himself receive the fine in accordance with the law. If a slave in a fit of passion kills his master, the kindred of the deceased man may do with the murderer (provided only they do not spare his life) whatever they please, and they will be pure; or if he kills a freeman, who is not his master, the owner shall give up the slave to the relatives of the deceased, and they shall be under an obligation to put him to death, but this may be done in any manner which they please. And if (which is a rare occurrence, but does sometimes happen) a father or a mother in a moment of passion slays a son or daughter by blows, or some other violence, the slayer shall undergo the same purification as in other cases, and be exiled during three years; but when the exile returns the wife shall separate from the husband, and the husband from the wife, and they shall never afterwards beget children together, or live under the same roof, or partake of the same sacred rites with those whom they have deprived of a child or of a brother. And he who is impious and disobedient in such a case shall be brought to trial for impiety by any one who pleases. If in a fit of anger a husband kills his wedded wife, or the wife her husband, the slayer shall undergo the same purification, and the term of exile shall be three years. And when he who has committed any such crime returns, let him have no communication in sacred rites with his children, neither let him sit at the same table with them, and the father or son who disobeys shall be liable to be brought to trial for impiety by any one who pleases. If a brother or a sister in a fit of passion kills a brother or a sister, they shall undergo purification and exile, as was the case with parents who killed their offspring: they shall not come under the same roof, or share

A homicide, if forgiven by his victim, to be banished for a year.

in the sacred rites of those whom they have deprived of their brethren, or of 869 their children. And he who is disobedient shall be justly liable to the law concerning impiety, which relates to these matters. If any one is so violent in his passion against his parents, that in the madness of his anger he dares to kill one of them, if the murdered person before dying freely forgives the murderer, let him undergo the purification which is assigned to those who have been guilty of involuntary homicide, and do as they do, and he shall be pure. But if he be not acquitted, the perpetrator of such a deed shall be amenable to many laws;—he shall be amenable to the extreme punishments for assault, and impiety, and robbing of temples, for he has robbed his parent of life; and if a man could be slain more than once, most justly would he who in a fit of passion has slain father or mother, undergo many deaths. How can he, whom, alone of all men, even in defence of his life, and when about to suffer death at the hands of his parents, no law will allow to kill his father or his mother who are the authors of his being, and whom the legislator will command to endure any extremity rather than do this—how can he, I say, lawfully receive any other punishment? Let death then be the appointed punishment of him who in a fit of passion slays his father or his mother. But if brother kills brother in a civil broil, or under other like circumstances, if the other has begun, and he only defends himself, let him be free from guilt, as he would be if he had slain an enemy; and the same rule will apply if a citizen kill a citizen, or a stranger a stranger. Or if a stranger kill a citizen or a citizen a stranger in self-defence, let him be free from guilt in like manner; and so in the case of a slave who has killed a slave; but if a slave have killed a freeman in self-defence, let him be subject to the same law as he who has killed a father; and let the law about the remission of penalties in the case of parricide apply equally to every other remission. Whenever any sufferer of his own accord remits the guilt of homicide to another, under the idea that his act was involuntary, let the perpetrator of the deed undergo a purification and remain in exile for a year, according to law.

Enough has been said of murders violent and involuntary and committed in passion: we have now to speak of voluntary crimes done with injustice of every kind and with premeditation, through the influence of pleasures, and desires, and jealousies.

Athenian, Cleinias.

CLE.

Very good.

ATH.

Crimes committed voluntarily and with premeditation are due to three causes:—(1) avarice:

(2) ambition:

(3) cowardly fear.

Let us first speak, as far as we are able, of their various kinds. The greatest cause of them is lust, which gets the mastery of the soul maddened by desire; and this is most commonly found to exist where the passion reigns which is strongest and most prevalent among the mass of mankind: I mean where the power of wealth breeds endless desires of never-to-be-satisfied acquisition, originating in natural disposition, and a miserable want of education. Of this want of education, the false praise of wealth which is bruited about both among Hellenes and barbarians is the cause; they deem that to be the first of goods which in reality is only the third. And in this way they wrong both posterity and themselves, for nothing can be nobler and better than that the truth about wealth should be spoken in all states—namely, that riches are for the sake of the body, as the body is for the sake of the soul. They are good, and wealth is intended by nature to be for the sake of them, and is therefore inferior to them both, and third in order of excellence. This argument teaches us that he who would be happy ought not to seek to be rich, or rather he should seek to be rich justly and temperately, and then there would be no murders in states requiring to be purged away by other murders. But now, as I said at first, avarice is the chiefest cause and source of the worst trials for voluntary homicide. A second cause is ambition: this creates jealousies, which are troublesome companions, above all to the jealous man himself, and in a less degree to the chiefs of the state. And a third cause is cowardly and unjust fear, which has been the occasion of many murders. When a man is doing or has done something which he desires that no one should know him to be doing or to have done, he will take the life of those who are likely to inform of such things, if he have no other means of getting rid of them. Let this be said as a prelude concerning crimes of violence in general; and I must not omit to mention a tradition which is firmly believed by many, and has been received by them from those who are learned in the mysteries: they say that such deeds will be punished in the world below, and also that when the perpetrators return to this world they will pay the natural penalty which is due to the sufferer, and end their lives in like manner by the hand of another. If he who is about to commit murder believes this, and is made by the mere prelude to dread such a penalty, there is no need to proceed with the proclamation of the law. But if he will not listen, let the following law be declared and registered against him:—Whoever shall wrongfully and of design slay with his own hand any of his kinsmen, shall in the first place be deprived of legal privileges; and he shall not pollute the temples, or the agora, or the harbours, or any other place of meeting, whether he is forbidden of men or not; for the law, which represents the whole state, forbids him, and always is and will be in the attitude of forbidding him. And if a cousin or nearer relative of the deceased, whether on the male or female side, does not prosecute the homicide when he ought, and have him proclaimed an outlaw, he shall in the first place be involved in the pollution, and incur the hatred of the Gods, even as the curse of the law stirs up the voices of men against him; and in the second place he shall be liable to be prosecuted by any one who is willing to inflict retribution on behalf of the dead. And he who would avenge a murder shall observe all the precautionary ceremonies of lavation, and any others which the God commands in

Athenian.

The punishments of the world below and when men return to earth.

The law:—Excommunication of slayers of kindred.

Duties of the nearest kinsmen, and the punishment of him who neglects them.

The murderer to be punished with death if convicted. He may fly, but must not return.

cases of this kind. Let him have proclamation made, and then go forth and compel the perpetrator to suffer the execution of justice according to the law. Now the legislator may easily show that these things must be accomplished by prayers and sacrifices to certain Gods, who are concerned with the prevention of murders in states. But who these Gods are, and what should be the true manner of instituting such trials with due regard to religion, the guardians of the law, aided by the interpreters, and the prophets, and the God, shall determine, and when they have determined let them carry on the prosecution at law. The cause shall have the same judges¹ who are appointed to decide in the case of those who plunder temples. Let him who is convicted be punished with death, and let him not be buried in the country of the murdered man, for this would be shameless as well as impious. But if he fly and will not stand his trial, let him fly for ever; or, if he set foot anywhere on any part of the murdered man's country, let any relation of the deceased, or any other citizen who may first happen to meet with him, kill him with impunity, or bind and deliver him to those among the judges of the case who are magistrates, that they may put him to death. And let the prosecutor demand surety of him whom he prosecutes; three sureties sufficient in the opinion of the magistrates who try the cause shall be provided by him, and they shall undertake to produce him at the trial. But if he be unwilling or unable to provide sureties, then the magistrates shall take him and keep him in bonds, and produce him at the day of trial.

If a man do not commit a murder with his own hand, but contrives the death of another, and is the author of the deed in intention and design, and he continues to dwell in the city, having his soul not pure of the guilt of murder, let him be tried in the same way, except in what relates to the sureties; and also, if he be found guilty, his body after execution may have burial in his native land, but in all other respects his case shall be as the former; and whether a stranger shall kill a citizen, or a citizen a stranger, or a slave a slave, there shall be no difference as touching murder by one's own hand or by contrivance, except in the matter of sureties; and these, as has been said, shall be required of the actual murderer only, and he who brings the accusation shall bind them over at the time. If a slave be convicted of slaying a freeman voluntarily, either by his own hand or by contrivance, let the public executioner take him in the direction of the sepulchre, to a place whence he can see the tomb of the dead man, and inflict upon him as many stripes as the person who caught him orders, and if he survive, let him put him to death. And if any one kills a slave who has done no wrong, because he is afraid that he may inform of some base and evil deeds of his own, or for any similar reason, in such a case let him pay the penalty of murder, as he would have done if he had slain a citizen. There are things about which it is terrible and unpleasant to legislate, but impossible not to legislate. If, for example, there should be murders of kinsmen, either perpetrated by the hands of kinsmen, or by their contrivance, voluntary and purely malicious, which most often happen in ill-regulated and ill-educated states, and

The instigator of a murder is as guilty as the doer, and like him, shall suffer death.

Various cases of murder and their punishments.

The retribution of heaven on the slayers of kinsmen.

The earthly law.

The punishment and the manner of executing it.

The suicide to be buried alone in no-man's-land.

Animals which take away life to be slain and cast forth.

Lifeless things also to be cast forth.

may perhaps occur even in a country where a man would not expect to find them, we must repeat once more the tale which we narrated a little while ago, in the hope that he who hears us will be the more disposed to abstain voluntarily on these grounds from murders which are utterly abominable. For the myth, or saying, or whatever we ought to call it¹, has been plainly set forth by priests of old; they have pronounced that the justice which guards and avenges the blood of kindred, follows the law of retaliation, and ordains that he who has done any murderous act should of necessity suffer that which he has done. He who has slain a father shall himself be slain at some time or other by his children,—if a mother, he shall of necessity take a woman's nature, and lose his life at the hands of his offspring in after ages; for where the blood of a family has been polluted there is no other purification, nor can the pollution be washed out until the homicidal soul which did the deed has given life for life, and has propitiated and² laid to sleep the wrath of the whole family. These are the retributions of Heaven, and by such punishments men should be deterred. But if they are not deterred, and any one should be incited by some fatality to deprive his father, or mother, or brethren, or children, of life voluntarily and of purpose, for him the earthly lawgiver legislates as follows:—There shall be the same proclamations about outlawry, and there shall be the same sureties which have been enacted in the former cases. But in his case, if he be convicted, the servants of the judges and the magistrates shall slay him at an appointed place without the city where three ways meet, and there expose his body naked, and each of the magistrates on behalf of the whole city shall take a stone and cast it upon the head of the dead man, and so deliver the city from pollution; after that, they shall bear him to the borders of the land, and cast him forth unburied, according to law. And what shall he suffer who slays him who of all men, as they say, is his own best friend? I mean the suicide, who deprives himself by violence of his appointed share of life, not because the law of the state requires him, nor yet under the compulsion of some painful and inevitable misfortune which has come upon him, nor because he has had to suffer from irremediable and intolerable shame, but who from sloth or want of manliness imposes upon himself an unjust penalty. For him, what ceremonies there are to be of purification and burial God knows, and about these the next of kin should enquire of the interpreters and of the laws thereto relating, and do according to their injunctions. They who meet their death in this way shall be buried alone, and none shall be laid by their side; they shall be buried ingloriously in the borders of the twelve portions of the land, in such places as are uncultivated and nameless, and no column or inscription shall mark the place of their interment. And if a beast of burden or other animal cause the death of any one, except in the case of anything of that kind happening to a competitor in the public contests, the kinsmen of the deceased shall prosecute the slayer for murder, and the wardens of the country, such, and so many as the kinsmen appoint, shall try the cause, and let the beast when condemned be slain by them, and let them cast it beyond the borders. And if any lifeless thing deprive a man of life, except in the case of a thunderbolt or other fatal dart sent from the Gods,—whether a man is killed by lifeless objects falling upon him, or by his³ falling upon them, the nearest of kin shall appoint the nearest neighbour to be a judge, and thereby acquit himself and the whole family of guilt. And he shall cast forth the guilty thing beyond the border, as has been said about the animals.

If a man is found dead, and his murderer be unknown, and after a diligent search cannot be detected, there shall be the same proclamation as in the previous cases, and the same interdict on the murderer; and having proceeded against him, they shall proclaim in the agora by a herald, that he who has slain such and such a person, and has been convicted of murder, shall not set his foot in the temples, nor at all in the country of the murdered man, and if he appears and is discovered, he shall die, and be cast forth unburied beyond the border. Let this one law then be laid down by us about murder; and let cases of this sort be so regarded.

When a murderer is unknown, he shall still be tried, and if afterwards discovered, he shall die.

And now let us say in what cases and under what circumstances the murderer is rightly free from guilt:—If a man catch a thief coming into his house by night to steal, and he take and kill him, or if he slay a footpad in self-defence, he shall be guiltless. And any one who does violence to a free woman or a youth, shall be slain with impunity by the injured person, or by his or her father or brothers or sons. If a man find his wife suffering violence, he may kill the violator, and be guiltless in the eye of the law; or if a person kill another in warding off death from his father or mother or children or brethren or wife who are doing no wrong, he shall assuredly be guiltless.

Cases of justifiable homicide.

Thus much as to the nurture and education of the living soul of man, having which, he can, and without which, if he unfortunately be without them, he cannot live; and also concerning the punishments which are to be inflicted for violent deaths, let thus much be enacted. Of the nurture and education of the body we have spoken before, and next in order we have to speak of deeds of violence, voluntary and involuntary, which men do to one another; these we will now distinguish, as far as we are able, according to their nature and number, and determine what will be the suitable penalties of each, and so assign to them their proper place in the series of our enactments. The poorest legislator will have no difficulty in determining that wounds and mutilations arising out of wounds should follow next in order after deaths. Let wounds be divided as homicides were divided—into those which are involuntary, and which are given in passion or from fear, and those inflicted voluntarily and with premeditation. Concerning all this, we must make some such proclamation as the following:—Mankind must have laws, and conform to them, or their life would be as bad as that of the most savage beast¹. And the reason of this is that no man's nature is able to know what is best for human society; or knowing, always able and willing to do what is best. In the first place, there is a difficulty in apprehending that the true art of politics is concerned, not with private but with public good (for public good binds together states, but private only distracts them); and that both the public and private good as well of individuals as of states is greater when the state and not the individual is first considered. In the second place, although a person knows in the abstract that this is true, yet if he be possessed of absolute and irresponsible power, he will never remain firm in his principles or persist in regarding the public good as primary in the state, and the private good as secondary. Human nature will be always drawing him into avarice and selfishness, avoiding pain and

Prelude to the law about wounding:—

Athenian, Cleinias.

Laws are necessary because of the selfishness of human nature.

pursuing pleasure without any reason, and will bring these to the front, obscuring the juster and better; and so working darkness in his soul will at last fill with evils both him and the whole city¹. For if a man were born so divinely gifted that he could naturally apprehend the truth, he would have no need of laws to rule over him²; for there is no law or order which is above knowledge, nor can mind, without impiety, be deemed the subject or slave of any man, but rather the lord of all. I speak of mind, true and free, and in harmony with nature. But then there is no such mind anywhere, or at least not much; and therefore we must choose law and order, which are second best. These look at things as they exist for the most part only, and are unable to survey the whole of them. And therefore I have spoken as I have.

And now we will determine what penalty he ought to pay or suffer who has hurt or wounded another. Any one may easily imagine the questions which have to be asked in all such cases:—What did he wound, or whom, or how, or when? for there are innumerable particulars of this sort which greatly vary from one another. And to allow courts of law to determine all these things, or not to determine any of them, is alike impossible. There is one particular which they must determine in all cases—the question of fact. And then, again, that the legislator should not permit them to determine what punishment is to be inflicted in any of these 876cases, but should himself decide about all of them, small or great, is next to impossible.

CLE.

Then what is to be the inference?

ATH.

The inference is, that some things should be left to courts of law; others the legislator must decide for himself.

CLE.

And what ought the legislator to decide, and what ought he to leave to the courts of law?

ATH.

I may reply, that in a state in which the courts are bad and mute, because the judges conceal their opinions and decide causes clandestinely; or what is worse, when they are disorderly and noisy, as in a theatre, clapping or hooting in turn this or that orator—I say that then there is a very serious evil, which affects the whole state. Unfortunate is the necessity of having to legislate for such courts, but where the necessity exists, the legislator should only allow them to ordain the penalties for the smallest offences; if the state for which he is legislating be of this character, he must take most matters into his own hands and speak distinctly. But when a state has good courts, and the judges are well trained and scrupulously tested, the determination of the penalties or

If the courts of law are bad they should have little or no power of determining penalties: to good courts much may be left.

punishments which shall be inflicted on the guilty may fairly and with advantage be left to them. And we are not to be blamed for not legislating concerning all that large class of matters which judges far worse educated than ours would be able to determine, assigning to each offence what is due both to the perpetrator and to the sufferer. We believe those for whom we are legislating to be best able to judge, and therefore to them the greater part may be left. At the same time, as I have often said ¹, we should exhibit to the judges, as we have done, the outline and form of the punishments to be inflicted, and then they will not transgress the just rule. That was an excellent practice, which we observed before, and which now that we are resuming the work of legislation, may with advantage be repeated by us.

Let the enactment about wounding be in the following terms:—If any one has a purpose and intention to slay another who is not his enemy, and whom the law does not permit him to slay, and he wounds him, but is unable to kill ⁸⁷⁷him, he who had the intent and has wounded him is not to be pitied—he deserves no consideration, but should be regarded as a murderer and be tried for murder. Still having respect to the fortune which has in a manner favoured him, and to the providence which in pity to him and to the wounded man saved the one from a fatal blow, and the other from an accursed fate and calamity—as a thank-offering to this deity, and in order not to oppose his will—in such a case the law will remit the punishment of death, and only compel the offender to emigrate to a neighbouring city for the rest of his life, where he shall remain in the enjoyment of all his possessions. But if he have injured the wounded man, he shall make such compensation for the injury as the court deciding the cause shall assess, and the same judges shall decide who would have decided if the man had died of his wounds. And if a child intentionally wound his parents, or a servant his master, death shall be the penalty. And if a brother or a sister intentionally wound a brother or a sister, and is found guilty, death shall be the penalty. And if a husband wound a wife, or a wife a husband, with intent to kill, let him or her undergo perpetual exile; if they have sons or daughters who are still young, the guardians shall take care of their property, and have charge of the children as orphans. If their sons are grown up, they shall be under no obligation to support the exiled parent, but they shall possess the property themselves. And if he who meets with such a misfortune has no children, the kindred of the exiled man to the degree of sons of cousins, both on the male and female side, shall meet together, and after taking counsel with the guardians of the law and the priests, shall appoint a ⁵⁰⁴⁰th citizen to be the heir of the house, considering and reasoning that no house of all the 5040 belongs to the inhabitant or to the whole family, but is the public and private property of the state. Now the state should seek to have its houses as holy and happy as possible. And if any one of the houses be unfortunate, and stained with impiety, and the owner leave no posterity, but dies unmarried, or married and childless, having suffered death as the penalty of murder or some other crime committed against the Gods or against his fellow-citizens, of which death is the penalty distinctly laid down in the law; or if any of the citizens be in perpetual exile,

Wounding with intent to kill to be deemed murder, but only when children wound their parents or one another, or a slave wounds a master, to be punished with death.

Athenian.

Husband wounding wife or wife husband shall be exiled for life.

When the lot becomes vacant through crime, the kinsmen and the guardians of the law shall select some one of a virtuous family to succeed.

and also childless, that house shall first of all be purified and undergo expiation according to law; and then let the kinsmen of the house, as we were just now saying, and the guardians of the law, meet and consider what family there is ⁸⁷⁸in the state which is of the highest repute for virtue and also for good fortune, in which there are a number of sons; from that family let them take one and introduce him to the father and forefathers of the dead man as their son, and, for the sake of the omen, let him be called so, that he may be the continuer of their family, the keeper of their hearth, and the minister of their sacred rites with better fortune than his father had; and when they have made this supplication, they shall make him heir according to law, and the offending person they shall leave nameless and childless and portionless when calamities such as these overtake him.

Now the boundaries of some things do not touch one another, but there is a borderland which comes in between, preventing them from touching. And we were saying that actions done from passion are of this nature, and come in between the voluntary and involuntary. If a person be convicted of having inflicted wounds in a passion, in the first place he shall pay twice the amount of the injury, if the wound be curable, or, if incurable, four times the amount of the injury; or if the wound be curable, and at the same time cause great and notable disgrace to the wounded person, he shall pay fourfold. And whenever any one in wounding another inflicts not only the sufferer, but also the city, and makes him incapable of defending his country against the enemy, he, besides the other penalties, shall pay a penalty for the loss which the state has incurred. And the penalty shall be, that in addition to his own times of service, he shall serve on behalf of the disabled person, and shall take his place in war; or, if he refuse, he shall be liable to be convicted by law of refusal to serve. The compensation for the injury, whether to be twofold or threefold or fourfold, shall be fixed by the judges who convict him. And if, in like manner, a brother wounds a brother, the parents and kindred of either sex, including the children of cousins, whether on the male or female side, shall meet, and when they have judged the cause, they shall entrust the assessment of damages to the parents, as is natural; and if the estimate be disputed, then the kinsmen on the male side shall make the estimate, or if they cannot, they shall commit the matter to the guardians of the law. And when similar charges of wounding are brought by children against their parents, those who are more than sixty years of age, having children of their own, not adopted, shall be required to decide; and if any one is convicted, they shall determine whether he or she ought to die, or suffer some other punishment either greater than death, or, at any rate, not much less. A kinsman of the offender shall not be ⁸⁷⁹allowed to judge the cause, not even if he be of the age which is prescribed by the law. If a slave in a fit of anger wound a freeman, the owner of the slave shall give him up to the wounded man, who may do as he pleases with him, and if he do not give him up he shall himself make good the injury. And if any one says that the slave and the wounded man are conspiring together, let him argue the point, and if he is cast, he shall pay for the wrong three times over, but if he gains his case, the freeman who conspired with the slave shall be liable to an action for kidnapping. And if any one unintentionally

Punishments for wounds inflicted in passion.

of parents who wound their children;

of a slave who wounds a freeman.

Unintentional hurts not to be punished, but only compensated.

wounds another he shall simply pay for the harm, for no legislator is able to control chance. In such a case the judges shall be the same as those who are appointed in the case of children suing their parents; and they shall estimate the amount of the injury.

All the preceding injuries and every kind of assault are deeds of violence; and every man, woman, or child ought to consider that the elder has the precedence of the younger in honour¹, both among the Gods and also among men who would live in security and happiness. Wherefore it is a foul thing and hateful to the Gods to see an elder man assaulted by a younger in the city; and it is reasonable that a young man when struck by an elder should lightly endure his anger, laying up in store for himself a like honour when he is old. Let this be the law:—Every one shall reverence his elder in word and deed; he shall respect any one who is twenty years older than himself, whether male or female, regarding him or her as his father or mother; and he shall abstain from laying hands on any one who is of an age to have been his father or his mother, out of reverence to the Gods who preside over birth; similarly he shall keep his hands from a stranger, whether he be an old inhabitant or newly arrived; he shall not venture to correct such an one by blows, either as the aggressor or in self-defence. If he thinks that some stranger has struck him out of wantonness or insolence, and ought to be punished, he shall take him to the wardens of the city, but let him not strike him, that the stranger may be kept far away from the possibility of lifting up his hand against a citizen, and let the wardens of the city take the offender and examine him, not forgetting their duty to the God of Strangers, and in case the stranger appears to have struck the citizen unjustly, let them inflict upon him as many blows with the scourge as he has himself inflicted, and quell his presumption. But if he be innocent, they shall threaten and rebuke the man who arrested him, and let them both go. 880If a person strikes another of the same age or somewhat older than himself, who has no children, whether he be an old man who strikes an old man or a young man who strikes a young man, let the person struck defend himself in the natural way without a weapon and with his hands only. He who, being more than forty years of age, dares to fight with another, whether he be the aggressor or in self-defence, shall be regarded as rude and ill-mannered and slavish;—this will be a disgraceful punishment, and therefore suitable to him. The obedient nature will readily yield to such exhortations, but the disobedient, who heeds not the prelude, shall have the law ready for him:—If any man smite another who is older than himself, either by twenty or by more years, in the first place, he who is at hand, not being younger than the combatants, nor their equal in age, shall separate them, or be disgraced according to law; but if he be the equal in age of the person who is struck or younger, he shall defend the person injured as he would a brother or father or still older relative. Further, let him who dares to smite an elder be tried for assault, as I have said, and if he be found guilty, let him be imprisoned for a period of not less than a year, or if the judges approve of a longer period, their decision shall be final. But if a stranger or metic smite one who is older by twenty years or more, the same law shall hold about the bystanders assisting, and he who is found guilty in such a suit, if he be a stranger but not resident, shall be imprisoned during a period of two

The law respecting assaults committed by elders and strangers.

The elder, if he commits an assault, not to be struck in return;

the stranger to be taken before the wardens of the city.

Cases of assault (1) on equals in age;

(2) on elders,—by citizens;

and by strangers or metics.

years; and a metic who disobeys the laws shall be imprisoned for three years, unless the court assign him a longer term. And let him who was present in any of these cases and did not assist according to law be punished, if he be of the highest class, by paying a fine of a mina; or if he be of the second class, of fifty drachmas; or if of the third class, by a fine of thirty drachmas; or if he be of the fourth class, by a fine of twenty drachmas; and the generals and taxiarchs and phylarchs and hipparchs shall form the court in such cases.

Laws are partly framed for the sake of good men, in order to instruct them how they may live on friendly terms with one another, and partly for the sake of those who refuse to be instructed, whose spirit cannot be subdued, or softened, or hindered from plunging into evil. These are the persons who cause the word to be spoken which I am about to utter; for them the legislator legislates of necessity, and in the hope that there may be no need of his laws. He who shall dare to lay violent hands upon his father or mother, or any still older relative, having no fear either of the wrath of the Gods above, or of the punishments that are spoken of in the world below, but transgresses in contempt of ancient and universal traditions as though he were too wise to believe in them, requires some extreme measure of prevention. Now death is not the worst that can happen to men; far worse are the punishments which are said to pursue them in the world below. But although they are most true tales, they work on such souls no prevention; for if they had any effect there would be no slayers of mothers, or impious hands lifted up against parents; and therefore the punishments of this world which are inflicted during life ought not in such cases to fall short, if possible, of the terrors of the world below. Let our enactment then be as follows:—If a man dare to strike his father or his mother, or their fathers or mothers, he being at the time of sound mind, then let any one who is at hand come to the rescue as has been already said, and the metic or stranger who comes to the rescue shall be called to the first place in the games; but if he do not come he shall suffer the punishment of perpetual exile. He who is not a metic, if he comes to the rescue, shall have praise, and if he do not come, blame. And if a slave come to the rescue, let him be made free, but if he do not come to the rescue, let him receive 100 strokes of the whip, by order of the wardens of the agora, if the occurrence take place in the agora; or if somewhere in the city beyond the limits of the agora, any warden of the city who is in residence shall punish him; or if in the country, then the commanders of the wardens of the country¹. If those who are near at the time be inhabitants of the same place, whether they be youths, or men, or women, let them come to the rescue and denounce him as the impious one; and he who does not come to the rescue shall fall under the curse of Zeus, the God of kindred and of ancestors, according to law. And if any one is found guilty of assaulting a parent, let him in the first place be for ever banished from the city into the country, and let him abstain from the temples; and if he do not abstain, the wardens of the country shall punish him with blows, or in any way which they please, and if he return he shall be put to death. And if any freeman eat or drink, or have any other sort of intercourse with him, or only meeting him have voluntarily touched him, he shall not

Laws partly for instruction, partly for those who will not listen to instruction.

Hardened criminals are not affected by the tales of the world below: and must therefore be punished on earth.

Law about striking a parent.

The punishment for the offence is perpetual exile from the city.

enter into any temple, nor into the agora, nor into the city, until he is purified; for he should consider that he has become tainted by a curse. And if he disobeys the law, and pollutes the city and the temples contrary to law, and one of the magistrates sees him and does not indict him, when he gives in his account this omission shall be a most serious charge.

882If a slave strike a freeman, whether a stranger or a citizen, let any one who is present come to the rescue, or pay the penalty already mentioned; and let the bystanders bind him, and deliver him up to the injured person, and he receiving him shall put him in chains, and inflict on him as many stripes as he pleases; but having punished him he must surrender him to his master according to law, and not deprive him of his property. Let the law be as follows:—The slave who strikes a freeman, not at the command of the magistrates, his owner shall receive bound from the man whom he has stricken, and not release him until the slave has persuaded the man whom he has stricken that he ought to be released. And let there be the same laws about women in relation to women, and about men and women in relation to one another.

The punishment of the slave who strikes a freeman.

BOOK X.

And now having spoken of assaults, let us sum up all acts 884 of violence under a single law, which shall be as follows:—No one shall take or carry away any of his neighbour's goods, neither shall he use anything which is his neighbour's without the consent of the owner; for these are the offences which are and have been, and will ever be, the source of all the aforesaid evils. The greatest of them are excesses and insolences of youth, and are offences against the greatest when they are done against religion; and especially great when in violation of public and holy rites, or of the partly-common rites in which tribes and phratries share; and in 885 the second degree great when they are committed against private rites and sepulchres, and in the third degree (not to repeat the acts formerly mentioned), when insults are offered to parents; the fourth kind of violence is when any one, regardless of the authority of the rulers, takes or carries away or makes use of anything which belongs to them, not having their consent; and the fifth kind is when the violation of the civil rights of an individual demands reparation. There should be a common law embracing all these cases. For we have already said in general terms what shall be the punishment of sacrilege, whether fraudulent or violent, and now we have to determine what is to be the punishment of those who speak or act insolently toward the Gods. But first we must give them an admonition which may be in the following terms:—No one who in obedience to the laws believed that there were Gods, ever intentionally did any unholy act, or uttered any unlawful word; but he who did must have supposed one of three things,—either that they did not exist,—which is the first possibility, or secondly, that, if they did, they took no care of man, or thirdly, that they were easily appeased and turned aside from their purpose by sacrifices and prayers.

Laws X.

Athenian.

A general law about deeds of violence.

Insolence towards the Gods arises from irreligion, of which there are three forms.

Athenian, Cleinias.

CLE.

What shall we say or do to these persons?

ATH.

My good friend, let us first hear the jests which I suspect that they in their superiority will utter against us.

CLE.

What jests?

ATH.

They will make some irreverent speech of this sort:—‘O inhabitants of Athens, and Sparta, and Cnosus,’ they will reply, ‘in that you speak truly; for some of us deny the very existence of the Gods, while others, as you say, are of opinion that they do not care about us; and others that they are turned from their course by gifts. Now we have a right to claim, as you yourself allowed, in the matter of laws, that before you are hard upon us and threaten us, you should argue with us and convince us¹—you should first attempt to teach and persuade us that there are Gods by reasonable evidences, and also that they are too good to be unrighteous, or to be propitiated, or turned from their course by gifts. For when we hear such things said of them by those who are esteemed to be the best of poets, and orators, and prophets, and priests, and by innumerable others, the thoughts of most of us are not set upon abstaining from unrighteous acts, but upon doing them and atoning for them². When lawgivers profess that they are gentle and not stern, we think that they should first of all use persuasion to us, and show us the existence of Gods, if not in a better manner than other men, at any rate in a truer; and who knows but that we shall hearken to you? If then our request is a fair one, please to accept our challenge.’

The unbelievers demand that they should be reasoned with before they are condemned.

CLE.

But is there any difficulty in proving the existence of the Gods?

ATH.

886How would you prove it?

CLE.

How? In the first place, the earth and the sun, and the stars and the universe, and the fair order of the seasons, and the division of them into years and months, furnish proofs of their existence; and also there is the fact that all Hellenes and barbarians believe in them.

The existence of the Gods is proved by the order of the universe.

ATH.

I fear, my sweet friend, though I will not say that I much regard, the contempt with which the profane will be likely to assail us. For you do not understand the nature of their complaint, and you fancy that they rush into impiety only from a love of sensual pleasure.

CLE.

Why, Stranger, what other reason is there?

ATH.

One which you who live in a different atmosphere would never guess.

CLE.

What is it?

ATH.

A very grievous sort of ignorance which is imagined to be the greatest wisdom.

Impiety arises out of conceit of wisdom.

CLE.

What do you mean?

ATH.

At Athens there are tales preserved in writing which the virtue of your state, as I am informed, refuses to admit. They speak of the Gods in prose as well as verse, and the oldest of them tell of the origin of the heavens and of the world, and not far from the beginning of their story they proceed to narrate the birth of the Gods, and how after they were born they behaved to one another. Whether these stories have in other ways a good or a bad influence, I should not like to be severe upon them, because they are ancient; but, looking at them with reference to the duties of children to their parents, I cannot praise them, or think that they are useful, or at all true¹. Of the words of the ancients I have nothing more to say; and I should wish to say of them only what is pleasing to the Gods. But as to our younger generation and their wisdom, I cannot let them off when they do mischief. For do but mark the effect of their words: when you and I argue for the existence of the Gods, and produce the sun, moon, stars, and earth, claiming for them a divine being, if we would listen to the aforesaid philosophers we should say² that they are earth and stones only³, which can have no care at all of human affairs, and that all religion is a cooking up of words and a make-believe.

Superstition of the ancients; irreligion of the moderns.

The latter say that the sun, moon and stars are earth and stone only.

CLE.

One such teacher, O Stranger, would be bad enough, and you imply that there are many of them, which is worse.

ATH.

Well, then; what shall we say or do?—Shall we assume that some one is accusing us among unholy men, 887who are trying to escape from the effect of our legislation; and that they say of us—How dreadful that you should legislate on the supposition that there are Gods! Shall we make a defence of ourselves? or shall we leave them and return to our laws, lest the prelude should become longer than the law? For the discourse will certainly extend to great length, if we are to treat the impiously disposed as they desire, partly demonstrating to them at some length the things of which they demand an explanation, partly making them afraid or dissatisfied, and then proceed to the requisite enactments.

The prelude will extend to a great length.

CLE.

Yes, Stranger; but then how often have we repeated already that on the present occasion there is no reason why brevity should be preferred to length¹; for who is ‘at our heels?’—as the saying goes, and it would be paltry and ridiculous to prefer the shorter to the better. It is a matter of no small consequence, in some way or other to prove that there are Gods, and that they are good, and regard justice more than men do. The demonstration of this would be the best and noblest prelude of all our laws. And therefore, without impatience, and without hurry, let us unreservedly consider the whole matter, summoning up all the power of persuasion which we possess.

It should be the best and noblest prelude of all.

ATH.

Seeing you thus in earnest, I would fain offer up a prayer that I may succeed:—but I must proceed at once. Who can be calm when he is called upon to prove the existence of the Gods? Who can avoid hating and abhorring the men who are and have been the cause of this argument; I speak of those who will not believe the tales which they have heard as babes and sucklings from their mothers and nurses, repeated by them both in jest and earnest, like charms, who have also heard them in the sacrificial prayers, and seen sights accompanying them,—sights and sounds delightful to children,—and their parents during the sacrifices showing an intense earnestness on behalf of their children and of themselves, and with eager interest talking to the Gods, and beseeching them, as though they were firmly convinced of their existence; who likewise see and hear the prostrations and invocations which are made by Hellenes and barbarians at the rising and setting of the sun and moon, in all the vicissitudes of life, not as if they thought that there were no Gods, but as if there could be no doubt of their existence, and no suspicion of their non-existence; when men, knowing all these things, despise them on no real grounds, as would be admitted by all who have any particle 888of intelligence, and when they force us to say what we are now saying, how can any one in gentle terms remonstrate with the like of them, when he

Can we suppose that all the practices of religion with which we have been familiar from childhood, and which are common to Greeks and Barbarians, have no meaning?

We say to the young:—Do not meddle with things above you; but know that no one ever continues through life an unbeliever.

has to begin by proving to them the very existence of the Gods? Yet the attempt must be made; for it would be unseemly that one half of mankind should go mad in their lust of pleasure, and the other half in their indignation at such persons. Our address to these lost and perverted natures should not be spoken in passion; let us suppose ourselves to select some one of them, and gently reason with him, smothering our anger:—O my son, we will say to him, you are young, and the advance of time will make you reverse many of the opinions which you now hold. Wait awhile, and do not attempt to judge at present of the highest things; and that is the highest of which you now think nothing—to know the Gods rightly and to live accordingly. And in the first place let me indicate to you one point which is of great importance, and about which I cannot be deceived:—You and your friends are not the first who have held this opinion about the Gods. There have always been persons more or less numerous who have had the same disorder. I have known many of them, and can tell you, that no one who had taken up in youth this opinion, that the Gods do not exist, ever continued in the same until he was old; the two other notions certainly do continue in some cases, but not in many; the notion, I mean, that the Gods exist, but take no heed of human things, and the other notion that they do take heed of them, but are easily propitiated with sacrifices and prayers. As to the opinion about the Gods which may some day become clear to you, I advise you to wait and consider if it be true or not; ask of others, and above all of the legislator. In the meantime take care that you do not offend against the Gods. For the duty of the legislator is and always will be to teach you the truth of these matters.

CLE.

Our address, Stranger, thus far, is excellent.

ATH.

Quite true, Megillus and Cleinias, but I am afraid that we have unconsciously lighted on a strange doctrine.

CLE.

What doctrine do you mean?

ATH.

The wisest of all doctrines, in the opinion of many.

CLE.

I wish that you would speak plainer.

ATH.

The doctrine that all things do become, have become, and will become, some by nature, some by art, and some by chance.

CLE.

Is not that true?

ATH.

Well, philosophers are probably right; at any rate we may as well follow in their track, and examine what is the meaning of them and their disciples.

The doctrine of certain philosophers explained.

CLE.

By all means.

ATH.

They say that the greatest and fairest things are the work of nature and of chance, the lesser of art, which, receiving from nature the greater and primeval creations, moulds and fashions all those lesser works which are generally termed artificial.

CLE.

How is that?

ATH.

I will explain my meaning still more clearly. They say that fire and water, and earth and air, all exist by nature and chance, and none of them by art, and that as to the bodies which come next in order,—earth, and sun, and moon, and stars,—they have been created by means of these absolutely inanimate existences. The elements are severally moved by chance and some inherent force according to certain affinities among them—of hot with cold, or of dry with moist, or of soft with hard, and according to all the other accidental admixtures of opposites which have been formed by necessity. After this fashion and in this manner the whole heaven has been created, and all that is in the heaven, as well as animals and all plants, and all the seasons come from these elements, not by the action of mind, as they say, or of any God, or from art, but as I was saying, by nature and chance only. Art sprang up afterwards and out of these, mortal and of mortal birth, and produced in play certain images and very partial imitations of the truth, having an affinity to one another, such as music and painting create and their companion arts. And there are

They say that the elements exist, and the heavenly bodies are created out of them, by nature and chance. Art comes later, sometimes working alone, sometimes co-operating with nature.

other arts which have a serious purpose, and these co-operate with nature, such, for example, as medicine, and husbandry, and gymnastic. And they say that politics co-operate with nature, but in a less degree, and have more of art; also that legislation is entirely a work of art, and is based on assumptions which are not true.

CLE.

How do you mean?

ATH.

In the first place, my dear friend, these people would say that the Gods exist not by nature, but by art, and by the laws of states, which are different in different places, according to the agreement of those who make them; and that the honourable is one thing by nature and another thing by law, and that the principles of justice have no existence at all in nature, but that mankind are always disputing about them and altering them; and that the alterations which are made by art and by law have no basis in nature, but are of authority 890for the moment and at the time at which they are made.—These, my friends, are the sayings of wise men, poets and prose writers, which find a way into the minds of youth. They are told by them that the highest right is might, and in this way the young fall into impieties, under the idea that the Gods are not such as the law bids them imagine; and hence arise factions, these philosophers inviting them to lead a true life according to nature, that is, to live in real dominion over others, and not in legal subjection to them¹.

They maintain further that religion and morality are a mere convention; and that 'The highest right is might.'

CLE.

What a dreadful picture, Stranger, have you given, and how great is the injury which is thus inflicted on young men to the ruin both of states and families!

ATH.

True, Cleinias; but then what should the lawgiver do when this evil is of long standing? should he only rise up in the state and threaten all mankind, proclaiming that if they will not say and think that the Gods are such as the law ordains (and this may be extended generally to the honourable, the just, and to all the highest things, and to all that relates to virtue and vice), and if they will not make their actions conform to the copy which the law gives them, then he who refuses to obey the law shall die, or suffer stripes and bonds, or privation of citizenship, or in some cases be punished by loss of property and exile? Should he not rather, when he is making laws for men, at the same time infuse the spirit of persuasion into his words, and mitigate the severity of them as far as he can?

The laws should persuade rather than threaten.

Athenian, Cleinias, Megillus.

CLE.

Why, Stranger, if such persuasion be at all possible, then a legislator who has anything in him ought never to weary of persuading men; he ought to leave nothing unsaid in support of the ancient opinion that there are Gods, and of all those other truths which you were just now mentioning; he ought to support the law and also art, and acknowledge that both alike exist by nature, and no less than nature, if they are the creations of mind in accordance with right reason, as you appear to me to maintain, and I am disposed to agree with you in thinking.

ATH.

Yes, my enthusiastic Cleinias; but are not these things when spoken to a multitude hard to be understood, not to mention that they take up a dismal length of time?

CLE.

Why, Stranger, shall we, whose patience failed not when drinking or music were the themes of discourse, weary now of discoursing about the Gods, and about divine things? And the greatest help to rational legislation is that the laws 891 when once written down are always at rest; they can be put to the test at any future time, and therefore, if on first hearing they seem difficult, there is no reason for apprehension about them, because any man however dull can go over them and consider them again and again; nor if they are tedious but useful, is there any reason or religion, as it seems to me, in any man refusing to maintain the principles of them to the utmost of his power.

The laws if once written down may in time be understood.

MEG.

Stranger, I like what Cleinias is saying.

ATH.

Yes, Megillus, and we should do as he proposes; for if impious discourses were not scattered, as I may say, throughout the world, there would have been no need for any vindication of the existence of the Gods—but seeing that they are spread far and wide, such arguments are needed; and who should come to the rescue of the greatest laws, when they are being undermined by bad men, but the legislator himself?

MEG.

There is no more proper champion of them.

ATH.

Well, then, tell me, Cleinias,—for I must ask you to be my partner,—does not he who talks in this way conceive fire and water and earth and air to be the first elements of all things 1 ? these he calls nature, and out of these he supposes the soul to be formed afterwards; and this is not a mere conjecture of ours about his meaning, but is what he really means.

The error of the physical philosophers is that they speak of the four elements as the first elements.

Athenian, Cleinias.

CLE.

Very true.

ATH.

Then, by Heaven, we have discovered the source of this vain opinion of all those physical investigators; and I would have you examine their arguments with the utmost care, for their impiety is a very serious matter; they not only make a bad and mistaken use of argument, but they lead away the minds of others: that is my opinion of them.

CLE.

You are right; but I should like to know how this happens.

ATH.

I fear that the argument may seem singular.

CLE.

Do not hesitate, Stranger; I see that you are afraid of such a discussion carrying you beyond the limits of legislation. But if there be no other way of showing our agreement in the belief that there are Gods, of whom the law is said now to approve, let us take this way, my good sir.

ATH.

Then I suppose that I must repeat the singular argument of those who manufacture the soul according to their own impious notions; they affirm that which is the first cause of the generation and destruction of all things, to be not first, but last, and that which is last to be first, and hence they have fallen into error about the true nature of the Gods.

They put what is first last; they do not know that the soul is prior to the body.

CLE.

Still I do not understand you. 892

ATH.

Nearly all of them, my friends, seem to be ignorant of the nature and power of the soul, especially in what relates to her origin: they do not know that she is among the first of things, and before all bodies, and is the chief author of their changes and transpositions. And if this is true, and if the soul is older than the body, must not the things which are of the soul's kindred be of necessity prior to those which appertain to the body?

CLE.

Certainly.

ATH.

Then thought and attention and mind and art and law will be prior to that which is hard and soft and heavy and light; and the great and primitive works and actions will be works of art; they will be the first, and after them will come nature and works of nature, which however is a wrong term for men to apply to them; these will follow, and will be under the government of art and mind.

Mind and art and law come first, and then the works of nature, which are, however, so termed in error.

CLE.

But why is the word 'nature' wrong?

ATH.

Because those who use the term mean to say that nature is the first creative power; but if the soul turn out to be the primeval element, and not fire or air, then in the truest sense and beyond other things the soul may be said to exist by nature; and this would be true if you proved that the soul is older than the body, but not otherwise.

CLE.

You are quite right.

ATH.

Shall we, then, take this as the next point to which our attention should be directed?

CLE.

By all means.

ATH.

Let us be on our guard lest this most deceptive argument with its youthful looks, beguiling us old men, give us the slip and make a laughing-stock of us. Who knows but we may be aiming at the greater, and fail of attaining the lesser? Suppose that we three have to pass a rapid river, and I, being the youngest of the three and experienced in rivers, take upon me the duty of making the attempt first by myself; leaving you in safety on the bank, I am to examine whether the river is passable by older men like yourselves, and if such appears to be the case then I shall invite you to follow, and my experience will help to convey you across; but if the river is impassable by you, then there will have been no danger to anybody but myself,—would not that seem to be a very fair proposal? I mean to say that the argument in prospect is likely to be too much for you, out of your depth and beyond your strength, 893and I should be afraid that the stream of my questions might create in you who are not in the habit of answering, giddiness and confusion of mind, and hence a feeling of unpleasantness and unsuitableness might arise. I think therefore that I had better first ask the questions and then answer them myself while you listen in safety; in that way I can carry on the argument until I have completed the proof that the soul is prior to the body.

The Athenian is willing to undertake the entire risk of the argument in his own person.

CLE.

Excellent, Stranger, and I hope that you will do as you propose.

ATH.

Athenian.

Some things are in motion; others at rest.

Of motion there are ten kinds:—

(1) Motion on an axis;

(2) locomotion;

(3) a combination of these;

(4) separation;

(5) composition;

(6) growth;

(7) decay;

Come, then, and if ever we are to call upon the Gods, let us call upon them now in all seriousness to come to the demonstration of their own existence. And so holding fast to the rope we will venture upon the depths of the argument. When questions of this sort are asked of me, my safest answer would appear to be as follows:—Some one says to me, ‘O Stranger, are all things at rest and nothing in motion, or is the exact opposite of this true, or are some things in motion and others at rest?’—To this I shall reply that some things are in motion and others at rest. ‘And do not things which move move in a place, and are not the things which are at rest at rest in a place?’ Certainly. ‘And some move or rest in one place and some in more places than one?’ You mean to say, we shall rejoin, that those things which rest at the centre move in one place, just as the circumference goes round of globes which are said to be at rest? ‘Yes.’ And we observe that, in the revolution, the motion which carries round the larger and the lesser circle at the same time is proportionally distributed to greater and smaller, and is greater and smaller in a certain proportion. Here is a wonder which might be thought an impossibility, that the same motion should impart swiftness and slowness in due proportion to larger and lesser circles. ‘Very true.’ And when you speak of bodies moving in many places, you seem to me to mean those which move from one place to another, and sometimes have one centre of motion and sometimes more than one because they turn upon their axis; and whenever they meet anything, if it be stationary, they are divided by it; but if they get in the midst between bodies which are approaching and moving towards the same spot from opposite directions, they unite with them. ‘I admit the truth of what you are saying.’ Also when they unite they grow, and when they are divided they waste away,—that is, supposing the constitution of each to remain, or if that fails, then there is a second reason of their dissolution. ‘And when are all things created and how?’ Clearly, they are created when the first principle receives increase and attains to the second dimension, and from this arrives at the one which is neighbour to this, and after reaching the third becomes perceptible to sense. Everything which is thus changing and moving is in process of generation; only when at rest has it real existence, but when passing into another state it is destroyed utterly. Have we not mentioned all motions that there are, and comprehended them under their kinds and numbered them with the exception, my friends, of two?

Athenian, Cleinias.

(8) destruction;

CLE.

Which are they?

ATH.

Just the two, with which our present enquiry is concerned.

CLE.

Speak plainer.

ATH.

I suppose that our enquiry has reference to the soul?

CLE.

Very true.

ATH.

Let us assume that there is a motion able to move other things, but not to move itself;—that is one kind; and there is another kind which can move itself as well as other things, working in composition and decomposition, by increase and diminution and generation and destruction,—that is also one of the many kinds of motion.

CLE.

Granted.

ATH.

And we will assume that which moves other, and is changed by other, to be the ninth, and that which changes itself and others, and is co-incident with every action and every passion, and is the true principle of change and motion in all that is,—that we shall be inclined to call the tenth.

(9) external, and

(10) spontaneous, motion.

CLE.

Certainly.

ATH.

And which of these ten motions ought we to prefer as being the mightiest and most efficient?

The last is superior to the other kinds,

CLE.

I must say that the motion which is able to move itself is ten thousand times superior to all the others¹.

ATH.

Very good; but may I make one or two corrections in what I have been saying?

CLE.

What are they?

ATH.

When I spoke of the tenth sort of motion, that was not quite correct.

and should rank first, being the ultimate source of all motion. The ninth should rank second.

CLE.

What was the error?

ATH.

According to the true order, the tenth was really the first in generation and power; then follows the second, which was strangely enough termed the ninth by us.

CLE.

What do you mean?

ATH.

I mean this: when one thing changes another, and that another, of such will there be any primary changing element? How can a thing which is moved by another ever be the beginning of change? Impossible. But when the self-moved changes other, and that again other, and thus thousands upon tens of thousands of bodies are set in motion, must not the beginning of all this motion be the change of the self-moving principle [1](#) ?

A demonstration of the priority of spontaneous to external motion.

CLE.

Very true, and I quite agree.

ATH.

Or, to put the question in another way, making answer to ourselves:—If, as most of these philosophers have the audacity to affirm, all things were at rest in one mass, which of the above-mentioned principles of motion would first spring up among them?

CLE.

Clearly the self-moving; for there could be no change in them arising out of any external cause; the change must first take place in themselves.

ATH.

Then we must say that self-motion being the origin of all-motions, and the first which arises among things at rest as well as among things in motion, is the eldest and mightiest principle of change, and that which is changed by another and yet moves other is second.

CLE.

Quite true.

ATH.

At this stage of the argument let us put a question.

CLE.

What question?

ATH.

If we were to see this power existing in any earthy, watery, or fiery substance, simple or compound—how should we describe it?

CLE.

You mean to ask whether we should call such a self-moving power life?

The self-moving principle is life and soul.

ATH.

I do.

CLE.

Certainly we should.

ATH.

And when we see soul in anything, must we not do the same—must we not admit that this is life?

CLE.

We must.

ATH.

And now, I beseech you, reflect;—you would admit that we have a threefold knowledge of things?

The knowledge of things is threefold:—of the essence, the definition, and the name.

CLE.

What do you mean?

ATH.

I mean that we know the essence, and that we know the definition of the essence, and the name,—these are the three; and there are two questions which may be raised about anything.

CLE.

How two?

ATH.

Sometimes a person may give the name and ask the definition; or he may give the definition and ask the name. I may illustrate what I mean in this way.

CLE.

How?

ATH.

Number like some other things is capable of being divided into equal parts; when thus divided, number is named ‘even,’ and the definition of the name ‘even’ is ‘number divisible into two equal parts’?

CLE.

True.

ATH.

I mean, that when we are asked about the definition and give the name, or when we are asked about the name and give the definition—in either case, whether we give name or definition, we speak of the same thing, calling ‘even’ the number which is divided into two equal parts.

CLE.

Quite true.

ATH.

And what is the definition of that which is named 896'soul'? Can we conceive of any other than that which has been already given—the motion which can move itself?

The soul may be defined as the self-moved, and is the source of motion in all things.

CLE.

You mean to say that the essence which is defined as the self-moved is the same with that which has the name soul?

ATH.

Yes; and if this is true, do we still maintain that there is anything wanting in the proof that the soul is the first origin and moving power of all that is, or has become, or will be, and their contraries, when she has been clearly shown to be the source of change and motion in all things?

CLE.

Certainly not; the soul as being the source of motion, has been most satisfactorily shown to be the oldest of all things.

ATH.

And is not that motion which is produced in another, by reason of another, but never has any self-moving power at all, being in truth the change of an inanimate body, to be reckoned second, or by any lower number which you may prefer?

External motion is posterior to spontaneous, and therefore the body to the soul.

CLE.

Exactly.

ATH.

Then we are right, and speak the most perfect and absolute truth, when we say that the soul is prior to the body, and that the body is second and comes afterwards, and is born to obey the soul, which is the ruler?

CLE.

Nothing can be more true.

ATH.

Do you remember our old admission, that if the soul was prior to the body the things of the soul were also prior to those of the body?

And mental qualities are prior to the qualities of body.

CLE.

Certainly.

ATH.

Then characters and manners, and wishes and reasonings, and true opinions, and reflections, and recollections are prior to length and breadth and depth and strength of bodies, if the soul is prior to the body.

CLE.

To be sure.

ATH.

In the next place, must we not of necessity admit that the soul is the cause of good and evil, base and honourable, just and unjust, and of all other opposites, if we suppose her to be the cause of all things?

The soul (or two souls) of the world is the source of good and evil,

CLE.

We must.

ATH.

And as the soul orders and inhabits all things that move, however moving, must we not say that she orders also the heavens?

CLE.

Of course.

ATH.

One soul or more? More than one—I will answer for you; at any rate, we must not suppose that there are less than two—one the author of good, and the other of evil.

CLE.

Very true.

ATH.

Yes, very true; the soul then directs all things in heaven, and earth, and sea by her movements, and these are described by the terms—will, consideration, attention, 897deliberation, opinion true and false, joy and sorrow, confidence, fear, hatred, love, and other primary motions akin to these; which again receive the secondary motions of corporeal substances, and guide all things to growth and decay, to composition and decomposition, and to the qualities which accompany them, such as heat and cold, heaviness and lightness, hardness and softness, blackness and whiteness, bitterness and sweetness, and all those other qualities which the soul uses, herself a goddess, when truly receiving the divine mind she disciplines all things rightly to their happiness; but when she is the companion of folly, she does the very contrary of all this. Shall we assume so much, or do we still entertain doubts?

and orders all things
in heaven and earth.

CLE.

There is no room at all for doubt.

ATH.

Shall we say then that it is the soul which controls heaven and earth, and the whole world?—that it is a principle of wisdom and virtue, or a principle which has neither wisdom nor virtue? Suppose that we make answer as follows:—

Is the world governed
by the better of the
two souls?

CLE.

How would you answer?

ATH.

If, my friend, we say that the whole path and movement of heaven, and of all that is therein, is by nature akin to the movement and revolution and calculation of mind, and proceeds by kindred laws, then, as is plain, we must say that the best soul takes care of the world and guides it along the good path.

CLE.

True.

ATH.

But if the world moves wildly and irregularly, then the evil soul guides it.

CLE.

True again.

ATH.

Of what nature is the movement of mind?—To this question it is not easy to give an intelligent answer; and therefore I ought to assist you in framing one.

Yes:—for its motion is akin to that of mind, which is circular.

CLE.

Very good.

ATH.

Then let us not answer as if we would look straight at the sun, making ourselves darkness at midday¹,—I mean as if we were under the impression that we could see with mortal eyes, or know adequately the nature of mind;—it will be safer to look at the image only.

CLE.

What do you mean?

ATH.

Let us select of the ten motions the one which mind chiefly resembles; this I will bring to your recollection, and will then make the answer on behalf of us all.

CLE.

That will be excellent.

ATH.

You will surely remember our saying that all things were either at rest or in motion?

CLE.

I do.

ATH.

And that of things in motion some were moving in ⁸⁹⁸one place, and others in more than one?

CLE.

Yes.

ATH.

Of these two kinds of motion, that which moves in one place must move about a centre like globes made in a lathe, and is most entirely akin and similar to the circular movement of mind.

CLE.

What do you mean?

ATH.

In saying that both mind and the motion which is in one place move in the same and like manner, in and about the same, and in relation to the same, and according to one proportion and order, and are like the motion of a globe, we invented a fair image, which does no discredit to our ingenuity.

CLE.

It does us great credit.

ATH.

And the motion of the other sort which is not after the same manner, nor in the same, nor about the same, nor in relation to the same, nor in one place, nor in order, nor according to any rule or proportion, may be said to be akin to senselessness and folly?

The irregular motion is the motion of senselessness and folly.

CLE.

That is most true.

ATH.

Then, after what has been said, there is no difficulty in distinctly stating, that since soul carries all things round, either the best soul or the contrary must of necessity carry round and order and arrange the revolution of the heaven.

CLE.

And judging from what has been said, Stranger, there would be impiety in asserting that any but the most perfect soul or souls carries round the heavens.

ATH.

You have understood my meaning right well, Cleinias, and now let me ask you another question.

CLE.

What are you going to ask?

ATH.

If the soul carries round the sun and moon, and the other stars, does she not carry round each individual of them?

The soul or mind carries round the whole;—does it carry round each of the heavenly bodies? e. g., the sun?

CLE.

Certainly.

ATH.

Then of one of them let us speak, and the same argument will apply to all.

CLE.

Which will you take?

ATH.

Every one sees the body of the sun, but no one sees his soul, nor the soul of any other body living or dead; and yet there is great reason to believe that this nature, unperceived by any of our senses, is circumfused around them all, but is perceived by mind; and therefore by mind and reflection only let us apprehend the following point.

CLE.

What is that?

ATH.

If the soul carries round the sun, we shall not be far wrong in supposing one of three alternatives.

CLE.

What are they?

ATH.

Either the soul which moves the sun this way and that, resides within the circular and visible body, like the soul which carries us about every way; or the soul provides herself with an external body of fire or air, as some affirm, and violently propels body by body; or thirdly, she is without such a body, but guides the sun by some extraordinary and wonderful power.

Either (1) the soul of the sun (like the soul in man) resides within it; or (2) propels it with, or (3) without the help of some external body.

CLE.

Yes, certainly; the soul can only order all things in one of these three ways.

ATH.

And this soul of the sun, which is therefore better than the sun, whether taking the sun about in a chariot to give light to men, or acting from without, or in whatever way, ought by every man to be deemed a God¹.

CLE.

Yes, by every man who has the least particle of sense.

ATH.

And of the stars too, and of the moon, and of the years and months and seasons, must we not say in like manner, that since a soul or souls having every sort of excellence are the causes of all of them, those souls are Gods, whether they are living beings and reside in bodies, and in this way order the whole heaven, or whatever be the place and mode of their existence;—and will any one who admits all this venture to deny that all things are full of Gods?

The soul or souls, which are the causes of the stars and the seasons, are divine beings.

CLE.

No one, Stranger, would be such a madman.

ATH.

And now, Megillus and Cleinias, let us offer terms to him who has hitherto denied the existence of the Gods, and leave him.

CLE.

What terms?

ATH.

Either he shall teach us that we were wrong in saying that the soul is the original of all things, and arguing accordingly; or, if he be not able to say anything better, then he must yield to us and live for the remainder of his life in the belief that there are Gods.—Let us see, then, whether we have said enough or not enough to those who deny that there are Gods.

Enough of the disbeliever in the Gods.

CLE.

Certainly,—quite enough, Stranger.

ATH.

Then to them we will say no more. And now we are to address him who, believing that there are Gods, believes also that they take no heed of human affairs: To him we say,—O thou best of men, in believing that there are Gods you are led by some affinity to them, which attracts you towards your kindred and makes you honour and believe in them. But the fortunes of evil and unrighteous men in private as well as public life, which, though not really happy, are wrongly counted happy in the judgment of men, and are celebrated both by poets and prose writers¹—these draw you aside from your natural piety. Perhaps

To those who believe that the Gods exist, but take no heed of man, we say:—‘You feel that you are the kindred of the Gods, and you cannot believe that the injustice of this world is to be ascribed to them.

you have seen impious men growing old and leaving their children’s children in high offices, and their prosperity shakes your faith—you have known or heard or been yourself an eyewitness of many monstrous impieties, and have beheld men by such criminal means from small beginnings attaining to sovereignty and the pinnacle of greatness; and considering all these things you do not like to accuse the Gods of them, because they are your relatives; and so from some want of reasoning power, and also from an unwillingness to find fault with them, you have come to believe that they exist indeed, but have no thought or care of human things. Now, that your present evil opinion may not grow to still greater impiety, and that we may if possible use arguments which may conjure away the evil before it arrives, we will add another argument to that originally addressed to him who utterly denied the existence of the Gods. And do you, Megillus and Cleinias, answer for the young man as you did before; and if any impediment comes in our way, I will take the word out of your mouths, and carry you over the river as I did just now.

We will justify the ways of God to you.

CLE.

Very good; do as you say, and we will help you as well as we can.

ATH.

There will probably be no difficulty in proving to him that the Gods care about the small as well as about the great. For he was present and heard what was said, that they are perfectly good, and that the care of all things is most entirely natural to them¹.

The Gods are perfectly good:

CLE.

No doubt he heard that.

ATH.

Let us consider together in the next place what we mean by this virtue which we ascribe to them. Surely we should say that to be temperate and to possess mind belongs to virtue, and the contrary to vice?

CLE.

Certainly.

ATH.

Yes; and courage is a part of virtue, and cowardice of vice?

CLE.

True.

ATH.

And the one is honourable, and the other dishonourable?

CLE.

To be sure.

ATH.

And the one, like other meaner things, is a human quality, but the Gods have no part in anything of the sort?

CLE.

That again is what everybody will admit.

ATH.

But do we imagine carelessness and idleness and luxury to be virtues? What do you think?

CLE.

Decidedly not.

ATH.

They rank under the opposite class?

CLE.

Yes.

ATH.

901 And their opposites, therefore, would fall under the opposite class?

CLE.

Yes.

ATH.

But are we to suppose that one who possesses all these good qualities will be luxurious and heedless and idle, like those whom the poet compares to stingless drones²?

and therefore cannot be charged with idleness and carelessness.

CLE.

And the comparison is a most just one.

ATH.

Surely God must not be supposed to have a nature which He Himself hates?—he who dares to say this sort of thing must not be tolerated for a moment.

CLE.

Of course not. How could He have?

ATH.

Should we not on any principle be entirely mistaken in praising any one who has some special business entrusted to him, if he have a mind which takes care of great matters and no care of small ones? Reflect; he who acts in this way, whether he be God or man, must act from one of two principles.

CLE.

What are they?

ATH.

Either he must think that the neglect of the small matters is of no consequences to the whole, or if he knows that they are of consequence, and he neglects them, his neglect must be attributed to carelessness and indolence. Is there any other way in which his neglect can be explained? For surely, when it is impossible for him to take care of all, he is not negligent if he fails to attend to these things great or small, which a God or some inferior being might be wanting in strength or capacity to manage?

CLE.

Certainly not.

ATH.

Now, then, let us examine the offenders, who both alike confess that there are Gods, but with a difference,—the one saying that they may be appeased, and the other that they have no care of small matters: there are three of us and two of them, and we will say to them,—In the first place, you both acknowledge that the Gods hear and see and know all things, and that nothing can escape them which is matter of sense and knowledge:—do you admit this?

We and our adversaries alike admit that the Gods see and know all things; that they have all power;

CLE.

Yes.

ATH.

And do you admit also that they have all power which mortals and immortals can have?

CLE.

They will, of course, admit this also.

ATH.

And surely we three and they two—five in all—have acknowledged that they are good and perfect?

and that they are good and perfect.

CLE.

Assuredly.

ATH.

But, if they are such as we conceive them to be, can we possibly suppose that they ever act in the spirit of carelessness and indolence? For in us inactivity is the child of cowardice, and carelessness of inactivity and indolence.

They cannot therefore neglect small matters from idleness;

CLE.

Most true.

ATH.

Then not from inactivity and carelessness is any God ever negligent; for there is no cowardice in them.

CLE.

That is very true.

ATH.

Then the alternative which remains is, that if the Gods neglect the lighter and lesser concerns of the universe, they neglect them because they know that they ought not to care about such matters—what other alternative is there but the opposite of their knowing?

but either they think them unworthy of regard, or are ignorant:—they cannot be ignorant, and they will not knowingly neglect man who is their possession.

CLE.

There is none.

ATH.

And, O most excellent and best of men, do I understand you to mean that they are careless because they are ignorant, and do not know that they ought to take care, or that they know, and yet like the meanest sort of men, knowing the better, choose the worse because they are overcome by pleasures and pains?

CLE.

Impossible.

ATH.

Do not all human things partake of the nature of soul? And is not man the most religious of all animals¹?

CLE.

That is not to be denied.

ATH.

And we acknowledge that all mortal creatures are the property of the Gods, to whom also the whole of heaven belongs²?

CLE.

Certainly.

ATH.

And, therefore, whether a person says that these things are to the Gods great or small—in either case it would not be natural for the Gods who own us, and who are the most careful and the best of owners, to neglect us.—There is also a further consideration.

CLE.

What is it?

ATH.

Sensation and power are in an inverse ratio to each other in respect to their ease and difficulty.

CLE.

What do you mean?

ATH.

Small things harder to be seen, but more

I mean that there is greater difficulty in seeing and hearing the small than the great, but more facility in moving and controlling and taking care of small and unimportant things than of their opposites.

easily managed than great.

CLE.

Far more.

ATH.

Suppose the case of a physician who is willing and able to cure some living thing as a whole,—how will the whole fare at his hands if he takes care only of the greater and neglects the parts which are lesser?

The physician, the pilot, the general, &c., take care of small things as well as great: will the all-wise God neglect them?

CLE.

Decidedly not well.

ATH.

No better would be the result with pilots or generals, or householders or statesmen, or any other such class, if they neglected the small and regarded only the great;—as the builders say, the larger stones do not lie well without the lesser.

CLE.

Of course not.

ATH.

Let us not, then, deem God inferior to human workmen, who, in proportion to their skill, finish and perfect their works, small as well as great, by one and the same art; or that God, the wisest of beings, who is both willing and able to take care, is like a lazy good-for-nothing, or a coward, who turns his back upon labour and gives no thought to smaller and easier matters, but to the greater only.

CLE.

Never, Stranger, let us admit a supposition about the Gods which is both impious and false.

ATH.

I think that we have now argued enough with him who delights to accuse the Gods of neglect.

CLE.

Yes.

ATH.

He has been forced to acknowledge that he is in error, but he still seems to me to need some words of consolation.

CLE.

What consolation will you offer him?

ATH.

Let us say to the youth:—The ruler of the universe has ordered all things with a view to the excellence and preservation of the whole, and each part, as far as may be, has an action and passion appropriate to it. Over these, down to the least fraction of them, ministers have been appointed to preside, who have wrought out their perfection with infinitesimal exactness. And one of these portions of the universe is thine own, unhappy man, which, however little, contributes to the whole; and you do not seem to be aware that this and every other creation is for the sake of the whole, and in order that the life of the whole may be blessed; and that you are created for the sake of the whole, and not the whole for the sake of you. For every physician and every skilled artist does all things for the sake of the whole, directing his effort towards the common good, executing the part for the sake of the whole, and not the whole for the sake of the part. And you are annoyed because you are ignorant how what is best for you happens to you and to the universe, as far as the laws of the common creation admit. Now, as the soul combining first with one body and then with another undergoes all sorts of changes, either of herself, or through the influence of another soul, all that remains to the player of the game is that he should shift the pieces; sending the better nature to the better place, and the worse to the worse, and so assigning to them their proper portion.

Words of
consolation:—

Let the youth
remember that God
created him for the
whole, not the whole
for the sake of him.

CLE.

In what way do you mean?

ATH.

In a way which may be supposed to make the care of all things easy to the Gods. If any one were to form or fashion all things without any regard to the whole¹,—if, for example, he formed a living element of water out of fire, instead of forming many things out of one or one out of 904many in regular order attaining to a first or second

or third birth², the transmutation would have been infinite; but now the ruler of the world has a wonderfully easy task.

CLE.

How so?

ATH.

I will explain:—When the king saw that our actions had life, and that there was much virtue in them and much vice, and that the soul and body, although not, like the Gods of popular opinion, eternal, yet having once come into existence, were indestructible (for if either of them had been destroyed, there would have been no generation of living beings); and when he observed that the good of the soul was ever by nature designed to profit men, and the evil to harm them—he, seeing all this, contrived so to place each of the parts that their position might in the easiest and best manner procure the victory of good and the defeat of evil in the whole. And he contrived a general plan by which a thing of a certain nature found a certain seat and room. But the formation of qualities³ he left to the wills of individuals. For every one of us is made pretty much what he is by the bent of his desires and the nature of his soul.

God assigns to human souls their places in such a manner as to ensure the defeat of evil.

The fashioning of men's characters he leaves to themselves.

CLE.

Yes, that is probably true.

ATH.

Then all things which have a soul change, and possess in themselves a principle of change, and in changing move according to law and to the order of destiny: natures which have undergone a lesser change move less and on the earth's surface, but those which have suffered more change and have become more criminal sink into the abyss, that is to say, into Hades and other places in the world below, of which the very names terrify men, and which they picture to themselves as in a dream, both while alive and when released from the body. And whenever the soul receives more of good or evil from her own energy and the strong influence of others—when she has communion with divine virtue and becomes divine, she is carried into another and better place, which is perfect in holiness; but when she has communion with evil, then she also changes the place of her life.

Athenian.

If a soul grows better, it goes to a better place; if worse, to a worse.

‘This is the justice of the Gods who inhabit Olympus¹.’

O youth or young man, who fancy that you are neglected by the Gods, know that if you become worse you shall go to the worse souls, or if better to the better, and in every succession of life and death you will do and suffer what like may fitly suffer at the hands of like. This is the justice of heaven, 905 which neither you nor any other unfortunate will ever glory in escaping, and which the ordaining powers have specially ordained; take good heed thereof, for it will be sure to take heed of you. If you say:—I am small and will creep into the depths of the earth, or I am high and will fly up to heaven, you are not so small or so high but that you shall pay the fitting penalty, either here or in the world below or in some still more savage place whither you shall be conveyed. This is also the explanation of the fate of those whom you saw, who had done unholy and evil deeds, and from small beginnings had grown great, and you fancied that from being miserable they had become happy; and in their actions, as in a mirror, you seemed to see the universal neglect of the Gods, not knowing how they make all things work together and contribute to the great whole. And thinkest thou, bold man, that thou needest not to know this?—he who knows it not can never form any true idea of the happiness or unhappiness of life or hold any rational discourse respecting either. If Cleinias and this our reverend company succeed in proving to you that you know not what you say of the Gods, then will God help you; but should you desire to hear more, listen to what we say to the third opponent, if you have any understanding whatsoever. For I think that we have sufficiently proved the existence of the Gods, and that they care for men:—The other notion that they are appeased by the wicked, and take gifts, is what we must not concede to any one, and what every man should disprove to the utmost of his power.

You complain of the prosperity of the wicked, not seeing how all things work together for the good of the whole.

We turn to him who believes that the Gods may be appeased.

CLE.

Very good; let us do as you say.

ATH.

Well, then, by the Gods themselves I conjure you to tell me,—if they are to be propitiated, how are they to be propitiated? Who are they, and what is their nature? Must they not be at least rulers who have to order unceasingly the whole heaven?

Athenian, Cleinias.

CLE.

True.

ATH.

The Gods are our allies in the great conflict which is

And to what earthly rulers can they be compared, or who to them? How in the less can we find an image of the greater? Are they charioteers of contending pairs of steeds, or pilots of vessels? Perhaps they might be compared to the generals of armies, or they might be likened to physicians providing against the diseases which make war upon the body, or to husbandmen observing anxiously the effects of the seasons on the growth of plants; or perhaps to shepherds of flocks. For as we acknowledge the world to be full of many goods and also of

going on between good and evil.

But some men fawn upon them in the belief that they can be flattered and bribed into the betrayal of justice.

evils, and of more evils than goods, there is, as we affirm, an immortal conflict going on among us, which requires marvellous watchfulness; and in that conflict the Gods and demigods are our allies, and we are their property. Injustice and insolence and folly are the destruction of us, and justice and temperance and wisdom are our salvation; and the place of these latter is in the life of the Gods, although some vestige of them may occasionally be discerned among mankind. But upon this earth we know that there dwell souls possessing an unjust spirit¹, who may be compared to brute animals, which fawn upon their keepers, whether dogs or shepherds, or the best and most perfect masters; for they in like manner, as the voices of the wicked declare, prevail by flattery and prayers and incantations, and are allowed to make their gains with impunity. And this sin, which is termed dishonesty, is an evil of the same kind as what is termed disease in living bodies or pestilence in years or seasons of the year, and in cities and governments has another name, which is injustice.

CLE.

Quite true.

ATH.

What else can he say who declares that the Gods are always lenient to the doers of unjust acts, if they divide the spoil with them? As if wolves were to toss a portion of their prey to the dogs, and they, mollified by the gift, suffered them to tear the flocks¹. Must not he who maintains that the Gods can be propitiated argue thus?

CLE.

Precisely so.

ATH.

And to which of the above-mentioned classes of guardians would any man compare the Gods without absurdity? Will he say that they are like pilots, who are themselves turned away from their duty by 'libations of wine and the savour of fat,' and at last overturn both ship and sailors?

CLE.

Assuredly not.

ATH.

And surely they are not like charioteers who are bribed to give up the victory to other chariots?

CLE.

That would be a fearful image of the Gods.

ATH.

Nor are they like generals, or physicians, or husbandmen, or shepherds; and no one would compare them to dogs who have been silenced by wolves.

CLE.

A thing not to be spoken of.

ATH.

And are not all the Gods the chiefest of all guardians, 907and do they not guard our highest interests?

CLE.

Yes; the chiefest.

ATH.

And shall we say that those who guard our noblest interests, and are the best of guardians, are inferior in virtue to dogs, and to men even of moderate excellence, who would never betray justice for the sake of gifts which unjust men impiously offer them?

We cannot, however, suppose the Gods to be worse than even moderately good men.

CLE.

Certainly not; nor is such a notion to be endured, and he who holds this opinion may be fairly singled out and characterized as of all impious men the wickedest and most impious.

ATH.

Then are the three assertions—that the Gods exist, and that they take care of men, and that they can never be persuaded to do injustice, now sufficiently demonstrated? May we say that they are?

CLE.

You have our entire assent to your words.

ATH.

I have spoken with vehemence because I am zealous against evil men; and I will tell you, dear Cleinias, why I am so. I would not have the wicked think that, having the superiority in argument, they may do as they please and act according to their various imaginations about the Gods; and this zeal has led me to speak too vehemently; but if we have at all succeeded in persuading the men to hate themselves and love their opposites, the prelude of our laws about impiety will not have been spoken in vain.

A righteous real must excuse our warmth.

CLE.

So let us hope; and even if we have failed, the style of our argument will not discredit the lawgiver.

ATH.

The law about impiety.

Method of procedure.

The three sorts of impious persons are either (1) honest, or (2) dishonest.

Athenian.

The first class are to be placed in solitary confinement for five years; and, if they repent, at the end of that time they shall be restored to society.

If they again offend, they shall die.

After the prelude shall follow a discourse, which will be the interpreter of the law; this shall proclaim to all impious persons that they must depart from their ways and go over to the pious. And to those who disobey, let the law about impiety be as follows:—If a man is guilty of any impiety in word or deed, any one who happens to be present shall give information to the magistrates, in aid of the law; and let the magistrates who first receive the information bring him before the appointed court according to the law; and if a magistrate, after receiving information, refuses to act, he shall be tried for impiety at the instance of any one who is willing to vindicate the laws; and if any one be cast, the court shall estimate the punishment of each act of impiety; 908and let all such criminals be imprisoned. There shall be three prisons in the state: the first of them is to be the common prison in the neighbourhood of the agora for the safe-keeping of the generality of offenders; another is to be in the neighbourhood of the nocturnal council [1](#), and is to be called the ‘House of Reformation’; another, to be situated in some wild and desolate region in the centre of the country, shall be called by some name expressive of retribution. Now, men fall into impiety from three causes, which have been already mentioned, and from each of these causes arise two sorts of impiety, in all six, which are worth distinguishing, and should not all have the same punishment. For he who does not believe in the Gods, and yet has a righteous nature, hates the wicked and dislikes and refuses to do injustice, and avoids unrighteous men, and loves the righteous. But they who besides believing that the world is devoid of Gods are intemperate, and have at the same time good memories and quick wits, are worse; although both of them are unbelievers, much less injury is done by the one than by the other. The one may talk loosely about the Gods and about sacrifices and oaths, and perhaps by laughing at other men he may make them like himself, if he be not punished. But the other who holds the same opinions and is called a clever man, is full of stratagem and deceit—men of this class deal in prophecy and jugglery of all kinds, and out of their ranks sometimes come tyrants and demagogues and generals and hierophants of private mysteries and the Sophists, as they are termed, with their ingenious devices. There are many kinds of unbelievers, but two only for whom legislation is required; one the hypocritical sort, whose crime is deserving of death many times over, while the other needs only bonds and admonition. In like manner also the notion that the Gods take no thought of men produces two other sorts of crimes, and the notion that they may be propitiated produces two more. Assuming these divisions, let those who have been made what they are only from want of understanding, and not from malice or an evil nature, be placed by the judge in the House of Reformation, and ordered to suffer imprisonment 909during a period of not less than five years. And in the meantime let them have no intercourse with the other citizens, except with members of the nocturnal council, and with them let them converse with a view to the improvement of their soul’s health. And when the time of their imprisonment has expired, if any of them be of sound mind let him be restored to sane company, but if not, and if he be condemned a second time, let him be punished with death. As to that class of monstrous natures who not only believe that there are no Gods, or that they are negligent, or to be propitiated, but in contempt of mankind conjure the souls of the living [1](#) and say that they can conjure the dead and promise to charm the Gods with sacrifices and prayers, and will utterly overthrow individuals and whole houses and

The second class are to be imprisoned for life, and when dead to be cast beyond the border.

Their children to be cared for, like other orphans.

states for the sake of money—let him who is guilty of any of these things be condemned by the court to be bound according to law in the prison which is in the centre of the land, and let no freeman ever approach him, but let him receive the rations of food appointed by the guardians of the law from the hands of the public slaves; and when he is dead let him be cast beyond the borders unburied, and if any freeman assist in burying him, let him pay the penalty of impiety to any one who is willing to bring a suit against him. But if he leaves behind him children who are fit to be citizens, let the guardians of orphans take care of them, just as they would of any other orphans, from the day on which their father is convicted.

In all these cases there should be one law, which will make men in general less liable to transgress in word or deed, and less foolish, because they will not be allowed to practise religious rites contrary to law. And let this be the simple form of the law:—No man shall have sacred rites in a private house. When he would sacrifice, let him go to the temples and hand over his offerings to the priests and priestesses, who see to the sancity of such things, and let him pray himself, and let any one who pleases join with him in prayer. The reason of this is as follows:—Gods and temples are not easily instituted, and to establish them rightly is the work of a mighty intellect. And women especially, and men too, when they are sick or in danger, or in any sort of difficulty, or again on their receiving any good fortune, have a way of consecrating the occasion, vowing sacrifices, and promising shrines to Gods, demigods, and sons of Gods; and when they are awakened by terrible apparitions and dreams or remember visions, they find in altars and temples the remedies of them, and will fill every house and village with them, placing them in the open air, or wherever they may have had such visions; and with a view to all these cases we should obey the law. The law has also regard to the impious, and would not have them fancy that by the secret performance of these actions—by raising temples and by building altars in private houses, they can propitiate the God secretly with sacrifices and prayers, while they are really multiplying their crimes infinitely, bringing guilt from heaven upon themselves, and also upon those who permit them, and who are better men than they are; and the consequence is that the whole state reaps the fruit of their impiety, which, in a certain sense, is deserved. Assuredly God will not blame the legislator, who will enact the following law:—No one shall possess shrines of the Gods in private houses, and he who is found to possess them, and perform any sacred rites not publicly authorized,—supposing the offender to be some man or woman who is not guilty of any other great and impious crime,—shall be informed against by him who is acquainted with the fact, which shall be announced by him to the guardians of the law; and let them issue orders that he or she shall carry away their private rites to the public temples, and if they do not persuade them, let them inflict a penalty on them until they comply. And if a person be proven guilty of impiety, not merely from childish levity, but such as grown-up men may be guilty of, whether he have sacrificed publicly or privately to any Gods, let him be punished with death, for his sacrifice is impure. Whether the deed has been done in earnest, or only from childish levity, let the guardians of the law determine, before they bring the matter into court and prosecute the offender for impiety.

Men must not make a religion for themselves.

Only a great intelligence can establish Gods and temples.

Private rites to be transferred to temples under a penalty.

BOOK XI.

913In the next place, dealings between man and man require to be suitably regulated. The principle of them is very simple:—Thou shalt not, if thou canst help, touch that which is mine, or remove the least thing which belongs to me without my consent; and may I be of a sound mind, and do to others as I would that they should do to me. First, let us speak of treasure trove:—May I never pray the Gods to find the hidden treasure, which another has laid up for himself and his family, he not being one of my ancestors, nor lift, if I should find, such a treasure. And may I never have any dealings with those who are called diviners, and who in any way or manner counsel me to take up the deposit entrusted to the earth, for I should not gain so much in the increase of my possessions, if I take up the prize, as I should grow in justice and virtue of soul, if I abstain; and this will be a better possession to me than the other in a better part of myself; for the possession of justice in the soul is preferable to the possession of wealth. And of many things it is well said,—‘Move not the immovables,’ and this may be regarded as one of them. And we shall do well to believe the common tradition which says, that such deeds prevent a man from having a family. Now as to him who is careless about having children and regardless of the legislator, taking up that which neither he deposited, nor any ancestor of his, without the consent of the depositor, violating the simplest and noblest of laws which was the enactment of no mean man:—‘Take not up that which was not laid down by thee,’—of him, I say, who despises these two legislators, and takes up, not some small matter which he has not deposited, but perhaps a great heap of treasure, what he ought to suffer at the hands of the Gods, God only knows; but I would have the first person who sees him go and tell the wardens of the city, if the occurrence has taken place in the city, or if the occurrence has taken place in the agora he shall tell the wardens of the agora, or if in the country he shall tell the wardens of the country and their commanders¹. When information has been received the city shall send to Delphi, and, whatever the God answers about 914the money and the remover of the money, that the city shall do in obedience to the oracle; the informer, if he be a freeman, shall have the honour of doing rightly, and he who informs not, the dishonour of doing wrongly; and if he be a slave who gives information, let him be freed, as he ought to be, by the state, which shall give his master the price of him; but if he do not inform he shall be punished with death. Next in order shall follow a similar law, which shall apply equally to matters great and small:—If a man happens to leave behind him some part of his property, whether intentionally or unintentionally, let him who may come upon the left property suffer it to remain, reflecting that such things are under the protection of the Goddess of ways, and are dedicated to her by the law. But if any one defies the law, and takes the property home with him, let him, if the thing is of little worth, and the man who takes it a slave, be beaten with many stripes by him who meets him, being a person of not

How cases of disputed ownership are to be determined.

less than thirty years of age. Or if he be a freeman, in addition to being thought a mean person and a despiser of the laws, let him pay ten times the value of the treasure which he has moved to the leaver. And if some one accuses another of having anything which belongs to him, whether little or much, and the other admits that he has this things, but denies that the property in dispute belongs to the other, if the property be registered with the magistrates according to law, the claimant shall summon the possessor, who shall bring it before the magistrates; and when it is brought into court, if it be registered in the public registers, to which of the litigants it belonged, let him take it and go his way. Or if the property be registered as belonging to some one who is not present, whoever will offer sufficient surety on behalf of the absent person that he will give it up to him, shall take it away as the representative of the other. But if the property which is deposited be not registered with the magistrates, let it remain until the time of trial with three of the eldest of the magistrates; and if it be an animal which is deposited, then he who loses the suit shall pay the magistrates for its keep, and they shall determine the cause within three days.

Any one who is of sound mind may arrest his own slave, and do with him whatever he will of such things as are lawful; and he may arrest the runaway slave of any of his friends or kindred with a view to his safe-keeping. And if any one takes away him who is being carried off as a slave, intending to liberate him, he who is carrying him off shall let him go; but he who takes him away shall give three sufficient sureties; and if he give them, and not without giving them, he may take him away, but if he take him away after any other manner he shall be deemed guilty of violence, and being convicted shall pay as a penalty double the amount of the damages claimed to him who has been deprived of the slave. Any man may also carry off a freedman, if he do not pay respect or sufficient respect to him who freed him. Now the respect shall be, that the freedman go three times in the month to the hearth of the person who freed him, and offer to do whatever he ought, so far as he can; and he shall agree to make such a marriage as his former master approves. He shall not be permitted to have more property than he who gave him liberty, and what more he has shall belong to his master. The freedman shall not remain in the state more than twenty years, but like other foreigners¹ shall go away, taking his entire property with him, unless he has the consent of the magistrates and of his former master to remain. If a freedman or any other stranger has a property greater than the census of the third class, at the expiration of thirty days from the day on which this comes to pass, he shall take that which is his and go his way, and in this case he shall not be allowed to remain any longer by the magistrates. And if any one disobeys this regulation, and is brought into court and convicted, he shall be punished with death, and his property shall be confiscated. Suits about these matters shall take place before the tribes, unless the plaintiff and defendant have got rid of the accusation either before their neighbours or before judges chosen by them. If a man lay claim to any animal or anything else which he declares to be his, let the possessor refer to the seller or to some honest and trustworthy person, who has given, or in some

legitimate way made over the property to him; if he be a citizen or a metic, sojourning in the city, within thirty days, or, if the property have been delivered to him by a stranger, within five months, of which the middle month shall include the summer solstice¹. When goods are exchanged by selling and buying, a man shall deliver them, and receive the price of them, at a fixed place in the agora, and have done with the matter; but he shall not buy or sell anywhere else, nor give credit. And if in any other manner or in any other place there be an exchange of one thing for another, and the seller give credit to the man who buys from him, he must do this on the understanding that the law gives no protection in cases of things sold not in accordance with these regulations². Again, as to contributions, any man who likes may go about collecting contributions as a friend among friends, but if any difference arises about the collection, he is to act on the understanding that the law gives no protection in such cases. He who sells anything above the value of fifty drachmas shall be required to remain in the city for ten days, and the purchaser shall be informed of the house of the seller, with a view to the sort of charges which are apt to arise in such cases, and the restitutions which the law allows. And let legal restitution be on this wise:—If a man sells a slave who is in a consumption, or who has the disease of the stone, or of strangury, or epilepsy, or some other tedious and incurable disorder of body or mind, which is not discernible to the ordinary man, if the purchaser be a physician or trainer, he shall have no right of restitution; nor shall there be any right of restitution if the seller has told the truth beforehand to the buyer. But if a skilled person sells to another who is not skilled, let the buyer appeal for restitution within six months, except in the case of epilepsy, and then the appeal may be made within a year. The cause shall be determined by such physicians as the parties may agree to choose; and the defendant, if he lose the suit, shall pay double the price at which he sold. If a private person sell to another private person, he shall have the right of restitution, and the decision shall be given as before, but the defendant, if he be cast, shall only pay back the price of the slave. If a person sells a homicide to another, and they both know of the fact, let there be no restitution in such a case, but if he do not know of the fact, there shall be a right of restitution, whenever the buyer makes the discovery; and the decision shall rest with the five youngest guardians of the law, and if the decision be that the seller was cognisant of the fact, he shall purify the house of the purchaser, according to the law of the interpreters, and shall pay back three times the purchase money.

Prelude to the law about adulteration:—Adulteration is a kind of falsehood and perjury.

The law:—One price to be asked; no puffing, or taking of oaths.

Penalties for adulteration.

If a man exchanges either money for money, or anything whatever for anything else, either with or without life, let him give and receive them genuine and unadulterated, in accordance with the law. And let us have a prelude about all this sort of roguery, like the preludes of our other laws. Every man should regard adulteration as of one and the same class with falsehood and deceit, concerning which the many are too fond of saying that at proper times and places the practice may often be right. But they leave the occasion, and the when, and the where, undefined and unsettled, and from this want of definiteness in their language they do a great deal of harm to themselves and to others. Now a legislator ought not to leave the matter undetermined; he ought to prescribe some limit, either greater or less. Let this be the rule prescribed:—No one shall call the Gods to witness, when he says or does anything false or deceitful or dishonest, unless he would be the most hateful of mankind to 917them. And he is most hateful to them who takes a false oath, and pays no heed to the Gods; and in the next degree, he who tells a falsehood in the presence of his superiors. Now better men are the superiors of worse men, and in general elders are the superiors of the young; wherefore also parents are the superiors of their offspring, and men of women and children, and rulers of their subjects; for all men ought to reverence any one who is in any position of authority, and especially those who are in state offices. And this is the reason why I have spoken of these matters. For every one who is guilty of adulteration in the agora tells a falsehood, and deceives, and when he invokes the Gods, according to the customs and cautions of the wardens of the agora, he does but swear without any respect for God or man. Certainly, it is an excellent rule not lightly to defile the names of the Gods, after the fashion of men in general, who care little about piety and purity in their religious actions. But if a man will not conform to this rule, let the law be as follows:—He who sells anything in the agora shall not ask two prices for that which he sells, but he shall ask one price, and if he do not obtain this, he shall take away his goods; and on that day he shall not value them either at more or less; and there shall be no praising of any goods, or oath taken about them. If a person disobeys this command, any citizen who is present, not being less than thirty years of age, may with impunity chastise and beat the swearer, but if instead of obeying the laws he takes no heed, he shall be liable to the charge of having betrayed them. If a man sells any adulterated goods and will not obey these regulations, he who knows and can prove the fact, and does prove it in the presence of the magistrates, if he be a slave or a metic, shall have the adulterated goods; but if he be a citizen, and do not pursue the charge, he shall be called a rogue, and deemed to have robbed the Gods of the agora; or if he proves the charge, he shall dedicate the goods to the Gods of the agora. He who is proved to have sold any adulterated goods, in addition to losing the goods themselves, shall be beaten with stripes,—a stripe for a drachma, according to the price of the goods; and the herald shall proclaim in the agora the offence for which he is going to be beaten. The wardens of the agora and the guardians of the law shall obtain information from experienced persons about the rogueries and adulterations of the sellers, and shall write up what the seller ought and ought not to do in each case; and let them inscribe their laws on a column in front of the court of the wardens of the agora, that they may be clear instructors of those who have business in the agora. Enough has been said in what 918has preceded about the wardens of the city, and if anything seems to be wanting, let them communicate with the guardians of the law, and write down the

Athenian, Cleinias.

omission, and place on a column in the court of the wardens of the city the primary and secondary regulations which are laid down for them about their office.

After the practices of adulteration naturally follow the practices of retail trade. Concerning these, we will first of all give a word of counsel and reason, and the law shall come afterwards. Retail trade in a city is not by nature intended to do any harm, but quite the contrary; for is not he a benefactor who reduces the inequalities and incommensurabilities of goods to equality and common measure? And this is what the power of money accomplishes, and the merchant may be said to be appointed for this purpose. The hireling and the tavern-keeper, and many other occupations, some of them more and others less seemly—all alike have this object;—they seek to satisfy our needs and equalize our possessions¹. Let us then endeavour to see what has brought retail trade into ill-odour, and wherein lies the dishonour and unseemliness of it, in order that if not entirely, we may yet partially, cure the evil by legislation. To effect this is no easy matter, and requires a great deal of virtue.

Retail trade.

Its objects are laudable:

why, then, is it so despised?

CLE.

What do you mean?

ATH.

Dear Cleinias, the class of men is small—they must have been rarely gifted by nature, and trained by education,—who, when assailed by wants and desires, are able to hold out and observe moderation, and when they might make a great deal of money are sober in their wishes, and prefer a moderate to a large gain. But the mass of mankind are the very opposite: their desires are unbounded, and when they might gain in moderation they prefer gains without limit; wherefore all that relates to retail trade, and merchandise, and the keeping of taverns, is denounced and numbered among dishonourable things. For if what I trust may never be and will not be, we were to compel, if I may venture to say a ridiculous thing, the best men everywhere to keep taverns for a time, or carry on retail trade, or do anything of that sort; or if, in consequence of some fate or necessity, the best women were compelled to follow similar callings, then we should know how agreeable and pleasant all these things are; and if all such occupations were managed on incorrupt principles, they would be honoured as we honour a mother or a nurse. But now that a man goes to desert places and builds houses which can only be reached by long journeys, for the sake of retail trade, and receives strangers who are in need at the welcome resting-place, and gives them peace and calm when they are tossed by the storm, or cool shade in the heat; and then instead of behaving to them as friends, and showing the duties of hospitality to his guests, treats them as enemies and captives who are at his mercy, and will not release

Because it encourages the love of gain.

If good men and women only kept shops and taverns, retail trade would be thought a beneficent occupation.

Athenian.

The extortionate practices now-a-days have brought it into ill-repute.

The remedy:—Retailers to be few, of the meaner sort, and well looked after.

them until they have paid the most unjust, abominable, and extortionate ransom,—these are the sort of practices, and foul evils they are, which cast a reproach upon the succour of adversity. And the legislator ought always to be devising a remedy for evils of this nature. There is an ancient saying, which is also a true one—‘To fight against two opponents is a difficult thing,’ as is seen in diseases and in many other cases. And in this case also the war is against two enemies—wealth and poverty; one of whom corrupts the soul of man with luxury, while the other drives him by pain into utter shamelessness. What remedy can a city of sense find against this disease? In the first place, they must have as few retail traders as possible; and in the second place, they must assign the occupation to that class of men whose corruption will be the least injury to the state; and in the third place, they must devise some way whereby the followers of these occupations themselves will not readily fall into habits of unbridled shamelessness and meanness.

After this preface let our law run as follows, and may fortune favour us:—No landowner among the Magnetes, whose city the God is restoring and resettling—no one, that is, of the 5040 families, shall become a retail trader either voluntarily or involuntarily; neither shall he be a merchant, or do any service for private persons unless they equally serve him, except for his father or his mother, and their fathers and mothers; and in general for his elders who are freemen¹, and whom he serves as a freeman. Now it is difficult to determine accurately the things which are worthy or unworthy of a freeman, but let those who have obtained the prize of virtue give judgment about them in accordance with their feelings of right and wrong. He who in any way shares in the illiberality of retail trades may be indicted for dishonouring his race by any one who likes, before those who have been judged to be the first in virtue; and if he appear to throw dirt upon his father’s house by an unworthy occupation, let him be imprisoned for a year and abstain from that sort of thing; and if he repeat the offence, for two years; and every time that he is convicted let the length of his imprisonment be doubled. This shall be the second law:—He who engages in retail trade must be either a metic or a stranger. And a third law shall be:—In order that the retail trader who dwells in our city may be as good or as little bad as possible, the guardians of the law shall remember that they are not only guardians of those who may be easily watched and prevented from becoming lawless or bad, because they are well-born and bred; but still more should they have a watch over those who are of another sort, and follow pursuits which have a very strong tendency to make men bad. And, therefore, in respect of the multifarious occupations of retail trade, that is to say, in respect of such of them as are allowed to remain, because they seem to be quite necessary in a state,—about these the guardians of the law should meet and take counsel with those who have experience of the several kinds of retail trade, as we before commanded concerning adulteration (which is a matter akin to this), and when they meet they shall consider what amount of receipts, after deducting expenses, will produce a moderate gain to the retail trades, and they shall fix in writing and strictly maintain what they find to be the right percentage of profit; this shall be seen to by the wardens of the agora, and by the wardens of the city, and by the wardens of the country. And so retail

The law:—Retail traders to be, not citizens, but metics or strangers.

The punishment for citizens who disobey.

The guardians of the law shall determine the rate of profit.

trade will benefit every one, and do the least possible injury to those in the state who practise it.

When a man makes an agreement which he does not fulfil, unless the agreement be of a nature which the law or a vote of the assembly does not allow, or which he has made under the influence of some unjust compulsion, or which he is prevented from fulfilling against his will by some unexpected chance, the other party may go to law with him in the courts of the tribes, for not having completed his agreement, if the parties are not able previously to come to terms before arbiters or before their neighbours. The class of craftsmen who have furnished human life with the arts is dedicated to Hephaestus and Athene; and there is a class of craftsmen who preserve the works of all craftsmen by arts of defence, the votaries of Ares and Athene, to which divinities they too are rightly dedicated. All these continue through life serving the country and the people; some of them are leaders in battle; others make for hire implements and works, and they ought not to deceive in such matters, out of respect to the Gods who are their ancestors. If any craftsman through indolence omit to execute his work in a given time, not reverencing the God who gives him the means of life, but considering, foolish fellow, that he is his own God and will let him off easily, in the first place, he shall suffer at the hands of the God, and in the second place, the law shall follow in a similar spirit. He shall owe to him who contracted with him the price of the works which he has failed in performing, and he shall begin again and execute them gratis in the given time. When a man undertakes a work, the law gives him the same advice which was given to the seller, that he should not attempt to raise the price, but simply ask the value; this the law enjoins also on the contractor; for the craftsman assuredly knows the value of his work. Wherefore, in free states the man of art ought not to attempt to impose upon private individuals by the help of his art, which is by nature a true thing; and he who is wronged in a matter of this sort, shall have a right of action against the party who has wronged him. And if any one lets out work to a craftsman, and does not pay him duly according to the lawful agreement, disregarding Zeus the guardian of the city and Athene, who are the partners of the state, and overthrows the foundations of society for the sake of a little gain, in his case let the law and the Gods maintain the common bonds of the state. And let him who, having already received the work in exchange, does not pay the price in the time agreed, pay double the price; and if a year has elapsed, although interest is not to be taken on loans, yet for every drachma which he owes to the contractor let him pay a monthly interest of an obol. Suits about these matters are to be decided by the courts of the tribes; and by the way, since we have mentioned craftsmen at all, we must not forget that other craft of war, in which generals and tacticians are the craftsmen, who undertake voluntarily or involuntarily the work of our safety, as other craftsmen undertake other public works;—if they execute their work well the law will never tire of praising him who gives them ¹ those honours which are the just rewards of the soldier; but if any one, having already received the benefit of any noble service in war, does not make the due return of

Breaches of contract to be actionable.

Punishment for not fulfilling a contract within the appointed time.

No overcharge.

The price, if not paid at the time agreed,

Athenian, Cleinias.

shall be doubled. Soldiers and generals, also, like other craftsmen, should have their reward, though not the highest;—this is reserved for men who honour the law.

honour, the law will blame him. Let this then be the law, having an ingredient of praise, not compelling but advising the great body of the citizens to honour the brave men who are the saviours of the whole state, whether by their courage or by their military skill;—they should honour them, I say, in the second place; for the first and highest tribute of respect is to be given to those who are able above other men to honour the words of good legislators.

The greater part of the dealings between man and man have been now regulated by us with the exception of those that relate to orphans and the supervision of orphans by their guardians. These follow next in order, and must be regulated in some way. But to arrive at them we must begin with the testamentary wishes of the dying and the case of those who may have happened to die intestate. When I said, Cleinias, that we must regulate them, I had in my mind the difficulty and perplexity in which all such matters are involved. You cannot leave them unregulated, for individuals would make regulations at variance with one another, and repugnant to the laws and habits of the living and to their own previous habits, if a person were simply allowed to make any will which he pleased, and this were to take effect in whatever state he may have been at the end of his life; for most of us lose our senses in a manner, and feel crushed when we think that we are about to die.

The wishes of the dying to be made subject to the interests of the living.

CLE.

What do you mean, Stranger?

ATH.

O Cleinias, a man when he is about to die is an intractable creature, and is apt to use language which causes a great deal of anxiety and trouble to the legislator.

CLE.

In what way?

ATH.

He wants to have the entire control of all his property, and will use angry words.

CLE.

Such as what?

ATH.

O ye Gods, he will say, how monstrous that I am not allowed to give, or not to give, my own to whom I will—less to him who has been bad to me, and more to him who has been good to me,

The fretful complaints of the dying man;

and whose badness and goodness have been tested by me in time of sickness or in old age and in every other sort of fortune!

CLE.

Well, Stranger, and may he not very fairly say so?

ATH.

In my opinion, Cleinias, the ancient legislators were too good-natured, and made laws without sufficient observation or consideration of human things.

CLE.

What do you mean?

ATH.

I mean, my friend, that they were afraid of the testator's reproaches, and so they passed a law to the effect that a man should be allowed to dispose of his property in all respects as he liked; but you and I, if I am not mistaken, will have something better to say to our departing citizens. 923

CLE.

What?

ATH.

and the legislator's answer to them.

Athenian.

The father may leave the lot to any of his sons, and distribute what remains to such of his other children as are unprovided for.

Other regulations respecting inheritance, adoption, orphanhood.

The principles on which the daughters of persons dying

O my friends, we will say to them, hard is it for you, who are creatures of a day, to know what is yours,—hard too, as the Delphic oracle says, to know yourselves at this hour. Now I, as the legislator, regard you and your possessions, not as belonging to yourselves, but as belonging to your whole family, both past and future, and yet more do I regard both family and possessions as belonging to the state; wherefore, if some one steals upon you with flattery, when you are tossed on the sea of disease or old age, and persuades you to dispose of your property in a way that is not for the best, I will not, if I can help, allow this; but I will legislate with a view to the whole, considering what is best both for the state and for the family, esteeming as I ought the feelings of an individual at a lower rate; and I hope that you will depart in peace and kindness towards us, as you are going the way of all mankind; and we will impartially take care of all your concerns, not neglecting any of them, if we can possibly help. Let this be our prelude and consolation to the living and dying, Cleinias, and

intestate shall be given in marriage.

If a childless man dies intestate, he shall be succeeded by his nearest kinsman and kinswoman.

Athenian, Cleinias.

The legislator is well aware that his law may be oppressive, but he must sometimes sacrifice individuals for the state.

let the law be as follows:—He who makes a disposition in a testament, if he be the father of a family, shall first of all inscribe as his heir any one of his sons whom he may think fit; and if he gives any of his children to be adopted by another citizen, let the adoption be inscribed. And if he has a son remaining over and above who has not been adopted upon any lot, and who may be expected to be sent out to a colony according to law, to him his father may give as much as he pleases of the rest of his property, with the exception of the paternal lot and the fixtures on the lot. And if there are other sons, let him distribute among them what there is more than the lot in such portions as he pleases. And if one of the sons has already a house of his own, he shall not give him of the money, nor shall he give money to a daughter who has been betrothed, but if she is not betrothed he may give her money. And if any of the sons or daughters shall be found to have another lot of land in the country, which has accured after the testament has been made, they shall leave the lot which they have inherited to the heir of the man who has made the will. If the testator has no sons, but only daughters, let him choose the husband of any one of his daughters whom he pleases, and leave and inscribe him as his son and heir. And if a man have lost his son, when he was a child, and before he could be reckoned among grown-up men, whether his own or an adopted son, let the testator make mention of the circumstance and inscribe whom he will to be his second son in hope of better fortune. If the testator has no children at all, he may select and give to any one whom he pleases the tenth part of the property which he has acquired; but let him not be blamed if he gives all the rest to his adopted son, and makes a friend of him according to the law. If the sons of a man require guardians, and the father when he dies leaves a will appointing guardians, those who have been named by him, whoever they are and whatever their number be, if they are able and willing to take charge of the children, shall be recognized according to the provisions of the will. But if he dies and has made no will, or a will in which he has appointed no guardians, then the next of kin, two on the father's and two on the mother's side, and one of the friends of the deceased, shall have the authority of guardians, whom the guardians of the law shall appoint when the orphans require guardians. And the fifteen eldest guardians of the law shall have the whole care and charge of the orphans, divided into threes according to seniority,—a body of

three for one year, and then another body of three for the next year, until the cycle of the five periods is complete; and this, as far as possible, is to continue always. If a man dies, having made no will at all, and leaves sons who require the care of guardians, they shall share in the protection which is afforded by these laws. And if a man dying by some unexpected fate leaves daughters behind him, let him pardon the legislator if when he gives them in marriage, he have a regard only to two out of three conditions,—nearness of kin and the preservation of the lot, and omits the third condition, which a father would naturally consider, for he would choose out of all the citizens a son for himself, and a husband for his daughter, with a view to his character and disposition—the father, I say, shall forgive the legislator if he disregards this, which to him is an impossible consideration. Let the law about these matters where practicable be as follows:—If a man dies without making a will, and leaves behind him daughters, let his brother, being the son of the same father or of the same mother, having no lot, marry the daughter and have the lot of the dead man. And if he have no brother, but only a brother's son, in like manner let them marry, if they be of a suitable age; and if there be not even a brother's son, but only the son of a sister, let them do likewise, and so in the fourth degree, if there be only the testator's father's brother, or in the fifth degree, his father's brother's son, or in a sixth degree, the child of his father's sister. Let kindred be always reckoned in this way: if a person leaves daughters the relationship shall proceed upwards through brothers and sisters, and brothers' and sisters' children, and first the males shall come, and after them the females in the same family. The judge shall consider and determine the suitability or unsuitability of age in marriage; he shall make an inspection of the males naked, and of the women naked down to the navel. And if there be a lack of kinsmen in a family extending to grandchildren of a brother, or to the grandchildren of a grandfather's children, the maiden may choose with the consent of her guardians any one of the citizens who is willing and whom she wills, and he shall be the heir of the dead man, and the husband of his daughter. Circumstances vary, and there may sometimes be a still greater lack of relations within the limits of the state; and if any maiden has no kindred living in the city, and there is some one who has been sent out to a colony, and she is disposed to make him the heir of her father's possessions, if he be indeed of her kindred, let him proceed to take the lot according to the regulation of the law; but if he be not of her kindred, she having no kinsmen within the city, and he be chosen by the daughter of the dead man, and empowered to marry by the guardians, let him return home and take the lot of him who died intestate. And if a man has no children, either male or female, and dies without making a will, let the previous law in general hold; and let a man and a woman go forth from the family and share the deserted house, and let the lot belong absolutely to them; and let the heiress in the first degree be a sister, and in a second degree a daughter of a brother, and in the third, a daughter of a sister, in the fourth degree the sister of a father, and in the fifth degree the daughter of a father's brother, and in a sixth degree of a father's sister; and these shall dwell with their male kinsmen, according to the degree of relationship and right, as we enacted before. Now we must not conceal from ourselves that such laws are apt to be oppressive and that there may sometimes be a hardship in the lawgiver commanding the kinsman of the dead man to marry his relation; he may be thought not to have considered the innumerable hindrances which may arise among men in the execution of such ordinances; for there may be cases in which the parties refuse to obey, and are ready to do anything rather than marry, when there is some

bodily or mental malady or defect among those who are bidden to marry or be married. Persons may fancy that the legislator never thought of this, but they are mistaken; wherefore let us make a common prelude on behalf of the lawgiver and of his subjects, the law begging the latter to forgive the legislator, in that he, having to take care of the common weal, cannot order at the same time the various circumstances of individuals, and begging him to pardon them if naturally they are sometimes unable to fulfil the act which he in his ignorance imposes upon them.

CLE.

And how, Stranger, can we act most fairly under the circumstances?

ATH.

There must be arbiters chosen to deal with such laws and the subjects of them.

CLE.

What do you mean?

ATH.

I mean to say, that a case may occur in which the nephew, having a rich father, will be unwilling to marry the daughter of his uncle; he will have a feeling of pride, and he will wish to look higher. And there are cases in which the legislator will be imposing upon him the greatest calamity, and he will be compelled to disobey the law, if he is required, for example, to take a wife who is mad, or has some other terrible malady of soul or body, such as makes life intolerable to the sufferer. Then let what we are saying concerning these cases be embodied in a law:—If any one finds fault with the established laws respecting testaments, both as to other matters and especially in what relates to marriage, and asserts that the legislator, if he were alive and present, would not compel him to obey,—that is to say, would not compel those who are by our law required to marry or be given in marriage, to do either,—and some kinsman or guardian dispute this, the reply is that the legislator left fifteen of the guardians of the law to be arbiters and fathers of orphans, male or female, and to them let the disputants have recourse, and by their aid determine any matters of the kind, admitting their decision to be final. But if any one thinks that too great power is thus given to the guardians of the law, let him bring his adversaries into the court of the select judges, and there have the points in dispute determined. And he who loses the cause shall have censure and blame from the legislator, which, by a man of sense, is felt to be a penalty far heavier than a great loss of money.

Hard cases may be considered by fifteen of the guardians of the law, or tried before the select judges.

Athenian.

Thus will orphan children have a second birth. After their first birth we spoke of their nurture and education, and after their second birth, when they have lost their parents, we ought to take measures that the misfortune of orphanhood may be as little sad to them as possible. In the first place, we say that the guardians of the law are lawgivers and fathers to them, not inferior to their natural fathers. Moreover, they shall take charge of them year by year¹ as of their own kindred; and we have given both to them and to the children's own guardians a suitable admonition concerning² the nurture of orphans. And we seem to have spoken opportunely in our former discourse², when we said that the souls of the dead have the power after death of taking an interest in human affairs, about which there are many tales and traditions, long indeed, but true; and seeing that they are so many and so ancient, we must believe them, and we must also believe the lawgivers, who tell us that these things are true, if they are not to be regarded as utter fools. But if these things are really so, in the first place men should have a fear of the Gods above, who regard the loneliness of the orphans; and in the second place of the souls of the departed, who by nature incline to take an especial care of their own children, and are friendly to those who honour, and unfriendly to those who dishonour them. Men should also fear the souls of the living who are aged and high in honour; wherever a city is well ordered and prosperous, their descendants cherish them, and so live happily; old persons are quick to see and hear all that relates to them, and are propitious to those who are just in the fulfilment of such duties, and they punish those who wrong the orphan and the desolate, considering that they are the greatest and most sacred of trusts. To all which matters the guardian and magistrate ought to apply his mind, if he has any, and take heed of the nurture and education of the orphans, seeking in every possible way to do them good, for he is making a contribution³ to his own good and that of his children. He who obeys the tale which precedes the law, and does no wrong to an orphan, will never experience the wrath of the legislator. But he who is disobedient, and wrongs any one who is bereft of father or mother, shall pay twice the penalty which he would have paid if he had wronged one whose parents had been alive. As touching other legislation concerning guardians in their relation to orphans, or concerning magistrates and their superintendence of the guardians, if they did not possess⁴ examples of the manner in which children of freemen should be brought up in the bringing up of their own children, and of the care of their property in the care of their own, or if they had not just laws fairly stated about these very things,—there would have been reason in making laws for them, under the idea that they were a peculiar class, and we might distinguish and make separate rules for the life of those who are orphans and of those who are not orphans. But as the case stands, the condition of orphans with us is not different from the case of those who have a father, though in regard to honour and dishonour, and the attention given to them, the two are not usually placed upon a level. Wherefore, touching the legislation about orphans, the law⁵ speaks in serious accents, both of persuasion and threatening, and such a threat as the following will be by no means out of place:—He who is the guardian of an orphan of either sex, and he among the guardians of the law to whom the superintendence of this guardian has been assigned, shall love the

The guardians of the law to be the second fathers of orphans.

The Gods and the souls of the departed look upon them, and aged and venerable persons have a care of them.

The guardian shall educate the orphan and manage his property as if he were his own child.

Punishment of the fraudulent or negligent trustee or magistrate.

unfortunate orphan as though he were his own child, and he shall be as careful and diligent in the management of his possessions as he would be if they were his own, or even more careful and diligent. Let every one who has the care of an orphan observe this law. But any one who acts contrary to the law on these matters, if he be a guardian of the child, may be fined by a magistrate, or, if he be himself a magistrate, the guardian may bring him before the court of select judges, and punish him, if convicted, by exacting a fine of double the amount of that inflicted by the court. And if a guardian appears to the relations of the orphan, or to any other citizen, to act negligently or dishonestly, let them bring him before the same court, and whatever damages are given against him, let him pay fourfold, and let half belong to the orphan and half to him who procured the conviction. If any orphan arrives at years of discretion, and thinks that he has been ill-used by his guardians, let him within five years of the expiration of the guardianship be allowed to bring them to trial; and if any of them be convicted, the court shall determine what he shall pay or suffer. And if a magistrate shall appear to have wronged the orphan by neglect, and he be convicted, let the court determine what he shall suffer or pay to the orphan, and if there be dishonesty in addition to neglect, besides paying the fine, let him be deposed from his office of guardian of the law, and let the state appoint another guardian of the law for the city and for the country in his room.

Quarrels between fathers and sons.

A son can only be renounced by a father with the consent of the family. When renounced, he may be adopted by another citizen: but if he be not adopted within ten years, he must emigrate.

The characters of young men are subject to many changes.

An imbecile father may be deprived of the control of his affairs.

If husband and wife do not agree, let them separate and find other partners.

Regulations respecting widowers and widows.

The custody of children of whom one or both parents are slaves.

Greater differences than there ought to be sometimes arise between fathers and sons, on the part either of fathers who will be of opinion that the legislator should enact that they may, if they wish, lawfully renounce their son by the proclamation of a herald in the face of the world, or of sons who think that they should be allowed to indict their fathers on the charge of imbecility when they are disabled by disease or old age. These things only happen, as a matter of fact, where the natures of men are utterly bad; for where only half is bad, as, for example, if the father be not bad, but the son be bad, or conversely, no great calamity is the result of such an amount of hatred as this. In another state, a son disowned by his father would not of necessity cease to be a citizen, but in our state, of which these are to be the laws, the disinherited must necessarily emigrate into another country, for no addition can be made even of a single family to the 5040 households; and, therefore, he who deserves to suffer these things must be renounced not only by his father, who is a single person, but by the whole family, and what is done in these cases must be regulated by some such law as the following:—He who in the sad disorder of his soul has a mind, justly or unjustly, to expel from his family a son whom he has begotten and brought up, shall not lightly or at once execute his purpose; but first of all he shall collect together his own kinsmen, extending to cousins, and in like manner his son's kinsmen by the mother's side, and in their presence he shall accuse his son, setting forth that he deserves at the hands of them all to be dismissed from the family; and the son shall be allowed to address them in a similar manner, and show that he does not deserve to suffer any of these things. And if the father persuades them, and obtains the suffrages of more than half of his kindred, exclusive of the father and mother and the offender himself—I say, if he obtains more than half the suffrages of all the other grown-up members of the family, of both sexes, the father shall be permitted to put away his son, but not otherwise. And if any other citizen is willing to adopt the son who is put away, no law shall hinder him; for the characters of young men are subject to many changes in the course of their lives. And if he has been put away, and in a period of ten years no one is willing to adopt him, let those who have the care of the superabundant population which is sent out into colonies, see to him, in order that he may be suitably provided for in the colony. And if disease or age or harshness of temper, or all these together, makes a man to be more out of his mind than the rest of the world are,—but this is not observable, except to those who live with him,—and he, being master of his property, is the ruin of the house, and his son doubts and hesitates about indicting his father for insanity, let the law in that case ordain that he shall first of all go to the eldest guardians of the law and tell them of his father's misfortune, and they shall duly look into the matter, and take counsel as to whether he shall indict him or not. And if they advise him to proceed, they shall be both his witnesses and his advocates; and if the father is cast, he shall henceforth be incapable of ordering the least particular of his life; let him be as a child dwelling in the house for the remainder of his days. And if a man and his wife have an unfortunate incompatibility of temper, ten of the guardians of the law, who are impartial¹, and ten of the women who regulate marriages², shall look to the matter, and if they are able to reconcile them they shall be formally reconciled; but if their souls are too much tossed with passion, they shall endeavour to find other partners. Now they are not likely to have very gentle tempers; and, therefore, we must endeavour to associate with them deeper and softer natures. Those who have no children, or only a few, at

the time of their separation, should choose their new partners with a view to the procreation of children; but those who have a sufficient number of children should separate and marry again in order that they may have some one to grow old with and that the pair may take care of one another in age. If a woman dies, leaving children, male or female, the law will advise rather than compel the husband to bring up the children without introducing into the house a stepmother. But if he have no children, then he shall be compelled to marry until he has begotten a sufficient number of sons to his family and to the state. And if a man dies leaving a sufficient number of children, the mother of his children shall remain with them and bring them up. But if she appears to be too young to live virtuously without a husband, let her relations communicate with the women who superintend marriage, and let both together do what they think best in these matters; if there is a lack of children, let the choice be made with a view to having them; two children, one of either sex, shall be deemed sufficient in the eye of the law. When a child is admitted to be the offspring of certain parents and is acknowledged by them, but there is need of a decision as to which parent the child is to follow,—in case a female slave have intercourse with a male slave, or with a freeman or freedman, the offspring shall always belong to the master of the female slave. Again, if a free woman have intercourse with a male slave, the offspring shall belong to the master of the slave; but if a child be born either of a slave by her master, or of his mistress by a slave—and this be proven—the offspring of the woman and its father shall be sent away by the women who superintend marriage into another country, and the guardians of the law shall send away the offspring of the man and its mother.

Neither God, nor a man who has understanding, will ever advise any one to neglect his parents. To a discourse concerning the honour and dishonour of parents, a prelude such as the following, about the service of the Gods, will be a suitable introduction:—There are ancient customs about the Gods which are universal, and they are of two kinds: some of the Gods we see with our eyes and we honour them, of 931 others we honour the images, raising statues of them which we adore; and though they are lifeless, yet we imagine that the living Gods have a good will and gratitude to us on this account. Now, if a man has a father or mother, or their fathers or mothers treasured up in his house stricken in years, let him consider that no statue can be more potent to grant his requests than they are, who are sitting at his hearth, if only he knows how to show true service to them.

Athenian, Cleinias.

A father or mother stricken in years is as potent to grant a request as any lifeless image.

CLE.

And what do you call the true mode of service?

ATH.

I will tell you, O my friend, for such things are worth listening to.

CLE.

Proceed.

ATH.

Oedipus, as tradition says, when dishonoured by his sons, invoked on them curses which every one declares to have been heard and ratified by the Gods, and Amyntor in his wrath invoked curses on his son Phoenix, and Theseus upon Hippolytus, and innumerable others have also called down wrath upon their children, whence it is clear that the Gods listen to the imprecations of parents; for the curses of parents are, as they ought to be, mighty against their children as no others are. And shall we suppose that the prayers of a father or mother who is specially dishonoured by his or her children, are heard by the Gods in accordance with nature; and that if a parent is honoured by them, and in the gladness of his heart earnestly entreats the Gods in his prayers to do them good, he is not equally heard, and that they do not minister to his request? If not, they would be very unjust ministers of good, and that we affirm to be contrary to their nature.

The curses of parents upon their children are heard by the Gods, and so are the prayers which they offer for their welfare.

CLE.

Certainly.

ATH.

May we not think, as I was saying just now, that we can possess no image which is more honoured by the Gods, than that of a father or grandfather, or of a mother stricken in years? whom when a man honours, the heart of the God rejoices, and he is ready to answer their prayers. And, truly, the figure of an ancestor is a wonderful thing, far higher than that of a lifeless image. For the living, when they are honoured by us, join in our prayers, and when they are dishonoured, they utter imprecations against us; but lifeless objects do neither. And therefore, if a man makes a right use of his father and grandfather and other aged relations, he will have images which above all others will win him the favour of the Gods.

The worship of a living ancestor higher than of a lifeless image.

CLE.

Excellent.

ATH.

The penalty for the neglect of parents in the case of the young

Every man of any understanding fears and respects the prayers of parents, knowing well that many times and to many persons they have been accomplished. Now these things being thus ordered by nature, good men think it a blessing from heaven if their parents live to old age and reach the utmost limit of human life, or if taken away before their time they are deeply regretted by them; but to bad men parents are always a cause of terror. Wherefore let every man honour with every sort of lawful honour his own parents, agreeably to what has now been said. But if this prelude be an unmeaning sound in the ears of any one, let the law follow, which may be rightly imposed in these terms:—If any one in this city be not sufficiently careful of his parents, and do not regard and gratify in every respect their wishes more than those of his sons and of his other offspring or of himself,—let him who experiences this sort of treatment either come himself, or send some one to inform the three eldest guardians of the law, and three of the women who have the care of marriages; and let them look to the matter and punish youthful evil-doers with stripes and bonds if they are under thirty years of age, that is to say, if they be men, or if they be women, let them undergo the same punishment up to forty years of age. But if, when they are still more advanced in years, they continue the same neglect of their parents, and do any hurt to any of them, let them be brought before a court in which every single one of the eldest citizens shall be the judges, and if the offender be convicted, let the court determine what he ought to pay or suffer, and any penalty may be imposed on him which a man can pay or suffer. If the person who has been wronged be unable to inform the magistrates, let any freeman who hears of his case inform, and if he do not, he shall be deemed base, and shall be liable to have a suit for damage brought against him by any one who likes. And if a slave inform, he shall receive freedom; and if he be the slave of the injurer or injured party, he shall be set free by the magistrates, or if he belong to any other citizen, the public shall pay a price on his behalf to the owner; and let the magistrates take heed that no one wrongs him out of revenge, because he has given information.

will be bonds and stripes;

if they persist they shall be brought before a court of elders and punished more severely.

Athenian.

Cases in which one man injures another by poisons, and which prove fatal, have been already discussed¹; but about other cases in which a person intentionally and of malice harms another with meats, or drinks, or ointments, nothing has as yet been determined. For there are two kinds of poisons used among men, which cannot clearly be distinguished. There is the kind just now explicitly mentioned, which injures bodies by the use of other bodies according to natural law; there is also another kind which persuades the more daring class that they can do injury by sorceries, and incantations, and magic knots, as they are termed, and makes others believe that they above all persons are injured by the powers of the magician. Now it is not easy to know the nature of all these things; nor if a man do know can he readily persuade others to believe him. And when men are disturbed in their minds at the sight of waxen images fixed either at their doors, or in a place where three ways meet, or on the sepulchres of parents, there is no use in trying to persuade them that they should despise all such things because they

Two kinds of poisoning: (1) by meats and drinks; (2) by magic.

Men cannot be taught to despise sorcery, and therefore the practice of it must be punished.

The physician who employs poison, and the professional sorcerer, shall be put to death.

have no certain knowledge about them. But we must have a law in two parts, concerning poisoning, in whichever of the two ways the attempt is made, and we must entreat, and exhort, and advise men not to have recourse to such practices, by which they scare the multitude out of their wits, as if they were children, compelling the legislator and the judge to heal the fears which the sorcerer arouses, and to tell them in the first place, that he who attempts to poison or enchant others knows not what he is doing, either as regards the body (unless he has a knowledge of medicine), or as regards his enchantments (unless he happens to be a prophet or diviner). Let the law, then, run as follows about poisoning or witchcraft:—He who employs poison to do any injury, not fatal, to a man himself, or to his servants, or any injury, whether fatal or not, to his cattle or his bees, if he be a physician, and be convicted of poisoning, shall be punished with death; or if he be a private person, the court shall determine what he is to pay or suffer. But he who seems to be the sort of man who injures others by magic knots, or enchantments, or incantations, or any of the like practices, if he be a prophet or diviner, let him die; and if, not being a prophet, he be convicted of witchcraft, as in the previous case, let the court fix what he ought to pay or suffer.

When a man does another any injury by theft or violence, for the greater injury let him pay greater damages to the injured man, and less for the smaller injury; but in all cases, whatever the injury may have been, as much as will compensate the loss. And besides the compensation of the wrong, let a man pay a further penalty for the chastisement of his offence: he who has done the wrong instigated by the folly of another¹, through the lightheartedness of youth or the like, shall pay a lighter penalty; but he who has injured another through his own folly, when overcome by pleasure or pain, in cowardly fear, or lust, or envy, or implacable anger, shall endure a heavier punishment. Not that he is punished because he did wrong, for that which is done can never be undone, but in order that in future times, he, and those who see him corrected, may utterly hate injustice, or at any rate abate much of their evil-doing. Having an eye to all these things, the law, like a good archer, should aim at the right measure of punishment, and in all cases at the deserved punishment. In the attainment of this the judge shall be a fellow-worker with the legislator, whenever the law leaves to him to determine what the offender shall suffer or pay; and the legislator, like a painter, shall give a rough sketch of the cases in which the law is to be applied. This is what we must do, Megillus and Cleinias, in the best and fairest manner that we can, saying what the punishments are to be of all actions of theft and violence, and giving laws of such a kind as the Gods and sons of Gods would have us give.

He who does an injury shall not only make compensation, but suffer punishment.

Punishment not vindictive, but preventive.

A madman must be kept at home by his relations.

The madness (1) of disease, (2) of passion.

If a man is mad he shall not be at large in the city, but his relations shall keep him at home in any way which they can; or if not, let them pay a penalty,—he who is of the highest class shall pay a penalty of one hundred drachmas, whether he be a slave or a freeman whom he neglects; and he of the second class shall pay four-fifths of a mina; and he of the third class three-fifths; and he of the fourth class two-fifths. Now there are many sorts of madness, some arising out of disease, which we have already mentioned; and there are other kinds, which originate in an evil and passionate temperament, and are increased by bad education; out of a slight quarrel this class of madmen will often raise a storm of abuse against one another, and nothing of that sort ought to be allowed to occur in a well-ordered state. Let this, then, be the law about abuse, which shall relate to all cases:—No one shall speak evil of another; and when a man disputes with another he shall teach and learn of the disputant and the company, but he shall abstain from evil-speaking; for out of the imprecations which men utter against one another, and the feminine habit of casting aspersions on one another, 935and using foul names, out of words light as air, in very deed the greatest enmities and hatreds spring up. For the speaker gratifies his anger, which is an ungracious element of his nature; and nursing up his wrath by the entertainment of evil thoughts, and exacerbating that part of his soul which was formerly civilized by education, he lives in a state of savageness and moroseness, and pays a bitter penalty for his anger. And in such cases almost all men take to saying something ridiculous about their opponent, and there is no man who is in the habit of laughing at another who does not miss virtue and earnestness altogether, or lose the better half of greatness. Wherefore let no one utter any taunting word at a temple, or at the public sacrifices, or at the games, or in the agora, or in a court of justice, or in any public assembly. And let the magistrate who presides on these occasions chastise an offender, and he shall be blameless; but if he fails in doing so, he shall not claim the prize of virtue; for he is one who heeds not the laws, and does not do what the legislator commands. And if in any other place any one indulges in these sort of revilings, whether he has begun the quarrel or is only retaliating, let any elder who is present support the law, and control with blows those who indulge in passion, which is another great evil; and if he do not, let him be liable to pay the appointed penalty. And we say now, that he who deals in reproaches against others cannot reproach them without attempting to ridicule them; and this, when done in a moment of anger, is what we make matter of reproach against him. But then, do we admit into our state the comic writers [1](#) who are so fond of making mankind ridiculous, if they attempt in a good-natured manner to turn the laugh against our citizens? or do we draw the distinction of jest and earnest, and allow a man to make use of ridicule in jest and without anger about any thing or person; though as we were saying, not if he be angry and have a set purpose? We forbid earnest—that is unalterably fixed; but we have still to say who are to be sanctioned or not to be sanctioned by the law in the employment of innocent humour. A comic poet, or maker of iambic or satirical lyric verse, shall not be permitted to ridicule any of the citizens, either by word or likeness, either in anger or without anger. And if any one is disobedient, the judges shall either at once expel him from the country, or he shall pay a fine of three minae, which shall be

The law respecting abuse.

He who ridicules another misses virtue and loses the better half of greatness.

The punishment of the offender.

Jesting in verse without anger may be allowed, if approved by the minister of education, but not serious or illnatured satire, or ridicule of the citizens.

dedicated to the God who presides over the contests. 936 Those only who have received permission shall be allowed to write verses at one another, but they shall be without anger and in jest; in anger and in serious earnest they shall not be allowed. The decision of this matter shall be left to the superintendent of the general education of the young, and whatever he may license, the writer shall be allowed to produce, and whatever he rejects let not the poet himself exhibit, or ever teach anybody else, slave or freeman, under the penalty of being dishonoured, and held disobedient to the laws.

Now he is not to be pitied who is hungry, or who suffers any bodily pain, but he who is temperate, or has some other virtue, or part of a virtue, and at the same time suffers from misfortune; it would be an extraordinary thing if such an one, whether slave or freeman, were utterly forsaken and fell into the extremes of poverty in any tolerably well-ordered city or government. Wherefore the legislator may safely make a law applicable to such cases in the following terms:—Let there be no beggars in our state; and if anybody begs, seeking to pick up a livelihood by unavailing prayers, let the wardens of the agora turn him out of the agora, and the wardens of the city out of the city, and the wardens of the country send him out of any other parts of the land across the border, in order that the land may be cleared of this sort of animal.

Beggars are not to be tolerated in our state.

If a slave of either sex injure anything, which is not his or her own, through inexperience, or some improper practice, and the person who suffers damage be not himself in part to blame, the master of the slave who has done the harm shall either make full satisfaction, or give up the slave who has done the injury. But if the master argue that the charge has arisen by collusion between the injured party and the injurer, with the view of obtaining the slave, let him sue the person, who says that he has been injured, for malpractices. And if he gain a conviction, let him receive double the value which the court fixes as the price of the slave; and if he lose his suit, let him make amends for the injury, and give up the slave. And if a beast of burden, or horse, or dog, or any other animal, injure the property of a neighbour, the owner shall in like manner pay for the injury.

The owner of a slave or an animal responsible for any harm done by them.

If any man refuses to be a witness, he who wants him shall summon him, and he who is summoned shall come to the trial; and if he knows and is willing to bear witness, let him bear witness, but if he says he does not know let him swear by the three divinities Zeus, and Apollo, and Themis, that he does not, and have no more to do with the cause. And 937 he who is summoned to give witness and does not answer to his summoner, shall be liable for the harm which ensues according to law. And if a person calls up as a witness any one who is acting as a judge, let him give his witness, but he shall not afterwards vote in the cause. A free woman may give her witness and plead, if she be more than forty years of age, and may bring an action if she have no husband; but if her husband be alive she shall only be allowed to bear witness. A slave of either sex and a child shall be allowed to give evidence and to plead, but only in cases of murder; and they must produce sufficient sureties that they will certainly remain until

Regulations respecting witnesses.

False witness.

Penalties for false witness.

the trial, in case they should be charged with false witness. And either of the parties in a cause may bring an accusation of perjury against witnesses, touching their evidence in whole or in part, if he asserts that such evidence has been given; but the accusation must be brought previous to the final decision of the cause. The magistrates shall preserve the accusations of false witness, and have them kept under the seal of both parties, and produce them on the day when the trial for false witness takes place. If a man be twice convicted of false witness, he shall not be required; and if thrice, he shall not be allowed to bear witness; and if he dare to witness after he has been convicted three times, let any one who pleases inform against him to the magistrates, and let the magistrates hand him over to the court, and if he be convicted he shall be punished with death. And in any case in which the evidence is rightly found to be false, and yet to have given the victory to him who wins the suit, and more than half the witnesses are condemned, the decision which was gained by these means shall be rescinded, and there shall be a discussion and a decision as to whether the suit was determined by that false evidence or not; and in whichever way the decision may be given, the previous suit shall be determined accordingly.

There are many noble things in human life, but to most of them attach evils which are fated to corrupt and spoil them. Is not justice noble, which has been the civilizer of humanity? How then can the advocate of justice be other than noble? And yet upon this profession which is presented to us under the fair name of art has come an evil reputation¹. In the first place, we are told

Good and evil lie near together in human life. The ends of the law apt to be defeated by the ingenuity of lawyers.

that by ingenious pleas and the help of an advocate the law enables a man to win a particular cause, whether just or unjust; and that both the art, and the power of speech which is thereby imparted, are at the service of him who is willing to pay for them. Now in our state this so-called art, whether really an art² or only an experience and practice destitute of any art, ought if possible never to come into existence, or if existing among us should listen to the request of the legislator and go away into another land, and not speak contrary to justice. If the offenders obey we say no more; but for those who disobey, the voice of the law is as follows:—If any one thinks that he will pervert the power of justice in the minds of the judges, and unseasonably litigate or advocate, let any one who likes indict him for malpractices of law and dishonest advocacy, and let him be judged in the court of select judges; and if he be convicted, let the court determine whether he may be supposed to act from a love of money or from contentiousness. And if he is supposed to act from contentiousness, the court shall fix a time during which he shall not be allowed to institute or plead a cause; and if he is supposed to act as he does from love of money, in case he be a stranger, he shall leave the country, and never return under penalty of death; but if he be a citizen, he shall die, because he is a lover of money, in whatever manner gained; and equally, if he be judged to have acted more than once from contentiousness, he shall die.

The punishment of unscrupulous advocacy, which in certain cases is to be death.

BOOK XII.

941 If a herald or an ambassador carry a false message from our city to any other, or bring back a false message from the city to which he is sent, or be proved to have brought back, whether from friends or enemies, in his capacity of herald or ambassador, what they have never said, let him be indicted for having violated, contrary to the law, the commands and duties imposed upon him by Hermes and Zeus, and let there be a penalty fixed, which he shall suffer or pay if he be convicted.

Laws XII.

Athenian.

Misconduct of heralds or ambassadors.

Theft is a mean, and robbery a shameless thing; and none of the sons of Zeus delight in fraud and violence, or ever practised either. Wherefore let no one be deluded by poets or mythologers into a mistaken belief of such things, nor let him suppose, when he thieves or is guilty of violence, that he is doing nothing base, but only what the Gods themselves do. For such tales are untrue and improbable; and he who steals or robs contrary to the law, is never either a God or the son of a God; of this the legislator ought to be better informed than all the poets put together¹. Happy is he and may he be for ever happy, who is persuaded and listens to our words; but he who disobeys shall have to contend against the following law:—If a man steal anything belonging to the public, whether that which he steals be much or little, he shall have the same punishment. For he who steals a little steals with the same wish as he who steals much, but with less power, and he who takes up a greater amount, not having deposited it, is wholly unjust. Wherefore the law is not disposed to inflict a less penalty on the one than on the other because his theft is less, but on the ground that the thief may possibly be in one case still curable, and may in another case be incurable. If any one convict in a court of law a stranger or a slave of a theft of public property, let the court determine what punishment he shall suffer, or what penalty he shall pay, bearing in mind that he is probably not incurable. But the citizen who has been brought up as our citizens will have been, if he be found guilty of robbing his country by fraud or violence, whether he be caught in the act or not, shall be punished with death; for he is incurable¹.

No God or son of a God ever was a thief.

Punishment for theft of public property.

The stranger or slave, as curable, to be dealt with leniently; the citizen, as incurable, to suffer death.

Obedience the great military virtue.

Soldiers to have a common life.

Agility and endurance to be cultivated.

Care of the extremities.

Now for expeditions of war much consideration and many laws are required; the great principle of all is that no one of either sex should be without a commander²; nor should the mind of any one be accustomed to do anything, either in jest or earnest, of his own motion, but in war and in peace he should look to and follow his leader, even in the least things being under his guidance; for example, he should stand or move, or exercise, or wash, or take his meals, or get up in the night to keep guard and deliver messages when he is bidden; and in the hour of danger he should not pursue and not retreat except by order of his superior; and in a word, not teach the soul or accustom her to know or understand how to do anything apart from others. Of all soldiers the life should be always and in all things as far as possible in common and together; there neither is nor ever will be a higher, or better, or more scientific principle than this for the attainment of salvation and victory in war. And we ought in time of peace from youth upwards to practise this habit of commanding others, and of being commanded by others; anarchy should have no place in the life of man or of the beasts who are subject to man. I may add that all dances ought to be performed with a view to military excellence³; and agility and ease should be cultivated for the same object, and also endurance of the want of meats and drinks, and of winter cold and summer heat, and of hard couches; and, above all, care should be taken not to destroy the peculiar qualities of the head and the feet by surrounding them with extraneous coverings, and so hindering their natural growth of hair and soles. For these are the extremities, and of all the parts of the body, whether they are preserved or not is of the greatest consequence; the one is the servant of the whole body, and the other the master, in whom all the ruling senses are by nature set. Let the young man imagine that he hears in what has preceded the praises of the military life; the law shall be as follows:—He shall serve in war who is on the roll or appointed to some special service, and if any one is absent from cowardice, and without the leave of the generals, he shall be indicted before the military commanders for failure of service when the army comes home; and the soldiers shall be his judges; the heavy-armed, and the cavalry, and the other arms of the service shall form separate courts; and they shall bring the heavy-armed before the heavy-armed, and the horsemen before the horsemen, and the others in like manner before their peers; and he who is found guilty shall never be allowed to compete for any prize of valour, or indict another for not serving on an expedition, or be an accuser at all in any military matters. Moreover, the court shall further determine what punishment he shall suffer, or what penalty he shall pay. When the suits for failure of service are completed, the leaders of the several kinds of troops shall again hold an assembly, and they shall adjudge the prizes of valour; and he who likes shall give judgment in his own branch of the service, saying nothing about any former expedition, nor producing any proof or witnesses to confirm his statement, but speaking only of the present occasion. The crown of victory shall be an olive wreath which the victor shall offer up at the temple of any war-god whom he likes, adding an inscription for a testimony to last during life, that such an one has

The manner of trial and punishment of those who fail to serve.

The award of prizes of valour.

Desertion to receive the same punishment as refusal to serve.

Witnesses to be careful not to confound the losing and the throwing away of arms.

The law respecting cowardice.

Would that the coward could be changed into a woman!

Since such a punishment is impossible, let him not be allowed to serve, and let him incur a fine.

received the first, the second, or the third prize. If any one goes on an expedition, and returns home before the appointed time, when the generals have not withdrawn the army, he shall be indicted for desertion before the same persons who took cognizance of failure of service, and if he be found guilty, the same punishment shall be inflicted on him. Now every man who is engaged in any suit ought to be very careful of bringing false witness against any one, either intentionally or unintentionally, if he can help; for justice is truly said to be an honourable maiden¹, and falsehood is naturally repugnant to honour and justice. A witness ought to be very careful not to sin against justice, as for example in what relates to the throwing away of arms—he must distinguish the throwing them away when necessary, and not make that a reproach, or bring an action against some innocent person on that account. To make the distinction may be difficult; but still the law must attempt to define the different kinds in some way. Let me endeavour to explain my meaning by an ancient tale:—If Patroclus had been brought to the tent still alive but without his arms (and this has happened to innumerable persons), the original arms, which the poet says were presented to Peleus by the Gods as a nuptial gift when he married Thetis, remaining in the hands of Hector, then the base spirits of that day might have reproached the son of Menoetius with having cast away his arms. Again, there is the case of those who have been thrown down precipices and lost their arms; and of those who at sea, and in stormy places, have been suddenly overwhelmed by floods of water; and there are numberless things of this kind which one might adduce by way of extenuation, and with the view of justifying a misfortune which is easily misrepresented. We must, therefore, endeavour to divide to the best of our power the greater and more serious evil from the lesser. And a distinction may be drawn in the use of terms of reproach. A man does not always deserve to be called the thrower away of his shield; he may be only the loser of his arms. For there is a great or rather absolute difference between him who is deprived of his arms by a sufficient force, and him who voluntarily lets his shield go. Let the law then be as follows:—If a person having arms is overtaken by the enemy and does not turn round and defend himself, but lets them go voluntarily or throws them away, choosing a base life and a swift escape rather than a courageous and noble and blessed death—in such a case of the throwing away of arms let justice be done, but the judge need take no note of the case just now mentioned; for the bad man ought always to be punished, in the hope that he may be improved, but not the unfortunate, for there is no advantage in that. And what shall be the punishment suited to him who has thrown away his weapons of defence? Tradition says that Caeneus, the Thessalian, was changed by a God from a woman into a man; but the converse miracle cannot now be wrought, or no punishment would be more proper than that the man who throws away his shield should be changed into a woman¹. This however is impossible, and therefore let us make a law as nearly like this as we can—that he who loves his life too well shall be in no danger for the remainder of his days, but shall live for ever under the stigma of cowardice. And let the law be in the following terms:—When a man is found guilty of disgracefully throwing away his arms in war, no general or military officer shall allow him to serve as a soldier, or give him any place at all in the ranks of soldiers; and the officer who gives the coward any place, shall suffer a penalty which the public examiner shall exact of him; and if he be of the highest class, he shall pay a thousand drachmae; or if he be of the second class, five minae; or if he be of the third, three minae; or if he be of the fourth class, one mina. And he who is found guilty of cowardice, shall not

only be dismissed from manly dangers, which is a disgrace appropriate to his nature, but he shall pay a thousand drachmae, if he be of the highest class, and five minae if he be of the second class, and three if he be of the third class, and a mina, like the preceding, if he be of the fourth class.

What regulations will be proper about examiners, seeing that some of our magistrates are elected by lot, and for a year, and some for a longer time and from selected persons? Of such magistrates, who will be a sufficient censor or examiner, if any of them, weighed down by the pressure of office or his own inability to support the dignity of his office, be guilty of any crooked practice? It is by no means easy to find a magistrate who excels other magistrates in virtue, but still we must endeavour to discover some censor or examiner who is more than man. For the truth is, that there are many elements of dissolution in a state, as there are also in a ship, or in an animal; they all have their cords, and girders, and sinews,—one nature diffused in many places, and called by many names; and the office of examiner is a most important element in the preservation and dissolution of states. For if the examiners are better than the magistrates, and their duty is fulfilled justly and without blame, then the whole state and country flourishes and is happy; but if the examination of the magistrates is carried on in a wrong way, then, by the relaxation of that justice which is the uniting principle of all constitutions, every power in the state is rent asunder from every other; they no longer incline in the same direction, but fill the city with faction, and make many cities out of one¹, and soon bring all to destruction. Wherefore the examiners ought to be admirable in every sort of virtue. Let us invent a mode of creating them, which shall be as follows:—Every year, after the summer solstice, the whole city shall meet in the common precincts of Helios and Apollo, and shall present to the God three men out of their own number in the manner following:—Each citizen shall select, not himself, but some other citizen whom he deems in every way the best, and who is not less than fifty years of age. And out of the selected persons who have the greatest number of votes, they shall make a further selection until they reduce them to one-half, if they are an even number; but if they are not an even number, they shall subtract the one who has the smallest number of votes, and make them an even number, and then leave the half which have the greater number of votes. And if two persons have an equal number of votes, and thus increase the number beyond one-half, they shall withdraw the younger of the two and do away the excess; and then including all the rest they shall again vote, until there are left three having an unequal number of votes. But if all the three, or two out of the three, have equal votes, let them commit the election to good fate and fortune, and separate off by lot the first, and the second, and the third; these they shall crown with an olive wreath and give them the prize of excellence, at the same time proclaiming to all the world that the city of the Magnetes, by the providence of the Gods, is again preserved, and presents to the Sun and to Apollo her three best men as first-fruits, to be a common offering to them, according to the ancient law, as long as their lives answer to the judgment formed of them. And these

Examiners to be better men than the other magistrates.

Importance of the office.

Three men preeminent in virtue to be elected annually from among the citizens.

Honours to be paid to them.

Examiners to be appointed by them, who shall have power to punish the magistrates.

The magistrates may appeal against them to the court of select judges.

shall appoint in their first year twelve examiners, to continue until each has completed seventy-five years, to whom three shall afterwards be added yearly; and let these divide all the magistracies into twelve parts, and prove the holders of them by every sort of test to which a freeman may be subjected; and let them live while they hold office in the precinct of Helios and Apollo, in which they were chosen, and let each one form a judgment of some things individually, and of others in company with his colleagues; and let him place a writing in the agora about each magistracy, and what the magistrate ought to suffer or pay, according to the decision of the examiners. And if a magistrate does not admit that he has been justly judged, let him bring the examiners before the select judges, and if he be acquitted by their decision, let him, if he will, accuse the examiners themselves; if, however, he be convicted, and have been condemned to death by the examiners, let him die (and of course he can only die once):—but any other penalties which admit of being doubled let him suffer twice over.

And now let us pass under review the examiners themselves; what will their examination be, and how conducted? 947 During the life of these men, whom the whole state counts worthy of the rewards of virtue, they shall have the first seat at all public assemblies, and at all Hellenic sacrifices and sacred missions, and other public and holy ceremonies in which they share. The chiefs of each sacred mission shall be selected from them, and they only of all the citizens shall be adorned with a crown of laurel; they shall all be priests of Apollo and Helios; and one of them, who is judged first of the priests created in that year, shall be high priest; and they shall write up his name in each year to be a measure of time as long as the city lasts; and after their death they shall be laid out and carried to the grave and entombed in a manner different from the other citizens. They shall be decked in a robe all of white, and there shall be no crying or lamentation over them; but a chorus of fifteen maidens, and another of boys, shall stand around the bier on either side, hymning the praises of the departed priests in alternate responses, declaring their blessedness in song all day long; and at dawn a hundred of the youths who practise gymnastic exercises, and whom the relations of the departed shall choose, shall carry the bier to the sepulchre, the young men marching first, dressed in the garb of warriors,—the cavalry with their horses, the heavy-armed with their arms, and the others in like manner. And boys near the bier and in front of it shall sing their national hymn, and maidens shall follow behind, and with them the women who have passed the age of child-bearing; next, although they are interdicted from other burials, let priests and priestesses follow, unless the Pythian oracle forbid them; for this burial is free from pollution. The place of burial shall be an oblong vaulted chamber underground, constructed of tufa, which will last for ever, having stone couches placed side by side. And here they will lay the blessed person, and cover the sepulchre with a circular mound of earth and plant a grove of trees around on every side but one; and on that side the sepulchre shall be allowed to extend for ever, and a new mound will not be required. Every year they shall have contests in music and gymnastics, and in horsemanship, in honour of the dead. These are the honours which shall be given to those who at the examination are found blameless; but if any of them, trusting to the scrutiny being over, should, after the judgment has been given,

The honours during life and after death of the examiners, if they pass the scrutiny.

But if after the scrutiny they do wrong, they shall be deprived of their honours.

manifest the wickedness of human nature, let the law ordain that he who pleases shall indict him, and 948let the cause be tried in the following manner. In the first place, the court shall be composed of the guardians of the law, and to them the surviving examiners shall be added, as well as the court of select judges; and let the pursuer lay his indictment in this form—he shall say that so-and-so is unworthy of the prize of virtue and of his office; and if the defendant be convicted let him be deprived of his office, and of the burial, and of the other honours given him. But if the prosecutor do not obtain the fifth part of the votes, let him, if he be of the first class, pay twelve minae, and eight if he be of the second class, and six if he be of the third class, and two minae if he be of the fourth class.

The so-called decision of Rhadamanthus is worthy of all admiration. He knew that the men of his own time believed and had no doubt that there were Gods, which was a reasonable belief in those days, because most men were the sons of Gods¹, and according to tradition he was one himself. He appears to have thought that he ought to commit judgment to no man, but to the Gods only, and in this way suits were simply and speedily decided by him. For he made the two parties take an oath respecting the points in dispute, and so got rid of the matter speedily and safely. But now that a certain portion of mankind do not believe at all in the existence of the Gods, and others imagine that they have no care of us, and the opinion of most men, and of the worst men, is that in return for a small sacrifice and a few flattering words they will be their accomplices in purloining large sums and save them from many terrible punishments, the way of Rhadamanthus is no longer suited to the needs of justice; for as the opinions of men about the Gods are changed, the laws should also be changed;—in the granting of suits a rational legislation ought to do away with the oaths of the parties on either side—he who obtains leave to bring an action should write down the charges, but should not add an oath; and the defendant in like manner should give his denial to the magistrates in writing, and not swear; for it is a dreadful thing to know, when many lawsuits are going on in a state, that almost half the people who meet one another quite unconcernedly at the public meals and in other companies and relations of private life are perjured. Let the law, then, be as follows:—A judge who is about to give judgment shall take an oath, and he who is choosing magistrates for the state shall either vote on oath or with a voting tablet which he brings from a temple; so too the judge of dances and of 949all music, and the superintendents and umpires of gymnastic and equestrian contests, and any matters in which, as far as men can judge, there is nothing to be gained by a false oath; but all cases in which a denial confirmed by an oath clearly results in a great advantage to the taker of the oath, shall be decided without the oath of the parties to the suit, and the presiding judges shall not permit either of them to use an oath for the sake of persuading, nor to call down curses on himself and his race, nor to use unseemly supplications or womanish laments. But they shall ever be teaching and learning what is just in auspicious words; and he who does otherwise shall be supposed to speak beside the point, and the judges shall again bring him back to the question at issue. On the other hand, strangers in their dealings with strangers shall as

The oath of Rhadamanthus suited to a God-fearing age, but not to our own.

Oaths are not to be taken by the parties to a suit.

Judges, however, and citizens when electing magistrates, and the umpires of contests, shall take an oath.

Note;—the prohibition of oaths does not extend to strangers.

at present have power to give and receive oaths, for they will not often grow old in the city or leave a fry of young ones like themselves to be the sons and heirs of the land.

As to the initiation of private suits, let the manner of deciding causes between all citizens be the same as in cases in which any freeman is disobedient to the state in minor matters, of which the penalty is not stripes, imprisonment, or death. But as regards attendance at choruses or processions or other shows, and as regards public services, whether the celebration of sacrifice in peace, or the payment of contributions in war—in all these cases, first comes the necessity of providing a remedy for the loss; and by those who will not obey, there shall be security given to the officers whom the city and the law empower to exact the sum due; and if they forfeit their security, let the goods which they have pledged be sold and the money given to the city; but if they ought to pay a larger sum, the several magistrates shall impose upon the disobedient a suitable penalty, and bring them before the court, until they are willing to do what they are ordered.

Penalty for neglect of certain public duties.

Now a state which makes money from the cultivation of the soil only, and has no foreign trade, must consider what it will do about the emigration of its own people to other countries, and the reception of strangers from elsewhere. About these matters the legislator has to consider, and he will begin by trying to persuade men as far as he can. The intercourse of cities with one another is apt to create a confusion of manners; strangers are always suggesting novelties to strangers¹. When states are well governed by good laws the mixture causes the greatest possible injury; but seeing that most cities are the reverse of well-ordered, the confusion which arises in them from the reception of strangers, and from the citizens themselves rushing off into other cities, when any one either young or old desires to travel anywhere where abroad at whatever time, is of no consequence. On the other hand, the refusal of states to receive others, and for their own citizens never to go to other places, is an utter impossibility, and to the rest of the world is likely to appear ruthless and uncivilized; it is a practice adopted by people who use harsh words, such as xenelasia or banishment of strangers, and who have harsh and morose ways, as men think. And to be thought or not to be thought well of by the rest of the world is no light matter; for the many are not so far wrong in their judgment of who are bad and who are good, as they are removed from the nature of virtue in themselves. Even bad men have a divine instinct which guesses rightly, and very many who are utterly depraved form correct notions and judgments of the differences between the good and bad. And the generality of cities are quite right in exhorting us to value a good reputation in the world, for there is no truth greater and more important than this—that he who is really good (I am speaking of the man who would be perfect) seeks for reputation with, but not without, the reality of goodness. And our Cretan colony ought also to acquire

Admission of foreigners, and foreign travel,

are evils in a well-ordered state, but of no consequence in an ordinary state.

Inhospitality condemned by the many; the good opinion of mankind to be desired,

both by cities, and individuals, but it should be also deserved.

The law:—

No one to travel in a foreign country under forty years of age, or in a private capacity.

Athenian, Cleinias.

The state to send out men to be spectators of the world.

Saints and sages are to be found even in ill-governed cities.

the fairest and noblest reputation for virtue from other men; and there is every reason to expect that, if the reality answers to the idea, she will be one of the few well-ordered cities which the sun and the other Gods behold. Wherefore, in the matter of journeys to other countries and the reception of strangers, we enact as follows:—In the first place, let no one be allowed to go anywhere at all into a foreign country who is less than forty years of age; and no one shall go in a private capacity, but only in some public one, as a herald, or on an embassy, or on a sacred mission. Going abroad on an expedition or in war is not to be included among travels of the class authorized by the state. To Apollo at Delphi and to Zeus at Olympia and to Nemea and to the Isthmus, citizens should be sent to take part in the sacrifices and games there dedicated to the Gods; and they should send as many as possible, and the best and fairest that can be found, and they will make the city renowned at holy meetings in time of peace, procuring a glory which shall be the converse of that which is gained in war; and when they come home they shall teach the young that the institutions of other states are inferior to their own. And they shall send spectators of another sort, if they have the consent of the guardians, being such citizens as desire to look a little more at leisure at the doings of other men; and these no law shall hinder. For a city which has no experience of good and bad men or intercourse with them, can never be thoroughly and perfectly civilized, nor, again, can the citizens of a city properly observe the laws by habit only, and without an intelligent understanding of them¹. And there always are in the world a few inspired men whose acquaintance is beyond price, and who spring up quite as much in ill-ordered as in well-ordered cities. These are they whom the citizens of a well-ordered city should be ever seeking out, going forth over sea and over land to find him who is incorruptible—that he may establish more firmly institutions in his own state which are good already, and amend what is deficient; for without this examination and enquiry a city will never continue perfect any more than if the examination is ill-conducted.

CLE.

How can we have an examination and also a good one?

ATH.

The spectator to be a model citizen of his own city.

He shall report to the assembly which revises the laws.

The assembly to consist of elders and of younger men co-opted by them.

Athenian.

In this way:—In the first place, our spectator shall be of not less than fifty years of age; he must be a man of reputation, especially in war, if he is to exhibit to other cities a model of the guardians of the law, but when he is more than sixty years of age he shall no longer continue in his office of spectator. And when he has carried on his inspection during as many out of the ten years of his office as he pleases, on his return home let him go to the assembly of those who review the laws. This shall be a mixed body of young and old men, who shall be required to meet daily between the hour of dawn and the rising of the sun. They shall consist, in the first place, of the priests who have obtained the rewards of virtue²; and, in the second place, of guardians of the law, the ten eldest being chosen; the general superintendent of education shall also be a member, as well the last appointed as those who have been released from the office; and each of them shall take with him as his companion a young man, whomsoever he chooses, between the ages of thirty and forty. These shall be always holding conversation and discourse about the laws of their own city or about any specially good ones which they may hear to be existing elsewhere; also about kinds of knowledge which may appear to be of use and will throw light upon the examination, or of which the want will make the subject of laws dark and uncertain to them. Any knowledge of this sort which the elders approve, the younger men shall learn with all diligence; and if any one of those who have been invited appear to be unworthy, the whole assembly shall blame him who invited him. The rest of the city shall watch over those among the young men who distinguish themselves, having an eye upon them, and especially honouring them if they succeed, but dishonouring them above the rest if they turn out to be inferior. This is the assembly to which he who has visited the institutions of other men, on his return home shall straightway go, and if he have discovered any one who has anything to say about the enactment of laws or education or nurture, or if he have himself made any observations, let him communicate his discoveries to the whole assembly. And if he be seen to have come home neither better nor worse, let him be praised at any rate for his enthusiasm; and if he be much better, let him be praised so much the more; and not only while he lives but after his death let the assembly honour him with fitting honours. But if on his return home he appear to have been corrupted, pretending to be wise when he is not, let him hold no communication with any one, whether young or old; and if he will hearken to the rulers, then he shall be permitted to live as a private individual; but if he will not, let him die, if he be convicted in a court of law of interfering about education and the laws. And if he deserve to be indicted, and none of the magistrates indict him, let that be counted as a disgrace to them when the rewards of virtue are decided.

The city to have an eye for young men distinguished in the assembly.

The rewards and punishments of spectators accordingly as they return home better or worse.

Regulations about strangers.

Four kinds:—

(1) the bird of passage, who comes in the summer to trade;

Let such be the character of the person who goes abroad, and let him go abroad under these conditions. In the next place, the stranger who comes from abroad should be received in a friendly spirit. Now there are four kinds of strangers, of whom we must make some mention—the first is he who comes and stays throughout the summer¹; this class are like birds of passage, taking wing in pursuit of commerce, and flying over the sea to other cities, while the season lasts; he shall be received in market-places and harbours and public buildings, near the city but outside², by those magistrates who are appointed to superintend these matters; and they shall take care that a stranger, whoever he be, duly receives justice; but he shall not be allowed to make any innovation. They shall hold the intercourse with him which is necessary, 953and this shall be as little as possible. The second kind is just a spectator who comes to see with his eyes and hear with his ears the festivals of the Muses; such ought to have entertainment provided them at the temples by hospitable persons, and the priests and ministers of the temples should see and attend to them. But they should not remain more than a reasonable time; let them see and hear that for the sake of which they came, and then go away, neither having suffered nor done any harm. The priests shall be their judges, if any of them receive or do any wrong up to the sum of fifty drachmae, but if any greater charge be brought, in such cases the suit shall come before the wardens of the agora. The third kind of stranger is he who comes on some public business from another land, and is to be received with public honours. He is to be received only by the generals and commanders of horse and foot, and the host by whom he is entertained, in conjunction with the Prytanes, shall have the sole charge of what concerns him. There is a fourth class of persons answering to our spectators, who come from another land to look at ours. In the first place, such visits will be rare, and the visitor should be at least fifty years of age; he may possibly be wanting to see something that is rich and rare in other states, or himself to show something in like manner to another city. Let such an one, then, go unbidden to the doors of the wise and rich, being one of them himself: let him go, for example, to the house of the superintendent of education, confident that he is a fitting guest of such a host, or let him go to the house of some of those who have gained the prize of virtue and hold discourse with them, both learning from them, and also teaching them; and when he has seen and heard all, he shall depart, as a friend taking leave of friends, and be honoured by them with gifts and suitable tributes of respect. These are the customs, according to which our city should receive all strangers of either sex who come from other countries, and should send forth her own citizens, showing respect to Zeus, the God of hospitality, not forbidding strangers at meals and sacrifices, as is the manner which prevails among the children of the Nile, nor driving them away by savage proclamations¹.

(2) the visitor of festivals;

(3) the representative of a foreign country;

(4) the official spectator.

The manner of giving security.

The right of searching houses allowed.

Penalty for refusing.

When a man becomes surety, let him give the security in a distinct form, acknowledging the whole transaction in a written document, and in the presence of not less than three witnesses if the sum be under a thousand drachmae, and of not less than five witnesses if the sum be above a thousand 954drachmae. The agent of a dishonest or untrustworthy seller shall himself be responsible; both the agent and the principal shall be equally liable. If a person wishes to find anything in the house of another, he shall enter naked, or wearing only a short tunic and without a girdle, having first taken an oath by the customary Gods that he expects to find it there; he shall then make his search, and the other shall throw open his house and allow him to search things both sealed and unsealed. And if a person will not allow the searcher to make his search, he who is prevented shall go to law with him, estimating the value of the goods after which he is searching, and if the other be convicted he shall pay twice the value of the article. If the master be absent from home, the dwellers in the house shall let him search the unsealed property, and on the sealed property the searcher shall set another seal, and shall appoint any one whom he likes to guard them during five days; and if the master of the house be absent during a longer time, he shall take with him the wardens of the city, and so make his search, opening the sealed property as well as the unsealed, and then, together with the members of the family and the wardens of the city, he shall seal them up again as they were before. There shall be a limit of time in the case of disputed things, and he who has had possession of them during a certain time shall no longer be liable to be disturbed. As to houses and lands there can be no dispute in this state of ours; but if a man has any other possessions which he has used and openly shown in the city and in the agora and in the temples, and no one has put in a claim to them, and some one says that he was looking for them during this time, and the possessor is proved to have made no concealment, if they have continued for a year, the one having the goods and the other looking for them, the claim of the seeker shall not be allowed after the expiration of the year; or if he does not use or show the lost property in the market or in the city, but only in the country, and no one offers himself as the owner during five years, at the expiration of the five years the claim shall be barred for ever after; or if he uses them in the city but within the house, then the appointed time of claiming the goods shall be three years, or ten years if he has them in the country in private. And if he has them in another land, there shall be no limit of time or prescription, but whenever the owner finds them he may claim them.

Statute of limitation as affecting disputed property other than land or houses.

If any one prevents another by force from being present at a trial, whether a principal party or his witnesses; if the person prevented be a slave, whether his own or belonging to another, the suit shall be incomplete and invalid; but if he who is prevented be a freeman, besides the suit being incomplete, the other who has prevented him shall be imprisoned 955for a year, and shall be prosecuted for kidnapping by any one who pleases. And if any one hinders by force a rival competitor in gymnastic or music, or any other sort of contest, from being present at the contest, let him who has a mind inform the presiding judges, and they shall liberate him who is desirous of competing; and if they are not able, and he who hinders the other from competing wins the prize, then they shall give the prize of victory to him who is prevented, and inscribe him as the conqueror in any temples

Penalty for preventing the appearance of a person in the courts or at contests.

which he pleases; and he who hinders the other shall not be permitted to make any offering or inscription having reference to that contest, and in any case he shall be liable for damages, whether he be defeated or whether he conquer.

If any one knowingly receives anything which has been stolen, he shall undergo the same punishment as the thief, and if a man receives an exile he shall be punished with death. Every man should regard the friend and enemy of the state as his own friend and enemy; and if any one makes peace or war with another on his own account, and without the authority of the state, he, like the receiver of the exile, shall undergo the penalty of death. And if any fraction of the city declare war or peace against any, the generals shall indict the authors of this proceeding, and if they are convicted death shall be the penalty. Those who serve their country ought to serve without receiving gifts, and there ought to be no excusing or approving the saying, 'Men should receive gifts as the reward of good, but not of evil deeds'; for to know which we are doing, and to stand fast by our knowledge, is no easy matter. The safest course is to obey the law which says, 'Do no service for a bribe,' and let him who disobeys, if he be convicted, simply die. With a view to taxation, for various reasons, every man ought to have had his property valued: and the tribesmen should likewise bring a register of the yearly produce to the wardens of the country, that in this way there may be two valuations; and the public officers may use annually whichever on consideration they deem the best, whether they prefer to take a certain portion of the whole value, or of the annual revenue, after subtracting what is paid to the common tables.

The receiver as bad as the thief.

Death to be the punishment of those who (1) receive exiles, or who (2) make war or peace on their own account, or who (3) take bribes.

Registration of property with a view to income-tax.

Touching offerings to the Gods, a moderate man should observe moderation in what he offers. Now the land and the hearth of the house of all men is sacred to all Gods; wherefore let no man dedicate them a second time to the Gods. Gold and silver, whether possessed by private persons or in temples, are in other cities provocative of envy, 956and ivory, the product of a dead body, is not a proper offering; brass and iron, again, are instruments of war; but of wood let a man bring what offering he likes, provided it be a single block, and in like manner of stone, to the public temples; of woven work let him not offer more than one woman can execute in a month. White is a colour suitable to the Gods, especially in woven works, but dyes should only be used for the adornments of war. The most divine of gifts are birds and images, and they should be such as one painter can execute in a single day. And let all other offerings follow a similar rule.

Offerings to the Gods to be simple and inexpensive.

Private suits to be tried,

(1) before arbiters:

(2) there may be an appeal from their

Now that the whole city has been divided into parts of which the nature and number have been described, and laws have been given about all the most important contracts as far as this was possible, the next thing will be to have justice done. The first of the courts shall consist of elected judges, who shall be chosen by the plaintiff and the defendant in common: these shall be called arbiters rather than judges. And in the second court there shall be judges of the villages and tribes corresponding to the twelvefold division of the land, and before these the litigants shall go to contend for greater damages, if the suit be not decided before the first judges; the defendant, if he be defeated the second time, shall pay a fifth more than the damages mentioned in the indictment; and if he find fault with his judges and would try a third time, let him carry the suit before the select judges, and if he be again defeated, let him pay the whole of the damages and half as much again. And the plaintiff, if when defeated before the first judges he persist in going on to the second, shall if he wins receive in addition to the damages a fifth part more, and if defeated he shall pay a like sum; but if he is not satisfied with the previous decision, and will insist on proceeding to a third court, then if he win he shall receive from the defendant the amount of the damages and, as I said before, half as much again, and the plaintiff, if he lose, shall pay half of the damages claimed. Now the assignment by lot of judges to courts and the completion of the number of them, and the appointment of servants to the different magistrates, and the times at which the several causes should be heard, and the votings and delays, and all the things that necessarily concern suits, and the order of causes, and the time in which answers have to be put in and parties are to appear—of these and other things akin to these we have indeed already spoken¹, but there is no harm in repeating what is right twice or thrice:—All lesser and easier matters which the elder legislator has omitted may be supplied by the younger one. Private courts will be sufficiently regulated in this way, and the public and state courts, and those which the magistrates must use in the administration of their several offices, exist in many other states. Many very respectable institutions of this sort have been framed by good men, and from them the guardians of the law may by reflection derive what is necessary for the order of our new state, considering and correcting them, and bringing them to the test of experience, until every detail appears to be satisfactorily determined; and then putting the final seal upon them, and making them irreversible, they shall use them for ever afterwards. As to what relates to the silence of judges and the abstinence from words of evil omen and the reverse, and the different notions of the just and good and honourable which exist in our own as compared with other states, they have been partly mentioned already, and another part of them will be mentioned hereafter as we draw near the end. To all these matters he who would be an equal judge shall justly look, and he shall possess writings about them that he may learn them. For of all kinds of knowledge the knowledge of good laws has the greatest power of improving the learner; otherwise there would be no meaning in the divine and admirable law possessing a name akin to mind (νοῦς, νόμος). And of all other words, such as the praises and censures of individuals which occur in poetry and also in prose, whether written down or uttered in daily conversation, whether men dispute about them in the

decision to the tribal courts:

and (3) from the tribal courts to the court of select judges; in the two last cases with an increase of the penalty

The younger legislator will arrange minor matters.

The judge should study the writings of the legislator and test all other writings by their standard, and then he will give righteous judgment.

spirit of contention or weakly assent to them, as is often the case—of all these the one sure test is the writings of the legislator¹, which the righteous judge ought to have in his mind as the antidote of all other words, and thus make himself and the city stand upright, procuring for the good the continuance and increase of justice, and for the bad, on the other hand, a conversion from ignorance and intemperance, and in general from all unrighteousness, as far as their evil minds can be healed, but to those whose web of life is in reality finished, giving death, which is the only remedy for souls in their condition, as I may say truly again 958 and again. And such judges and chiefs of judges will be worthy of receiving praise from the whole city.

When the suits of the year are completed the following laws shall regulate their execution:—In the first place, the judge shall assign to the party who wins the suit the whole property of him who loses, with the exception of mere necessities¹, and the assignment shall be made through the herald immediately after each decision in the hearing of the judges; and when the month arrives following the month in which the courts are sitting, (unless the gainer of the suit has been previously satisfied,) the court shall follow up the case, and hand over to the winner the goods of the loser; but if they find that he has not the means of paying, and the sum deficient is not less than a drachma, the insolvent person shall not have any right of going to law with any other man until he have satisfied the debt of the winning party; but other persons shall still have the right of bringing suits against him. And if any one after he is condemned refuses to acknowledge the authority which condemned him, let the magistrates who are thus deprived of their authority bring him before the court of the guardians of the law, and if he be cast, let him be punished with death, as a subverter of the whole state and of the laws.

The goods of the losing party in a suit to be handed over to the gainer if the damages are not paid within a month.

Contempt of court to be punished with death.

The end of life.

The dead are to be buried in some barren region, where they will do least harm to the living.

The body is our shadow: the soul or true being goes to judgment after death.

Burials should be simple. The living need the help of kindred more than the dead.

The law:—The cost of funerals.

Thus a man is born and brought up, and after this manner he begets and brings up his own children, and has his share of dealings with other men, and suffers if he has done wrong to any one, and receives satisfaction if he has been wronged, and so at length in due time he grows old under the protection of the laws, and his end comes in the order of nature. Concerning the dead of either sex, the religious ceremonies which may fittingly be performed, whether appertaining to the Gods of the under-world or of this, shall be decided by the interpreters with absolute authority. Their sepulchres are not to be in places which are fit for cultivation, and there shall be no monuments in such spots, either large or small, but they shall occupy that part of the country which is naturally adapted for receiving and concealing the bodies of the dead with as little hurt as possible to the living. No man, living or dead, shall deprive the living of the sustenance which the earth, their foster-parent, is naturally inclined to provide for them. And let not the mound be piled higher than would be the work of five men completed in five days; nor shall the stone which is placed over the spot be larger than would be sufficient to receive the praises of the dead included in four heroic lines. Nor shall the laying out of the dead in 959 the house continue for a longer time than is sufficient to distinguish between him who is in a trance only and him who is really dead, and speaking generally, the third day after death will be a fair time for carrying out the body to the sepulchre. Now we must believe the legislator when he tells us that the soul is in all respects superior to the body, and that even in life what makes each one of us to be what we are is only the soul; and that the body follows us about in the likeness of each of us, and therefore, when we are dead, the bodies of the dead are quite rightly said to be our shades or images; for the true and immortal being of each one of us which is called the soul goes on her way to other Gods¹, before them to give an account—which is an inspiring hope to the good, but very terrible to the bad, as the laws of our fathers tell us; and they also say that not much can be done in the way of helping a man after he is dead. But the living—he should be helped by all his kindred, that while in life he may be the holiest and justest of men, and after death may have no great sins to be punished in the world below. If this be true, a man ought not to waste his substance under the idea that all this lifeless mass of flesh which is in process of burial is connected with him; he should consider that the son, or brother, or the beloved one, whoever he may be, whom he thinks he is laying in the earth, has gone away to complete and fulfil his own destiny, and that his duty is rightly to order the present, and to spend moderately on the lifeless altar of the Gods below. But the legislator does not intend moderation to be taken in the sense of meanness². Let the law, then, be as follows:—The expenditure on the entire funeral of him who is of the highest class, shall not exceed five minae; and for him who is of the second class, three minae, and for him who is of the third class, two minae, and for him who is of the fourth class, one mina, will be a fair limit of expense. The guardians of the law ought to take especial care of the different ages of life, whether childhood, or manhood, or any other age. And at the end of all, let there be some one guardian of the law presiding, who shall be chosen by the friends of the deceased to superintend, and let it be glory to him to manage with fairness and moderation what relates to the dead, and

The funeral ceremonies to be super-intended by some guardian of the law.

Athenian, Cleinias.

Ostentatious grief to be repressed, but some allowance to be made for human weakness.

We have still to provide for the continuance of our laws.

a discredit to him if they are not well managed. Let the laying out and other ceremonies be in accordance with custom, but to the statesman who adopts custom as his law we must give way in certain particulars. It would be monstrous for example that he should command any man to weep or abstain from weeping over the dead; but he may forbid cries of lamentation, and not allow the voice of the mourner to be heard outside the house; also, he may forbid the bringing of the dead body into the open streets, or the processions of mourners in the streets, and may require that before daybreak they should be outside the city. Let these, then, be our laws relating to such matters, and let him who obeys be free from penalty; but he who disobeys even a single guardian of the law shall be punished by them all with a fitting penalty. Other modes of burial, or again the denial of burial, which is to be refused in the case of robbers of temples and parricides and the like, have been devised and are embodied in the preceding laws, so that now our work of legislation is pretty nearly at an end; but in all cases the end does not consist in doing something or acquiring something or establishing something,—the end will be attained and finally accomplished, when we have provided for the perfect and lasting continuance of our institutions; until then our creation is incomplete.

CLE.

That is very good, Stranger; but I wish you would tell me more clearly what you mean.

ATH.

O Cleinias, many things of old time were well said and sung; and the saying about the Fates was one of them.

CLE.

What is it?

ATH.

The saying that Lachesis or the giver of the lots is the first of them, and that Clotho or the spinster is the second of them, and that Atropos or the unchanging one is the third of them¹; and that she is the preserver of the things which we have spoken, and which have been compared in a figure to things woven by fire, they both (i. e. Atropos and the fire) producing² the quality of unchangeableness. I am speaking of the things which in a state and government give not only health and salvation to the body, but law, or rather preservation of the law, in the soul; and, if I am not mistaken, this seems to be still wanting in our laws: we have still to see how we can implant in them this irreversible nature.

We want some power, like Atropos among the fates, to make them irreversible.

Athenian, Cleinias, Megillus.

CLE.

It will be no small matter if we can only discover how such a nature can be implanted in anything.

ATH.

But it certainly can be; so much I clearly see.

CLE.

Then let us not think of desisting until we have imparted this quality to our laws; for it is ridiculous, after a great deal of labour has been spent, to place a thing at last on an insecure foundation.

MEG.

I approve of your suggestion, and am quite of the same mind with you.

CLE.

Very good: And now what, according to you, is to be the salvation of our government and of our laws, and how is it to be effected?

ATH.

Were we not saying that there must be in our city a council which was to be of this sort:—The ten oldest guardians of the law, and all those who have obtained prizes of virtue, were to meet in the same assembly, and the council was also to include those who had visited foreign countries in the hope of hearing something that might be of use in the preservation of the laws, and who, having come safely home, and having been tested in these same matters, had proved themselves to be worthy to take part in the assembly;—each of the members was to select some young man of not less than thirty years of age, he himself judging in the first instance whether the young man was worthy by nature and education, and then suggesting him to the others, and if he seemed to them also to be worthy they were to adopt him; but if not, the decision at which they arrived was to be kept a secret from the citizens at large, and, more especially, from the rejected candidate. The meeting of the council was to be held early in the morning, when everybody was most at leisure from all other business, whether public or private—was not something of this sort said by us before?

The nocturnal council will be such a preserving power in our state.

CLE.

True.

ATH.

Then, returning to the council, I would say further, that if we let it down to be the anchor of the state, our city, having everything which is suitable to her, will preserve all that we wish to preserve.

CLE.

What do you mean?

ATH.

Now is the time for me to speak the truth in all earnestness.

CLE.

Well said, and I hope that you will fulfil your intention.

ATH.

Know, Cleinias, that everything, in all that it does, has a natural saviour, as of an animal the soul and the head are the chief saviours.

CLE.

Once more, what do you mean?

ATH.

The well-being of those two is obviously the preservation of every living thing.

CLE.

How is that?

ATH.

The soul, besides other things, contains mind, and the head, besides other things, contains sight and hearing; and the mind, mingling with the noblest of the senses, and becoming one with them, may be truly called the salvation of all.

Mind and sense uniting are the salvation of all things.

CLE.

Yes, quite so.

ATH.

Yes, indeed; but with what is that intellect concerned which, mingling with the senses, is the salvation of ships in storms as well as in fair weather? In a ship, when the pilot and the sailors unite their perceptions with the piloting mind, do they not save both themselves and their craft?

CLE.

Very true.

ATH.

We do not want many illustrations about such matters:—What aim would the general of an army, or what aim would a physician propose to himself, if he were seeking to attain salvation?

As the general and the physician must know the aim of their arts:

CLE.

Very good.

ATH.

Does not the general aim at victory and superiority ⁹⁶²in war, and do not the physician and his assistants aim at producing health in the body?

CLE.

Certainly.

ATH.

And a physician who is ignorant about the body, that is to say, who knows not that which we just now called health, or a general who knows not victory, or any others who are ignorant of the particulars of the arts which we mentioned, cannot be said to have understanding about any of these matters.

CLE.

They cannot.

ATH.

And what would you say of the state? If a person proves to be ignorant of the aim to which the statesman should look, ought he, in the first place, to be called a ruler at all; and further, will he

so too the nocturnal council must know the aim of the state.

ever be able to preserve that of which he does not even know the aim?

CLE.

Impossible.

ATH.

And therefore, if our settlement of the country is to be perfect, we ought to have some institution, which, as I was saying, will tell what is the aim of the state, and will inform us how we are to attain this, and what law or what man will advise us to that end. Any state which has no such institution is likely to be devoid of mind and sense, and in all her actions will proceed by mere chance.

CLE.

Very true.

ATH.

In which, then, of the parts or institutions of the state is any such guardian power to be found? Can we say?

CLE.

I am not quite certain, Stranger; but I have a suspicion that you are referring to the assembly which you just now said was to meet at night.

ATH.

You understand me perfectly, Cleinias; and we must assume, as the argument implies, that this council possesses all virtue; and the beginning of virtue is not to make mistakes by guessing many things, but to look steadily at one thing, and on this to fix all our aims.

CLE.

Quite true.

ATH.

Then now we shall see why there is nothing wonderful in states going astray—the reason is that their legislators have such different aims; nor is there anything wonderful in some laying down as their rule of justice, that certain individuals should bear rule in the state, whether they be good or bad, and others that the citizens should be rich, not caring whether they are the slaves of other men or not. The tendency of others, again, is

which is not privilege,
wealth, or freedom,

towards freedom; and some legislate with a view to two things at once,—they want to be at the same time free and the lords of other states; but the wisest men, as they deem themselves to be, look to all these and similar aims, and there is no one of them which they exclusively honour, and to which they would have all things look.

CLE.

Then, Stranger, our former assertion will hold, for we 963 were saying that laws generally should look to one thing only; and this, as we admitted, was rightly said to be virtue.

but virtue.

ATH.

Yes.

CLE.

And we said that virtue was of four kinds?

ATH.

Quite true.

CLE.

And that mind was the leader of the four, and that to her the three other virtues and all other things ought to have regard?

ATH.

You follow me capitally, Cleinias, and I would ask you to follow me to the end, for we have already said that the mind of the pilot, the mind of the physician and of the general look to that one thing to which they ought to look; and now we may turn to mind political, of which, as of a human creature, we will ask a question:—O wonderful being, and to what are you looking? The physician is able to tell his single aim in life, but you, the superior, as you declare yourself to be, of all intelligent beings, when you are asked are not able to tell. Can you, Megillus, and you, Cleinias, say distinctly what is the aim of mind political, in return for the many explanations of things which I have given you?

We have seen the end of the mind of the general and the physician;—but what is the end of mind political?

CLE.

We cannot, Stranger.

ATH.

Well, but ought we not to desire to see it, and to see where it is to be found?

CLE.

For example, where?

ATH.

For example, we were saying that there are four kinds of virtue, and as there are four of them, each of them must be one.

The four virtues are distinct, yet one.

CLE.

Certainly.

ATH.

And further, all four of them we call one; for we say that courage is virtue, and that prudence is virtue, and the same of the two others, as if they were in reality not many but one, that is, virtue.

CLE.

Quite so.

ATH.

There is no difficulty in seeing in what way the two differ from one another, and have received two names, and so of the rest. But there is more difficulty in explaining why we call these two and the rest of them by the single name of virtue.

It is easy to see how they differ;

CLE.

How do you mean?

ATH.

I have no difficulty in explaining what I mean. Let us distribute the subject into questions and answers.

CLE.

Once more, what do you mean?

ATH.

Ask me what is that one thing which I call virtue, and then again speak of as two, one part being courage and the other wisdom. I will tell you how that occurs:—One of them has to do with fear; in this the beasts also participate¹, and quite young children,—I mean courage; for a courageous temper is a gift of nature and not of reason. But without reason there never has been, or is, or will be a wise and understanding soul; it is of a different nature.

e. g. how courage differs from wisdom;

CLE.

That is true.

ATH.

I have now told you in what way the two are different, and do you in return tell me in what way they are one and the same. Suppose that I ask you in what way the four are one, and when you have answered me, you will have a right to ask of me in return in what way they are four; and then let us proceed to enquire whether in the case of things which have a name and also a definition to them, true knowledge consists in knowing the name only and not the definition. Can he who is good for anything be ignorant of all this without discredit where great and glorious truths are concerned?

but how are they all one?

CLE.

I suppose not.

ATH.

And is there anything greater to the legislator and the guardian of the law, and to him who thinks that he excels all other men in virtue, and has won the palm of excellence, than these very qualities of which we are now speaking,—courage, temperance, wisdom, justice?

CLE.

How can there be anything greater?

ATH.

And ought not the interpreters, the teachers, the lawgivers, the guardians of the other citizens, to excel the rest of mankind, and perfectly to show him who desires to learn and know or whose evil actions require to be punished and reproved, what is the nature of virtue and vice? Or shall some poet who has found his

The nature of virtue must be taught by lawgivers and guardians, not by the poets.

way into the city, or some chance person who pretends to be an instructor of youth, show himself to be better than him who has won the prize for every virtue? And can we wonder that when the guardians are not adequate in speech or action, and have no adequate knowledge of virtue, the city being unguarded should experience the common fate of cities in our day?

CLE.

Wonder! no.

ATH.

Well, then, must we do as we said? Or can we give our guardians a more precise knowledge of virtue in speech and action than the many have? or is there any way in which our city can be made to resemble the head and senses of rational beings because possessing such a guardian power?

CLE.

What, Stranger, is the drift of your comparison?

ATH.

Do we not see that the city is the trunk, and are not the younger guardians, who are chosen for their natural gifts, placed in the head of the state, having their souls all full of eyes, with which they look about the whole city? They keep watch and hand over their perceptions to the memory, and inform the elders of all that happens in the city; and those whom we compared to the mind, because 965they have many wise thoughts—that is to say, the old men—take counsel, and making use of the younger men as their ministers, and advising with them,—in this way both together truly preserve the whole state:—Shall this or some other be the order of our state? Are all our citizens to be equal in acquirements, or shall there be special persons among them who have received a more careful training and education?

The younger guardians are the eyes of the city, and they tell what they have seen to the elders, who are the mind of the city.

CLE.

That they should be equal, my good sir, is impossible.

ATH.

Then we ought to proceed to some more exact training than any which has preceded.

CLE.

Certainly.

ATH.

And must not that of which we are in need be the one to which we were just now alluding?

The guardians should have a special training,

CLE.

Very true.

ATH.

Did we not say that the workman or guardian, if he be perfect in every respect, ought not only to be able to see the many aims, but he should press onward to the one [1](#) ? this he should know, and knowing, order all things with a view to it.

CLE.

True.

ATH.

And can any one have a more exact way of considering or contemplating anything, than the being able to look at one idea gathered from many different things?

CLE.

Perhaps not.

ATH.

Not 'Perhaps not,' but 'Certainly not,' my good sir, is the right answer. There never has been a truer method than this discovered by any man.

CLE.

I bow to your authority, Stranger; let us proceed in the way which you propose.

ATH.

Then, as would appear, we must compel the guardians of our divine state to perceive, in the first place, what that principle is which is the same in all the four—the same, as we affirm, in courage and in temperance, and in justice and in prudence, and which, being one, we call as we ought, by the single name of virtue. To this, my friends, we will, if you please, hold fast, and not let go until we have sufficiently explained what that is to which we are to look, whether to be regarded as one, or as a whole, or as both, or in whatever way. Are we likely ever to

which will enable them to see the unity as well as plurality of virtue.

be in a virtuous condition, if we cannot tell whether virtue is many, or four, or one? Certainly, if we take counsel among ourselves, we shall in some way contrive that this principle has a place amongst us; but if you have made up your mind that we should let the matter alone, we will.

CLE.

We must not, Stranger, by the God of strangers I swear that we must not, for in our opinion you speak most truly; but we should like to know how you will accomplish your purpose.

ATH.

966 Wait a little before you ask; and let us, first of all, be quite agreed with one another that the purpose has to be accomplished.

CLE.

Certainly, it ought to be, if it can be.

ATH.

Well, and about the good and the honourable, are we to take the same view? Are our guardians only to know that each of them is many, or also how and in what way they are one?

and of the good and honourable.

CLE.

They must consider also in what sense they are one.

ATH.

And are they to consider only, and to be unable to set forth what they think?

CLE.

Certainly not; that would be the state of a slave.

ATH.

And may not the same be said of all good things—that the true guardians of the laws ought to know the truth about them, and to be able to interpret them in words, and carry them out in action, judging of what is and of what is not well, according to nature?

CLE.

Certainly.

ATH.

Is not the knowledge of the Gods which we have set forth with so much zeal one of the noblest sorts of knowledge;—to know that they are, and know how great is their power, as far as in man lies? We do indeed excuse the mass of the citizens, who only follow the voice of the laws, but we refuse to admit as guardians any who do not labour to obtain every possible evidence that there is respecting the Gods; our city is forbidden and not allowed to choose as a guardian of the law, or to place in the select order of virtue, him who is not an inspired man, and has not laboured at these things.

They must also know about the Gods.

CLE.

It is certainly just, as you say, that he who is indolent about such matters or incapable should be rejected, and that things honourable should be put away from him.

ATH.

Are we assured that there are two things which lead men to believe in the Gods, as we have already stated?

CLE.

What are they?

ATH.

One is the argument about the soul, which has been already mentioned—that it is the eldest and most divine of all things, to which motion attaining generation gives perpetual existence¹; the other was an argument from the order of the motion of the stars, and of all things under the dominion of the mind which ordered the universe². If a man look upon the world not lightly or ignorantly, there was never any one so godless who did not experience an effect opposite to that which the many imagine. For they think that those who handle these matters by the help of astronomy, and the accompanying arts of demonstration, may become godless, because they see, as far as they can see, things happening by necessity, and not by an intelligent will accomplishing good.

Two arguments for the existence of Gods:—(1) the priority of the soul; (2) the order of the universe.

Astronomy need not tend to Atheism, as the many think.

CLE.

But what is the fact?

ATH.

Just the opposite, as I said, of the opinion which once prevailed among men, that the sun and stars are without soul. Even in those days men wondered about them, and that which is now ascertained was then conjectured by some who had a more exact knowledge of them—that if they had been things without soul, and had no mind, they could never have moved with numerical exactness so wonderful; and even at that time some ventured to hazard the conjecture that mind was the orderer of the universe. But these same persons again mistaking the nature of the soul, which they conceived to be younger and not older than the body, once more overturned the world, or rather, I should say, themselves; for the bodies which they saw moving in heaven all appeared to be full of stones, and earth, and many other lifeless substances, and to these they assigned the causes of all things. Such studies gave rise to much atheism and perplexity, and the poets took occasion to be abusive,—comparing the philosophers to she-dogs uttering vain howlings, and talking other nonsense of the same sort. But now, as I said, the case is reversed¹.

Long ago it was suspected that mind was the orderer of the heavens. But mankind went wrong by putting body before mind.

CLE.

How so?

ATH.

No man can be a true worshipper of the Gods who does not know these two principles—that the soul is the eldest of all things which are born, and is immortal and rules over all bodies; moreover, as I have now said several times, he who has not contemplated the mind of nature which is said to exist in the stars, and gone through the previous training, and seen the connexion of music with these things, and harmonized them all with laws and institutions, is not able to give a reason of such things as have a reason². And he who is unable to acquire this in addition to the ordinary virtues of a citizen, can hardly be a good ruler of a whole state; but he should be the subordinate of other rulers. Wherefore, Cleinias and Megillus, let us consider whether we may not add to all the other laws which we have discussed this further one,—that the nocturnal assembly of the magistrates, which has also shared in the whole scheme of education proposed by us, shall be a guard set according to law for the salvation of the state. Shall we propose this?

The true ruler must have grasped true principles, and have gone through the previous training and seen the connexion of the sciences.

The nocturnal council the guard of the state.

CLE.

Certainly, my good friend, we will if the thing is in any degree possible.

ATH.

Let us make a common effort to gain such an object; for I too will gladly share in the attempt. Of these matters I have had much experience, and have often considered them, and I dare say that I shall be able to find others who will also help.

CLE.

I agree, Stranger, that we should proceed along the road in which God is guiding us; and how we can proceed rightly has now to be investigated and explained.

ATH.

O Megillus and Cleinias, about these matters we cannot legislate further until the council is constituted; when that is done, then we will determine what authority they shall have of their own; but the explanation of how this is all to be ordered would only be given rightly in a long discourse.

We can proceed no further in determining either the powers of the council,

CLE.

What do you mean, and what new thing is this?

ATH.

In the first place, a list would have to be made out of those who by their ages and studies and dispositions and habits are well fitted for the duty of a guardian. In the next place, it will not be easy for them to discover themselves what they ought to learn, or become the disciple of one who has already made the discovery. Furthermore, to write down the times at which, and during which, they ought to receive the several kinds of instruction, would be a vain thing; for the learners themselves do not know what is learned to advantage until the knowledge which is the result of learning has found a place in the soul of each. And so these details, although they could not be truly said to be secret, might be said to be incapable of being stated beforehand, because when stated they would have no meaning.

or the qualifications and education of the guardians.

CLE.

What then are we to do, Stranger, under these circumstances?

ATH.

We must stake everything on the successful establishment of the

As the proverb says, the answer is no secret, but open to all of us:—We must risk the whole on the chance of throwing, as they say, thrice six or thrice ace, and I am willing to share with you the danger by stating and explaining to you my views about education and nurture, which is the question coming to the surface again. The danger is not a slight or ordinary one, and I would advise you, Cleinias, in particular, to see to the matter; for if you order rightly the city of the Magnetes, or whatever name God may give it, you will obtain the greatest glory; or at any rate you will be thought the most courageous of men in the estimation of posterity. Dear companions, if this our divine assembly can only be established, to them we will hand over the city; none of the present company of legislators, as I may call them, would hesitate about that. And the state will be perfected and become a waking reality, which a little while ago we attempted to create as a dream¹ and in idea only, mingling together reason and mind in one image, in the hope that our citizens might be duly mingled and rightly educated; and being educated, and dwelling in the citadel of the land, might become perfect guardians, such as we have never seen in all our previous life, by reason of the saving virtue which is in them.

council. To its care we will then hand over the new city, and so our dream will become a reality.

Athenian, Cleinias, Megillus.

MEG.

Dear Cleinias, after all that has been said, either we must detain the Stranger, and by supplications and in all manner of ways make him share in the foundation of the city, or we must give up the undertaking.

The Athenian must give his help.

CLE.

Very true, Megillus; and you must join with me in detaining him.

MEG.

I will.

THE SEVENTH LETTER

[323d]

Plato to Dion's associates and friends wishes well-doing.

You wrote to me that I ought to consider that your policy was the same as that which Dion had; and moreover you charged me to support it, so far as I can, [324a] both by deed and word. Now if you really hold the same views and aims as he, I consent to support them, but if not, I will ponder the matter many times over. And what was his policy and his aim I will tell you, and that, as I may say, not from mere conjecture but from certain knowledge. For when I originally arrived at Syracuse, being about forty years old, Dion was of the age which Hipparinus has now reached,¹ and the views which he had then come to hold [324b] he continued to hold unchanged; for he believed that the Syracusans ought to be free and dwell under the best laws. Consequently, it is no matter of surprise if some Deity has made Hipparinus also come to share his views about government and be of the same mind. Now the manner in which these views originated is a story well worth hearing for young and old alike, and I shall endeavor to narrate it to you from the beginning; for at the present moment it is opportune.

In the days of my youth my experience was the same as that of many others. I thought that as soon as I should become my own master [324c] I would immediately enter into public life. But it so happened, I found, that the following changes occurred in the political situation.

In the government then existing, reviled as it was by many, a revolution took place; and the revolution was headed by fifty-one leaders, of whom eleven were in the City and ten in the Piraeus—each of these sections dealing with the market and with all municipal matters requiring management—and Thirty were established [324d] as irresponsible rulers of all. Now of these some were actually connections and acquaintances of mine²; and indeed they invited me at once to join their administration, thinking it would be congenial. The feelings I then experienced, owing to my youth, were in no way surprising: for I imagined that they would administer the State by leading it out of an unjust way of life into a just way, and consequently I gave my mind to them very diligently, to see what they would do. And indeed I saw how these men within a short time caused men to look back on the former government as a golden age; and above all

how they treated my [324e] aged friend Socrates, whom I would hardly scruple to call the most just of men then living, when they tried to send him, along with others, after one of the citizens, to fetch him by force [325a] that he might be put to death—their object being that Socrates, whether he wished or no, might be made to share in their political actions; he, however, refused to obey and risked the uttermost penalties rather than be a partaker in their unholy deeds.³ So when I beheld all these actions and others of a similar grave kind,⁴ I was indignant, and I withdrew myself from the evil practices then going on. But in no long time the power of the Thirty was overthrown together with the whole of the government which then existed. Then once again I was really, though less urgently, impelled with a desire to take part in public and [325b] political affairs. Many deplorable events, however, were still happening in those times, troublous as they were, and it was not surprising that in some instances, during these revolutions, men were avenging themselves on their foes too fiercely; yet, notwithstanding, the exiles who then returned⁵ exercised no little moderation. But, as ill-luck would have it, certain men of authority⁶ summoned our comrade Socrates before the law-courts, laying a charge against him which was most unholy, and which Socrates of all men least deserved; [325c] for it was on the charge of impiety that those men summoned him and the rest condemned and slew him—the very man who on the former occasion, when they themselves had the misfortune to be in exile, had refused to take part in the unholy arrest of one of the friends of the men then exiled.

When, therefore, I considered all this, and the type of men who were administering the affairs of State, with their laws too and their customs, the more I considered them and the more I advanced in years myself, the more difficult appeared to me [325d] the task of managing affairs of State rightly. For it was impossible to take action without friends and trusty companions; and these it was not easy to find ready to hand, since our State was no longer managed according to the principles and institutions of our forefathers; while to acquire other new friends with any facility was a thing impossible. Moreover, both the written laws and the customs were being corrupted, and that with surprising rapidity. Consequently, although at first [325e] I was filled with an ardent desire to engage in public affairs, when I considered all this and saw how things were shifting about anyhow in all directions, I finally became dizzy; and although I continued to consider by what means some betterment could be brought about not only in these matters but also in the government as a whole, [326a] yet as regards political action I kept constantly waiting for an opportune moment; until, finally, looking at all the States which now exist, I perceived that one and all they are badly governed; for the state of their laws is such as to be almost incurable without some marvellous overhauling and good-luck to boot. So in my praise of the right philosophy I was compelled to declare⁷ that by it one is enabled to discern all forms of justice both political and individual. Wherefore the classes of mankind (I said) will have no cessation from evils until either the class of those [326b] who are right and true philosophers attains political supremacy, or else the class of those who hold power in the States becomes, by some dispensation of Heaven, really philosophic.⁸

This was the view I held when I came to Italy and Sicily, at the time of my first arrival. And when I came I was in no wise pleased at all with “the blissful life,” as it is there termed, replete as it is with Italian and Syracusan banquetings⁹; for thus one's existence is spent in gorging food twice a day and never sleeping alone at night, [326c] and all the practices which accompany this mode of living. For not a single man of all who live beneath the heavens could ever become wise if these were his practices from his youth, since none will be found to possess a nature so admirably compounded; nor would he ever be likely to become temperate; and the same may truly be said of all other forms of virtue. And no State would remain stable under laws of any kind, if its citizens, while supposing that they ought to spend everywhere to excess, [326d] yet believed that they ought to cease from all exertion except feasting and drinkings and the vigorous pursuit of their amours. Of necessity these States never cease changing into tyrannies, oligarchies, and democracies,¹⁰ and the men who hold power in them cannot endure so much as the mention of the name of a just government with equal laws. Holding these views, then, as well as those previously formed, I travelled through to Syracuse—possibly as luck would have it, [326e] though it seems likely that one of the Superior Powers was contriving at that time to lay the foundation of the events which have now taken place in regard to Dion and in regard to Syracuse; and of still more events, as is to be feared, unless you now hearken to the counsel I offer you now, for the second time.¹¹

What, then, do I mean by saying that my arrival in Sicily on that occasion was [327a] the foundation of everything? When I associated with Dion, who was then a youth, instructing him verbally in what I believed was best for mankind and counselling him to realize it in action, it seems that I was not aware that I was, in a way, unwittingly contriving the future overthrow of the tyranny. For Dion in truth, being quick-witted, both in other respects and in grasping the arguments I then put forward, hearkened to me with a keenness and ardor that I have never yet found in any [327b] of the youth whom I have met; and he determined to live the rest of his life in a different manner from the majority of the Italians and Sicilians, counting virtue worthy of more devotion than pleasure and all other kinds of luxury. In consequence, his way of life was in ill-odor with those who were conforming to the customary practices of the tyranny, until the death of Dionysius¹² occurred.

After this event, he came to the belief that this belief, which he himself had acquired through right instruction, would not always be confined to himself; [327c] and in fact he saw it being implanted in others also— not in many, it is true, but yet implanted in some; and of these he thought that Dionysius (with Heaven's help) might become one, and that, if he did become a man of this mind, both his own life and that of all the rest of the Syracusans would, in consequence, be a life of immeasurable felicity. Moreover, Dion considered that I ought, by all means, to come to Syracuse with all speed to be his partner in this task, since he bore in mind [327d] our intercourse with one another and how happily it had wrought on him to acquire a longing for the

noblest and best life; and if now, in like manner, he could effect this result in Dionysius, as he was trying to do, he had great hopes of establishing the blissful and true life throughout all the land without massacres and murders and the evils which have now come about.

Holding these right views, Dion persuaded Dionysius to summon me; and he himself also sent a request that I should by all means come with all speed, before that [327e] any others¹³ should encounter Dionysius and turn him aside to some way of life other than the best. And these were the terms—long though they are to repeat—in which his request was couched: ” What opportunities (he asked) are we to wait for that could be better than those that have now been presented by a stroke of divine good fortune?” And he dwelt in detail on the extent of the empire [328a] in Italy and Sicily and his own power therein, and the youth of Dionysius, mentioning also how great a desire he had for philosophy and education, and he spoke of his own nephews¹⁴ and connections, and how they would be not only easily converted themselves to the doctrines and the life I always taught, but also most useful in helping to influence Dionysius; so that now, if ever (he concluded), all our hopes will be fulfilled of seeing the same persons at once philosophers and rulers of mighty States. [328b]

By these and a vast number of other like arguments Dion kept exhorting me; but as regards my own opinion, I was afraid how matters would turn out so far as the young people were concerned—for the desires of such as they change quickly, and frequently in a contrary direction; although, as regards Dion's own character, I knew that it was stable by nature and already sufficiently mature. Wherefore as I pondered the matter and was in doubt whether I should make the journey and take his advice, or what, I ultimately inclined to the view that if we were ever to attempt to realize our theories [328c] concerning laws and government, now was the time to undertake it; for should I succeed in convincing one single person sufficiently I should have brought to pass all manner of good. Holding this view and in this spirit of adventure it was that I set out from home,—not in the spirit which some have supposed, but dreading self-reproach most of all, lest haply I should seem to myself to be utterly and absolutely nothing more than a mere voice and never to undertake willingly any action, and now to be in danger of proving false, in the first¹⁵ instance, to my friendship [328d] and association with Dion, when he is actually involved in no little danger. Suppose, then, that some evil fate should befall him, or that he should be banished by Dionysius and his other foes and then come to us as an exile and question us in these words—“O Plato, I come to you as an exile not to beg for foot-soldiers, nor because I lack horse-soldiers to ward off mine enemies, but to beg for arguments and persuasion, whereby you above all, as I know, are able to convert young men to what is good and just and thereby to bring them always into a state of mutual friendliness [328e] and comradeship. And it is because you have left me destitute of these that I have now quitted Syracuse and come hither. My condition, however, casts a lesser reproach on you; but as for Philosophy, which you are always belauding, and saying that she is treated with ignominy by the rest of mankind, surely, so

far as it depends on you, she too is now betrayed [329a] as well as I. Now if we had happened to be living at Megara,¹⁶ you would no doubt have come to assist me in the cause for which I summoned you, on pain of deeming yourself of all men the most base; and now, forsooth, do you imagine that when you plead in excuse the length of the journey and the great strain of the voyage and of the labor involved you can possibly be acquitted of the charge of cowardice? Far from it, indeed.”

If he had spoken thus, what plausible answer should I have had to such pleadings? There is none. Well then, I came for good and just reasons so far as it is possible for men to do so; [329b] and it was because of such motives that I left my own occupations, which were anything but ignoble, to go under a tyranny which ill became, as it seemed, both my teaching and myself. And by my coming I freed myself from guilt in the eyes of Zeus Xenios¹⁷ and cleared myself from reproach on the part of Philosophy, seeing that she would have been calumniated if I, through poorness of spirit and timidity, had incurred the shame of cowardice.

On my arrival—I must not be tedious—I found Dionysius's kingdom all full of civil strife and of slanderous stories [329c] brought to the court concerning Dion. So I defended him, so far as I was able, though it was little I could do; but about three months later, charging Dion with plotting against the tyranny, Dionysius set him aboard a small vessel and drove him out with ignominy. After that all of us who were Dion's friends were in alarm lest he should punish any of us on a charge of being accomplices in Dion's plot; and regarding me a report actually went abroad in Syracuse that I had been put to death by Dionysius as [329d] being responsible for all the events of that time. But when Dionysius perceived us all in this state of mind, he was alarmed lest our fears should bring about some worse result; so he was for receiving us all back in a friendly manner; and, moreover, he kept consoling me and bidding me be of good courage and begging me by all means to remain. For my fleeing away from him would have brought him no credit, but rather my remaining; and that was why he pretended to beg it of me so urgently. But the requests of tyrants are coupled, as we know, with compulsory powers. [329e] So in order to further this plan he kept hindering my departure; for he brought me into the Acropolis¹⁸ and housed me in a place from which no skipper would have brought me off, and that not merely if prevented by Dionysius but also if he failed to send them a messenger charging them to take me off. Nor would any trader nor any single one of the officers at the ports of the country have let me pass out by myself, without arresting me on the spot and bringing me back again to Dionysius, [330a] especially as it had already been proclaimed abroad, contrary to the former report, that “Dionysius is wonderfully devoted to Plato.” But what were the facts? For the truth must be told. He became indeed more and more devoted as time advanced, according as he grew familiar with my disposition and character, but he was desirous that I should praise him more than Dion and regard him rather than Dion as my special friend, and this triumph he was marvellously anxious to achieve. But the best way to achieve this, if it was to be achieved—

[330b] namely, by occupying himself in learning and in listening to discourses on philosophy and by associating with me—this he always shirked owing to his dread of the talk of slanderers, lest he might be hampered in some measure and Dion might accomplish all his designs.¹⁹ I, however, put up with all this, holding fast the original purpose with which I had come, in the hope that he might possibly gain a desire for the philosophic life; but he, with his resistance, won the day.

These, then, were the causes which brought about my visit to Sicily and my sojourn there, on the first occasion. After this I went away, [330c] and I returned again on receiving a most urgent summons from Dionysius. That my motives for doing so and all my actions were reasonable and just, all this I will try to explain later on, for the benefit of those who ask what object I had in going the second time. But first I must counsel you as to the course you ought to adopt in view of the present circumstances, so as not to give the first place to matters of secondary importance.²⁰ What I have to say, then, is this:

Ought not the doctor that is giving counsel to a sick man who is indulging in [330d] a mode of life that is bad for his health to try first of all to change his life, and only proceed with the rest of his advice if the patient is willing to obey? But should he prove unwilling, then I would esteem him both manly and a true doctor if he withdraws from advising a patient of that description, and contrariwise unmanly and unskilled if he continues to advise.²¹ So too with a State, whether it has one ruler or many, if so be that it asks for some salutary advice when its government is duly proceeding by the right road, [330e] then it is the act of a judicious man to give advice to such people. But in the case of those who altogether exceed the bounds of right government and wholly refuse to proceed in its tracks, and who warn their counsellor [331a] to leave the government alone and not disturb it, on pain of death if he does disturb it, while ordering him to advise as to how all that contributes to their desires and appetites may most easily and quickly be secured for ever and ever—then, in such a case, I should esteem unmanly the man who continued to engage in counsels of this kind, and the man who refused to continue manly.

This, then, being the view I hold, whenever anyone consults me concerning any very important affair relating to his life—the acquisition of wealth, for instance, [331b] or the care of his body or his soul,—if I believe that he is carrying on his daily life in a proper way, or that he will be willing to obey my advice in regard to the matters disclosed, then I give counsel readily and do not confine myself to some merely cursory reply. But if he does not ask my advice at all or plainly shows that he will in no wise obey his adviser, I do not of my own instance come forward to advise such an one, nor yet to compel him, not even were he my own son. To a slave, however, I would give advice, and if he refused it I would use compulsion. But to a father or mother [331c] I deem it impious to apply compulsion,²² unless they are in the grip of the disease of insanity; but if they are living a settled life which is pleasing to them, though not to me, I

would neither irritate them with vain exhortations nor yet minister to them with flatteries by providing them with means to satisfy appetites of a sort such that I, were I addicted to them, would refuse to live. So likewise it behoves the man of sense to hold, while he lives, the same view concerning his own State: if it appears to him to be ill governed [331d] he ought to speak, if so be that his speech is not likely to prove fruitless nor to cause his death²³; but he ought not to apply violence to his fatherland in the form of a political revolution, whenever it is impossible to establish the best kind of polity without banishing and slaughtering citizens, but rather he ought to keep quiet and pray for what is good both for himself and for his State.

This, then, is the way in which I would counsel you—even as Dion and I together used to counsel Dionysius that he should, in the first place, so order his daily life as [331e] to gain the greatest possible mastery over himself, and to win for himself trusty friends and companions that so he might avoid the evils suffered by his father. For he, when he had recovered many great cities of Sicily which had been laid waste by the barbarians, was unable, when he settled them, to establish in each a loyal government composed of true comrades,—whether strangers from abroad [332a] or men of his own kin²⁴ whom he himself had reared up in their youth and had raised from a private position to one of authority and from a state of poverty to surpassing wealth. Neither by persuasion nor instruction, neither by benefits nor by ties of kindred, was he able to make any one of them worthy of a share in his government. Thus he was seven times more unhappy than Darius²⁵ who trusted men who neither were his brothers nor reared up by himself but merely colleagues who had helped him to crush the Mede and the Eunuch; and he divided amongst them seven provinces, [332b] each greater than the whole of Sicily; and these colleagues he found loyal, neither did they make any attack either on himself or on one another. And thus he left an example of the character which should belong to the good lawgiver and king; for by the laws he framed he has preserved the empire of the Persians even until this day. Moreover, the Athenians also, after taking over many of the Greek cities which had fallen into the hands of the barbarians, though they had not colonized them themselves yet held their sway over them securely for seventy years [332c] because they possessed citizens who were their friends in each of those cities.²⁶ But Dionysius, though he amalgamated the whole of Sicily into one City-State, because in his wisdom he distrusted everyone, barely achieved safety; for he was poor in men who were loyal friends, and there exists no surer sign of a man's virtue or vice than whether he is or is not destitute of men of that kind.

Such, then, was the counsel which Dion and I always gave to Dionysius. Inasmuch as the result of his father's conduct was [332d] to leave him unprovided with education and unprovided with suitable intercourse, he should, in the first place, make it his aim to acquire other friends for himself from among his kindred and contemporaries who were in harmony about virtue; and to acquire, above all else, this harmony within himself, since in this he was surprisingly deficient. Not that we expressed this openly, for it would not have been safe; but we put it in veiled terms

and maintained by argument that this is how every man will save both himself and all those under his leadership, whereas if he does not adopt this course he will bring about entirely opposite results. [332e] And if he pursued the course we describe, and made himself right-minded and sober-minded, then, if he were to re-people the devastated cities of Sicily and bind them together by laws and constitutions so that they should be leagued both with himself and with one another against barbarian reinforcements, he would thus not merely double the empire of his father [333a] but actually multiply it many times over; for if this came to pass, it would be an easy task to enslave the Carthaginians far more than they had been enslaved in the time of Gelon,²⁷ whereas now, on the contrary, his father had contracted to pay tribute to the barbarians.

Such was the advice and exhortation given to Dionysius by us, who were plotting against him, as statements pouring in from many quarters alleged; which statements in fact so prevailed with Dionysius that they caused Dion's expulsion and threw us [333b] into a state of alarm. Then—to cut a long story short—Dion came from the Peloponnesus and from Athens and admonished Dionysius by deed.²⁸ When, however, Dion had delivered the Syracusans and given them back their city twice, they showed the same feeling towards him as Dionysius had done. For when Dion was trying to train and rear him up to be a king worthy of the throne, that so he might share with him in all his life, [333c] Dionysius listened to the slanderers who said that Dion was plotting against the tyranny in all that he was then doing, his scheme being that Dionysius, with his mind infatuated with education, should neglect his empire and entrust it to Dion, who should then seize on it for himself and expel Dionysius from his kingship by craft. And then, for the second time, these slanderous statements triumphed with the Syracusans, and that with a triumph that was most monstrous and shameful for the authors of the triumph.

Those who are urging me to address myself [333d] to the affairs of today ought to hear what then took place. I, a citizen of Athens, a companion of Dion, an ally of his own, went to the tyrant in order that I might bring about friendship instead of war; but in my struggle with the slanderers I was worsted. But when Dionysius tried to persuade me by means of honors and gifts of money to side with him so that I should bear witness, as his friend, to the propriety of his expulsion of Dion, in this design he failed utterly. And later on, while returning home from exile, Dion attached to himself two brothers from Athens,²⁹ [333e] men whose friendship was not derived from philosophy, but from the ordinary companionship out of which most friendships spring, and which comes from mutual entertaining and sharing in religion and mystic ceremonies.³⁰ So, too, in the case of these two friends who accompanied him home; it was for these reasons and because of their assistance in his homeward voyage that they became his companions. But on their arrival in Sicily, when [334a] they perceived that Dion was slanderously charged before the Siceliots whom he had set free with plotting to become tyrant, they not only betrayed their companion and host but became themselves, so to say, the authors of his murder, since they stood beside the murderers, ready to assist, with arms in their hands. For

my own part, I neither slur over the shameful and sinful nature of their action nor do I dwell on it, since there are many others who make it their care to recount these doings and will continue to do so in time to come. [334b] But I do take exception to what is said about the Athenians, that these men covered their city with shame; for I assent that it was also an Athenian who refused to betray the very same man when, by doing so, he might have gained wealth and many other honors. For he had become his friend not in the bonds of a venal friendship but owing to association in liberal education; since it is in this alone that the judicious man should put his trust, rather than in kinship of soul or of body. Consequently, the two murderers [334c] of Dion are not important enough to cast a reproach upon our city,³¹ as though they had ever yet shown themselves men of mark.

All this has been said by way of counsel to Dion's friends and relatives. And one piece of counsel I add, as I repeat now for the third time to you in the third place the same counsel as before, and the same doctrine. Neither Sicily, nor yet any other State—such is my doctrine—should be enslaved to human despots but rather to laws; for such slavery is good neither for those who enslave nor those who are enslaved— [334d] themselves, their children and their children's children; rather is such an attempt wholly ruinous, and the dispositions that are wont to grasp gains such as these are petty and illiberal, with no knowledge of what belongs to goodness and justice, divine or human, either in the present or in the future. Of this I attempted to persuade Dion in the first place, secondly Dionysius, and now, in the third place, you. Be ye, then, persuaded for the sake of Zeus, Third Savior,³² and considering also the case of Dionysius and of Dion, of whom the former was unpersuaded and is living now no noble life, [334e] while the latter was persuaded and has nobly died. For whatsoever suffering a man undergoes when striving after what is noblest both for himself and for his State is always right and noble. For by nature none of us is immortal, and if any man should come to be so he would not be happy, as the vulgar believe; for no evil nor good worthy of account [335a] belongs to what is soulless, but they befall the soul whether it be united with a body or separated therefrom. But we ought always truly to believe the ancient and holy doctrines which declare to us that the soul is immortal and that it has judges and pays the greatest penalties, whensoever a man is released from his body; wherefore also one should account it a lesser evil to suffer than to perform the great iniquities and injustices.³³ But to these doctrines the man who is fond of riches but poor [335b] in soul listens not, or if he listens he laughs them (as he thinks) to scorn, while he shamelessly plunders from all quarters everything which he thinks likely to provide himself, like a beast, with food or drink or the satiating himself with the slavish and graceless pleasure which is miscalled by the name of the Goddess of Love³⁴; for he is blind and fails to see what a burden of sin—how grave an evil—ever accompanies each wrong-doing; which burden the wrong-doer must of necessity drag after him both while he moves about on earth [335c] and when he has gone beneath the earth again on a journey that is unhonored and in all ways utterly miserable.

Of these and other like doctrines I tried to persuade Dion, and I have the best of rights to be angry with the men who slew him, very much as I have to be angry also with Dionysius; for both they and he have done the greatest of injuries both to me, and, one may say, to all the rest of mankind—they by destroying the man who purposed to practice justice, and he by utterly refusing to practice justice, when he had supreme power, [335d] throughout all his empire; although if, in that empire, philosophy and power had really been united in the same person the radiance thereof would have shone through the whole world of Greeks and barbarians, and fully imbued them with the true conviction that no State nor any individual man can ever become happy unless he passes his life in subjection to justice combined with wisdom, whether it be that he possesses these virtues within himself or as the result of being reared and trained righteously under holy rulers in their ways. [335e] Such were the injuries committed by Dionysius; and, compared to these, the rest of the injuries he did I would count but small. And the murderer of Dion is not aware that he has brought about the same result as Dionysius. For as to Dion, I know clearly—in so far as it is possible for a man to speak with assurance about men—that, if he had gained possession of the kingdom, he would never have adopted for his rule any other principle than this when he had first brought gladness to [336a] Syracuse, his own fatherland, by delivering her from bondage, and had established her in a position of freedom, he would have endeavored next, by every possible means, to set the citizens in order by suitable laws of the best kind; and as the next step after this, he would have done his utmost to colonize the whole of Sicily and to make it free from the barbarians, by driving out some of them and subduing others more easily than did Hiero.³⁵ [336b] And if all this had been done by a man who was just and courageous and temperate and wisdom-loving, the most of men would have formed the same opinion of virtue which would have prevailed, one may say, throughout the whole world, if Dionysius had been persuaded by me, and which would have saved all. But as it is, the onset of some deity or some avenging spirit, by means of lawlessness and godlessness and, above all, by the rash acts of ignorance³⁶—that ignorance which is the root whence all evils for all men spring and which will bear hereafter most bitter fruit for those who have planted it—this it is which for the second time [336c] has wrecked and ruined all.

But now, for the third time, let us speak good words, for the omen's sake. Nevertheless, I counsel you, his friends, to imitate Dion in his devotion to his fatherland and in his temperate mode of life; and to endeavor to carry out his designs, though under better auspices; and what those designs were you have learnt from me clearly. But if any amongst you is unable to live in the Dorian fashion of his forefathers and follows after [336d] the Sicilian way of life and that of Dion's murderers, him you should neither call to your aid nor imagine that he could ever perform a loyal or sound action; but all others you should call to aid you in repeopling all Sicily and giving it equal laws, calling them both from Sicily itself and from the whole of the Peloponnese, not fearing even Athens itself; for there too there are those who surpass all men in virtue, and who detest the enormities of men who slay their hosts. But—though these results

may come about later,—if for the present you are beset by the constant quarrels of every kind [336e] which spring up daily between the factions, then every single man on whom the grace of Heaven has bestowed even a small measure of right opinion must surely be aware that there is no cessation of evils for the warring factions until those who have won the mastery cease from perpetuating feuds by assaults and expulsions and executions, and cease from [337a] seeking to wreak vengeance on their foes; and, exercising mastery over themselves, lay down impartial laws which are framed to satisfy the vanquished no less than themselves; and compel the vanquished to make use of these laws by means of two compelling forces, namely, Reverence and Fear³⁷—Fear, inasmuch as they make it plain that they are superior to them in force; and Reverence, because they show themselves superior both in their attitude to pleasures and in their greater readiness and ability to subject themselves to the laws. In no other way is it possible for a city at strife within itself to cease from evils, but [337b] strife and enmity and hatred and suspicion are wont to keep for ever recurring in cities when their inner state is of this kind.³⁸

Now those who have gained the mastery, whenever they become desirous of safety, ought always to choose out among themselves such men of Greek origin as they know by inquiry to be most excellent—men who are, in the first place, old, and who have wives and children at home, and forefathers as numerous and good and famous as possible, and who are all in [337c] the possession of ample property; and for a city of ten thousand citizens, fifty such men would be a sufficient number³⁹ These men they should fetch from their homes by means of entreaties and the greatest possible honors; and when they have fetched them they should entreat and enjoin them to frame laws, under oath that they will give no advantage either to conquerors or conquered, but equal rights in common to the whole city. And when the laws have been laid down, then everything depends on the following condition. On the one hand, if the victors prove themselves subservient to the laws more than [337d] the vanquished, then all things will abound in safety and happiness, and all evils will be avoided; but should it prove otherwise, neither I nor anyone else should be called in to take part in helping the man who refuses to obey our present injunctions. For this course of action is closely akin to that which Dion and I together, in our plans for the welfare of Syracuse, attempted to carry out, although it is but the second-best⁴⁰; for the first was that which we first attempted to carry out with the aid of Dionysius himself—a plan which would have benefited all alike, had it not been that some Chance, mightier than men, scattered it to the winds. Now, however, it is for you to endeavor [337e] to carry out our policy with happier results by the aid of Heaven's blessing and divine good-fortune.⁴¹

Let this, then, suffice as my counsel and my charge, and the story of my former visit to the court of Dionysius. In the next place, he that cares to listen may hear the story of my later journey by sea, and how naturally and reasonably it came about. For (as I said) I had completed my account of the first period of my stay [338a] in Sicily⁴² before I gave my counsel to the intimates and companions of Dion. What happened next was this: I urged Dionysius by all means possible to

let me go, and we both made a compact that when peace was concluded (for at that time there was war in Sicily⁴³) Dionysius, for his part, should invite Dion and me back again, as soon as he had made his own power more secure; and he asked Dion to regard the position he was now in not as a form of exile [338b] but rather as a change of abode; and I gave a promise that upon these conditions I would return. When peace was made he kept sending for me; but he asked Dion to wait still another year, although he kept demanding most insistently that I should come. Dion, then, kept urging and entreating me to make the voyage; for in truth constant accounts were pouring in from Sicily how Dionysius was now once more marvellously enamored of philosophy; and for this reason Dion was strenuously urging me not to disobey his summons. [338c] I was of course well aware that such things often happen to the young in regard to philosophy; but none the less I deemed it safer, at least for the time, to give a wide berth both to Dion and Dionysius, and I angered them both by replying that I was an old man and that none of the steps which were now being taken were in accordance with our compact.

Now it seems that after this Archytas⁴⁴ arrived at the court of Dionysius; for when I sailed away, I had, before my departure, effected a friendly alliance between Archytas and the Tarentines and Dionysius; [338d] and there were certain others in Syracuse who had had some teaching from Dion, and others again who had been taught by these, men who were stuffed with some borrowed philosophical doctrines. These men, I believe, tried to discuss these subjects with Dionysius, on the assumption that Dionysius was thoroughly instructed in all my system of thought. Now besides being naturally gifted otherwise with a capacity for learning Dionysius has an extraordinary love of glory. Probably, then, he was pleased with what was said and was ashamed of having it known that he had no lessons [338e] while I was in the country; and in consequence of this he was seized with a desire to hear my doctrines more explicitly, while at the same time he was spurred on by his love of glory: and we have already explained, in the account we gave a moment ago,⁴⁵ the reasons why he had not been a hearer of mine during my previous sojourn. So when I had got safely home and had refused his second summons, as I said just now, Dionysius was greatly afraid, I believe, because of his love of glory, lest any should suppose that it was owing to my contempt [339a] for his nature and disposition, together with my experience of his mode of life, that I was ungracious and was no longer willing to come to his court.

Now I am bound to tell the truth, and to put up with it should anyone, after hearing what took place, come to despise, after all, my philosophy and consider that the tyrant showed intelligence. For, in fact, Dionysius, on this third occasion,⁴⁶ sent a trireme to fetch me, in order to secure my comfort on the voyage; and he sent Archedemus, one of the associates of Archytas, believing that I esteemed him above all others in Sicily, [339b] and other Sicilians of my acquaintance; and all these were giving me the same account, how that Dionysius had made marvellous progress in philosophy. And he sent an exceedingly long letter, since he knew how I was disposed towards Dion and also Dion's eagerness that I should make the voyage⁴⁷ and come to Syracuse;

for his letter was framed to deal with all these circumstances, having its commencement couched in some such terms as these— “Dionysius to Plato,” followed by [339c] the customary greetings; after which, without further preliminary— “If you are persuaded by us and come now to Sicily, in the first place you will find Dion's affairs proceeding in whatever way you yourself may desire—and you will desire, as I know, what is reasonable, and I will consent thereto; but otherwise none of Dion's affairs, whether they concern himself or anything else, will proceed to your satisfaction.” Such were his words on this subject, but the rest [339d] it were tedious and inopportune to repeat. And other letters kept coming both from Archytas and from the men in Tarentum, eulogizing the philosophy of Dionysius, and saying that unless I come now I should utterly dissolve their friendship with Dionysius which I had brought about, and which was of no small political importance. Such then being the nature of the summons which I then received,— when on the one hand the Sicilians and Italians were pulling me in and the Athenians, on the other, were literally pushing me out, so to say, by their entreaties,— [339e] once again the same argument recurred, namely, that it was my duty not to betray Dion, nor yet my hosts and comrades in Tarentum. And I felt also myself that there would be nothing surprising in a young man, who was apt at learning, attaining to a love of the best life through hearing lectures on subjects of importance. So it seemed to be my duty to determine clearly in which way the matter really stood, and in no wise to prove false to this duty, nor to leave myself open to a reproach that would be truly serious, [340a] if so be that any of these reports were true.

So having blindfolded myself with this argumentation I made the journey, although, naturally, with many fears and none too happy forebodings. However, when I arrived the third time, I certainly did find it really a case of “the Third to the Saviour”⁴⁸: for happily I did get safely back again; and for this I ought to give thanks, after God, to Dionysius, seeing that, when many had planned to destroy me, he prevented them and paid some regard to reverence in his dealings with me. And when [340b] I arrived, I deemed that I ought first of all to gain proof of this point,— whether Dionysius was really inflamed by philosophy, as it were by fire, or all this persistent account which had come to Athens was empty rumor. Now there is a method of testing such matters which is not ignoble but really suitable in the case of tyrants, and especially such as are crammed with borrowed doctrines; and this was certainly what had happened to Dionysius, as I perceived as soon as I arrived. To such persons one must point out what the subject is as a whole, [340c] and what its character, and how many preliminary subjects it entails and how much labor. For on hearing this, if the pupil be truly philosophic, in sympathy with the subject and worthy of it, because divinely gifted, he believes that he has been shown a marvellous pathway and that he must brace himself at once to follow it, and that life will not be worth living if he does otherwise. After this he braces both himself and him who is guiding him on the path, nor does he desist until either he has reached the goal of all his studies, or else has gained such power as to be capable of directing his own steps without the aid of the instructor. It is thus, [340d] and in this mind, that such a student lives, occupied indeed in whatever occupations he may find himself, but always

beyond all else cleaving fast to philosophy and to that mode of daily life which will best make him apt to learn and of retentive mind and able to reason within himself soberly; but the mode of life which is opposite to this he continually abhors. Those, on the other hand, who are in reality not philosophic, but superficially tinged by opinions,—like men whose bodies are sunburnt on the surface —when they see how many studies are required and how great labor,⁴⁹ [340e] and how the orderly mode of daily life is that which befits the subject, they deem it difficult or impossible for themselves, and thus they become in fact incapable of pursuing it; [341a] while some of them persuade themselves that they have been sufficiently instructed in the whole subject and no longer require any further effort.

Now this test proves the clearest and most infallible in dealing with those who are luxurious and incapable of enduring labor, since it prevents any of them from ever casting the blame on his instructor instead of on himself and his own inability to pursue all the studies which are accessory to his subject.

This, then, was the purport of what I said to Dionysius on that occasion. I did not, however, expound the matter fully, nor did Dionysius ask me to do so; [341b] for he claimed that he himself knew many of the most important doctrines and was sufficiently informed owing to the versions he had heard from his other teachers. And I am even told that later on he himself wrote a treatise on the subjects in which I then instructed him, composing it as though it were something of his own invention and quite different from what he had heard; but of all this I know nothing. I know indeed that certain others have written about these same subjects; but what manner of men they are not even themselves know.⁵⁰ But thus much I can certainly declare [341c] concerning all these writers, or prospective writers, who claim to know the subjects which I seriously study, whether as hearers of mine or of other teachers, or from their own discoveries; it is impossible, in my judgement at least, that these men should understand anything about this subject. There does not exist, nor will there ever exist, any treatise of mine dealing therewith. For it does not at all admit of verbal expression like other studies, but, as a result of continued application to the subject itself and communion therewith, it is brought to birth in the soul on a sudden,⁵¹ as light that is kindled [341d] by a leaping spark, and thereafter it nourishes itself. Notwithstanding, of thus much I am certain, that the best statement of these doctrines in writing or in speech would be my own statement; and further, that if they should be badly stated in writing, it is I who would be the person most deeply pained. And if I had thought that these subjects ought to be fully stated in writing or in speech to the public,⁵² what nobler action could I have performed in my life than that of writing what is of great benefit to mankind and [341e] bringing forth to the light for all men the nature of reality? But were I to undertake this task it would not, as I think, prove a good thing for men, save for some few who are able to discover the truth themselves with but little instruction; for as to the rest, some it would most unseasonably

fill with a mistaken contempt, and others with an overweening and empty aspiration, as though they had learnt some sublime mysteries. [342a]

But concerning these studies I am minded to speak still more at length; since the subject with which I am dealing⁵³ will perhaps be clearer when I have thus spoken. For there is a certain true argument which confronts the man who ventures to write anything at all of these matters, an argument which, although I have frequently stated it in the past, seems to require statement also at the present time.

Every existing object has three things⁵⁴ which are the necessary means by which knowledge of that object is acquired; and the knowledge itself is a fourth thing; and as a fifth one must postulate the object itself which is cognizable [342b] and true. First of these comes the name; secondly the definition; thirdly the image; fourthly the knowledge. If you wish, then, to understand what I am now saying, take a single example and learn from it what applies to all. There is an object called a circle, which has for its name the word we have just mentioned and, secondly, it has a definition, composed of names and verbs; for “that which is everywhere equidistant from the extremities to the center” will be the definition of that object which has for its name “round” and “spherical” and “circle.”⁵⁵ [342c] And in the third place there is that object which is in course of being portrayed and obliterated, or of being shaped with a lathe, and falling into decay; but none of these affections is suffered by the circle itself, whereto all these others are related inasmuch as it is distinct therefrom. Fourth comes knowledge and intelligence and true opinion regarding these objects; and these we must assume to form a single whole, which does not exist in vocal utterance or in bodily forms but in souls; whereby it is plain that it differs both from the nature of the circle itself and from the three previously mentioned. And of those four [342d] intelligence approaches most nearly in kinship and similarity to the fifth,⁵⁶ and the rest are further removed.

The same is true alike of the straight and of the spherical form, and of color, and of the good and the fair and the just, and of all bodies whether manufactured or naturally produced (such as fire and water and all such substances), and of all living creatures, and of all moral actions or passions in souls. For unless [342e] a man somehow or other grasps the four of these, he will never perfectly acquire knowledge of the fifth. Moreover, these four attempt to express the quality of each object no less than its real essence, owing to the weakness inherent in language⁵⁷; [343a] and for this reason, no man of intelligence will ever venture to commit to it the concepts of his reason, especially when it is unalterable—as is the case with what is formulated in writing.

But here again you must learn further the meaning of this last statement. Every one of the circles which are drawn in geometric exercises or are turned by the lathe is full of what is opposite to the fifth, since it is in contact with the straight everywhere⁵⁸; whereas the circle itself, as we

affirm, contains within itself no share greater or less of the opposite nature. And none of the objects, we affirm, has any fixed name, [343b] nor is there anything to prevent forms which are now called “round” from being called “straight,” and the “straight” “round”⁵⁹; and men will find the names no less firmly fixed when they have shifted them and apply them in an opposite sense. Moreover, the same account holds good of the Definition also, that, inasmuch as it is compounded of names and verbs, it is in no case fixed with sufficient firmness.⁶⁰ And so with each of the Four, their inaccuracy is an endless topic; but, as we mentioned a moment ago, the main point is this, that while there are two separate things, the real essence and the quality, [343c] and the soul seeks to know not the quality but the essence, each of the Four proffers to the soul either in word or in concrete form that which is not sought; and by thus causing each object which is described or exhibited to be always easy of refutation by the senses, it fills practically all men with all manner of perplexity and uncertainty. In respect, however, of those other objects the truth of which, owing to our bad training, we usually do not so much as seek—being content with such of the images as are proffered,—those of us who answer are not made to look ridiculous by those who question, [343d] we being capable of analysing and convicting the Four. But in all cases where we compel a man to give the Fifth as his answer and to explain it, anyone who is able and willing to upset the argument gains the day, and makes the person who is expounding his view by speech or writing or answers appear to most of his hearers to be wholly ignorant of the subjects about which he is attempting to write or speak; for they are ignorant sometimes of the fact that it is not the soul of the writer or speaker that is being convicted but the nature of each of the Four, which is essentially defective. But it is the methodical study [343e] of all these stages, passing in turn from one to another, up and down, which with difficulty implants knowledge, when the man himself, like his object, is of a fine nature; but if his nature is bad—and, in fact, the condition of most men's souls in respect of learning and of what are termed [344a] “morals” is either naturally bad or else corrupted,—then not even Lynceus⁶¹ himself could make such folk see. In one word, neither receptivity nor memory will ever produce knowledge in him who has no affinity with the object, since it does not germinate to start with in alien states of mind; consequently neither those who have no natural connection or affinity with things just, and all else that is fair, although they are both receptive and retentive in various ways of other things, nor yet those who possess such affinity but are unreceptive and unretentive—none, I say, of these will ever learn to the utmost possible extent [344b] the truth of virtue nor yet of vice. For in learning these objects it is necessary to learn at the same time both what is false and what is true of the whole of Existence,⁶² and that through the most diligent and prolonged investigation, as I said at the commencement⁶³; and it is by means of the examination of each of these objects, comparing one with another—names and definitions, visions and sense-perceptions,—proving them by kindly proofs and employing questionings and answerings that are void of envy—it is by such means, and hardly so, that there bursts out the light of intelligence and reason regarding each object in the mind of him who uses every effort of which mankind is capable. [344c]

And this is the reason why every serious man in dealing with really serious subjects⁶⁴ carefully avoids writing, lest thereby he may possibly cast them as a prey to the envy and stupidity of the public. In one word, then, our conclusion must be that whenever one sees a man's written compositions—whether they be the laws of a legislator or anything else in any other form,—these are not his most serious works, if so be that the writer himself is serious: rather those works abide in the fairest region he possesses.⁶⁵ If, however, these really are his serious efforts, and put into writing, it is not the gods but mortal men who [344d] “Then of a truth themselves have utterly ruined his senses.”⁶⁶

Whosoever, then, has accompanied me in this story and this wandering of mine will know full well that, whether it be Dionysius or any lesser or greater man who has written something about the highest and first truths of Nature, nothing of what he has written, as my argument shows, is based on sound teaching or study. Otherwise he would have revered these truths as I do, and would not have dared to expose them to unseemly and degrading treatment. For the writings of Dionysius were not meant as aids to memory, [344e] since there is no fear lest anyone should forget the truth if once he grasps it with his soul, seeing that it occupies the smallest possible space⁶⁷; rather, if he wrote at all, it was to gratify his base love of glory, either by giving out the doctrines as his own discoveries, or else by showing, forsooth, that he shared a culture which he by no means deserved because of his lust for the fame accruing from its possession. [345a] Well, then, if such was the effect produced on Dionysius by our one conversation, perhaps it was so; but how this effect was produced “God troweth,” as the Theban says⁶⁸; for as I said,⁶⁹ I explained my doctrine to him then on one occasion only, and never again since then.

And if anyone is concerned to discover how it was that things actually happened as they did in regard to this matter, he ought to consider next the reason why we did not explain our doctrine a second time, or a third time, or still more often. Does Dionysius fancy [345b] that he possesses knowledge, and is his knowledge adequate, as a result of hearing me once only, or as the result of his own researches, or of previous instruction from other teachers? Or does he regard my doctrines as worthless? Or, thirdly, does he believe them to be beyond and above his capacity, and that he himself would be really incapable of living a life devoted to wisdom and virtue? For if he deems them worthless he will be in conflict with many witnesses who maintain the opposite, men who should be vastly more competent judges of such matters than Dionysius.⁷⁰ While if he claims that he has found out these truths by research or by instruction, and if he admits their value [345c] for the liberal education of the soul, how could he possibly (unless he is a most extraordinary person) have treated the leading authority⁷¹ on this subject with such ready disrespect? And how he showed this disrespect I will now relate.

It happened next, after no long interval, that whereas Dionysius had previously allowed Dion to remain in possession of his own property and to enjoy the income, he now ceased to

permit Dion's trustees to remit it to the Peloponnese, just as though he had entirely forgotten the terms of his letter, claiming that the property belonged not to Dion but to his son, [345d] his own nephew, of whom he was the legal trustee. Such were his actions during this period up to this point; and when matters had turned out thus, I perceived clearly what kind of love Dionysius had for philosophy; and, moreover, I had good reason to be annoyed, whether I wished it or not. For by then it was already summer and the season for ships to sail. Still I judged that I had no right to be more angry with Dionysius than with myself and those who had forced me to come the third time to the straits adjoining Scylla— [345e] “There yet again to traverse the length of deadly Charybdis;

”⁷² rather I should inform Dionysius that it was impossible for me to remain now that Dion was so insultingly treated. He, however, tried to talk me over and entreated me to remain, as he thought it would not be to his own credit that I should hurry away in person to convey such tidings; and when he failed to persuade me he promised [346a] to provide a passage for me himself. For I was proposing to embark and sail in the trading-vessels; because I was enraged and thought that I ought to stop at nothing, in case I were hindered, seeing that I was manifestly doing no wrong but suffering wrong. But when he saw that I had no inclination to remain he devised a scheme of the following kind to secure my remaining over that sailing-season. On the following day he came and addressed me in these plausible terms: “You and I,” he said, “must get Dion and Dion's affairs cleared out of the way, [346b] to stop our frequent disputes about them. And this,” said he, “is what I will do for Dion for your sake. I require that he shall remove his property and reside in the Peloponnese, not, however, as an exile but possessing the right to visit this country also whenever it is mutually agreed by him and by me and by you his friends. But this is on condition that he does not conspire against me; and you and your associates⁷³ and Dion's here in Sicily shall be the guarantors of these terms, and he shall furnish you [346c] with his security. And all the property he shall take shall be deposited in the Peloponnese and Athens with such persons as you shall think fit; and he shall enjoy the income from it but shall not be authorized to remove it without your consent. For I do not altogether trust him to act justly towards me if he had the use of these funds—for they will be by no means small; and I put more trust in you and your friends. So consider whether this arrangement contents you, and remain on these terms for the present year, and when next season arrives depart and take with you these funds of Dion. And I am well assured that Dion [346d] will be most grateful to you for having effected this arrangement on his behalf.”

And I, when I heard this speech, was annoyed, but none the less I replied that I would think it over and let him know next day my decision about the matter; and to this we both then agreed. So after this, when I was by myself, I was thinking it over, very much perturbed. And in my deliberation the first and foremost reflection was this— “Come now, suppose that Dionysius has no intention of performing any [346e] of his promises, and suppose that on my departure he sends a plausible note to Dion—both writing himself and charging many of his friends also to do

so—stating the proposal he is now making to me, and how in spite of his wish I had refused to do what he had invited me to do, and had taken no interest at all in Dion's affairs; and beyond all this, suppose that he is no longer willing to send me away by giving his own personal order to one of the shipmasters, but makes it plain to them all [347a] that he has no wish for me to sail away in comfort—in this case would any of them consent to convey me as a passenger,⁷⁴ starting off from the residence of Dionysius?" For, in addition to my other misfortunes, I was lodging in the garden adjoining his residence, and out of this not even the doorkeeper would have allowed me to pass without a permit sent him from Dionysius. "On the other hand, if I stay on for the year I shall be able to write and tell Dion the position in which I am placed and what I am doing; and if Dionysius should actually perform any of his promises, I shall have accomplished something [347b] not altogether contemptible—for Dion's property, if it is rightly valued, amounts probably to as much as a hundred talents; whereas if the events now dimly threatening come to pass in the way that seems likely, I am at a loss to know what I shall do with myself. Notwithstanding, I am obliged, it appears, to endure another year of toil and endeavor to test by actual experience the devices of Dionysius."

When I had come to this decision, I said to Dionysius on the following day— "I have decided to remain. I request you, however," [347c] I said, "not to regard me as Dion's master, but to join with me yourself in sending him a letter explaining what we have now decided, and asking him whether it satisfies him; and if not, and if he desires and claims other conditions, let him write them to us immediately; and do you refrain till then from taking any new step in regard to his affairs." This is what was said, and this is what we agreed; pretty nearly in the terms I have now stated.⁷⁵

After this the vessels had put to sea and it was no longer possible for me to sail; and then it was that Dionysius [347d] remembered to tell me that one half of the property ought to belong to Dion, the other half to his son; and he said that he would sell it, and when sold he would give me the one half to convey to Dion, and leave the half intended for his son where it was; for that was the most equitable arrangement. I, then, although I was dumbfounded at his statement, deemed that it would be utterly ridiculous to gainsay him any more; I replied, however, that we ought to wait for the letter from Dion, and then send him back this proposal by letter. But immediately after this he proceeded to sell the whole of Dion's property in a very high-handed fashion, [347e] where and how and to what purchasers he chose, without ever saying a single word to me about the matter; and verily I, in like manner, forbore to talk to him at all any longer about Dion's affairs; for I thought that there was no longer any profit in so doing.

Now up to this time I had been assisting in this way philosophy and my friends but after this, the kind of life [348a] we lived, Dionysius and I, was this—I was gazing out of my cage, like a bird⁷⁶ that is longing to fly off and away, while he was scheming how he might shoo me back

without paying away any of Dion's money; nevertheless, to the whole of Sicily we appeared to be comrades.

Now Dionysius attempted, contrary to his father's practice, to reduce the pay of the older members of his mercenary force, and the soldiers, being infuriated, assembled together and refused to permit it. And when he kept trying to force them by closing the gates of the citadel,⁷⁷ [348b] they immediately rushed up to the walls shouting out a kind of barbaric war-chant; whereupon Dionysius became terribly alarmed and conceded all and even more than all to those of the peltasts that were then assembled.

Then a report quickly got abroad that Heracleides⁷⁸ was to blame for all this trouble; and Heracleides, on hearing this, took himself off and vanished. Then Dionysius was seeking to capture him, and finding himself at a loss he summoned [348c] Theodotes to his garden; and it happened that at the time I too was walking in the garden. Now the rest of their conversation I neither know nor heard, but I both know and remember what Theodotes said to Dionysius in my presence. "Plato," he said, "I am urging this course on our friend Dionysius: if I prove able to fetch Heracleides here to answer the charges now made against him, in case it is decided that he must not reside in Sicily, I claim that he should have a passage to the Peloponnese, [348d] taking his son and his wife, and reside there without doing injury to Dionysius, and enjoying the income from his property. In fact I have already sent to fetch him, and I will now send again, in case he should obey either my former summons or the present one. And I request and beseech Dionysius that, should anyone meet with Heracleides, whether in the country or here in the city, no harm should be inflicted on him [348e] beyond his removal out of the country until Dionysius has come to some further decision." And addressing Dionysius he said, "Do you agree to this?" "I agree," he replied, "that even if he be seen at your house he shall suffer no harm beyond what has now been mentioned."

Now on the next day, at evening, Eurybius and Theodotes came to me hurriedly, in an extraordinary state of perturbation; and Theodotes said— "Plato, were you present yesterday at the agreement which Dionysius made with us both concerning Heracleides?" "Of course I was," I replied. "But now," he said, peltasts⁷⁹ are running about seeking to capture Heracleides, and he is probably somewhere about here. But do you now by all means [349a] accompany us to Dionysius." So we set off and went in to where he was and while they two stood in silence, weeping, I said to him— "My friends here are alarmed lest you should take any fresh step regarding Heracleides, contrary to our agreement of yesterday; for I believe it is known that he has taken refuge somewhere hereabouts." On hearing this, Dionysius fired up and went all colors, just as an angry man would do; and Theodotes fell at his knees and grasping his hand besought him with tears [349b] to do no such thing. And I interposed and said by way of encouragement— "Cheer up, Theodotes; for Dionysius will never dare to act otherwise contrary

to yesterday's agreement." Then Dionysius, with a highly tyrannical glare at me, said— "With you I made no agreement, great or small." "Heaven is witness," I replied, "that you did,—not to do what this man is now begging you not to do." And when I had said this I turned away and went out. After this Dionysius kept on hunting after Heracleides, [349c] while Theodotes kept sending messengers to Heracleides bidding him to flee. And Dionysius sent out Tisias and his peltasts with orders to pursue him; but Heracleides, as it was reported, forestalled them by a fraction of a day and made his escape into the Carthaginians' province.

Now after this Dionysius decided that his previous plot of refusing to pay over Dion's money would furnish him with a plausible ground for a quarrel with me; and, as a first step, [349d] he sent me out of the citadel, inventing the excuse that the women had to perform a sacrifice of ten days' duration in the garden where I was lodging; so during this period he gave orders that I should stay outside with Archedemus. And while I was there Theodotes sent for me and was loud in his indignation at what had then taken place and in his blame of Dionysius; but the latter, when he heard that I had gone to the house of Theodotes, by way of making this a new pretext, [349e] akin to the old, for his quarrel against me, sent a man to ask me whether I had really visited Theodotes when he invited me. "Certainly," I replied; and he said— "Well then, he ordered me to tell you that you are not acting at all honorably in always preferring Dion and Dion's friends to him." Such were his words; and after this he did not summon me again to his house, as though it was now quite clear that I was friendly towards Theodotes and Heracleides but hostile to him; and he supposed that I bore him no goodwill because of the clean sweep he was making of Dion's moneys.

Thereafter I was residing outside the citadel among [350a] the mercenaries; and amongst others some of the servants who were from Athens, fellow-citizens of my own, came to me and reported that I had been slanderously spoken of amongst the peltasts; and that some of them were threatening that if they could catch me they would make away with me. So I devised the following plan to save myself: I sent to Archytas and my other friends in Tarentum stating the position in which I found myself: and they, having found some pretext for an Embassy from the State, [350b] dispatched a thirty-oared vessel, and with it one of themselves, called Lamiscus; and he, when he came, made request to Dionysius concerning me, saying that I was desirous to depart, and begging him by all means to give his consent. To this he agreed, and he sent me forth after giving me supplies for the journey; but as to Dion's money, neither did I ask for any of it nor did anyone pay me any.

On arriving at Olympia,⁸⁰ in the Peloponnese, I came upon Dion, who was attending the Games; and I reported what had taken place. And he, calling Zeus to witness, was invoking me and my relatives and [350c] friends to prepare at once to take vengeance on Dionysius,—we on account of his treachery to guests (for that was what Dion said and meant) , and he himself on account of

his wrongful expulsion and banishment. And I, when I heard this, bade him summon my friends to his aid, should they be willing— “But as for me,” I said, “it was you yourself, with the others, who by main force, so to say, made me an associate of Dionysius at table and at hearth and a partaker in his holy rites; and he, though he probably believed that I, as many slanderers asserted, was conspiring with you against himself and his throne, yet refrained from killing me, [350d] and showed compunction. Thus, not only am I no longer, as I may say, of an age to assist anyone in war, but I also have ties in common with you both, in case you should ever come to crave at all for mutual friendship and wish to do one another good; but so long as you desire to do evil, summon others.” This I said because I loathed my Sicilian wandering⁸¹ and its ill-success. They, however, by their disobedience and their refusal to heed my attempts at conciliation have themselves to blame for all the evils which have now happened; for, in all human probability, none of these would ever have occurred if Dionysius [350e] had paid over the money to Dion or had even become wholly reconciled to him, for both my will and my power were such that I could have easily restrained Dion. But, as things are, by rushing the one against the other they have flooded the world with woes. [351a]

And yet Dion had the same designs as I myself should have had (for so I would maintain) or anyone else whose purpose regarding his own power and his friends and his city was the reasonable one of achieving the greatest height of power and privilege by conferring the greatest benefits. But a man does not do this if he enriches himself, his comrades, and his city by means of plotting and collecting conspirators, while in reality he himself is poor and not his own master but the cowardly slave of pleasures; [351b] nor does he do so if he proceeds next to slay the owners of property, dubbing them “enemies,” and to dissipate their goods, and to charge his accomplices and comrades not to blame him if any of them complains of poverty. So likewise if a man receives honor from a city for conferring on it such benefits as distributing the goods of the few to the many by means of decrees; or if, when he is at the head of a large city which holds sway over many smaller ones, he distributes the funds of [351c] the smaller cities to his own, contrary to what is just. For neither Dion nor any other will ever voluntarily⁸² aim thus at a power that would bring upon himself and his race an everlasting curse, but rather at a moderate government and the establishment of the justest and best of laws by means of the fewest possible exiles and executions.

Yet when Dion was now pursuing this course, resolved to suffer rather than to do unholy deeds—although guarding himself against so suffering⁸³—none the less when he had attained the highest pitch of superiority over his foes he stumbled. And therein he suffered no surprising fate. [351d] For while, in dealing with the unrighteous, a righteous man who is sober and sound of mind will never be wholly deceived concerning the souls of such men; yet it would not, perhaps, be surprising if he were to share the fate of a good pilot, who, though he certainly would not fail to notice the oncoming of a storm, yet might fail to realize its extraordinary and unexpected

violence, and in consequence of that failure might be forcibly overwhelmed. And Dion's downfall was, in fact, due to the same cause; for while he most certainly did not fail to notice that those who brought him down were evil men, yet he did fail to realize to what a pitch [351e] of folly they had come, and of depravity also and voracious greed; and thereby he was brought down and lies fallen, enveloping Sicily in immeasurable woe.

What counsel I have to offer, after this narrative of events, [352a] has been given already, and so let it suffice. But I deemed it necessary to explain the reasons why I undertook my second journey to Sicily⁸⁴ because absurd and irrational stories are being told about it. If, therefore, the account I have now given appears to anyone more rational, and if anyone believes that it supplies sufficient excuses for what took place, then I shall regard that account as both reasonable and sufficient.

1 Dion was about twenty in 388-387 B.C., the date of Plato's first visit to Syracuse; so if this letter was written in 353 B.C. the birth of Hipparinus (probably Dion's son, not his nephew) should be put at about 373 B.C. cf. Plat. L. 8. Prefatory Note and Plat. L. 8.355e.

2 Plato's uncle Charmides and his cousin Critias were among the leaders of "the Thirty."

3 For this episode see Plat. Apol. 32c.

4 Possibly an illusion to the execution of Theramenes by Critias.

5 i.e. the democrats under Thrasybulus and Thrasyllus.

6 Meletus and Anytus, the accusers of Socrates; see the Apology.

7 An obvious reference to Plat. Rep. 473d, Plat. Rep. 501e.

8 This echoes the famous passage in Plat. Rep. 5.473d; cf. Plat. L. 7.328a *infra*.

9 cf. Plat. Rep. 404d.

10 These are the three defective forms of government, contrasting with the three correct forms, monarchy, aristocracy, and constitutional republic; see Plat. Stat. 291d ff., Plat. Stat. 302b ff.

11 The first occasion being at Olympia in 360 B.C.; cf. Plat. L. 7.350b ff.

12 Dionysius the Elder died in 367 B.C.

13 Among the philosophers and sophists who are said to have been entertained by Dionysius were Aristippus the Cyreniac, Aeschines the Socratic, Polyxenus (cf. Plat. L. 2.310c) , and Philistus (cf. Plat. L. 3.315e) .

14 Probably sisters' sons of Dion, and not including Hipparinus (who would be too young at this date).

15 The second danger was of “proving false to Philosophy,” see Plat. L. 7.328e below.

16 A town close to Athens, to which the disciples of Socrates retreated after his death.

17 Zeus “the Guardian of guests” is mentioned because Plato was a guest-friend of Dion.

18 The citadel of Syracuse, where Plato was housed during both his visits, the tyrant thus having him under his eye.

19 Philistus and the anti-reform party alleged that Dion was plotting against the tyrant, aided and abetted by Plato, cf. Plat. L. 7.333e *infra*.

20 i.e. “first place” must be given to what is (ostensibly) the main object of the letter, viz. the advising of Dion's friends; see further the Prefatory Note.

21 For the comparison of the political adviser to a physician cf. Plat. Rep. 425e ff., Plat. Laws 720a ff.

22 On the subject of filial piety cf. Plat. Crito 51c, Plat. Laws 717b ff.

23 cf. Plat. L. 5.322b .

24 The reference is to the two brothers of Dionysius the Elder, Leptines and Thearidas.

25 Darius wrested the kingdom of Persia from the usurper Pseudo-Smerdis by the aid of six other Persian nobles, cf. Plat. Laws 695b ff. For the numerical computation of comparative happiness cf. Plat. Rep. 587b ff.

26 The maritime empire of the Athenians lasted for some seventy years after Salamis (480 B.C.)

27 Gelon succeeded Hippocrates as tyrant of Gela about 490 B.C., and then captured Syracuse and made it his capital. His defeat of the Carthaginians at Himera, 480 B.C., was celebrated by the poet Simonides.

28 i.e. by a military campaign (“deed” as opposed to “word”) in 357 B.C.

29 Callipus and Philostratus; cf. Plutarch, *Dion*, cc. 54 ff.

30 After the Little Mysteries of Eleusis the initiated became *μυστήρ*, after the Great Mysteries *ἀνέπόπτης*.

31 Cf. Plat. L. 7.336d, Plat. Laws 961a ff.

32 An allusion to the custom of offering the third (and last) cup at banquets as a libation to Zeus Soter; cf. Plat. Rep. 583b, Plat. Charm. 167b.

33 This theme is to be found also in the Gorgias and Republic; cf. also Plat. Lysis 217b.

34 cf. Plat. Gorg. 493e, Plat. Phaedo 81b, Plat. Phileb. 12b.

35 Hiero, tyrant of Syracuse (478-466) , waged successful war against the Carthaginians.

36 For the calamitous effects of “ignorance” (or “folly”) cf. Plat. Laws 688c ff., Plat. Laws 863c ff.

37 cf. Plat. Laws 646e ff., Plat. Laws 671d.

38 cf. Plat. Laws 715a ff.

39 For this scheme cf. Plat. Laws 752d ff; and for the qualifications of the law-givers cf. Plat. Laws 765d.

40 For the Law-governed State as the second-best, after the Ideal Republic, cf. Plat. Stat. 297d ff.

41 Alluding to the attempt then being made by Dion's party at Leontini, under Hipparinus (his nephew) , to overthrow Callipus.

42 This refers back to Plat. L. 7.330c, Plat. L. 7.330d, just before he begins his “counsel” to Dion's friends.

43 cf. Plat. L. 3.317a.

44 A famous scientist and statesman of Tarentum; cf. Plat. L. 7.350a *infra*, Plat. L. 13.360c.

45 Cf. Plat. L. 7.330b.

46 Plato had refused a second time; see Plat. L. 7.338e.

47 cf. Plat. L. 3.317.

48 Cf. Plat. L. 7.334d.

49 cf. Plat. Rep. 531d.

50 Probably an allusion to the proverbial maxim “Know thyself.”

51 cf. Plat. Sym. 210e for the “suddenness” of the mystic vision of the Idea.

52 On the danger of writing such doctrines cf. Plat. L. 2.314c ff.; and for philosophy as possible only for “the few” cf. Plat. Rep. 494a.

53 Cf. Plat. L. 7.341c.

54 cf. Plat. Laws 895d, where Essence, Definition, and Name are enumerated; also Plat. Parm. 142a.

55 For the definition of “circle” cf. Plat. Tim. 33b, Plat. Parm. 137e.

56 This echoes the language of Plat. Rep. 490b.

57 cf. Plat. Crat. 438d, Plat. Crat. 438e.

58 i.e. any number of straight tangents to a circle may be drawn; or, a circle, like a straight line, is composed of points, therefore the circular is full of the elements of the straight.

59 f. Plat. Crat. 384d, Plat. Crat. 384e for the view that names are not natural but conventional fixities.

60 cf. Plat. Theaet. 208b ff. for the instability of Definitions.

61 An Argonaut, noted for his keenness of sight; here, by a playful hyperbole, he is supposed to be also a producer of sight in others; cf. Aristoph.Plut. 210.

62 cf. Plat. Laws 816d.

63 Cf. Plat. L. 7.341c.

64 For legislation as not a “serious” subject but “playful” see Plat. Laws 769a; cf. Plat. Stat. 294a.

65 i.e. in his head, the abode of unexpressed thoughts; cf. Plat. Tim. 44d.

66 Hom. Il. 7.360, Hom. Il. 11.234.

67 cf. Plat. Phaedrus 275d,, Plat. Phaedrus 278a.

68 cf. Plat. Phaedo 62a, Plat. Phaedo 62b; the allusion is to the Theban dialect (ἵττω for ἴστω) used by Cebes.

69 Cf. Plat. L. 7.341a.

70 cf. Plat. L. 2.314a ff.

71 i.e. Plato himself.

72 Hom. Od. 12.428

73 Amongst Plato's companions on this visit were Speusippus and Xenocrates

74 For this use of the word ναύτης cf. Soph. Phil. 901.

75 For this part of the biographical details cf. Plat. L. 3.318a ff.

76 cf. Plat. Phaedrus 249d.

77 The mercenaries lived in the island of Ortygia, but beyond the walls of the Acropolis; so when Plato had to quit the Acropolis he was surrounded by them in his new lodgings.

78 cf. Plat. L. 3.318c for Heracleides, Theodotes, and Eurybius.

79 i.e. light-armed soldiers, so called from the kind of light shield they carried.

80 i.e. for the festival of 360 B.C.

81 Perhaps an allusion to the “wanderings of Ulysses” ; cf. Plat. L. 7.345e.

82 According to the Socratic dictum, “No one sins voluntarily.”

83 For “suffering” wrong as a bar to complete happiness cf. Plat. Laws 829a.

84 i.e. Plato's third Sicilian visit (as he does not count the first), cf. Plat. L. 7.330c, Plat. L. 7.337e.

Source: Plato. *Plato in Twelve Volumes*, Vol. 7 translated by R.G. Bury (Loeb Classical Library L234). Cambridge, MA, 1966.

THE following Index refers to the pages of Stephens, which are given in the margin of the translation. The page of Stephens is divided into five parts by the letters A, B, C, D, E, which are retained in the Index, though they are not given in the margin. Thus the letter A signifies the first portion of the page, the letter B the second, and so on.

The order in which the dialogues are arranged in the translation is as follows:—

For the analogy of the arts and virtues cp. Analogy. Art. [*No dialogue of Plato contains a discussion upon art in the*

general sense of the term. In Hellas, as in all countries where art has most flourished, the age of creation preceded the age of criticism and analysis. Plato knows nothing of 'schools' or of the history of art, nor does he select any building or statue for condemnation or admiration. Pheidias is only twice mentioned, once casually as the typical sculptor (Protag. 311 C), and again in the *Meno* (91 D), where Socrates says that Pheidias, although he wrought such exceedingly noble works, did not make nearly so much money by them as Protagoras did by his wisdom. Equally slight are the references to painters: the names of Zeuxippus (Protag. 318 B), Polygnotus (Ion 532 E), and Zeuxis (Gorg. 453 C) occur; but we hear nothing of any masterpiece of theirs, nor is the attempt made to point out their several characteristics. Art, according to the conception of Plato, is not a collection of canons of criticism, but rather a subtle influence which pervades all things animate as well as inanimate (Rep. 3. 400, 401). He judges art by one test, 'simplicity,' but under this he includes moderation, purity, and harmony of proportion; and, in the *Republic* at least, he places sculpture and architecture under the same rigid censorship which he applies to poetry and music (Rep. 3. 401 A). He dislikes the 'illusions' of painting (Rep. 10. 602), and the 'false proportions' given by sculptors to their subjects (Soph. 235, 236): both these he classes as a sort of magic. He has observed that excessive devotion to art is apt to produce effeminacy of character (Rep. 3. 411; 5. 475); but he hopes to preserve the

guardians of his state from this evil by the severe discipline and training of their early years. Thus in art as in many other respects Plato combines the reactionary and the reforming spirit. He is willing to follow the Egyptian fashion and consecrate the forms of art which have received the sanction of the authorities (Laws 2. 657 A). But he will banish from the state all that is base and impure, and surround his citizens with an atmosphere of grace and beauty which will instil noble and true ideas into their minds.]

Artemis, meaning of the name, Crat. 406 B; goddess of childbirth, Theaet. 149 B:—temple of [Artemis] Agra, Phaedr. 229 C.

Artemisium, battle of, Laws 4. 707 C; Menex. 241 A.

- Community. [*The communism upon which Plato has based his ideal polity seems to have been suggested by his desire for the unity of the state* (Rep. 5. 462 foll.; and cp. Arist. Pol. ii. 2-4). 'If those two small pestilent words "meum" and "tuum," which have engendered so much strife among men and created so much mischief in the world,' could be banished from the lips and thoughts of mankind, the dream of the philosopher would soon be realized. The citizens would have parents, wives, children, and property in common; they would rejoice in each other's prosperity and sorrow at each other's misfortune; they would call their rulers, not 'lords' and 'masters,' but 'friends' and 'saviours.' Plato was aware that such a conception could hardly be carried out in this world; and he evades or adjourns rather than solves the difficulty by the assertion of the famous 'paradox' that only when the philosopher rules in the city will the ills of human life find an end [cp. Introduction to Republic, p. clxxiii]. In the Critias, where the ideal state, as Plato himself intimates to us, is to some extent reproduced in an imaginary description of ancient Attica, property is common, but there is no mention of a community of wives and children. Finally in the Laws (5. 739), Plato, while still maintaining the blessings of communism, recognizes the impossibility of its

- realization, and sets about the construction of a 'second-best state' in which the rights of property are conceded; although, according to Aristotle (Pol. ii. 6, § 5), he gradually reverts to the ideal constitution in all except a few unimportant particulars. See s. v. State].*
- Comparison, difficulties occasioned by, Theaet. 154, 155.
- Compassionateness of Athens to the weak, Menex. 244, 245.
- Compensation for injury, Laws 9. 877, 878.

Counsellors, the two, of man (pleasure and pain), Laws 1. 644 C.

Country, arrangements for the defence of the, Laws 6. 760, 778 E (cp. Wardens of the Country):—a man's country to be served without taking of rewards, *ib.* 12. 955 C.

Courage, a part of virtue, Laches 190, 199; Protag. 349, 350, 353, 359; Laws 1. 631 D foll.; 3. 688 A, 696 B; 12. 963; fourth in the scale of virtue, Laws 1. 630 C, 631 D; 2. 667 A: = staying at one's post, Laches 190 E; = endurance of the soul, *ib.* 192; = knowledge of that which inspires fear or confidence, *ib.* 195 (cp. Rep. 2. 376; 4. 429 C, 442 B); = knowledge of that which is not dangerous, Protag. 360;—courage not to be ascribed to children or animals, Laches 196 E (*but* cp. Rep. 4. 430 B; Laws 12. 963 E); distinguished from fearlessness, Laches 197 B (cp. Protag. 349 C foll., 351, 359 foll.; Meno 88 A; Rep. 4. 430 B); concerned with the good and evil of all time, Laches 199; may exist in bad men, Protag. 349 D, 359 B; Laws 1. 630 B; springs in many cases merely from dread, Phaedo 68; inconsistent with the fear of death, *ibid.*; Rep. 3. 386; 6. 486 A; one of the philosopher's virtues, Phaedo 68; Rep. 6. 486 A, 490 E, 495 A; required in the guardians, Rep. 2. 375; 3. 386; 4. 429; 6. 503 E; a good, 1 Alcib. 115;—courage and temperance opposed, Statesm. 307, 308; to be blended, *ib.* 310 (cp. Laws 1. 630 A; 3. 696 A);—courage and wisdom, Protag. 350, 360 (cp. Laches 194 D; Gorg. 491, 495; Laws 12. 963);

—the courage which resists pleasure, Laws 1. 633:—the courageous life, *ib.* 5. 733 E:—the courageous temper averse to intellectual toil, Rep. 6. 503 D (cp. Tim. 88 D); dangerous to the state, when in excess, Statesm. 308 A; apt to make men brutal, *ib.* 309 D; a gift of nature, Laws 12. 963 E.

Courage. [*In treating of courage Plato shows a tendency, as in the case of the virtues generally, to connect or even identify it with knowledge. The subject is first discussed in the Laches, of which it forms the main topic. A series of definitions is there given, which are all found to be inadequate, but which exhibit the progression from a lower to a higher conception of courage. Laches begins by saying that courage is the quality which makes a man stand to his post; but this is refuted by the observation that 'courage may also be displayed in flight. A second definition, according to which courage is the same as endurance, is equally futile: for endurance may be mere persistence in a wrong course. Nicias then interposes:—Courage is a species of wisdom, which teaches us the true grounds of hope and fear. It is thus distinguished from confidence or fearlessness, which causes men and animals to be bold because they are ignorant of danger. Socrates answers that such a knowledge, like any other, must include the future and the past as well as the present, if it is to be of any use to us. But then courage, which is the 'knowledge of all,' will be identical with 'all virtue,' and we have gained, not a definition of courage, but of virtue in general.*]

—A similar identification of courage and wisdom is found in the Protagoras, and is there left unrefuted, although Socrates is made to intimate that the argument is inconclusive.—In the Republic, where courage, like the other virtues, is regarded principally in relation to the state, it is declared to be the especial virtue of the 'spirited element' in the soul which is represented by the warrior class among the citizens. But it is also (as in the Phaedo) a virtue of the philosopher, who alone of men fears neither death nor the life to come.—The Statesman contains an interesting contrast between temperance and courage. The courageous man is all fire and energy; he neither rests himself nor suffers others to rest. The orderly and moderate character on the contrary is long-suffering and patient, nor has he any inclination to interfere with his neighbours. The two dispositions are rarely or never united in the same person; and both when in excess are the cause of great evils (cp. the similar remarks in Rep. 6. 503 C and Theaet. 144 B, and v. s. v. Temperance).—In the Laws, of which one main thesis is 'that peace is better than war,' courage is placed fourth and lowest in the scale of virtues. Courage is a mere gift of nature, and may be shown even by children and the brutes. This is a fact which has been overlooked by the legislators of Crete and Sparta. They have tried to make their citizens courageous and enduring, but they have only regarded courage of the vulgar sort, and have neglected that nobler kind which teaches men to resist the insidious temptations of pleasure and desire. The

Spartans boast that they are superior to all other men in battle; but war is a matter of chance, and victory does not always prove the goodness or badness of institutions. (V. s. v. Virtue).]

Courtesans, Phaedr. 240 B; Rep. 3. 404 D.

Courts of Law, at Athens, Apol. 34;—in the Model City, Laws 5. 766; 9. 876. See Law courts.

Covetousness, not found in the philosopher, Rep. 6. 485 E; characteristic of timocracy and oligarchy, *ib.* 8. 548, 553; = the appetitive element of the soul, *ib.* 9. 581 A.

Cowardice, Protag. 359 foll.; Menex. 246; 1 Alcib. 115 D; in war, to be punished, Rep. 5. 468 A; Laws 12. 944 E; not found in the philosopher, Rep. 6. 486 B; alien to the nature of God, Laws 10. 901 E.

Craftsmen, dedicated to the Gods, Laws 11. 920 D; regulations for (in the Model City), *ib.* 920, 921. Cp. Artisans.

- animals under, *ib.* 563; elements combined in, *ib.* 564; may be either with or without law, Statesm. 302 D; the worst of lawful governments, the best of lawless ones, *ib.* 303 A; one of the two mother-forms of states, Laws 3. 693 D; to be combined with monarchy, *ibid.*, 698, 701 D; the third state in capacity for improvement, *ib.* 4. 710 E:—the democratical man, Rep. 8. 558, 559 foll., 561, 562; 9. 572; his place in regard to pleasure, *ib.* 9. 587.
- Democrates, father of Lysis, Lysis 204 E, 209 A; his wealth, *ib.* 205 C, 208.
- Demodocus, father of Paralus, Apol. 33 E.
- Demon (spirit, genius, *δαίμων*); etymology of the word, Crat. 397; Love a great demon (spirit), Symp. 202 E; every man has a demon (attendant genius), Phaedo 107 E, 108 B, 113 D; the genius of good fortune, Laws 5. 732 C:—Socrates' denial of the existence of demons, Apol. 27 foll.; the demons intermediate between God and man, Symp. 202 E; Statesm. 271 D (cp. Rep. 4. 427 B; Laws 4. 713 D, 717 B; 5. 727 A, 738 B, D, 740 A; 7. 801 E; 8. 848 D; 9. 853 C; 10. 906 A, 910 A); the agents under God in the creation of the universe, Tim. 41 foll.; assist in the government of the world, Statesm. 271 foll.
- Demophon, father of Menexenus, Lysis 207 B.
- Demus, the Athenian, Gorg. 481 D, E, 513 B (cp. 1 Alcib. 132 A).
- Demus, son of Pyrilampes, Gorg. 481 E, 513 B.
- Denial and affirmation, Soph. 264 A.
- Dependents as day-labourers, Euthyph. 4 C.
- Depletion, Tim. 81 A.
- Deposits, law respecting, Laws 11. 913.
- Desertion, indictment for, Laws 12. 943 D.
- Desire, a stronger tie than necessity, Crat. 403; nature of, Symp. 192, 200, 201 (cp. Phaedr. 237, 251); has a relaxing effect on the soul, Rep. 4. 430 A; conflict of desire and reason, *ib.* 439-442; 9. 571 (cp. Phaedr. 253 foll.; Tim. 69 E foll.; Laws 3. 687, 689); is of the soul only, Phil. 34, 35; a mingled pain and pleasure, *ib.* 47 E; the sense of (in the Heraclitean philosophy), Theaet. 156 B;—desire and friendship, Laws 6. 776 A:—the desires, should they be regulated? Gorg. 491 E foll., 505; painful, *ib.* 496 D; divided into simple and qualified, Rep. 4. 437 foll.; into necessary and unnecessary, *ib.* 8. 559; make men immoderate, Laws 11. 918 C:—desires of men, *ib.* 6. 782, 783; control of, *ibid.*; 8. 835, 836 (cp. Gorg. 505 B). Cp. Love.
- Despotism, evils of, Laws 3. 697, 701 E.
- Despots (masters), Rep. 5. 463 A. See Tyrants.
- Dessert, Rep. 2. 372 C; Crit. 115 B.
- Destiny, the, of man in his own power, Rep. 10. 617 E; the order of destiny, Laws 10. 904.
- Destiny, [the Goddess], Phaedr. 248 C; Rep. 5. 451 A.
- Destructions of mankind in past ages, Tim. 22 C; Statesm. 269 foll.; Laws 3. 677 (cp. Crit. 109 D).
- Deucalion, the deluge of, Tim. 22 A; Crit. 112 A.
- Diagnosis, Greek method of, Protag. 352. Cp. Medicine.
- Diagonal, see Mathematics.
- Dialect, Old Attic, *δαίμωνες*, Crat. 398 B; *ἑσπία*, *ib.* 401 C; *ῥῆμα*, *ib.* 410 C; *ο*=*ω*, *ibid.*, 420 B; use of

ε and δ for η or ε and ζ, *ib.* 418 B; ε = η, *ib.* 426 C:—Cean, Protag. 341 A:—Doric, Phaedo 62 A; Crat. 409 A:—Eretrian, Crat. 434:—Thessalian, *ib.* 405 C.

Dialectic, distinguished from eristic, Euthyd. 275 foll., 293 foll.; Meno 75 D, 80 E; Phaedo 101 E; Rep. 5. 454 A; 6. 499 A; 7. 539; Theaet. 167 E; Soph. 216 E; Phil. 17 A; divides things into their classes, Phaedr. 277; Soph. 253; Statesm. 286 (cp. Soph. 264 E); leads from earthly to heavenly conceptions, Symp. 210; aids to define ideas, Phaedo 75-79;—the most difficult branch of philosophy, Rep. 6. 498; proceeds by a double method, *ib.* 511; objects of, *ibid.*; 7. 537 D; compared to sight, *ib.* 7. 532 A; capable of attaining to the idea of good, *ibid.*; gives firmness to hypotheses, *ib.* 533; the copingstone of the sciences, *ib.* 534; must be studied by the rulers (in the best state), *ib.* 537; dangers of the study, *ibid.*; years to be spent in, *ib.* 539; despised by the many, Parm. 135 D; useless, if 'man is the measure of all things,' Theaet. 161 E; regardless of fine names, Soph. 227; needed, because ideas have no sensible image or form, Statesm. 285 E; a gift of the Gods, Phil. 16 C; first among all learning, *ib.* 57 (cp. Rep. 7. 534); wrongly employed by physical philosophers, Laws 10. 891 D; Athenian skill in, *ib.* 892:—the dialectical method of argument Parm. 135; compared to carving Phaedr. 265 E; Statesm. 287 B; has no place in the arts, Phil. 59; 'no respecter of persons,' Statesm. 266 D:—synthetic and analytic method, Phaedr. 265:—division,

Statesm. 258, 262, 265 (cp. 261-268):—dichotomy, *ib.* 262:—the 'dialectical net,' Soph. 235 (cp. Theaet. 165 E):—dialectic and the doctrine of recollection, Meno 81 E foll. (cp. Recollection):—dialectic and rhetoric, Phaedr. 266, 270 (cp. Gorg. 448 E, 471 E); dialectic and writing, Phaedr. 277.

Dialectic. [*Dialectic, the 'copingstone of knowledge,' is everywhere distinguished by Plato from eristic, i.e. argument for argument's sake, but takes various shapes with the changing forms of his philosophy. In the Symposium, where the lover and the philosopher are shown by Socrates to be one and the same, dialectic is the gradual process by the aid of which we pass from the sensible to the ideal, and the earthly love is refined into the 'birth in beauty.' A like conception is found in the Republic. There it is the means by which we learn to employ the hypotheses of science, not as final results, but as points from which the mind may rise into the higher heaven of ideas and behold truth and being (Rep. 6. 510, 511). This vague and magnificent conception was, perhaps, scarcely clearer to Plato himself at the time when he wrote than it is to us [cp. Introduction to Republic, p. xcii]. When Glaucon asks Socrates for an explanation, the latter gives an evasive reply:—Glaucon cannot follow him because he has never studied the preliminary sciences (Rep. 7. 533; and cp. Symp. 210 A). In the Sophist and Statesman dialectic assumes a more definite and less ideal form, and appears as a combination of analysis and synthesis by which we arrive at a*

- true notion of things, and are enabled to penetrate the many disguises of the Sophist and to distinguish the true statesman from his imitators and rivals.* [Cp. Phaedrus 265 E, where the dialectician is compared to a skilful carver because he understands the art of 'division into species.' So also Aristotle in the Politics (I. 1, § 3; 8, § 1) speaks of a 'customary method' (ὑφ' ἡγμένη μεθόδῳ) by the aid of which he resolves the whole into its parts or elements.] *In the Laws dialectic no longer occupies a prominent place; it is the 'old man's harmless amusement' (7. 820 C), or, regarded more seriously, the method of discussion by question and answer, which is abused by the natural philosophers to disprove the existence of the Gods (10. 891).]*
- Dialectician, the, user of names, Crat. 390; gardener of the soul, Phaedr. 276 E; has a conception of essence, Rep. 7. 534 (cp. Phaedo 75 D); cares only for truth, Statesm. 287 A:—enthusiasm of the youthful dialectician, Phil. 15, 16.
- Diaprepes, son of Poseidon, Crit. 114 C.
- Dice (ἀσπράγαλοι), Lysis 206 E; 1 Alcib. 110 B;—(κύβοι), Rep. 10. 604 C; Theaet. 154 C, 155 B; the game of dice (κυβεία) invented by Theuth, Phaedr. 274 C;—'thrice six or thrice ace,' (the highest and the lowest throw), Laws 12. 968 E;—skill required in dice-playing, Rep. 2. 374 C.
- Dictation in schools, Euthyd. 276 C, 277 A.
- Diet, Rep. 3. 404 foll.; 8. 559 C; Tim. 89; Laws 2. 659 E; effects of change of, Laws 7. 797 E.
- Differences in natural inclination explained, Phaedr. 252:—differences and likenesses in things, *ib.* 261 E, 262 A; accidental and essential differences, Rep. 5. 454.
- Difficult (χαλεπὸν), = 'evil' in the Cean dialect, Protag. 341 A.

Guardians, Rulers):—[in the Model City]; the preliminary, Laws 7. 788 foll., 808 foll.; the higher, *ib.* 817 E; 12. 967;—Director or Minister of Education, *ib.* 6. 765 D foll.; 7. 801 D, 809, 811 D, 812 E, 813 C; 8. 829 D, 835 A; 11. 936 A; 12. 951 E, 953 D (cp. Director).
 Education. [*The subject of education is incidentally treated in many of the Dialogues of Plato; for Socrates is the especial friend of youth, and takes the greatest interest in their growth and progress. Melesias and Lysimachus come to him for advice about the training of their sons: the youthful Hippocrates entreats him for an introduction to Protagoras: Theaetetus submits himself gladly to the treatment of the skilful practitioner. Plato's own views are given at length in the Republic and in the Laws, and form a main part of their contents. The Greek philosophers were profoundly convinced of the necessity and importance of education: in this respect their views were in advance of those which have been entertained in modern countries until quite recent times. [Cp. Arist. Pol. viii. 1, § 3; 3, § 10.] The system of education which Plato has sketched in the Republic appears to be nearly the same with that which is contained in the Laws: their principal features may be*

summed up as follows:—There is the common education of the (i) citizens; (ii) the special education of the rulers. (i) The first, beginning with childhood in the plays of the children, is the old Hellenic education, [the κατὰ βιβλημένα παιδεύματα of Aristotle, Pol. viii. 2, § 6], 'music for the mind and gymnastic for the body.' But, according to Plato, both are really intended for the benefit of the soul (cp. Tim. 88): and under 'music' he includes literature (λόγος), i. e. humane culture as distinguished from scientific knowledge. Music precedes gymnastic: both are not to be learned together; only the simpler kinds of either are tolerated. Boys and girls share equally in both. The most careful attention must be paid to good surroundings; nothing mean or vile must meet the eye or strike the ear of the young scholar. The fairy tales of childhood and the fictions of the poets are alike placed under censorship. [Cp. the Politics of Aristotle, vii. 17, and see s. v. Poetry]. Gentleness is to be united with manliness; beauty of form and activity of mind are to mingle in perfect and harmonious accord.—The ages at which children should commence their various studies are not stated in the Republic; but in the VIIIth Book of the Laws, where the subject is treated more in detail, the children begin going to school at ten, and spend three years in learning to read and write, and another three years in music (Laws 7. 810). This agrees very fairly with the selection of the most promising youth at the age of twenty (Rep. 7. 537), as it would allow a corresponding period of three years for gymnastic training.—

- (ii) *The special education is scarcely more than alluded to in the Laws (7. 817 E; 12. 967), but is described at length in the Republic. According to the latter the selected students are to spend ten years in the acquisition of the higher branches of arithmetic, geometry, astronomy, harmony, which are not to be pursued in a scientific spirit or for utility only, but rather with a view to their combination by means of dialectic into an ideal of all knowledge (see s. v. Dialectic). At thirty a further selection is made: those selected spend five years in the study of philosophy, are then sent into active life for fifteen years, and finally after fifty return to philosophy, which for the remainder of their days is to form their chief occupation.]*
- Effect and cause, Euthyph. 10; Phil. 26, 27.
- Effluences of existence, Meno 76.
- Egypt, embalment in, Phaedo 80 C; passage money from, to Athens, = two drachmae, Gorg. 511 D; tale brought by Solon from, Tim. 21 C; Crit. 108 D, 113; kings of, priests, Statesm. 290 E; conquered by the Persians, Menex. 239 E; Athenian expedition to, *ib.* 241 E:—Egyptian Delta, Tim. 21 E:—Egyptian deities; Neith, *ibid.*, 23 E; Theuth, Phaedr. 274 C, 275 C; Phil. 18 B:—‘Egyptian tales,’ Phaedr. 275 B:—the Egyptian wizard (Proteus), Euthyd. 288 B:—Egyptians characterized by the love of money, Rep. 4. 435 E; consecrate every form of art, Laws 2. 656 D, 660 B; 7. 799 A; cunning and crafty, *ib.* 5. 747 C; teach their children arithmetic by means of games, *ib.* 7. 819 B; inhospitable, *ib.* 12. 953 E.

- Gentleness of the just, Gorg. 516 C; characteristic of the philosopher, Rep. 2. 375, 376; 3. 410; 6. 486 C; ought to be found in every man, Laws 5. 731 B.
- Geographers, mistaken in their notions about the earth, Phaedo 108 C.
- Geometry, invented by Theuth, Phaedr. 274 C; must be learnt by the rulers in the best state, Rep. 7. 526 foll. (cp. Laws 7. 817 E); erroneously supposed to serve for practical purposes only, Rep. 7. 527:—geometry of plane surfaces, Laws 7. 819, 820; of solids, Meno 82; Rep. 7. 528; Theaet. 147 D foll.:—geometry in the division of species, Statesm. 266:—geometrical diagrams, Crat. 436 D:—geometrical figures, beauty of, Phil. 51 C:—geometrical hypotheses, Meno 87 B:—geometrical necessity, Rep. 5. 458 D:—geometrical notions apprehended by a faculty of the soul, *ib.* 6. 511 C (cp. Theaet. 185 D, E):—geometrical ratios, Statesm. 257.
- Gerosia, the, at Lacedaemon, Laws 3. 691 E.
- Geryon, Euthyd. 299 C; Gorg. 484 B; Laws 7. 795 C.
- Gestation and nursing, Laws 7. 789.
- Ghosts, Phaedo 81 D; Laws 5. 738 C; 10. 910 A (cp. Tim. 72 A).
- Giants, battles of the, Rep. 2. 378 B; Soph. 246 A (cp. Euthyph. 6. B, C; Symp. 190 B).
- Gifts given to victors, Rep. 3. 414 A; 5. 460 B, 468:—gifts of nature, Phaedr. 269 E; Rep. 2. 370 A; 5. 455; 7. 535 A; may be perverted, Rep. 6. 491 E, 495 A; 7. 519 (cp. Laws 5. 747; 7. 819 A; 10. 908 C).
- Girls, education of, Laws 7. 794 D, 804 E, 813; contests of, *ib.* 8. 833 C, 834 D. Cp. Women.
- Givers of names, Crat. 389, 393 E, 404 A, 408 A, 414 B, 427 D, 429 E, 431 E, 436, 437 E; Laws 7. 816 B. Cp. Names.
- Glass, Tim. 61 C.
- Glaucon, son of Ariston, Rep. 1. 327 A; takes up the discourse, *ib.* 347 A; 2. 357, 372 C; 3. 398 B; 4. 427 D; 5. 450 A; 6. 506 D; 9. 576 B; anxious to contribute money for Socrates, *ib.* 1. 337 E; the boldest of men, *ib.* 2. 357 A; his genius, *ib.* 368 A; distinguished at the battle of Megara, *ibid.*; a musician, *ib.* 3. 398 D; 7. 531 A; desirous that Socrates should discuss the subject of women and children, *ib.* 5. 450 A; breeds dogs and birds, *ib.* 459 A; a lover, *ib.* 474 D (cp. 3. 402 E; 5. 458 E); not a dialectician, *ib.* 7. 533; his contentiousness *ib.* 8. 548 E; not acquainted with the doctrine of the immortality of the soul, *ib.* 10. 608:—mentioned, Parm. 126 A.
- Glaucon, father of Charmides, Charm. 154 B, 158 B; Protag. 315 A; Symp. 222 B.
- Glaucon, a famous rhapsode, Ion 530 D.
- Glaucon, the *Symposium* narrated

- to, by Apollodorus, Symp. 172 B.
- Glaucus, the sea-god, Rep. 10. 611 C:—'the art of Glaucus,' [? the Chian artist], Phaedo 108 D.
- Gluttony, Phaedr. 238 A; Rep. 9. 586 A; Tim. 72 E.
- Goats, keeping of, Laws 1. 639 A:—'the goat of tragedy,' Crat. 408 C.
- God, the Great Artist, Rep. 10. 596 (cp. Laws 10. 902 E); the Maker of all things, Rep. 10. 597 C; the best of causes, Tim. 29 A; the Creator, *ib.* 30 foll.; Soph. 265; Statesm. 269, 270 (cp. Laws 10. 886 foll.); assisted in His work by subordinate deities, Tim. 41 A; the Shepherd, Crit. 109; Statesm. 271, 275;—alone is wise, Phaedr. 278 D (cp. Tim. 51 E); not the author of evil, Rep. 2. 379, 380 A; 3. 391 C (cp. 2. 364; Laws 2. 672 B); never changes, Rep. 2. 380; will not lie, *ib.* 382; alone able to combine the many into one or dissolve the one into many, Tim. 68 D; alone has absolute knowledge, Parm. 134 D; is perfect righteousness, Theaet. 176 C; aided by chance and art in the government of the world, Laws 4. 709 (cp. 10. 889); moves in a straight line towards His end, *ib.* 4. 716 A; the measure of all things, *ib.* D; will not receive the gifts of the wicked, *ib.* E; watches over the stranger and the suppliant, *ib.* 5. 729 E; cannot fight against necessity, *ib.* 741 A; 7. 818 A (cp. Protag. 345 D); approves of the middle state, Laws 7. 792 D; the nature of, a fit subject of enquiry, *ib.* 821 (cp. 12. 966); has no cowardice, *ib.* 10. 901 E; exercises thought for all, *ib.* 902 B;—takes away the mind of the poet, Ion 534 (cp. Laws 3. 682 A; 4. 719 B; 2 Alcib. 147 C).
- Gods, the, Socrates' belief in, Apol. 26; human ignorance of, Crat. 400 E, 425 C (cp. Rep. 2. 365 E; Crit. 107; Parm. 134 E); disbelief in, Rep. 2. 365; Laws 10. 885 foll., 887, 909; 12. 948; existence of, proved, Laws 10. 886-900; 12. 966; said to exist by convention, *ib.* 10. 889 E; supposed to take no heed of human affairs, *ib.* 885 C, 888 E foll.; 12. 948 (cp. Rep. 2. 365 E; Parm. 134 E); not careless or ignorant, Laws 10. 900; eternal, but the soul and body indestructible, *ib.* 904 A; not to be appeased by gifts, *ib.* 905, 908 E (cp. Rep. 2. 364; Laws 4. 716 E; 10. 885 C, 888 D; 12. 948 C, D; 2 Alcib. 149 E); hate falsehood, Laws 11. 917 A; belief in, not universal, *ib.* 12. 948:—common stories about the gods, not to be received, Euthyph. 6, 8; Rep. 2. 378 foll.; 3. 388 foll., 408 C; Laws 10. 886 C; 12. 941 (cp. Symp. 195 C; Crit. 109 B; Laws 2. 672 B; and see Menex. 237 C); the Gods ought not to be represented grieving or laughing, Rep. 3. 388; have neither joy nor sorrow, Phil. 33 B, C:—sun and moon are gods, Apol. 26; Laws 7. 821 (cp. 10. 886); the gods of Hades, Phaedo 63 C; Laws 12. 958 C; gods of the natural world, Crat. 408 E; gods who 'wander about at night in the disguise of strangers,' Rep. 2. 381 D; the earth the first and oldest of gods in heaven, Tim. 40 C; genealogy of the gods, *ib.* E (cp. Crat. 402); the gods divided into the Olympian gods, gods of the state, gods of the world below, ancestral and private gods, Laws 4. 417 A; gods of generation, *ib.* 5. 729 C; 9. 879 D; the twelve, in the Model City, *ib.* 5. 745; 6.

771; 8. 828 B, 848 D; the gods who preside over contests, (*ἀγῶνισθαι θεοί*), *ib.* 6. 783 A; the gods to whom the several days and nights are dedicated, *ib.* 7. 807 A; heavenly and infernal gods, *ib.* 8. 828 D; the gods who avert evils, (*ἀποτροπαῖοι θεοί*), *ib.* 9. 854 B; the gods who are concerned with the prevention of murder, *ib.* 871 C; the gods of the Agora, *ib.* 11. 917 D :—procession of the gods, *Phaedr.* 246 E foll. :—names of the gods, *Crat.* 397, 400 foll. :—war of the gods and giants, *Rep.* 2. 378 B; *Soph.* 246 A (cp. *Euthyph.* 6 B, C; *Symp.* 190 B) :—strife of the gods respecting Attica, *Menex.* 237 C (cp. *Crit.* 109 B) :—sacrifices to the gods below at places where three ways meet, *Phaedo* 108 A; laws about the gods, *Laws* 4. 716, 717; arrangements for their worship in a new state, *ib.* 5. 738; ancient local deities, to be honoured, *ib.* B; 8. 848 C; gods and temples not easily established, *ib.* 11. 909 C; invocation of gods at sales, *ib.* 916 E, 917 B; law respecting offerings to, *ib.* 12. 955 E :—the gods love a joke, *Crat.* 406 C; have each their appointed work, *Phaedr.* 247 A; influence of, on love, *ib.* 252, 253; the givers of good, *Euthyph.* 14, 15 (cp. 2 *Alcib.* 148 C); our guardians and masters, *Phaedo* 62 (cp. *Laws* 5. 727 A; 1 *Alcib.* 124); are thought to favour the unjust, *Rep.* 2. 362 B, 364 (cp. *Laws* 10. 899 E); share in immortality by the will of the Creator, *Tim.* 41 A; visit the good and evil among men, *Soph.* 216 A; their gifts to men, *Statesm.* 274 (cp. *Protag.* 320 D); excuse the perjuries of lovers, *Phil.* 65 C (cp. *Symp.* 183 B); unlike men, have absolute knowledge, *Laws* 1. 641 E; have appointed festivals

as a relief to men, *ib.* 2. 653 D, 665 A; cease to be revered when anarchy prevails, *ib.* 3. 701 C; a man's most precious possession, *ib.* 5. 726, 727; sometimes oppose men, *ib.* 732; exist in all things, *ib.* 10. 899; are our kindred, *ib.* 900 A (cp. *Protag.* 322 A); have care of orphans, *Laws* 11. 927 B; the aged bear their likeness, *ib.* 930 E foll.; listen to the imprecations of parents, *ib.* 931 B (cp. 2 *Alcib.* 138).
 God. [*The dialogues of Plato show us the ancient religious system of Hellas in a state of disintegration and transition. Old ideas were passing away:—Homer had ceased to be a sufficient guide to men who had sat at the feet of the Sophists: the traditional conceptions of right and wrong were made topics of debate in the schools. Amid this chaos of opinion Plato strove to separate the truer and more permanent elements of religion and to give a new sanction to them. The ancient mythology was intolerable to him; the stories of the gods 'were lies, and, what is more, bad lies.' How could the guardians be the 'virtuous rulers of a virtuous state' if they were taught in the impressible days of their childhood that the gods were the authors of evil, or would accept the gifts of the wicked, or show favour to the unjust? Would they not be tempted to make the crimes which the poets impute to the gods an excuse for their own transgressions? Accordingly Plato lays down in the second book of the Republic two canons of religion: 'God is perfect and unchangeable,' and 'God is true and the author of truth.' These opinions must be held and acted upon by all the citizens of the*

perfect state; and they also serve as a test by which to try poetry and the poets (see s. v. Poetry). Homer and the tragedians represent the gods as changing their forms and deceiving men by lying dreams; and therefore they must be expelled from the state.—A similar spirit characterizes the Laws; but some differences may be noted. A more austere temper is shown in the later treatise; the question of the existence of the gods is debated with the greatest earnestness, and the unbeliever who remains impenetrable to argument is threatened with bonds and death. The Laws is also more pessimistic in tone than the Republic; the thought of the insignificance of man and the shortness of human life is constantly present to Plato's mind and forms a background to the whole work. Human affairs are not worth much consideration: we are but the puppets of the gods, playing our parts for a brief while in the tragi-comedy of life.—The conception of God as the Demiurgus or Creator of the universe, which is prominent in the Timaeus, the Statesman, and to a lesser degree in the Sophist (265 foll.), hardly appears in the Republic or Laws (cp. Rep. 10. 596 foll.; Laws 10. 886 foll.). The Timaeus is remarkable for the manner in which Plato attempts to solve the problem of the existence of evil. The Maker first creates the universe, and then delegates the creation of man and the animals to an inferior order of gods, of whom He is 'the Father and Artificer.' They receive from Him the divine and immortal element, i.e. the soul, and combine it in due proportion with the

material and perishable. Thus man, 'the most religious of animals,' comes into being, but evil is born within him by reason of his composite nature. Yet with the aid of education he can struggle against his passions and desires, and pass through the pilgrimage of life unharmed. If he yields to temptation, he himself and not his Creator is responsible for his evil state (cp. Rep. 10. 617 E).—In the Statesman the riddle of the universe receives a somewhat different solution. There was a time when the Creator Himself presided over the revolutions of the world. This was the so-called 'age of Cronos,' during which men lived the life of nature in peace and innocence. But in the fulness of time He withdrew His hand from the helm, and the world turned back in its course with a mighty shock which caused the destruction of all living creatures. A new race then succeeded, and at first things went fairly well. But gradually the evil which was inherent in matter reasserted itself, and the world was ready to fall into chaos again. The Creator once more took the helm and restored order to creation. At the same time He made the world immortal and self-creating: men and animals no longer grew out of the earth, but reproduced their species, each after their kind. In the beginning the human race was poor and helpless, but gradually by the aid of the gods they acquired the arts of life and learnt to form social communities (cp. Laws 3. 677 foll.). In this manner Plato sets forth under a mythical disguise both the origin of evil and the growth of civilization among men.]

Goddess of ways, Laws 11. 914 B.

Gold (and silver), not allowed to the guardians, Rep. 3. 416 E; 4. 419, 422 D; 5. 464 C; Tim. 18 B; mingled by the God in those who are to rule, Rep. 3. 415 A (cp. 8. 546 E); nature of, Tim. 59; not used in ancient Attica, Crit. 112 C; unknown to primitive society, Laws 3. 679 B; not to be possessed in the Model City, *ib.* 5. 742 A, 743 D, 746 A; not to be offered to the gods, *ib.* 12. 955 E.—refining of gold, Statesm. 303 D.

Laws 9. 870 A); enumerated, Euthyd. 279; Meno 78; remedial goods, Protag. 354 A; goods an object of desire to all, Euthyd. 279; use of, depends on knowledge, *ib.* 287; Meno 88; goods of the soul, Meno 88; the goods of life often a temptation, Rep. 6. 491 E, 495 A (cp. Laws 5. 729 A); goods not to be over-estimated, Crit. 120; wrongly judged by the many, Laws 2. 661 A; 5. 742 E; an evil to the evil, *ib.* 2. 661 (cp. Eryx. 396 E foll.).

Good man, the, no evil can happen to, Apol. 30 D, 41 (cp. Rep. 3. 387 C); like the good artist, has a view to the best, Gorg. 503 E; will disdain to imitate ignoble actions, Rep. 3. 396:—Good men are like and friends to one another, Lysis 214 C (cp. Phaedr. 255 A); self-sufficient, Lysis 215 A; Rep. 3. 387 (cp. Menex. 247 E); not good by

- nature, Meno 89; hated by the world, Apol. 28 A; enjoy happiness in the life to come, *ib.* 41; Phaedo 63, 107, 114; Gorg. 526 C, 527 D; why they take office, Rep. 1. 347; = the wise, *ib.* 350; 1 Alcib. 124, 125; unfortunate (Adeimantus), Rep. 2. 364; will not give way to sorrow, *ib.* 3. 387; 10. 603 E (cp. Laws 5. 732 B; 7. 792 B, 800 D; Menex. 247 D); appear simple from their inexperience of evil, Rep. 3. 409 A; hate the tyrant, *ib.* 8. 568 A; able to rule themselves, Laws 1. 626, 627, 644 B; the friends of God, and like Him, *ib.* 4. 716 D (cp. Symp. 212 A; Rep. 2. 383 C; 10. 613 A; Theaet. 176 B; Phil. 39 E); ought to impart their virtue, Laws 5. 730 E; ought to be both gentle and passionate, *ib.* 731 D (cp. Rep. 3. 410); will prefer exile to an unjust form of government, Laws 6. 770 E; are the enemies of the evil, *ib.* 10. 908 B; are found even in ill-ordered states, *ib.* 12. 951 B (cp. Phaedo 78 A); best able to tell a falsehood, Hipp. Min. 367 foll.:—sons of good men not good, Laches 179, 180; Protag. 320, 324, 325; Meno 93 (cp. Laws 3. 694 D; 1 Alcib. 118 E).
- Goods, community of, Rep. 3. 416; 5. 464; 8. 543 A; Laws 5. 739; 7. 807 B; in ancient Attica, Crit. 110 D; in the days of Cronos, Statesm. 272 A. Cp. Community.
- Gorgias, a great master of rhetoric, Phaedr. 261 C; Symp. 198 C; well aware that probability is superior to truth, Phaedr. 267 A; his influence at Larisa, Meno 70; his style of answer, *ibid.* (cp. 76 C); his influence on Meno, *ib.* 71 E; his definition of virtue, *ib.* 73 D; does not profess to teach virtue, *ib.* 95 C; has failed to educate Meno, *ib.* 96 E; goes the round of the cities, Apol. 19 E; the guest of Callicles, Gorg. 447 B; converses with Socrates, *ib.* 449 A–461 A; accustomed to go with his brother Herodicus to persuade patients to take medicine, *ib.* 456 B; his deference to opinion, *ib.* 482 D, 487 A, 494 D; used to maintain that the art of persuasion was superior to every other art, Phil. 58 B foll. Cp. Rhetoric.
- Gorgons, Phaedr. 229 E.
- Gortys, in Crete, colonized from Gortys in Peloponnesus, Laws 4. 708 A.
- Gout, 2 Alcib. 139 E, 140 A.
- Government, the art of, slowly grew up among mankind, Protag. 322 B; a science, Statesm. 292, 293; good government possible without laws, *ib.* 294; science of government attained by few, *ib.* 292, 300; government without knowledge, a source of misery, *ib.* 301 E; origin of government, Laws 3. 676 foll.
- Government, forms of, should they be administered in the interest of the rulers? Rep. 1. 338 D, 343, 346 (cp. Statesm. 295 E); have undergone many changes in the course of ages, Laws 3. 676 B (cp. 6. 782 A); no form can be destroyed except by the fault of the rulers, *ib.* 3. 683 C;—the patriarchal form the oldest of all, *ib.* 680; gradual development of the earlier forms, *ib.* 680, 681;—the two mother forms, democracy and monarchy, *ib.* 693 C;—the five [or four] imperfect forms, Rep. 4. 445 B; 8. 544; Statesm. 291 foll., 301 foll. (cp. Laws 4. 712 B, C); arise from unwillingness to accept the rule of the one best man, Statesm. 301 D; their order in capacity for improvement, Laws 4. 711;—succession of changes in states, Rep.

8. 545 foll.;—present forms of government in an evil condition, *ib.* 6. 492 E, 496; none of them adapted to philosophy, *ib.* 497; are 'states of discord,' Laws 8. 832 C; all depend upon a principle of justice, *ib.* 12. 945 D (cp. Rep. 1. 338 E); based on the supremacy of certain classes, Laws 12. 962 E (cp. 4. 714):—peculiar barbarian forms, Rep. 8. 544 D;—the Persian Government in the days of Cyrus, Laws 3. 694 foll.;—the ancient Athenian constitution, *ib.* 698 foll. (cp. Menex. 238 C);—the elements of all forms combined in the Lacedaemonian and Cretan governments, Laws 4. 712:—the first, second, and third forms of the ideal state, *ib.* 5. 739; 7. 807 B. Cp. Constitution, Model City, State.

Government, forms of. [*The three dialogues of Plato which more especially deal with political science,—the Republic, the Statesman, and the Laws,—all contain discussions of the different forms of government and the manner in which they should be classified; and in each of them somewhat different conclusions are reached.—In the Republic the series commences with the perfect state which may be either monarchy or aristocracy, accordingly as 'the one best man' bears rule or many who are all 'perfect in virtue' [cp. Arist. Pol. iv. 2, § 1]. The further succession is then somewhat fancifully connected with the divisions of the soul. The rule of reason [i. e. the perfect state] passes into timocracy, in which the 'spirited element' is predominant; timocracy into three governments in turn, which represent the 'appetitive principle,'—first, oligarchy, in which the desire of wealth is*

supreme; secondly, democracy, characterized by an unbounded lust for freedom; thirdly, tyranny, in which all evil desires grow unchecked, and the tyrant becomes 'the waking reality of what he once was in his dreams only.' Each of these inferior forms is illustrated in the individual who corresponds to the state and is 'set over against it.'—In the Statesman, after the government of the one or many good has been separated, the remaining forms are classified accordingly as the government has or has not regard to law, and democracy is said to be 'the worst of lawful and the best of lawless governments' (an expression to which Aristotle takes objection, Pol. iv. 2, § 3).—In the Laws the subject is differently treated: monarchy and democracy are considered to be the 'two mother forms,' which must be combined in order to produce a good state, and the Spartan and Cretan constitutions are therefore praised as polities in which every form of government is represented. But the majority of existing states are mere class-governments and have no regard to virtue.—These various ideas are nearly all reproduced or criticized by Aristotle in the Politics, who, however, does not there employ the term 'timocracy,' and adds one great original conception, the *μεσὴ πολιτεία*, or government of the middle class. He divides existing governments into three true forms and three 'perversions,' accordingly as the state is or is not ruled with a view to the common interest: the true forms are monarchy, aristocracy, 'polity,' and the 'perversions,' tyranny, oligarchy, democracy (iii. 7).

- All alike, good and bad, may also be considered perversions of the perfect state* (iv. 8, § 1). *In the Ethics* (viii. 10) he speaks of the 'timocratic state, which is usually called polity'; but he derives the name from τιμήμα (ἡ ἀπὸ τιμημάτων πολιτεία, — 'that government which is based upon a property qualification'), not, as Plato does, from τιμή (ἡ φιλότιμος πολιτεία, — 'the government of honour').]
- Governments, sometimes bought and sold, Rep. 8. 544 D.

 Holiness (δσιότης), one of the five virtues, Protag. 329 C, 359 A; nature of, Euthyph. 10. foll.;—accepted of God, Laws 4. 716;—holiness and justice, Protag. 330, 331; Euthyph. 12. *See* Piety.
 Holiness. [*Holiness is enumerated as one of the virtues only in the Protagoras and Euthyphro.—In the Protagoras it is cursorily men-*

tioned in the discussion upon the unity of virtue (v. s. v. Virtue), and is there said to have an especial affinity to justice.—In the *Euthyphro* the nature of holiness is the principal theme. Socrates, who is just going to stand his trial on a charge of impiety, meets the soothsayer *Euthyphro* and takes the opportunity of having a lesson upon holiness from him. *Euthyphro* first suggests that holiness is doing as he is doing, prosecuting his father for homicide. But this is clearly an example, not a definition, of piety. Another endeavour is made:—‘Piety is that which is dear to the Gods, and impiety that which is hateful to them.’ The Gods, however, may differ, like men, about what is just or unjust, and the action which pleases one God may displease another. And if, by way of correction, we affirm that what all the Gods love is pious, and what they all hate is impious, still this only gives us an attribute of the Gods; it does not show the real nature of piety. Again *Euthyphro* attempts a definition:—‘Piety is that part of justice which gives to the Gods their due.’ But piety thus becomes merely a way of doing business with the Gods. They give us various good things, and receive in return gratitude from us. Once more then, piety is, not what is beneficial, but what is dear or grateful to the Gods. The argument has gone round in a circle: but *Euthyphro* is in a hurry and cannot stay to explain his meaning.—The subject is not elsewhere resumed by Plato, nor is holiness reckoned among the virtues in his later dialogues. Probably, if we may judge from the indications which he has sup-

plied in the *Protagoras* and the *Euthyphro*, he regarded holiness as a part of justice, and thought, therefore, that it did not require further discussion apart from the virtue under which it was included.]

Holiness of marriage, Rep. 5. 458 E foll.; Laws 6. 775. Cp. Marriage.

Homer, a sophist, Protag. 316 D; the best and most divine of poets, Ion 530 B, 531; 2 Alcib. 147 C; the principal study of the rhapsodes, Ion 531 A; subjects of his poetry, *ib.* C; like a magnetic ring, *ib.* 536 A, B; his knowledge of the arts, *ib.* 537 A foll. Idea. [*The Idea of Good is an abstraction, which, under that name at least, does not occur in any other of Plato's writings except the Republic. But it is probably not essentially different from another abstraction, 'the true being of things,' which is mentioned in many of his dialogues. He has nowhere given*

an explanation of his meaning, not because he was 'regardless whether we understood him or not,' but rather, perhaps, because he was himself unable to state in precise terms the ideal which floated before his mind. He belonged to an age in which men felt too strongly the first pleasure of metaphysical speculation to be able to estimate the true value of the ideas which they conceived (cp. his own picture of the effect of dialectic on the youthful intellect, Rep. 7. 539). To him, as to the Schoolmen of the Middle Ages, an abstraction seemed truer than a fact: he was impatient to shake off the shackles of sense and rise into the purer atmosphere of ideas. Yet in the allegory of the cave (Republic vii), whose inhabitants must go up to the light of perfect knowledge, but descend again into the obscurity of opinion; he has shown that he was not unaware of the necessity of finding a firm starting-point for these flights of metaphysical imagination (cp. Rep. 6. 510). A passage in the Philebus (65 A) will give the best insight into his meaning: 'If we are not able to hunt the good with one idea only, with three we may take our prey,—Beauty, Symmetry, Truth.' The three were inseparable to the Greek mind, and no conception of perfection could be formed in which they did not unite (cp. Introduction to Rep. p. lxix).]

Ideas. [*No part of Plato's philosophy has been more commonly associated with his name than 'the doctrine of ideas.' But his meaning has been often misunderstood, or he has been supposed to be formulating a system when he is only 'guessing at truth.' His*

opinions did not always remain the same, and in his later works the ideas are not so prominent as in the *Phaedo* or *Phaedrus*. He is his own best critic in the *Parmenides* and the *Sophist*, and has there shown how fully he appreciates the difficulties of the argument.—The ideas are one phase of a conception which he has expressed in many forms in his various writings:—That there is a truth which is beyond sense, and which is perceived by the mind alone when freed from the 'disturbing element' of the body (*Phaedo* 65; *Tim.* 51; and *cp.* *Theaet.* 185 foll.). In this spirit the subjects of the higher education are discussed in the *Republic* (Book vii), and the sciences are declared to be valuable only in proportion as they enable us to attain true being. The ideas may be gained by association, which Plato calls 'the reminiscence of knowledge acquired in a previous state,' when we beheld them 'shining in brightness' (*Phaedr.* 250), and makes a proof of immortality (*Phaedo* 73, 76): or they may be reached by the 'gracious aid' of dialectic, which uses the objects of sense as steps by which we are able to mount to the sphere of the absolute (*Symp.* 211, and *cp.* *Rep.* 5. 476; 6. 510). They are unchangeable and invisible, and therefore akin to the divine element in us, that is, the soul (*Phaedo* 78 E). By participation in them things are what they are: the beautiful is beautiful because it shares in the idea of beauty, that which is just is just because it partakes of the nature of justice (*Phaedo* 100-105; *Parm.* 130). Nor could names ever have been found for things, unless the

legislator, who was the original name giver, had been acquainted with the ideas which they represent (*Crat.* 389). Again, the ideas afford an argument against the Heraclitean doctrine of flux: for that which is absolute and true cannot change, but must always abide and exist (*ib.* 439, 440). The ideas are the work of God, and the artist only imitates them at second- or even third-hand: for there cannot be two or more ideas of the same thing (*Rep.* 10. 596 foll.; *Tim.* 28). The Creator when the worlds were made had such a single, perfect idea of the universe, in accordance with which He contrived all His work (*Tim.* 31). They are almost unintelligible to human apprehension, unless they are expressed by examples, or translated into the language of facts (*Statesm.* 277).—In the *Philebus* Plato begins to discuss the 'troublesome questions' which are raised by the doctrine of ideas. How can the one be predicated of the many? Have the ideas real existence? His reply is somewhat crude and unsatisfactory:—There are four categories, the infinite, the finite, that which is intermediate between them, and the cause which unites them. The intermediate element is 'law' or 'order' or 'proportion'; and since all things share in it, the finite is thus joined with the infinite, the one with the many, and ideas are proved to be real and connected with phenomena. The cause of union is explained to be mind or God.—In the *Parmenides* the criticism of the ideas is carried still further; nor can Plato apparently provide a sufficient answer to his own objections. He is applying the

test of logic to the vague thoughts and dreams which had filled his mind at an earlier period; and we cannot wonder that they are not always able to endure the trial. He does not know how to prove to the sceptic the existence of the ideas, which seem to dwell apart in the sphere of the absolute; or how these unknown, unknowable conceptions can be brought from heaven to earth.—Zeno has denied the 'being of many'; for if being is many, it must be both like and unlike, which is impossible. And when Socrates in reply distinguishes between the idea and the object, and says that the two ideas of likeness and unlikeness, which are incompatible, may yet inhere in the same individual, he is met by the 'inevitable question':—What is the nature of this participation in the idea:—does the individual share in the whole of the idea or in a part only? Socrates replies that the idea may be like the day, which is one and the same in many places and yet continuous with itself, or like a sail which covers several persons and still is one. But he cannot meet the objection that the idea, which is in itself an inseparable whole, is thus regarded also as divisible into parts.—Another difficulty is then started. Ideas are formed by abstractions made from some class of objects: e.g. the idea of greatness is drawn from the contemplation of a number of things which have greatness. But then the idea of greatness must itself be added to the class of great things, and a new idea which embraces them all will be required, and this process will go on *ad infinitum*.—Although Plato cannot find a reply to these

and similar objections, he is still convinced that without abstract ideas thought and reasoning are impossible, and he hints by the mouth of Parmenides that a more searching analysis of them both from the negative and the positive side will at last conduct us to a sound doctrine of ideas (cp. *Soph.* 259).—In the *Sophist* he once more seeks to prove the connexion of ideas. He is attacking the Eleatic doctrine that there is no such thing as falsehood, because not-being is not and therefore cannot exist. He shows that the entire separation of the spheres of the absolute and the relative, of being and not-being, cannot be maintained. It is not true that all ideas are incompatible, although some are. And it is the business of dialectic, which is the art of division into classes, to teach us under what category a particular idea is included. Being, for instance, has communion with rest and motion; but rest and motion are inconsistent. Not-being is only the negation of being, just as not-motion or rest is the negation of motion.—In the *Statesman* and the *Laws* the doctrine of ideas occupies a subordinate place, and seems to have lost its former attractiveness to Plato. Yet at the very end of the *Laws* he exhibits a trace of the old feeling in the final injunction that the guardians must be men who are able to see 'the one in many' and to order all things accordingly (12. 965 B).]

Ideal state, the, difficulty of, *Rep.* 5. 472; 6. 502 E; *Laws* 4. 711; is it possible? *Rep.* 5. 471, 473; 6. 499; 7. 540 (cp. *ib.* 7. 520; *Laws* 4. 711 E; 5. 739; 12. 968 A); how to be commenced, *Rep.* 6.

Laws 11. 913 B); toilsome, Rep. 1. 364 (cp. Protag. 340 C; Laws 4. 718 E); follows after God, Laws 4. 716 A; worthy of honour, *ib.* 5. 730 D; the administration of, ought to be shared in by all the citizens, *ib.* 6. 768; especially necessary towards slaves and inferiors, *ib.*

777 E; the salvation of men, *ib.* 10. 906 B; the civilizer of humanity, *ib.* 11. 937 E; found to some extent in every constitution, *ib.* 12. 945 D (cp. Rep. I. 338 E):—compared to health, Rep. 4. 444:—the poets on, *ib.* 2. 363, 364, 365 E:—in perfection, *ib.* 361:—justice and equity, Laws 6. 757;—justice and expediency, I Alcib. 113, 116;—justice and holiness, Protag. 330, 331; Euthyph. 12;—justice and politics, Gorg. 464;—justice and retribution, Laws 5. 728;—justice and virtue, Rep. I. 348:—justice more profitable than injustice, *ib.* 4. 445; 9. 589 foll.; superior to injustice, *ib.* 9. 589; final triumph of, *ib.* 580; 10. 612, 613:—in the state, *ib.* 2. 369; 4. 431, 433; the same in the individual and the state, *ib.* 4. 435 foll., 441 foll.:—absolute justice, *ib.* 5. 479 E; 6. 501 B; 7. 517 E:—natural justice, Gorg. 483, 484, 488, 492; Laws 10. 890 A (cp. *ib.* 3. 690 B):—‘the justice of the Gods,’ Laws 10. 904.

Justice. [*The happiness which is conferred by justice is one of the main theses of the Gorgias. The young Sophist, Polus, and Calicles, the man of the world, agree in thinking that the unjust is happy so long as he is able to escape punishment. But Socrates maintains a higher view, which he sets forth under a paradoxical form. The wicked man is unhappy because he is wicked, and still more unhappy when he is not punished for his evil deeds. On the other hand the just and innocent are happy even on earth and amidst the greatest sufferings; and in the world to come all the advantages are on their side. The argument is confirmed in Plato's fashion by a myth.*

Once upon a time the judgment of souls took place upon the day of death while both the judges and the judged were alive. The result was unsatisfactory: the veil of the body hid the soul from the glance of the judge, who was himself hindered by a like impediment. In order to remedy this evil Zeus made his sons judges in the world below, and the souls were tried after death. There was no more escape for the wicked: the judges beheld his soul stained and corrupted by lust and wickedness and pronounced the fitting penalty.—The argument of the Gorgias is in a manner resumed and completed in the Republic. In the first Book several definitions of justice are attempted, all of which fall before the dialectic of Socrates. Glaucon and Adeimantus then intervene:—mankind regard justice as a necessity, not as a good in itself, or at best as only to be practised because of the temporal benefits which flow from it: can Socrates prove that it belongs to a higher class of goods? Socrates in reply proposes to construct an ideal state in which justice will be more easily recognized than in the individual. Justice is thus discovered to be the essential virtue of the state (a thesis afterwards enlarged upon by Aristotle [Pol. i. 2. 16; iii. 13, § 3]), the bond of the social organization, and, like temperance in the Laws (3. 696, 697; 4. 709 E), rather the accompaniment or condition of the virtues than a virtue in itself. Expressed in an outward or political form it becomes the great principle which has been already enunciated (Rep. I. 332), ‘that every man shall do his own

work'; on this Plato bases the necessity of the division into classes which underlies the whole fabric of the ideal state (Rep. 4. 433 foll.; Tim. 17 C). Thus we are led to acknowledge the happiness of the just; for he alone reflects in himself this vital principle of the state (Rep. 4. 445). The final proof is supplied by a comparison of the perfect state with actual forms of government. These, like the individuals who correspond to them, become more and more miserable as they recede further from the ideal, and the climax is reached (Rep. 9. 587) when the tyrant is shown by the aid of arithmetic to have '729 times less pleasure than the king' [i.e. the perfectly just ruler]. Lastly, the happiness of the just is proved to extend also into the next world, where men appear before the judgment-seat of heaven and receive the due reward of their deeds in this life. —In the Laws, no less than in the Republic, justice is assigned a high place among the virtues. Every constitution, however imperfect, must share in justice to some degree; for no association, even of the bad, can be formed unless regard is had to justice (cp. Lysis 214). It is the virtue which makes men civilized, and fits them to dwell together in the state. But injustice is the disease of cities and governments, corresponding to sickness in the bodily frame. Again, the just man shows his justice especially in his dealings with slaves and inferiors, whom he endeavours to train in virtue [cp. Arist. Pol. i. 13, § 14]. He alone enjoys true happiness; for to him the good and the pleasant are one and the same. He has God always as his

friend and guide, whereas the unjust passes through life in wild confusion and soon comes to the end of his seeming prosperity.]

Justice, courts of; see Law Courts.

K.

Kindred, honour of, Laws 5. 729; — marriages of kindred, *ib.* 11. 924 E.

King, the, pleasures of, compared with those of the tyrant, Rep. 9. 587 foll.; art of, Statesm. 260, 276, 289, 290, 291, 292, 293, 295 B, 300 E, 305 A, 308, 311 (cp. 700; strictly regulated in Crete and at Lacedaemon, *ib.* 2. 660; unchangeable in Egypt, *ib.* 657; 7. 799 A.

Music. [*Music to the ancients had a far wider significance than it has to us. It was opposed to gymnastic as 'mental' to 'bodily' training, and included equally reading and writing, mathematics, harmony, poetry, and music strictly speaking: drawing, as Aristotle tells us (Pol. viii. 3, § 1), was sometimes made a separate division.* I. *Music (in the wider sense), Plato says, should precede gymnastic; and, according to a remarkable passage in the Protagoras (325 C), the pupils in a Greek school were actually instructed in reading and writing, made to learn poetry by heart, and taught to play on the lyre before they went to the gymnasium. In the Republic Plato does not enter into the details of elementary education, but confines himself to the discussion of general principles. He is more explicit in the Laws. The children will begin to attend school at the age of ten, and will spend three years in learning to read and write (Laws 7. 810 foll.; and see s.v. Education). This seems to us a short time for the purpose; but Plato expressly says that only a moderate standard of proficiency will be required. He also wishes the children to commit to memory compositions in prose and verse; but they are to learn nothing which has not received the sanction of the Director of Education;—his own discourses in the Laws will be an excellent model. Arithmetic and elementary mathematics ought in his opinion to be acquired by*

means of object lessons, as was the custom among the Egyptians, an idea which would be approved by many modern educators. [Aristotle in the Politics appears to think that education should commence at seven (vii. 17, § 7), and should continue for seven years; but his language is obscure, and we cannot gather in what order he intends that the different subjects should be taken (cp. viii. 4, §§ 7-9).] II. *Music, strictly so called, plays a great part in Plato's scheme of education. He hopes by its aid to make the lives of his youthful scholars harmonious and gracious, and to implant in their souls true conceptions of good and evil. Music is a gift of the Gods to men, and was never intended, 'as the many foolishly and blasphemously suppose,' merely to give us an idle pleasure. Neither should a freeman aim at attaining perfect execution [cp. Arist. Pol. viii. 6, §§ 7, 15]: in the Laws (7. 810) we are told that every one must go through the three years' course of music, 'neither more nor less, whether he like or whether he dislike the study.' Both instruments and music are to be of a simple character: in the Republic only the lyre, the pipe, and the flute are tolerated, and the Dorian and Phrygian harmonies [cp. Laws 7. 815, and the criticisms of Aristotle, Pol. viii. 7]. No change in the fashions of music is permitted; for where there is license in music there will be anarchy in the state. In this desire for simplicity and fixity in music Plato was probably opposed to the tendencies of his own age. The severe harmony which had once distin-*

guished Hellenic art was passing out of favour: alike in architecture, sculpture, painting, literature, and music, richer and more ornate styles prevailed. We regard the change as inevitable, and not perhaps wholly to be regretted: to Plato it was a cause rather than a sign of the decline of Hellas.]

Music-masters, Charm. 160 A; Laws 7. 812. Cp. Connus, Damon.

Musical amateurs, Rep. 5. 475;—contests, Laws 2. 657 E; 6. 764 D foll.; 8. 828 C, 834 E; 12. 947 E;—education, Theaet. 206 B; effect of, Protag. 326 B; Rep. 2. 377; 3. 401 E–403; 7. 522 A; Tim. 47 E; Laws 2. 654, 660; 7. 810;—instruments, the more complex kinds of, to be rejected, Rep. 3. 399 (cp. —of sight, smell, beauty, *ib.* 51; of smell, Rep. 9. 584 B;—pleasures of the many, *ib.* E foll. (cp. Phil. 52 B); of the passionate, Rep. 9. 586; of the philosopher, *ib.* 586, 587;—pleasures of the body, *ib.* 6. 485 E; Phil. 45; of the soul, Rep. 6. 485 E; Phil. 47 E.

Plurality in unity, Phil. 17 A.

Pluto, meaning of the name (πλούτος), Crat. 402 D foll.; a great Sophist, *ib.* 403 E; his complaint to Zeus, Gorg. 523 A, B; the blind God, Rep. 8. 554 B (cp. Laws 1. 631 C); =riches, Laws 7. 801 B; the twelfth month sacred to, *ib.* 8. 828 C; the best friend of man, *ib.* D. Cp. Hades.

Pnyx, included in the Acropolis in early times, Crit. 112 A.

Poetry, place of, in Greek education, Protag. 325 E foll., 339; Laws 2. 659 (cp. Education); learnt by heart in schools, Protag. 326 A; Laws 7. 810 C, 811 A; poetry and inspiration, Phaedr. 245 A, 265 B; Ion 533–535; Apol. 22 B; Laws 3. 682 A; 4. 719 B; poetry a whole, Ion 532; complex and manifold, Symp. 205 B; a sort of rhetoric, Gorg. 502; made up of song, rhythm, metre, speech, *ibid.*; styles of, Rep. 3. 392–394, 398; in the state, *ib.* 398; 8. 568 B; 10. 595 foll., 607 A (cp. Laws 7. 817); effect of, Rep. 10. 605; feeds the passions, *ib.* 606; poetry and philosophy, *ib.* 607 (cp. Laws 12. 967); poetry and prose, Laws 7. 811;—‘colours’ of poetry, Rep. 10. 601 A;—Tragic poetry native to Athens, Laches 183.

Poetry. [*Poetry held a far greater place in Hellenic life than it has ever done in modern times, and, like the kindred art of music, exercised an influence which it is difficult for us to understand. A*

large part of elementary education consisted in learning poetry by heart (Protag. 326 A; Laws 7. 810 C); *the rhapsode moved the crowds to laughter and tears at the festivals* (Ion 535); *the theatres were free, or almost free, to all, ‘costing but a drachma at the most’* (Apol. 26 D); *the intervals of a banquet were filled up by conversation about the poets* (Protag. 347 C). *The ancient philosopher, therefore, who proposed to construct an ideal state was obliged to consider whether the poet could be allowed to practise his art without any restrictions in a city which was designed to be ‘an imitation of the best and noblest life’* (Laws 7. 817 A). *But there was ‘an ancient quarrel between philosophy and poetry,’ which had found its first expression in the attacks of Xenophanes (538 B.C.) and Heraclitus (508 B.C.) upon the popular mythology. And Plato, though he had himself a double portion of the poetic spirit, fully shares in this hostile feeling. Even in the earlier dialogues there is often an antagonism to the poets which is only slightly veiled by the ironical courtesy of the language. They are ‘winged and holy beings’* (Ion 534 B), *who sing by inspiration without knowing the meaning of what they utter, ‘for not by art can a man enter into the temple of the Muses’* (Phaedr. 245 A); *but at the same time they are the worst possible critics of their own writings and the most self-conceited of mortals* (Apol. 22 D).—*In the Republic* (II. and III.) *Plato grows more in earnest and brings poetry to a formal trial. Are the tales and legends, he asks, which the tragic and epic*

poets relate, either true in themselves or likely to furnish good examples to the citizens of the model state? They cannot be true for they are contrary to the nature of God (see s. v. God), and they are certainly not proper lessons for youth. There must be a censorship of poetry, and all objectionable passages expunged; suitable rules and regulations will be laid down, and to these the poets must conform. In the Tenth Book the argument takes a still deeper tone. The poet is proved to be an impostor thrice removed from the truth; a wizard who steals the hearts of the unwary by his spells and enchantments. Men easily fall into the habit of imitating what they admire, and the lamentations and woes of the tragic hero and the unseemly buffoonery of the comedian are equally bad models for the citizens of a free and noble state. The poets must therefore be banished, unless, Plato adds, the lovers of poetry can persuade us of her innocence of the charges laid against her.—In the Laws the subject is treated more shortly, but a similar conclusion is reached. The poet is the rival of the legislator, who is striving to set the noblest of dramas in action (cp. Tim. 19 A); and he cannot be allowed to address the citizens in a manner which is not in accord with the institutions of the state. The magistrates must maintain a censorship of poetry, and see that the injunctions of the legislator are obeyed. Nor must any poet be licensed by them unless he be a man of years and good repute, and he must only sing of noble thoughts and deeds: it will not matter if his strains are a little inharmonious. (The

expulsion of the poets from Plato's commonwealth is not mentioned by Aristotle in the Politics. He may have thought that such a topic was one of the 'digressions' of which he complains (ii. 6, § 3); or the omission may be due to the fragmentary nature of his observations on education.)]

Poets, the, quoted on friendship, Lysis 212; fathers and authors of wisdom, *ib.* 214 A; their works learnt in schools, Protag. 326 A; Laws 7. 810 C, 811 A; talk about, commonplace, Protag. 347 C; sing by inspiration, Phaedr. 245 A, 265 B; Ion 534; Apol. 22 A; Laws 3. 682 A; 4. 719 B (cp. Meno 81 A, 99 D); first in the chain of persons who derive inspiration from the Muses, Ion 533 E, 535 E; winged and holy, *ib.* 534; various kinds of, *ibid.*; each good in his own kind only, *ibid.*; how distinguished from other makers, Symp. 205; create conceptions of wisdom and virtue, *ib.* 209 A; their children (i.e. works), *ib.* C (cp. Rep. 1. 330 C); bear witness to the immortality of the soul, Meno 81; not wise, Apol. 22; speak in parables, Rep. 1. 332 B (cp. 3. 413 B; 2 Alcib. 147 C); on justice, Rep. 2. 363, 364, 365 E; bad teachers of youth, *ib.* 377; 3. 391, 392, 408 C; 10. 600, 606 E, 607 B; Laws 10. 886 C, 890 A; 12. 941 B; must be restrained by certain rules, Rep. 2. 379 foll.; 3. 398 A (cp. Laws 2. 656, 660 A; 4. 719; 7. 817 D; 8. 829 D; 11. 936 A); banished from the state, Rep. 3. 398 A; 8. 568 B; 10. 595 foll., 605 A, 607 A (cp. Laws 7. 817); poets and tyrants, Rep. 8. 568; thrice removed from the truth, *ib.* 10. 596, 597, 598 E, 602 B, 605 C; imitators only, *ib.* 600 E; Tim. 19 (cp. Rep. 3. 393;

- Laws 4. 719 C); poets and painters, Rep. 10. 601, 603, 605; ought to be controlled by law, Laws 2. 656, 660, 661 C, 662 B; 4. 719 A; 7. 801, 802, 811, 817; 8. 829 D; degraded by the applause of the theatre, *ib.* 2. 659; their corrupt use of music, *ib.* 669, 670 E; 3. 700; need not know whether their imitations are good or not, *ib.* 2. 670 E; 4. 719 C; often attain truth, *ib.* 3. 682 A; when they make prayer for the state, must be careful that they ask only what is good, *ib.* 7. 801; to celebrate the victors in contests (in the Model City), *ib.* 8. 829; poets and legislators, *ib.* 9. 858; 12. 957, 964 D; poets and philosophers, *ib.* 12. 967 (cp. Rep. 10. 607);—'the poets who were children and prophets of the gods' (? Orpheus and Musaeus), Rep. 2. 366 A (cp. *ib.* 364 E);—comic and iambic poets, regulations respecting (in the Model City), Laws 11. 935; the comic poets the enemies of Socrates, Apol. 18, 19; Phaedo 70 B;—the lyric poets set to music in schools, Protag. 326 B;—tragic poets, all come to Athens, Laches 183.
- Poison, its action hindered by exercise, Phaedo 63 E; operation of, *ib.* 117; employed in the capture of fish, Laws 7. 824;—Poisoning, *ib.* 11. 932 E.
- Polemarchus, brother of Lysias, a student of philosophy, Phaedr. 257 B; the son of Cephalus, Rep. 1. 327 B; 'the heir of the argument,' *ib.* 331 C foll.; intervenes in the discussion, *ib.* 340 A; wishes Socrates to speak in detail about the community of women and children, *ib.* 5. 449;—meaning of the name, Crat. 394 C.

better than the dissolution of them, Laws 8. 828 E:—the soul compared to a charioteer and pair of horses, Phaedr. 246 foll.; to a vessel, Gorg. 493; to a many-headed monster, Rep. 9. 588; to the images of the sea-god Glaucus, *ib.* 10. 611:—like the eye, *ib.* 6. 508; 7. 518:—like a book, in which the feelings and perceptions are written, Phil. 38 E:—harmony of the soul, produced by temperance, Rep. 4. 430, 442, 443 (cp. 9. 591 D; Laws 2. 653 B):—eye of the soul, Phaedr. 99 E; Rep. 7. 518 D, 527 E, 533 D, 540 A:—the soul's wings, Phaedr. 251:—the soul's horses, *ib.* 253 D foll.:—the soul's painter, Phil. 39:—five forms of the state and soul, Rep. 4. 445; 5. 449; 9. 577:—procession of the souls, Phaedr. 247; order of, *ib.* 248:—creative souls, Symp. 209:—the world-soul, Tim. 30 B, 34 E; soul and universe, *ib.* 90 (cp. Phil. 30; Laws 10. 896–898):—souls of the sun and stars, Tim. 41; Laws 10. 899; 12. 967 A.

Soul. [*The psychology of Plato, like the rest of his philosophical teaching, is not to be regarded as a formal system to which he always adhered. The progress of thought in his mind is reflected in the Dialogues, while their dramatic form and tentative character cause some difficulty in distinguishing the opinions which he himself would have maintained. Allowing for this element of uncertainty, his conclusions may be summed up as follows:*—

(1) *The soul is prior to the body, both in creation and in order of thought, although in our 'random way of talking' we sometimes invert the relation between them (Tim. 34 E). The body is intended by nature to be its servant,*

and to listen to its commands and admonitions. It is immaterial, not made, 'as the physical philosophers say,' after the four elements and by their aid (Laws 10. 891); and, being akin to the divine, it is ever desirous to escape from the body in which it is 'encaged' or 'entombed,' and to go to its home with God.—(2) 'There are two souls,' Plato says in the Laws, 'a good and an evil.' Such a dualism is not found elsewhere in his writings, and it is not easy to apprehend his precise meaning. But he probably wishes in this manner to account for the existence of evil in the world, just as in the Timaeus he explains the wickedness of man by the hypothesis of a 'mortal soul' which is the work of the inferior Gods, and in which the passions and desires have their seat (see s. v. God).—

(3) *The division of the soul into three elements, reason, spirit, appetite, is first clearly stated in the Republic, where it is made the means of classifying the different forms of government. Virtue is the harmony or accord of these elements, when the dictates of reason are enforced by passion against the appetites, while vice is the anarchy or discord of the soul when passion and appetite join in rebellion against reason.—(4) Regarded from the intellectual side the soul may be analysed into four faculties, reason, understanding, faith, knowledge of shadows. They correspond to the four divisions of knowledge, two for intellect and two for opinion; and thus arises the Platonic 'proportion,' being : becoming :: intellect : opinion, and science : belief :: understanding : knowledge of shadows. These divisions are partly real, partly formed by*

a logical process, which, as in so many distinctions of ancient philosophers, has outrun fact, and are further explained by the allegory of the cave (Rep. Book vii).—(5) The pre-existence of the soul is especially dwelt upon in the *Meno*, *Phaedo*, and *Phaedrus*, in the two former of which the 'remembrance of a previous existence' (ἀνάμνησις) is made a proof of immortality (*Meno* 86; *Phaedo* 73). It is apparently alluded to in the myth of *Er* (Rep. 10. 621 A), where we are told that 'the pilgrims drank the waters of Unmindfulness; the foolish took too deep a draught, but the wise were more moderate.' In the later dialogues it is nowhere mentioned.—(6) The immortality of the soul is chiefly discussed in the *Phaedo* and the *Republic*, but it occupies a considerable place in many of Plato's other writings. In the *Phaedo* the two Thebans, *Simmias* and *Cebes*, admit that the soul has pre-existence, but doubt that it is immortal. *Simmias* affirms that the soul and the body are related as the harmony is to the lyre: the harmony is invisible and incorporeal, yet it does not survive the lyre, which is visible and corporeal. *Cebes* fears that the soul, although she may outlive many bodies, may be worn out in the end, like a garment, which, after belonging to many owners, at last perishes and decays. *Socrates* denies the assumption that the soul is a harmony: for (1) it is a cause, not an effect: (2) it leads the body, but harmony follows the instrument: (3) it does not admit of degrees: (4) it allows of discord, as when reason is arrayed against passion. Against *Cebes* he urges the

doctrine of the exclusion of opposites. Life, which is the essential attribute of the soul, excludes death, and therefore death cannot be predicated of the soul.—In the *Republic* (10. 608), *Glaucon* hears with amazement *Socrates'* confident belief in immortality, although a previous allusion to another state of existence has fallen unheeded (6. 498 D); and in earlier parts of the discussion (e.g. 2. 362; 3. 386) the censure which is passed on the common representations of *Hades* implies in itself some belief in a future life. The argument by which *Socrates* seeks to prove the immortality of the soul is of a purely verbal character:—All things which perish are destroyed by some inherent evil, but the soul is not destroyed by sin, which is the evil proper to her, and must therefore be immortal.—In the *Phaedrus* and the *Laws* the soul is said to be self-moved and a cause of motion; and upon this assertion the proof of immortality is made to rest. But there is a curious passage in the *Laws* (10. 904 B), which is not apparently in accord with the opinions which Plato elsewhere maintains. 'The King [i.e. the Creator] . . . saw that the soul and body, although not, like the Gods whom the laws recognize, eternal, were indestructible; for if either of them had been destroyed, there would have been no generation of living beings.'—(7) The condition of the soul after death is described by Plato in several dialogues under the form of myths, for which he is careful not to demand entire credence. These representations agree in their main features. The soul on her release from the body goes to give account of herself

- before the judgment seat. The righteous are sent to the Isles of the Blessed; the wicked go to Tartarus, and there suffer punishment, not hopeless or eternal, but duly proportioned to their offences. (In the *Phaedo* (113 E) and the *Gorgias* (525), however, a few great sinners, chiefly kings and potentates, are kept in Hades as a salutary terror to others.) When the penalty has been paid, the soul must choose a new life: the responsibility of choice rests on herself, and if she has learnt wisdom in her travail she secures a better lot; but if she persists in folly and chooses unwisely, she takes an inferior life or even assumes the form of some lower animal. There is also a limit to the blessedness of the righteous, and when the appointed time comes, they too must make a new choice. This at least is Plato's usual statement (cp. *Phaedr.* 249; *Rep.* 10. 619 C); but in the *Phaedo*, Socrates, who is so soon to die, consoles himself with the thought that the soul of the philosopher will live after death 'altogether without the body' (114 C).—(8) The doctrine of the transmigration of souls was probably adopted by Plato because it agreed, or could be made to agree, with the conviction which he everywhere expresses of the remedial nature of punishment. It was in all likelihood derived by him from Oriental sources, but through Pythagorean channels.]

State. [*Plato has left us in the Republic and the Laws two companion pictures of the 'best' and the 'second-best' state. The one is confessedly an ideal, which will only be accepted, if ever, when men see the true philosopher*

ruling the state in righteousness and justice: the other is supposed to be more adapted to ordinary circumstances, and might be set up without any considerable difficulty by a benevolent tyrant or a legislator who had despotic power.—[I.] The polity of which Plato 'sketches the outline' in the *Republic* may be analyzed into two principal elements:—(i) an Hellenic state of the older or Spartan type, with some traits borrowed from Athens; (ii) an ideal city in which the citizens have all things in common, and the government is carried on by a class of philosopher rulers who are selected by merit. These two elements are not perfectly combined; and, as Aristotle complains (*Pol.* ii. 5, § 18), very much is left ill-defined and uncertain.—(i) Like Hellenic cities in general, the number of the citizens is not to be great. The size of the state is limited by the requirement that 'it shall not be larger or smaller than is consistent with unity.' Again, the individual is subordinate to the state. When Adeimantus complains of the hard life which the citizens will lead, 'like mercenaries in a garrison' (4. 419), he is answered by Socrates that if the happiness of the whole is secured, the happiness of the parts will inevitably follow. Once more, war is conceived to be the normal condition of the state, and military service is imposed upon all. Trade is regarded as dishonourable;—'those who are good for nothing else sit in the Agora buying and selling' (2. 371 D): the warrior can spare no time for such an employment.—In these respects, as well as in the introduction of common meals,

Plato was probably influenced by the traditional ideal of Sparta. The Athenian element appears in the intellectual training of the citizens, and generally in the atmosphere of grace and refinement which they are to breathe (see s. v. Art). The restless energy of the Athenian character is perhaps reflected in the discipline imposed upon the ruling class, who when they have reached fifty are dispensed from continual public service, but must then devote themselves to abstract study, and also be willing to take their turn when necessary at the helm of state [*cp.* Thucyd. i. 70; ii. 40].—(ii.) The most peculiar features of Plato's state are (1) the community of property, (2) the position of women, (3) the government of philosophers. The first (see s. v.), though suggested in some measure by the example of Sparta or Crete [*cp.* Arist. *Pol.* ii. 5, § 6], is not known to have been actually practised anywhere in Hellas, unless possibly among such a body as the Pythagorean brotherhood. (2) Nothing in all the *Republic* was probably stranger to the contemporaries of Plato than the place assigned by him to women in the state. The community of wives and children, though carefully guarded by him from the charge of licentiousness, would appear worse in Athenian eyes than the traditional 'licence' of the Spartan women [*cp.* Arist. *Pol.* ii. 9, § 5]. Again, the equal share in education, in war, and in administration which is enjoyed by the women in Plato's state was, if not so revolting, quite as contrary to common Hellenic sentiment [*cp.* Thucyd. ii. 45]. The Spartan women

exercised a great influence on public affairs, but this was mainly indirect [cp. Laws 7. 806; Arist. Pol. ii. 9, § 8]: they did not hold office or learn the use of arms. At Athens the women, of the upper classes at least, lived in an almost Oriental seclusion, and were wholly absorbed in household duties. (3) Finally, the government of philosophers had no analogy in the Hellenic world of Plato's time. The suggestion may have been taken from the stories of the Pythagorean rule in Magna Graecia; but we cannot doubt that Plato was chiefly indebted to his own imagination for his kingdom of philosophers, or that it remained to himself an ideal, rather than a state which would ever 'play her part in actual life' (Tim. 19, 20). It is at least significant that he never finished the Critias, as though he were unable to embody, even in a mythical form, the 'city of which the pattern is laid up in heaven.'—[II.] The state which is portrayed in the Laws is said by Aristotle to be 'a mixture of oligarchy and democracy, leaning rather to oligarchy' (Pol. ii. 6, § 18). The description is an inaccurate one; for the only democratic characteristic which Aristotle mentions is the use of the lot in elections, and this, he himself admits, is neutralized by other regulations. Plato's 'second-best state' is in fact an aristocratical government of a narrow and exclusive type, in which wealth plays an important part. The administration is in the hands of the higher classes, and the mode of election is so contrived that they always have a preponderance. The chief magistrates are the thirty-seven guard-

ians of the law, who combine executive and judicial functions in the manner common to Hellenic states. There is also a nocturnal council, composed of the ten oldest guardians, of all those who have gained the prize of virtue, of the Director and the ex-Directors of Education, and of those who have travelled to see the institutions of other countries, besides an equal number of younger colleagues between thirty and forty, appointed, one by each of the seniors. This council seems only to exercise powers of advice and revision, and not to have the initiative in legislation, which was probably intended to be restricted to the guardians. Further, there is a Senate of 360 members, of which a twelfth part sits each month in succession, and a General Assembly. Of the latter very little is said, but we cannot suppose that Plato intended it to have much authority.—The greatest departure from the ideal state is the abandonment of communism, which, as Plato reluctantly confesses, will hardly be accepted by mankind in general (see s. v. Community). On the other hand, the common meals are extended to women, who are thus brought from the retirement of domestic life into the organization of the state.—In two points there is an advance on the Republic:—(i) Plato has discovered that peace is nobler than war, and passes a severe censure on the military states of which Sparta is the typical example. Yet he has himself given a warlike character to the whole commonwealth, and the 5040 citizens would have formed with their wives an armed force such as was hardly possessed by Sparta

at the time of her greatest power. (ii) *Although in an earlier part of the work (4. 705 A) Plato repeats the old idea that trade exerts a corrupting influence on men and cities, he exhibits towards the end a more liberal spirit (11. 918). He recognizes the necessity of commerce, and even speculates on the possibility of redeeming trade from reproach by compelling some of the best citizens to open a shop or keep a tavern. [Cp. the discussion of the question by Aristotle, Pol. vii. 6.]—In most respects, however, Plato's political speculations in the Laws have a reactionary cast, akin to the pessimism by which his view of human life is coloured. The energy and enterprise of Athens are exchanged for a rigid and monotonous existence in which every thought and action must conform to the word of the legislator. Plato had shown in the Statesman (293 foll.) that the law was only a general rule which must be modified by circumstances, and he would therefore set the 'one best man' above the law. But he seems, like Aristotle, to have afterwards come to the conclusion that there was no one to be found among mankind 'thus immeasurably superior to his fellows' (Pol. v. 10, § 37). He is still unwilling, however, to allow the citizens at large to control the destinies of the commonwealth, and seeks to ensure stability by the imitation of an antiquated and unprogressive polity like that of Egypt (2. 657 A), or by the institution of the Nocturnal Council, which he expects to be 'the anchor of the whole state' (12. 961 B.)]* Statesman, the, vocation of, Gorg. 515; Laws 12. 963; has science,

Statesm. 258, 259; must he always follow the laws? *ib.* 293 foll.; will implant in his citizens true opinions about the just and the good, *ib.* 309; will combine courage and temperance, *ib.* 311; the true statesman aims at peace rather than war, Laws 1. 629 D (cp. Legislator);—distinguished from the orator, Soph. 268; from the politician, Statesm. 291, 292, 303; from the general or judge, *ib.* 304, 305; will preserve the state by the aid of mind, Laws 12. 961;—statesman and king, Statesm. 259; statesman and herdsman, *ib.* 261, 265, 275;—art of the statesman, *ib.* 260, 276, 289, 290, 292, 293, 295 B, 300 E, 305 A, 308, 311 (cp.  lator, *ib.* 692 B.
 Temper, incompatibility of, a
 ground of divorce, Laws 11. 930.
 Temperance (*σωφροσύνη*), defined
 as quietness, Charm. 159; as
 modesty, *ib.* 160; as doing one's
 own business, *ib.* 161; as doing
 good actions, *ib.* 163 E; as
 self-knowledge, *ib.* 165; as know-
 ing what we know and do not
 know, *ib.* 167; = the health of the

soul, Gorg. 504, 507; wrongly defined as prudence, Laws 4. 710 A;—a part of virtue, Meno 73;—one of the virtues of the philosopher, Phaedo 68; Rep. 6. 485 E, 490 E, 491 B, 494 B;—a social virtue, Phaedo 82 B;—not a virtue, but a condition of virtue, Laws 3. 696, 697 A; 4. 709 E;—the victory over desire, Phaedr. 237 E; the order of the soul, Gorg. 507, 508; a harmony of the soul, Rep. 4. 430, 441 E, 442 D, 443; 9. 591 D; Laws 2. 653 B;—the science of itself and of other sciences, Charm. 170;—is a good, *ib.* 159, 160, 169; how far possible or advantageous, *ib.* 167, 170; acquired by habit, Phaedo 82 B; fostered in the soul by the simple kind of music, Rep. 3. 404 E, 410 A (cp. Laws 7. 802 E); ought to be blended with courage, Statesm. 309, 310 (cp. Laws 3. 696 A); promoted by common meals and gymnastic exercises, Laws 1. 636 A; requires experience of pleasure, *ib.* 647 D, 649; worthy of praise, *ib.* 5. 730 E; principles to support, *ib.* 8. 841;—temperance and courage, Statesm. 306; temperance and love, Rep. 3. 403 A; Laws 8. 839, 840; temperance and pleasure, Phil. 45 D; temperance and wisdom, Charm. 165, 170; Protag. 332; Symp. 209 A;—the 'foolish temperance' of the many, Phaedo 68, 69; temperance an invention of the weak to protect themselves against the strong [Callicles], Gorg. 492, 494;—temperance in the state, Rep. 3. 389; 4. 430 foll.; Laws 3. 696;—in the tyrant, Laws 4. 710 (cp. 712 A).

Temperance. [*The virtue of 'temperance,'—σωφροσύνη, a word for which there is no exact equivalent in English,—may perhaps be best*

explained as a conception by which the Greek carried his favourite idea of moderation into the moral sphere, and which found expression in 'the wise man's aphorism,—Nothing too much' (Phil. 45 E). It marked the line at which indulgence passed into excess; the unjust man is intemperate because his desires have no limit, but the just restrains himself and is sober and moderate in all his ways. It was liable to be confused with wisdom, for prudence and temperance are naturally allied, and the confusion was aided by a false etymology which connected σωφροσύνη with σωφρονεῖν (Laws 4. 710 A).—One of the earliest Platonic Dialogues, the Charmides, is devoted to the examination of the question, 'What is temperance?' Several definitions are offered:—Temperance is 'Quietness': 'Modesty': 'Doing one's own business': 'Doing good': 'Self-knowledge': 'Knowing what we know and what we do not know.' But all these prove inadequate, and the result is, as usual, only a negative one.—In the Gorgias an advance is made. When Callicles maintains that happiness depends upon the indulgence of the desires, Socrates, in order to confute this immoral doctrine, shows that temperance in the soul corresponds to health in the body, and that, just as the sick man is in want of restraint and direction, so the diseased or intemperate soul needs chastisement and reproof. But he who is temperate knows his duty both to Gods and men and lives in happiness and freedom, because he does not require to be restrained by punishment.—In the Republic temper-

ance is said to be, in the individual, the accord or agreement of the three elements of the soul, and, in the state, the arrangement which allows those who are superior by nature to rule over the inferior, and thus produces a perfect harmony of the different classes. It is therefore, unlike wisdom or courage, not the exclusive possession of one portion of the citizens, but a virtue which is common to all.—In the Statesman one of the definitions of the Charmides is revived, and temperance is explained to be quietness. Now there are two varieties of character among men, the quiet or temperate and the active or courageous, and these stand in natural opposition to each other (cp. s. v. Courage). It is the work of the 'royal science' to effect a union of these dispositions, both in the soul of the individual and in the state at large. Thus the warp and the woof of the state will be fitly woven 'into one smooth and even web.'—In the Laws temperance is the quality which gives control over self. By this Plato would have us understand, not that 'lame and one-sided virtue' which enables us to retain our self-possession in time of danger or to endure physical suffering, but a higher kind which arms us also against the enchantments of pleasure. This virtue, as he afterwards tells us, can hardly be said to have a separate existence, but is rather the ground or accompaniment of all virtue. If it is conjoined with wisdom in the mind of the ruler, the ideal state may be easily realized in action, and it must equally exist among the citizens, or they cannot hope to live the life of true

happiness in the political community.]

Temperate life, the, better than the intemperate, Gorg. 493 foll.; Laws 5. 733 E foll.;—the temperate man the friend of God, Laws 4. 716 D.

Temples in a new state, Laws 5. 738; not easily established, *ib.* 10. 909 E;—their situation in the Model City, *ib.* 6. 778 C;—temples of Hestia, Zeus, and Athene, *ib.* 5. 745; 8. 848;—officers of temples, *ib.* 6. 759;—water-supply for temples, *ib.* 761 C;—temple-robbing, Rep. 9. 574 D, 575 B; Laws 8. 831 E; 9. 854.

Terpsichore, Phaedr. 259 C.

Terpsion, present at the death of Socrates, Phaedo 59 C (cp. Theaet. 142 A–143 C).

Territory, devastation of Hellenic, not to be allowed, Rep. 5. 470;—unlimited, not required by the good state, *ib.* 4. 423; Laws 5. 737.

Terror, to be distinguished from fear, Protag. 358 D. See Fear.

Testamentary disposition, Laws 11. 923, 924.

Tetanus, Tim. 84 E.

Tethys and Oceanus, parents of all, Crat. 402 B, C, D; Tim. 40 E; Theaet. 152 E, 180 D; meaning of the name, Crat. 402 C.

- Veins, Tim. 77 D.
- Ventriloquism, Soph. 252 C.
- Verbal distinctions; 'making' and 'doing,' Charm. 163;—'being' and 'becoming,' Protag. 340, 344;—'learning' and 'knowing,' Euthyd. 278;—'having' and 'possessing,' Theaet. 197;—'willing' and 'wishing,' Gorg. 467;—distinctions attributed to Prodicus, Charm. 163 D; Laches 197 D; Protag. 337 A, 340 A, 358 A, D; Euthyd. 277 E; Meno 75 E:—verbal discussions, Euthyd. 276 foll., 284 foll., 293 foll.:—verbal fallacy, 'justice dishonourable,' Laws 9. 860:—verbal quibbles of sophists, Rep. 1. 340:—Socrates' use of the word *δαιμόνιον*, Protag. 341. Cp. Sophists.
- Verbs, Soph. 261, 262.
- Vested interests, Laws 3. 684.
- Vice, the disease of the soul, Rep. 4. 444; 10. 609 foll.; Soph. 228 (cp. Statesm. 296 D; Laws 10. 906 A); is many, Rep. 4. 445; the proper object of ridicule, *ib.* 5. 452 E; = virtue out of place, Statesm. 307; inferior to virtue in pleasure, Laws 5. 733; the destruction of men, *ib.* 10. 906 D (cp. Rep. 1. 351 E); slavish, 1 Alcib. 135;—fine names for the vices, Rep. 8. 560 E. Cp. Injustice.
- Victory in battle, no proof of the goodness or badness of institutions, Laws 1. 638 A; often suicidal to the victors, *ib.* 641 C; the two things which give victory, *ib.* 647 B; bestowed by the Gods on those who propitiate them rightly, *ib.* 7. 803 E;—victory in civic life, the prize of obedience to the laws, *ib.* 4. 715 C; 5. 729 D; 8. 840 B, 845 D:—Olympian victories, glory conferred by, Laws 5. 729 D; 7. 807 C (*see* Olympia).
- Vine, the, only to be cultivated on a moderate scale, Laws 2. 674 B;—first appearance of the vine, *ib.* 6. 782 B.
- Vintage, the season of, Laws 8. 844 E.
- Violence, laws concerning, Laws 9. 874 C; 10. 884, 885.
- Virtue, divided into many parts, Laches 190, 198 A; five virtues enumerated (wisdom, temperance, courage, justice, holiness), Protag. 349, 359 A; four virtues, wisdom, courage, temperance, and justice, Rep. 4. 428 foll., 433; Laws 1. 631 D; 3. 688 A; 12. 963, 965:—virtue = the power of governing mankind, Meno 73; = the love and attainment of the honourable, *ib.* 77; = the power of attaining good, *ib.* 78;—the health of the soul, Rep. 4. 444 (cp. 10. 609 foll.; Soph. 228; Statesm. 296 D; Laws 10. 906 A);—a harmony of the soul, Laws 2. 653;—whether one or many, Protag. 329; Meno 71 E foll., 74 (cp. Statesm. 306; Laws 12. 963 C, 965); unity of, restated,

Protag. 349; is one, Rep. 4. 445;—virtue and courage, Laches 190 foll.; Protag. 349, 350, 353, 359; Laws 1. 631 D foll.; 2. 667 A; 3. 688 A, 696 B; 12. 963 E; virtue and justice, Meno 73 E, 79 (cp. Rep. 1. 350); virtue and temperance, Laws 3. 696;—virtue and knowledge, Protag. 356 foll.; Euthyd. 274 E; Meno 87, 89; virtue and mind, Laws 10. 900 C (cp. 12. 961–963); virtue and wisdom, Meno 88; Phaedo 69; Rep. 3. 409 E;—is it given by instruction? Meno 70, 86, 89 (cp. Protag. 323, 361; Euthyd. 274; Laws 5. 730 E); innate or acquired? Eryx. 398; no teachers of, Meno 89 foll., 96; comes by the gift of God, *ib.* 100 A; ought to be freely imparted by men to each other, Laws 5. 730, 731; the magistrates to be teachers of virtue in the state, *ib.* 12. 964;—virtue and the desires, *ib.* 6. 782 E;—virtue and good, Gorg. 506;—virtue and harmony, Rep. 3. 401 A (cp. 7. 522 A);—virtue and pleasure, *ib.* 3. 402 E (cp. Pleasure);—virtue not a private possession, but a common interest of mankind, Protag. 325 foll.; not perceived by our bodily senses, Phaedr. 250; always the same, Meno 73; the ordinary views of, paradoxical, Phaedo 68; true motives of, *ib.* 83, 84; thought by mankind to be toilsome, Rep. 2. 364 A (cp. Laws 7. 807 D); not promoted by excessive care of the body, Rep. 3. 407; may be a matter of habit, *ib.* 7. 518 E; 10. 619 D; impeded by wealth, *ib.* 8. 550 E; Laws 5. 742; 8. 831 C, 836 A; misplaced = vice, Statesm. 307; is the greatest of goods, Laws 2. 661; the object of the legislator, *ib.* 3. 693, 701 D; 4. 705 E; 6. 770; 8. 835 D; 12. 962, 963; more to be esteemed than riches, *ib.* 5. 728

A; gives more pleasure than vice, *ib.* 733; the chief business of life, *ib.* 7. 807; the salvation of men, *ib.* 10. 906 A; the attribute of a freeman, Alcib. 135; the prize of life, Menex. 246, 247;—virtue according to Simonides, Protag. 339; according to Theognis, Laws 1. 630 (cp. Poets);—virtue in the individual and in the state, Rep. 4. 435 foll., 441 (cp. Justice);—absolute virtue, seen by the soul, Phaedr. 247;—political virtue, unlike the arts, common to all men, Protag. 322, 323;—nature of the virtues, *ib.* 330 foll. (cp. Laches 199); the virtues numberless, Meno 72; place of the several virtues in the state, Rep. 4. 427 foll.; the virtues (except wisdom) akin to the body and attained by habit, *ib.* 7. 518 E (cp. Phaedo 82 B); are they invisible and incorporeal? Soph. 247 (cp. Phaedr. 250); honour to be assigned to the several virtues, Laws 3. 696;—the social virtues (temperance and justice), Phaedo 82 B;—virtues of the philosopher, *ib.* 68 A; Rep. 6. 485 foll., 490 E, 491 B, 495 A (see Philosopher).

Virtue. [*The nature of virtue is a subject which is frequently treated by Plato. In the earlier dialogues the Socratic thesis that 'virtue is knowledge' appears under various forms and is brought to bear on almost every argument, nor does it lose its hold over Plato's mind until we reach the very latest stages of his philosophy. At the outset he is especially beset with two questions, 'Can virtue be taught?' and, 'Is virtue one or many?'—The Protagoras and the Meno contain a discussion of these points. In the former the great Sophist endeavours to prove that*

virtue can be imparted by man to men. He shows, in the form of an apologue, that virtue, unlike the arts, is the common property of all, and remarks that, if we did not believe that we could improve those with whom we come in contact, we should not consent to the employment of punishment.—The question is next asked whether virtue is a whole of which the separate virtues are parts, or whether virtue and the virtues are to be identified. Protagoras inclines to the former view, but is met by an application of the doctrine of opposites. Every quality has one opposite; but justice is not opposed to holiness, nor wisdom to temperance: how then can there be a difference between them? The reply is, that although these four virtues are similar, the fifth, courage, is of another kind. But courage is identical with confidence, and confidence rests on knowledge. Knowledge, again, is the basis of the other virtues: a man is temperate because he knows that temperance will bring him greater pleasure and less pain than intemperance; and he is just or holy for a similar reason. Vice is ignorance, and evil comes only by want of knowledge. From this point of view the virtues appear to be one, and, as virtue has been shown to be knowledge, there is no doubt that it can be taught.—In the *Meno*, when Socrates asks for a definition of virtue, *Meno* is with difficulty brought to understand the nature of general notions. At last he answers that 'virtue is to delight in things honourable and to have the power of getting them.' But the words must be added 'with justice,' and the definition thus becomes,

'Virtue is the power of getting good with a part of virtue.' As the absurdity of this is manifest a new attempt is made. Socrates, starting with the hypothesis that, if virtue is knowledge, it can be taught, argues that virtue is a good: and all goods, whether of the body or the soul, must be used with knowledge or they become unprofitable. But if so, virtue may be taught. Yet who are the teachers? Certainly not the world in general (for how then could good men have bad sons?), and the Sophists, who make it their business to teach virtue, are themselves good for nothing. The conclusion is that ordinary virtue is founded, not on knowledge, but on true opinion, and therefore cannot be taught; but that there is a higher virtue which could be taught, if any one could be found to possess it.—In the *Phaedo* the virtues are idealised. The philosopher alone has true virtue: he does not act, like other men, from a balance of motives or from a consideration of what he is likely to gain or lose by the indulgence of his passions; but he is desirous to keep his soul pure from the contaminations of the body and ready when the hour of departure arrives to fly away to God.—A similar transcendentalism is found in the *Phaedrus*. The earthly virtues are feeble copies of the absolute qualities which are beheld by the soul when she accompanies the Gods in their pilgrimage (cp. *Laws* 10. 906 B). Most men remember little from their previous existence; but the philosopher, who has a better memory, is filled with rapture when he contemplates the earthly copies of the virtues shining in some noble soul.—In the *Republic*

the virtues are considered chiefly with a view to the state. Four virtues are enumerated, wisdom, courage, temperance, justice: 'holiness,' which makes the fifth in the Protagoras, is not mentioned, being regarded, probably, as a part of justice (cp. Euthyph. 12). Each of these virtues has an appropriate place in the state. Wisdom resides in the governing class, who typify the rule of reason in the soul: courage is peculiar to the warriors, the representatives of the 'spirited element'; temperance is the harmony of the state, an agreement by which superiors rule and inferiors obey. Justice, finally, is the virtue of the state, the cause or condition of the other virtues, and may be summed up in the formula that 'every man must do his own work.'—In the Laws the four virtues of the Republic reappear. They are declared to have a common principle, which is the guide of the legislator in all his enactments, and which the guardians must be especially trained to recognize. Virtue is no longer identified with knowledge, though the companion paradox with which this is usually associated by Plato, 'that no man does evil of his own will,' is not given up; and he is still inclined to assign wisdom or 'mind' the highest place in the state. In the same spirit, too, he remarks (v. 730 E) that the good man should not be churlish of his virtue, but freely impart it to his fellow-citizens. On the whole, however, the conception of virtue in the Laws takes, in accordance with the more serious tone which marks the later writings of Plato, a religious or theological rather than an intellectual character.

(See s. vv. Courage, Holiness, Justice, Temperance, Wisdom.)]
 Visible world, divisions of, Rep. 6. 510 foll.; 7. 517; compared to the intellectual, *ib.* 6. 508, 509; 7. 532 A;—visible things and ideas, Parm. 130, 135 E.

Laws 1. 630 E; 12. 965); in propositions, Crat. 385; in regard to the happiness of the state, Rep. 4. 420; 5. 466; 7. 519 E; Laws 7. 806 C; in love, Rep. 5. 474 C, 475 B; 6. 485 B; in the one, Parm. 137, 138 E, 142, 144, 145, 147 B, 150, 153 C,

- 157 C, 158, 159 D; Soph. 245; in the universe, Tim. 30 E; Laws 10. 903, 905; in legislation, Laws 1. 630 E.
- Whorl, the great, Rep. 10. 616.
- Wicked, the, punishment of, in the world below, Phaedr. 249 A; Phaedo 108 B, 114; Gorg. 523 B, 525; Rep. 2. 363; 10. 614; Theaet. 177 A; Laws 9. 870 E, 881 B; 10. 904 C; 12. 959; miserable in this life, Gorg. 470 foll.; 1 Alcib. 134 B; thought by men to be happy, Rep. 1. 354; 2. 364 A; 3. 392 B; Laws 2. 661; 10. 899 E, 905 A (cp. Gorg. 470); their gifts not received by God, Rep. 2. 365 E; Laws 4. 716 E; 10. 885 C, 888 E, 905, 908 E; 12. 948 C; 2 Alcib. 149 E.
- Wild animals, creation of, Tim. 91.
- Will, freedom of the, Laws 10. 904 C.
- 'Willing' and 'wishing,' Gorg. 467.
- Wills, freedom in making, restricted, Laws 11. 922; regulations concerning, *ib.* 923.
- Wine, Tim. 60 A; a cure for drinking hemlock, Lysis 219 E; makes men think they have a mind, Crat. 406 D; = fear potion, Laws 1. 647 foll.; in education, *ibid.*; use of, *ib.* 2. 666; forbidden to children, *ib.* A; why given to men, *ib.* 672; when and by whom it may be drunk, *ib.* 674;—lovers of wine, Rep. 5. 475 A.
- Wings of the soul, Phaedr. 246, 251.
- Wisdom (*σοφία, φρόνησις*), = good fortune, Euthyd. 282; = true thought, Theaet. 170;—the true wisdom, to know God, *ib.* 176; to have harmony in the soul, Laws 3. 689;—wisdom, the highest of human things, Protag. 352 D; the most valuable of treasures, Euthyd. 282; Eryx. 394 A; can it be taught? Euthyd. 282 (cp. Virtue); loveliness of, Phaedr. 250; unseen, *ibid.*; to be ascribed to God only, *ib.* 278 (cp. Apol. 23 A); the one true coin for which all things ought to exchange, Phaedo 69; the communion of the soul with the unchanging, *ib.* 79; the only release from evil, *ib.* 107; akin to truth, Rep. 6. 485 D; the power of, *ib.* 7. 518, 519; the only virtue which is innate in us, *ib.* 518 E; a real thing, Theaet. 166 E; a good, Phil. 11, 66 (cp. Laws 1. 631 C); not wholly to be severed from pleasure, Phil. 21, 60 foll.; occupied in the contemplation of true being, *ib.* 59; to be prayed for both by states and men, Laws 3. 688; first among virtues, *ib.* A; after the event, an easy matter, *ib.* 691 B, 692 B; the source of happiness, 1 Alcib. 134 (cp. Charm. 173; Meno 88);—wisdom and courage, Laws 12. 963 (cp. Protag. 350, 360; Gorg. 495);—wisdom and false opinion, Statesm. 278;—wisdom and friendship, Lysis 210;—wisdom and goodness, 1 Alcib. 124;—wisdom and injustice, Rep. 1. 349;—wisdom and knowledge, Theaet. 145 E;—wisdom and science, Charm. 165;—wisdom and self-conceit, Phil. 48 D (cp. Laws 5. 727 B, 732 A; 9. 863);—wisdom and temperance, Charm. 165 C, 170, 171; Protag. 332; Symp. 209 A;—wisdom and virtue, Meno 88;—wisdom in the state, Rep. 4. 428 (cp. Laws 3. 689; 12. 964, 965); the fairest wisdom that which is concerned with the ordering of states, Symp. 209 A.
- Wisdom. [*Wisdom is the equivalent in English of two Greek words, σοφία and φρόνησις, between which, however, there is a slight difference of meaning. By the former is intended 'wisdom' in the wider sense, i.e. the highest combination of virtue and intelligence. The latter has the*

narrower signification of 'prudence' or 'forethought,' and contains less of the moral element.—Like temperance, wisdom is with difficulty distinguished as a separate virtue, and may be regarded rather as the culmination or perfection of all virtue, under which the other virtues are included (Meno 88; Phaedo 69; Symp. 209 A). It is the virtue which purges the soul from error (Phaedo 79, 107), or, to use another metaphor, which effects her conversion from darkness to light and enables her to behold true being (Rep. 7. 518). Unlike most of the other virtues it is not a matter of habit, but innate and the gift of God, of whom it is the peculiar attribute and prerogative (Phaedr. 278 D; Rep. 7. 519 A; Theaet. 176). Yet it is also the virtue which 'every man from his very boyhood' fancies that he possesses, and this universal self-conceit leads us into all kinds of error and folly (Phil. 49 A; Laws 5. 727 A). Again, it is more akin to the good than pleasure, because it has a larger share of the three elements of the good,—beauty, symmetry, truth (Philebus *passim*).—Finally, in the state wisdom is the virtue which more especially belongs to the legislator and the ruler. Those who have it will form the smallest class among the citizens, and may be fitly called the 'mind' of the state, because they are the guiding or directing faculty of the whole community (Rep. 4. 428; Laws 12. 964). And, just as in the soul the commands of reason ought to be obeyed by the desires, so in the state the mandates of the rulers and the laws should be accepted without question by the mass of the citizens (Laws 3. 689 A).].

Wise man, the, the friend and kindred of all, Lysis 210 C; does not fear death, Apol. 29, 35 A; Phaedo 62-68; =the good, Rep. 1. 350; 1 Alcib. 124, 125; definition of, Rep. 4. 442 C; alone has true pleasure, *ib.* 9. 583 B; life of, *ib.* 591; according to Protagoras' philosophy, Theaet. 166 E; the only 'measure of all things,' *ib.* 183 B; different from the clever artist, 2 Alcib. 145 E;—'the wise to go to the doors of the rich,' Rep. 6. 489 B (see s. v. Proverbs);—wise men *δαιμονες*, Crat. 398; said to be the friends of the tyrant, Rep. 8. 568; compared to physicians and husbandmen, Theaet. 167 B; are those whose impressions are acute, *ib.* 194 D; ought to rule over the ignorant, Laws 3. 690 B;—the seven wise men, Protag. 343;—Socrates the wisest of men, Apol. 21 A.
